

ONKYO® SERVICE MANUAL

COMPACT DISC PLAYER MODEL DX-200

UDN, UD	120V AC, 60Hz
UGV, UG	220V AC, 50Hz
UW	120/220V AC, 50/60Hz
UQA, UQB	240V AC, 50Hz

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK  ON THE SCHEMATIC DIAGRAM AND IN THE PARTS LIST ARE CRITICAL FOR RISK OF FIRE AND ELECTRIC SHOCK. REPLACE THESE COMPONENTS WITH ONKYO PARTS WHOSE PARTS NUMBERS APPEAR AS SHOWN IN THIS MANUAL.

MAKE LEAKAGE-CURRENT OR RESISTANCE MEASUREMENTS TO DETERMINE THAT EXPOSED PARTS ARE ACCEPTABLY INSULATED FROM THE SUPPLY CIRCUIT BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

SPECIFICATIONS

Type:	Compact Disc player with optical pickup
Quantization:	16 bit linear
Channels:	2 (Stereo)
Frequency response:	2Hz ~ 20kHz ±0.5dB
Dynamic range:	Over 96dB
Total harmonic distortion:	0.003% (1kHz)
Channel separation:	93 dB at 1kHz
S/N ratio:	Over 96dB
Wow and flutter:	Unmeasurable
Output:	2.0 volts
Pickup:	Semiconductor laser type
Power consumption:	21 watts
Dimensions:	435 (W) x 102 (H) x 350 (D) mm
Weight:	6.0kg
Accessories:	Connection cables Instruction manual Remote control

Specifications are subject to change without notice.

PRECAUTIONS

1. Removing the Transport Screws and Locking Plate

Three transport screws and locking plate are located on the bottom panel of this unit. Before using this unit for the first time, these screws and the plate must be removed. If power is switched on while these parts are still in place, the unit will not operate properly.

Note: For safe keeping, insert the short end of the locking plate back in the slot and replace the screw to hold the plate in place.

Fig. 1

2. Safety-check out (U.S.A. model)

After correcting the original service problem, perform the following safety check before releasing the set to the customer:

Connect the insulating-resistance tester between the plug of power supply cable and chassis.

Specifications: more than 10Mohm at 500V.

3. Replacing the fuses

For continued protection against fire hazard, replace only with same type and same rating fuse.

Circuit no.	Part no.	Description
F801	252063	500mA-EAWK, Primary (G/Q models)
F802	252063	500mA-EAWK, Primary (W model)
F801	252045	1A (ST-6), Primary (D/W models)

4. Procedures for replacement of flat packaged ICs

1. Tools to be used:

- (1) **Soldering iron** Grounded soldering iron or soldering iron with leak resistance of 10 Mohms or more.

Form of soldering iron's tip:

Fig. 2

- (2) **Magnifying glass** for checking of finished works
- (3) **Tweezers** for handling of IC and forming of leads
- (4) **Grounding ring** Countermeasure for electrostatic breakdown
- (5) **Nipper** for removing defective IC
- (6) **Small brush** for application of flux

2. Work Procedures:

(1) Remove the defective IC

Cut all leads of the defective IC one by one using a nipper and remove the IC.

(2) Clean the pattern surface of the PC board.

Get rid of the remaining leads and solder.

(3) Check and form the leads of the new flat packaged IC to be installed.

From every lead on the new IC using a pair of tweezers, so that all of them are aligned neatly without being risen, twisted or inclined toward one side. Especially the rising portion of every lead must be formed with greatest care.

Fig. 3

(4) Apply flux to the PC board.

Apply flux to the pattern surface of the PC board which has been cleaned, as shown in the illustration. The area to be applied with flux is the portion of about 2.5mm in width where the IC's leads are to be soldered.

Be careful to apply minimum amount of flux required so as not to smear it on unwanted areas.

(5) Temporarily tighten the IC

Carefully align the pattern and IC's leads, so that the IC will be temporarily tightened to the pattern on the four leads at the corners. At this time, soldering is required, but no need to apply soldering material.

Fig. 5

(6) Apply flux to IC's leads

Apply flux to the areas of IC's leads where soldering is to be performed. Be careful not to smear flux on the root portion of any lead or the body of IC.

Fig. 6

(7) Soldering

While attaching the tip of the soldering iron to the soldering point as shown in the illustration, feed 2–5mm of soldering wire. Then, slowly move the iron in the direction indicated by the arrow in the illustration, so that the leads will be soldered to the pattern. Move the iron in the rate of approximately 1cm in 5sec. Proceed with your work while confirming a clean fillet of solder is formed on each lead, subsequent to the melting of flux.

Fig. 7

CAUTION

- 1) If you move the iron too quickly, loose soldering is likely to result.
 - 2) Be especially careful when soldering the first lead where loose soldering is most liable to be formed.
- (8) Check the results**

When soldering of all leads is finished, check the soldered portion on every lead with a magnifying glass. A tester must not be used or checking of any soldered position

NOTE ON COMPACT DISC**• Holding Compact Discs**

Hold Compact Discs by the edges so that you do not touch

the surface of disc. Remember that the side of the disc with the "rainbow" reflection is the side containing the audio information.

Do not attach tape or paper to the label side of the disc and always be careful not to leave fingerprints on the side that is played.

• Storing Compact Discs

Store Compact Discs in a location protected from direct sunlight, high heat and humidity and extremely high and low temperatures. Discs should never be left in the trunk or interior of an automobile in the sun since the temperature can become very high in such a closed environment.

Always store Compact Discs in the holders in which they were sold. Never leave a disc in the player's disc holder for a long period of time.

**• Cleaning Compact Discs**

Before playing a disc wipe off the playing surface with a soft cloth to remove dust and other soil. Wipe the surface in straight lines from the center of the disc outward, not in a circular motion as you would with a phonograph record.

Do not use benzene, chemical cleansers or phonograph record cleaning solutions to clean Compact Discs. Also avoid static electricity prevention solutions since they can damage the surface of Compact Discs.

**Problems Caused by Dew**

Dew can form inside a Compact player when it is brought from a cold environment into a warm room, when a room is rapidly heated and if a player is left in a humid environment.

This dew can prevent the laser pickup from reading the data contained in the pits in the disc surface. If the player does not operate properly because of dew, remove the disc and leave the player's power switch on for about one hour to remove all moisture.

PROTECTION OF EYES FROM LASER BEAM DURING SERVICING

This set employs a laser. Therefore, be sure to follow carefully the instructions below when servicing.

WARNING!!

WHEN SERVICING, DO NOT APPROACH THE LASER EXIT WITH THE EYE TOO CLOSELY. IN CASE IT IS NECESSARY TO CONFIRM LASER BEAM EMISSION, BE SURE TO OBSERVE FROM A DISTANCE OF MORE THAN 30cm FROM THE SURFACE OF THE OBJECTIVE LENS ON THE OPTICAL PICK-UP BLOCK.

Laser Diode Properties

- Material: GaAs/GaAlAs
- Wavelength: 780nm
- Emission Duration: continuous
- Laser output: max. 0.4mW*

*This output is the value measured at a distance about 1.8mm from the objective lens surface on the Optical Pick-up Block.

LASER WARNING LABELS

The labels shown below are affixed.

1. Warning labels

ADVARSEL: USYNLIG LASERSTRÅLING VED ÅBNING, NÅR SIKKERHEDSAF-BRYDER ER UDE AF FUNKTION. UNDGÅ UDSÆTTELSE FOR STRÅLING.

(Other models)

DANGER — INVISIBLE LASER RADIATION WHEN OPEN AND INTERLOCK FAILED OR DEFEATED. AVOID DIRECT EXPOSURE TO BEAM.

CAUTION — HAZARDOUS LASER AND ELECTROMAGNETIC RADIATION WHEN OPEN AND INTERLOCK DEFEATED.

ATTENTION — RAYONNEMENT LASER ET ELECTROMAGNETIQUE DANGEREUX SI OUVERT AVEC L'ENCLANCHEMENT DE SECURITE ANNULE.

(UD model)

2. Certification label (UD model only)

This label is located on the back panel.

PRODUCT IS CERTIFIED BY THE MANUFACTURER TO COMPLY WITH DHHS RULES 21 CFR SUBCHAPTER J APPLICABLE AT THE DATE OF MANUFACTURE.

MANUFACTURED: 1985

3. Class 1 label (UG/UW/UQ models)

This label is located on the back panel.

ADVARSEL

"CLASS 1 LASER
PRODUCT"

Denne mærkning er anbragt på apparatets højre side og indikerer, at apparatet arbejder med laserstråler af klasse 1, hvilket betyder, at der anvendes laserstråler af svageste klasse, og at man ikke på apparatets yderside kan blive udsat for utilladelig kraftig stråling.

APPARATET BØR KUN ÅBNES AF FAGFOLK MED SÆRLIGT KENDSKAB TIL APPARATER MED LASERSTRÅLER!

ADVARSEL: USYNLIG LASERSTRÅLING
VED ÅBNING. NÅR SIKKERHEDSAF-
BRYDER ER UDE AF FUNKTION,
UNDGA UDSÆTTELSE FOR STRÅLING.

Indvendigt i apparatet er anbragt den her gengivne advarselmærkning, som advarer imod at foretage sådanne indgreb i apparatet, at man kan komme til at udsætte sig for laserstråling.

CAUTIONS ON REPLACEMENT OF PICK-UP

The laser diode in the optical pick-up block is so sensitive to static electricity, surge current and etc. that the components are liable to be broken down or its reliability remarkably deteriorated.

During repair, carefully take the following precautions.

(The following precautions are included in the service parts.)

PRECAUTIONS

1. Ground for the work-desk.

Place a conductive sheet such as a sheet of copper (with impedance lower than $10^6\Omega$) on the work-desk and place the set on the conductive sheet so that the chassis.

2. Grounding for the test equipment and tools.

Test equipments and toolings should be grounded in order that their ground level is the same the ground of the power source.

3. Grounding for the human body.

Be sure to put on a wrist-strap for grounding whose other end is grounded.

Be particularly careful when the workers wear synthetic fiber clothes, or air is dry.

4. Select a soldering iron that permits no leakage and have the tip of the iron well-grounded.

5. Do not check the laser diode terminals with the probe of a circuit tester or oscilloscope.

ADJUSTMENT PROCEDURES

1. CLV-PLL circuit adjustment

Instrument Required: Frequency counter, adjusting rod, shorting clip

- (1) Turn on power to set.
- (2) With set in STOP condition, use shorting clip to drop VC01 (TP-221) to ground.
- (3) Connect frequency counter to WFCK (TP-283).
- (4) Turn the OSC coil L206 to adjust frequency to 7.35 ± 0.01 kHz.
- (5) Remove shorting clip.

2. Focus tracking adjustment

- Set the semi-fixed resistors R114, R226, R229, R232 to about their midpoint.
- Carry out adjustment at Track 1. Take sufficient care to avoid damage.

2-1 Adjustment method – I (when using adjustment jig [1])

Instrument Required: Adjustment jig [1], standard disc (SONY TEST CD Type 4 (YEDS-18))

- Turn on power to adjustment jig [1], and after turning on SW1, insert connectors P207 and P208.

2-1-1 Focus offset adjustment

- (1) Turn on SW1 of adjustment jig [1].
- (2) With meter 2 in the range of $0 \pm 0.1V$, adjust R229 for minum deflection of meter 1.

Note: When the deflection of meter 1 is broad, adjust meter 2 to 0V.

2-1-2 Focus gain adjustment

- (1) Turn on SW2 of adjustment jig [1].
- (2) Adjust R232 until the deflection of meter 1 is 0.10V. (If R232 is turned clockwise, the deflection of meter 1 reduces.)
- (3) At this time, check to see that meter 2 reads in the range of $0 \pm 0.1V$.
- (4) If meter 2 is outside the range of $0 \pm 0.1V$, return to the adjustment of 2-1-1.

2-1-3 Tracking offset adjustment

- (1) Turn on SW3 of adjustment jig [1].
- (2) Set R226 to Min. (Completely counterclockwise)
- (3) Adjust R114 to bring the deflection of meter 2 to the center.

Note: 1. When the disc rotates at high speed, make the adjustment while holding down the speed manually.
2. An adjusting rod of insulating material must be used.

2-1-4 Tracking gain adjustment

- (1) Return R226 to about the center, and confirm that the servo is operating.
- (2) Turn on SW4 of the adjustment jig [1].
- (3) Adjust R226 so that meter 1 deflects to 0.10V. (If R226 is turned clockwise, meter 1 deflection reduces.)

2-1-5 Disconnection of adjustment jig [1].

- (1) Turn on SW1 of adjustment jig [1].
- (2) Remove connectors P207 and P208 of adjustment jig [1].

2-2 Adjustment method – II (when adjustment jig [2] is used)

Instrument Required: Adjustment jig 2, standard disc (SONY TEST CD Type 4 (YEDS-18)), oscilloscope, CR oscillator, DC voltmeter.

2-2-1 Focus offset adjustment

- (1) Connect DC voltmeter to terminal FE (TP-207).
 - (2) Connect oscilloscope to terminal EYE (TP-209).
 - (3) With terminal FE within the range of $0 \pm 0.25V$, observe the waveform on the oscilloscope, and adjust R229 for the least jitter.
- When the amount of jitter is broad, adjust FE to 0V.

2-2-2 Focus gain adjustment

- (1) Apply a sine wave of 6 V p-p at 500Hz from the CR oscillator to terminal 1 of adjustment jig [2].
- (2) Connect the oscilloscope to terminal 2 of adjustment jig [2].
- (3) Turn on SW1 of adjustment jig [2].
- (4) Adjust R232 so that there is a sine wave of 1V p-p on the oscilloscope. (If there are 2 images on the oscilloscope, it is better to remove the synch from the oscillator output.)
- (5) After adjustment, disconnect the oscillator.

2-2-3 Tracking offset adjustment

- (1) Connect the oscilloscope to terminal TE (TP-206).
- (2) Set R226 to Min. (completely counterclockwise).
- (3) Adjust R114 so that the waveform deflection at TE is 0V at the center.

Note: 1. When the disc rotates at high speed, make the adjustment while holding down the speed manually.
2. An adjusting rod of insulating material must be used.

2-2-4 Tracking gain adjustment

- (1) Return R226 to about the center, and confirm that the servo is operating.
- (2) Connect the oscillator and oscilloscope to adjustment jig [2].
- (3) Turn on SW2 of adjustment jig [2].
- (4) In the same manner as that of 2-2-2, adjust R226 so that a sine wave of 1V p-p appears on the oscilloscope.

3. Remote Control Tuned Coil Adjustment

- (1) Connect the oscilloscope to IC Q501 pin 3.
- (2) Continue to press PLAY key of remote control transmit.
- (3) Keep away the distance of the transmit from unit so that peak-peak of waveform becomes 0.5V.
- (4) Adjust L501 so that waveform becomes maximum output.

Mechanism Adjustment

• **Turntable height adjustment**

Adjust the screw A to make the gap between turntable and chassis M 0.5mm.

• **Close switch PC board attachment**

Attach the close switch PC board ass'y (NACSW-2367) to completely arrow mark.

SCHEMATIC DIAGRAM

CAUTION:

COMPONENTS IDENTIFIED BY MARK Δ ON THE SCHEMATIC DIAGRAM AND IN THE PARTS LIST ARE CRITICAL FOR RISK OF FIRE AND ELECTRIC SHOCK. REPLACE THESE COMPONENTS WITH ONKYO PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL.

NOTES:

- + ALL RESISTORS ARE IN OHMS 1/6 WATT UNLESS OTHERWISE NOTED
- + ALL CAPASITORS ARE IN μF, 50VW UNLESS OTHERWISE NOTED.
- + ELECTROLYTIC CAPASITORS (⊥) ARE IN μF/WV.
- + VOLTAGE (MEASURED WITH V. T. V. M.) NO INPUT SIGNAL.
- + CIRCUIT IS SUBJECT TO CHANGE FOR IMPROVEMENT.
