## 120V model

Track System:	4-track, 2-channel stereo
Recording System:	AC bias
Erasing System:	AC erase
Tape Speed:	4.8 cm/sec.
Wow and Flutter:	0.04% (WRMS)
Frequency Response:	20 – 17,000 Hz (20 – 16,000 Hz ± 3 dB) (normal position tape)
	20 – 19,000 Hz (20 – 17,000 Hz ± 3 dB) (high position tape)
	20 – 21,000 Hz (20 – 19,000 Hz ± 3 dB) (metal position tape)
Signal-to-Noise Ratio:	60 dB (Dolby NR out, metal position tape) A noise reduction of 10 dB above 5 kHz and 5 dB at 1 kHz is possible with the Dolby NR in
Input Jacks:	Microphone Jacks: 2 Minimum input level: 0.3 mV/600Ω Input impedance: 5 kΩ Optimum mic impedance: 600Ω – 50 kΩ
	Line In: 2 Minimum input level: 50 mV Input impedance: 50 kΩ
Outputs:	Line Out: 2 Output level: 1.1 V (at 0 dB) Optimum load impedance: over 50 kΩ
Motor:	Headphone Jack: 1 8Ω – 200Ω
Heads:	2 Motor System DD Motor: 1 DC Motor: 1
Components:	Rec/PB head: Sendust combination head
Power Supply:	Erase: Ferrite head
Power Consumption:	TR: 69 Diodes: 46 IC: 16 LED: 9
Dimensions:	120 V/60 Hz
Weight:	35 W
Accessories:	418(W) x 120(H) x 330(D) mm 16-1/2" x 4-3/4" x 13"
	6.5 kg (14.3 lbs.)
	Pin-type connecting cords: 2

\* Specifications and external appearance are subject to change without notice because of product improvements.

## Other model

Track System:	4-track, 2-channel stereo
Recording System:	AC bias
Erasing System:	AC erase
Tape Speed:	4.8 cm/sec.
Wow and Flutter:	0.04% (WRMS)
Frequency Response:	20 – 17,000 Hz (20 – 16,000 Hz ± 3 dB) (normal position tape)
	20 – 19,000 Hz (20 – 17,000 Hz ± 3 dB) (high position tape)
	20 – 21,000 Hz (20 – 19,000 Hz ± 3 dB) (metal position tape)
Signal-to-Noise Ratio:	60 dB (Dolby NR out, metal position tape) A noise reduction of 10 dB above 5 kHz and 5 dB at 1 kHz is possible with the Dolby NR in
Input Jacks:	Microphone Jacks: 2 Minimum input level: 0.3 mV/600Ω Input impedance: 5 kΩ Optimum mic impedance: 600Ω – 50 kΩ
	Line In: 2 Minimum input level: 50 mV Input impedance: 50 kΩ
Outputs:	DIN Jack: 1 Minimum input level: 0.1 mV/1 kΩ Input impedance: 1 kΩ
Motor:	Line Out: 2 Output level: 1.1 V (at 0 dB) Optimum load impedance: over 50 kΩ
Heads:	DIN Jack: 1 Standard output level: 1.1 V (at 0 dB) Optimum load impedance: more than 50 kΩ
Components:	Headphone Jack: 1 8Ω – 200Ω
Power Supply:	2 Motor System DD Motor: 1 DC Motor: 1
Power Consumption:	Rec/PB head: Sendust combination head
Dimensions:	Erase: Ferrite head
Weight:	TR: 74 Diodes: 49 IC: 16 LED: 9
Accessories:	220 V/50 Hz, 120/220 V 50/60 Hz or 240 V/50 Hz
	35 W
	418(W) x 120(H) x 330(D) mm 16-1/2" x 4-3/4" x 13"
	6.5 kg (14.3 lbs.)
	Pin-type connecting cords: 2

\* Specifications and external appearance are subject to change without notice because of product improvements.

## Mechanism

1. Back Tension: 3 – 6 g-cm
2. Play Torque: 38 – 45 g-cm
3. F.F Torque: 70 – 140 g-cm
4. Rewind Torque: 70 – 140 g-cm
5. Auto-Stop Time: less than 4.5 sec. (Play)  
less than 2.5 sec. (F.F./Rewind)
6. Timer-Start Time: less than 5 sec.
7. Rewind Time: less than 90 sec. (Use a C-60 cassette tape)

## Current Consumption

	Reel motor		Capstan motor
	PLAY	180 mA	110 mA
FF	110 mA	—	—
REW	110 mA	110 mA	110 mA
	PLAY	190 mA	120 mA
AUTO STOP	FF. REW	120 mA	—
			—

## FEATURES

### Three Head Design with Sendust for Superior Metal Tape Performance

Three heads means you can monitor the actual recorded signal as you record instead of having to rewind the tape to check your recording. The combination 3-head system also features separate record and playback gaps in a special sendust head formulation boasting high saturation flux density and abrasion resistance perfect for metal tape compatibility.

### AUTO-ACCUBIAS System

The Onkyo AUTO-ACCUBIAS system lets you quickly and accurately match the recording bias to any tape formulation to optimize frequency response and other performance parameters to get the most out of all your tapes.

### Dolby NR/HX System

In addition to the standard Dolby NR (Noise Reduction) system which reduces tape hiss noise, the TA-2060 is also equipped with the new Dolby HX (Headroom Extension) circuitry which significantly improves dynamic range in the high frequencies to permit higher recording levels above 10 kHz even when you don't use expensive tape formulations.

### Fade Out Mechanism

This convenient function enables smooth fade-ins and fade-outs to be inserted at the beginning and end of each tape to eliminate sudden cut-offs and starts.

### Remove Control Unit Terminal

With an optional remote control unit (the RC-5T), you can switch all tape transport modes from the comfort of your listening position.

## COMMON MODES OF OPERATION

### Auto ACCUBIAS Operation

1. Set the Memory switch to the STOP position and the Tape Counter to '000'.
2. Insert the tape in the cassette holder and set the Tape Selector switch to the appropriate position.  
(Use the NORM setting for FeCr tapes.)
3. Set the Dolby NR/HX switch to the OUT position.
4. Set the Monitor button to the SOURCE position.
5. Pull out on the Auto ACCUBIAS Control knob to start the test signal generator. A high (approx. 10 kHz) and low (approx. 333 Hz) signal will be generated alternately and register on the level meters.
6. Press the Record and Play buttons together to record the test signal. This will not be possible if the erasure prevention tabs have been broken off.
7. Change the Monitor button to the TAPE position. The test signal can now be monitored through the speakers or headphones. While watching the level meters, adjust the Auto ACCUBIAS Control knob so the position of the needles does not change when the test signal switches between high and low. Turn in the + direction when the high frequency is larger than the low and in the - direction when the low frequency is larger. The bias is now set to the optimum value for the tape in use. For tapes where the deflections can not be matched, adjust the Auto ACCUBIAS Control to the point where the meter needles move back and forth the least.
8. With the Auto ACCUBIAS Control knob in the setting described above, depress the knob to return it to the in position.
9. Press the Rewind button and the tape will automatically be rewound to '999'.
10. Turn the Memory switch OFF.
11. Begin recording operations.
12. The position of the Auto ACCUBIAS Control knob has no effect on sound quality during playback.

### About the Dolby NR/HX Switch

The Dolby Noise Reduction system has been developed to reduce tape hiss. The Dolby system boosts the higher frequencies (where the hiss is most apparent) during the recording process and reduces them again during playback thereby reducing the background hiss at the same time. In the TA-2060 the Dolby NR circuitry reduces the background hiss by 5 dB at 1 kHz and about 10 dB above 5 kHz.

Any tape recorded using the Dolby system must be played back using the Dolby system, and any tape not recorded using the Dolby system must not be played back using the Dolby system because the Dolby system would suppress most of the high range frequencies.

The Dolby HX (Headroom Extension) system functions to significantly improve the usable dynamic range of any tape, particularly at high frequencies. Note that the Dolby HX system does not operate for metal tapes because metal formulations already have excellent high frequency characteristics. Dolby HX also optimized performance at low and middle frequencies for minimum distortion, modulation noise and drop-out effects. To use this system when recording, set the Dolby NR/HX switch in the NR + HX position. To enjoy the benefits of these noise reduction systems during playback, the Dolby NR/HX switch should be in the DOLBY NR IN/FILTER OUT position. Tapes recorded using the Dolby HX system can be played back on tape decks not equipped with HX circuitry if the deck is set to the Dolby NR IN position.

### Fade Out Function

To fade out the sound at the end of a recording, depress the Fade Out control and turn it slowly clockwise as far as it will go. Fade Out should be performed while listening to a tape so the speed of the fading out (i.e., rate at which the control is turned) can be matched to each tape.

## ADJUSTMENT PROCEDURES

### PRECAUTIONS

- Before adjustment, clean the following parts with an alcohol moistened swab.
  - \* record/playback head      \* erase head
  - \* pinch roller                \* capstan
  - \* rubber belt
- Do not use magnetized screwdriver for adjustments.
- Damagnetize record/playback head with a head demagnetizer.
- The switches and controls should be set as follows unless otherwise specified.

TAPE SEL .....	NORM
DOLBY NR/HX .....	OUT
FADE OUT .....	OUT
OUTPUT .....	MAX
INPUT LEVEL .....	0
ACCUBIAS .....	Center
TIMER/MEMORY .....	OFF

### TEST EQUIPMENT/TOOLS REQUIRED:

Audio oscillator  
 Digital frequency counter  
 Oscilloscope  
 Attenuator  
 AC voltmeter  
 Non-magnetic screw drive  
 Blank tapes (completely erased)

NORMAL .....	UD-XL/ I
HIGH .....	UD-XL/ II
METAL .....	MX

Test tapes

VTT-658	: 10 kHz, -15 dB
MTT-111	: 3 kHz, -10 dB
MTT-150	: Dolby level calibration 400 Hz tone 200 nWb/m
TW-2111	: Torque meter
MC-12C or MC-9C	: Mirror tape

### 1. Hall IC position adjustment

Press the eject button to open the cassette lid, then lift the lid up and out to remove. Remove the two screws holding the cassette chassis and holder plate. Adjust the clearance between the hall IC and magnet becomes 0.3 to 0.9 mm as shown below.

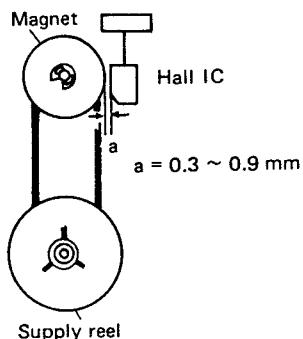

Fig. 1

### 2. Back tension adjustment

Play the torque meter TW-2111 back.  
 Adjust the VR21 on the motor control pc board so that the torque of supply reel hand becomes 3 to 6 gr-cm.

### 3. Play torque adjustment

Play the torque meter TW-2111 back.  
 Adjust the R721 so that the torque of take-up reel hand becomes 40 gr-cm.

### 4. Tape speed adjustment

Play the 3 kHz portion of the test tape MTT-111 back.  
 Adjust the VR1 on the motor control pc board so that the counter indication reads 3,000 Hz.

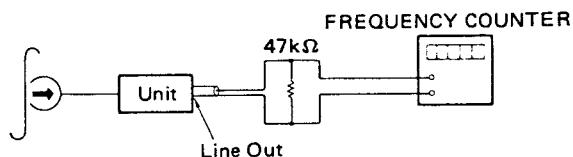

Fig. 2

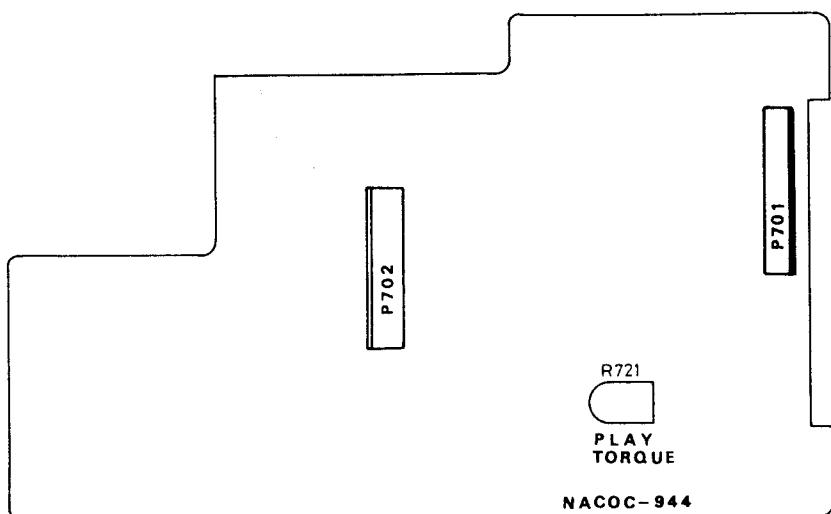

Fig. 3 Control pc board-adjustment point

### 5. Head azimuth adjustment

- 1) Play the test tape VTT-658 back.
- 2) Adjust the head azimuth screw (3) so that the phase relationship between L- and R-channels approximates 0 degrees as indicated on the oscilloscope.
- 3) At this time confirm that play back output level is approximately the maximum value on the AC voltmeter.
- 4) Then confirm that the phase difference of the respective frequency is within the rated value. 90 degrees or less in the range of 40 Hz to 10 kHz is required.
- 5) Secure the screw with the locking paint.

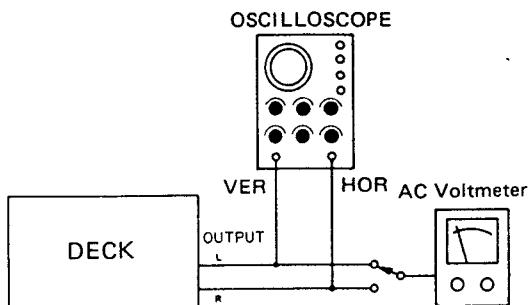

Fig. 4

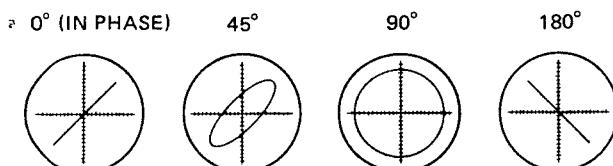

Fig. 5 Confirming phase relationship

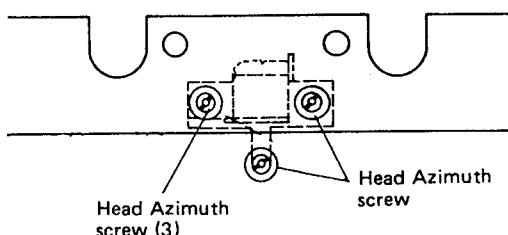

Fig. 6

Note: Perform the adjustment as shown below when the record/playback head is replaced.

1. Insert the mirror cassette tape into the cassette holder.
2. Play the mirror tape back.
3. Adjust the three azimuth screws so that the tape passes to the center of cassette guide as shown below.

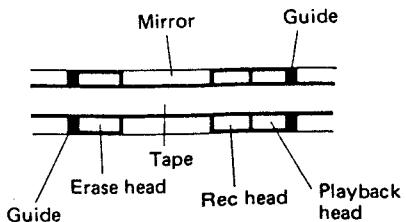

Fig. 7

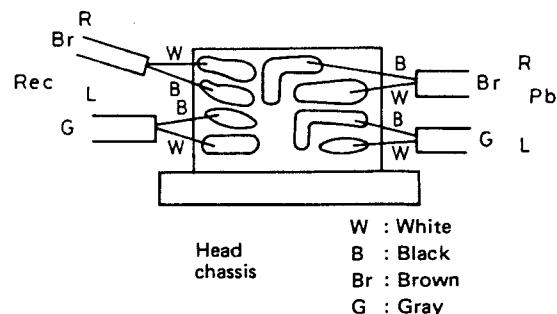

Fig. 8 Wiring view

4. Play the test tape VTT-658 back.
5. Adjust the head azimuth screws so that the AC voltmeter reads maximum.
6. Insert the normal blank tape into the cassette holder.
7. Apply the 10 kHz signal to the line-in terminals.
8. Set the monitor switch to the source position.
9. Adjust the AF oscillator output or input level volume so that the peak level meter reads OVU.
10. Then set the attenuator for -10 dB input level, put the tape deck into the recording mode.
11. Set the monitor switch to the tape position.
12. Adjust the three azimuth screws so that the left and right channel outputs become the same and maximum level.

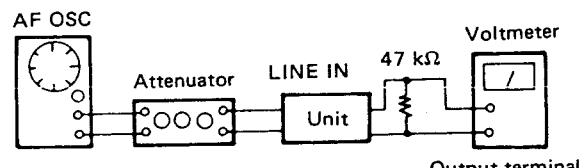

Fig. 9

### 6. Playback output adjustment

Play the test tape MTT-150 back.  
Adjust R119 and R120 so that the AC voltmeter reads 775 mV.

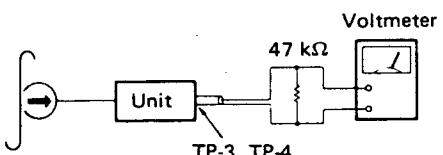

Fig. 10

### 7. Peak meter adjustment

- 1) Apply the 5 kHz signal to the line-in terminals.
- 2) Adjust the AF oscillator output or input level volume so that the AC voltmeter reads 1,100 mV.
- 3) Adjust the R341 and R342 so that the peak meter reads OVU.

Note: Connect the test equipment as shown Fig. 9.

**8. LAW adjustment**

- 1) Connect the test equipment as shown in Fig. 10.
- 2) Apply the 5 kHz signal to the line-in terminals.
- 3) Set the monitor switch to the source position.
- 4) Adjust the attenuator so that the AC voltmeter reads 23.4 mV.
- 5) Connect the test equipment as shown in Fig. 11.
- 6) Turn the Dolby NR switch to the Dolby position.
- 7) Adjust the R351 and R352 so that the AC voltmeter reads 60 mV.

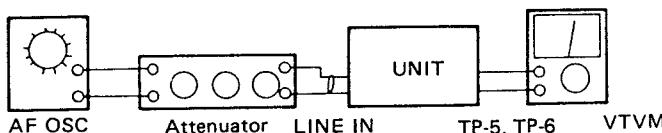

Fig. 11

**9. Accubias adjustment**

- 1) Pull out the auto accubias control knob and set the monitor switch to the source position.
- 2) Set the R517 and R516 to the position as shown below.

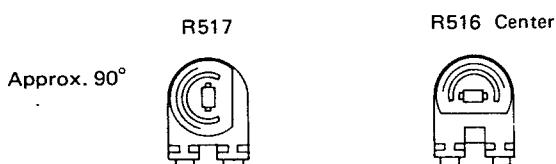

Fig. 12

- 3) Adjust the R516 so that the large indication of right channel meter becomes 0VU.
- 4) Adjust the R517 so that the meter of 333 Hz and 10 kHz indicates same calibration.
- 5) Adjust the R340 so that the meters of right and left channel indicate same calibration.
- 6) After adjustment, depress the accubias knob.

**10. Record level and bias current adjustment**

- 1) Insert the normal blank tape into the cassette holder.
- 2) Set the monitor switch to the source position.
- 3) Apply the 1,000 Hz signal to the line-in terminals.
- 4) Press the pause and record buttons and put the tape deck into recording mode.
- 5) Adjust the AF oscillator output or input level volume so that the VU meters read 0VU. (AC voltmeter reads 775 mV.)
- 6) Then set the attenuator so that the AC voltmeter reads 77.5 mV.
- 7) Release the pause button and record on the tape.
- 8) Set the monitor switch to the tape position.
- 9) Adjust the R263 and R264 so that AC voltmeter reads 77.5 mV.
- 10) Next change the frequency of 400 Hz, and record again.
- 11) Read the output level when the monitor switch is set to the tape position.
- 12) Next change the frequency of the 10 kHz and record again.
- 13) Adjust the R574 and R575 so that the 400 Hz and 10 kHz levels become is same.

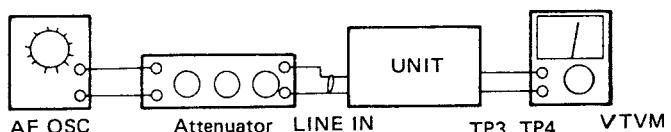

Fig. 13

**11. Lid opening speed adjustment**

Adjust the screw as shown below so that the lid opening speed becomes 0.3 to 2 sec.

Fig. 14

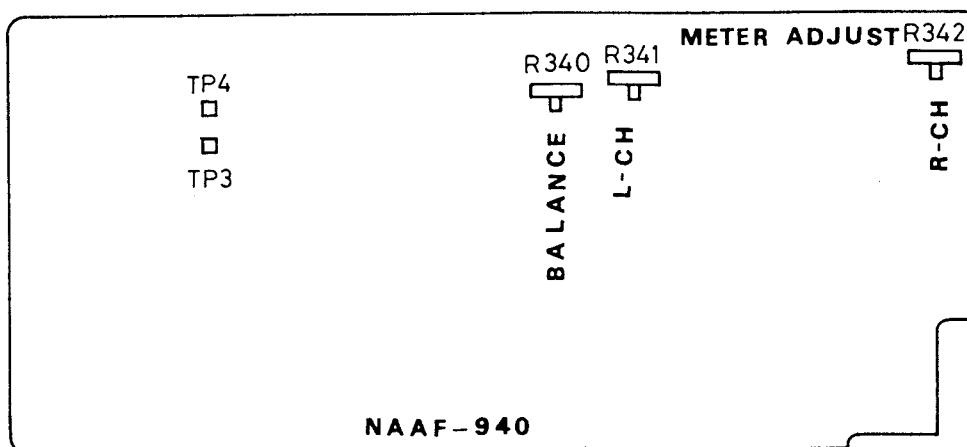

Fig. 15 Audio amplifier and meter drive pc board-adjustment points

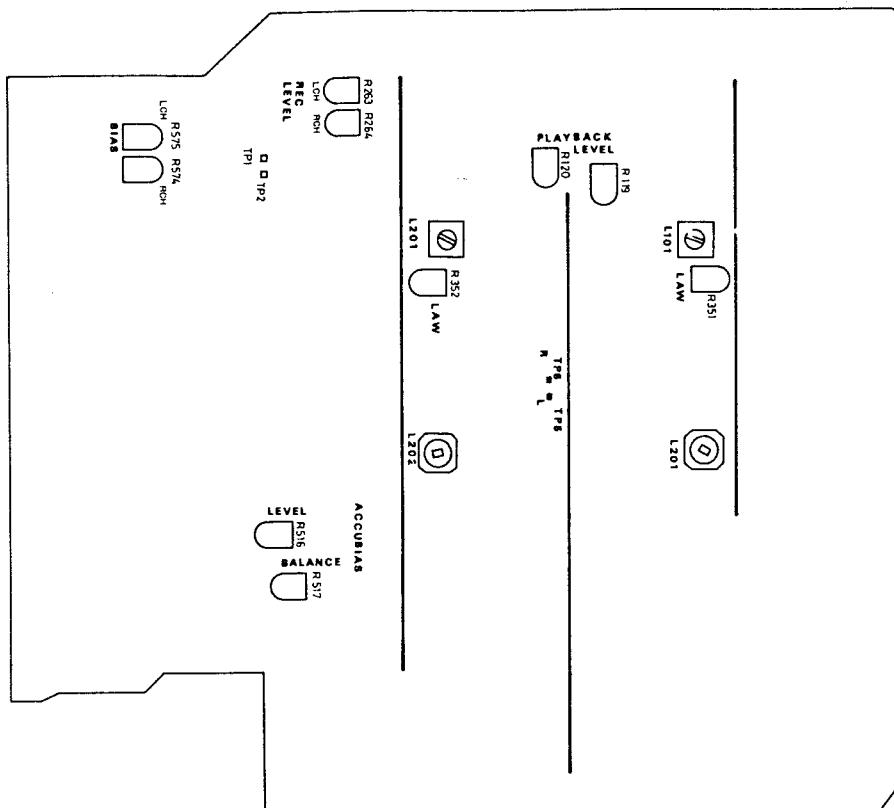

Fig. 16 Playback and record amplifier pc board-adjustment points

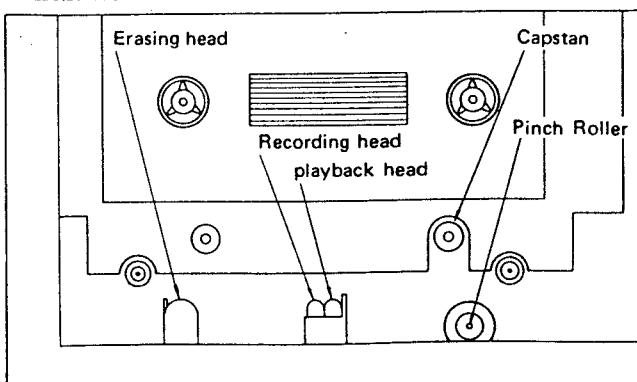

## SERVICE PROCEDURES

### 1. Head cleaning

A dirty head will cause:

- Poor sound quality (loss of high sounds)
- Decreased volume
- Skipping
- Poor erasing (incomplete erasure of previous recording)

To prevent these problems, clean the heads and capstan shaft with a cleaning pen or cotton swab dipped in a little alcohol.

### 2. Pinch roller cleaning

If the pinch roller is dirty, the tape may become tangled and damaged by wrapping around the roller. Clean the pinch roller when cleaning the head. Use a special cleaner and cotton swab. Head cleaning materials must never be used for the pinch roller.

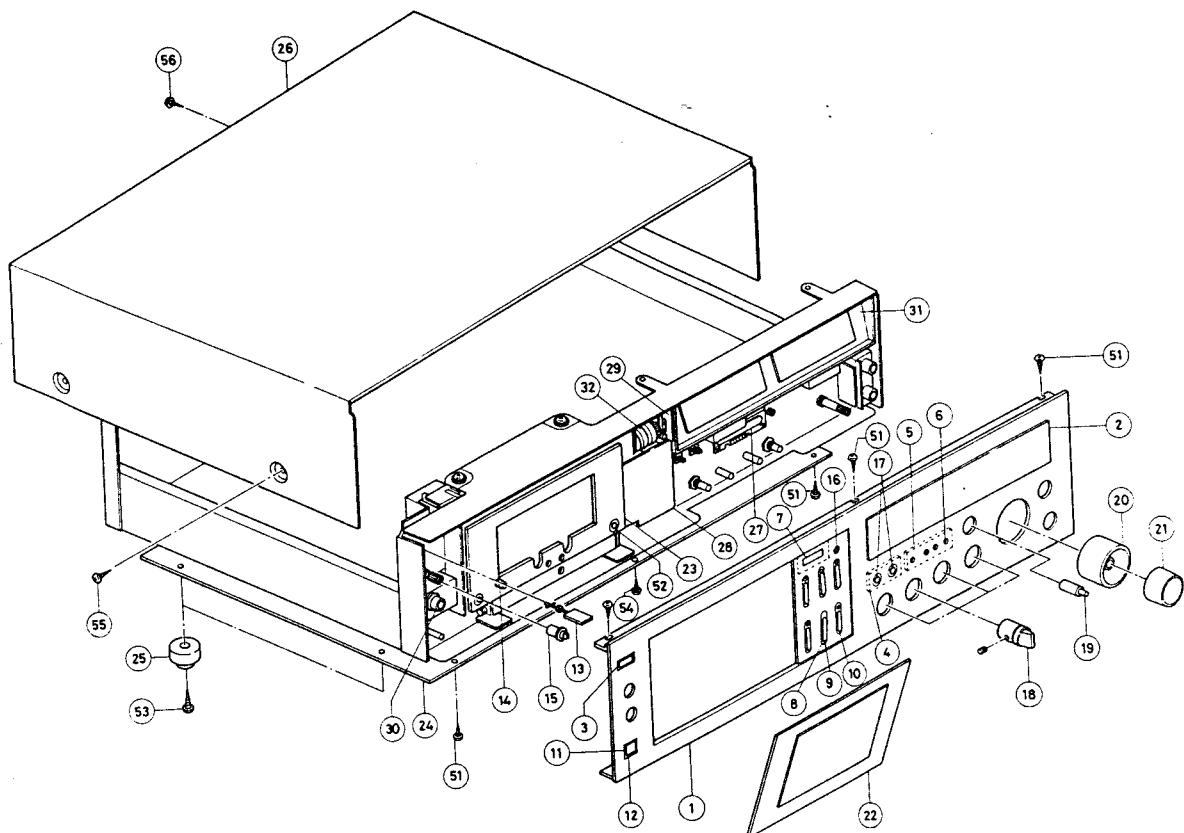

### 3. Demagnetizing

Residual magnetism builds up in the head after the cassette deck has been used for a long period of time. This build-up introduces noise and static into recording tapes and lowers the high frequency range. To prevent this, demagnetize the recording/playback head, as well as other affected metal parts (like the capstan shaft) once every 50 hours of use. Keep the tape deck power OFF while using the demagnetizer. Also place tapes far away from the work area.

### 4. DOLBY HX effect measurement

- 1) Connect the test equipment as shown in Fig. 9.
- 2) Insert the blank normal tape in the cassette holder.
- 3) Turn the tape selector switch to the normal position.
- 4) Apply to 10 kHz, 0VU signal to the line-in terminal and record on the tape.
- 5) Turn the monitor switch to the tape position.
- 6) While recording the 10 kHz signal, read the output level with the Dolby switch at OUT and Dolby HX positions.
- 7) The output level in the Dolby HX position should be more than 7 dB than the out position.
- 8) Insert the blank chrome tape and turn to the high position.
- 9) Repeat the above procedures (step 4 to step 6).
- 10) The output level in the Dolby HX position should be more than 5 dB than the out position.

## PACKING PROCEDURES

### 120V model

Ref. No.	Parts No.	Description
1	29340456	Instruction manual
2	29358002	Service station list (D)
3	29365006	Warranty card (D)
4	253074	Pin-pin connection cord
5	29100005	330 x 220 mm, Poly bag
6	29100037	650 x 500 mm, Poly bag
7	29360378	Label (D)
8	282301	Sealing hook
9	29050392	Master carton box
10	29090543	Pad (R)
11	29090542A	Pad (L)
12	29360363	Caution label (D)
13		Accessory bag

(D) : Only U.S.A. model

### 220V model

Ref. No.	Parts No.	Description
1	29340457	Instruction manual
2	29365005-3	Warranty card (G)
3	253074	Pin-pin connection cord
4	25055018	Conversion plug (W)
5	29100005	330 x 220 mm, Poly bag
6	29100037	650 x 500 mm, Poly bag
7	282301	Sealing hook
8	29050392	Master carton box
9	260012	Damplon tape
10	29090543	Pad (R)
11	29090542A	Pad (L)
12		Accessory bag

(G) : Only Germany model

(W) : Only 120/220V model
