COMPACT DISC PLAYER

MODEL **CD-A7**

* FOR THE CIRCUIT DESCRIPTION, PLEASE REFER TO THE TECHNICAL HAND BOOK AUDIO I "COMPACT DISC AND PLAYER".

CD-A7 uses three-spot method for tracking servo, and Astigmatic Method for Focus servo.

COMPACT DISC PLAYER

MODEL CD-A7

SECTION 1	SERVICE MANUAL	5
SECTION 2	PARTS LIST	15

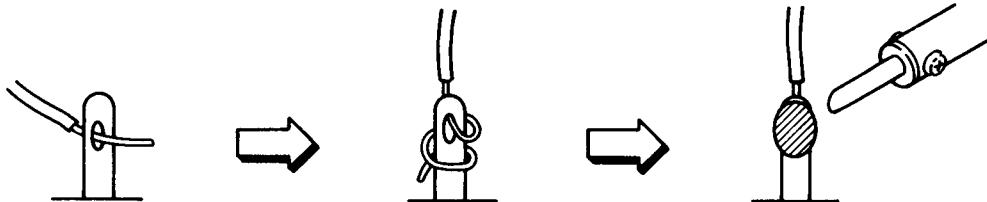

SAFETY INSTRUCTIONS

SAFETY CHECK AFTER SERVICING

Confirm the specified insulation resistance between power cord plug prongs and externally exposed parts of the set is greater than 10 Mohms, but for equipment with external antenna terminals (tuner, receiver, etc.) and is intended for [C] or [A], specified insulation resistance should be more than 2.2 Mohms (ground terminals, microphone jacks, headphone jacks, line-in-out jacks etc.).

PRECAUTIONS DURING SERVICING

1. Parts identified by the Δ symbol parts are critical for safety.
Replace only with parts number specified.
2. In addition to safety, other parts and assemblies are specified for conformance with such regulations as those applying to spurious radiation. These must also be replaced only with specified replacements.
Examples: RF converters, tuner units, antenna selector switches, RF cables, noise blocking capacitors, noise blocking filters, etc.
3. Use specified internal wiring. Note especially:
 - 1) Wires covered with PVC tubing
 - 2) Double insulated wires
 - 3) High voltage leads
4. Use specified insulating materials for hazardous live parts. Note especially:
 - 1) Insulation Tape
 - 2) PVC tubing
 - 3) Spacers (Insulating Barriers)
 - 4) Insulation sheets for transistors
 - 5) Plastic screws for fixing microswitch (especially in turntable)
5. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.), wrap ends of wires securely about the terminals before soldering.

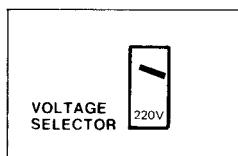

6. Observe that wires do not contact heat producing parts (heatsinks, oxide metal film resistors, fusible resistors, etc.).
7. Check that replaced wires do not contact sharp edged or pointed parts.
8. Also check areas surrounding repaired locations.
9. Use care that foreign objects (screws, solder droplets, etc.) do not remain inside the set.

VOLTAGE CONVERSION

Models for some countries are not equipped with this facility, each machine is preset at the factory according to its destination, but some machines can be set to 110V, 120V, 220V or 240V as required.

If your machine's voltage can be converted.

Before connecting the power cord, turn the VOLTAGE SELECTOR located on the rear panel with a screwdriver until the correct voltage is indicated.

SYCLE CONVERSION

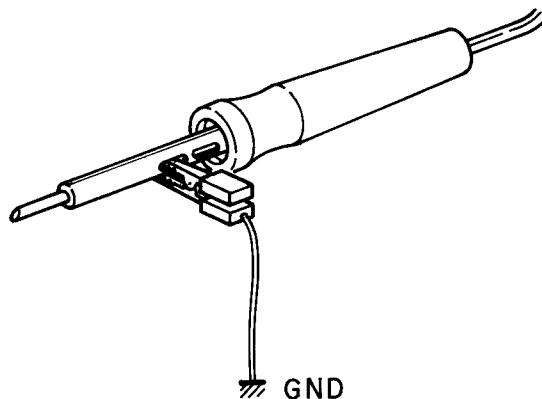

Sycle conversion is not necessary, since CD-A7 uses DC motors.

PRECAUTIONS IN REPAIRING

When repairing or adjusting the unit, please note the following points.

1. Do not put excessive pressure on the mecha part (operation part), including the pick-up block, as extremely high mechanical precision is required in these parts.
2. When the base is removed for repair or adjustment, make sure that there are no metal objects in the narrow gap between the PC Board or the mecha parts and the base.
3. The input processing IC (HA12049A) and the CD signal processing ICs (HD61Z001, HD61901A, HD61902A and HM6119) can be damaged by static electricity or leakage from a soldering iron during repairing.

While soldering, please take the precautions against leakage as in the illustration below.

4. Do not loosen any screws in the pick-up block. When handling the pick-up block, please refer to the points to NOTE when replacing the pick-up block.
5. Keep safety from hazardous Laser Beam Radiation, DO NOT watch the Laser Beam (objective Lens) Directly.

For basic adjustments, measuring methods, and operating principles, refer to GENERAL TECHNICAL MANUAL.

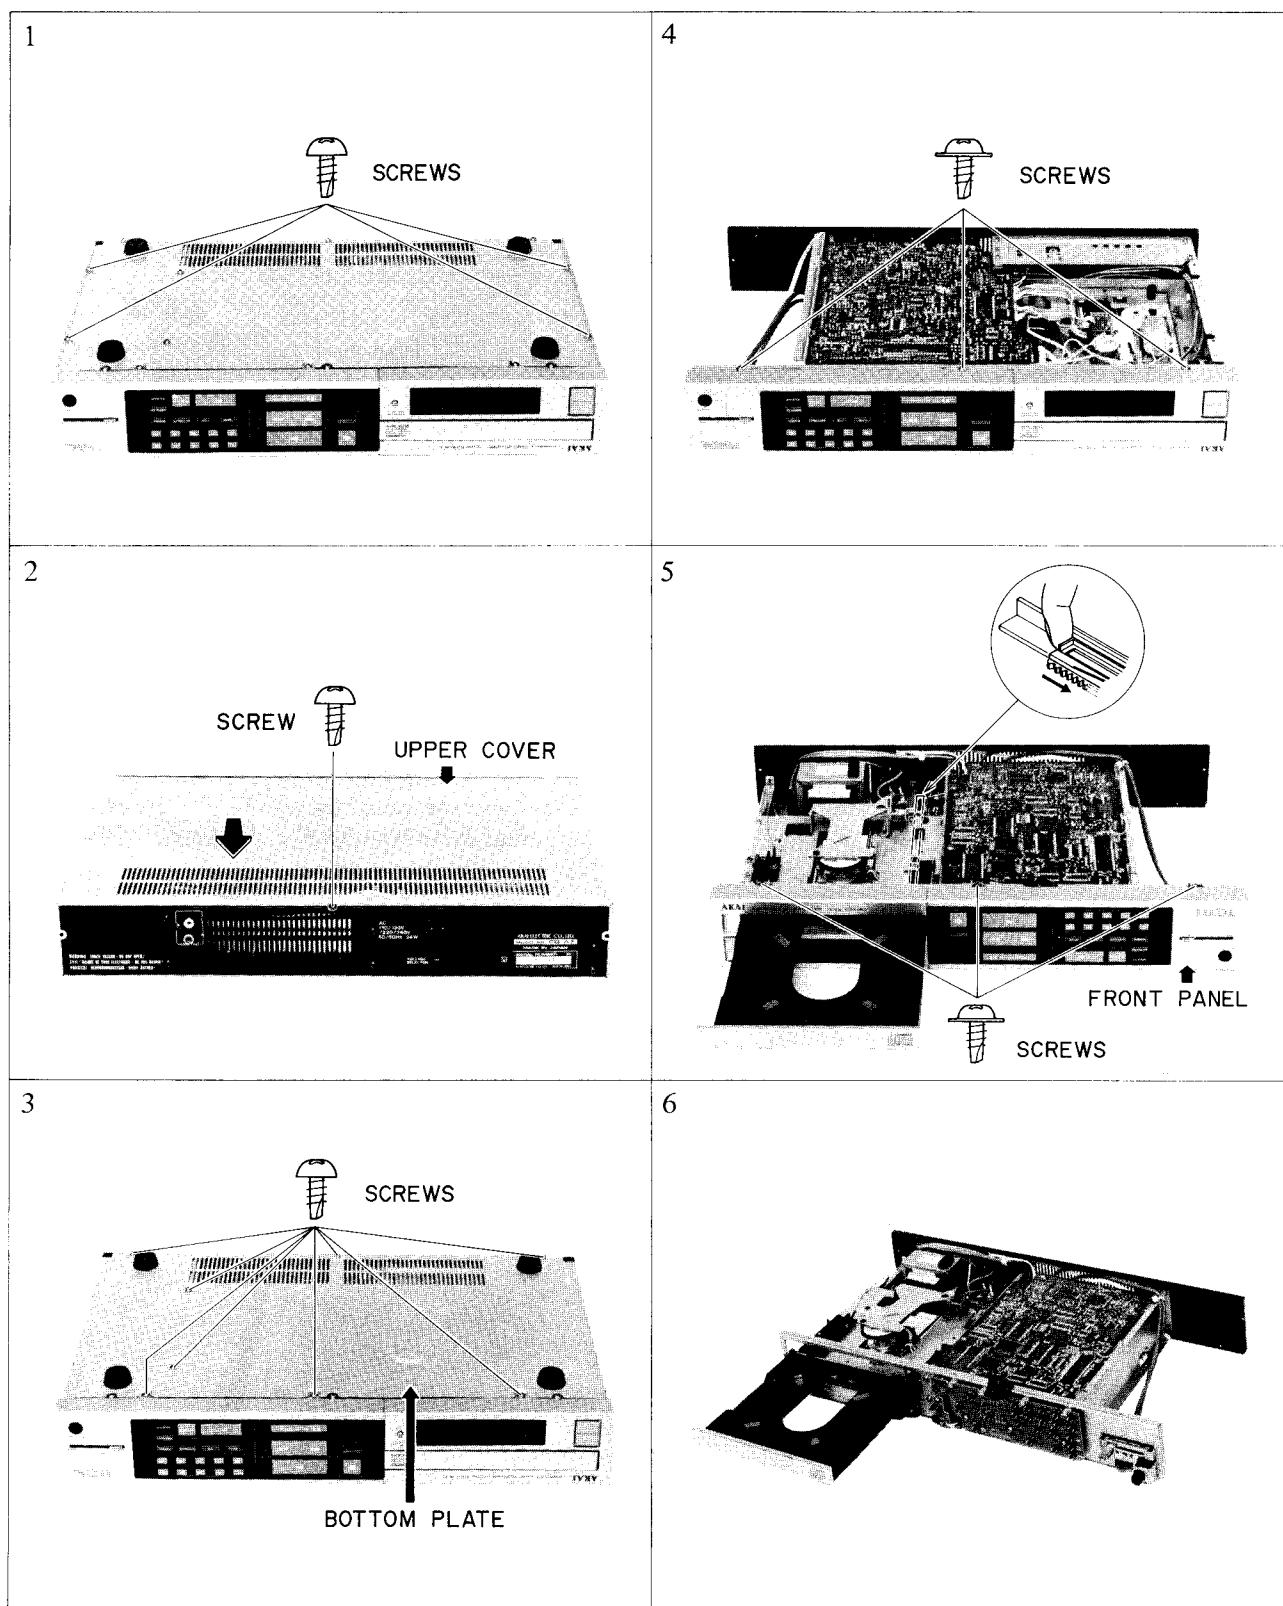

I. SPECIFICATIONS

SENSOR TYPE	Optical
QUANTUM BIT	16
CHANNEL	2
SAMPLING FREQUENCY	44.1kHz
FREQUENCY RESPONCE	5 to 20.000Hz ±0.5dB
T.H.D.	0.005% (1kHz)
CHANNEL SEPARATION	85dB (1kHz)
DYNAMIC RANGE	90dB
S/N RATIO	90dB
WOW & FLUTTER	Below measurable limits
LINE OUTPUT LEVEL	2V
ACCESS TIME	2.6 Sec
POWER REQUIREMENTS	AC100V 50/60Hz for Japan AC120V 60Hz for USA & Canada AC220V 50Hz for Europe except UK AC240V 50Hz for UK & Australia AC 110/120/220/240V, 50/60Hz convertible for other countries
DIMENSIONS	440(W) x 76(H) x 225(D)mm (17.6 x 3.0 x 9.0 incheis)
WEIGHT	5.8kg (12.8lbs)
REMOTE CONTROL UNIT RC-M80	
TYPE	Infrared pulse position modulation
CARRIER FREQUENCY	38kHz ±0.2kHz
RANGE	8m
DIRECTIVITY	±30°
POWER SUPPLY	Battery R6 (or AA, UM-3)X2 (3V)
DIMENSIONS	75(W) x 18(H) x 162(D)mm (3.0 x 0.72 x 6.5 incheis)
WEIGHT	150g (0.33lbs) including Batteries

* For improvement purposes, specifications and design are subject to change without notice.

II. DISMANTLING OF UNIT

In case of trouble, etc. necessitating dismantling, please dismantle in the order shown in the photographs. Reassemble in reverse order.

IV. PRINCIPAL PARTS LOCATION

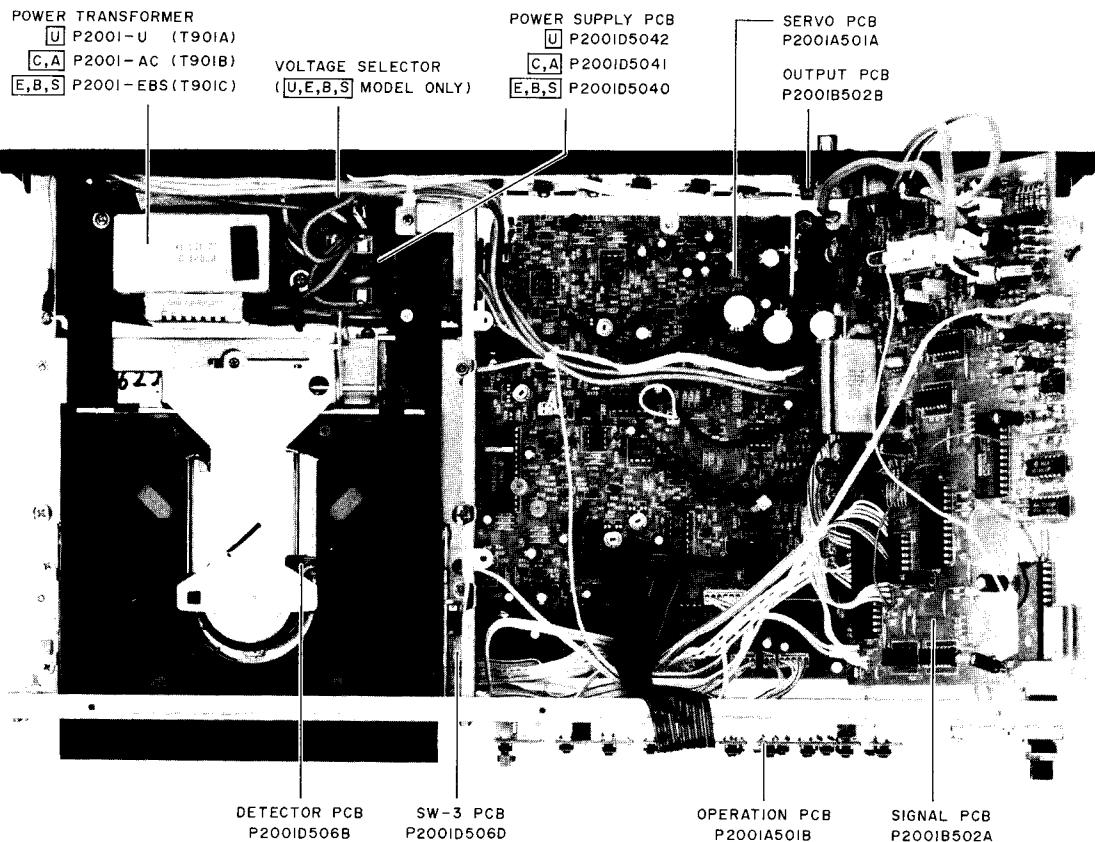

Fig. 4-1 Upper View

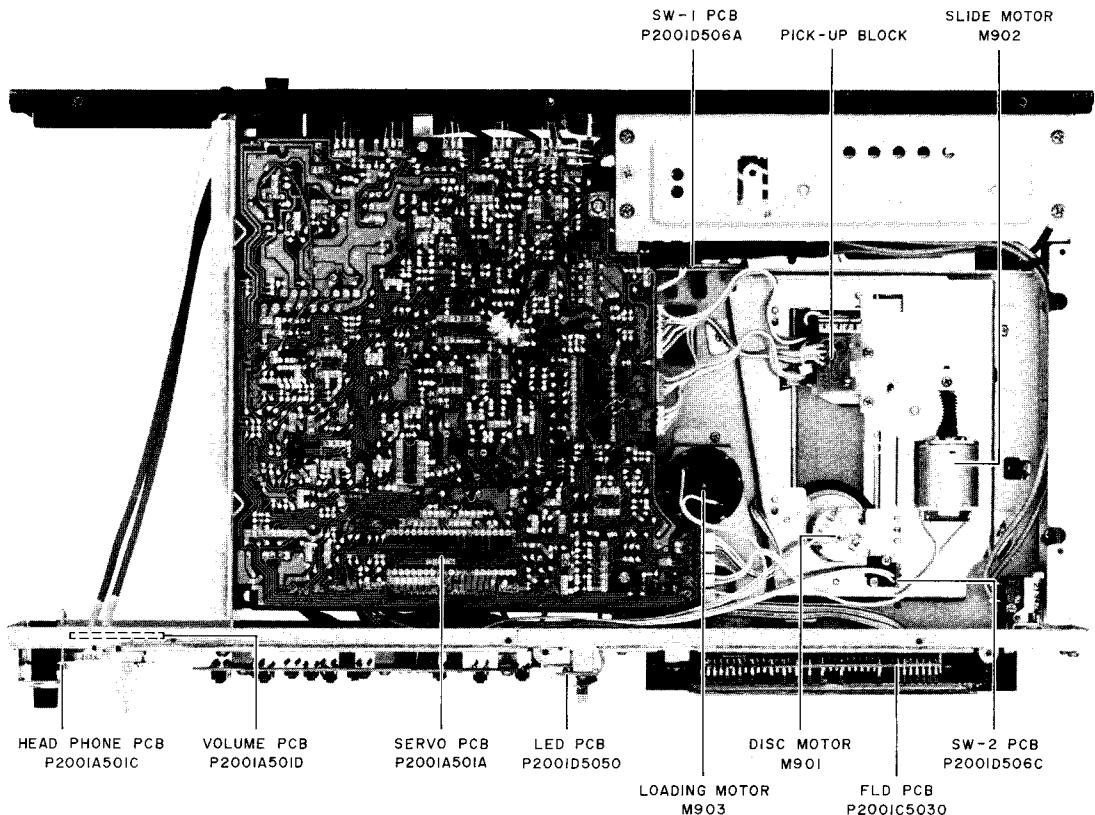

Fig. 4-2 Bottom View

V. REPLACEMENT OF THE PICK-UP BLOCK

5-1. PRECAUTIONS, WHEN REPLACING THE PICK-UP BLOCK

- 1) The LD (Laser Diode) fixed on the pick-up block PC Board can be damaged by static electricity or leakage from a soldering iron.
Do not touch the PC Board of the pick-up block, or use a tester to check if the electricity is on. When soldering, make sure that precautions are taken to prevent leakage from the soldering iron.
- 2) Avoid scratches, dirt or dust on the lense of the pick-up caused by touching with the fingers.
- 3) When connection or disconnection the RED connector, make sure that the PC Board is shorted circuit.
Do not turn the electricity on while it remains shorted-circuited.

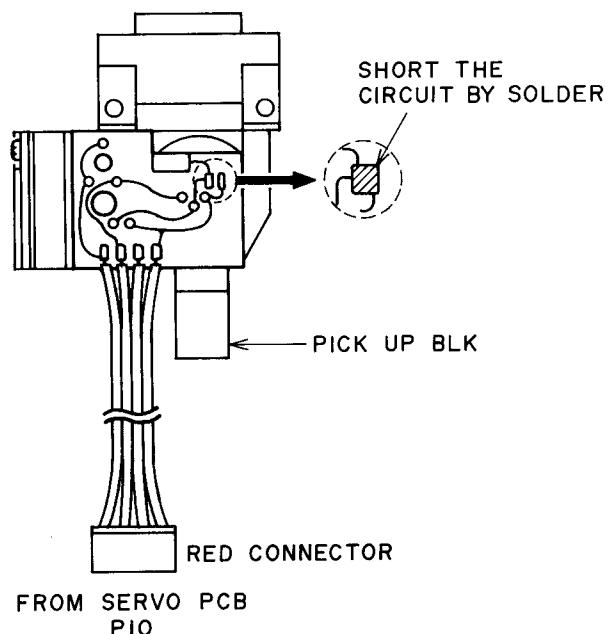

Fig. 5-1

5-2. PROCEDURES FOR CHANGING THE PICK-UP BLOCK

- 1) Remove the top cover and the base and turn the power on. Press the eject button and open the disk holder. Then turn the power off.
- 2) Remove the three connectors on the pick-up block: P10, 15 and 16.
Note: Make sure the LD is short circuited before removing the connectors.

- 3) Remove the slide gear fixed at the button. Refer to Fig. 4-2.
- 4) Move the disk clamer lever aside with a finger and remove the three disk motor fixing screws, (A)(B) and (C).
- 5) When the four screws (D), (E), (F) and (G), for the metal fittings of the pick-up guide rail are removed, the pick-up block guided rail can be removed.

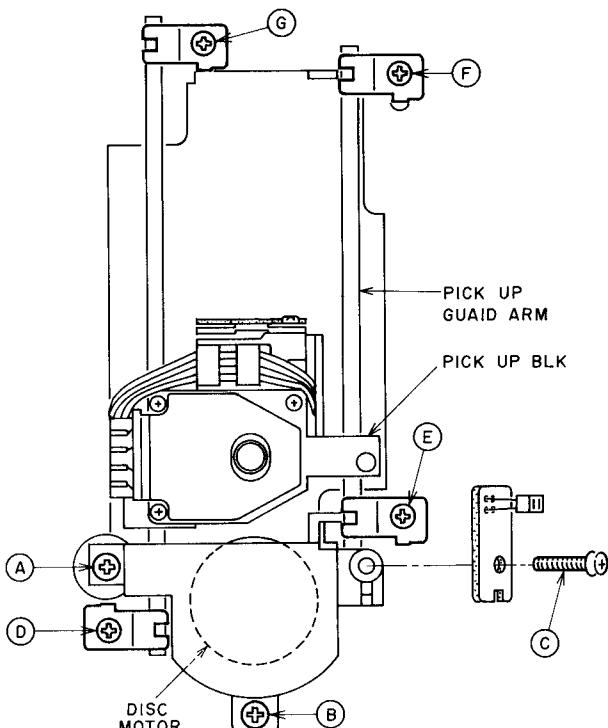

Fig. 5-2 TOP VIEW

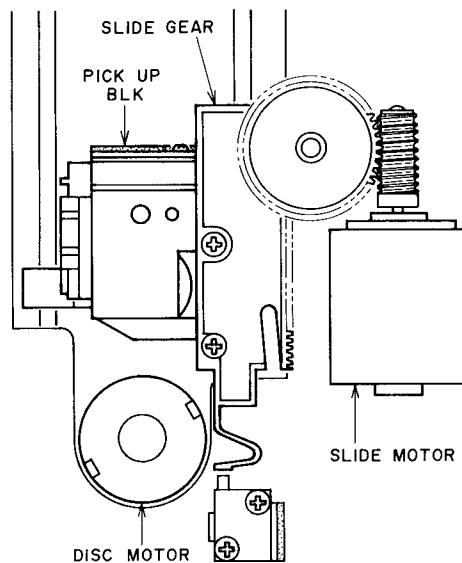

Fig. 5-3 BOTTOM VIEW

VI. ADJUSTMENT

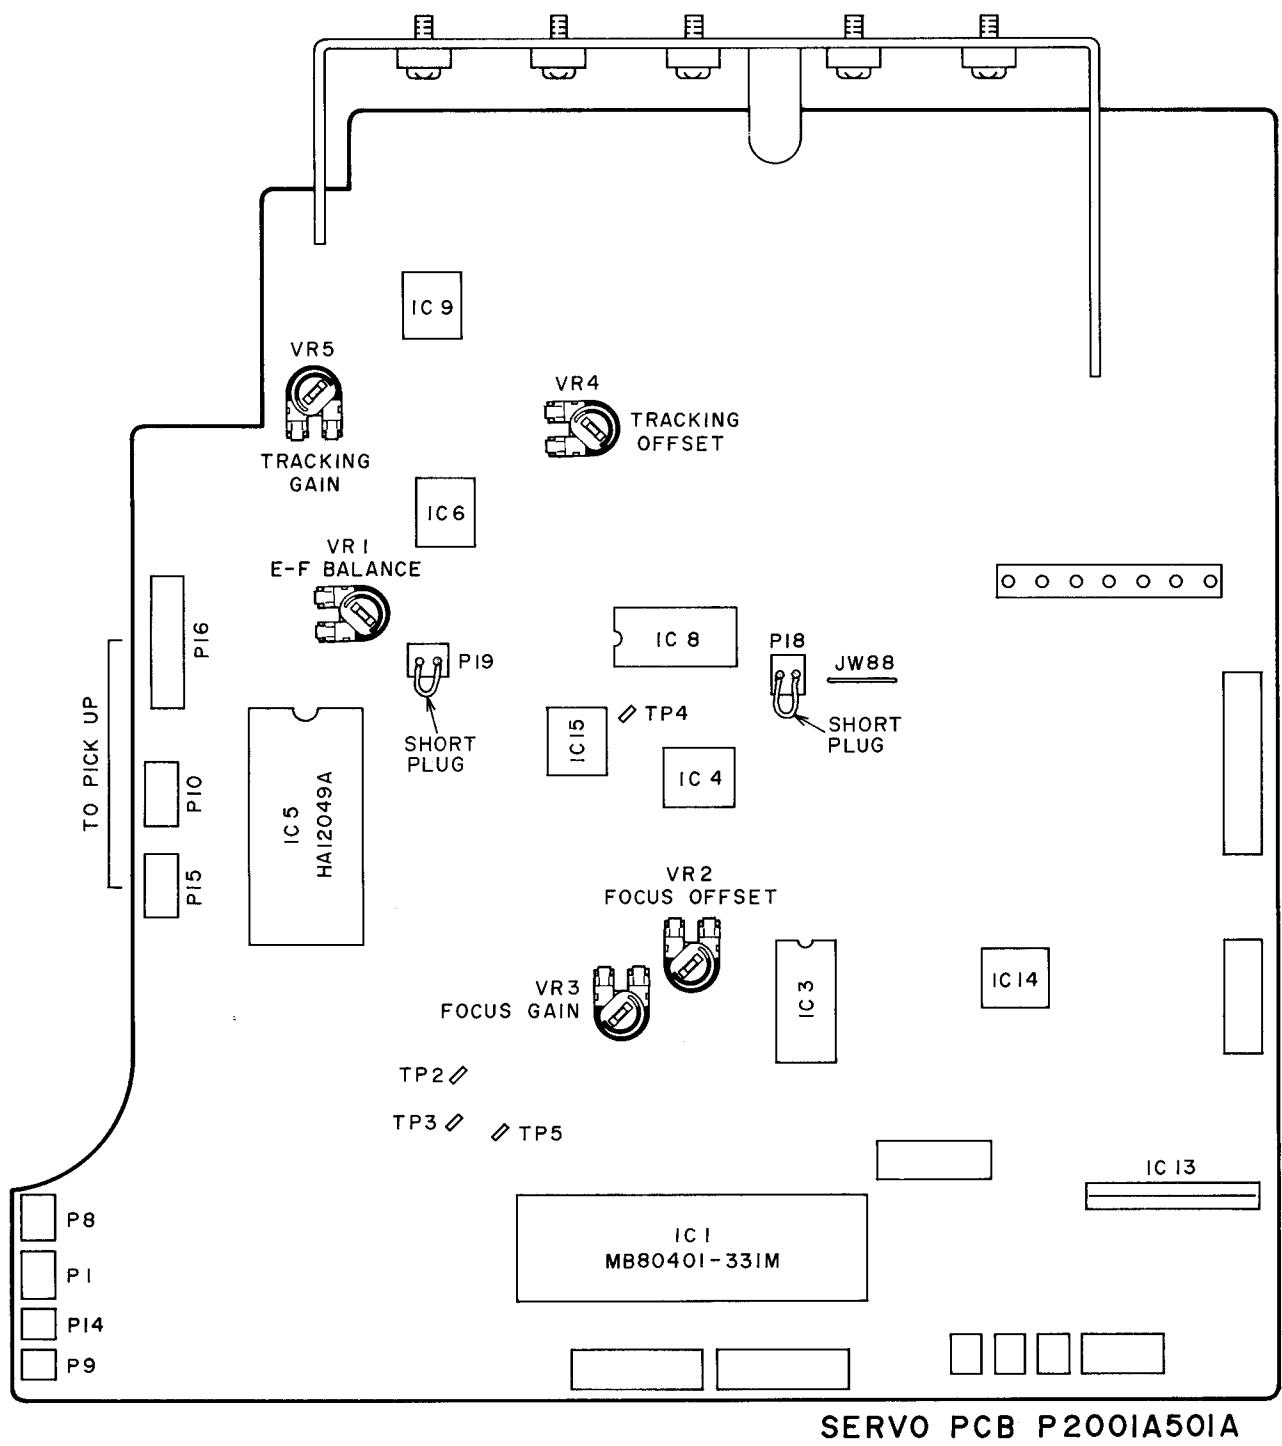

Fig. 6-1 SERVO PC Board Adjustment Points

6-1. ADJUSTMENT WHEN CHANGING THE PICK-UP

Change the pick-up, following the procedures in the item V, and when replacement is complete turn the short terminal of the LD (Laser Diode) to open.

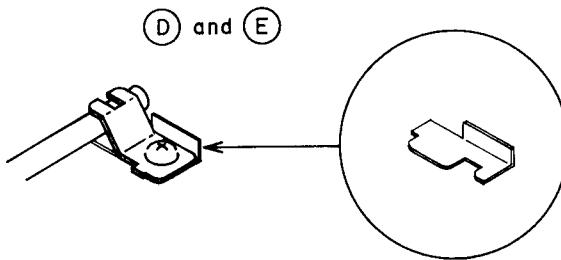

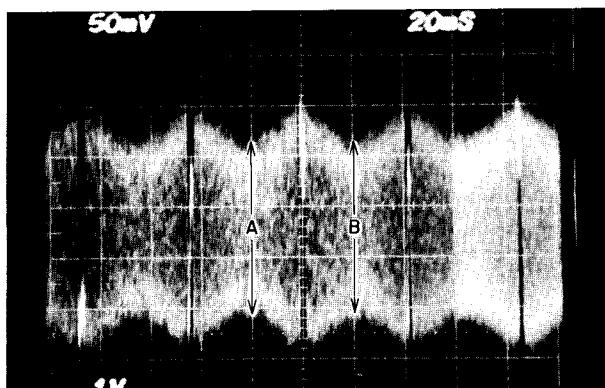

6-1-1. OPTICAL AXIS ADJUSTMENT

If the mechanical eccentricity is large when fixing the pick-up tracking errors become large.

This in turn interferes with the tracking servo, so optical axis adjustment is necessary.

- 1) Insert the eccentricity test disk, (AT-751370), and turn the tracking servo off (extract J19 on the servo PC board), then play back.
- 2) Connect the oscilloscope to TP5 on the Servo PC board and observe the wave patterns.
- 3) Put the optical axis metal fixings (0.1mm, 0.15 mm, 0.2mm, 0.25mm, and 0.3mm) under the pick-up guide rails D and E and adjust so that the voltage difference between A and B is less than 30 mV.

$$|A-B| < 30 \text{mV}$$

OPTICAL AXIS ADJUSTMENT SHIM

Fig. 6-2

THICKNESS OF THE SHIM	PARTS NUMBER
0.1mm	MZ351819 A
0.2mm	MZ351819 B
0.3mm	MZ351819 C
0.15mm	MZ351819 D
0.25mm	MZ351819 E

6-1-2. READJUSTMENT OF E-F BALANCE

When the pick-up is changed, E-F balance adjustment must be performed. Refer to item 6-2-2 for adjustment.

6-1-3. CHECKING THE ELECTRIC CURRENT OF THE LASER

The electric current of the laser is indicated on the labels on the pick-up.

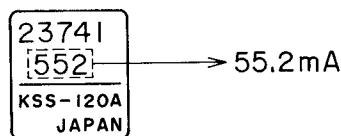

Fig. 6-3

- 1) Connect the millivoltmeter between TP2 and TP3 on the SERVO PC board and measure the voltage.

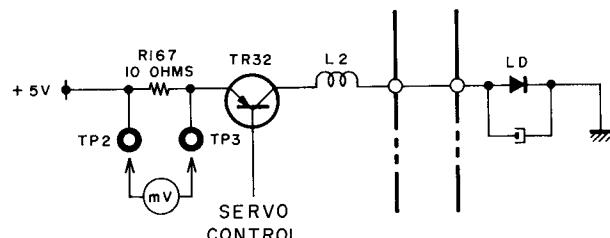

Fig. 6-4

- 2) Calculate the electric current of the laser from the voltage measured and check that it is within $\pm 10\%$ of the recommended value.

$$\text{Electric current of the laser} = \text{Voltage measured} \div 10.$$

If the electric current of the laser exceeds 10% of the recommended value, change the pick-up again.

6-1-4. APC (AUTOMATIC POWER CONTROL) CIRCUIT

This is a servo circuit to maintain the LD (Laser Diode) power of the pick-up. The LD power can be adjusted by the VR1 by the pick-up block. However, appropriate adjustment for individual characteristics has already been made, so DO NOT touch this.

6-2. SERVO ADJUSTMENT

Servo adjustment is an adjustment to the control circuitry for accurate and safe disc play back. When adjusting use a sony type 3 (No. YEDS 7) or philips (No. 410056-2 or 400079-2) as a test disc.

6-2-1. FOCUS OFFSET

- 1) Connect the oscilloscope to TP4 and the jumper wire JW88 on the SERVO PC board.
JW88 DC Balance Voltage
TP4 Eye pattern waves
- 2) Play back the test disc and adjust the VR2 so that the eye pattern wave forms are at their clearest. Check that the DC balance voltage is at minimum. If the eye pattern wave forms when the DC balance is at minimum are not the same as the clearest ones, adjust so that the eye pattern wave forms are at their clearest.

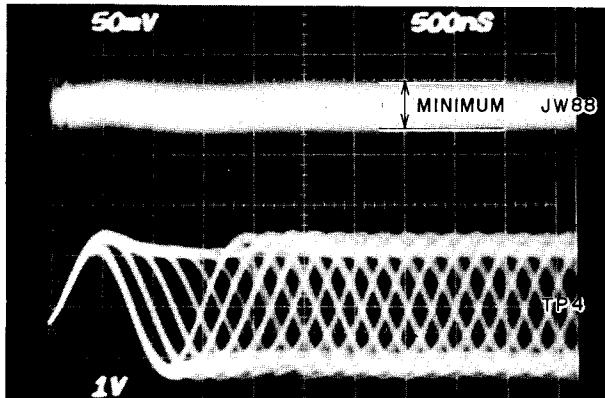

Fig. 6-5

6-2-2. E-F BALANCE ADJUSTMENT

This is to adjust the output balance of diodes E and F for tracking error detection.

When changing the pick-up adjusting the tracking constancy, this must be checked and adjusted.

- 1) Connect the oscilloscope to TP5 on the servo PC board.

Measure direct current voltage via an integral circuitry between TP5 and the oscilloscope as in illustration Fig. 6-7.

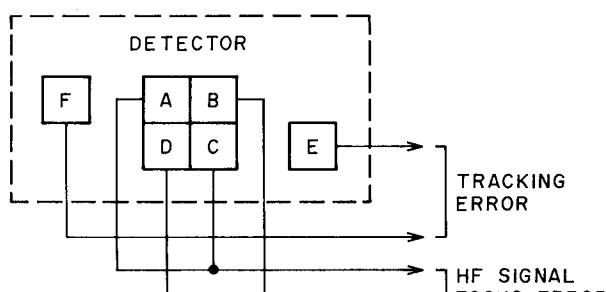

Fig. 6-6

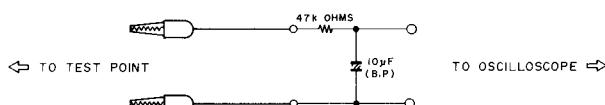

Fig. 6-7

- 2) Play back the test disc and turn the machine to pause.
- 3) Extract the short plug (P19) on the SERVO PC board.
- 4) Adjust the VR1 for E-F balance so that the voltage is $0V \pm 5mV$.

6-2-3. TRACKING OFFSET

- 1) Connect the oscilloscope to TP5 on the SERVO PC board. (Measure as in item 2-2, Via and integral circuit.)
- 2) Play back the test disc.
- 3) Adjust the tracking offset adjustment VR4 so that the TP5 voltage is $0V \pm 5mV$.

6-2-4. FOCUS GAIN ADJUSTMENT

- 1) Connect the oscilloscope between P15—No. 1 terminal on the SERVO PC board and earth, and measure the voltage on the focus coil.
- 2) Play back the test disc and adjust VR3 so that the focus coil voltage is 500 to 600 mVp-p.

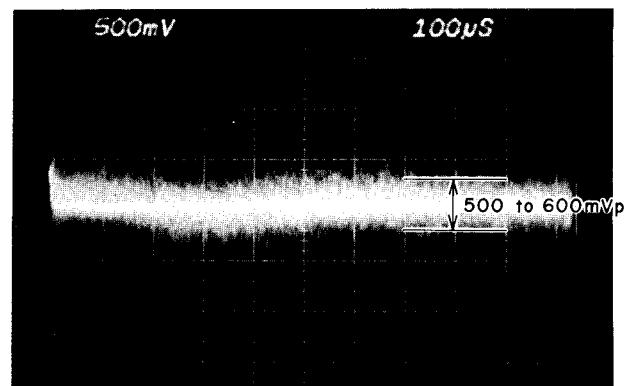

Fig. 6-8

6-2-5. TRACKING GAIN ADJUSTMENT

- 1) Connect the oscilloscope between P15—No. 2 terminal on the SERVO PC board and earth and measure the voltage on the tracking coil.
- 2) Play back the test disc and adjust VR5 so that the tracking coil voltage is 1.8 to 2.2Vp-p.

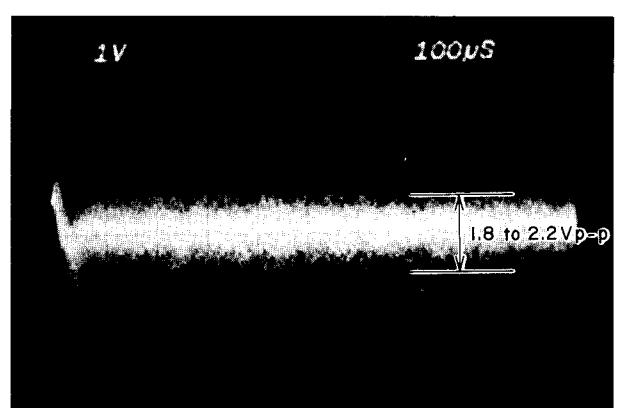

Fig. 6-9

Reference:

If the sound jumps when the machine is lightly jolted, this means the tracking Gain is small.

If a disc with a scratch of 600μ is played and the sound jumps, this means the tracking Gain is large.

Philips No. 410056-2 TNO6,01'05" up till TNO7,00'02"

Resistor and Capacitor which is not listed in this parts list, please refer to
COMMON LIST FOR SERVICE PARTS.

ATTENTION

1. When placing an order for parts, be sure to list the parts no., model no., and description of each part. If any of this information is omitted, there are instances in which parts cannot be shipped or the wrong parts will be delivered.
 2. Please be careful not to make a mistake in the parts no. If the parts no. is in error, a part different from the one ordered may be delivered.
 3. Because part numbers and part definitions and supply in the Preliminary Parts List may have been the subject of changes, please use this parts list for all future reference.

HOW TO USE THIS PARTS LIST

1. This Parts List shows those parts which are considered necessary for repairs. Other parts, such as resistors and capacitors, are shown in the "Common List for Service Parts" from which these parts should be selected and parts.
 2. The Recommended Spare Parts List shows those parts in the Parts List which are considered particularly important for service.
 3. Parts not shown in the Parts List and "Common List for Service Parts" will not in principle be supplied.
 4. How to read the parts list
 - a) Mechanism Block
 - b) P.C Board Block

- These reference symbols correspond with component symbols in the Schematic Diagrams.

5. The kind of part and its installation position can both be determined by the Part Number. To determine where a part number is listed, utilize the Parts Index at the end of the Parts List. It is necessary first of all to find the Part Number. This can be accomplished by using the Reference Number listed at the right of the part number in the Parts Index.

WARNING

⚠ INDICATES SAFETY CRITICAL COMPONENTS. FOR CONTINUED SAFETY, REPLACE SAFETY CRITICAL COMPONENTS ONLY WITH MANUFACTURE'S RECOMMENDED PARTS

BLOCK DIAGRAM OF IC's

[PURPOSE OF EACH IC's]

NAME OF IC	PURPOSE
BA6109	Motor Control
HA12049	Signal Processing for DAD Player
HD61Z001	Abstract the FFM and SYNC. Signal, Main Clock etc.
HD61901A	EFM Demodulator, DE-Interlive, Error Detection and Correction, Control & Display Data Process.
HD61902A	Address Control for EXT. RAM, Protecting SYNC Signal, Output Control, Digital Servo Control
HD14001BP	C-MOS nor Gate
HD6805	8 bit μ -Computer
HM6116P	16k bit Random Access Memory
LB1245	High Voltage, Darlington Array
LM311P	Voltage Comparator
M5218L0	Dual Low Noise Operational Amplifier
MB88401-331M	4 bit μ -Computer
MB84053B	Tripe-2 Channel Multiplexer/Demultiplexer
NJM4558D	Dual Low Noise Operational Amplifier
NJM5534D	Low Noise Operational Amplifier
NJM5221P	Dual Low Noise Operational Amplifier
PCM53JP-V	Digital to Analogue Convertor
TC4066	Analogue Switch
TC40H008P	High Speed C-MOS NAND Gate
TC4049	Inverter
TC4011BP	NAND Gate
μ PC1373H	Pre-Amplifier for Remote Control

HD6805 [8 bit μ -COMPUTER]

Pin No.	Symbol	Description	Pin No.	Symbol	Description
1	V _{SS}	To GND	21	D3
