# 1. Specifications

Transistor & Diode	: 26 FETs, 41 Transistors & 19 Diodes
Input Terminal and Input Impedance	: PHONO-1, 2 (Moving Magnet Type) 2 mV/100 Ω, 33 kΩ, 47 kΩ, 100 kΩ PHONO-3 (Moving Coil Type) 0.1 mV/30 Ω TUNER, AUX, TAPE PLAY 1, 2 140 mV/more than 50 kΩ
Cartridge Load Select	: (C) 100 pF, 220 pF, 330 pF, 470 pF (R) 100 Ω, 33 kΩ, 47 kΩ, 100 kΩ
Phono Overload	: PHONO-1, 2 (Moving Magnet Type) 300 mV (RMS) 1 kHz Before clip PHONO-3 (Moving Coil Type) 15 mV (RMS) 1 kHz Before clip
Output Terminal and Output Impedance	: TAPE REC 1, 2 140 mV OUTPUT 1, 2 1 V/600 Ω (Rated output) 20 V (Max)
Total Harmonic Distortion (20 Hz – 20 kHz)	: PHONO-1, 2 (Moving Magnet Type) 0.005 % or less (10 V) PHONO-3 (Moving Coil Type) 0.05 % or less (1 V) TUNER, AUX, TAPE PLAY 1, 2 0.005 % or less (10 V)
Frequency Response	: PHONO-1, 2 RIAA ± 0.3 dB (20 Hz – 20 kHz) PHONO-3 RIAA ± 0.5 dB (30 Hz – 20 kHz) TUNER, AUX, TAPE PLAY 1, 2 10 Hz – 40 kHz ± 0.5 dB
Tone Control	: 50 Hz ( $\pm 10 \pm 2$ dB), 20 kHz ( $\pm 10 \pm 2$ dB)
Signal-to-Noise Ratio at rated output (IHF A network)	: PHONO-1, 2 76 dB PHONO-3 66 dB TUNER, AUX, TAPE PLAY 1, 2 96 dB
Subsonic Filter	: 18 Hz 6 dB/Oct.

# 2. Precautions in Servicing

- If a turntable equipped with MM cartridge is connected to the PHONO-3 terminals (for exclusive use with an MC cartridge), most of high frequency sounds will be cut. The MC amplifier is overloaded, though the sound does not seem distorted.
- The 100 Ω position is exclusively for a high output MC cartridge.
- The cartridge load select switches are effective only for the PHONO-1 and PHONO-2 terminals.
- If excessive hum is encountered during record playing, check for induction caused by the other components placed around the preamplifier.  
Employment of the preamplifier on top of a high power apparatus (like a power amplifier) will induce hum.  
Keep it as far away from other apparatuses as possible. Nearby appliances containing even small transformers may cause induced hum if the transformers are imperfectly shielded.

### 3. Connection Diagram

#### Important notes

1. Do not plug the power cord into an AC outlet until all connections are complete.
2. Switch the power off when connecting any component.
3. Connect plugs or wires firmly. Poor contact may result in hum.
4. Connect the components with the correct left and right channel connections. Reversed channels will degrade the stereo effect.
5. Do not connect equipment requiring more than the rated power to the AC outlets. Do not employ these AC outlets for equipment other than audio components.
6. **Ground terminal (GND)**  
If your turntable has a separate ground lead, connect it to this terminal.
7. No sound will be heard for about 5 or 6 seconds after the power is turned on. This is not due to any defect of the set, but due to the operation of the protective circuit which prevents output noises until the circuit components are stabilized.

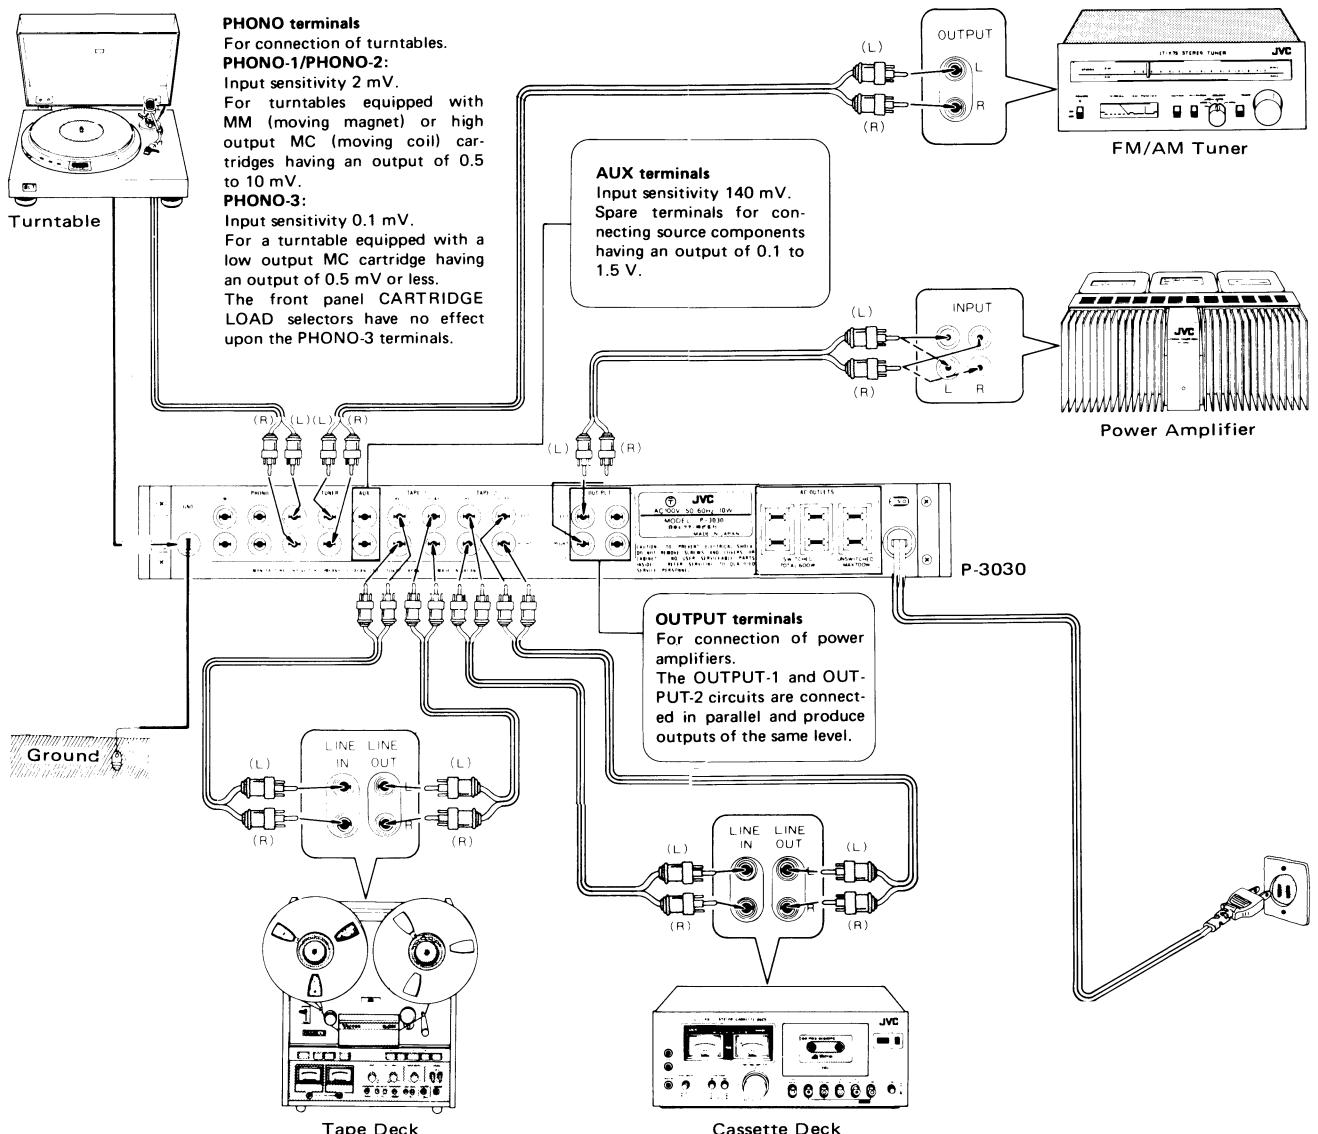

Fig. 1

#### AC outlets

For the connection of other audio components only.

#### SWITCHED:

Two SWITCHED outlets are switched off when the front panel power switch is off. If the power amplifier is connected to one of these outlets, its on and off power switching can be controlled with the power switch of this unit. The power capacity is rated at 600 W total. If the power amplifier is not a JVC product, check to make

sure that it is equipped with fuses or a circuit breaker to protect against current surges during switching. To give a rough reference, power amplifiers of less than 100 watts per channel can be connected. Those with output power more than that should be connected to the UNSWITCHED AC outlet.

#### UNSWITCHED:

Power is not switched off when the front panel power switch is off. The capacity is 700 W.

## 4. How to Operate

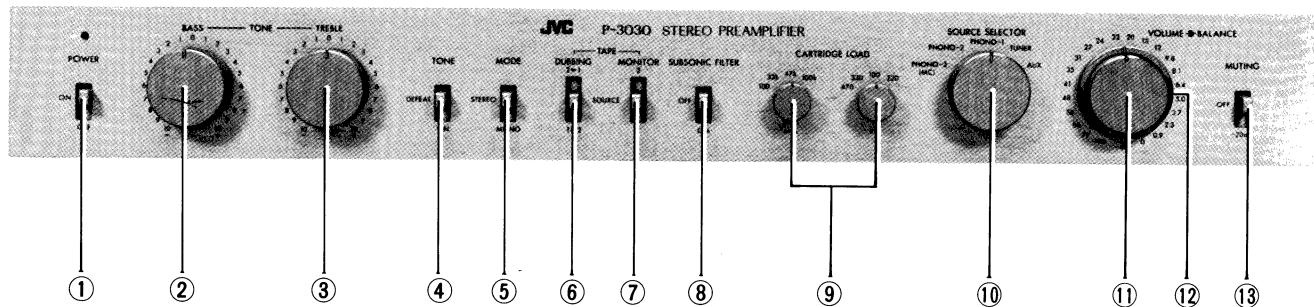

Fig. 2

### ① POWER switch

Flip up to turn power on.  
The power indicator will light.  
Flip down to turn power off.

### ② BASS control

Turn clockwise to boost bass response, counterclockwise to decrease bass response.

### ③ TREBLE control

Turn clockwise to boost treble response, counterclockwise to decrease treble response.

### ④ TONE switch

**DEFEAT:** Flip up to this position to obtain flat frequency response. The effects of the BASS and TREBLE controls are cancelled out.

**ON:** Flip down to this position to actuate the BASS and TREBLE controls.

### ⑤ MODE switch

**STEREO:** To hear stereo sound.

**MONO:** To hear mixed sounds of the left and right channels from both speakers.

### ⑥ DUBBING switch

**SOURCE:** Set to this position when recording a source connected to the rear panel PHONO, AUX and TUNER terminals.

**2 → 1:** Set to this position when dubbing from the tape deck connected to the TAPE-2 terminals to the tape deck connected to the TAPE-1 terminals.

**1 → 2:** Set to this position when dubbing from the tape deck connected to the TAPE-1 terminals to the tape deck connected to the TAPE-2 terminals.

### ⑦ TAPE MONITOR switch

**SOURCE:** Set to this position for listening or recording of the source selected with the SOURCE switch.

**TAPE-1:** Set to this position to listen to the tape deck connected to the TAPE-1 terminals.

**TAPE-2:** Set to this position to listen to the tape deck connected to the TAPE-2 terminals.

### ⑧ SUBSONIC FILTER switch

Flip down to ON to eliminate ultra-low noise from warped records and prevent speaker intermodulation distortion.

### ⑨ CARTRIDGE LOAD switches

Set to the proper cartridge impedance and capacitance according to the cartridge being used.

These switches are only effective when the PHONO-1 and PHONO-2 terminals are employed; they have no effect on the PHONO-3 terminals.

**⑩ SOURCE SELECTOR switch**

PHONO-1: To listen to records on the turntable connected to the PHONO-1 terminals.

PHONO-2: To listen to records on the turntable connected to the PHONO-2 terminals.

The input sensitivity is 2 mV (allowable from 0.5 to 10 mV). Therefore, connect a turntable equipped with a moving magnet or high output moving coil type cartridge.

PHONO-3: To listen to records on the turntable connected to the PHONO-3 terminals.

The input sensitivity is 0.1 mV (allowable from 0.05 to 0.5 mV). Connect a turntable equipped with a low output moving coil type cartridge.

**Note:** The CARTRIDGE LOAD switches cannot be used for the PHONO-3 terminals.

TUNER: To listen to radio broadcasts from the tuner connected to the TUNER terminals.

AUX: To listen to the source connected to the AUX terminals.

The input sensitivity of the AUX terminals is 140 mV. Connect a source having an output of 0.1 to 1.5 V.

**⑪ VOLUME control (inside knob)**

Adjusts the speaker or headphone volume.

The scale is graduated in dB attenuation increments starting from the fully clockwise maximum position.

**⑫ BALANCE control (outside knob)**

Adjusts the balance between the left and right speaker volumes. The control stops at the center click-stop position when turned in either direction.

**⑬ MUTING switch**

Flip to “-20 dB” to mute the sound to 1/10 normal level. Flipping to “OFF” returns the level to that adjusted with the VOLUME control.

# 5. Removal of Bottom Plate, Top Cover, Panels and Knobs

## Procedure

### 1. Bottom Plate

Remove the five screws (item No. ①).

### 2. Top Cover

Remove the PHONO-2 shorting pin and five screws ② then remove the cover, along with the protectors, from the chassis. Pull the cover further to the rear.

### 3. Side Panel

Remove the eight screws ③ from both sides.

### 4. Knobs

Remove all knobs, ④ through ⑧, on the front panel. Use a hex wrench to remove interior volume control knob ⑤.

### 5. Front Panel

Remove two screws ⑨ from above and two screws ⑩ from below, then pull the panel out to the front.

## 8. Adjustment Procedure

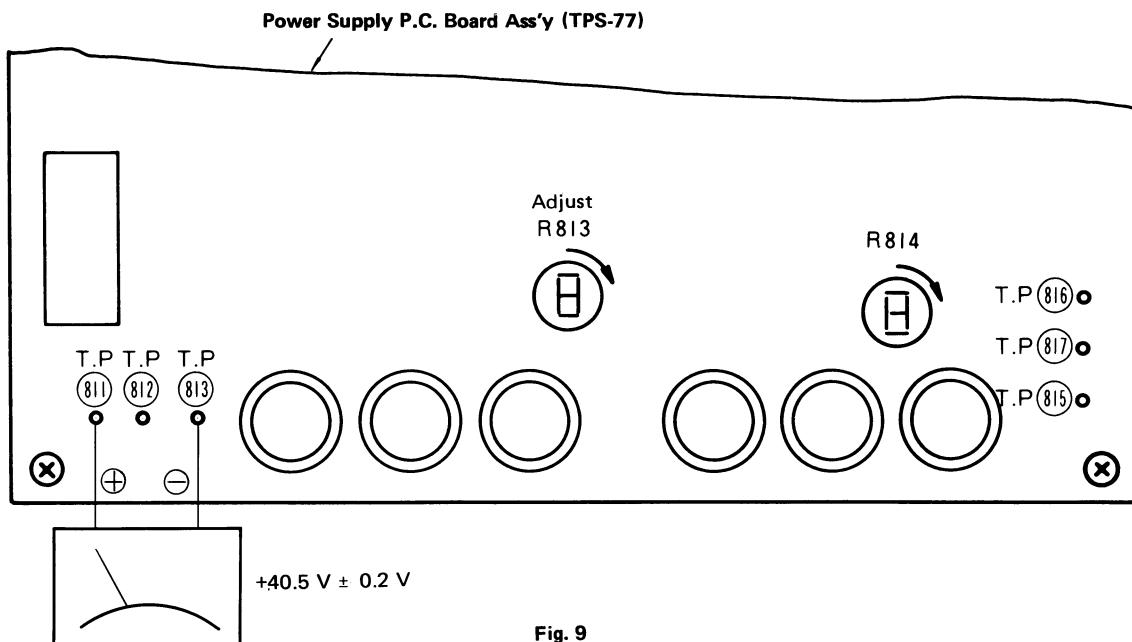

Fig. 9

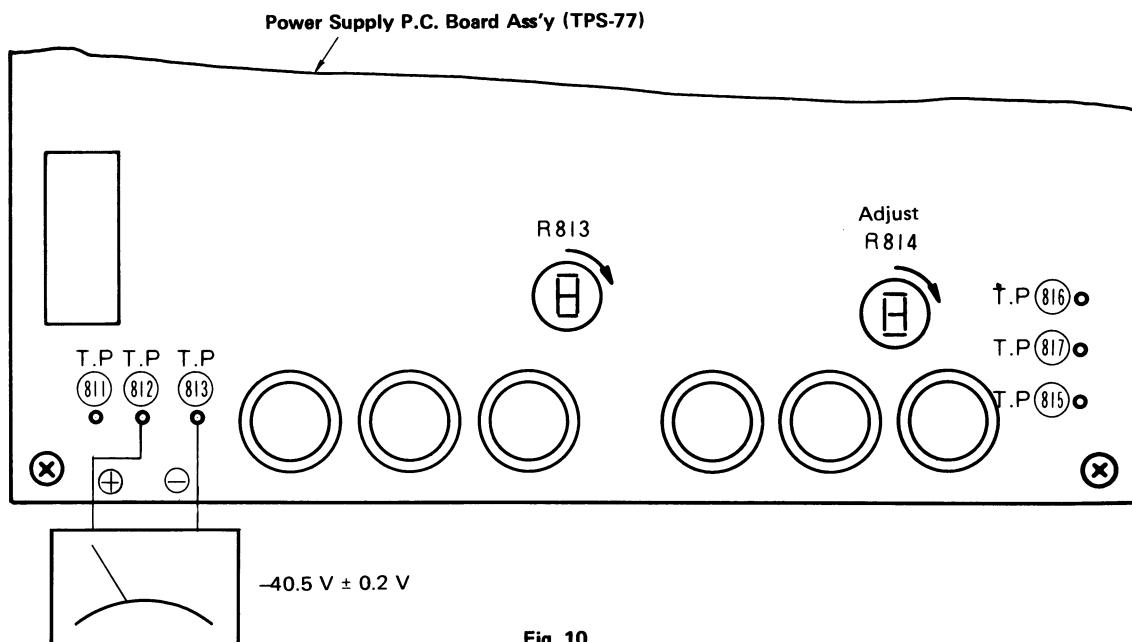

Fig. 10

### Adjustment

Voltage adjustment of the regulated voltage power supply for the equalizer circuit.

1. Before turning power on, turn R813 (or R814) fully counterclockwise.
2. Connect the plus lead of a precision voltmeter to test point (T.P.) 811 and the minus lead to T.P. 813, then turn power on.
3. Turn R813 little by little in the direction of the arrow until the voltmeter reads  $40.5 \pm 0.2$  V.
4. Reconnect the minus lead to T.P. 812 and the plus lead to T.P. 813, then slowly turn R814 until the voltmeter reads  $40.5 \pm 0.2$  V.

## Printed Circuit Board Ass'y Locations

P.C. Board Ass'y	Description	Page
TPS-77	Power Supply P.C. Board Ass'y	14
TPS-83	AC Fuse P.C. Board Ass'y	16
TPS-85	L.E.D. P.C. Board Ass'y	16
TAE-122	MC Head Amp. & Equalizer Amp. P.C. Board Ass'y	17
TAC-424	Tone Control Amp. P.C. Board Ass'y	21
TAC-425	Tone Control P.C. Board Ass'y	24
TAC-436	Cartridge Load Switch P.C. Board Ass'y	25
TAC-437	Muting P.C. Board Ass'y	26

## Transistor Lead Identification
