A symbol “■” in the key column indicates that the key should be pressed and held for 1 second or longer.

## ■ Key layout

## ■ How to enter the test mode

Procedure	Note
Reset while [SEARCH] and [SRC] keys are being pressed.	While “----” is displayed, power can be turned ON.

All lamps blink when it is detected that the sub-clock resonator is disconnected.

When having started up in the test mode, change the LINE MUTE inhibition time from 10 seconds to 1 second.

When operating in the test mode, even if a DC offset error occurs, detection information is not written in the E2PROM.

When operating in the test mode, CD mechanism error log information clear mode, and DC offset error detection information clear mode, do not perform DEMO mode operations.

Also, do not display DEMO ON/OFF option items in the MENU in STANDBY source in the above modes.

In the test mode the forced disc ejection is prohibited to shorten the period of activation during the test mode transition operation.

## ■ How to clear the test mode

Procedure	Note
Reset, momentary power down, ACC OFF, POWER OFF, Panel detached.	Clearing the test mode

This function is used, in case of front-end (A48x) failure, to transfer E2PROM data (ROM correction, security and other data) inside of the front-end (A48x) to E2PROM (IC300) of the data saving mother unit (X34-), and this function is also used, after the replacement of the front-end (A48x), to transfer the data that have been saved in the E2PROM (IC300) of the data saving mother unit (X34-) to the new front-end (A48x).

Refer to the following “ROM Data Transfer Process” pages for the details of security and other data”.

## ROM DATA TRANSFER PROCESSES

When replacing front-end (A48x) of mother unit (X34-), or when adding or replacing ROM correction (program correction with ROM IC (IC300)), the following activities are required.

### ■ Overview

When replacing front-end (A48x) in the model where ROM correction and security data have been written into E2PROM, included in the front-end (A48x) pack, the transfer function of the E2PROM data itself in the replaced front-end (A48x) is required.

This function in the above system configuration is used to allow for complete replacement of the front-end at any service center.

### ■ Overview of specifications

Procedures for replacement are as follows: To install the E2PROM (IC300) BR24L04FV-W to the mother unit (X34-), and replace front-end (A48x) with new front-end after copying the data in the E2PROM (IC300) (such as ROM correction data and other data) in the front-end (A48x) to the mother unit (X34-) by operating the system, and then copy the data (such as ROM correction data and other data) into the mother unit to the E2PROM of the front-end (A48x), operating the main body.

Tuner adjustment data was inserted during the tuner pack manufacturing, and data will not be transferred because front-end (A48x) is built-in.

In addition, tuner adjustment data for new front-end (A48x) is supplied as a service part in which data was inserted.

### ■ Data to be copied

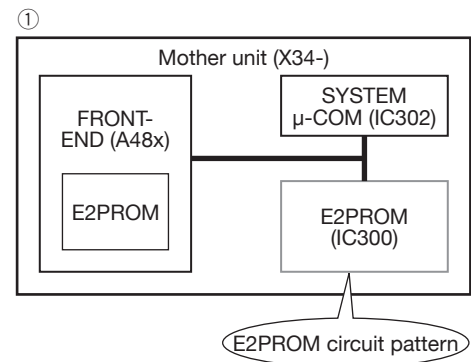

- ROM correction data
- Other data
  - Security data
  - DEMO MODE ON/OFF status
  - POWER ON time (For maintenance)
  - Playback time (For maintenance)
  - EJECT count (For maintenance)

  - CD ejection errors count (For maintenance)
  - DC offset error (For maintenance)

- Forced Power OFF information (For maintenance)
- Serial number (For maintenance)
- E2PROM data check data (For internal check)

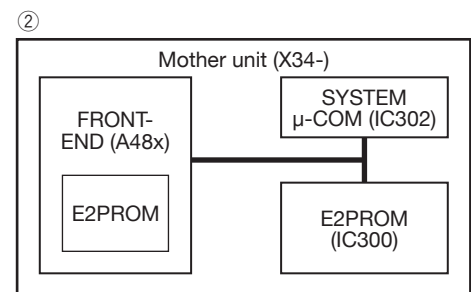

### ■ Operation procedure

Operation procedure is different depending on the conditions. Proceed with the appropriate operation procedure depending on the specific condition.

1. In case of replacing front-end (A48x) without an applicable ROM correction.
2. In case of replacing front-end (A48x) with an applicable ROM correction.
3. In case of applying new ROM correction at the same time when front-end (A48x) is replaced. (No ROM correction has been carried out.)

- Install new E2PROM (IC300) BR24L04FV-W.  
Install E2PROM (IC300) containing no data, in case of [1] and [2].  
In case of [3], install maintenance E2PROM with an applicable ROM correction program.

## INSTALLER MEMORY SPECIFICATIONS

At specialists (or specialty stores), when the installer sends the vehicle back to the user, they may make the store-recommended audio configuration.

When the user changes the setting values, when the backup power supply was taken out at times of battery change or when the reset button was pressed, to make it possible to recall the setting values, the store-recommended configuration values can be saved into E2PROM.

The specification detail defer in “with-DSP model” and in “without-DSP model”.

### [Models without DSP]

- Calling and saving the configuration is done by the MENU.
  - Items to be saved are Bass, Middle, Treble, X'over, and Sub Woofer Level. Only one setting can be saved for each item (Bass/Middle/Treble settings can be changed for each source, but only one setting can be saved as the installer memory specification, and the source in which the saving operation was carried out is saved as such).
- The contents read out by the call key shall be reflected only to the current source at the time→EQ curve is “USER” (Bass/Middle/Treble settings can be changed for each source, but not reflected to Bass/Middle/Treble settings of sources other than where the calling operation was carried out).
  - When the backup power supply was taken out at times of battery change or when the reset button was pressed, as the initial setting values of Bass, Middle, Treble, X'over, and Sub Woofer Level, the saved memory is reflected. (Bass/Middle/Treble setting initial setting value memory is reflected in all sources.)

**[NOTE]** By such, EQ curve initial setting shall always be “USER” (NOT “NATURAL” or “FLAT”).

## BACKUP MEMORY SPECIFICATIONS

Settings by the user other than the installer memory items are saved into the E2PROM, and when the backup power supply was taken out at times of battery change or when the reset button was pressed, it is made possible to recall the setting values saved.

- While Power ON, the memory is saved and accumulated at a certain interval (temporary).
  - Items to be saved into the memory are: Volume Offset (for all sources) and preset frequencies (FM/AM all bands x 6 channels).
- When the backup power supply was taken out at times of battery change or when the reset button was pressed, as the initial setting values of Volume Offset (for all sources) and preset frequencies (FM/AM all bands x 6 channels), the saved memory is reflected.
  - In models which includes channel space switching, when channel space is switched, TUNER-preset frequencies are set back to the default values.
