SHOCK, FIRE HAZARD SERVICE TEST :

CAUTION : After servicing this appliance and prior to returning to customer, measure the resistance between either primary AC cord connector pins (with unit NOT connected to AC mains and its Power switch ON), and the face or Front Panel of product and controls and chassis bottom.

Any resistance measurement less than 1 Megohms should cause unit to be repaired or corrected before AC power is applied, and verified before it is return to the user/customer.

Ref. UL Standard No. 1492.

In case of difficulties, do not hesitate to contact the Technical Department at above mentioned address.

SERVICE TOOL

Audio Signals Test Disc 1 4822 397 30184

MEASUREMENT SETUP

Tuner FM

Use a bandpass filter to eliminate hum (50Hz, 100Hz) and disturbance from the pilotone (19kHz, 38kHz).

Tuner AM (MW,LW)

To avoid atmospheric interference all AM-measurements have to be carried out in a Faraday's cage. Use a bandpass filter (or at least a high pass filter with 250Hz) to eliminate hum (50Hz, 100Hz).

SAFETY

Safety regulations require that the set be restored to its original condition and that parts which are identical with those specified be used. Safety components are marked by the symbol

WARNING

(GB) WARNING

All ICs and many other semiconductors are susceptible to electrostatic discharges (ESD). Careless handling during repair can reduce life drastically. When repairing, make sure that you are connected with the same potential as the mass of the set via a wristband with resistance. Keep components and tools at this potential.

(F) ATTENTION

Tous les IC et beaucoup d'autres semi-conducteurs sont sensibles aux décharges statiques (ESD). Leur longévité pourrait être considérablement écourtée par le fait qu'aucune précaution n'est prise à leur manipulation. Lors de réparations, s'assurer de bien être relié au même potentiel que la masse de l'appareil et enfilez le bracelet serti d'une résistance de sécurité. Veiller à ce que les composants ainsi que les outils que l'on utilise soient également à ce potentiel.

(D) WARNUNG

Alle ICs und viele andere Halbleiter sind empfindlich gegenüber elektrostatischen Entladungen (ESD). Unsorgfältige Behandlung im Reparaturfall kann die Lebensdauer drastisch reduzieren. Sorgen Sie dafür, daß sie im Reparaturfall über ein Pulsarmband mit Widerstand mit dem Massepotential des Gerätes verbunden sind. Halten Sie Bauteile und Hilfsmittel ebenfalls auf diesem Potential.

(NL) WAARSCHUWING

Alle IC's en vele andere halfgeleiders zijn gevoelig voor electrostatische ontladingen (ESD). Onzorgvuldig behandelen tijdens reparatie kan de levensduur drastisch doen verminderen. Zorg ervoor dat u tijdens reparatie via een polsband met weerstand verbonden bent met hetzelfde potentiaal als de massa van het apparaat. Houd componenten en hulpmiddelen ook op ditzelfde potentiaal.

(I) AVVERTIMENTO

Tutti IC e parecchi semi-conduttori sono sensibili alle scariche statiche (ESD). La loro longevità potrebbe essere fortemente ridotta in caso di non osservazione della più grande cauzione alla loro manipolazione. Durante le riparazioni occorre quindi essere collegato allo stesso potenziale che quello della massa dell'apparecchio tramite un braccialetto a resistenza. Assicurarsi che i componenti e anche gli utensili con quali si lavora siano anche a questo potenziale.

3) For AM RF adjustments the original frame antenna has to be used ! 4) MW has to be aligned before LW.

DOLBY PROLOGIC TEST DESCRIPTION

- The intention of this description is to explain the most important performance measurements for **DPL (Dolby Pro-Logic)** sets for service.

- Test instruments (recommended) :

- Dolby Prologic test CD 4822 395 10216
- AC mv meters (4x) L, C, R, S
- Oscilloscope (double beam)
- Distortion meter
- CD player.

WARNING: Be sure that the ground connection (-) of each instrument is not connected with the safety earth \perp connection. To avoid damage to output amplifiers (balance type) Use only cinch (input) ground connection

STARTING CONDITION :

- Replace the loudspeakers for all four output amplifiers with loud resistors according the output impedance for each amplifier (or use $8\ \Omega$ as standard loudresistor).
- Set volume to min. position
- Set Bass + Treble at 0 db .
- Select Surround <Prologic> .
- Select "LARGE" size for Center channel.
- Set time delay in Surround channel at 20 msec.
- Dolby Prologic test CD in CD player.

SERVICE TEST DESCRIPTION

Test 1 : Output and balance setting for all four channels

Select track 2 :

Adjust L, C, R and S for $\approx 1W$ output on the loudresistor with master volume. Adjust with L/R balance and Centre/Surround "TRIM" all four channels to equal level (equal meter readings)

Note: 1Watt output corresponds with 2.83V across $8\ \Omega$

$$P = U^2/R \rightarrow U = \sqrt{P \times R} = \sqrt{1 \times 8} = 2,83V$$

Test 2 : Frequency response for Left and Right channel

1- Center size "LARGE" requirements : -3 dB at ≤ 50 Hz and ≥ 15 kHz (same as L/R requirements)

2- Center size "SMALL" requirements : -3 dB point at ± 100 Hz and ≥ 15 kHz (the difference is the roll-off behaviour of the bass frequencies).

Select track 5 :

measure (and note) the overall gain of Center channel across the load resistor in "LARGE" size (only in sets with this option) and repeat this measurement in "SMALL" size.

Test 4 : Frequency response for Surround channel

Surround requirements : -3 dB point at ≤ 100 Hz and ± 7 kHz (6 kHz ... 8 kHz)

Note : The output level on track 14 = -35 dB below the 1W output reference of the Surround channel.

Test 6 : Total harmonic distortion measurements for Left, Center, Right, Surround channels for 1 Watt output

Note : If necessary use a special CD test filter 20 Hz ... 20 kHz between the output channel and the distortion meter to prevent spurious products out of audio waves (> 20 kHz) from to the CD player in test.

- Principle description encoded burst signal spots (see fig. 1)
 - 1- Tone burst 1 kHz during 1 msec with interval time at 20 msec are given at the same time to the L; R inputs. (in phase 0°)
 - 2- The next tone burst is given at the same time to the L R input, but in reverse phase to the R input (180°). These 2 tone bursts are repeated continuously during 2 minutes.
- Principle description decoded signal spots in Center/ Surround channel
 - In case of 20 msec time delay mode the results are shown in fig. 1 in Center and Surround channel.
The center spots in Center channel can be used as iMarker spots (trigger signal) → repeated every 40 msec.
The delayed surround spots occur at the same time as the center spots (markers)
 - When time delay mode is changed to 15 msec the delayed surround spots move to the left with respect to the centre mark spots.
 - When time delay mode is changed to 25 msec or 30 msec the delayed surround spots move to the right with respect to the center spots.
 - In case of no time delay ! (faulty condition) the surround spots fall just between 2 center markers spots (20 msec)
- **How to check with a double beam scope**
WARNING: Be sure that the ground connection (-) of each instrument is not connected with the safety earth ⊥ connection. To avoid damage to output amplifiers (balance type) Use only cinch (input) ground connection

- Select Pro Logic size "LARGE" or "SMALL" (phantom in case of no Center output.)
- Select 20 msec time delay in Surround channel.
- Adjust scope at 5 msec/division and trigger at A input
- Connect input A to Center channel (or L or R in case of phantom mode)
- Connect input B to Surround channel
- Adjust trigger level and the X position to set pulse A in the middle of the scope . see fig.2 (if L or R used in phantom mode choose the largest (amplitude) pulse. see fig 3

Select track 24:

Pulse A = 20 msec marker

Pulse B = delayed surround signal pulse

Fig 2

Fig 3

Change time delay to 15 msec (only in versions with variable delay).
 The surround pulse in channel B moves to the left with respect to side from center marker (channel A) position.
 Change time delay to 25 or 30 msec (versions with variable delay).
 The surround pulse in channel B moves to the right with respect to center marker (channel A) position.

Time delay with track 6

Alternative methode :
 The functional operation of the time delay can be made visible with a lisajous figure, with an single beam scope.
 Connect X-direction on Surround output
 Connect Y-direction on Left or Right output/input.
Note : be careful and use only 1 ground connected to scope.
 Select track 6 (surround test) :
 Make the lisajous figure visible on the scope (amplitude adjust) see fig. 4

Fig 4 Lisajous out of phase
 Time delay = OK

Note : in sets with variable time delay the ellipse of the lisajous figure must be always open. Changing the time delay changes the direction of the circle accordingly.
