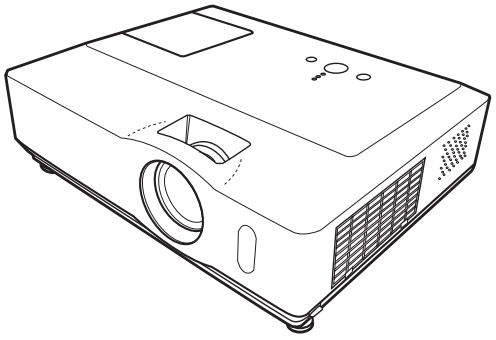
SERVICE MANUAL

ED-X31EP(C14B-20)
ED-X33EP(C14B-20)
ED-X31GEP(C14D-20)
ED-X33GEP(C14D-20)



⚠ Warning

The technical information and parts shown in this manual are not to be used for: the development, design, production, storage or use of nuclear, chemical, biological or missile weapons or other weapons of mass destruction; or military purposes; or purposes that endanger global safety and peace. Moreover, do not sell, give, or export these items, or grant permission for use to parties with such objectives. Forward all inquiries to Hitachi Ltd.

Caution

Be sure to read this manual before servicing. To assure safety from fire, electric shock, injury, harmful radiation and materials, various measures are provided in this Hitachi Multimedia LCD Projector.
Be sure to read cautionary items described in the manual to maintain safety before servicing.

Service Warning

1. When replacing the lamp, avoid burns to your fingers, the lamp becomes very hot.
2. Never touch the lamp bulb with a finger or anything else. Never drop it or give it a shock. They may cause bursting of the bulb.
3. This projector is provided with a high voltage circuit for the lamp. Do not touch the electric parts of the power unit (circuit) or the power unit (ballast) after turning on the projector.
4. Do not touch the exhaust fan during operation.
5. The LCD module assembly is likely to be damaged. If replacing the LCD LENS/PRISM assembly, do not hold the FPC of the LCD module assembly.
6. Use the cables which are included with the projector or as specified.

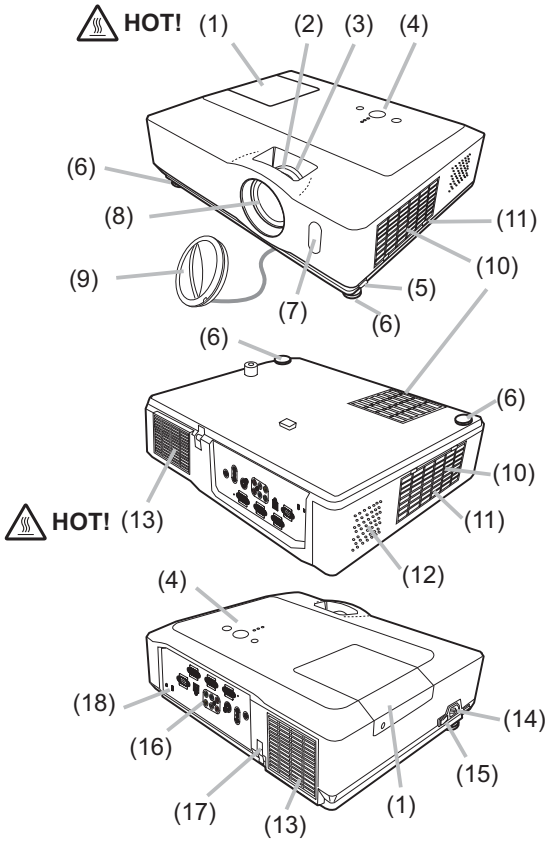
3. Names of each part

● Projector

(1) Lamp cover
The lamp unit is inside.
(2) Focus ring
(3) Zoom ring
(4) Control panel
(5) Elevator buttons (x 2)
(6) Elevator feet (x 2)
(7) Remote sensor
(8) Lens
(9) Lens cover
(10) Intake vents
(11) Filter cover
The air filter and intake vent are inside.
(12) Speaker
(13) Exhaust vent
(14) AC inlet
(15) Power switch
(16) Rear panel
(17) Security bar
(18) Security slot

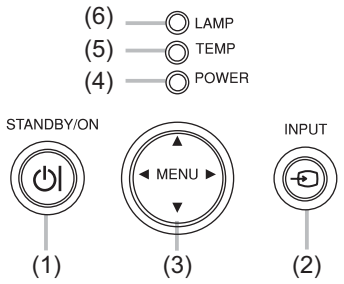


⚠**WARNING** ►**HOT!** : Do not touch around the lamp cover and the exhaust vents during use or just after use, since it is too hot.
►Do not look into the lens or vents while the lamp is on, since the strong light is not good for your eyes.
►Do not handle the elevator buttons without holding the projector, since the projector may drop down.

⚠**CAUTION** ►Maintain normal ventilation to prevent the projector from heating up. Do not cover, block or plug up the vents. Do not place anything that can stick or be sucked to the vents, around the intake vents. Clean the air filter periodically.
►Do not use the security bar and slot to prevent the projector from falling down, since it is not designed for it.

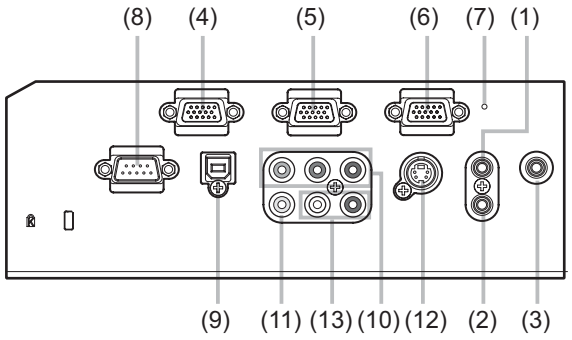
Control panel

(1) STANDBY/ON button
(2) INPUT button
(3) MENU button
    It consists of four cursor buttons.
(4) POWER indicator
(5) TEMP indicator
(6) LAMP indicator



Rear panel

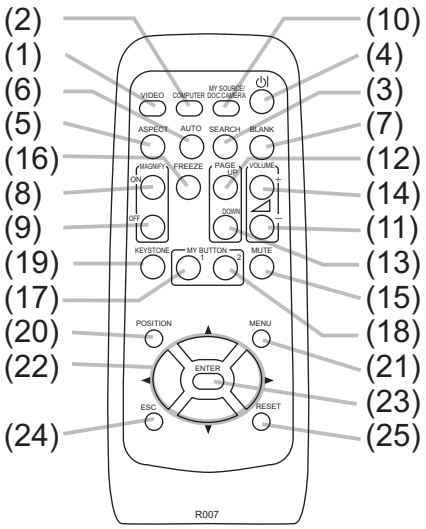
(1) AUDIO IN1 port
(2) AUDIO IN2 port
(3) AUDIO OUT port
(4) COMPUTER IN1 port
(5) COMPUTER IN2 port
(6) MONITOR OUT port
(7) Shutdown switch
(8) CONTROL port
(9) USB port
(10) COMPONENT
    (Y, Cb/Pb, Cr/Pr) ports
(11) VIDEO port
(12) S-VIDEO port
(13) AUDIO IN3 (L,R) ports

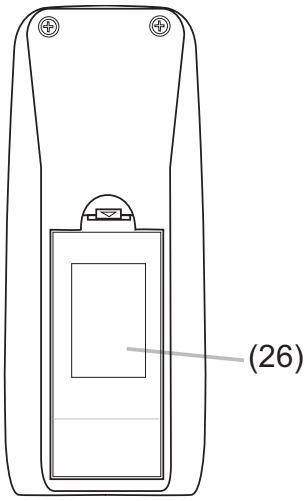


⚠**CAUTION** ►Use the shutdown switch only when the projector is not turned off by normal procedure, since pushing this switch stops operation of the projector without cooling it down.

Remote control

(1) VIDEO button
(2) COMPUTER button
(3) SEARCH button
(4) STANDBY/ON button
(5) ASPECT button
(6) AUTO button
(7) BLANK button
(8) MAGNIFY - ON button
(9) MAGNIFY - OFF button
(10) MY SOURCE/DOC.CAMERA button
(11) VOLUME - button
(12) PAGE UP button
(13) PAGE DOWN button
(14) VOLUME + button
(15) MUTE button
(16) FREEZE button
(17) MY BUTTON - 1 button
(18) MY BUTTON - 2 button
(19) KEYSTONE button
(20) POSITION button
(21) MENU button
(22) ▲/▼/◄/► cursor buttons
(23) ENTER button
(24) ESC button
(25) RESET button
(26) Battery cover





Back of
the remote control

⚠**WARNING** ►Do not look into the beam outlet and point the beam at people and pets while pressing the LASER button, since the beam is not good for eyes.
⚠**CAUTION** ►Note that the laser beam may result in hazardous radiation exposure. Use the laser pointer only for pointing on the screen.

4. Adjustment

4-1 Before adjusting

4-1-1 Selection of adjustment

When any parts in the table 4-1 are changed, choose the proper adjusting items with the chart.

Table 4-1: Relation between the replaced part and adjustment

Replaced part	Adjustment					
	Flicker (Chap.4-2)	Ghost (Chap.4-3)	DC OFF (Chap.4-4)	E-POS (Chap.4-5)	White balance (Chap.4-6)	Color uniformity (Chap.4-7)
Dichroic optics unit	○	○	△	△	△	△
LCD/LENS prism assembly	○	○	○	○	○	○
PWB assembly Main	○	○	○	○	○	○
Lamp unit assembly	△	△	×	×	△	△

○ : means need for adjustment. × : means not need for adjustment.
△ : means recommended.

4-1-2 Setting of condition before adjustments

1. Before starting adjustments, warm up projector for about 10 minutes.
   Turn off the automatic keystone function in OPTION Menu.
   If you changed [AUTO KEYSTONE] from [TURN ON] to [TURN OFF], set to the [TURN ON] after adjustment.
2. Set Zoom Wide to Max. And project an image with more than 1m (40 inches) in diagonal size.
3. Set the lens position to the center, using horizontal and vertical lens shift dials.
4. Normalizing the video adjustments
   Press the [MENU] button to display the EASY menu. If Advanced menu comes up, move to the Easy menu.
   Select the RESET in the EASY menu and press the [▶] or [ENTER] button to open the RESET dialog. Choose the EXECUTE with the [▲] button.
   Note that the projector will not allow you to reset its adjustment values with no signal input.
5. Perform all adjustments from the FACTORY MENU. Operate as follows to display the FACTORY MENU.
   When you use the remote control...
   a. Press the [MENU] button of the remote control to display the Easy menu. (If the Advanced menu appears, move to the Easy menu.)
   b. Select the RESET in the Easy menu, and then press the [▶] or [ENTER] button.
   c. Next, press the [RESET] button one time. And hold the [RESET] button for 3 seconds or longer (the FACTORY MENU will appear).

   When you use the keypad of the projector...
   a. Press the [▲], [▼], [◀] or [▶] button of the projector to display the Easy menu. (If the Advanced menu appears, move to the Easy menu.)
   b. Select the RESET in the Easy menu, and then press the [▶] or [ENTER] button.
   c. Next, press the [▼] button one time. And repress and hold the [▼] button together with the [INPUT] button for 3 seconds or more (the FACTORY MENU will appear).

4-2 Flicker adjustment (V.COM adjustment)

Test pattern for the adjustment

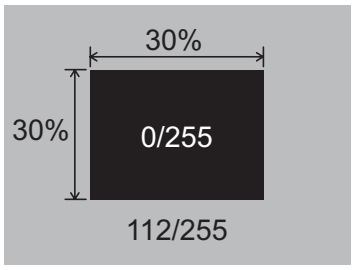
Adjustment procedure

1. Use DAC-P - V.COM - R: in the FACTORY MENU to adjust so that the flicker at the center of the screen is less than the flicker at the periphery. (When the flicker is about the same across the whole screen, adjust so that the flicker at the center of the screen is somewhat less than elsewhere.)
2. In the same way, use DAC-P - V.COM-G: in the FACTORY MENU to adjust the G color flicker.
3. In the same way, use DAC-P - V.COM-B: in the FACTORY MENU to adjust the B color flicker.

NOTE: The test pattern shown on the left sometimes has a horizontal line across the screen.

4-3 Ghost adjustment

Test pattern for the adjustment

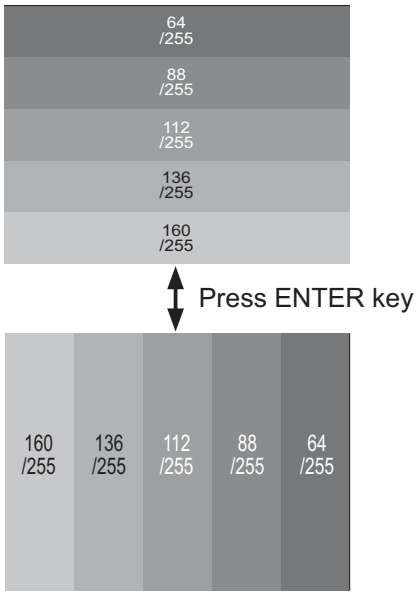


Adjustment procedure

1. Make this adjustment after completing the adjustment in the section 4-2.
   Set 0 to the GHOST R, G, B in OPTION-SERVICE-GHOST Menu.
2. Use DAC-P - GHOST - R: in the FACTORY MENU to adjust so that R color ghost is at a minimum. (Set the adjustment value to default, and then raise the value. When a ghost appears to the left of a vertical line, reduce the value by 6 steps.)
3. In the same way, use DAC-P - GHOST-G: in the FACTORY MENU to adjust so that G color ghost is at a minimum.
4. In the same way, use DAC-P - GHOST-B: in the FACTORY MENU to adjust so that B color ghost is at a minimum.

4-4 DC OFF adjustment (vertical bars adjustment 1)

Test pattern for the adjustment



Adjustment procedure

1. Make this adjustment after completing the adjustment in the section 4-3.
2. Use STRIPE - DCOFF - No. 0 - R : in the FACTORY MENU and use it so that vertical bars are minimized.
3. In the same way, use STRIPE - DCOFF - No. 0 - G : in the FACTORY MENU and use it so that vertical bars are minimized.
4. In the same way, use STRIPE - DCOFF - No. 0 - B : in the FACTORY MENU and use it so that vertical bars are minimized.

4-5 E-POS adjustment (vertical bars adjustment 2)

Test pattern for the adjustment

Adjustment procedure

1. Make this adjustment after completing the adjustment in the section 4-4.
2. Use DAC -P - E-POS - R in the FACTORY MENU and use it so that vertical bars are minimized.
3. In the same way, select DAC-P - E-POS - G and use it so that vertical bars are minimized.
4. In the same way, select DAC-P - E-POS - B and use it so that vertical bars are minimized.

4-6 White balance adjustment (visual inspection)

Preparations

1. Perform these adjustments after the adjustments described in Section 4-5.
2. Reset gamma correction before adjustment.
   - Place the cursor on [GAMMA] in the FACTORY MENU, press the [RESET] key and select RESET.

Adjustment procedure

1. First, adjust the G color.
2. Select GAMMA, SUB-CNT, and G: in the FACTORY MENU. If the background is white solid, press the [ENTER] key on the Remote control transmitter to change to [G] monochrome in the 33-tone grayscale.
3. Adjust GAMMA, SUB-CNT, and G: in the FACTORY MENU so that brightness of 33 steps is best.
4. Don't adjust GAMMA, SUB-BRT, and G: in the FACTORY MENU because we want to keep the best contrast ratio.
5. Then adjust colors R and B.
6. Select GAMMA, SUB-CNT, and G: in the FACTORY MENU. If the background is white solid, press the [ENTER] key on the remote control to change to [W] monochrome in the 33-tone grayscale.
7. Adjust GAMMA, SUB-BRT, R: and B: in the FACTORY MENU so that low-brightness white balance is best.
8. Adjust GAMMA, SUB-CNT, R: and B: in the FACTORY MENU so that middle-brightness white balance is best.
9. Repeat steps 7 to 8 above, and adjust so that brightness white balance of 33 steps is best.

4-7 Color uniformity adjustments

Preparations

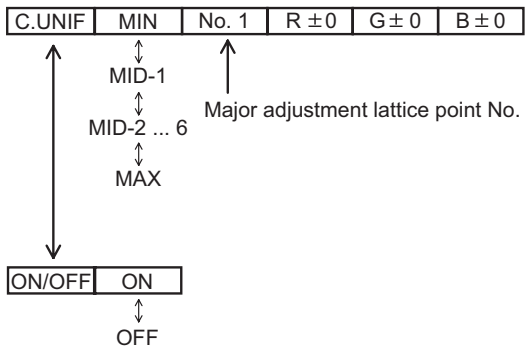
1. Perform these adjustments after the adjustments described in the section 4-6.
2. Make a color uniformity adjustments for the following tones.
   - MIN tone (approx. 7% input signal)
   - MID-1 tone (approx. 14% input signal)
   - MID-2 tone (approx. 21% input signal)
   - MID-3 tone (approx. 29% input signal)
   - MID-4 tone (approx. 36% input signal)
   - MID-5 tone (approx. 50% input signal)
   - MID-6 tone (approx. 61% input signal)
   - MAX tone (approx. 75% input signal)

   NOTE: The brightness level of the test patterns in MID-4 and MID-6 is selectable.
3. Select the [C.UNIF.] in the FACTORY MENU and press the [▶] key. This operation displays the Adjust Tone menu (shown below) on the bottom of the screen.
   To choose the tone to be adjusted, press the [▶] key and then use the [▲] or [▼] key.
   Select the major adjustment lattice point No. and color, and then adjust them.
4. The major adjustment lattice point numbers (a total of 17 points) corresponds to the major adjustment lattice point positions in the diagram on the right. The color uniformity of the entire screen can be adjusted by adjusting the white balance for each of the points starting in order from the low numbers.
5. Adjustment point No.1 should not be adjusted, because it controls the brightness of the entire screen.
6. To temporarily turn correction off, place the cursor on [C.UNIF.] in the Adjust Tone menu and press the [▼] key. The ON/OFF menu appears. Place the cursor on [ON] with the [▶] key and press the [▼] key. To turn it on again, place the cursor on [OFF] and press the [▲] key.
7. Although this adjustment can also be made using internal signals, we will here use the [ENTER] key on the remote control to select the following two signals.
   - Solid monochrome adjustment color (use G color adjustment when a color differential meter is used).
   - Solid white (use for adjustment other than above).
8. Reset color-shading correction before adjustment.
   - When resetting all values of 8 tones and all colors, place the cursor on [C.UNIF.] in the FACTORY MENU, press the [RESET] key and select RESET in the dialog.
   - When resetting only 1 tone, place the cursor on the tone such as MID-1 to be reset, press the [RESET] key and select RESET in the dialog.
   - Single tone and monochrome resets cannot be performed.

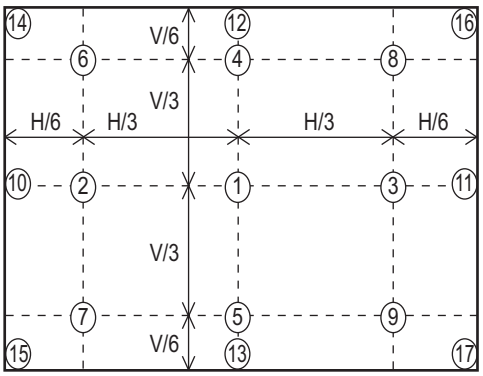
FACTORY MENU

VID-AD
C. UNIF.
DAC-P
GAMMA
STRIPE
OPTION

Adjust tone menu



Major adjustment lattice point position

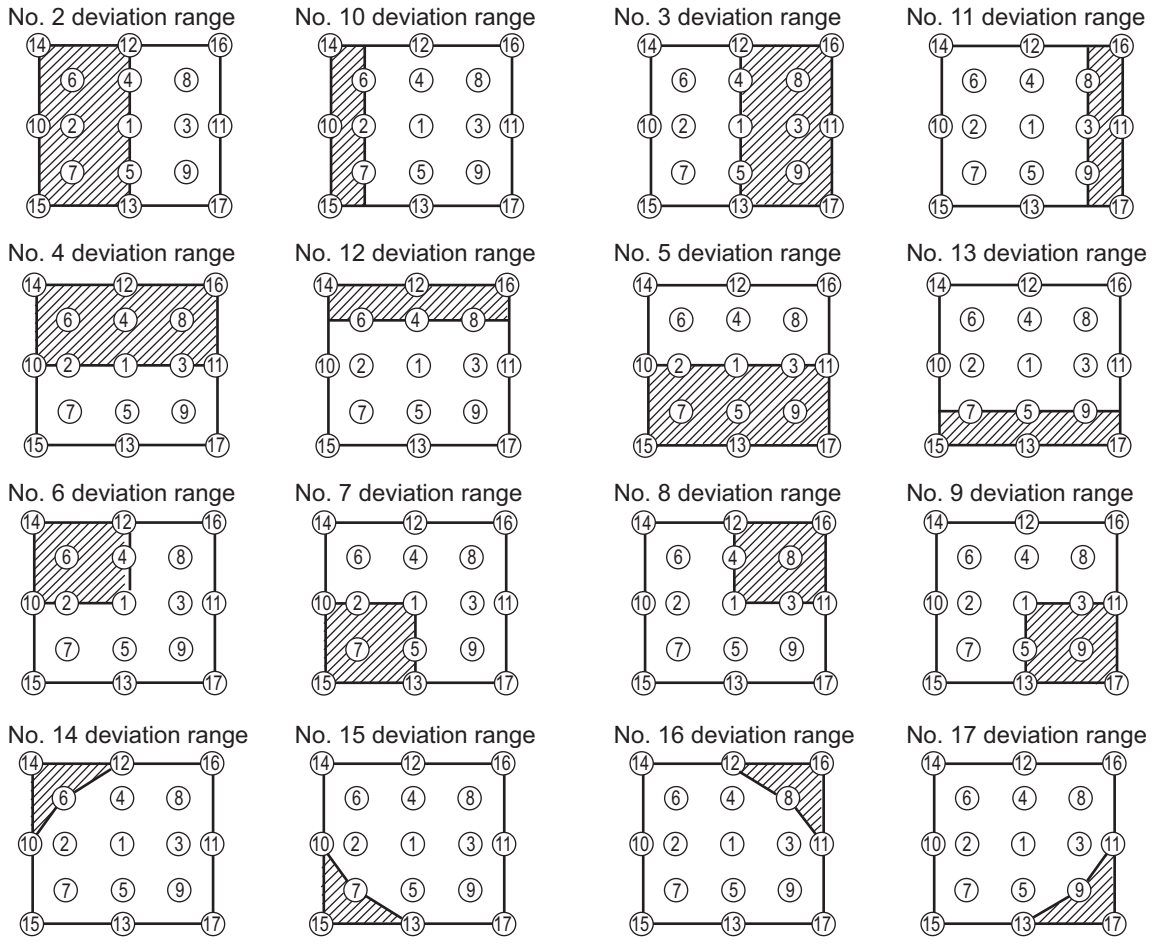


Adjustment procedure 1
(When a color differential meter is used)

1. First adjust the [MID-1] tone [G:].
2. Select adjustment point [No.2][G:].
   When the background is not [G] monochrome, press the [ENTER] key on the remote control to switch to solid [G] monochrome.
3. Measure the illumination at adjustment points No. 2, No.3, No.10 and No.11.
   The values should be:
   No.2 = Y2 [lx] No.10 = Y10 [lx]
   No.3 = Y3 [lx] No.11 = Y11 [lx]
4. No.2 and No.3 adjustment points have the average of Y2 and Y3.
   Y2 = (Y2 + Y3) / 2 ± 2 [%]
   Y3 = (Y2 + Y3) / 2 ± 2 [%]
5. No.10 and No.11 adjustment points have the average of Y10 and Y11.
   Y10 = (Y10 + Y11) / 2 ± 2 [%]
   Y11 = (Y10 + Y11) / 2 ± 2 [%]
6. Then adjust the [MID-1] tone [R] and [B].
   When the background is [G] monochrome, press the [ENTER] key on the remote control to switch to solid white.
7. Measure the color coordinates of adjustment point [No.1] and make a note of them.
   Assume that they are x = x1, y = y1.
   Note: When the CL-100 color and color difference meter is used, the [Δ](delta) mode is convenient. When adjustment point [No.1] color coordinate has been selected, set the slide switch on the side to [Δ](delta) while holding down the [F] button on the front panel. The measurement shown after this displays the deviation from measurement point 1.
8. Measure the color coordinates of measurement point [No.2] and adjust [No.2][R:] and [B:] so that the coordinates are as follows.
   x = x1 ± 0.005 , y = y1 ± 0.010
9. Similarly, measure adjustment points [No.3] to [No.17] and adjust their color coordinates starting in order from the small number points.
   This completes adjustments required for [MID-1].
   Note: Since excessive correction may lead to a correction data overview during internal calculations, use the following values for reference.
   [No.2] to [No.5] ± 40 or less
   [No.6] to [No.9] ± 50 or less
   [No.10] to [No.13] ± 70 or less
   [No.14] to [No.17] ± 120 or less
10. Then adjust the [MIN] tone [G] so that the adjustment values are two times as much as MID-1] tone [G] values.
    This completes [G] color adjustments.
11. Then adjust [MIN] tone [R] and [B].
    Select [No.2] [B:] and press the [ENTER] key on the Remote control transmitter to change to solid white.
12. Measure the color coordinates of adjustment point [No.1] and make a note of them.
    Assume that they are x = x1, y = y1.
13. Now measure the color coordinates of measurement point [No.2] and adjust [No.2][R:] and [B:] so that the coordinates are as follows.
    x = x1 ± 0.005 , y = y1 ± 0.010 (Target)
    x = x1 ± 0.020 , y = y1 ± 0.040
14. Similarly, measure adjustment points [No.3] to [No.17] and adjust their color coordinates starting in order from the small number points.
    This completes [MIN] tone adjustments.
15. Now make similar adjustments for [MID-2] tone. (Adjust [MID-2] tone [G] so that the adjustment data set half as many as [MID-1] tone [G].)
16. Now make similar adjustments for [MID-3], [MID-5], [MAX] tones. (It is not necessary to adjust the [G] data in these tones.)
17. After completing the step 16, set the value of the [MID-4] tone [R]: [No.2] to the mean of the values of the [R]: [No.2] in the [MID-3] and [MID-4] tones.
18. Set all the values for the [No.2] to [No.17] of the [MID-4] tone [R] and [B] in the same way as the step 17.
19. Finally, set the data of the [MID-6] tone [R] and [B] using the values of the [MID-5] and [MAX] tones in the same way as the [MID-4] tone [R] and [B] adjustments in the step 17 and 18.

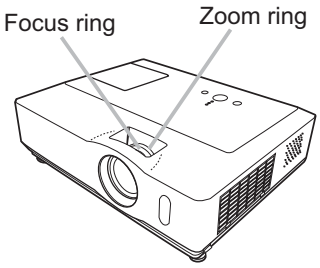
Adjustment procedure 2
(visual inspection)

1. First adjust [MIN] tone [G:].
2. Select [No.2] [G:].
   If the background is [G] monochrome, press the [ENTER] key on the remote control to switch to solid white.
3. View measurement point [No.2] and [No.3]. Lower the [G] color intensity only of the color point whose [G] color is more intense than measurement point [No.1].
4. View measurement point [No.10] and [No.11]. Lower the [G] color intensity only of the color point whose [G] color is more intense than measurement point [No.1], and raise the intensity of the point whose color intensity is lower than measurement point [No.1].
5. Now adjust the [MIN] tone for colors [R] and [B].
6. View measurement points [No.2], [No.3], [No.10] and [No.11]. Adjust the [R] and [B] of each measurement point so that they have the same color as measurement point [No.1].
   Adjustment technique:
   First, adjust [B:] of the point whose color is to be adjusted so that it approximates that of [No.1]. If [R:] is low at this time, the image will have cyan cast, in which case [R:] is increased. On the other hand, if [R:] is excessive, the image will have a magenta cast, in which case [R:] is decreased.
   Overall, a cyan cast makes it easy to see color shading.
7. Next, view measurement points [No.4], [No.5], [No.12], [No.13] and make similar adjustments.
8. Then adjust measurement points [No.6], [No.7], [No.8], [No.9], [No.14], [No.15], [No.16] and [No.17]. This completes the [MIN] tone adjustments.
9. Make similar adjustments for other tones, except the [MID-4] and [MID-6] tones, as described in steps 1 to 8 above.



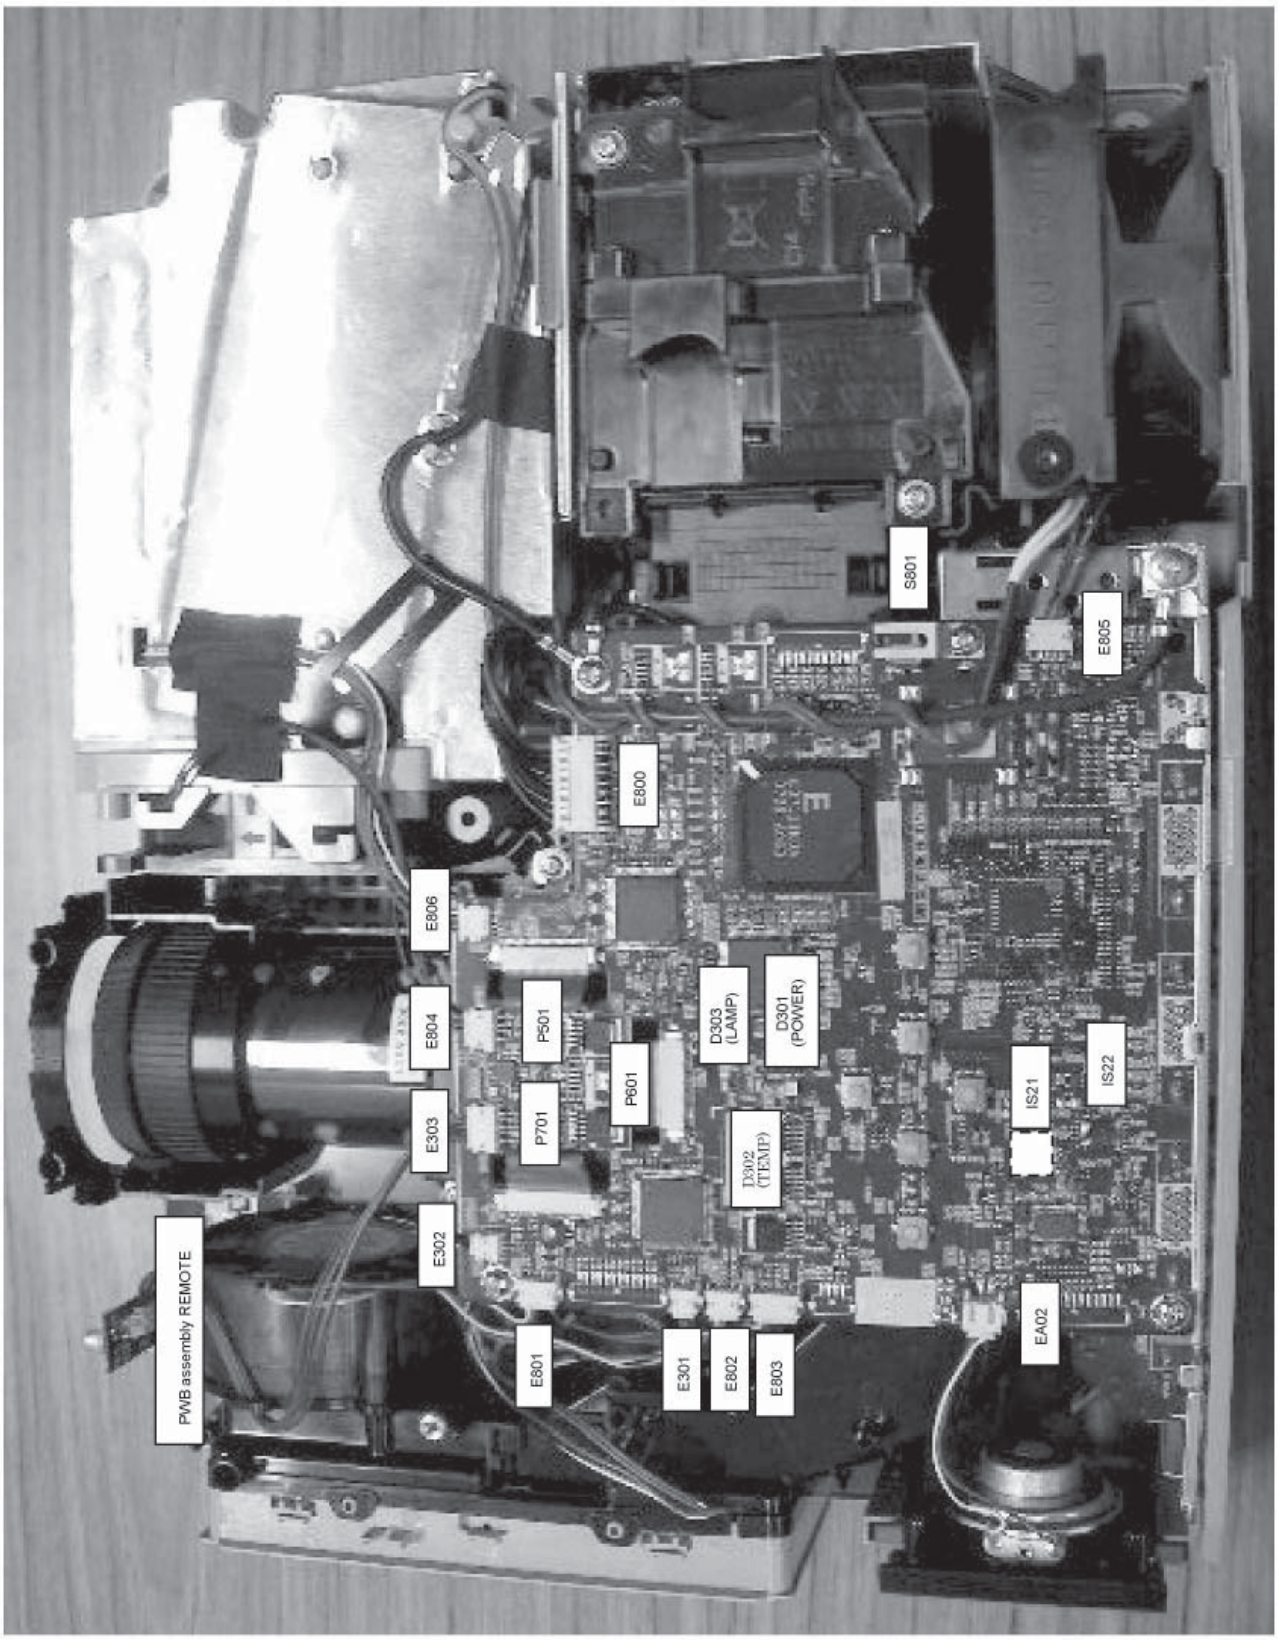
4-8 Adjusting the zoom and focus

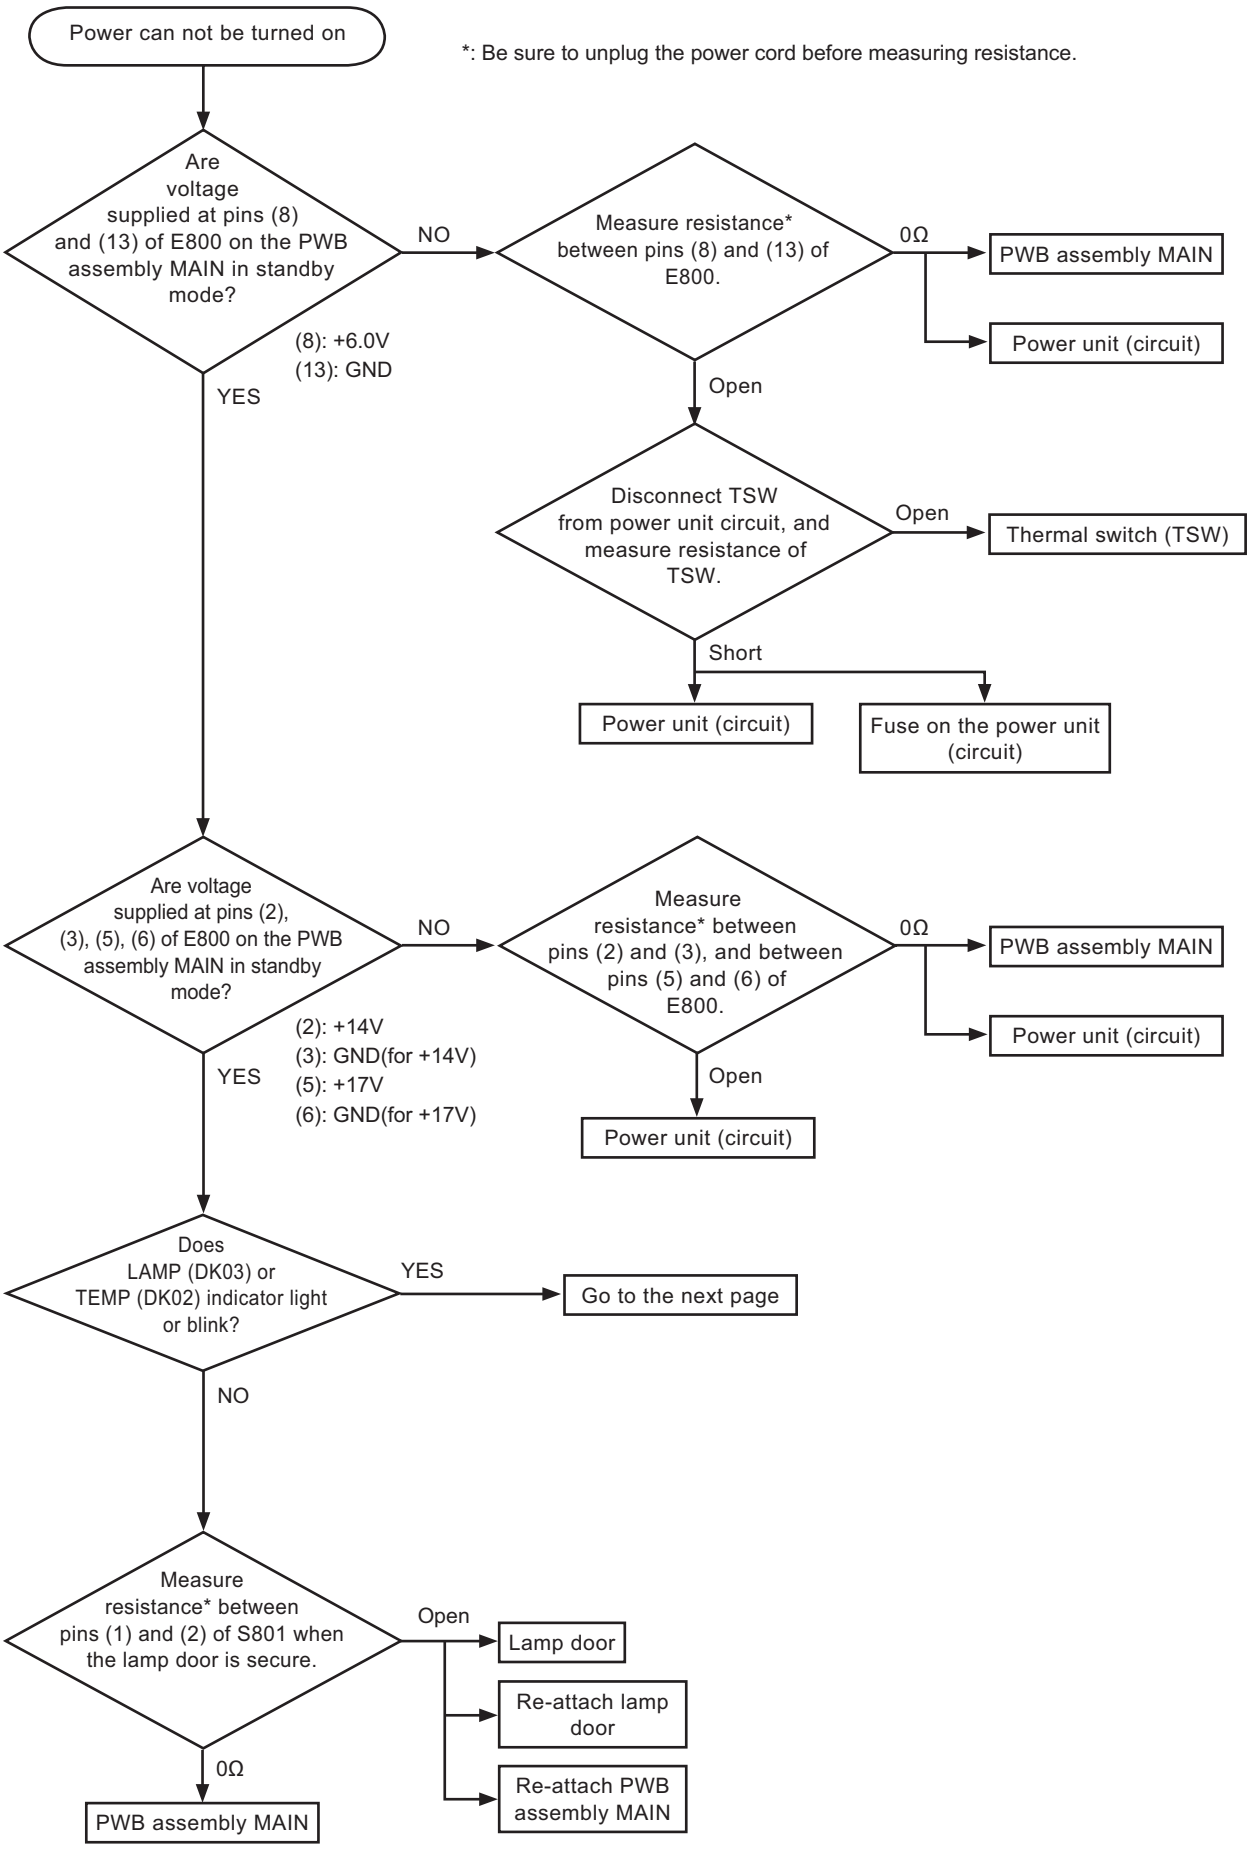
1. Use the zoom ring to adjust the screen size.
2. Use the focus ring to focus the picture.



5. Troubleshooting

Check points





Power can not be turned on
*: Be sure to unplug the power cord before measuring resistance.
Are voltage supplied at pins (8) and (13) of E800 on the PWB assembly MAIN in standby mode?
NO
Measure resistance* between pins (8) and (13) of E800.
0Ω

The check after parts change

1. PC power supply OFF
2. Connection of cable
3. Projector starting
4. PC starting
   *When not operating :
   PC set up change of cable.

6. Service points

6-1 Lead free solder [CAUTION]

This product uses lead free solder (unleaded) to help preserve the environment. Please read these instructions before attempting any soldering work.

⚠ CAUTION
Always wear safety glasses to prevent fumes or molten solder from getting into the eyes. Lead free solder can splatter at high temperatures (600˚C).

■ Lead free solder indicator

Printed circuit boards using lead free solder are engraved with an "F" or "LF".

■ Properties of lead free solder

The melting point of lead free solder is 40-50˚C higher than leaded solder.

■ Servicing solder

Solder with an alloy composition of Sn-3.0Ag-0.5Cu or Sn-0.7Cu is recommended.
Although servicing with leaded solder is possible, there are a few precautions that have to be taken. (Not taking these precautions may cause the solder to not harden properly, and lead to consequent malfunctions.)

Precautions when using leaded solder

- Remove all lead free solder from soldered joints when replacing components.
- If leaded solder should be added to existing lead free joints, mix in the leaded solder thoroughly after the lead free solder has been completely melted (do not apply the soldering iron without solder).

■ Servicing soldering iron

A soldering iron with a temperature setting capability (temperature control function) is recommended.
The melting point of lead free solder is higher than leaded solder. Use a soldering iron that maintains a high stable temperature (large heat capacity), and that allows temperature adjustment according to the part being serviced, to avoid poor servicing performance.

Recommended soldering iron:

- Soldering iron with temperature control function (temperature range: 320-450˚C)

Recommended temperature range per part:

Part	Soldering iron temperature
Mounting (chips) on mounted PCB	320˚C±30˚C
Mounting (chips) on empty PCB	380˚C±30˚C
Chassis, metallic shield, etc.	420˚C±30˚C

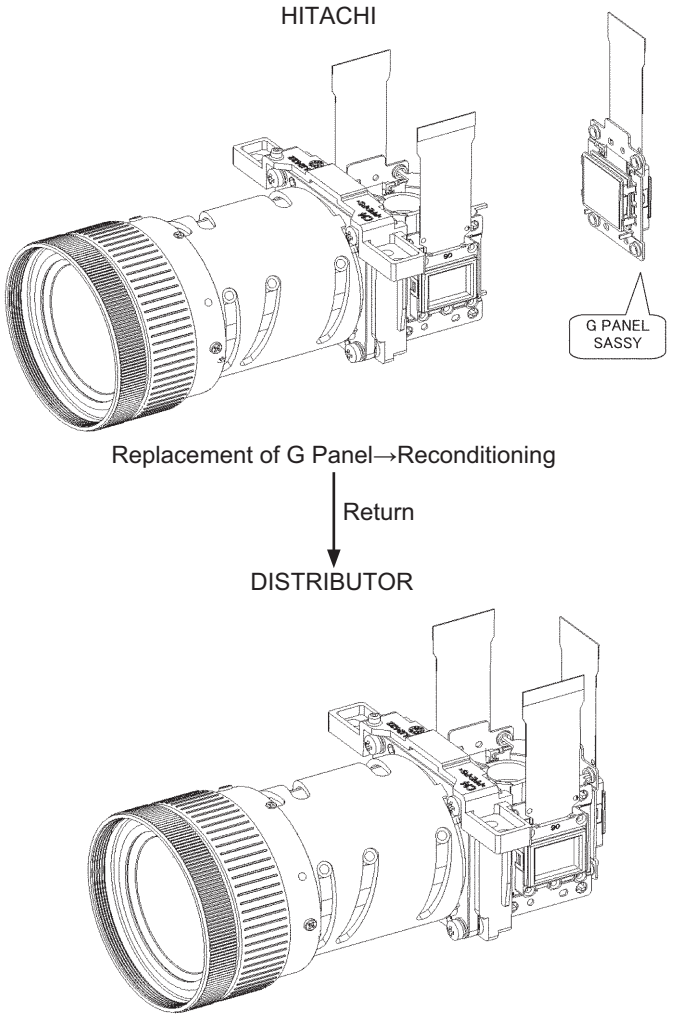
The PWB assembly which has used lead free solder

PWB assembly MAIN
PWB assembly REMOTE
PWB assembly INPUT
POWER UNIT (BALLAST)
POWER UNIT (CIRCUIT)

6-2 Before Replacing The LCD/Lens Prism

You should not replace separately the parts of the liquid crystal LCD/Lens prism because it works properly only when used together. Therefore, regarding these parts, you can either replace part, LCD/Lens prism assembly, or send the whole unit LCD/Lens prism assembly back to HITACHI, where we will replace the malfunctioning part, recondition the device and send it back to you.

Do not disassemble the unit because replacement of separate parts is not possible.



6-3 Cleaning up dust from panels and optical filters

⚠ WARNING
Wear sunglasses to protect your eyes when you maintain the projector with its lamp on.

1. Preparation

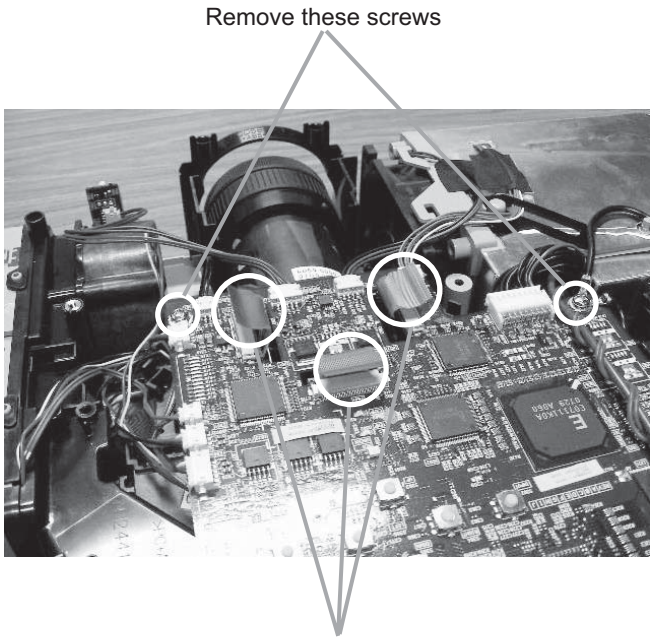
Please prepare cleaning tools and materials as follows. And prepare relatively clean room not to work in additional dust, while removing operation.

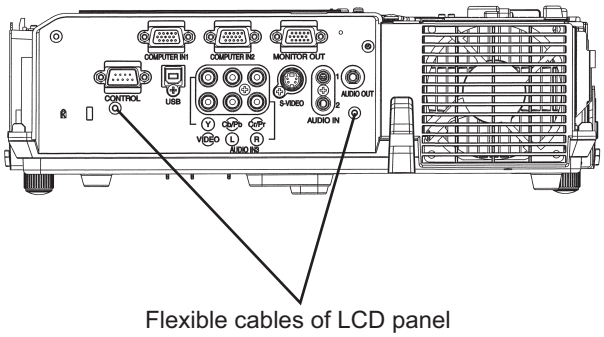
(1) Swab for cleaning : P#: NX32451, "Cotton stick BB-014"
(2) Air duster (Dust blower, spray can)
(3) Vacuum cleaner

2. Disassemble and setting up.

(1) Turn off the projector, and unplug the power cord.
(2) Remove the lamp cover and upper case, according to the disassembling diagram of chapter 8.

(3) Disconnect the LCD panel flexible cables and unscrew PWB assembly MAIN to make it free.





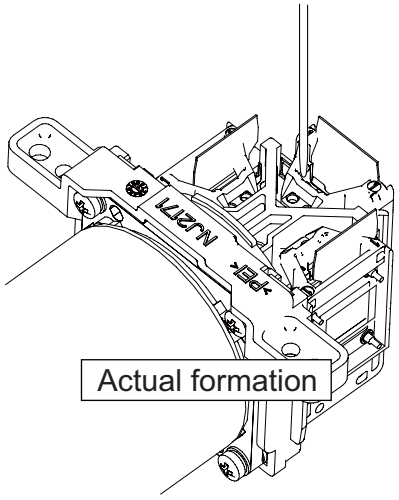
⚠ WARNING

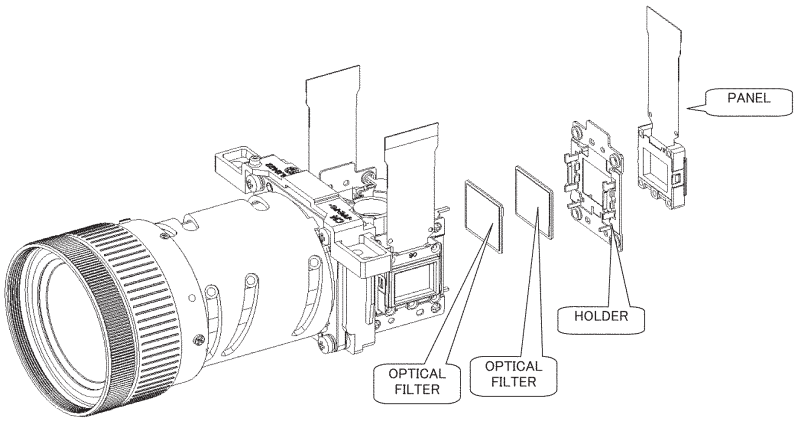
Never put the heavy stress to the main board.
Otherwise, connectors will be damaged.

(4) Press and hold the switch S801 using an insulator during maintenance.

(5) Keep the unscrewed wires away from all of electric parts.

3. Maintenance point



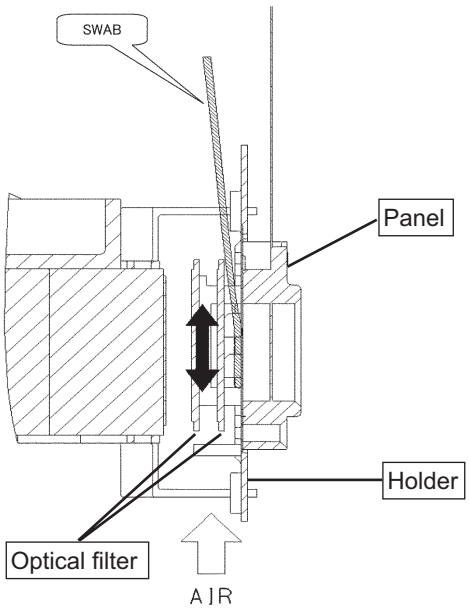


Each color part has same construction.By using swab and air duster, you can easily remove dust from panel and optical filter.

4. Cleaning the panels and optical filters

(1) Turn on the set and lit on the lamp.

(2) By using swab and air duster, remove the dust. Focusing dust makes you check the dust on screen.



- While removing the dust, separated dust will be blown off by air cooling system.
- Please pay attention not to damage panels and optical filters.
- Bend the top of SWAB a little if it is hard to insert the SWAB.

5. Re-assembly

(1) Turn off the set and unplug the power cord.

(2) Remove an insulator from S801.

(3) Screw down the PWB assembly MAIN and connect the LCD panel flexible cables to the PWB assembly MAIN.

(4) Re-assemble the set.

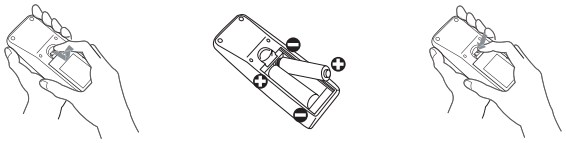
(5) While re-assembling, please clean the intake filter by using a vacuum cleaner.

6-4 Putting batteries

⚠ WARNING

Always handle the batteries with care and use them only as directed. Improper use may result in battery explosion, cracking or leakage, which could result in fire, injury and/or pollution of the surrounding environment.

- Be sure to use only the batteries specified. Do not use batteries of different types at the same time. Do not mix a new battery with used one.
- Make sure the plus and minus terminals are correctly aligned when loading a battery.
- Keep a battery away from children and pets.
- Do not recharge, short circuit, solder or disassemble a battery.
- Do not allow a battery in a fire or water. Keep batteries in a dark, cool and dry place.
- If you observe a leakage of a battery, wipe out the flower and then replace a battery. If the flower adheres your body or clothes, rinse well with water immediately.



- Use the batteries included in this product or two new batteries of the specified type: **HITACHI MAXELL,** part number **LR6** or **R6P**.

1. Remove the battery cover.
   Slide back and remove the battery cover in the direction of the arrow.
2. Insert the batteries.
   Align and insert the two AA batteries according to their plus and minus terminals as indicated in the remote control.
3. Close the battery cover.
   Replace the battery cover in the direction of the arrow and snap it back into place.

The signal settings for the remote control transmitter and the projector's remote sensor can be changed.
If the remote control does not function properly try changing the signal setting.
Changing the signal setting for the remote control transmitter

(1) Setting 1 (FREQ. : NORMAL)
Simultaneously press and hold the VOLUME − and RESET buttons for about 3 seconds.
(2) Setting 2 (FREQ. : HIGH)
Simultaneously press and hold the MAGNIFY OFF and ESC buttons for about 3 seconds.

- Setting 1 is the factory default setting.
- When the batteries are removed from the remote control, user-specified settings are saved for about half a day. If the batteries are removed from the remote control for longer than half a day, the remote will reset to Setting 1.

Changing the signal setting for the projector's remote sensor

Switch between Setting 1 and 2 using the SERVICE/REMOTE FREQ. item found in OPTION MENU.
Use the ▲/▼ button to change the Projector's remote sensor setting.
1:NORMAL ↔ 2:HIGH
Items with a checkmark are on. The factory default setting is for both 1:NORMAL and 2:HIGH to be on.
If the remote control does not function correctly set this to either only 1 or only 2. Neither can be turned off at the same time.

NOTE: The remote control will not function properly if the remote control transmitter settings and the projector's remote sensor settings are not the same.

6-5 Air filter

⚠ WARNING

- Before caring, make sure the power switch is off and the power cable is not plugged in, then allow the projector to cool sufficiently. The care in a high temperature state of the projector could cause an electric shock, a burn and/or malfunction to the projector.
- Use only the air filter of the specified type. Do not use the projector with the air filter and the filter cover removed. It could result in a fire and/or malfunction to the projector.
- The air filter should be cleaned periodically. If the air filter becomes clogged by dust or the like, internal temperatures rise and could cause a fire, a burn and/or malfunction to the projector.

NOTE

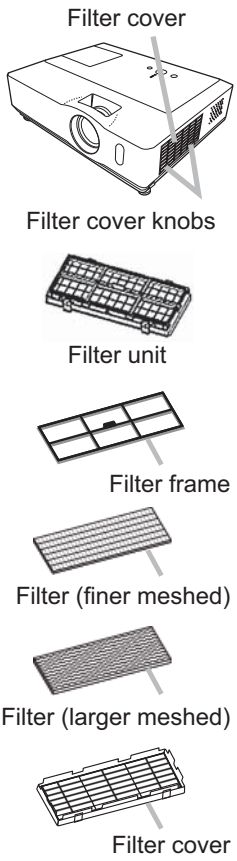
- Please replace the air filter when it is damaged or too soiled, and also when you replace the lamp.
- Please reset the filter time only when you have cleaned or replaced the air filter, for a suitable indication about the air filter.
- The projector may display the message such as “CHECK THE AIR FLOW” or turn itself off, to prevent the internal heat level rising.

If the air filter becomes clogged by dust or the like, internal temperatures rise and could cause a fire, a burn and/or malfunction to the projector. When the indicators or a message prompts to clean the air filter, clean the air filter as soon as possible.
Please check and clean the air filter periodically, even if there is no message.Please replace the air filter when it is damaged or too soiled.

And also when you replace the lamp, please replace the air filter. An air filter of specified type will come together with a replacement lamp for this projector.

1. Turn the projector off, and unplug the power cord. Allow the lamp to cool for at least 45 minutes.
2. When the projector is suspended from the ceiling, apply the vacuum cleaner to and around the filter cover first, to prevent penetration of dust or the like.
3. Pull the filter cover knobs while lifting it. The filter unit which consists of the filter' cover, air filter and filter frame will come off.
4. Use a vacuum cleaner for the filter vent of the projector and the filter frame side of the filter unit.
   If the air filter is damaged or too soiled, replace it according to the following procedure number 5 to 7.
   Otherwise, please jump to the procedure number 8.
5. Pull the filter frame' knob up while holding the filter cover. The filter frame will come off and the air filter will appear.
6. Replace the air filter with new one.
7. Put the filter frame back.
8. Put the filter unit back into the projector.
9. Turn the projector on and reset the filter time using the FILTER TIME item in the EASY MENU.

(1) Press the MENU button to display a menu.
(2) Point at the “FILTER TIME” using the ▼/▲ button, then press the ► button. A dialog will appear.
(3) Press the ▲ button to select “RESET” on the dialog. It performs resetting the filter time.



6-6 Lamp

⚠ WARNING

- The projector uses a high-pressure mercury glass lamp. The lamp can **break with a loud bang, or burn out,** if jolted or scratched, handled while hot, or worn over time. Note that each lamp has a different lifetime, and some may burst or burn out soon after you start using them. In addition, when the bulb bursts, it is possible for **shards of glass** to fly into the lamp housing, and for **gas containing mercury** to escape from the projector's vent holes.

- **About disposal of a lamp** • This product contains a mercury lamp; do not put it in the trash. Dispose of in accord with environmental laws.
For lamp recycling, go to www.lamprecycle.org. (in the US) For product disposal, contact your local government agency or www.eiae.org (in the US) or www.epsc.ca (in Canada).

Disconnect the plug from the power outlet

- If the lamp should break (it will make a loud bang when it does), unplug the power cord from the outlet. Note that shards of glass could damage the projector's internals, or cause injury during handling.
- If the lamp should break (it will make a loud bang when it does), ventilate the room well, and make sure not to breathe the gas that comes out of the projector vents, or get it in your eyes or mouth.
- Before replacing the lamp, turn the projector off and unplug the power cord, then wait at least 45 minutes for the lamp to cool sufficiently. Handling the lamp while hot can cause burns, as well as damaging the lamp.

- Never unscrew except the appointed (marked by an arrow) screws.
- Do not open the lamp cover while the projector is suspended from above. This is dangerous, since if the lamp's bulb has broken, the shards will fall out when the cover is opened.
- Do not use the projector with the lamp cover removed. At the lamp replacing, make sure that the screws are screwed in firmly. Loose screws could result in damage or injury.

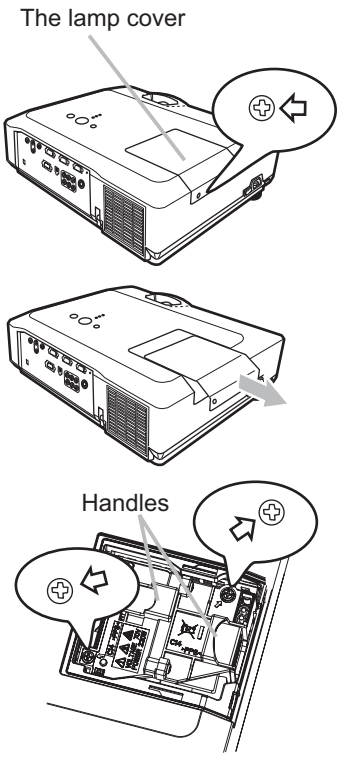
- Use only the lamp of the specified type.
- If the lamp breaks soon after the first time it is used, it is possible that there are electrical problems elsewhere besides the lamp. If this happens, contact your local dealer or a service representative.
- Handle with care: jolting or scratching could cause the lamp bulb to burst during use.
- Using the lamp for long periods of time could cause it dark, not to light up or to burst. When the pictures appear dark, or when the color tone is poor, please replace the lamp as soon as possible. Do not use old (used) lamps; this is a cause of breakage.
- Do not break up the lamp to replace because the structual parts broken up is unavailable.

● Replacing the Lamp

A lamp has a finite product life. Using the lamp for long periods of time could cause the pictures darker or the color tone poor. Note that each lamp has a different lifetime, and some may burst or burn out soon after being started using.

1. Turn the projector off, and unplug the power cord. Allow the projector to cool for at least 45 minutes.
2. Prepare a new lamp.
3. Loosen the screw (marked by arrow) of the lamp cover and then slide the lamp cover to the side to remove it.
4. Loosen the 2 screws (marked by arrow) of the lamp, and slowly pick up the lamp by the handles.
5. Insert the new lamp, and retighten firmly the 2 screws of the lamp that are loosened in the previous process to lock it in place.
6. Slide the lamp cover back in place and firmly fasten the screw of the lamp cover.
7. Turn the projector on and reset the lamp time using the LAMP TIME function in the OPTION menu.

(1) Press the MENU button to display a menu. Only when the EASY MENU has appeared, please perform the next step (2).
(2) Point at the “Go to Advanced Menu …” in the menu using ▼/▲ button, then press the ► button.
(3) Point at the “OPTION” in the left column of the menu using ▼/▲ button, then press the ► button.
(4) Point at the ”LAMP TIME” using ▼/▲ button, then press the ► button. A dialog will appear.
(5) Press the ▲ button to select “RESET” on the dialog. It performs resetting the lamp time.



NOTE
• Please reset the lamp time only when you have replaced the lamp, for a suitable indication about the lamp.

6-7 Other care

⚠ WARNING

Before caring, make sure the power switch is off and the power cable is not plugged in, and then allow the projector to cool sufficiently. The care in a high temperature state of the projector could cause a burn and/or malfunction to the projector.
Avoid wetting the projector or inserting liquids in the projector. It could result in a fire, an electric shock, and and/or malfunction to the projector.
• Don't put a container containing water , cleaner or chemicals near the projector.
• Don't use aerosols or sprays.

⚠ CAUTION

Please take right care of the projector according to the following. Incorrect care could cause not only an injury but adverse influence such as discoloration, peeling paint, etc.
• Do not use cleaner or chemicals other than those listed below.
• Do not polish or wipe with hard objects.

● **Inside of the projector**

In order to ensure the safe use of the projector, it needs to clean and inspect the projector about once a year.

● **Caring for the lens**

If the lens is flawed, soiled or fogged, it could cause deterioration of display quality. Please take care of the lens, being cautions of the handling.

1. Turn the projector off, and unplug the power cord. Allow the projector to cool sufficiently.
2. After making sure that the projector is cool adequately, lightly wipe the lens with a commercially available lens-cleaning wipe. Do not touch the lens directly with your hand.

● **Caring for the cabinet and remote control**

Incorrect care could have adverse influence such as discoloration, peeling paint, etc.

1. Turn the projector off, and unplug the power cord. Allow the projector to cool sufficiently.
2. After making sure that the projector is cool adequately, lightly wipe with gauze or a soft cloth.
   If soiling is severe, dip soft cloth in water or a neutral cleaner dilute in water, and wipe lightly after wringing well. Then, wipe lightly with a soft, dry cloth.

6-8 Notice of AUTO adjustment

Use of AUTO adjustment with the image through RGB input optimizes V_POSI, H_POSI, and H_PHASE automatically.

In case that projected image has dark tone around its peripheral, AUTO operation sometimes makes artifacts in the image, shifts capture area and so on. Those failures are caused by period of image data is not exactly distinguished to period of blanking on signal processing.

To avoid such phenomena, AUTO function should be used with the full size picture that has bright tone on its peripheral.

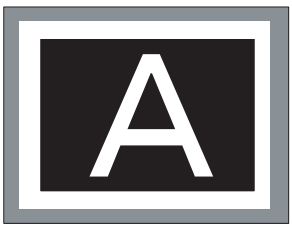


Image when AUTO operates correctly

Image when AUTO fails.

- Noting image of top or bottom lines.
- Shift of the image to East or West.
- Artifacts on image. Etc.

Note

1) The phenomenon at the failure of AUTO adjustment depends on resolution of input source, scene of picture etc.
2) There is no failure above in AUTO with video source through VIDEO, S-VIDEO or COMPONENT input.
   The reason is why recognition of input signal's standard does not need to search the capture range from input signal itself.

6-9 How to deactivate the security functions

This projector is equipped with security functions.

(1)MyScreen PASSWORD

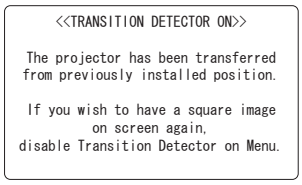
The MyScreen PASSWORD function can be used to prohibit access to the MyScreen function and prevent the currently registered MyScreen image from being overwritten.

(2)PIN LOCK

PIN LOCK is a function which prevents the projector from being used unless a registered Code is input.

(3)Transition detector

Transition detector is a function which prevents the projector from being used if vertical angle of the projector and mirror setting is not same with recorded.



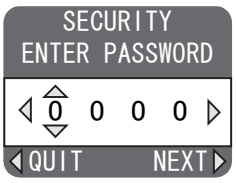
Transition Detector Alarm

(4)MY TEXT

This item allows you to display your own message (MY TEXT) on the START UP screen and INPUT-INFORMATION. It can be protected by a password to prevent it from being overwritten.

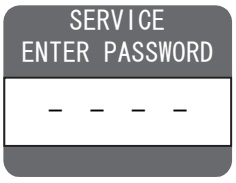
It is possible to deactivate all security functions temporarily with following procedures.

(1) Go to “SECURITY” on OPTION Menu and press the ► button.
Then, ENTER PASSWORD box will be displayed.
(The BOX will be displayed by pressing the [MENU] button (remote) or [▲/▼/◄/►] button (keypad) when Transition Detector Alarm is displayed.)



ENTER PASSWORD box

(2) Press the [Magnify off] button once, then press [Magnify off] button of remote for 3 second or more to display SERVICE PASSWORD box.



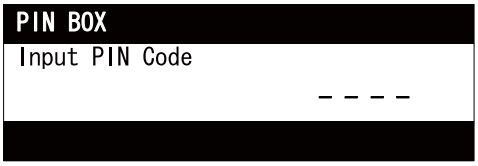
SERVICE PASSWORD box

(3) Enter the Life Key (MENU, ▼, KEYSTONE, ▲). Then all security functions will be deactivated temporarily.

Note: • The Life key can be used up to 30 times. The key cannot be used thereafter. If the Life key cannot be used, see the paragraph of SECURITY in the User’s Manual.
The frequency in which Life key is input will be set to 0 after the registered code is input.
• The SECURITY Menu can not be operated if the SECURITY PASSWORD was released by Life key.
• The Mirror, Keystone and Auto keystone are not memorized though they are possible to operate if Transition Detector was released by Life key.
• The MyScreen Lock on SCREEN Menu keeps “TURN ON” if MyScreen PASSWORD was set when SECURITY PASSWORD was released by Life key.

6-10 PIN LOCK System

If the following PIN BOX menu appears after power on the projector, the PIN LOCK system has been activated. Under such a condition, key operations and signal displaying are inhibited. To open the PIN LOCK system, we need to input the correct 4 digits PIN CODE. If correct PIN CODE is not input in 5 min., the lamp will be automatically turned off.



PIN BOX

Returning repaired unit

Use the Master PIN code. See the paragraph of Releasing the PIN LOCK system deactivation.

Swap unit/Returned unit

Release all security systems. See the paragraph of the PIN LOCK system deactivation.

Releasing the PIN LOCK System

When the PIN BOX menu is displayed, sequentially enter the codes with remote controller as follows. In accordance with remote controller button entry, "∗" mark appears in the PIN BOX menu.

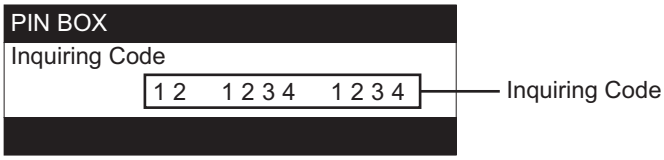
Master PIN codes

1st entry code: Press the "MENU" button.
2nd entry code: Press the "▼" button.
3rd entry code: Press the "KEYSTONE" button.
4th entry code: Press the "▲" button.

Note: The Master PIN codes can be used up to 30 times. The codes cannot be used thereafter. If the Master PIN codes cannot be used, see the paragraph of the PIN LOCK system deactivation.

The PIN LOCK System inactivation

1. When the PIN BOX menu is displayed, press "RESET" for 3 seconds or more in order to get the ID Inquiring Code.



PIN BOX (ID Inquiring Code)

2. Send HITACHI sales company the Inquiring code (10 digits) to inquire the correct PIN code.
3. With the PIN BOX menu displayed, input the correct PIN code. Enter the correct PIN CODE that HITACHI sales company supplied.
4. Open menu and select "TURN OFF" from the PIN LOCK items in the SECURITY menu. Then the PIN BOX menu appears.
   Password is required to display the Security Menu.
   See the Security in OPTION menu: User's Manual - Operating Guide.
5. Input the correct PIN code in the PIN BOX menu.
6. And then, PIN LOCK will be set to "TURN OFF".
7. Deactivate the MyScreen PASSWORD and Transition Detector too.
   Reset the Security Password to the [6971].
   See the Security in OPTION menu: User's Manual - Operating Guide.

6-11 Related Messages

When the unit's power is on, messages such as those shown below may be displayed. When any such message is displayed on the screen, please respond as described below.

Although these messages will be automatically disappeared around several minutes, it will be reappeared every time the power is turned on.

Message	Description
NO INPUT IS DETECTED ***	**There is no input signal.** Please confirm the signal input connection, and the status of the signal source.
SYNC IS OUT OF RANGE *** fH *****kHz fV *****Hz	**The horizontal or vertical frequency of the inputted signal is outside of the response parameters of this unit.** Please confirm the specs for this unit or the signal source specs.
INVALID SCAN FREQ. ***	**An improper signal is input.** Please confirm the specs for your projector or the signal source specs.
CHECK THE AIR FLOW	**The internal portion temperature is rising.** Please turn the power OFF, and allow the unit to cool down at least 20 minutes. After having confirmed the following items, please turn the power ON again. • Is there blockage of the air passage aperture? • Is the air filter dirty? • Does the peripheral temperature exceed 35°C? If the same indication is displayed after the remedy, please set FAN SPEED of the SERVICE item in the OPTION menu to HIGH.
REMINDER ***HRS PASSED AFTER THE LAST FILTER CHECK. FILTER MAINTENANCE IS ESSENTIAL TO REMOVE WARNING MESSAGE, RESET FILTER TIMER. SEE MANUAL FURTHER INFO.	**A note of precaution when cleaning the air filter.** Please immediately turn the power OFF, and clean or change the air filter by referring to the "Air Filter" section of this manual. After you have cleaned or changed the air filter, please be sure to reset the filter timer.

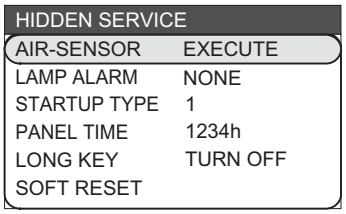
6-12 Regarding the indicator lamps

Lighting and flashing of the POWER indicator, the LAMP indicator, and the TEMP indicator have the meanings as described in the table below. Please respond in accordance with the instructions within the table.

POWER indicator	LAMP indicator	TEMP indicator	Description
Lighting In Orange	Turned off	Turned off	**The projector is in a standby state.**
Blinking In Green	Turned off	Turned off	**The projector is warming up.** Please wait.
Lighting In Green	Turned off	Turned off	**The projector is in an on state.** Ordinary operations may be performed.
Blinking In Orange	Turned off	Turned off	**The projector is cooling down.** Please wait.
Blinking In Red	(discre-tionary)	(discre-tionary)	**The projector is cooling down. A certain error has been detected.** Please wait until the POWER indicator finishes blinking, and then perform the proper measure using the item descriptions below.
Blinking In Red or Lighting In Red	Lighting In Red	Turned off	**The lamp does not light, and there is a possibility that interior portion has become heated.** Please turn the power off, and allow the projector to cool down at least 20 minutes. After the projector has sufficiently cooled down, please make confirmation of the following items, and then turn the power on again. • Is there blockage of the air passage aperture? • Is the air filter dirty? • Does the peripheral temperature exceed 35ºC? If the same indication is displayed after the remedy, please change the lamp referring to the section “Lamp”.
Blinking In Red or Lighting In Red	Blinking In Red	Turned off	**The lamp cover has not been properly fixed (attached).** Please turn the power off, and allow the unit to cool down at least 45 minutes. After the projector has sufficiently cooled down, please make confirmation of the attachment state of the lamp cover. After performing any needed maintenance, turn the power on again.
Blinking In Red or Lighting In Red	Turned off	Blinking In Red	**The cooling fan is not operating.** Please turn the power off, and allow the unit to cool down at least 20 minutes. After the projector has sufficiently cooled down, please make confirmation that no foreign matter has become caught in the fan, etc., and then turn the power on again. If the same indication is displayed after the remedy, please replace a fan.
Blinking In Red or Lighting In Red	Turned off	Lighting In Red	**There is a possibility that the interior portion has become heated.** Please turn the power off, and allow the unit to cool down at least 20 minutes. After the projector has sufficiently cooled down, please make confirmation of the following items, and then turn the power on again. • Is there blockage of the air passage aperture? • Is the air filter dirty? • Does the peripheral temperature exceed 35°C? If the same indication is displayed after the remedy, please set the FAN SPEED of the SERVICE item in the OPTION menu to HIGH.
Lighting In Green	Alternative blinking in Red		**There is a possibility that the interior portion has become overcooled.** Please use the unit within the usage temperature parameters (5°C to 35°C). After the treatment, resent the power to ON. If the same indication is displayed after the treatment, please make sure that the proper cables are connected to each of connectors E301, E302 and E304 on the PWB assembly MAIN.
Lighting In Green	Simultaneous blinking in Red		**It is time to clean the air filter.** Please immediately turn the power OFF, and clean or change the air filter referring to the section “Air Filter”. After cleaning or change the air filter, please be sure to reset the filter timer. After the remedy, resent the power to ON.

NOTE • When the interior portion has become overheated, for safety purposes, the power source is automatically turned off, and the indicator lamps may also be turned off. In such a case, press the “○” (OFF) side of the power switch, and wait at least 45 minutes. After the projector has sufficiently cooled down, please make confirmation of the attachment state of the lamp and lamp cover, and then turn the power on again.

6-13 HIDDEN SERVICE MENU



To display the OSD for “HIDDEN SERVICE MENU” set up.

By the control panel	By the remote control transmitter
1. Display the Advanced menu by the “MENU” button.(If EASY MENU appears, choose “Go to Advanced menu” to display ADVANCED MENU.) 2. Select the “OPTION” on the menu. 3. Continue press the button [◀] first, then press the button [◀] together with “INPUT”, and hold for 3 seconds.	1. Display the menu by the “MENU” button. (If EASY MENU appears, choose “Go to Advanced menu” to display ADVANCED MENU.) 2. Select the “OPTION” on the menu. 3. Press the “MAGNIFY OFF” button. Next hold the “MAGNIFY OFF” button for 3 seconds.

● AIR - SENSOR
Execute this item to adjust the air sensor.

● LAMP ALARM
Select the lamp alarm level. 3 Level ↔ 1 Level ↔ None

● STARTUP TYPE
Select the startup screen type. 1 : shows Hitachi Logo
2 : No Hitachi Logo

● PANEL TIME
Use time of LCD panel. Reset the PANEL TIME whenever you changed the LCD/LENS prism assembly panel.

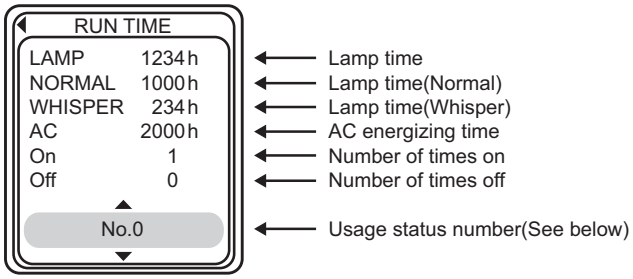
● LONG KEY
Projector react only to the key pressing the remote button for 3 seconds. Turn off ↔ Turn on.
When LONG KEY mode is on, MY BUTTON1 behave as “LONG KEY DISABLE” and MY BUTTON2 behave as “LONG KEY ENABLE”.

● SOFT RESET
If this is executed, all of the user data is initialized.Never use it when not required.

6-14 RUN TIME window

● Set operating time display method (accumulated lamp time display method)

1. Select “OPTION” from the Advanced menu, then place the cursor on the “LAMP TIME”.
2. Press the [▶], [ENTER] or [RESET] button.
3. Press the [Reset] button once, then press [KEYSTONE] button of the remote control for 3 seconds or more to display the screen shown below. (The menu will close after 10 seconds if there are no further operations.)
4. Use [▲] or [▼] to select the usage status number. (The usage status is as shown below.)



Usage status number

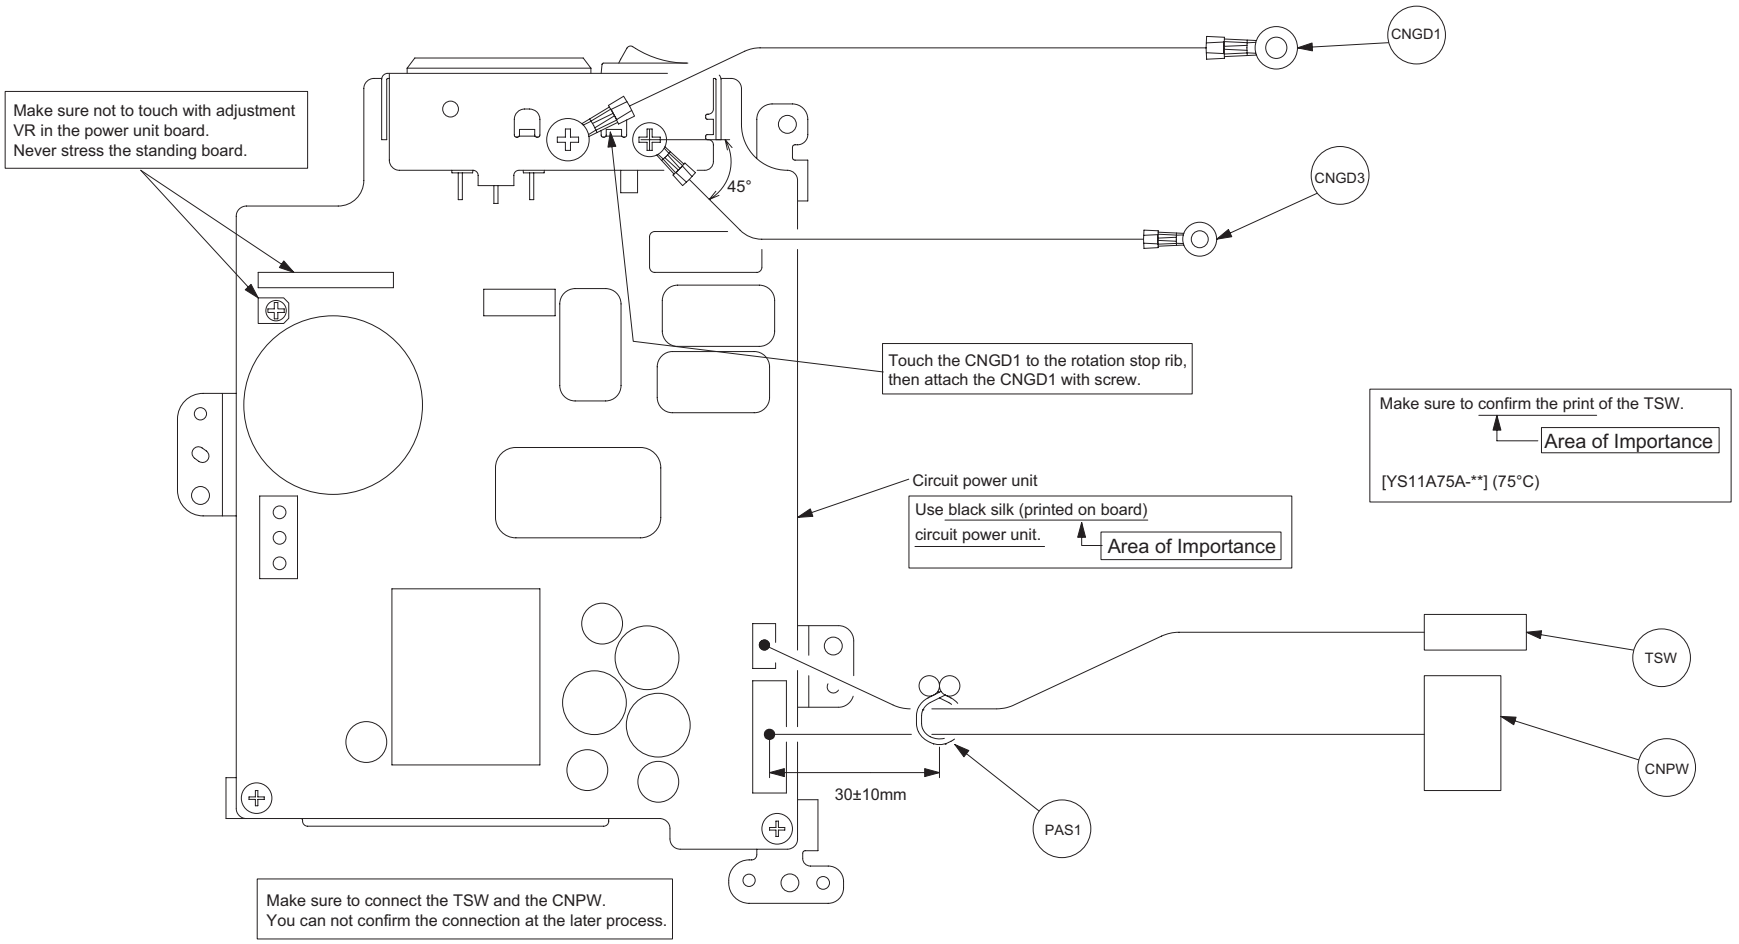
0 ..... Total usage status
1 ..... Current usage status
2 ..... Usage status before first reset
3 ..... Usage status before second reset
||
9 ..... Usage status before eighth reset

Wiring of the circuit power unit

(1) Attach the CNGD1 and the CNGD3 with screw.
(2) Connect the TSW after you confirmed the print of the TSW.
(3) Connect the CNPW.
(4) Bundle the CNPW and the TSW with purse lock (PAS1).

Area of Importance

The operations with this symbol have implications with laws/standards. It is possible to be in violation of these laws/standards in the case that these operations are not carried out according to the instructions. Assemble according to the operation instructions.



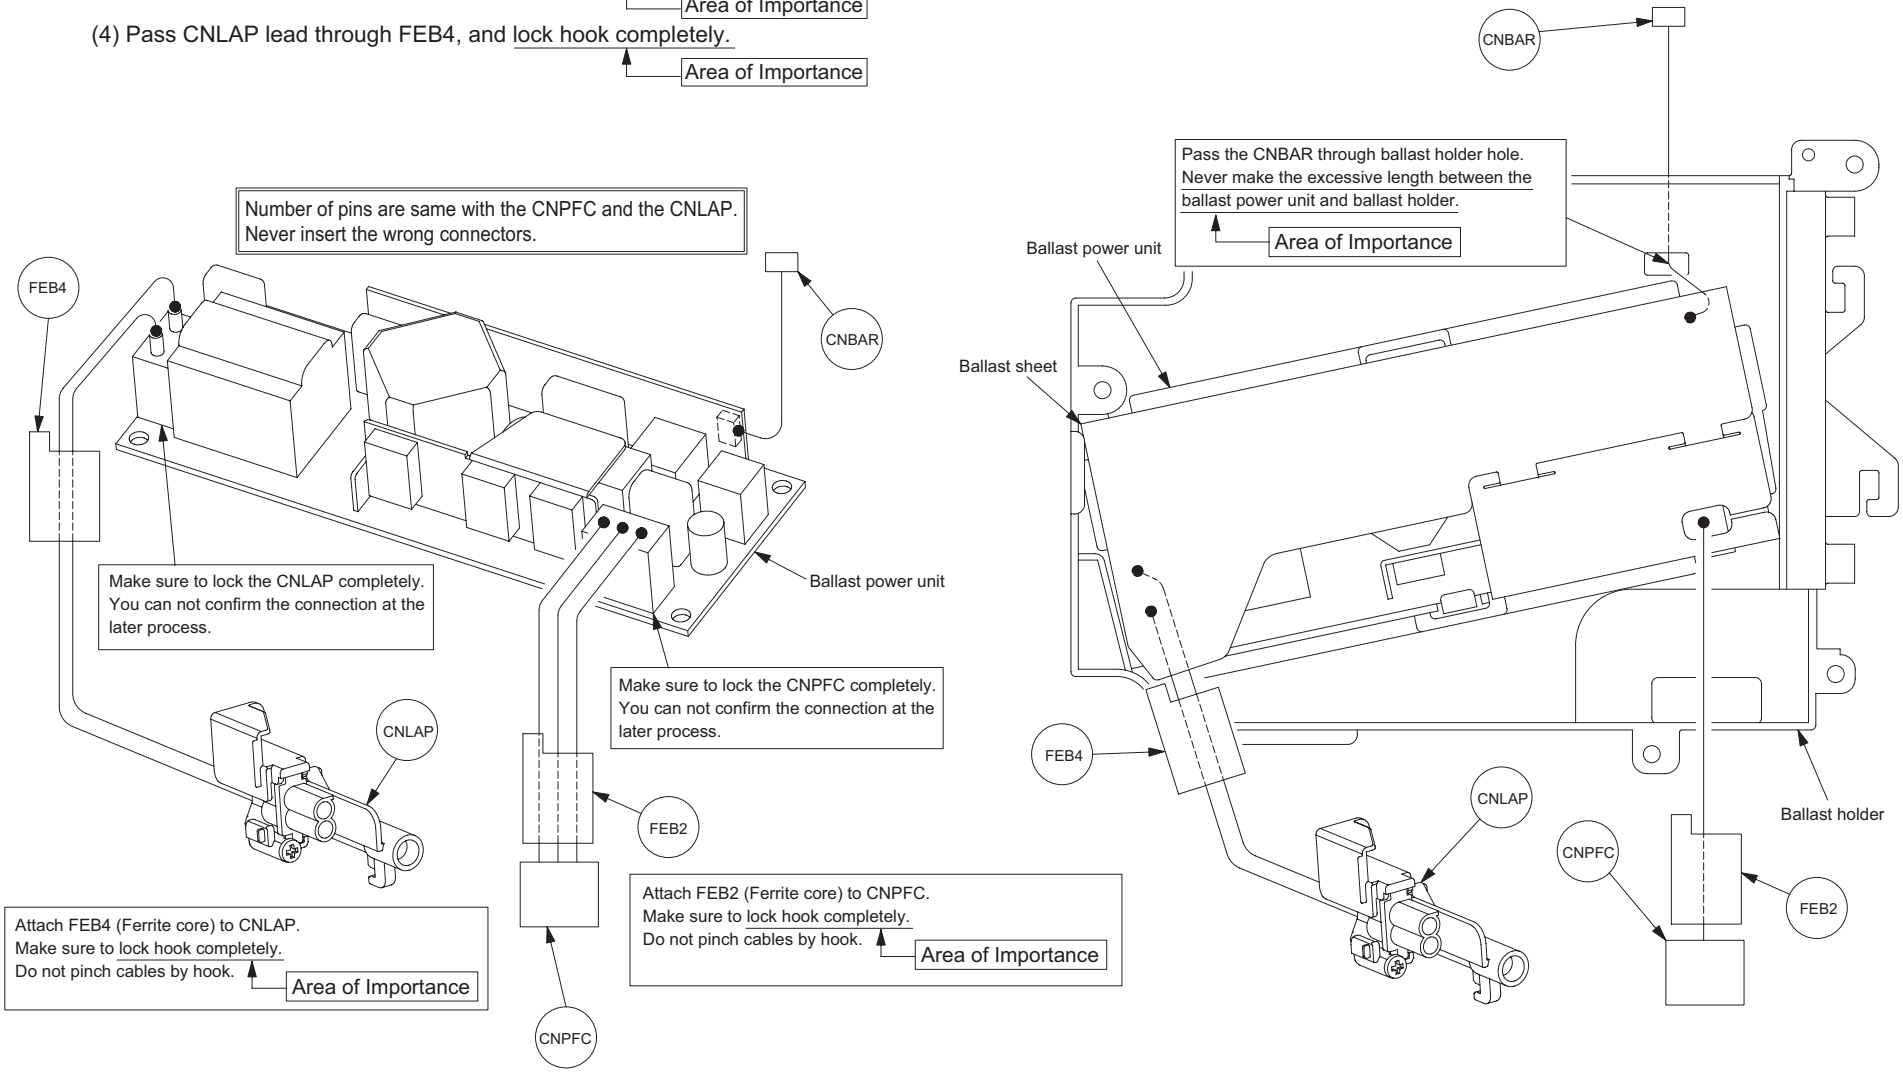
Wiring diagram 1

Preparation of the ballast power unit

(1) Connect the CNBAR, the CNPFC and the CNLAP.
(2) Use Ballast power unit white or white marked CNPFC connector is mounted.
(3) Pass CNPFC lead through FEB2, and lock hook completely.
Area of Importance
(4) Pass CNLAP lead through FEB4, and lock hook completely.
Area of Importance

Wiring after attaching the ballast power unit

(1) Style the CNBAR, the CNPFC and the CNLAP.



Wiring diagram 2

Assembling of the power unit block

The assembly order of the power block

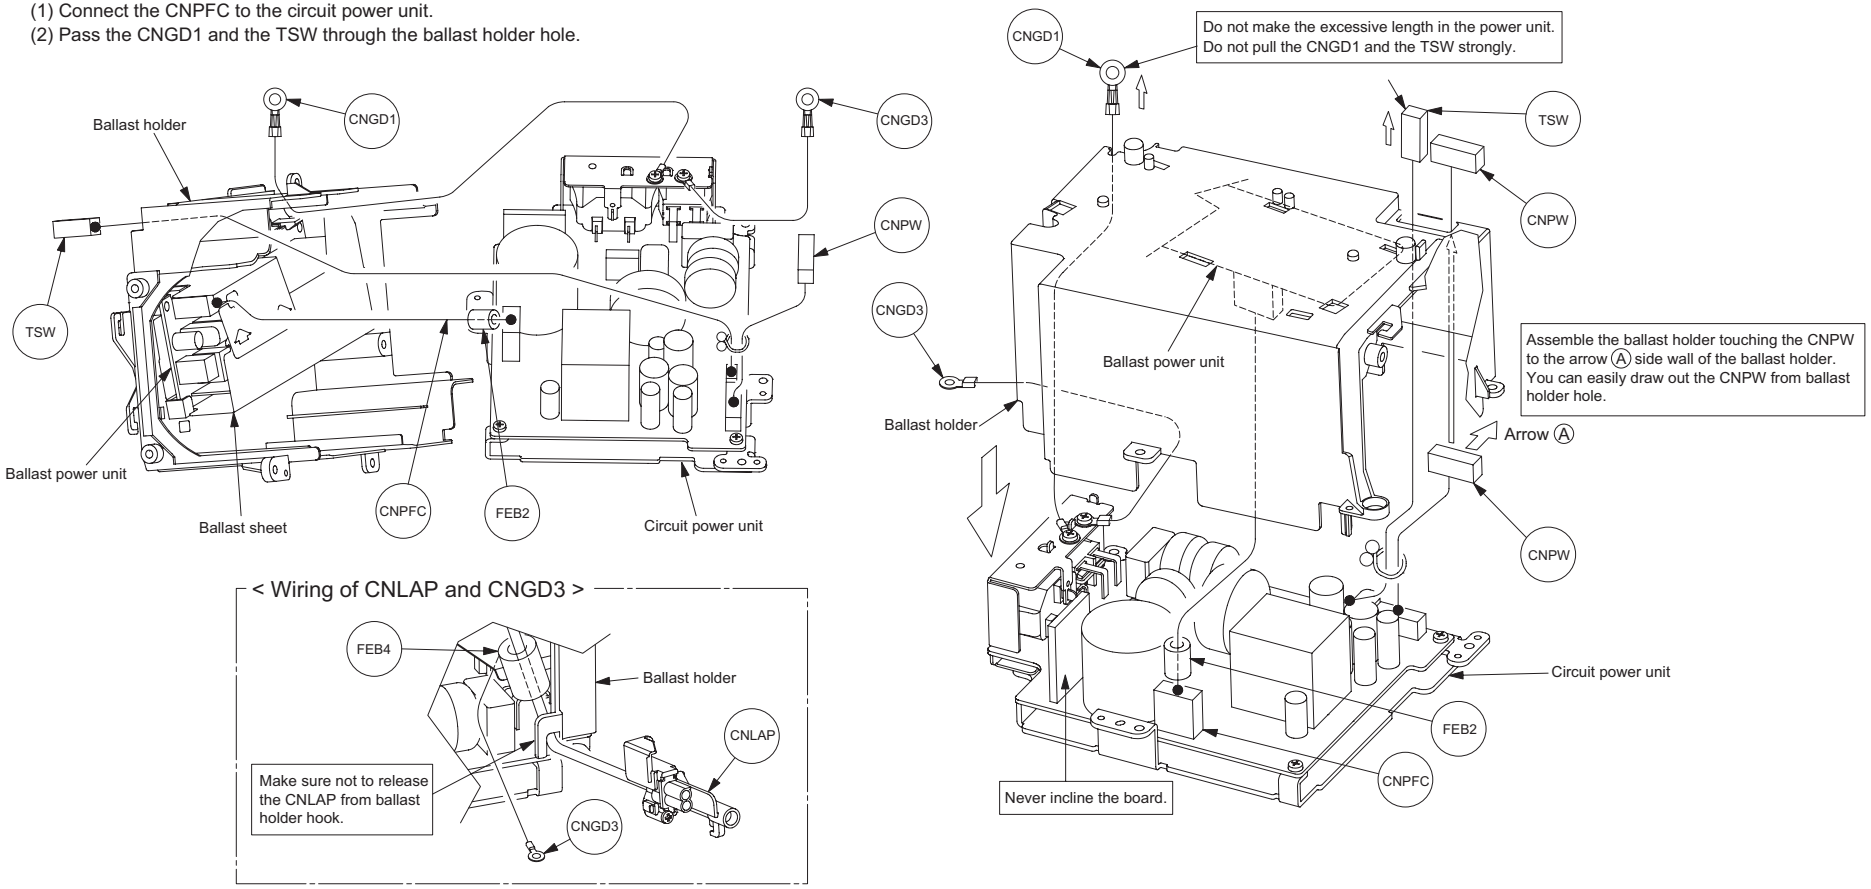
Assemble the circuit power unit and ballast power unit (Ballast holder) by the following procedures.
Refer the wiring of the power unit block (Next page) to style the cables, after you assembled the power unit block.

1. Connection of the circuit power unit and the ballast power unit, Preparation for assembling.

(1) Connect the CNPFC to the circuit power unit.
(2) Pass the CNGD1 and the TSW through the ballast holder hole.

2. Assembling of the circuit power unit and ballast power unit.

(1) Attach the ballast holder to the circuit power unit drawing out the CNPW.
Assemble the ballast holder and the circuit power unit touching the CNPW to the arrow Ⓐ side wall of the ballast holder.
You can easily draw out the CNPW.
(2) Draw out the CNPW from the ballast holder hole, then style the CNGD1 and the TSW.
Do not make the excessive length in the power unit.
Do not pull the CNGD1 and the TSW strongly, otherwise connector might be released.
(3) Style the igniter lead (CNLAP) on the ballast sheet.
Make sure not to release the CNLAP from ballast holder hook, then attach the ballast holder with screws.



Wiring diagram 3

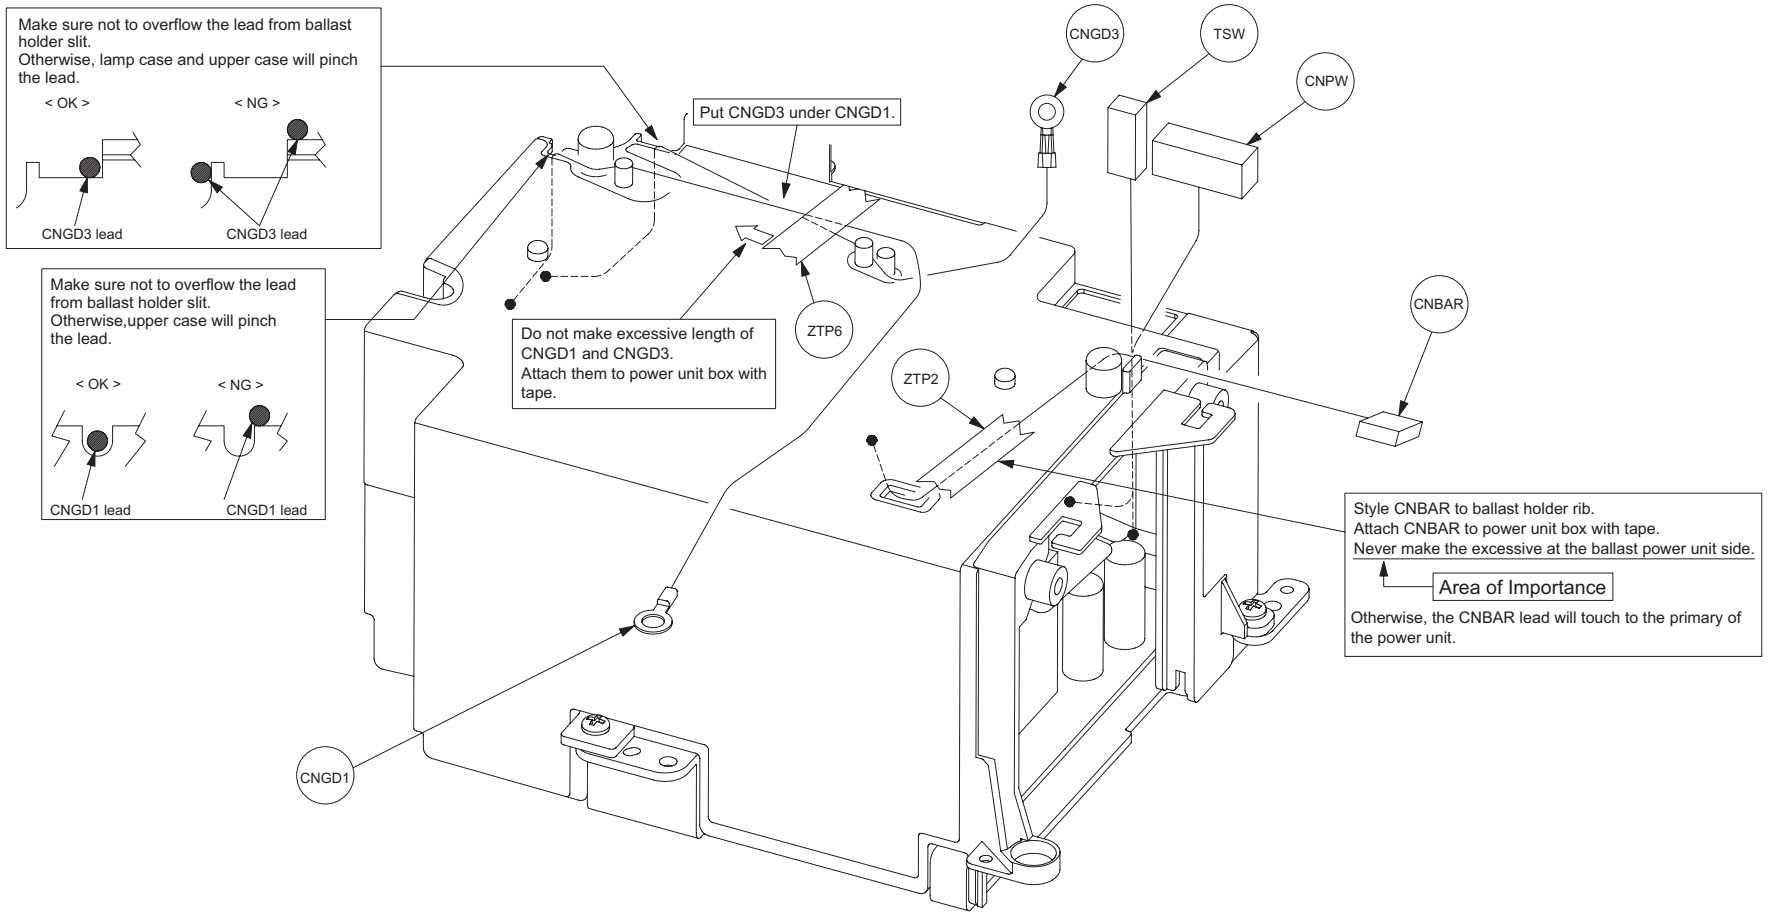
Wiring of the power unit

Style of the power unit assembling

(1) Style CNBAR to ballast holder rib, and fix with ZTP2.
(2) Attach the CNDG1 to a ballast holder boss.
- Make sure not to overflow the lead from ballast holder slit. (Otherwise, upper case will pinch the lead.)
- Do not make excessive length at the power unit side.

(3) Attach the CNGD3 to a ballast holder boss.
- Make sure not to overflow the lead from ballast holder slit. (Otherwise, lamp case and ballast holder will pinch the lead.)
- Do not make excessive length at the power unit side.

(4) Combine CNGD3 and CNGD1, and fix with ZTP6.

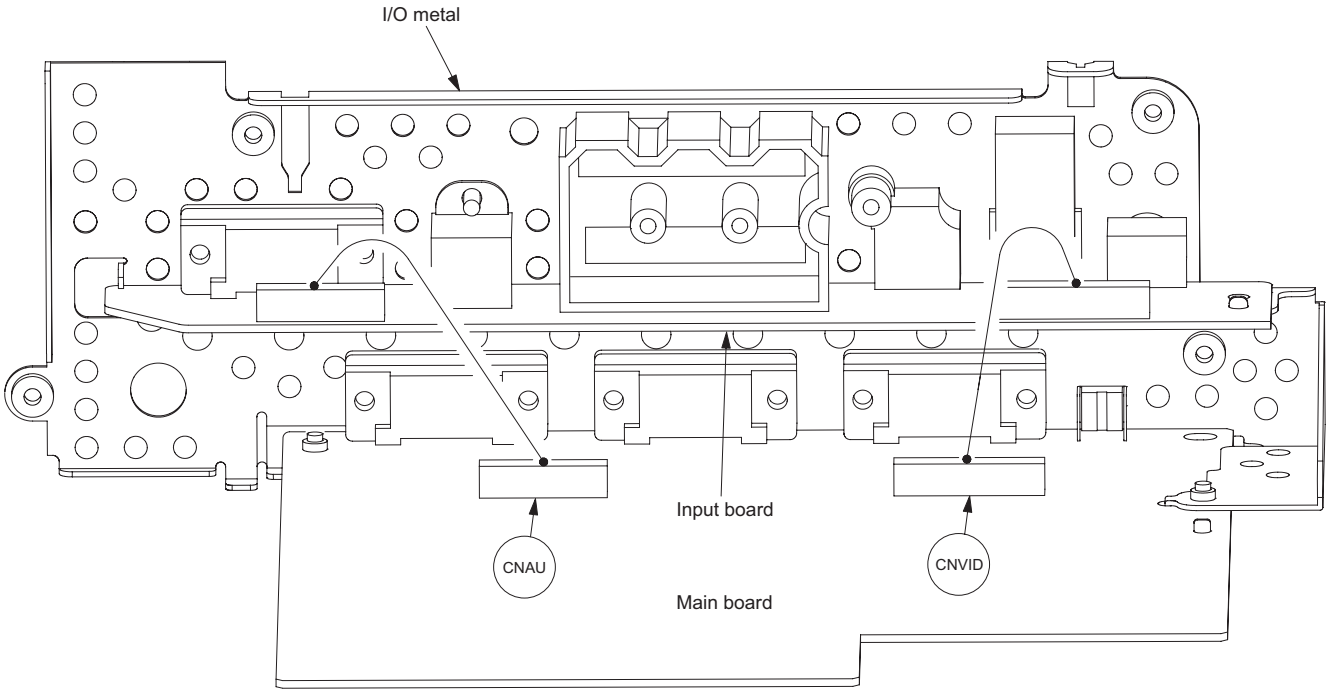


Wiring diagram 4

Preparation of the main board assembling

Wiring of the input board assembling

(1) Connect Main board and Input board with CNVID and CNAU.
Refer to following procedure.
① Insert to main board connector.
② Insert to Input board connector.
③ Attach Input board to I/O metal.

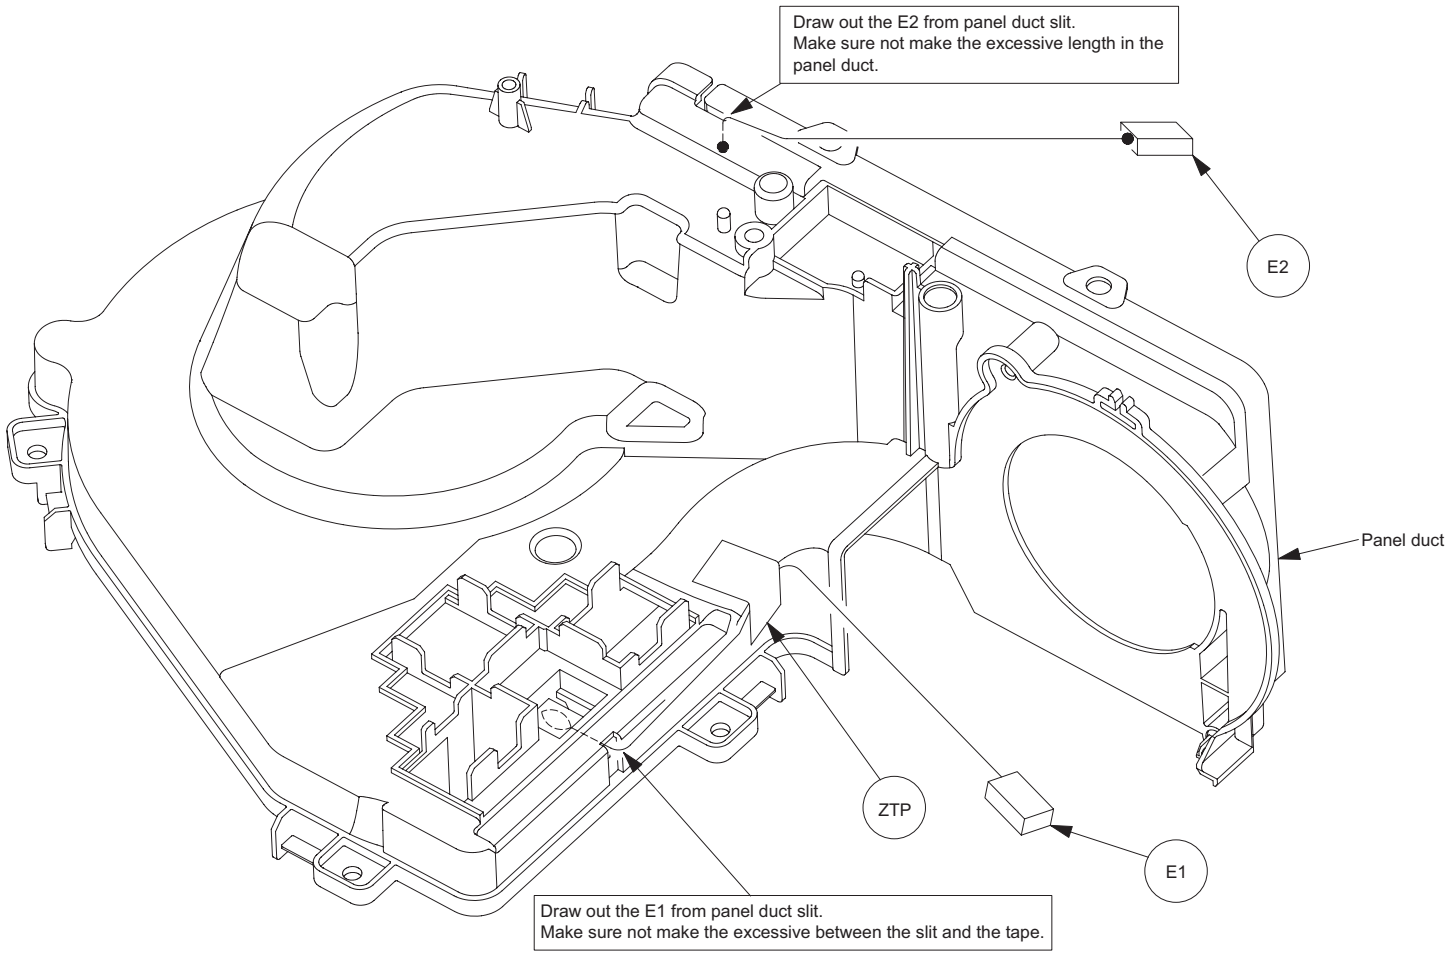


Wiring diagram 5

Preparation of the panel duct

Wiring of the panel duct assembling

(1) Draw out the E1 from the panel duct incision.
Style the E1 along the side of panel duct, then fix the E1 with tape.
(2) Attach the E2 to the panel duct with screw, then draw out the E2 from panel duct slit.
Make sure not make the excessive length in the panel duct.

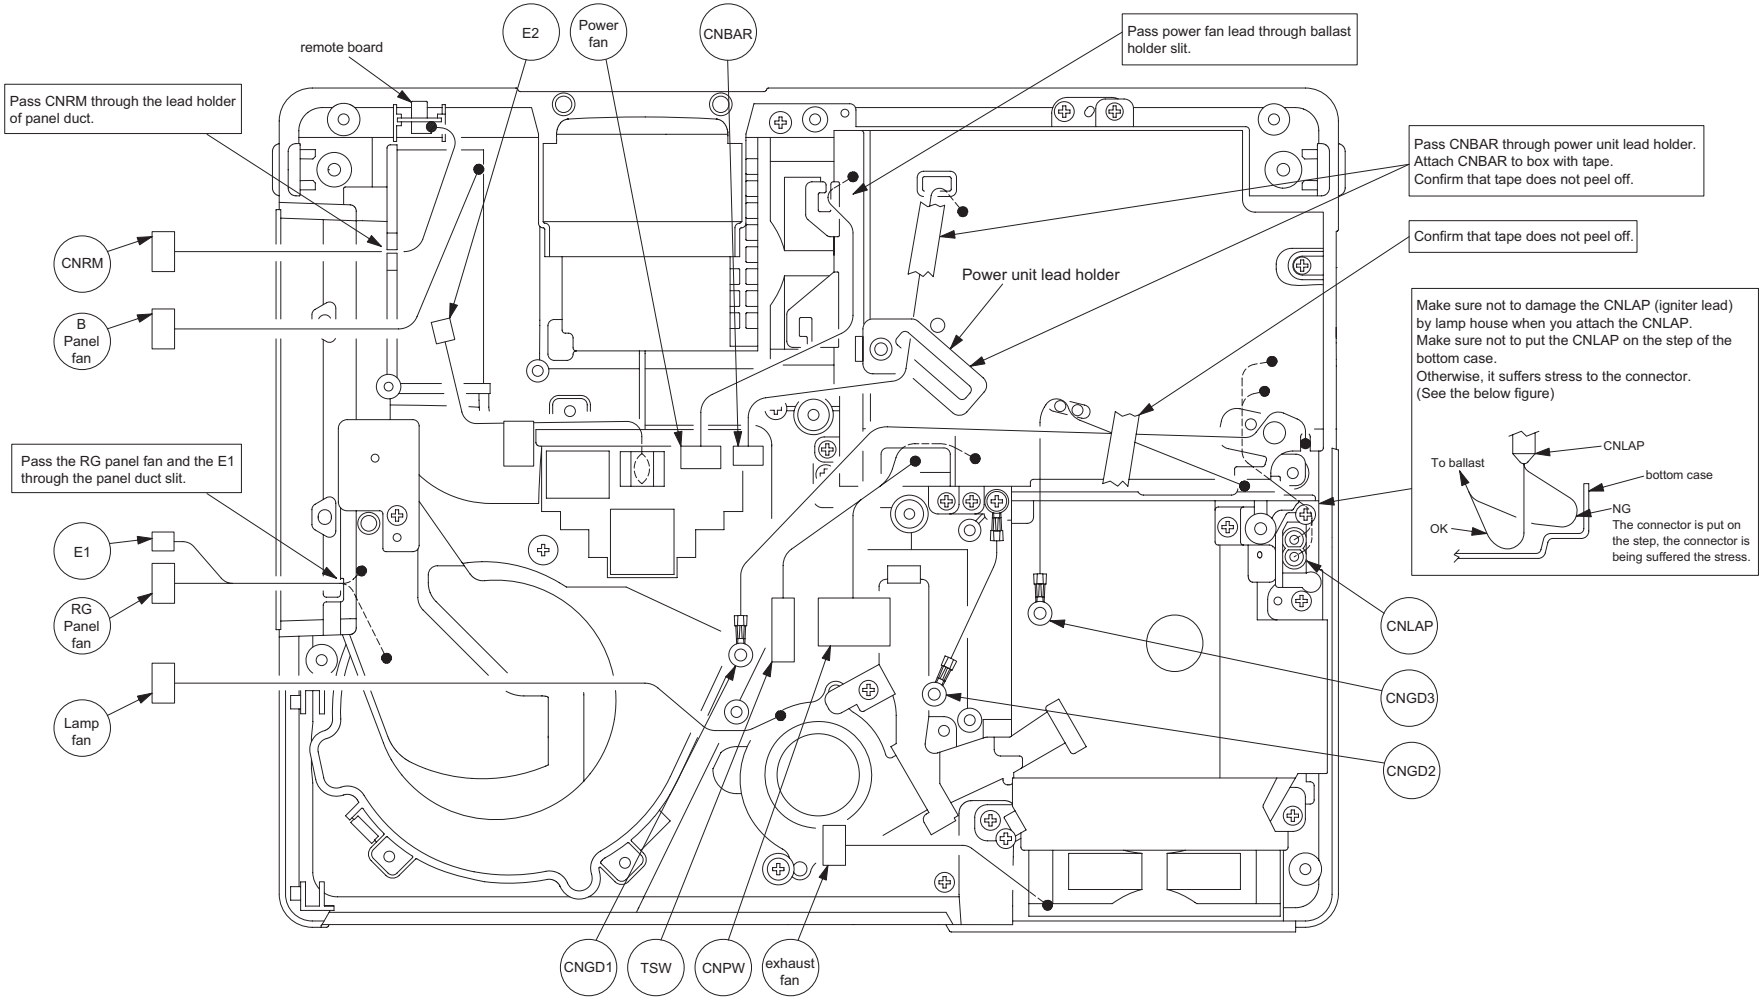


Wiring diagram 6

Attaching the power unit

Wiring of the power unit attaching

(1) Attach the CNGD2. (Attach the lamp house with this screw too.)
(2) Pass the power fan and the CNBAR through the ballast holder slit.
Make sure not make the excessive length at the fan side.
(3) Attach the CNLAP to the lamp holder (bottom case). Make sure not to damage the lead.
(4) Pass the RG panel fan and the E1 through the panel duct slit. Attach them to the panel duct.
(5) Connect the CNRM to the remote board. Then attach the remote board to the bottom case.
(6) Pass the CNRM through the lead holder of panel duct.
(7) Pass CNBAR through power unit lead holder. Then, Attach power unit lead holder to ballast holder.

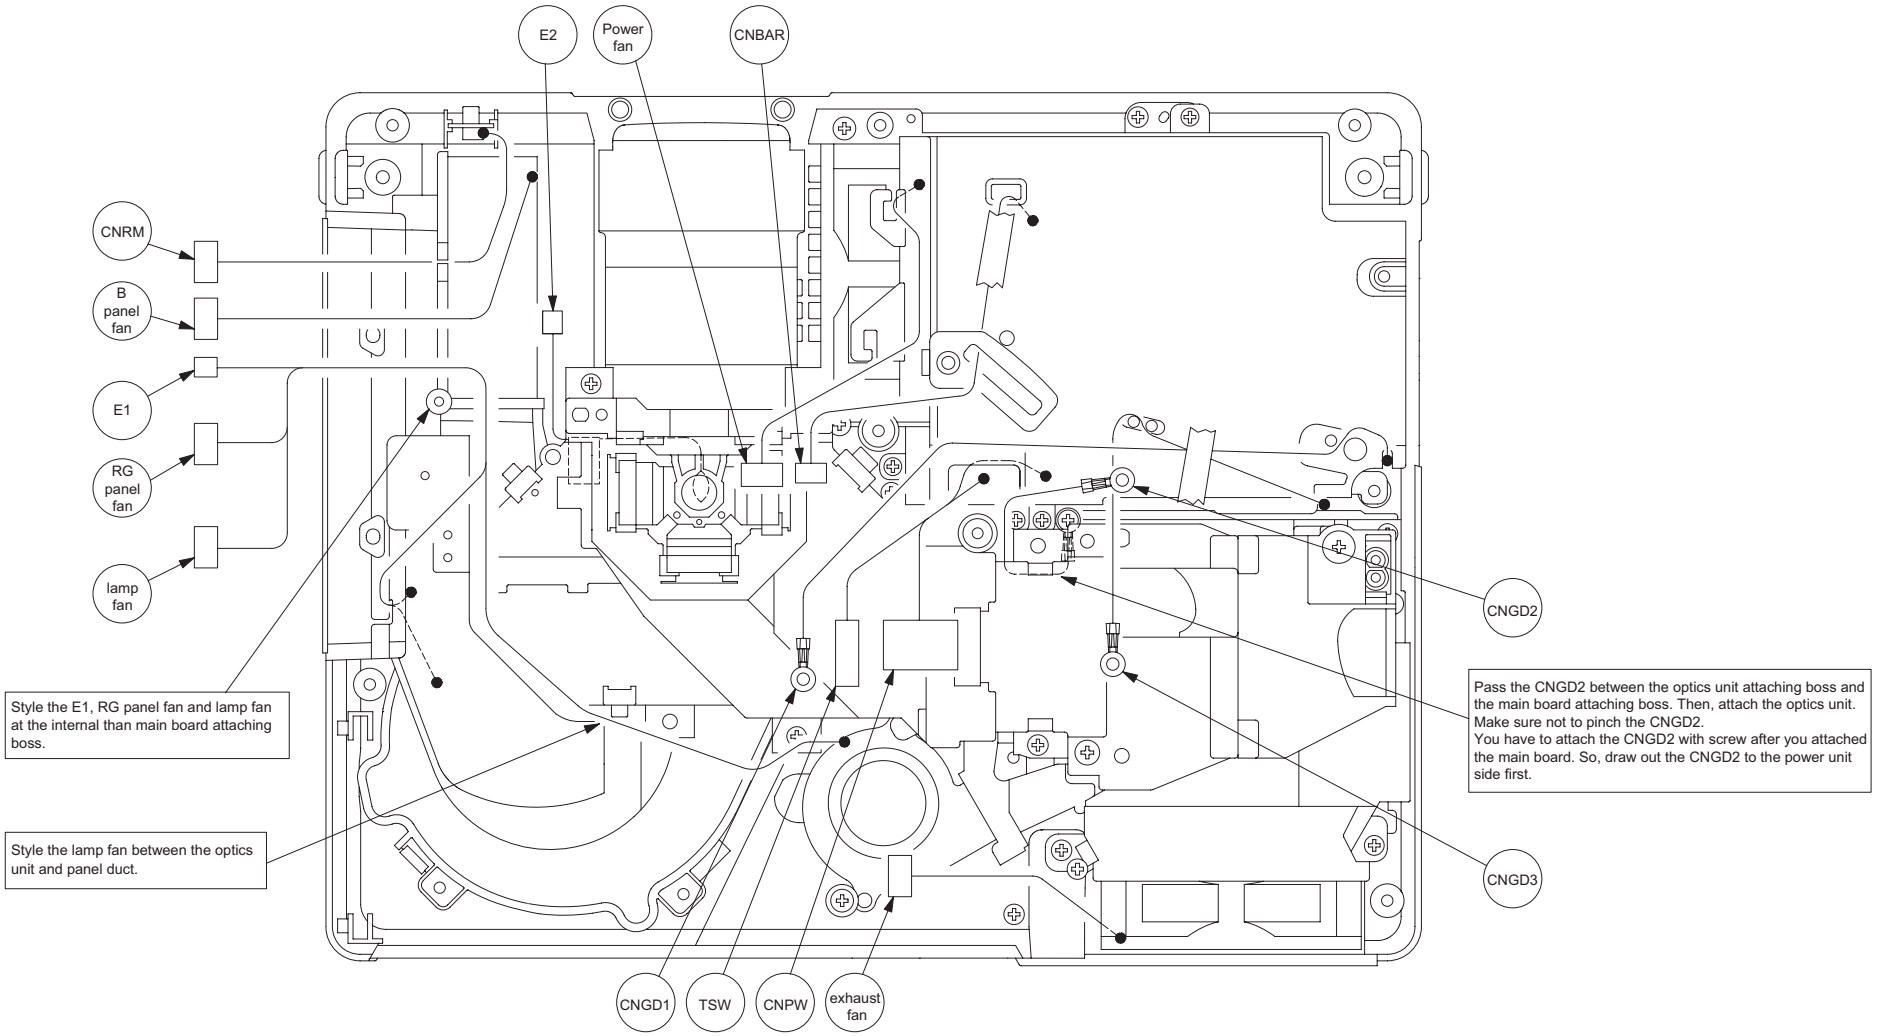


Wiring diagram 7

Attaching the optics unit

(1) Pass the CNGD2 between the optics unit attaching boss and the main board attaching boss. Then, attach the optics unit.
(2) Style the E1, RG panel fan and lamp fan at the internal than main board attaching boss.

Wiring of the optics unit attaching



Wiring diagram 8

Attaching the main board

Wiring of the main board attaching

(1) Attach main board after you connected exhaust fan. Attach main board with CNGD2 and CNGD3 by screw. Put CNGD2 under CNGD3.
(2) Connect CNPW. Put TSW and CNGD1 under CNPW.
(3) Connect RG panel fan, B panel fan, lamp fan, E1, E2 and CNRM.
Put excessive length of each cables into the space between B panel fan and panel duct.
Otherwise, upper case will pinch cables.
(4) Cross CNBAR and power fan. Then, connect to main board. Otherwise, upper case will pinch cables. Touch power fan lead to ballast holder shield and attach with tape.
Area of Importance
(5) Connect flexible cables (LCD panel).
(6) Wrap TSW to CNGD1 5 times. Then, attach CNGD1 and TSW.
(7) Attach speaker after you styled cables.

Notice

1. Detach and attach the upper case.

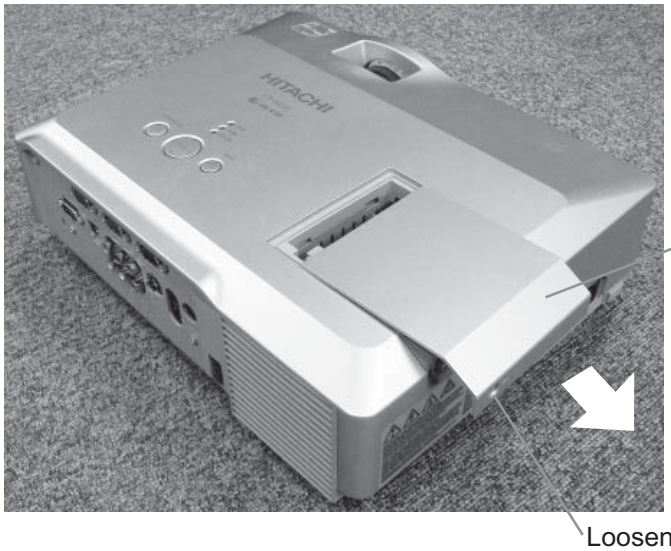
Follow the procedure below to detach and attach the upper case.

When disassembling

a. Remove the Lamp door.

⚠CAUTION

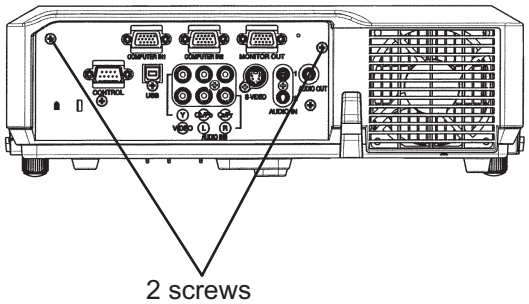
The lamp door must be removed before the upper case when disassembling the machine. If the upper case is detached with the lamp door installed, the MAIN board might be damaged.

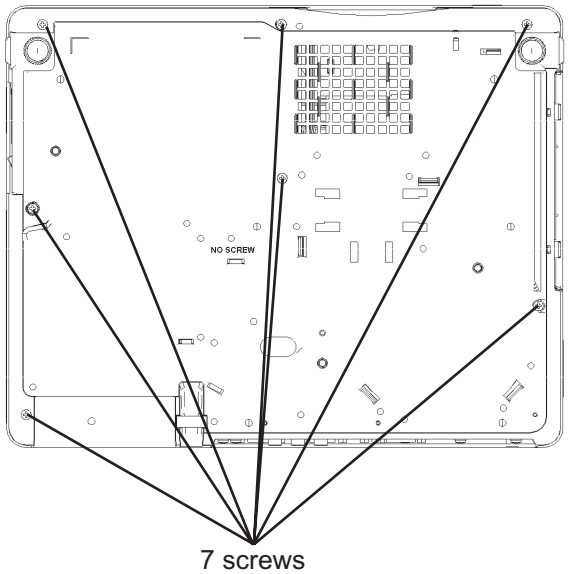


b. Remove 7 screws on the bottom and 3 screws on the rear to detach the upper case.

⚠CAUTION

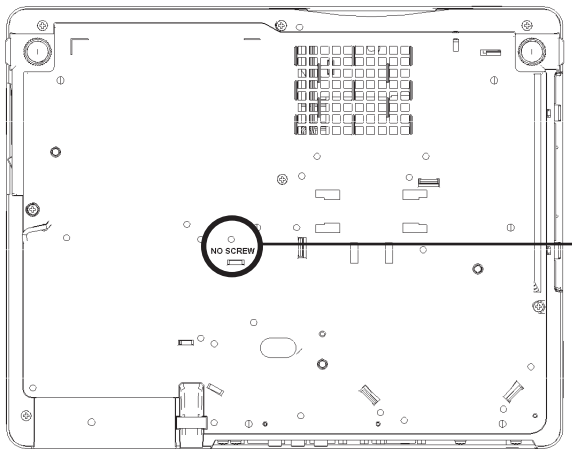
These are not screw holes. Do NOT insert a screw or screwdriver into them to avoid damaging the inside.





When assembling

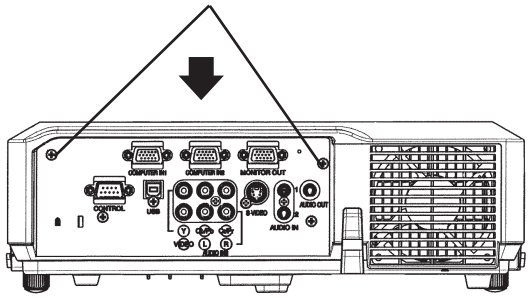
a. Tighten 7 screws on the bottom and 2 screws on the rear after attaching the upper case with the lamp door separated.



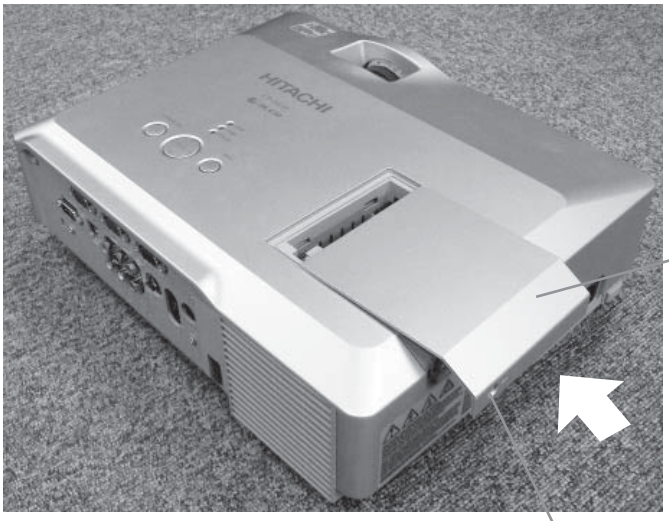
⚠CAUTION

These are not screw holes. Do NOT insert a screw or screwdriver into them to avoid damaging the inside.

In order not to make a gap between the upper and the bottom cases, tighten these screws while pressing down the upper case in the direction of the arrow. Be careful not to bend the outside casing.(Torque:0.39-0.59N•m)



b. Attach the Lamp door.



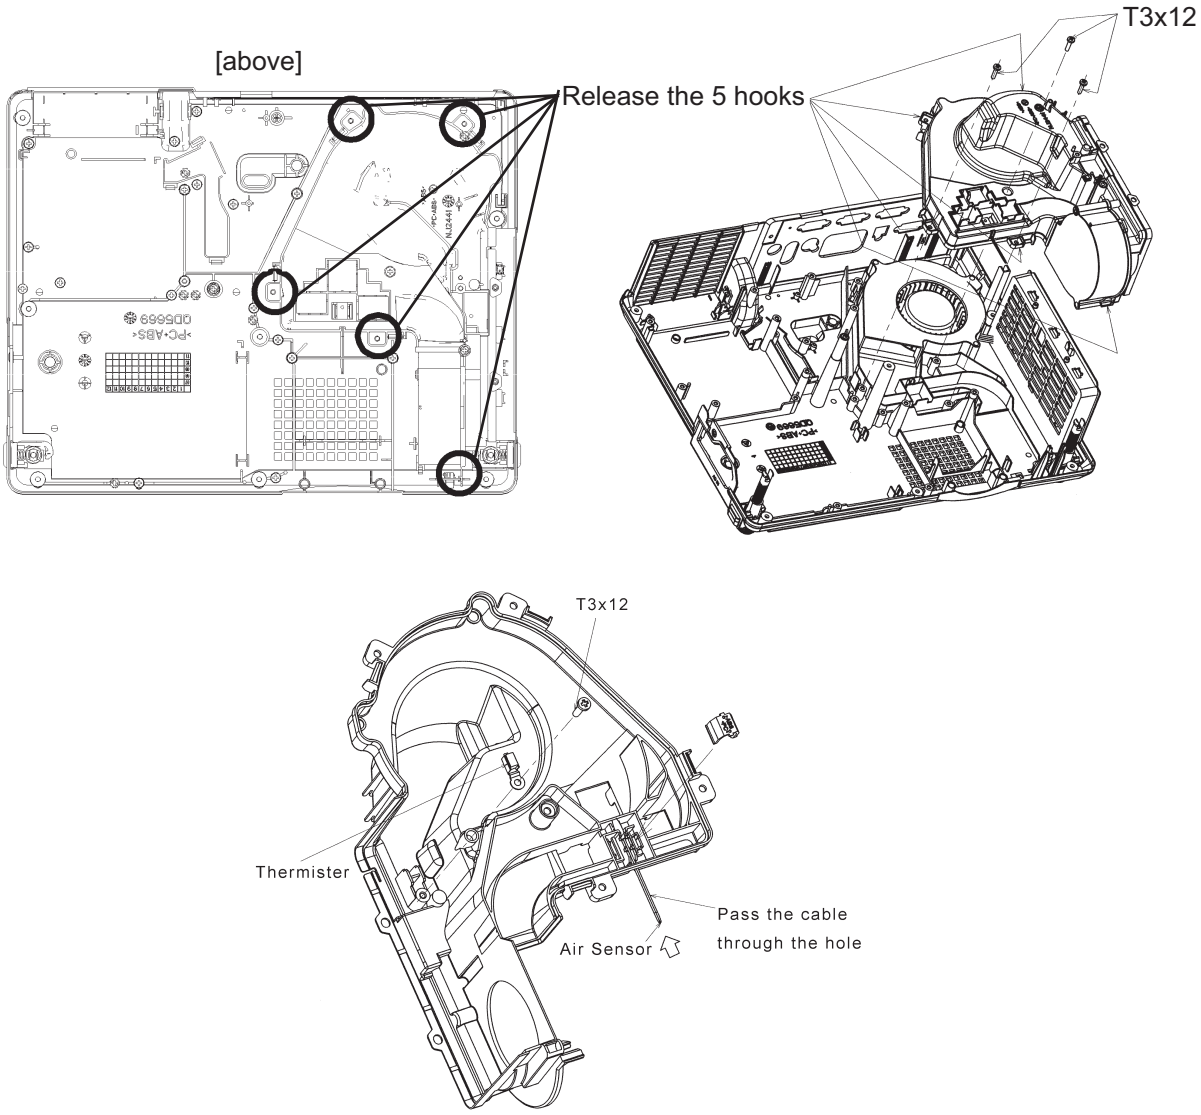
⚠CAUTION

Tighten this screw using a manual screwdriver.

2. Detaching and attaching the Panel Fan Duct assembly

When disassembling

Remove 1 screws and unhook the panel fan duct assembly as shown in the diagram.

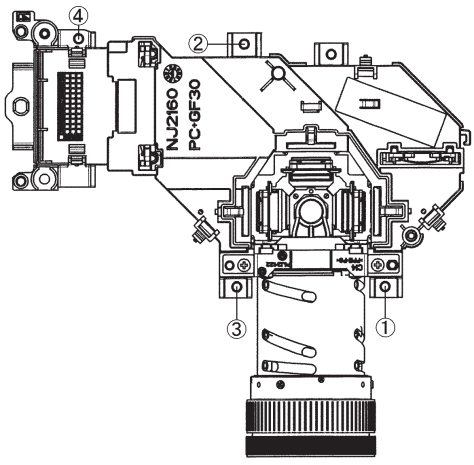


When assembling

(1) Put the thermistor and Air sensor in the correct position on the Panel duct as shown in the diagram.

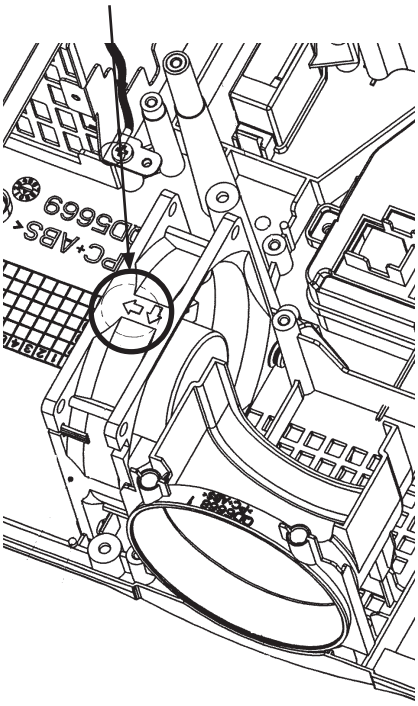
3. Attaching the dichroic optics unit

Put the dichroic optics unit on the bottom case, and tighten screws in order of 1, 2, 3 and 4 as shown in the diagram.



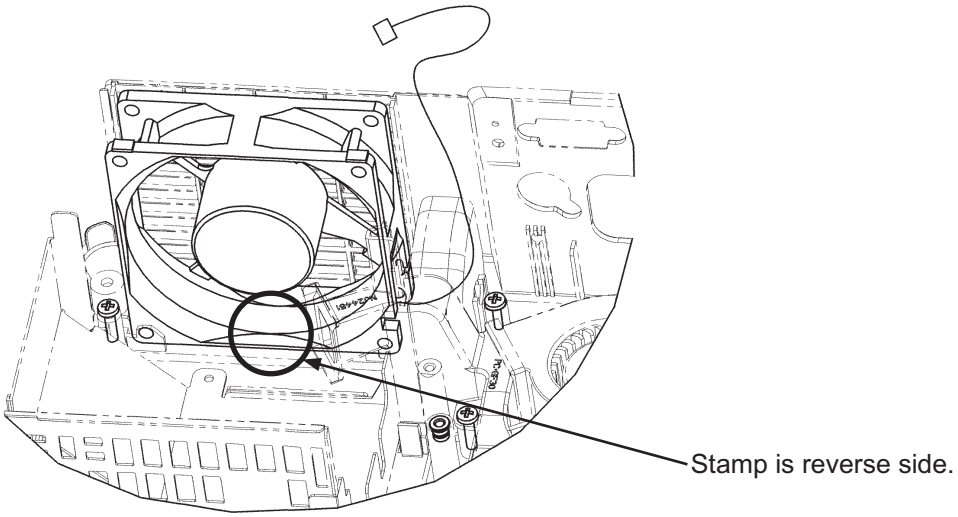
4. Attaching the power unit FAN.

Never attach the FAN to the wrong direction.
Refer the stamp on the FAN when you attach the power unit FAN.



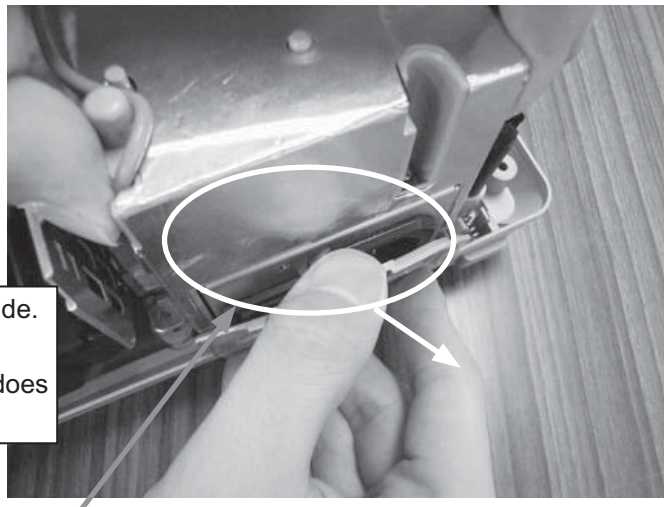
5. Attaching the exhaust FAN.

Never attach the FAN to the wrong direction.
Refer the diagram when you attach the exhaust FAN.

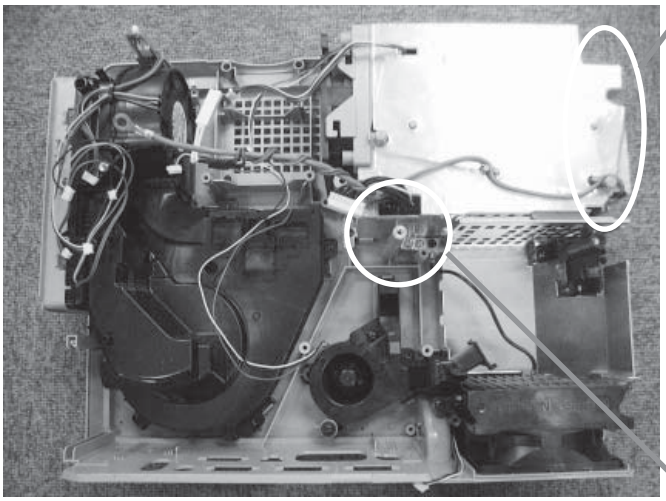


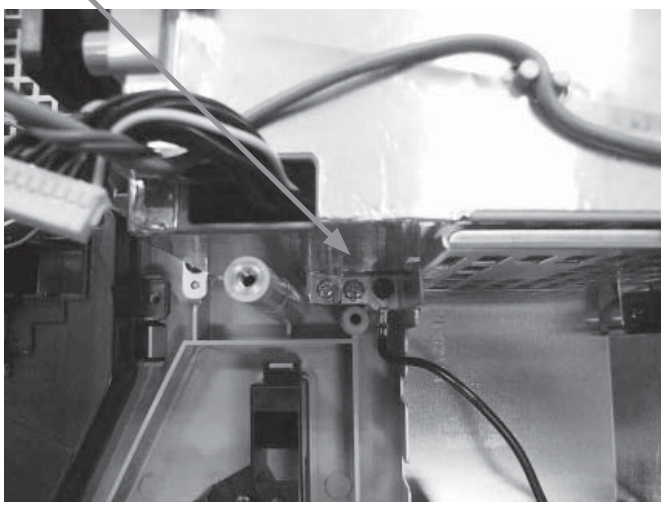
6. Attaching the power unit.

Refer the diagram when you attach the power unit.



Pull the AC inlet frame to the outside.
Then, attach the power unit.
Make sure that the bottom case does not come in contact with AC SW.





⚠CAUTION

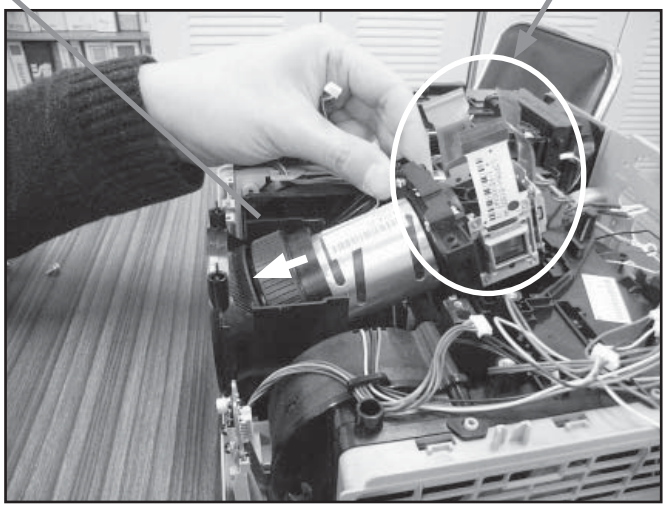
Never use the wrong screws.
M3 x 6 with lock washer.

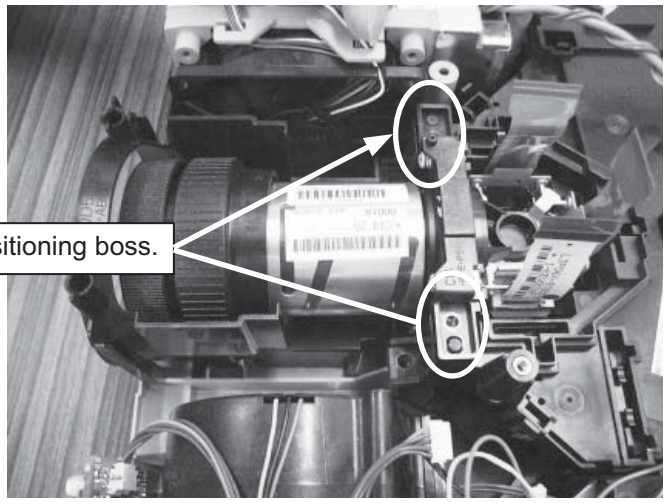
7. Attaching the Lens prism ASSY.

Refer the diagram when you attach the Lens prism ASSY.

(2) Attach the LCD prism ASSY inserting the top of the Lens to the lens enclosure.

Never touch the LCD to any parts when you attach the LCD prism ASSY.





Insert vertically to the positioning boss.

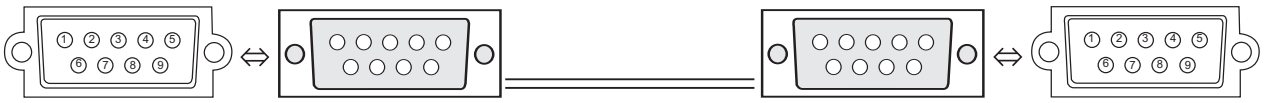
Audio/Video cable

Lens cover and strap

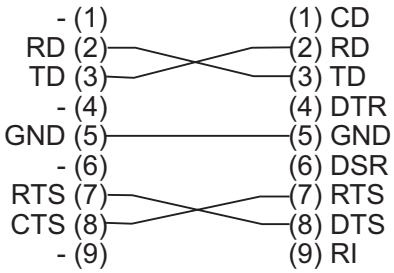
5. RS-232C communication



CONTROL port of the projector

RS-232C cable (cross)

RS-232C port of the computer



Connecting the cable

1. Turn off the projector and the computer.
2. Connect the CONTROL port of the projector with a RS-232C port of the computer by a RS-232C cable (cross). Use the cable that fulfills the specification shown in the previous page.
3. Turn the computer on, and after the computer has started up turn the projector on.

Communications setting

19200bps, 8N1

1. Protocol

Consist of header (7 bytes) + command data (6 bytes)

2. Header

BE + EF + 03 + 06 + 00 + CRC_low + CRC_high
CRC_low: Lower byte of CRC flag for command data
CRC_high: Upper byte of CRC flag for command data

3. Command data

Command data chart

byte_0	byte_1	byte_2	byte_3	byte_4	byte_5
Action		Type		Setting code	
low	high	low	high	low	high

Action (byte_0 - 1)

Action	Classification	Content
1	Set	Change setting to desired value.
2	Get	Read projector internal setup value.
4	Increment	Increment setup value by 1.
5	Decrement	Decrement setup value by 1.
6	Execute	Run a command.

Requesting projector status (Get command)

(1) Send the following request code from the PC to the projector.
Header + Command data ('02H' + '00H' + type (2 bytes) + '00H' + '00H')
(2) The projector returns the response code *'1DH' + data (2 bytes)* to the PC.

Changing the projector settings (Set command)

(1) Send the following setting code from the PC to the projector.
Header + Command data ('01H' + '00H' + type (2 bytes) + setting code (2 bytes))
(2) The projector changes the setting based on the above setting code.
(3) The projector returns the response code *'06H'* to the PC.

Using the projector default settings (Reset Command)

(1) The PC sends the following default setting code to the projector.
Header + Command data ('06H' + '00H' + type (2 bytes) + '00H' + '00H')
(2) The projector changes the specified setting to the default value.
(3) The projector returns the response code *'06H'* to the PC.

Increasing the projector setting value (Increment command)

(1) The PC sends the following increment code to the projector.
Header + Command data ('04H' + '00H' + type (2 bytes) + '00H' + '00H')
(2) The projector increases the setting value on the above setting code.
(3) The projector returns the response code *'06H'* to the PC.

Decreasing the projector setting value (Decrement command)

(1) The PC sends the following decrement code to the projector.
Header + Command data ('05H' + '00H' + type (2 bytes) + '00H' + '00H')
(2) The projector decreases the setting value on the above setting code.
(3) The projector returns the response code *'06H'* to the PC.

When the projector cannot understand the received command

When the projector cannot understand the received command, the error code *'15H'* is sent back to the PC.
Sometimes the projector cannot properly receive the command. In such a case, the command is not executed and the error code *'15H'* is sent back to the PC. If this error code is returned, send the same command again.

When the projector cannot execute the received command.

When the projector cannot execute the received command, the error code *'1CH' + 'xxxxH'* is sent back to the PC.
When the data length is greater than indicated by the data length code, the projector ignore the excess data code. Conversely when the data length is shorter than indicated by the data length code, an error code will be returned to the PC.

NOTE • Operation cannot be guaranteed when the projector receives an undefined command or data.
• Provide an interval of at least 40ms between the response code and any other code.
• The projector outputs test data when the power supply is switched ON, and when the lamp is lit. Ignore this data.
• Commands are not accepted during warm-up.
