

Build the Fisher KX-200 StrataKit and own a \$250 stereo control-amplifier for \$169.50.

It's almost absurdly easy. You need no experience whatsoever. The superbly detailed kit construction manual prepared by Fisher StrataKit engineers tells you absolutely everything you need to know to build this magnificent 80-watt stereo control-amplifier. The language is simple; the diagrams are huge and crystal-clear; the exclusive StrataKit method itself is uniquely 'beginner-proof.'

You build your StrataKit in ingeniously simplified stages (Strata). Each stage corresponds to a separate fold-out page in the instruction manual. Each stage is built from a separate, clearly identified packet of parts (StrataPack). The major parts come already mounted on the extra-heavy-gauge steel chassis. Wires are precut for every stage—which means every page. All work can be checked stage-by-stage and page-by-page, before proceeding to the next stage. There is no possibility of last-minute 'surprises.'

When you have built the Fisher KX-200, you are the owner of one of the world's finest amplifiers, easily worth \$250.00. Its 80-watt (1HF) stereo power amplifier section will drive the least efficient speakers at extremely low distortion. Its preamplifier section provides a virtually unlimited range of input and control facilities. It even incorporates exclusive features like a laboratory-type d'Arsonval bias/balance meter and a power-derived third-speaker output with separate volume control.

All this is yours in a kit priced at \$169.50. The Fisher KX-100, a 50-watt stereo control-amplifier kit of advanced design, costs only \$129.50. (Walnut cabinet for either model, \$24.95; metal cabinet, \$15.95.)

"I personally guarantee that any Fisher StrataKit you assemble, as directed, will be fully equal in performance and reliability to its laboratory-wired prototype."
