

The Harman Kardon Model EQ8 GRAPHIC EQUALIZER

Manual No. 61A

Technical Manual

SPECIFICATIONS

	Nominal	Limit
Input Sensitivity at 1V Output	1.1V	$\pm 1\text{dB}$
Input Impedance	$35\text{k}\Omega$	$\geq 30\text{k}\Omega$
Signal-to-Noise Ratio (IHF-A)	115dB	$\geq 112\text{dB}$
Crosstalk at 10kHz	68dB	$\geq 65\text{dB}$
Overload (20 ~ 20kHz)	5.0V	$\geq 4.5\text{V}$
Overload Indicator	4.4V	$\geq 4.2\text{V}$
Frequency Response at 0dB	0.25Hz ~ 180kHz	
THD at 2V Output (20 ~ 20kHz)	0.005%	$\leq 0.01\%$
Center Frequency	31.5, 63, 125, 250, 500, 1k, 2k, 4k, 8k, 16kHz	
Equalizer Control Action	$\pm 12.5\text{dB} \pm 1.0\text{dB}$	
Input Level Control	$-20\text{dB} \pm 1.0\text{dB}$	
Subsonic Filter 5Hz	3.5dB	$\pm 1\text{dB}$
30Hz	3.5dB	$\pm 1\text{dB}$
Square Wave Tilt (20Hz)	3.5%	$\leq 5\%$
Square Wave Response (1kHz)	0.14V	$\leq 0.25\text{V}$

Dimensions (W x H x D)	17-7/16" x 4" x 13-7/16" (443 x 102 x 341mm)
Weight	9lbs. 15oz. (4.5kg)
Power Supplies	
U.S. & Canadian models	AC 120V, 60Hz
General model	AC 100/120/220/240V, 50/60Hz
Power Consumption	8W

This specification is the target of servicing. But, there is a case that the specification is not applicable to the measurement condition and instrument.

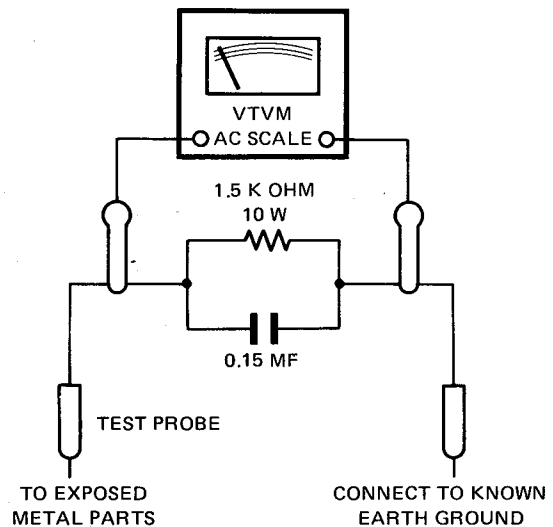

Specifications and components subject to change without notice. Overall performance will be maintained or improved.

LEAKAGE TEST (FOR SERVICE ENGINEERS IN THE U.S.A.)

Before returning the unit to the user, perform the following safety checks:

1. Inspect all lead dress to make certain that leads are not pinched or that hardware is not lodged between the chassis and other metal parts in the unit.
2. Replace all protective devices such as nonmetallic control knobs, insulating fishpapers, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacity networks, mechanical insulators, etc.
3. Be sure that no shock hazard exists; check for leakage current using Simpson Model 229 Leakage Tester, standard equipment item No. 21641, RCA Model WT540A or use alternate method as follows:
Plug the AC line cord directly into a 120-volt AC receptacle (do not use an Isolation Transformer for this test). Using two clip leads, connect a 1500 ohm, 10-watt resistor paralleled by a 0.15mf capacitor, in series with all exposed metal cabinet parts and a known earth ground, such as a water pipe or conduit. Use a VTVM or VOM with 1000 ohms per volt, or higher, sensitivity to measure the AC voltage drop across the resistor. (See Diagram.) Move the resistor connection to each exposed metal part having a return path to the chassis (antenna, metal, cabinet, screw heads, knobs and control shafts, escutcheon, etc.) and measure the AC voltage drop across the resistor. (This test should be performed with the power switch in both the On and Off positions.)
A reading of 0.35 volt RMS or more is excessive and indicates a potential shock hazard which must be corrected before returning the unit to the owner.

DISASSEMBLY PROCEDURES

1 CABINET TOP REMOVAL

Remove 6 screws **A** and then remove the cabinet top.

2 FRONT PANEL ASSEMBLY REMOVAL

1. Remove the cabinet top (refer to step **1**).
2. Pull out the equalizer level and subsonic frequency control knobs (133).
3. Remove 6 screws **B** and then remove the front panel assembly.

3 MAIN P.C. BOARD (PCB-1) REMOVAL

1. Remove the cabinet top and front panel assembly (refer to steps **1** and **2**).
2. Open the lid of connectors (P101, 102, 103, 104, 105) on the main P.C. board (PCB-1) and then disconnect lead wires.

3. Remove 4 screws **C** and then remove the main P.C. board (PCB-1) with push button assemblies (102). If necessary, unsolder the lead wires.

4 CONTROL P.C. BOARD (PCB-2) REMOVAL

1. Remove the cabinet top, front panel assembly and main P.C. board (refer to steps **1** through **3**).
2. Remove 2 screws **D** and then remove the subsonic switch P.C. boards (PCB-5 & PCB-6).
3. Pull off the Input Level knobs and remove input level control mounting nuts.
4. Remove 28 screws **E** and then remove the control P.C. board (PCB-2).
