SERVICE PROCEDURES

1. Replacing the fuses

This symbol located near the fuse indicates that the fuse used is fast operating type. For continued protection against fire hazard, replace with same type fuse. For fuse rating refer to the marking adjacent to the symbol.

Ce symbole indique que le fusible utilise est a rapide. Pour une protection permanents, n'utiliser que des fusibles de meme type. Ce darnier est indique la qu le present symbol est appose.

2. To Initialize the unit

This device employs a microprocessor to perform various functions and operations. If interference generated by an extermal power supply, radio wave, or other electrical source results in accident which causes the specified operations and functions to operate abnormally.

To perform a reset, please follow the procedure below.

1. Press and hold down the VIDEO-1 button, then press the SPEAKER-A button.
2. After "clear" is displayed, the preset memory and each mode stored in then memory, such as surround, are initialized and will return to the factory settings.

3. Safety-check out

(Only U.S.A. model)

After correcting the original service problem, perform the following safety check before releasing the set to the customer.

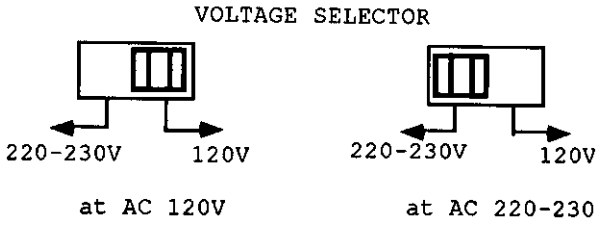
Connect the insulating-resistance tester between the plug of power supply cord and the screw on the back panel.

Specifications : 3.3Mohm±10% at 500V.

4. Change of voltage

Worldwide models are equipped with a voltage selector to conform to local power supplies. This switch is located or the back panel.

Be sure to set this switch to match the voltage of the power supply in your area before turning the the power switch or This switch is set to 220-230V at the factory. Voltage is changed by sliding the groove in the switch with the screwdriver to the right or left. Confirm that the switch ha been moved all the way to the right or left before turning t power switch on.



5. Memory preservation

This unit does not require memory preservation batteries.

A built-in memory power back-up system preserves contents of the memory during power failures and even when the unit is unplugged.

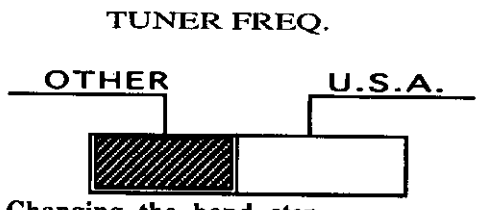
The unit must be plugged in and the power switch turned on and off once in order to charge the back-up system. Note that since this is not a permanent memory, the power switch must be turned on and off a few times each month the keep the back-up system operative.

The period of the time during which memory contents are preserved after power has last been turned off varies depending on climate and placement of the unit. On the average, memory contents are protected over a period of 3 to 4 weeks (a minimum of 2 weeks) after the last time power has been turned off. This period is shorted when the unit is exposed to very high humidity or used in an area with an extremely humid climate.

6. Setting the tuning step frequency

Worldwide models are equipped with a step band selector swich. This swich is located on the back papnel. This switch is set to 9 kHz at the factory, but may have to be reset to 10 kHz depending on the area where the unit is used.

AM band step
Oher area: 9 kHz
U.S.A. & Canada: 10 kHz



7. Changing the band step.

With the exception of the worldwide models, a tuning step selector switch is not provided. When you change the band step, change the parts as shown below.
