SBC442 Audio Burn-in test disc 1kHz 4822 397 30155

SBC429 Audio Signals disc 4822 397 30184

Dolby Pro-logic Test Disc 4822 395 10216

(GB)   **WARNING**

All ICs and many other semi-conductors are
susceptible to electrostatic discharges (ESD).
Careless handling during repair can reduce life
drastically.
When repairing, make sure that you are
connected with the same potential as the mass
of the set via a wrist wrap with resistance.
Keep components and tools also at this
potential.

(GB)

Safety regulations require that the set be restored to its original
condition and that parts which are identical with those specified,
be used

Safety components are marked by the symbol △ .

INFORMATION ABOUT LEAD-FREE SOLDERING

Philips CE is producing lead-free sets from 1.1.2005 onwards.
IDENTIFICATION:

Regardless of special logo (not always indicated) one must treat all sets from ⟨1 Jan 2005⟩ onwards, according next rules:

- On our website **www.atyourservice.ce.Philips.com** you find more information to:

  * BGA-de-/soldering (+ baking instructions)
  * Heating-profiles of BGAs and other ICs used in Philips-sets
  * Lead free

  You will find this and more technical information within the "magazine", chapter "workshop news".

For additional questions please contact your local repair-helpdesk.

SERVICE INSTRUCTION

Safety regulations require that after a repair, the set must be returned in its original condition. Pay in particular attention to
the following points:

- Route the wire trees correctly and fix them with the
  mounted cable clamps.
- Check the insulation of the AC Power lead for external
  damage.
- Check the strain relief of the AC Power cord for proper
  function.
- Check the electrical DC resistance between the AC Power
  Plug and the secondary side (only for sets which have a AC
  Power isolated power supply):

1. Unplug the AC Power cord and connect a wire
   between the two pins of the AC Power plug.
2. Set the AC Power switch to the "on" position (keep the
   AC Power cord unplugged!).
3. Measure the resistance value between the pins of the
   AC Power plug and the metal shielding of the tuner or
   the aerial connection on the set. The reading should be
   larger than 4.5 Mohm (For U.S. it should be between
   4.2 Mohm and 12 Mohm).
4. Switch "off" the set, and remove the wire between the
   two pins of the AC Power plug.

- Check the cabinet for defects, to avoid touching of any
  inner parts by the customer.

CD PLAYABILITY CHECK

Customer complaint
"CD related problem"

Set remains closed!

check playability ①

playability ok ? — N

Y

"fast" lens cleaning ③ ← For flap loaders (= access to CD drive possible) cleaning method ④ is recommended

check playability

playability ok ? — N

Y

Play a CD for at least 10 minutes

check playability

playability ok ? — N

Y

add Info for customer "SET OK" ②

return set

Standard repair procedure

clean the lens ④

check playability

playability ok ? — Y → **return set**

N

check "EYE-Pattern" ⑤

EYE-Pattern ok ? — N → replace CD Drive → **return set**

Y

check Laser current ⑥

Laser current ok ? — N → replace CD Drive → **return set**

Y

check CD Drive offsets ⑦

CD Drive offsets ok ?

Y → replace Signal Processor → **return set**

N → replace CD Drive → **return set**

① - ⑦ For description - see following pages

CD PLAYABILITY CHECK

①

PLAYABILITY CHECK

For sets which are compatible with **CD-RW** discs
use CD-RW Printed Audio Disc 7104 099 96611
    TR 3 (Fingerprint)
    TR 8 (600μ Black dot) **maximum at 01:00**

• playback of these two tracks without audible disturbance
  playing time for: Fingerprint ≥10seconds
                     Black dot from 00:50 to 01:10
• jump forward/backward (search) within a reasonable time

For all other sets
use CD-DA SBC 444A 4822 397 30245
    TR 14 (600μ Black dot) **maximum at 01:15**
    TR 19 (Fingerprint)
    TR 10 (1000μ wedge)

• playback of all these tracks without audible disturbance
  playing time for: 1000μ wedge ≥10seconds
                     Fingerprint ≥10seconds
                     Black dot from 01:05 to 01:25
• jump forward/backward (search) within a reasonable time

②

CUSTOMER INFORMATION

It is proposed to add an addendum sheet to the set which
informs the customer that the set has been checked
carefully - but no fault was found.
The problem was obviously caused by a scratched, dirty or
copy-protected CD. In case problems remain, the customer
is requested to contact the workshop directly.
The lens cleaning (method ③) should be mentioned in the
addendum sheet.

The final wording in national language as well as the printing
is under responsibility of the Regional Service Organizations.

③

FAST LENS CLEANING (dry brush)

Use lens cleaning CD
    SBC AC300 ....9082 100 00043

Insert the lens cleaning CD, press PLAY and follow the
voice guide´s instructions on the CD.

④

LIQUID LENS CLEANING

> **Before touching the lens it is advised to clean the
> surface of the lens by blowing clean air over it.
> This to avoid that little particles make scratches on
> the lens.**

Because the material of the lens is synthetic and coated
with a special anti-reflectivity layer, cleaning must be done
with a non-aggressive cleaning fluid. It is advised to use
"Cleaning Solvent B4-No2", available with codenumber
4822 389 10026.

The actuator is a very precise mechanical component and
may not be damaged in order to guarantee its full function.
Clean the lens gently (don't press too hard) with a soft and
clean cotton bud moistened with the special lens cleaner.

The direction of cleaning must be in the way as indicated in
the picture below.
CD PLAYABILITY CHECK
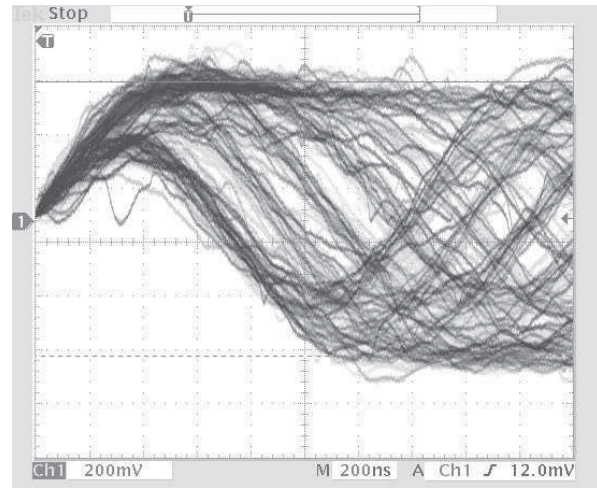

⑤

EYE-PATTERN SIGNAL – JITTER MEASUREMENT

Measure the signal on the input of the Signal processor using an **analog** oscilloscope. Please find the exact measuring point in your Service Manual.

See below examples of the signal. Amplitude should read at least 700mVpp using SBC444A.

good

bad

If the oscilloscope shows a signal like the 'bad' one, and/or the amplitude decreases within 1 minute - the CD drive has to be replaced.

⑥

CD DRIVE – LASER CURRENT MEASUREMENT

The laser current can be measured as a voltage drop on a resistor. The resistor is marked in every Service Manual. The value depends on the type of CD drive.

	typical value	most probably defect
VAMxxxx	: 150-230mV	≥350mV
MCDxx	: 170-230mV	≥300mV
DA1x	: 210-250mV	≥350mV
DA2x	: 175-200mV	≥250mV

Use SBC444A (CD-DA) for measurement.

Laser power control
⑦

CD DRIVE – OFFSET MEASUREMENT

The photodiodes of the CD-drive may have an offset. These offsets have to be compensated by the signal processor. High offsets can lead to poor playability of some CDs (skipping tracks).

To measure the offset values, start the **Service Test Program** - section "Focus Test" without a CD.

The offsets can be measured with a DC Millivoltmeter directly on the connector (see drawing below). Pin numbering varies from drive to drive.

The values from diode A-D should read 0±10mV. Diodes E and F are less critical.
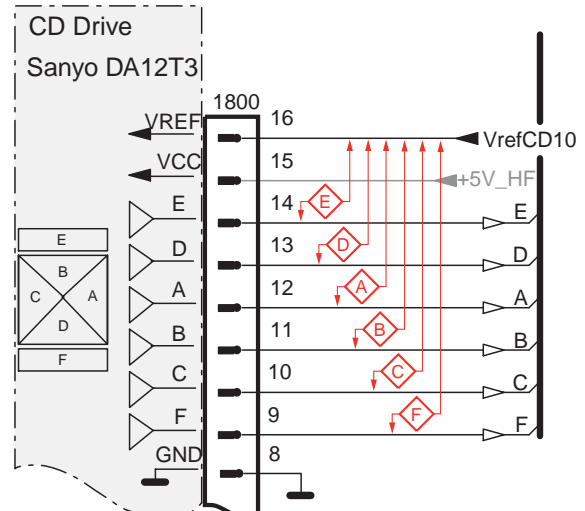

If one of the offsets is higher than ±10mV the CD drive has to be replaced. Otherwise replace the Signal Processor.

MCD755 Disassembly-DVD layer

A. Remove bottom cover
    A1.Loosen screws 2.5×7PWMTT(3PCS),2.6×5PWMTT(7PCS)
B.Remove top cover and loosen screws 3×10PTH(4PCS), 3×8FT(2PCS)
    B1. Loosen screws 3×10FA（1PCS）
C. Remove side plate and loosen screws 3×6BTH(4PCS),3×6FMTT(2PCS)
    Remove bezal panel and loosen screws 3×5FMTT(2PCS)
C1. Loosen screws where is the back of side plank 3×4FMTT(4PCS)

SOFTWARE VERSION CHECK AND UPGRADING

A.MPEG SOFTWARE VERSION CHECK

1.Press SYSTEM key (on the remote control) to open setup page,

TV Screen shows:

```
TV Displlay

Osd Lang
Screen Saver
DIVX(R) VOX
```
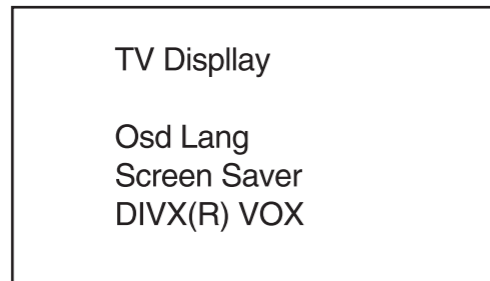

2.Press REMOVAL key (on the remote control) to the original setup page,

TV Screen shows:

```
TV Type
Audio
Subtitle
Disc Menu
Parental
Default
```
3.Enter the password "811502" (on the remote control)

TV Screen shows:

```
Ver       MCD755/xxxx
Date      mm  dd  yyyy
Time      hh:mm:ss
Region code    x
```
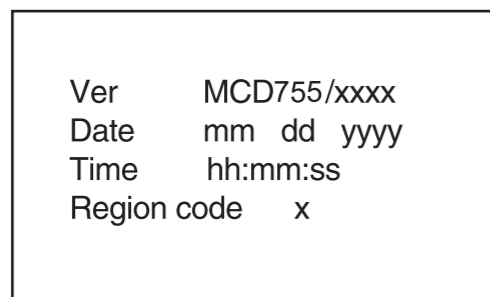

4.Press ▲ or ▼ button (on the remote control) to change region.
   Press OK to confirm.

B.CPU VERSION CHECK

Keep PLAY/PAUSE and STOP buttons (on the set) depressed while pressing POWER on.

TV screen shows

```
MCD 755 V xx
```
C. MPEG SOFTWARE UPGRADING

1. download the firmware from Philips support website
   http://www.philips.com/support

2. Prepare a uploading CD

3. Put the CD in the CD tray

4. TV Screen shows

```
Upgade file deteced
Upgade?
Press PLAY to start
upgrading
```
