

ONKYO SERVICE MANUAL

FULLY AUTOMATIC TURNTABLE

Model CP-1020F

120V model

Universal model

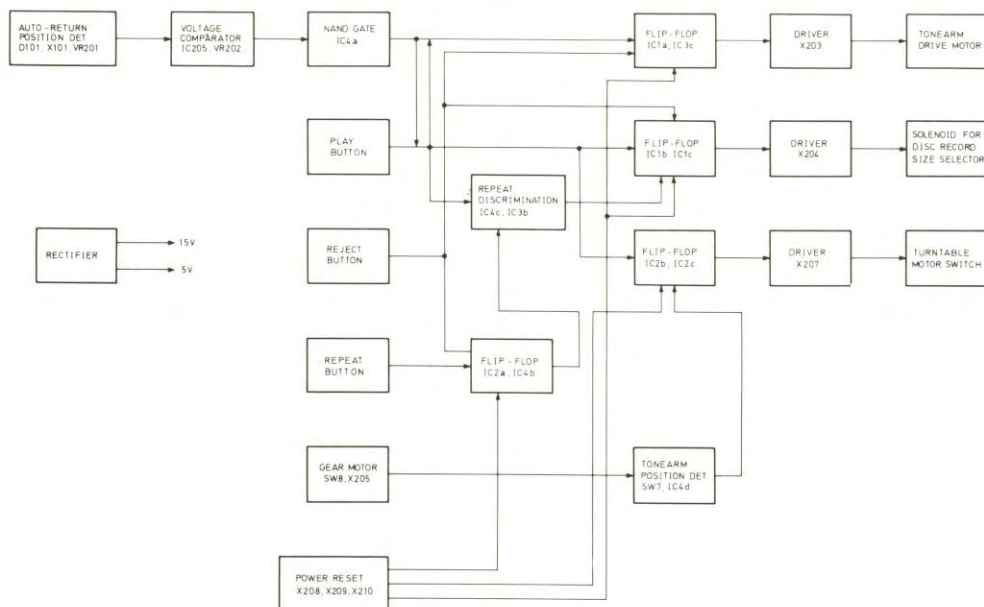

1. SPECIFICATIONS

Type:	2-speed fully-automatic turntable with manual lifter	Recommended Load	
Turntable Platter:	31 cm (12-3/16") Aluminum diecast	Impedance:	47 kohms
Motor:	Brushless, coreless, slotless, FG servo DC direct drive	Recommended Tracking Force:	2 grams
Speeds:	33-1/3 rpm, 45 rpm	Compliance:	8×10^{-6} cm/dyne
Wow & Flutter:	0.035% WRMS	Output Voltage:	4.0 mV
Signal-to-Noise Ratio:	72 dB (DIN B)	Stylus Tip:	0.5 mil (13 micron) diamond
Tonearm:	Static balanced straight pipe	Replacement Stylus:	DN-39 ST
Effective Arm Length:	224 mm (8-13/16")	Power Supply Rating:	AC110-120, 220-240V 50/60 Hz or 240V, 50 Hz
Overhang:	13 mm (1/2")	Power Consumption:	6 watts
Maximum Tracking Error:	+3 degrees, -1 degree	Dimensions (W x D x H):	453 mm x 370 mm x 133 mm 17-7/8" x 14-1/2" x 5-1/4"
(Only Universal model)		Weight:	5.8 kg (13 lbs.)
Cartridge		(Only U.S.A. Model)	
Type:	Moving magnet (OC-39M)	Usable Cartridge Weight:	5 ~ 8 gr.
Frequency Response:	18Hz - 25,000 Hz	Power Supply:	120V 60Hz

In the interest of further product improvements, specifications are subject to change without notice.

ONKYO[®]
AUDIO COMPONENTS

2. BLOCK DIAGRAM

Lead-In and Return Control Circuits

Note 1. Refer to the circuit diagram and block diagram.

- "L" and "H" denote TTL positive logic, while the figures in circles denote IC pin terminal numbers and printed circuit board terminal numbers.
- FF denotes flip-flop.

Play Operation

- When IC2b (3) is dropped to "L" level, IC2b(6) switched over to "H" and IC2c(8) to "L", resulting in the turntable motor being started up by the cut off action of X7.
- When IC1b(3) is dropped to "L" level and IC1b(6) switched to "H" level to turn X4 on, the record size selector solenoid is activated.
- When IC1a (1) is dropped to "L" level and IC1a(12) switched to "H" to turn X3 on, the tonearm drive motor is started.

Reject Operation

- When IC1a(2) is dropped to "L" level and IC1a(12) switched to "H" to turn X3 on, the tonearm drive motor is again started up.
- When IC1c(10) is dropped to "L" level, IC1c(8) is switched to "H" and IC1b(6) to "L" to cut X4 off, thereby inhibiting the record size selector solenoid.

Repeat Operation

- When IC4b(4) is dropped to "L" level, IC4b(6) is switched to "H" and IC3b(5) kept at "H". When the tonearm returns automatically at the end of the record, IC4a(3) generates an L pulse (U) which is then inverted by IC4c to become an H pulse. When this pulse is applied to IC3b(6), another L pulse is generated, resulting in IC1b(6) being switched to "H" level to turn X4 on and activate the record size selector solenoid. To release the reject mode, simply press the REJECT key. In this case, IC2a(2) is dropped to "L" level, IC2a(12) switched to "H" and IC4b(6) to "L", followed by IC3b(5) being switched to "L" and IC3b(6) to "H". Then in conjunction with the reject operation described above, the repeat mode is released by reject action. In other words, the repeat mode is maintained only as long as IC3b(5) is kept at "H" level.

Restoration of Initial Condition

When the tonearm drive motor is started up for play or reject operations, the main gear is also rotated. SW8 coupled to the main gear restores all FFs to the initial condition.

Auto-Return

When an eccentric pin of the lead arm coupled to the tonearm is inserted between D101 and Q101, it serves as a shut-off mechanism which turns the Q101 photo transistor off. The difference in voltage is applied to a comparator via IC5(3), resulting in the generation of a positive pulse which serves as the comparator output appearing at IC5(6). This pulse is subjected to rectification and inversion at the CR and IC4a, thereby forming a negative pulse which is applied to IC1a(1) and IC4c(12) and (13). This is then followed by return or repeat operation in the same way as described above.

Manual Play

When the tonearm is raised from the arm rest by hand, the SW7 arm switch drops IC2b(4) to "L" level, resulting in IC2b(6) being switched to "H" and IC1a(1) to "L", thereby starting up the turntable motor by cut off of X7.

Stopping the Turntable Motor

- When the tonearm is returned manually to the arm rest IC2c(11) is switched instantaneously to "L" level and IC2c(8) to "H", thereby turning X7 on to bring the turntable motor to a stop.
- When the main gear starts to rotate during reject or auto-return mode, the SW8 gear switch is set to position (21) during rotation, and to position (22) end the end of one revolution. As soon as this single revolution is completed, the base of X5 is switched to "L" level, resulting in a cut off action, and IC4d(10) being switched to "H". The SW7 arm switch is at position (24) (on the arm rest) at this time, and IC4d(9) is at "H" level. At the instant that IC4d(10) is switched to "H", IC4d(8) is switched to "L", IC2c(11) to "L", and IC2c(8) to "H", resulting in X7 being turned on to stop the turntable motor.

Power On Reset

When the power switch is turned on, the FFs at X8, X9 and X10 are rest to their prescribed initial state. (X9 is cut off immediately, while X8 and X10 are cut off according to their respective time constants).

3. SERVICE PROCEDURES AND ADJUSTMENTS

1. VOLTAGE CONVERSION

This turntable may be set to operate at either 110V–120V or 220V–240V at 50Hz to 60Hz. The voltage selector switch is under the turntable. If a voltage change is necessary, remove the lock plate, switch to the proper voltage, and replace the plate.

CAUTION: DISCONNECT POWER SUPPLY CORD FROM AC OUTLET BEFORE CONVERTING VOLTAGE.

2. Speed Adjustment

- Set the 33rpm and 45rpm speed adjustment controls to center positions.
- Set the speed selector to 33 rpm, and adjust VR-301 so that the stroboscope stripes appear to be stationary.

- Then switch over to 45rpm, and adjust VR-302 to obtain the same stationary stroboscope condition.

3. Wow and Flutter Adjustment

When Using Dual-Image Oscilloscope

Connect the oscilloscope leads between terminal no.12 and ground and terminal no.13 and ground in the motor drive circuit board.

Adjust VR-303 and VR-304 so as to make a and b in the following diagram the same size, and adjust VR-305 in order to obtain the same amplitude.

When Using 3kHz Test Record

Play the 3kHz test record, and adjust VR303 ~ VR-305 so as reduce wow and flutte to a minimum.

4. Return Position Adjustment

Connect a DC voltmeter between pins 9 and 10 of the control circuit board, and adjust VR-201 so that the voltage lies within the $0.2 \pm 0.05V$ range.

Set the speed selector to 33rpm, and reconnect the voltmeter to pins 9 and 11. Adjust VR-221 to obtain a reading of $0.8 \pm 0.05V$.

Then adjust the return position by the large eccentric pin attached to the tonearm base.

5. Lead-In Position Adjustment

The lead-in position is adjusted by means of the small eccentric pin attached to the base of the tonearm.

71	24506234	Hinge
72	24502082	Turntable platter
73	24509111	T.T. mat
74	292049A	45 rpm adaptor
75	24509156	Cabinet board
101	250159	Slide switch (UU)
102	24505065	Voltage plate (UU)
103	82113012	FM + 3 x 12, Pan head screw (UU)
104	838130082	Tapping screw (UU)

(UU): Only Universal model
(UDN): Only 120V model

**SCHEMATIC DIAGRAM
MODEL CP-1020F**

(A) OP Ampli. output

(B) X301 Output

(C) Differential comparison output

(D) Saw tooth wave output

(E) Differential circuit output

(F) Filter output

(G) Hall IC driver

(M) Drive ampli. output

(N) Drive ampli. output

- DD MOTOR**
- IC301, IC302 NJM4558D (μPC4558C μPC1458C)
 - X301-X303 X305 25C945 (K) (L) (25C2308 (B) (C))
 - X304 25A733(P)(Q) (25A844(B)(C))
 - X306 X307 25D667(C) (25D468(C))
 - X308 X309 25B647(C) (25B562(B)(C))
- TONE ARM CONTROL**
- IC201 IC202 SN7410N (HD7410P)
 - IC203 IC204 SN7400N (HD7400P)
 - IC205 μPC741C
 - X201 X202 25C106(B)(C)(D)
 - X203 X204 25C2001(L)(K)
 - X205, X207-X210 25C945(Q)(P)(K)

CIRCUIT NO	FUNCTION	SWITCH POSITION
SW1	POWER	[ON] OFF
SW2	SIZE	[30] 17
SW3a,b	SPEED	[33] 45
SW4	PLAY	ON [OFF]
SW5	REJECT	ON [OFF]
SW6	REPEAT	[SINGLE] REPEAT
SW7	ARM SW	[REST] PLAY
SW8	GEAR SW	ON [OFF]

7. PACKING PROCEDURES

REF. NO.	PARTS NO.	DESCRIPTION
1	24509147	FMT±4 × 30, Screw
2	870063	FW4.6φ × 10φ × 0.5 ^t , Washer
3	24500464	Caution card
4	24506248	FW4.7 × 28 × 0.4, Washer
5	24501237	Counter weight
6	292049A	45 adaptor
7	24509061	Poly sheet
8	29095097	280 × 200 mm, Protection sheet (Power supply cord)
	29100042	550 × 550 mm, Protection sheet (Dust cover)
	29095012	800 × 500 mm, Protection sheet (Cabinet)
9	29100018	750 × 650 mm, Poly bag
10	24509139	Pad
11	29100005	220 × 330 mm, Poly bag
	29340319	Instruction manual (Universal and 240V model)
	29340343	Instruction manual (Only 120V model)
	25055018	CV-K-1, Conversion plug (Only Universal model)
	29365006	Warranty card (Only U.S.A. model)
	29365005-2	Warranty card (Only Germany model)
12	24502082	Turntable platter
13	24509111	T.T. mat
14	29100008	350 × 450 mm, Poly bag
15	24509162	500 × 420 mm, Bottom pad sheet
16	29050254	Carton box
