

Next Stop on the Road to Perfection: Krell Evolution.

After 25 years of creating some of the finest audio components known to man, Krell C.E.O. and Chief Designer Dan D'Agostino is just hitting his stride.

Beginning with the KSA-100 Stereo Amplifier, every Krell product has embodied not only Dan's innovative engineering but also his passion for "getting it right." Today, dozens of Krell industry benchmarks later, that same passion is evident in the Evolution Series – an extraordinary collection of audio components that get it right like no other in history.

Witness Active Cascode Topology™, which delivers unprecedented amplifier linearity and speaker control capability. Newly refined Evolution CAST™ (Current Audio Signal Transmission) technology offers lossless interconnectivity among Krell components. And these are just two of numerous Evolution Series innovations that, you might say, were 25 years in the making.

Join the journey.
