

PHONO AMPLIFIERS

E-200

E-200 is a full-fledged phono equalizer amplifier with a compact chassis as small as B4 size in which an MC step-up transformer with gain selection device is integrated. A high level of S/N ratio has been achieved by introducing the NF equalizer method for the circuit system to obtain a high level of sound quality equivalent to high grade models. This model is designed in consideration of user-friendliness such as placing the articulator switch with the demagnetization function that accustoms the cartridge with sound signal current to be reproduced, monaural switch useful for various types of reproducing environments, and low cut switch on the front panel.

SPECIFICATIONS

Item	Value
Type	NF type equalizer equipped with MC step-up transformer
Input sensitivity	MM: 4mV, MC high: 0.4mV, MC low: 0.18mV
Input impedance	MM: 47kΩ, MC high: 40Ω, MC low: 2.5Ω
Output power	250mV
Output impedance	300Ω
Power consumption	4W (Electrical Appliance and Material Safety Law)
Outside dimensions	364 (W) x 84 (H) x 257 (D) mm (terminals and knobs excluded)
Weight	4.4kg
