PHILIPS

TECHNICAL SPECIFICATION**General:**

Mains voltage	: 230V±10%, 50Hz for /22 127V/240V +10% -15%, 50-60Hz switchable for for /21 120V±10%, 60Hz for /37
Power consumption	: ≤ 45W (measured at 1/8 P _{rated}) ≤ 10W in Standby ≤ 0,5W in ECO Standby

Input / Output:**Auxiliary / CDR in:**

input sensitivity	: ≤500mV _{rms} , Aux ≤1000mV _{rms} , CDR
input impedance	: 29kΩ

Headphone:

output level	: max. 2,5V _{rms} at 100Ω
frequency response	: 40Hz - 16.000 Hz ±3dB (typ. ±1dB), measured in JAZZ mode
distortion	: ≤ 1% (typ. 0,15%) at 1 kHz and -20dB output level at 120Ω
channel difference	: ≤ 1dB at 1 kHz
channel crosstalk	: ≤ -35dB at 1kHz (typ. -60dB)
signal/noise ratio	: ≥ 60dB (A-weighted)

Amplifier:

Power stage protection : shortcircuit and DC

Output power	: 2 x 70W _{rms} +0,6dB at 6Ω D=10%
frequency response	: 40Hz - 16000Hz ±3dB (typ. ±1dB), measured in JAZZ mode
distortion	: ≤ 1% (typ. 0,15%) at 1 kHz and 1W output power
channel difference	: ≤ 1dB at 1 kHz and 1W output power
channel crosstalk	: ≤ -35dB at 1kHz (typ. -60dB)
signal/noise ratio	: ≥ 60dB (A-weighted)

DC on output : ≤ 50mV with no signal on input

Digital Sound Control DSC

tolerance: ±3dB	60Hz	1kHz	12kHz
Jazz (flat) :	-1dB	0dB	0dB
Rock :	+18dB	+2,5dB	+8dB
Pop :	+17dB	+2dB	0dB
Optimal :	+9dB	+1dB	+3,5dB

Virtual Environment Control VEC

tolerance: ±3dB	60Hz	1kHz	12kHz
Jazz (flat) :	-1dB	0dB	0dB
Cyber :	+6,5dB	+2dB	+5dB
Concert :	+4,5dB	+2dB	+3dB
Cinema :	+7dB	+2dB	+2dB
Hall :	+13dB	+2dB	+1dB

Tuner:

	FM	MW (AM)
tuning range	87,5 - 108 MHz	531 - 1602 kHz (530 - 1700 kHz for /21/37)
IF	10,7 MHz ± 20 kHz	450kHz ± 1 kHz
sensitivity	Mono: 26dB S/N, m=30% -3 dB limiting point	
	≤ 5 μV (2μV typ.) ≤ 5 μV (2μV typ.)	≤ 4mV/m (2mV/m typ.)
frequency grid	50 kHz (100 kHz for /37) (50/100 kHz* for /21)	9 kHz (10 kHz for /37) (9/10 kHz* for /21)
	* can be selected via software initialization	
distortion	≤ 3% (≤ 1% typ.) RF=1mV Δf=75kHz	≤ 5% (3% typ.) RF=50mV/m m=80%
image rejection ratio	≥ 25dB (40dB typ.)	≥ 28dB
channel separation at 1kHz	≥ 22dB (27dB typ.)	----

CD module: To be measured on COMBI BOARD connector 1015 .

- frequency response : 20Hz - 20.000 Hz \pm 3dB
- signal/noise ratio : \geq 76dB (A-weighted)
- distortion : \leq 0,5% at 1 kHz)
- channel difference : \leq 1dB at 1 kHz
- channel crosstalk : \leq -60dB at 1kHz
- de emphasis : 0 or 15/50 μ s switched automatically by subcode on the disc

- laser
- output power : 500 μ W
 - wave length : 780 \pm 20nm

Wireless module „WESSLI“: To be measured on COMBI BOARD connector 1022 .

- frequency response : 20 - 20.000 Hz \pm 3dB
- signal/noise ratio : \geq 94dB (A-weighted)
- distortion : \leq 0,05% at 1 kHz)
- channel difference : \leq 1dB at 1 kHz
- channel crosstalk : \leq -75dB at 1kHz

Measurement setup

Tuner FM

Use a bandpass filter to eliminate hum (50Hz, 100Hz) and disturbance from the pilotone (19kHz, 38kHz).

Tuner AM (MW,LW)

To avoid atmospheric interference all AM-measurements have to be carried out in a Faraday's cage. Use a bandpass filter (or at least a high pass filter with 250Hz) to eliminate hum (50Hz, 100Hz).

CD

Use Audio Signal Disc SBC429 4822 397 30184 (replaces test disc 3)

Remote Control:

RC5/RC6 commands **RC19532014/0**

The RC19532014 uses standard RC5 codes for Tuner- CD- and Aux-mode and standard RC6 code for PC Link-mode.

WARNINGS & SAFETY

(GB) WARNING

All ICs and many other semiconductors are susceptible to electrostatic discharges (ESD). Careless handling during repair can reduce life drastically.

When repairing, make sure that you are connected with the same potential as the mass of the set via a wristband with resistance. Keep components and tools at this potential.

(F) ATTENTION

Tous les IC et beaucoup d'autres semi-conducteurs sont sensibles aux décharges statiques (ESD). Leur longévité pourrait être considérablement écourtée par le fait qu'aucune précaution n'est prise à leur manipulation.

Lors de réparations, s'assurer de bien être relié au même potentiel que la masse de l'appareil et enfilez le bracelet serti d'une résistance de sécurité.

Veiller à ce que les composants ainsi que les outils que l'on utilise soient également à ce potentiel.

ESD

(D) WARNUNG

Alle ICs und viele andere Halbleiter sind empfindlich gegenüber elektrostatischen Entladungen (ESD). Unsorgfältige Behandlung im Reparaturfall kann die Lebensdauer drastisch reduzieren.

Sorgen Sie dafür, daß Sie im Reparaturfall über ein Pulsarmband mit Widerstand mit dem Massepotential des Gerätes verbunden sind.

Halten Sie Bauteile und Hilfsmittel ebenfalls auf diesem Potential.

(NL) WAARSCHUWING

Alle IC's en vele andere halfgeleiders zijn gevoelig voor electrostatische ontladingen (ESD).

Onzorgvuldig behandelen tijdens reparatie kan de levensduur drastisch doen verminderen. Zorg ervoor dat u tijdens reparatie via een polsband met weerstand verbonden bent met hetzelfde potentiaal als de massa van het apparaat.

Houd componenten en hulpmiddelen ook op ditzelfde potentiaal.

(I) AVVERTIMENTO

Tutti IC e parecchi semi-conduttori sono sensibili alle scariche statiche (ESD).

La loro longevità potrebbe essere fortemente ridotta in caso di non osservazione della più grande cautela alla loro manipolazione. Durante le riparazioni occorre quindi essere collegato allo stesso potenziale che quello della massa del apparecchio tramite un braccialetto a resistenza.

Assicurarsi che i componenti e anche gli utensili con quali si lavora siano anche a questo potenziale.

(GB) AVAILABLE ESD PROTECTION EQUIPMENT :

KIT ESD3 (small tablemat, wristband, connection box, extension cable and earth cable) 4822 310 10671

wristband tester 4822 344 13999

(GB)

Safety regulations require that the set has to be restored to its original condition and parts which are identical with those specified be used. Replace safety components only by components identical to the original ones. Safety components are marked by the symbol 

(F)

Les normes de sécurité exigent que l'appareil soit remis à l'état d'origine et que soient utilisées les pièces de rechange identiques à celles spécifiées.

Les composants de sécurité sont marqués 

SAFETY

(D)

Bei jeder Reparatur sind die geltenden Sicherheitsvorschriften zu beachten. Der Originalzustand des Gerätes darf nicht verändert werden. Für Reparaturen sind Bauteile gleicher Spezifikation zu verwenden. Für Sicherheitsbauteile sind Originalersatzteile zu verwenden. Sicherheitsbauteile sind durch das Symbol  markiert.

(NL)

Veiligheidsbepalingen vereisen, dat het apparaat in zijn oorspronkelijke toestand wordt teruggebracht en dat onderdelen, identiek aan de gespecificeerde, worden toegepast. De Veiligheidsonderdelen zijn aangeduid met het symbool 

(I)

Le norme di sicurezza estigono che l'apparecchio venga rimesso nelle condizioni originali e che siano utilizzati i pezzi di ricambio identici a quelli specificati.

Componenti di sicurezza sono marcati con 

(GB)

DANGER: Invisible laser radiation when open. AVOID DIRECT EXPOSURE TO BEAM.

(S) Varning !

Osynlig laserstrålning när apparaten är öppnad och spärren är urkopplad. Betrakta ej strålen.

(DK) Advarsel !

Usynlig laserstrålning ved åbning når sikkerhedsafbrydere er ude af funktion. Undgå udsættelse for strålning.

(FIN) Varoitus !

Avatussa laitteessa ja suojalukituksen ohitettaessa olet alttiina näkymättömälle laserisäteilylle. Älä katso säteeseen !

(GB)

After servicing and before returning the set to customer perform a leakage current measurement test from all exposed metal parts to earth ground, to assure no shock hazard exists.

The leakage current must not exceed 0.5mA.

(F)

"Pour votre sécurité, ces documents doivent être utilisés par des spécialistes agréés, seuls habilités à réparer votre appareil en panne".

BRIEF OPERATING INSTRUCTIONS

The following excerpt of the Owner’s Manual serves as a very short introduction to the set. The complete Owners Manual can be downloaded in several languages from the Internet site of Philips Customer Care Center: www.p4c.philips.com

Controls and connections

English

On the back

- ① **SPEAKERS 6Ω L/R**
connect to the supplied speakers
- ② **AC MAINS ~**
After all other connections have been made, connect the mains lead to the wall socket.
- ③ **AUX/CDR IN R/L**
connect to the analogue audio output of an additional appliance
- ④ **AMANTENNA**
connect the supplied loop antenna here
- ⑤ **FMANTENNA**
connect the supplied wire antenna here

On the front

- ⑥ **DISC 1, DISC 2, DISC 3, DISC 4, DISC 5**
selects a disc tray and starts playback
- ⑦ **OPEN/CLOSE ▲**
opens/closes the disc tray
- ⑧ disc trays

Controls and connections

- 9 **STANDBY-ON** switches the set to (Eco Power) standby
- 10 **IR** sensor for the infrared remote control
Note: Always point the remote control towards this sensor.
- 11 display
- 12 **source control lights** when a source is active the respective control light lights up
- 13 **SOURCE** toggles between the sources:
CD: the CD changer is selected
TUNER: FM: the FM tuner waveband is selected
TUNER: MW: the MW tuner waveband is selected
FLUX: the high level input sensitivity for an additional connected appliance is selected
FLUX: CD: the low level input sensitivity for an additional connected appliance is selected
- 14 **HOME** PC LINK: returns to the first level of the file structure
- 15 **PC LINK** selects the connected PC as source
- 16 **VOLUME rotary** adjusts the volume
- 17 **▶▶** starts and interrupts playback
- 18 **STOP DEMO**
 - stops playback
 - deactivates/activates the demonstration mode (press and hold the button for 5 seconds)
- 19 **▶▶▶** CD:
 - selects the next track
 - searches forward (press and hold the button) within the current track
 TUNER: tunes to a higher radio frequency (press and hold the button for more than a half second)
 CLOCK or TIMER: sets the minutes
 PC LINK: selects the next item
- 20 **WIRELESS PC LINK control light** lights up and blinks when PC LINK data are transferred
- 21 3.5 mm headphone socket
Note: Connecting the headphones will switch off the speakers.
- 22 **◀◀** CD:
 - selects the previous track
 - searches backwards (press and hold the button) within the current track
 TUNER: tunes to a lower radio frequency (press and hold the button for more than a half second)
 CLOCK or TIMER: sets the minutes
 PC LINK: selects the previous item
- 23 **ALBUM/PRESET ▼ BROWSE**
 - CD: selects the previous album on an MP3-CD
 - TUNER: selects the previous preset radio station
 - PC LINK: selects the previous level
 - CLOCK or TIMER: sets the hours**ALBUM/PRESET ▲ BROWSE**
 - CD: selects the next album on an MP3-CD
 - TUNER: selects the next preset radio station
 - PC LINK: selects the next level
 - CLOCK or TIMER: sets the hours

English

Quick Use Guide

MCW770

This Quick Use Guide gives a rough overview and helps to start quickly with basic steps. Please read the supplied instruction manual for detailed information.

1 Insert batteries

Supplied accessories

- PC link software installer CD-ROM
- Wireless USB adapter and extension cable
- Remote control and 2 batteries, size AA
- 2 loudspeaker boxes including 2 speaker cables
- AM/MW loop antenna
- FM wire antenna
- AC power cord

Open the battery compartment of the remote control and insert 2 alkaline batteries, type AA (R06, UM-3).

2 Connect speakers, antennas, an additional appliance (optional) and the AC power cord

- 1 Connect the speaker cables to the MCW770. Use the supplied speakers only. Using other speakers can damage the set or the sound quality will be negatively affected.
- 2 Connect the AM/MW antenna.
- 3 Connect the FM antenna.
- 4 If you want to connect an additional appliance, use a cinch cable to connect the audio inputs of the MCW770 to the audio outputs of the additional appliance.
- 5 Check whether the mains voltage as shown on the type plate corresponds to your local mains voltage. If it does not, consult your dealer or service organisation.
Make sure all connections have been made before switching on the mains supply. Connect the AC power cord supplied to AC MAINS ~ and to the wall socket.

3 Install the tuner

- 1 When the AC power cord is connected for the first time to the wall socket, TUNER and AUTO INSTALL - PRESS PLAY are displayed.
- 2 Press ► on the set to store all available radio stations automatically.
→ Automatic searching and storing starts. Once completed, the last tuned radio station will be played.

4 Install the wireless connection to your PC

- PC system requirements:
- Windows 98SE/ME/2000/XP
 - Pentium Class 300MHz processor or higher
 - CD-ROM drive
 - USB port
 - Free hard disk space: 100 MB for the software

Do not connect the wireless USB adapter immediately! You will be asked during the installation process to connect it.

- 1 Place the set as close as possible to the PC.
- 2 Switch on your PC and insert the installation disc.
Note: Do not use the icon, which will appear on the PC screen during the installation process.
- 3 The installation guide will appear automatically. If it does not, go to the CD-ROM drive in Windows Explorer and double click on the **SETUP .exe**. Then continue as follows:
 - Select your desired language from the list.
 - Select **Installing Software** and then select **Quick Installation** and click **Install**.
 - Then follow the installation steps prompted by the screen to install the wireless USB adapter driver: the Philips Media Manager software and the network setup.
- 4 Switch on the set and press PC LINK.
- 5 During the network setup you will be asked to go to the install mode: Press and hold PC LINK for 5 seconds.
→ PC LINK is displayed and INSTALLING is scrolled. The set searches for a connection to the PC.

When the installation has been finished successfully:

- PC LINK and COMPLETED are displayed. The demo track from the installation disc starts to play automatically.

5 Play your music collection from the PC via the set

- 1 At installation time or later add your MP3 music folders and files to the Philips Media Manager. Only those folders and files you can see in the Philips Media Manager will be accessible from the MC-W770.
- 2 Make sure your PC is switched on.
- 3 Press PC LINK to select the PC as source.
- 4 As soon as the connection is established:
→ PC LINK is displayed and a track name is scrolled.
- 5 Press ► to start playback.
→ PC LINK is displayed and the track name is scrolled.
→ PC LINK and the elapsed playing time are displayed.

6 Play your discs on the set

For playback on this set you can use:

- All pre-recorded audio CDs
- All finalised audio CDR and CDRW discs
- MP3-CDs (CD-ROMs with MP3 tracks)

- 1 Press OPEN/CLOSE on the set.
- 2 Press one of the disc keys (DISC 1, DISC 2, DISC 3, DISC 4, or DISC 5) on the set to select the desired disc tray to be opened.
- 3 Load a disc with the printed side up.
- 4 Press OPEN/CLOSE again on the set to close the tray.

5 If you want to play one particular disc:

- Press one of the disc keys CD 1, CD 2, CD 3, CD 4, or CD 5 on the remote control to start playback of the desired disc in the selected tray.

If you want to play all loaded discs:

- Press CD on the remote control. Then press ► to start playback.

○ To stop playback press STOP.

Frequently asked questions

Important

Do not plug in the wireless USB adapter into a USB port of your computer, but start with the software installation first from the CD-ROM. After the necessary driver software has been installed you will be asked by the installation software to plug in the wireless USB adapter. This order of installation will ensure the proper function of your wireless USB adapter.

Wireless USB adapter

Question

I have plugged in the wireless USB adapter and completed the installation in Windows without installing the software from the bypacked CD-ROM first. What should I do?

Answer

In order that you can install the correct driver software for the wireless USB adapter, please do the following:

- 1 Open Windows **Start Menu/Settings/Control Panel/System/Hardware/Device Manager**
- 2 Select **Other Devices** and delete the USB WLAN device.
- 3 Unplug the wireless USB adapter.
- 4 Start the installation from the CD-ROM with **unplugged** wireless USB adapter!
- 5 You will be asked during the installation to plug in the adapter again.

I have followed the instructions for use and the instructions shown on the installation software exactly but cannot successfully install.

Possibly you have a problem with the quality of the wireless link. We propose using the extension cable which is delivered with the MCW770 Philips audio system and placing the wireless USB adapter as close as possible to the front side of the MCW770. Start the installation again.

Since I have changed the USB port for the wireless USB adapter I have longer connection times from my MCW770 audio system to the PC.

Your installation was optimised for the first USB port used. In order to decrease connection time for the new USB port, you have to configure the new USB port for your PC link network. Select from the CD-ROM setup the **Network Utilities** and then the **Install different USB port** menu. Follow the instructions of the setup programme. For more information please refer to the IFU chapter "Change of USB port using the MC W770".

English

7 Setting the clock

- 1 Press and hold **CLOCK** on the remote control for more than 2 seconds.
→ **SET CLOCK** is displayed, the hour's and minutes digits start blinking.
- 2 Press **ALBUM** or **ALBUM** on the remote control repeatedly to set the hour.
→ The clock shows the set time.
- 3 Press **←** or **→** on the remote control repeatedly to set the minutes.

8 Timer setting

- 1 Press and hold **TIMER** on the remote control for more than 2 seconds.
→ **SET TIMER** is displayed and the hours and minutes digits start blinking.
- 2 Press **CD, TUNER** or **PC LINK** on the remote control to select the source you want to be woken up with.
- 3 Press **ALBUM** or **ALBUM** on the remote control repeatedly to set the hour.
- 4 Press **←** or **→** on the remote control repeatedly to set the minutes.
- 5 Press **TIMER** on the remote control to confirm the setting.

9 Demonstration mode

To activate the demonstration mode press and hold **STOP DEMO** for 5 seconds during standby or Eco Power standby on the set until **DEMO ON** is displayed

To deactivate the demonstration mode press and hold **STOP DEMO** again on the set for 5 seconds until **DEMO OFF** is displayed

Frequently asked questions

I have lost my bypacked wireless USB adapter, what can I do?

You can order the wireless USB adapter at your local Philips Service organisation. The MCW770 PC link mode will also work with most other WiFi certified wireless adapters. But you have to perform a complete new setup, and a big part of the network setup has to be done manually. First install the new wireless adapter according to its manual. Use the MCW770 installation disc and select **Setup Network**. Continue the installation according IFU chapter "Using a different wireless network adapter". Your stored music files will not get lost.

Philips Media Manager Software

Question

Why can the tracks stored in my PC not be played even though I have successfully installed PC link?

Answer

Through PC link you have access only to those music files which are in the library of the Philips Media Manager software. The IFU chapter Preparation for wireless PC Link playback function describes how you can add MP3 music files to the Philips Media Manager.

How can I organise my tracks in the music library and in the MCW770 PC Link view?

Edit the Album, Title and other ID3 Tag information of your MP3 files with the Philips Media Manager software, so you can group your songs accordingly. To edit ID3 information select the track(s) you'd like to edit, right click and select the 'Edit Media Information...' from the popup menu.

If I already have a Musicmatch software installed in my PC, can I skip the installation of Musicmatch which comes with the CD-ROM?

Your Musicmatch software has to support the UPnP™ server function in order to be able to connect your Philips audio system MCW770 to your PC. We recommend installing the Musicmatch version from the CD-ROM.

How can I get a newer version of the Philips Media Manager?

You can download the latest version of the Philips Media Manager from <http://www.my.philips.com>

Frequently asked questions

Can I use other music archiving software than Philips Media Manager?

You can use another music archiving system than Philips Media Manager under condition that it provides an Universal Plug and Play (UPnP™) server interface.

Universal Plug and Play

Question

What is Universal Plug and Play?

Answer

Universal Plug and Play (UPnP™) allows easy interoperability of devices supporting this network technology. UPnP™ builds on standard networking technologies and provides standardized protocols for a wide variety of home and small business devices.

What does Universal Plug and Play mean for MCW770?

MCW770 implements the UPnP™ technology to get access, navigate and stream audio from a UPnP™ music server.

Network setup and system configuration

Question

Can I have more than one PC (server) to connect to this audio system?

Answer

Yes, you can add more than one PC (server) to your audio system's configuration. Start the CD-ROM installation on a PC which you want to add to your audio system and choose **Add new PC server** from the **Custom Installation** menu. Follow the instructions of the setup programme. For more information please refer to the IFU chapter "Installation of an additional PC server or recovery of PC link settings on your PC".

Can I have more than one network to connect to this audio system?

Yes, you can connect your audio system to more than one network. Each network configuration has to be added to your audio system using the installation CD. For more information please refer to the IFU chapter "Integration of MCW770 into an existing (home) network": When installed, browse through the installed networks using the ◀◀, ▶▶ keys while the display shows **NETWORK** in the first line. The network's name is scrolled in the second display line. Select a network by pressing the key on your set.

English

English

Frequently asked questions

What maximum number of networks can be installed with Philips audio system MC W770?

You can install 5 different networks.

Can I have more than one Philips audio system MC W770 to connect to my PC?

Yes, you can connect more than one Philips audio system MC W770 to your PC.

In the CD-ROM installation select **Custom Installation** and then the **Add additional Audio System** menu. Follow the instructions of the setup programme. For more information please refer to the IFU chapter "Installation of an additional audio system or recovery if audio system PC link settings are lost."

Can I use my built-in wireless LAN card in my PC to set up the communication with the audio system?

Yes, you can use the built in wireless Lan card of your PC, but you have to setup in Windows a network with this network adapter first. Then use the **Custom Installation** menu from the CD-ROM setup and choose **Network Setup** to add the same network configuration to the audio system. Follow the instructions of the setup programme. For more information please refer to the IFU chapter "Using a different wireless network adapter".

I want to use the PC link function in a wireless network which is already installed. What can I do?

The MC W770 is meant to be used with the bypassed wireless adapter. However, it is possible to use the MC W770 together with most other WiFi certified wireless adapters as well as in infrastructure mode networks using Access Point. Use the **Custom Installation** menu from the CD-ROM setup and choose **Network Setup**. In this advanced setup mode you can add to your audio system the network configuration of your home network. Please note that in this network at least one PC needs the Philips Media Manager installed and active. For more information please refer to the IFU chapter "Integration of MC W770 into an existing (home) network"

Frequently asked questions

When I press the PC LINK button, the display shows NO CONNECTION. What can I do?

If you receive this message you might need to restart your Philips Media Manager. To restart the Philips Media Manager, click on its icon on the taskbar and select "Shutdown Philips Media Manager". Restart the application from the Windows Start menu.

Can PC link work when the PC is in standby?

PC link cannot work when the PC is switched off or in standby.

UPnP™ is a certification mark of the UPnP™ Implementers Corporation.

English

Dismantling the Top Cover

- Remove 2 screws as shown in picture 1.
- Raise top cover at the rear and move it frontwards to disengage catches.

Note: the top cover is pre-fixed with burls protruding into a hole. Raising the top cover might need some force. If necessary use a bladed screwdriver.

picture 3

Dismantling the Cabinet Side panels

- Dismantle top cover first.
- Remove 4 screws as shown in picture 2.
- Pull off side panel at the rear as shown in picture 3 and move it frontwards to disengage catches.

Note: the side panels are pre-fixed with burls protruding into a hole. Pulling off at the rear might need some force. If necessary use a bladed screwdriver.

picture 2

picture 4

picture 5

Dismantling the 5 Disc Tray Changer

- Dismantle top cover and cabinet side panels first.
- Remove 4 screws as shown in pictures 6 and 7.
- Raise the changer unit at the rear and pull it out of the set.

picture 6

picture 7

picture 8

Dismantling the Combi Board

- Dismantle top cover and cabinet side panels first.
- Remove 3 screws as shown in pictures 9.
- Remove 2 screws fixing the 5DTC.
- It is advised to dismantle the 5DTC completely.
- Release 2 catches of the rear cabinet and move it backwards to get access to the cooling fin.
- Remove 1 screw fixing the cooling fin to the bottom plate → see picture 10.
- Release catches on front side as shown in picture 9 and fetch Combi Board out of the set.

picture 9

picture 10

Dismantling the Front Board

- Dismantle top cover, cabinet side panels and 5DTC first.
- Remove 2 screws at bottom side as shown in pictures 11.
- Remove 1 screw fixing the ground connection.
- Remove 1 screw fixing the Wessli Board to bottom plate.
- Release catches on front side of Combi Board as shown in picture 13.
- Release catches of front cabinet on left and right side and move front assy frontwards until it becomes free.
- Turn the whole unit to a proper service position as shown in picture 14.

picture 11

picture 13

picture 14

picture 12

Dismantling the *Tuner Board*

- Dismantle top cover and right cabinet side panel first.
- Remove 2 (3 for US version) screws from the antenna sockets.
- Release 2 catches and fetch the tuner module out of the set.
- Position the unit to a proper service position as shown in picture 15.

SERVICE TOOLS

TORX T10 screwdriver with shaftlength 150mm	4822 395 50423
TORX screwdriver set SBC 163	4822 295 50145
Audio signal disc SBC 429	4822 397 30184
Playability test disc SBC444	4822 397 30245
Test disc 5 (disc without errors) +	
Test disc 5A (disc with dropout errors, black spots and fingerprints)	
SBC 426/426A	4822 397 30096
Burn in test disc (65 min. 1kHz signal at -30dB level without "pause") ..	4822 397 30155

DEMO MODE

The DEMO MODE displays various features of the set.

The Demo mode can be switched on/off as follows:

Press the [STOP DEMO] key on the set at least for 5s.

→ Display shows

DEMO ON else DEMO OFF

DEALER MODE

The sets are equipped with a special DEALER MODE. This mode allows an automatic feature presentation when a dedicated 'demo CD' is detected in tray1.

When the DEALER MODE is switched on and this dedicated 'demo CD' is detected in tray1 Open/Close for tray 1 is blocked to prevent customers from fetching out CDs from exhibition sets. All keys except PC-LINK key and STAND BY-ON key are locked when the disc is playing.

The Trade mode can be switched on/off as follows:

Press the [HOME] key on the set at least for 5s.

→ Display shows

DEMO ON else DEMO OFF

LEAD FREE PRODUCED SET

This set is manufactured with lead-free production technology. This is also indicated by the PHILIPS-lead-free logo you find on the printed boards.

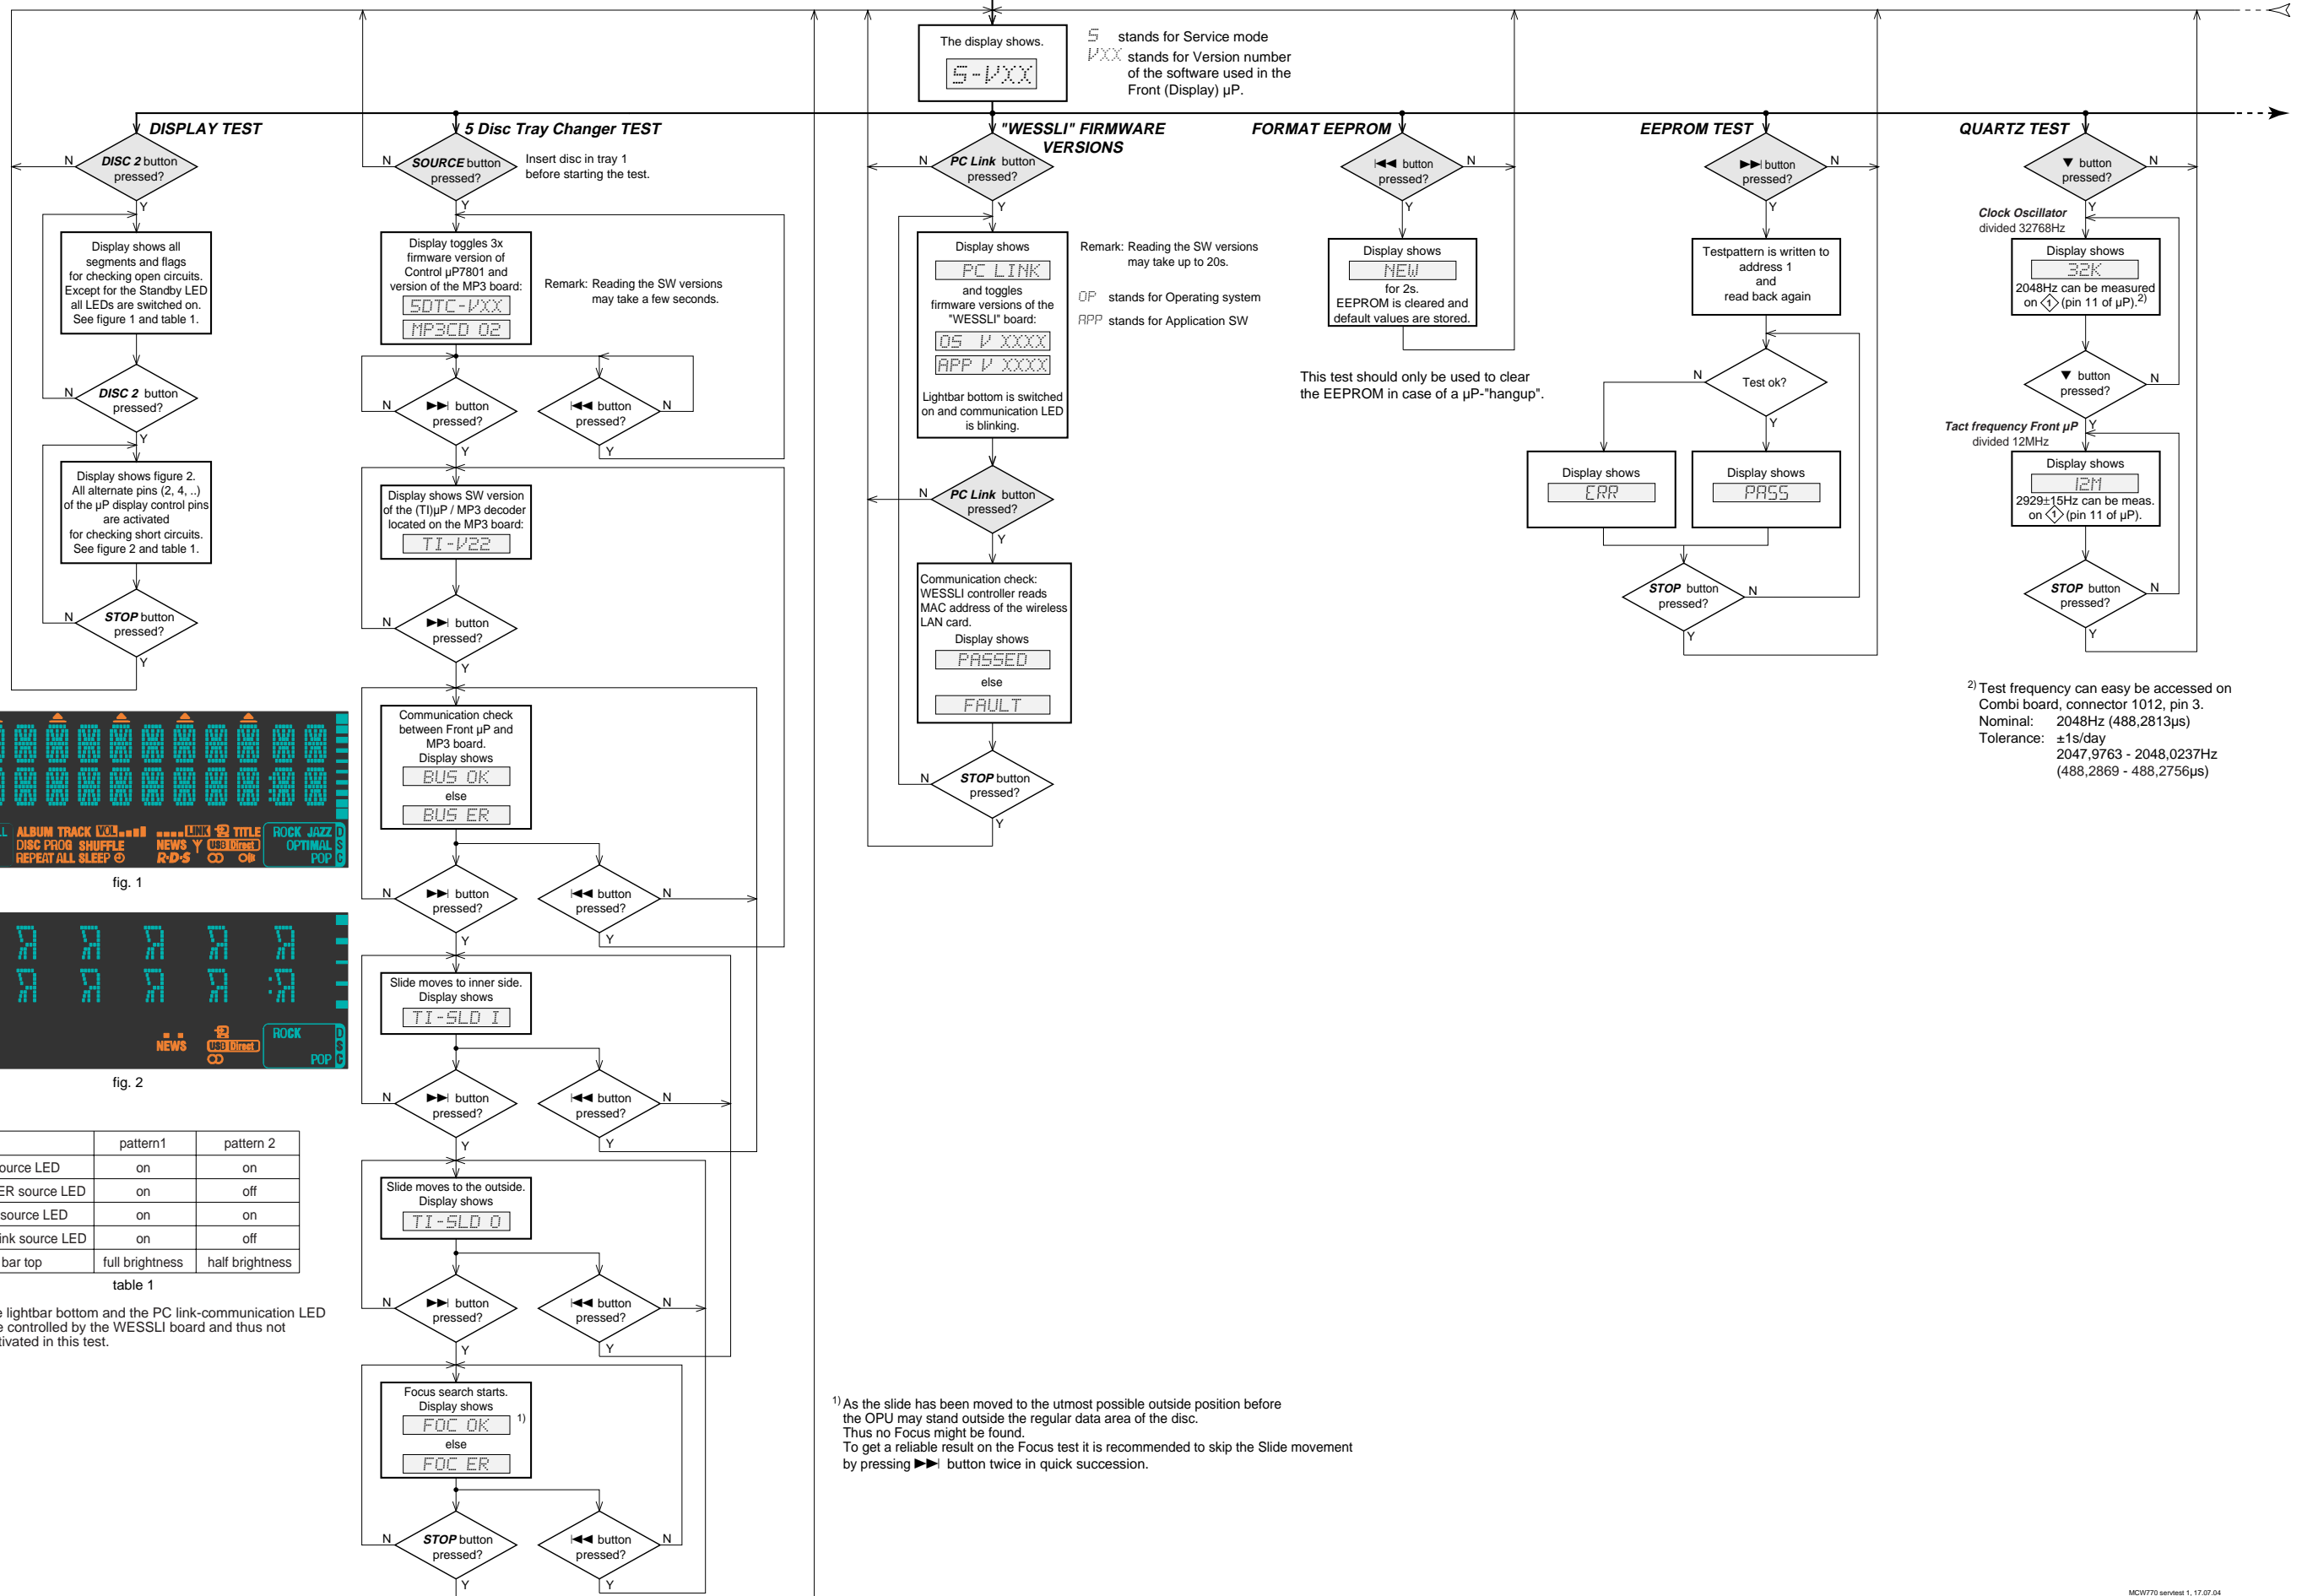

The set is produced with lead-free solder-alloy as well as with lead-free sub-parts. It can be considered as lead-free. Due to this fact some rules have to be respected by the workshop during a repair:

- Use only lead-free soldering-tin Philips SAC305 with order code 0622 149 00106. If lead-free solder-paste is required, please contact the manufacturer of your solder-equipment.
- Use only adequate solder tools applicable for lead-free soldering-tin.
- Adjust your solder tool so that a temperature around 217° – 220° is reached at the solder joint.
- Do not mix lead-free soldering-tin with leaded soldering-tin. This would lead to unreliable solder joints.
- On our website <http://www.atyourservice.ce.philips.com> you find more information to
 - aspects of lead-free technology
 - BGA-de-/soldering, heating-profiles of BGAs used in Philips-sets, and others.

PERSONAL NOTES:

**SERVICE TESTPROGRAM
PART 1**

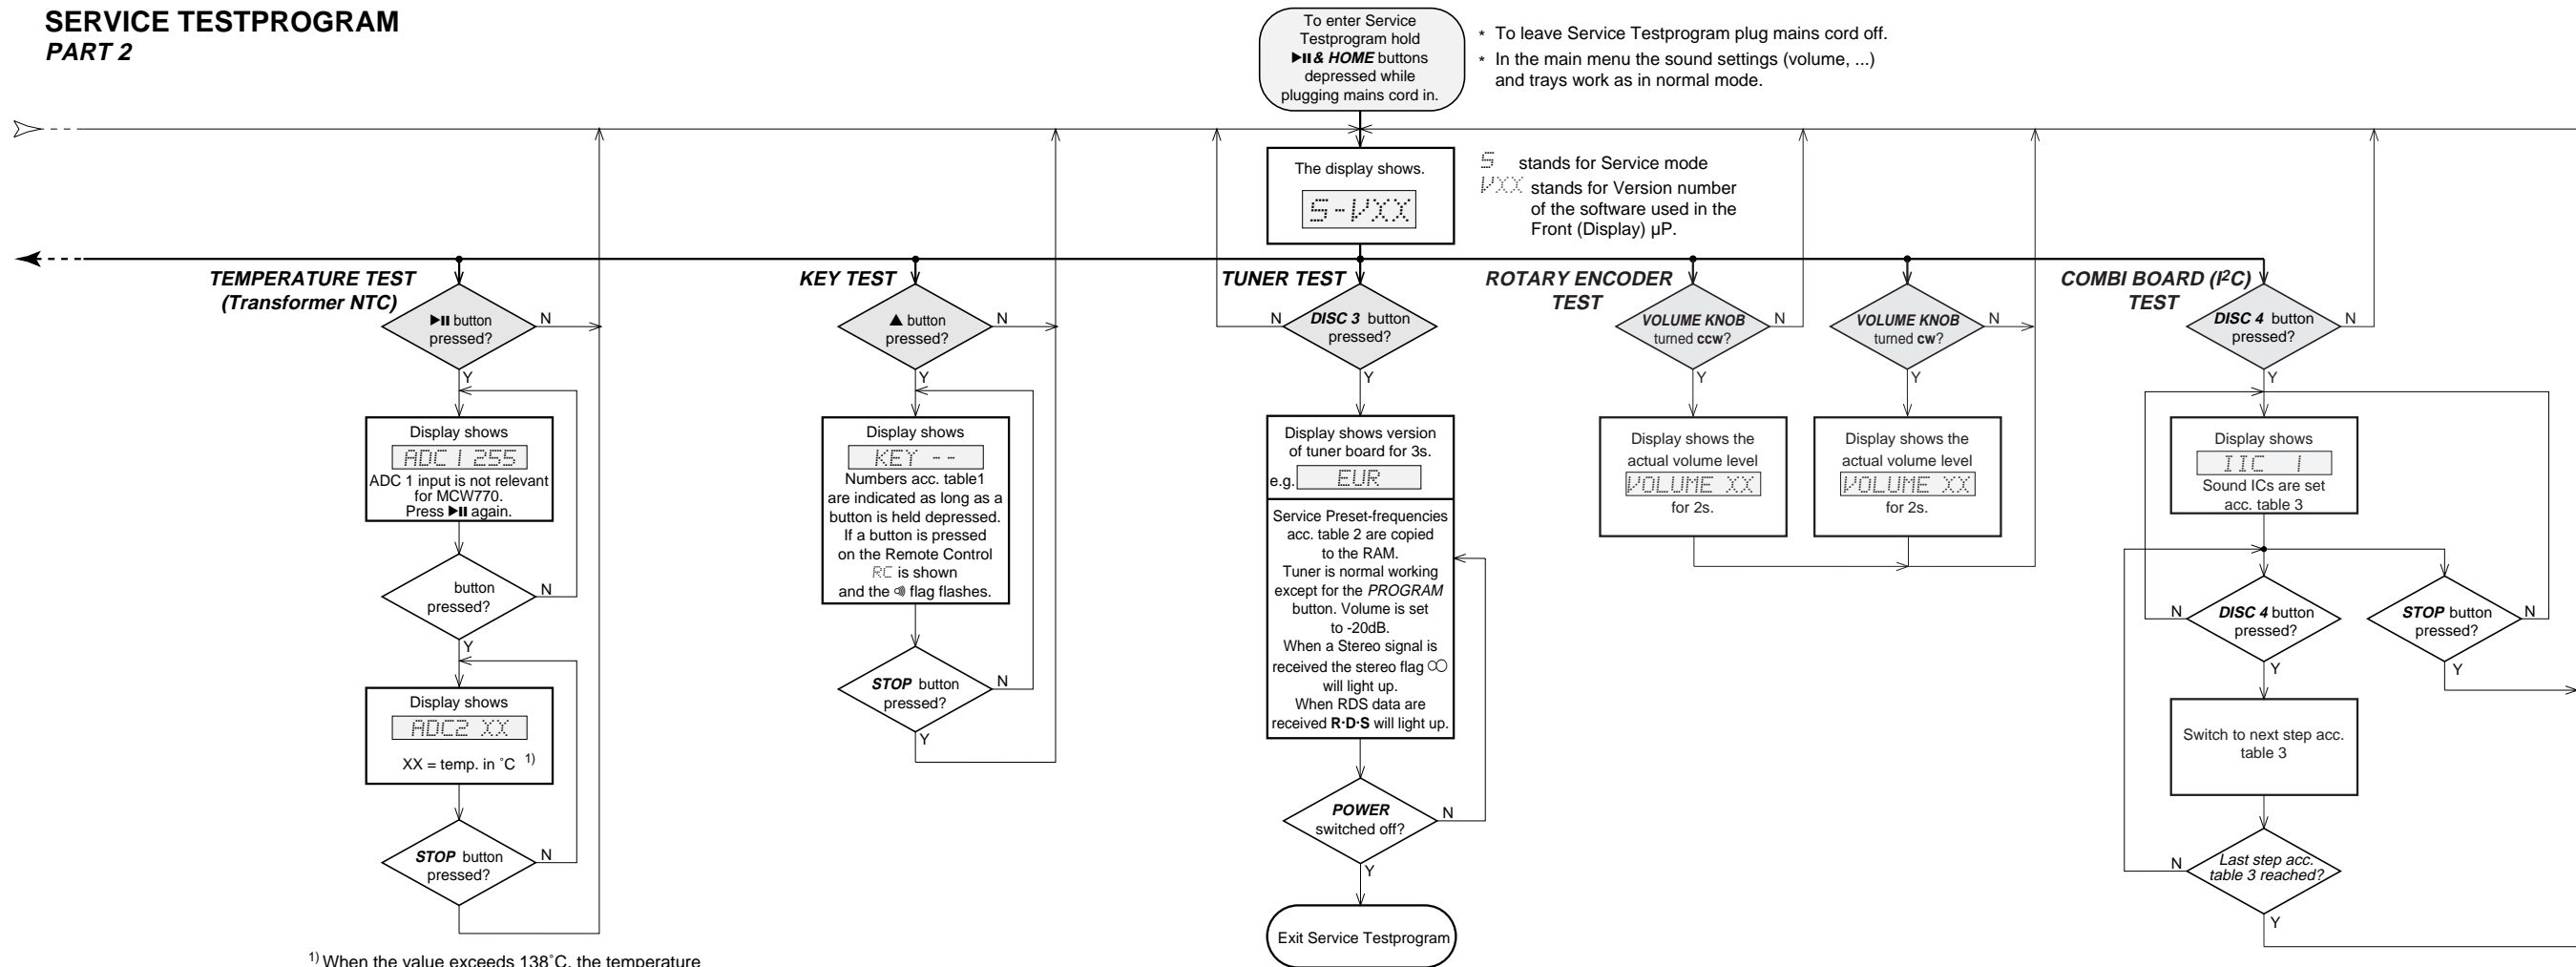

- * To leave Service Testprogram plug mains cord off.
- * In the main menu the sound settings (volume, ...) work as in normal mode.

²⁾ Test frequency can easily be accessed on Combi board, connector 1012, pin 3.
 Nominal: 2048Hz (488,2813μs)
 Tolerance: ±1s/day
 2047,9763 - 2048,0237Hz
 (488,2869 - 488,2756μs)

**SERVICE TESTPROGRAM
PART 2**

- * To leave Service Testprogram plug mains cord off.
- * In the main menu the sound settings (volume, ...) and trays work as in normal mode.

1) When the value exceeds 138°C, the temperature of the set is detected as too high and in turn the set will be switched to Standby mode. This can also be caused by the *Overvoltage Protection circuit*, switching the NTC line to ground.

Wessli Module

**This module is not intended to be repaired on component level.
Circuit Diagrams and Assembly Drawings are published for orientation only.**

**In case of defects please replace
the entire Printed Board respectively the Wireless LAN Card.**

Parts can be ordered as follows:

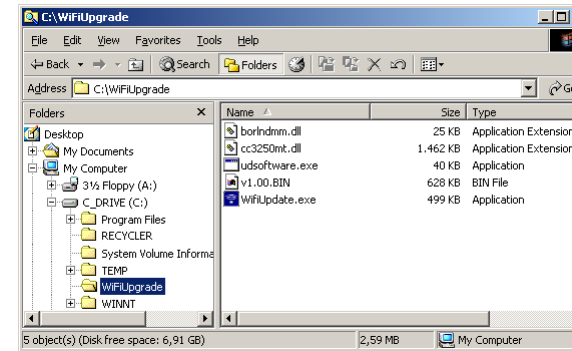

-
- 3103 308 67861.....Printed Board Assembly Wessli (all versions)
 - 2822 062 41028.....Wireless LAN Card WMOD WIFIB PCC2 B-120 US B (for /21/37)
 - 2822 062 41031.....Wireless LAN Card WMOD WIFIB PCC2 B-120 EU B (for /22)

Wessli Module – Firmware Upgrade

The firmware of the Wessli Module can be upgraded via wireless network. The network is used to transfer the new firmware from the PC to the on-board Flash-ROM (IC 7103). Firmware and related tools are usually distributed as zip-archive.

To upgrade the firmware of the Wessli Module proceed as follows:

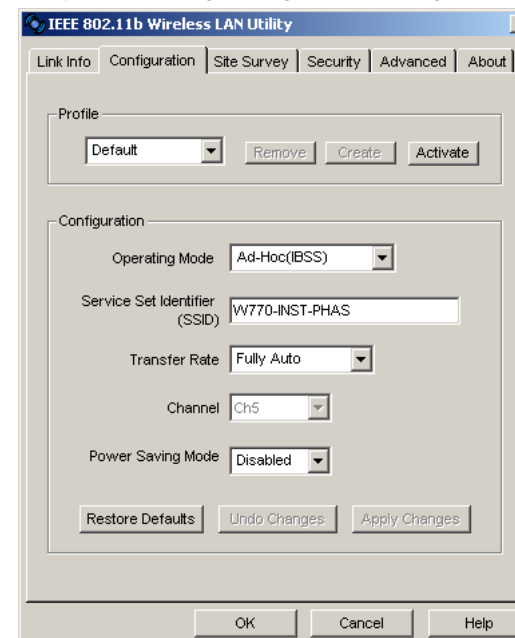

1. Insert the MCW770 Setup-CD into the CD-drive of the PC and walk through the consumer installation.
2. Create a new folder "WiFiUpgrade" on the PC hard disk and extract the content of the supplied zip-archive to this location. The folder should contain the following files:

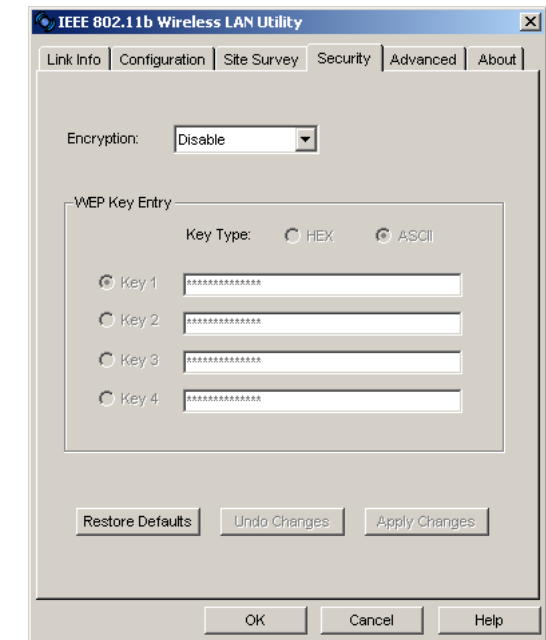

3. Open the Wireless LAN Utility via WiFi icon in the system tray (right-click the icon and click on "View Available Network").

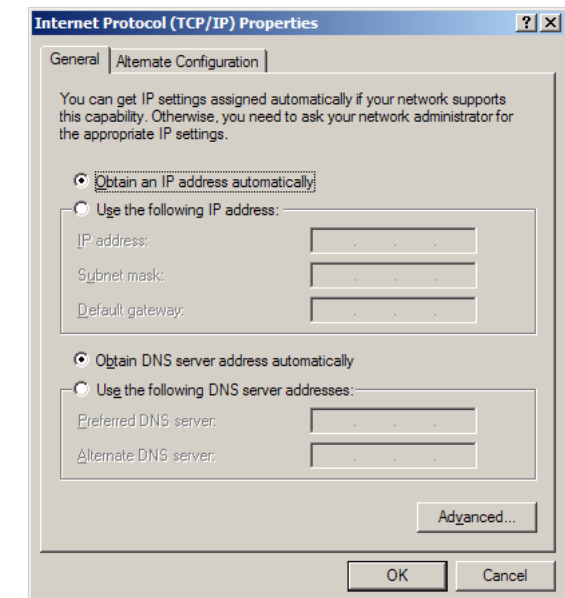

4. Apply the following settings in the configuration tab:

5. Disable encryption in the security tab:

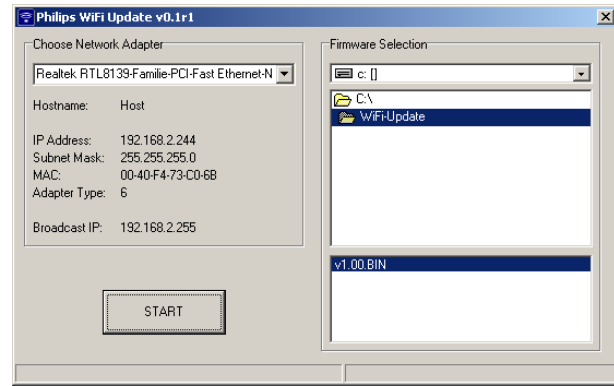

6. Open the "TCP/IP properties" in "Windows Network and Dial-up Connections" and ensure that "Obtain an IP address automatically" is selected.

7. Put the MCW770 into Installation mode as follows:
 - Hold the PC-LINK button depressed for at least 5s.
 - The display shows "INSTALLING".
 - Wait for another 15s.
 - Hold the BROWSE button depressed for at least 2s.
 - Wait for another 15s.
 - The display shows "EXPERT INSTALL" and the color of the WiFi icon in the system tray turns to green.
 - Wait for another 90s to ensure that the set has obtained its IP address.

8. Run "WiFiUpdate.exe" from the folder created in step 2 and mark the firmware upgrade file inside this folder.

9. Finally, start the firmware upgrade as follows:

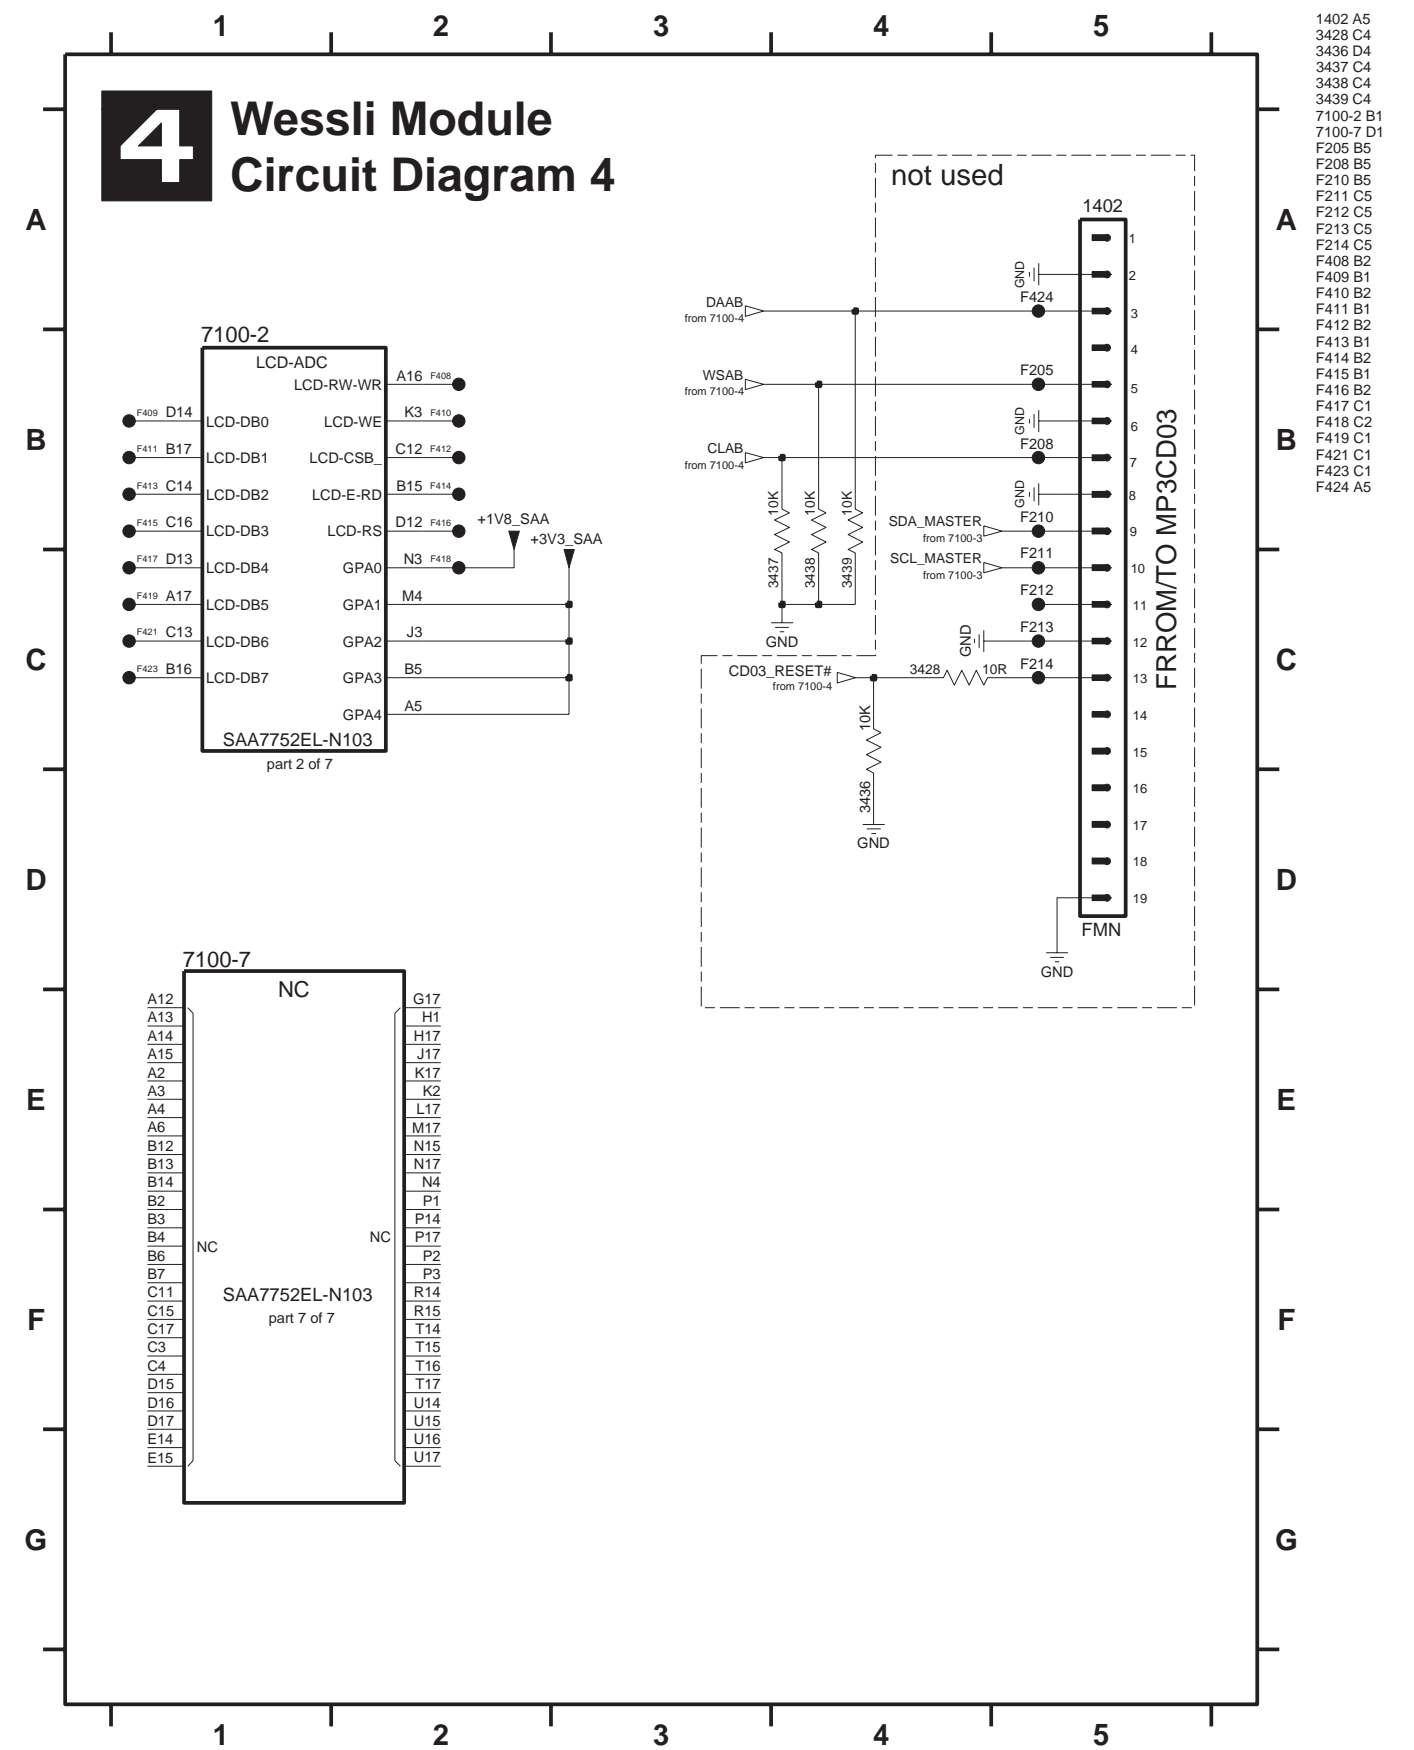

- Click the START button in the WiFi Upgrade utility.
- Dialog "Press OK to start Upgrade" pops up.

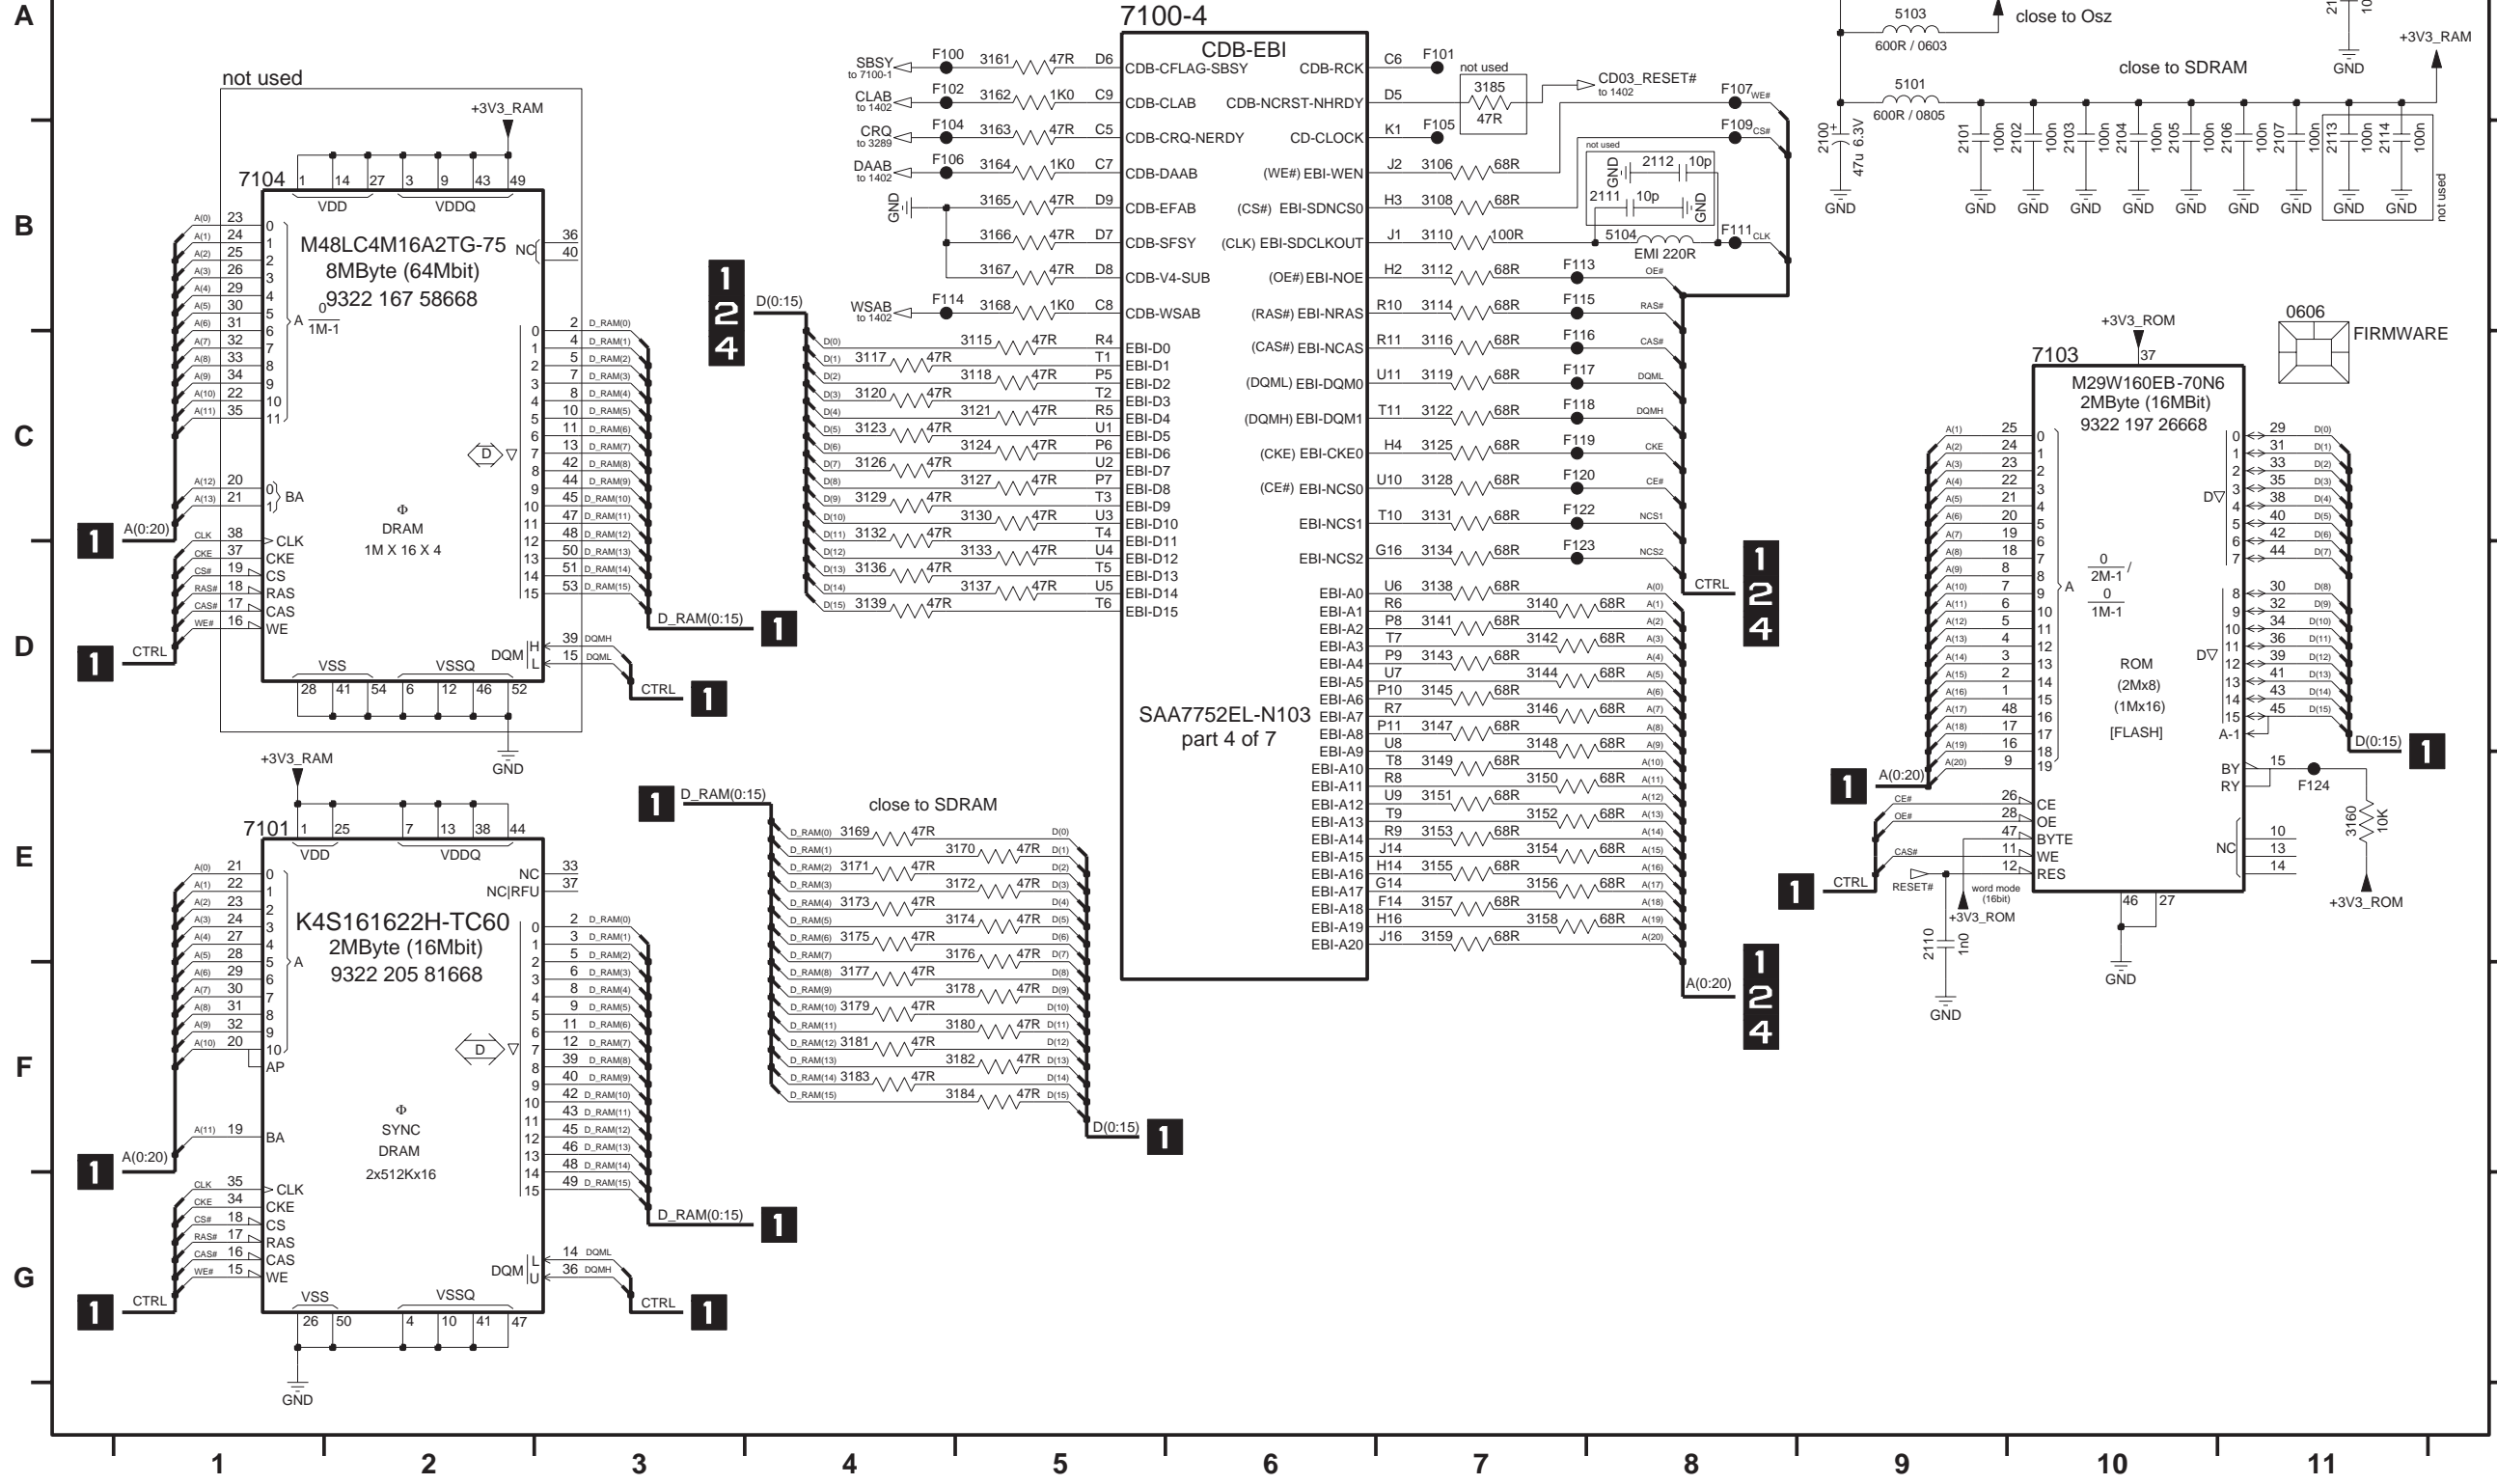

- Click the OK button.
- A command window opens and shows:

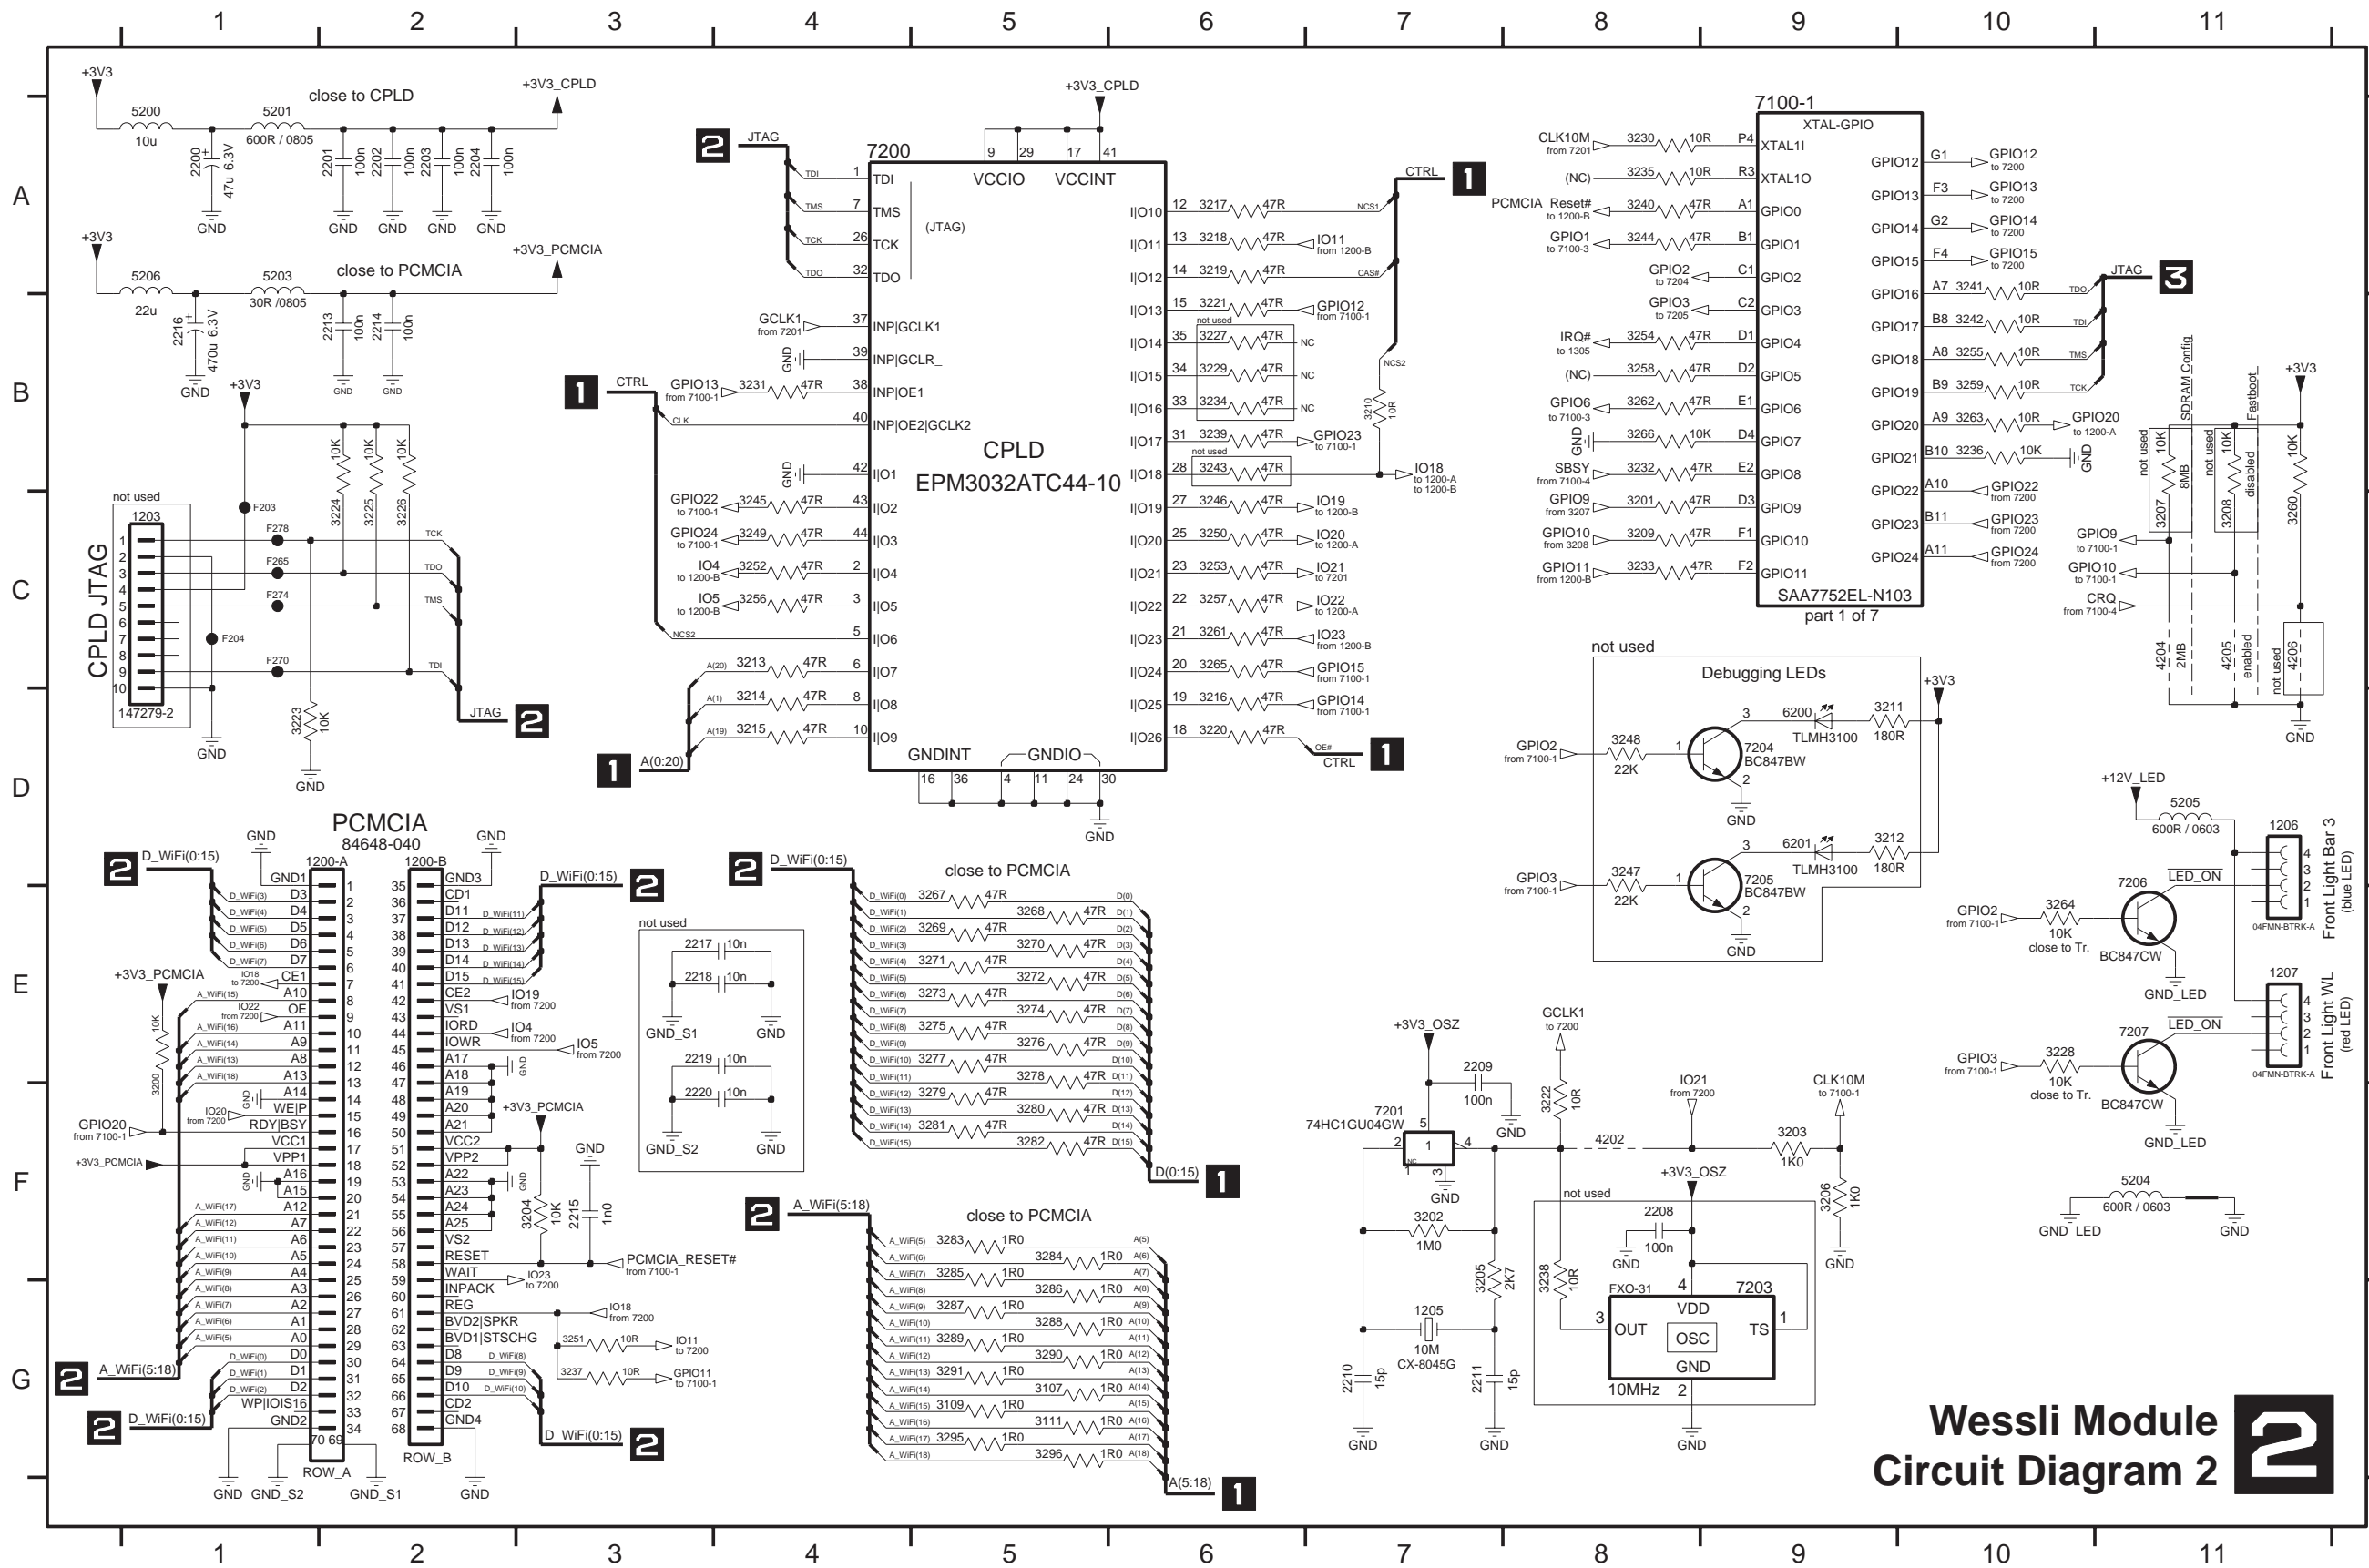

- The display on the set shows "PRESS PLAY TO UPGRADE PROG".
- Press the PLAY button on the set.
- After a few seconds the upgrade utility reports "Upgrade successful" and the display on the set shows "COMPLETED".
- Disconnect the set from the mains supply

These assembly drawings show a summary of all possible versions.
 For components used in a specific version see schematic diagram respectively partslist.

TUNER ADJUSTMENT TABLE (ECO6 Cenelec FM/MW - and FM/MW/LW - versions with AM-frame aerial)

Waverange	Input frequency	Input	Tuned to	Adjust	Output	Scope/Voltmeter
VARICAP ALIGNMENT						
FM 87.5 - 108MHz (50kHz grid)			108MHz	check		8V ±1.2V
			87.5MHz	check		1.6V ±0.5V
MW 531 - 1602kHz (9kHz grid)			1602kHz	5123	1	8V ±0.2V 3-band 6.9V ±0.2V 2-band
			531kHz	check		1.1V ±0.4V
LW 153 - 279kHz (3kHz grid)			279kHz	5122		8V ±0.2V
			153kHz	check		1.1V ±0.4V
FM - IF						
FM	10.7MHz, 45mV continuous wave	D		5119	2	0mV ±3mV
FM - VCO						
FM	98MHz, 1mV continuous wave	A	98MHz	3142	3	152kHz ±1kHz 1)
FM RF (channel separation) Note: The FM-frontend unit has already been adjusted by the factory and needs therefore no further adjustments for service purposes.						
FM	98MHz, 1mV 90% Left + 9% pilot mod=1kHz	A	98MHz	IF coil inside FM frontend 1110	4	right channel min.
AM IF						
MW	450kHz connect pin 6 of IC 7101 (AM Osc.) with 3.3kΩ to Vcc	C		5111	5	
				5112		
AM AFC MW	continuous wave V _{RF} = 2mV	C		5114	2	0mV ±2mV
AM RF 3)						
MW	1494kHz	B	1494kHz	2106	5	
	558kHz			5102		
LW	198kHz	Δf = ±30kHz V _{RF} as low as possible	198kHz	5103		

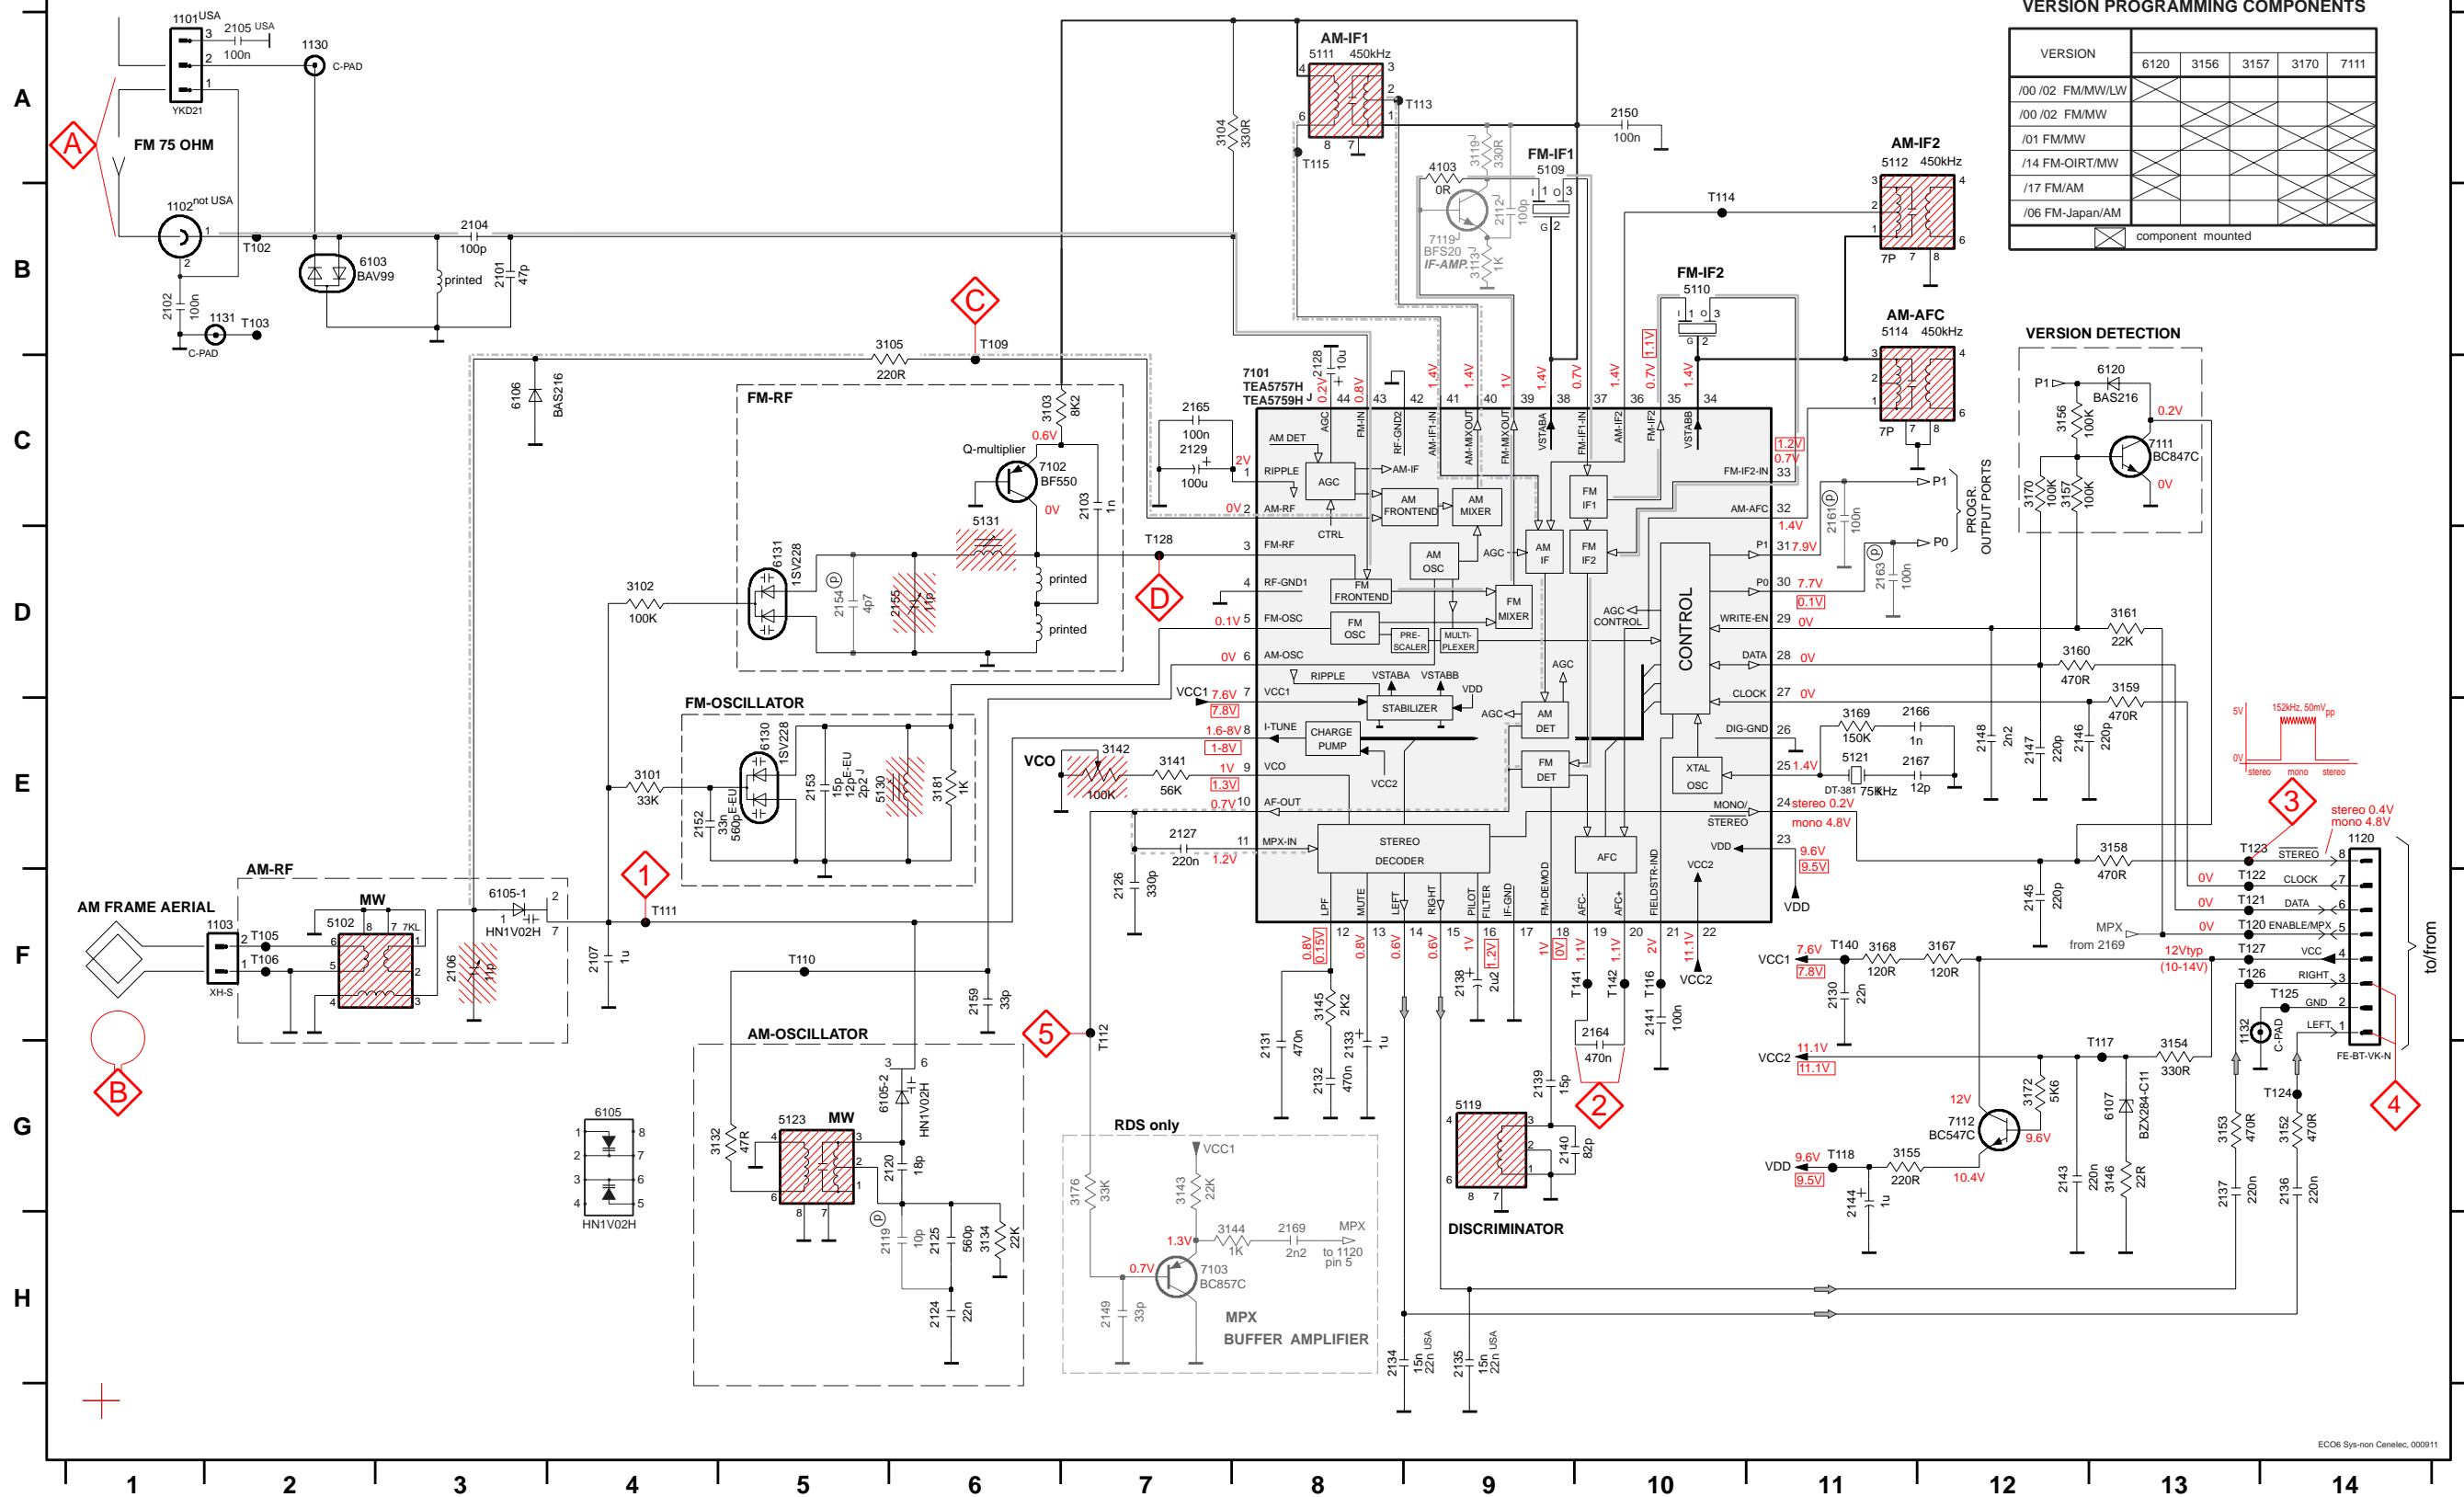

ECO6 Sys Cenelec, 190599

Use Service Testprogram. By selecting the TUNER TEST test frequencies will be stored as preset frequencies automatically.

- 1) If sensitivity of frequency counter is too low adjust to max. channel separation (input signal: stereo left 90% + 9%, adjust output on right channel to minimum)
- 2) RC network serves for damping the IF-filter while adjusting the other one.
- 3) For AM RF adjustments the original frame antenna has to be used!
 MW has to be aligned before LW.

Service Hints

In case of symptom „skipping tracks“ perform following actions:

1. VERIFY THE COMPLAINT

PLAYABILITY CHECK

Use CDDA SBC 444A:4822 397 30245
 TR 14 (600µ black dot) maximum at 01:15
 TR 19 (fingerprint)
 TR 10 (1000µ wedge)

Use CD-RW Printed Audio Disk7104 099 96611
 TR 3 (Fingerprint)
 TR 8 (600µ black dot) maximum at 01:00

- playback of all these tracks without audible disturbance
- jump forward/backward within a reasonable time

2. CLEAN THE LENS

CD DRIVE – LENS CLEANING

Before touching the lens it is advised to clean the surface of the lens by blowing clean air over it in order to avoid that little particles make scratches on the lens.

Because the material of the lens is synthetic and coated with a special anti-reflectivity layer, cleaning must be done with a non-aggressive cleaning fluid. It is advised to use “KODAK LENS CLEANER CAT 176 71 36”, available in normal photo shops.

The actuator is a very precise mechanical component and may not be damaged in order to guarantee its full function. It is advised to clean the lens gently (don't press too hard) with a soft and clean cotton bud moistened with the special lens cleaner.

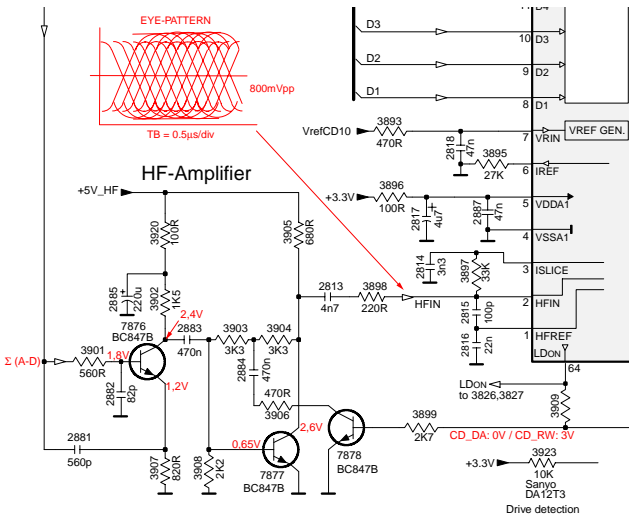

The direction of cleaning must be in the way as indicated in the picture below.

3. MEASURE THE EYE-PATTERN SIGNAL

EYE-PATTERN SIGNAL – JITTER MEASUREMENT

Measure the signal direct on resistor 3898 using an oscilloscope (see also chapter 10-9).

See below examples of the signal. Amplitude should read at least 700mVpp using SBC444A.

good

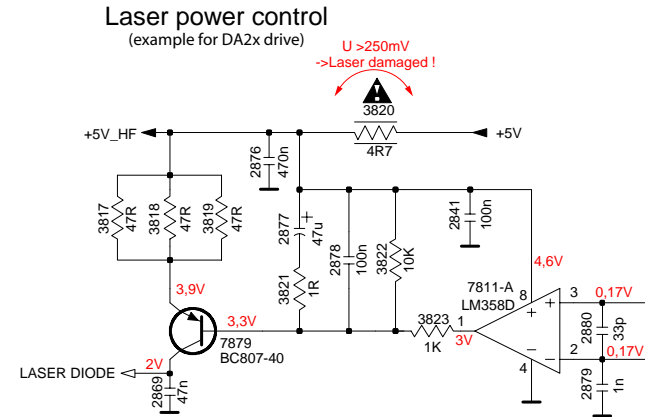

bad

If the oscilloscope shows a signal like the 'bad' one, and/or the amplitude decreases within 1minute - the CD drive has to be replaced.

4. MEASURE THE LASER CURRENT

CD DRIVE – LASER CURRENT MEASUREMENT

The laser current can be measured as a voltage drop on resistor 3820. Typical value 170 - 190mV for CD-DA respectively 200 - 220mV for CD-RW.

5. MEASURE THE OFFSETS OF THE CD-DRIVE

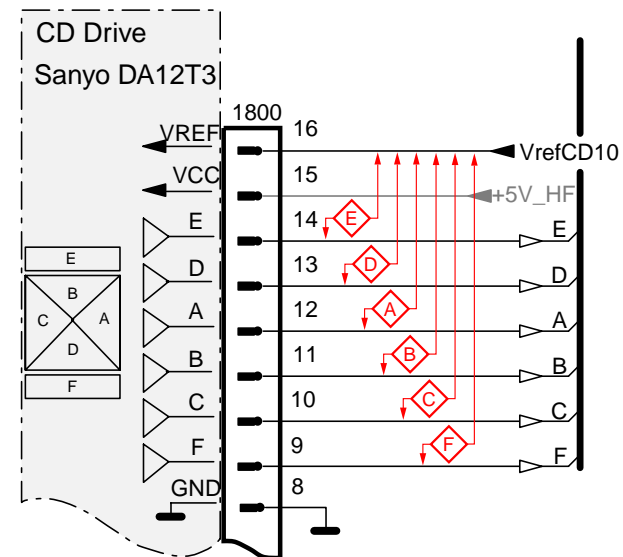

CD DRIVE – OFFSET MEASUREMENT

Each photodiode of the CD-drive may have an offset. This offset has to be compensated by the signal processor. A high offset of the CD-drive leads to poor playability of some CDs (skipping tracks).

Start the **Service Test Program** - section „Focus Test“ without a CD. Focus sensitivity = CD-RW.

Use a DC Millivoltmeter for measurement. The offsets can be measured direct on the connector. See drawing below.

The values from diode A-D should read $0 \pm 10mV$. Diodes E and F are less critical.

If one of the offsets is higher than $\pm 10mV$ the CD drive has to be replaced.

WARNING

CHARGED CAPACITORS ON THE SERVO BOARD MAY DAMAGE THE CD DRIVE ELECTRONICS WHEN CONNECTING A NEW CDM MECHANISM. THAT'S WHY, BESIDES THE SAFETY MEASURES LIKE

- **SWITCH OFF POWER SUPPLY**
- **ESD PROTECTION**

ADDITIONAL ACTIONS MUST BE TAKEN BY THE REPAIR TECHNICIAN.

The CD drive forms a compact building block with the CD Board.

The following steps have to be done when replacing the CD mechanism:

1. Desolder disc and slide motor
2. Loosen 2x screw
1. Disconnect flexfoil from old CD drive
2. Put a paperclip over contacts of flexfoil to short-circuit the contacts (fig.1)
3. Remove old CD drive
4. Mount new CD drive to CD board
5. Solder disc and slide motor **after** fixing the drive to the board
5. Move slide outside
6. Remove paperclip from flexfoil
7. Connect flexfoil to new CD drive
8. Remove ESD-protection (solder joint) from laserunit (see picture below)

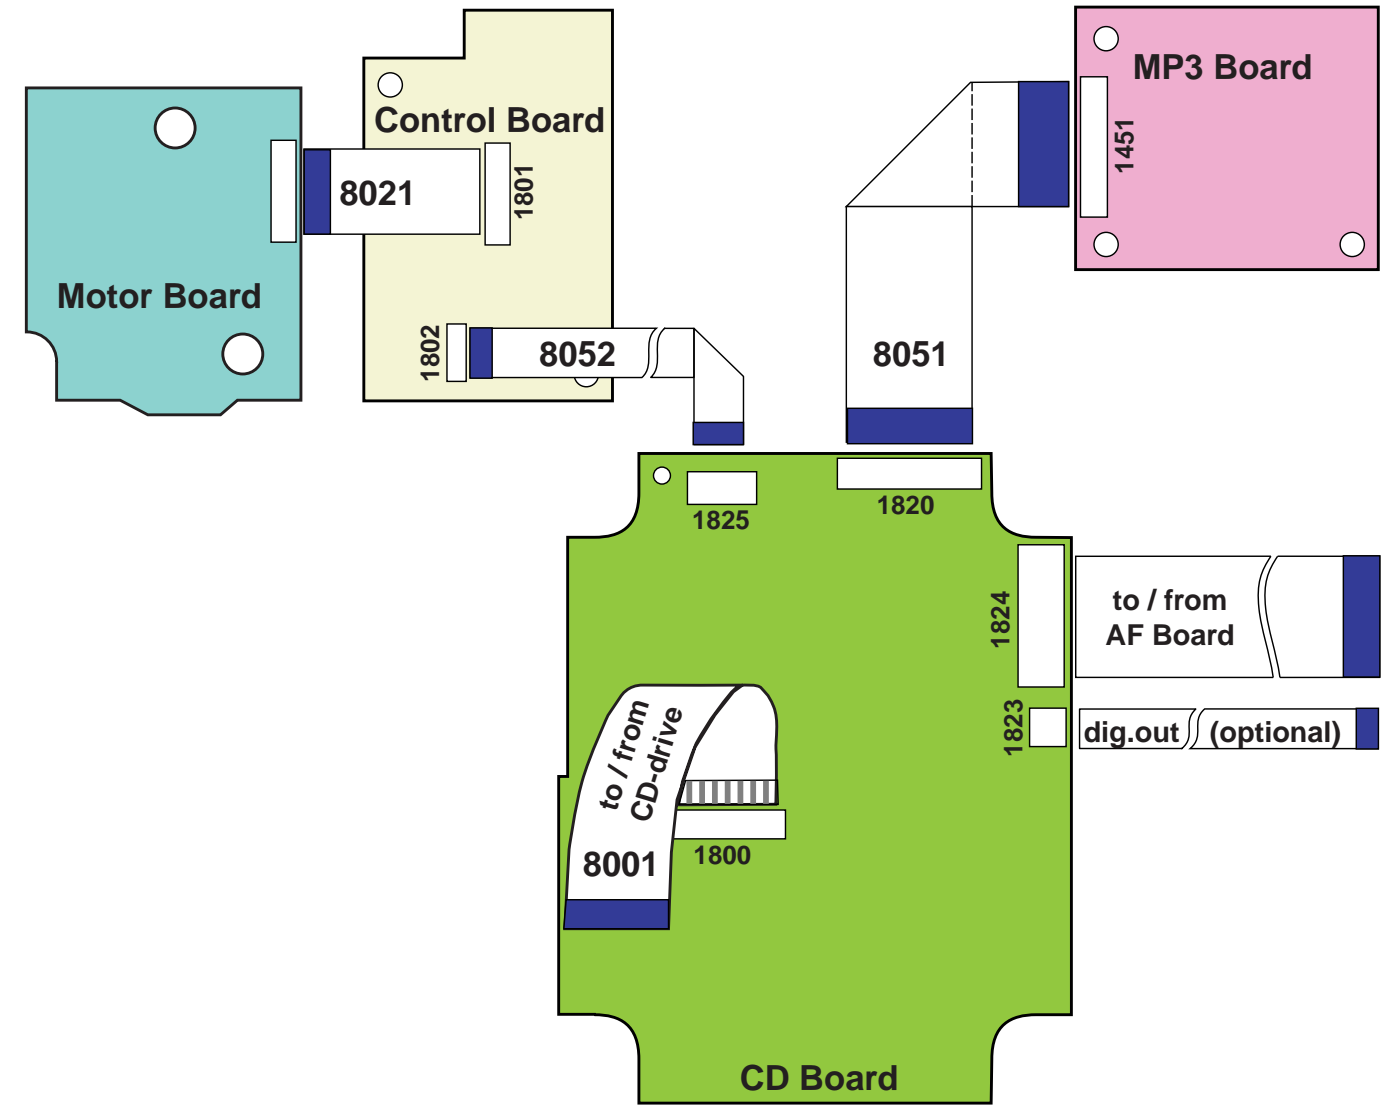

Attention: The laser diode of this CD drive is protected against ESD by a solder joint which shortcircuits the laserdiode to ground. For proper functionality of the CD drive this solder joint must be removed **after** connection the drive to the set.

Location of Printed Circuit Boards

Wiring Diagram 5DTC Module

The FFC-Cables are available as sparepart.

8001	3103 308 93090	FFC CABLE 16Pin 80mm BD	Connection from CD Board to CD Drive
8051	3103 308 93100	FFC-CABLE 19Pin 90mm AD	Connection from CD Board to MP3 Board
8052	3103 308 93120	FFC CABLE 8Pin 80mm BD	Connection from CD Board to Control Board
8021	3103 308 93110	FFC-CABLE 16Pin 60mm AD	Connection from Control Board to Motor Board

Emergency opening of the trays

The trays of the 5DTC are mechanically locked.

To open tray 1, 2 and 3 move lever (pos 29) backwards (e.g. with a screwdriver - see picture 2) to its endposition.

Release the locking mechanism and pull out the tray (see picture 3).

To open tray 4 and 5 move lever (pos 29) forward to its endposition (see picture 4).

Release snap as shown in picture 5 and pull tray out.

To remove a CD from Play Position perform following steps:

1. Open tray 1 as described before.
2. Tear the tray out with speed (see picture 6). The tray can be inserted afterwards without any alignment.

3. Move lever (pos 29) forward to its endposition (see picture 4).
4. Push lever (pos 31) forward (see picture 7).

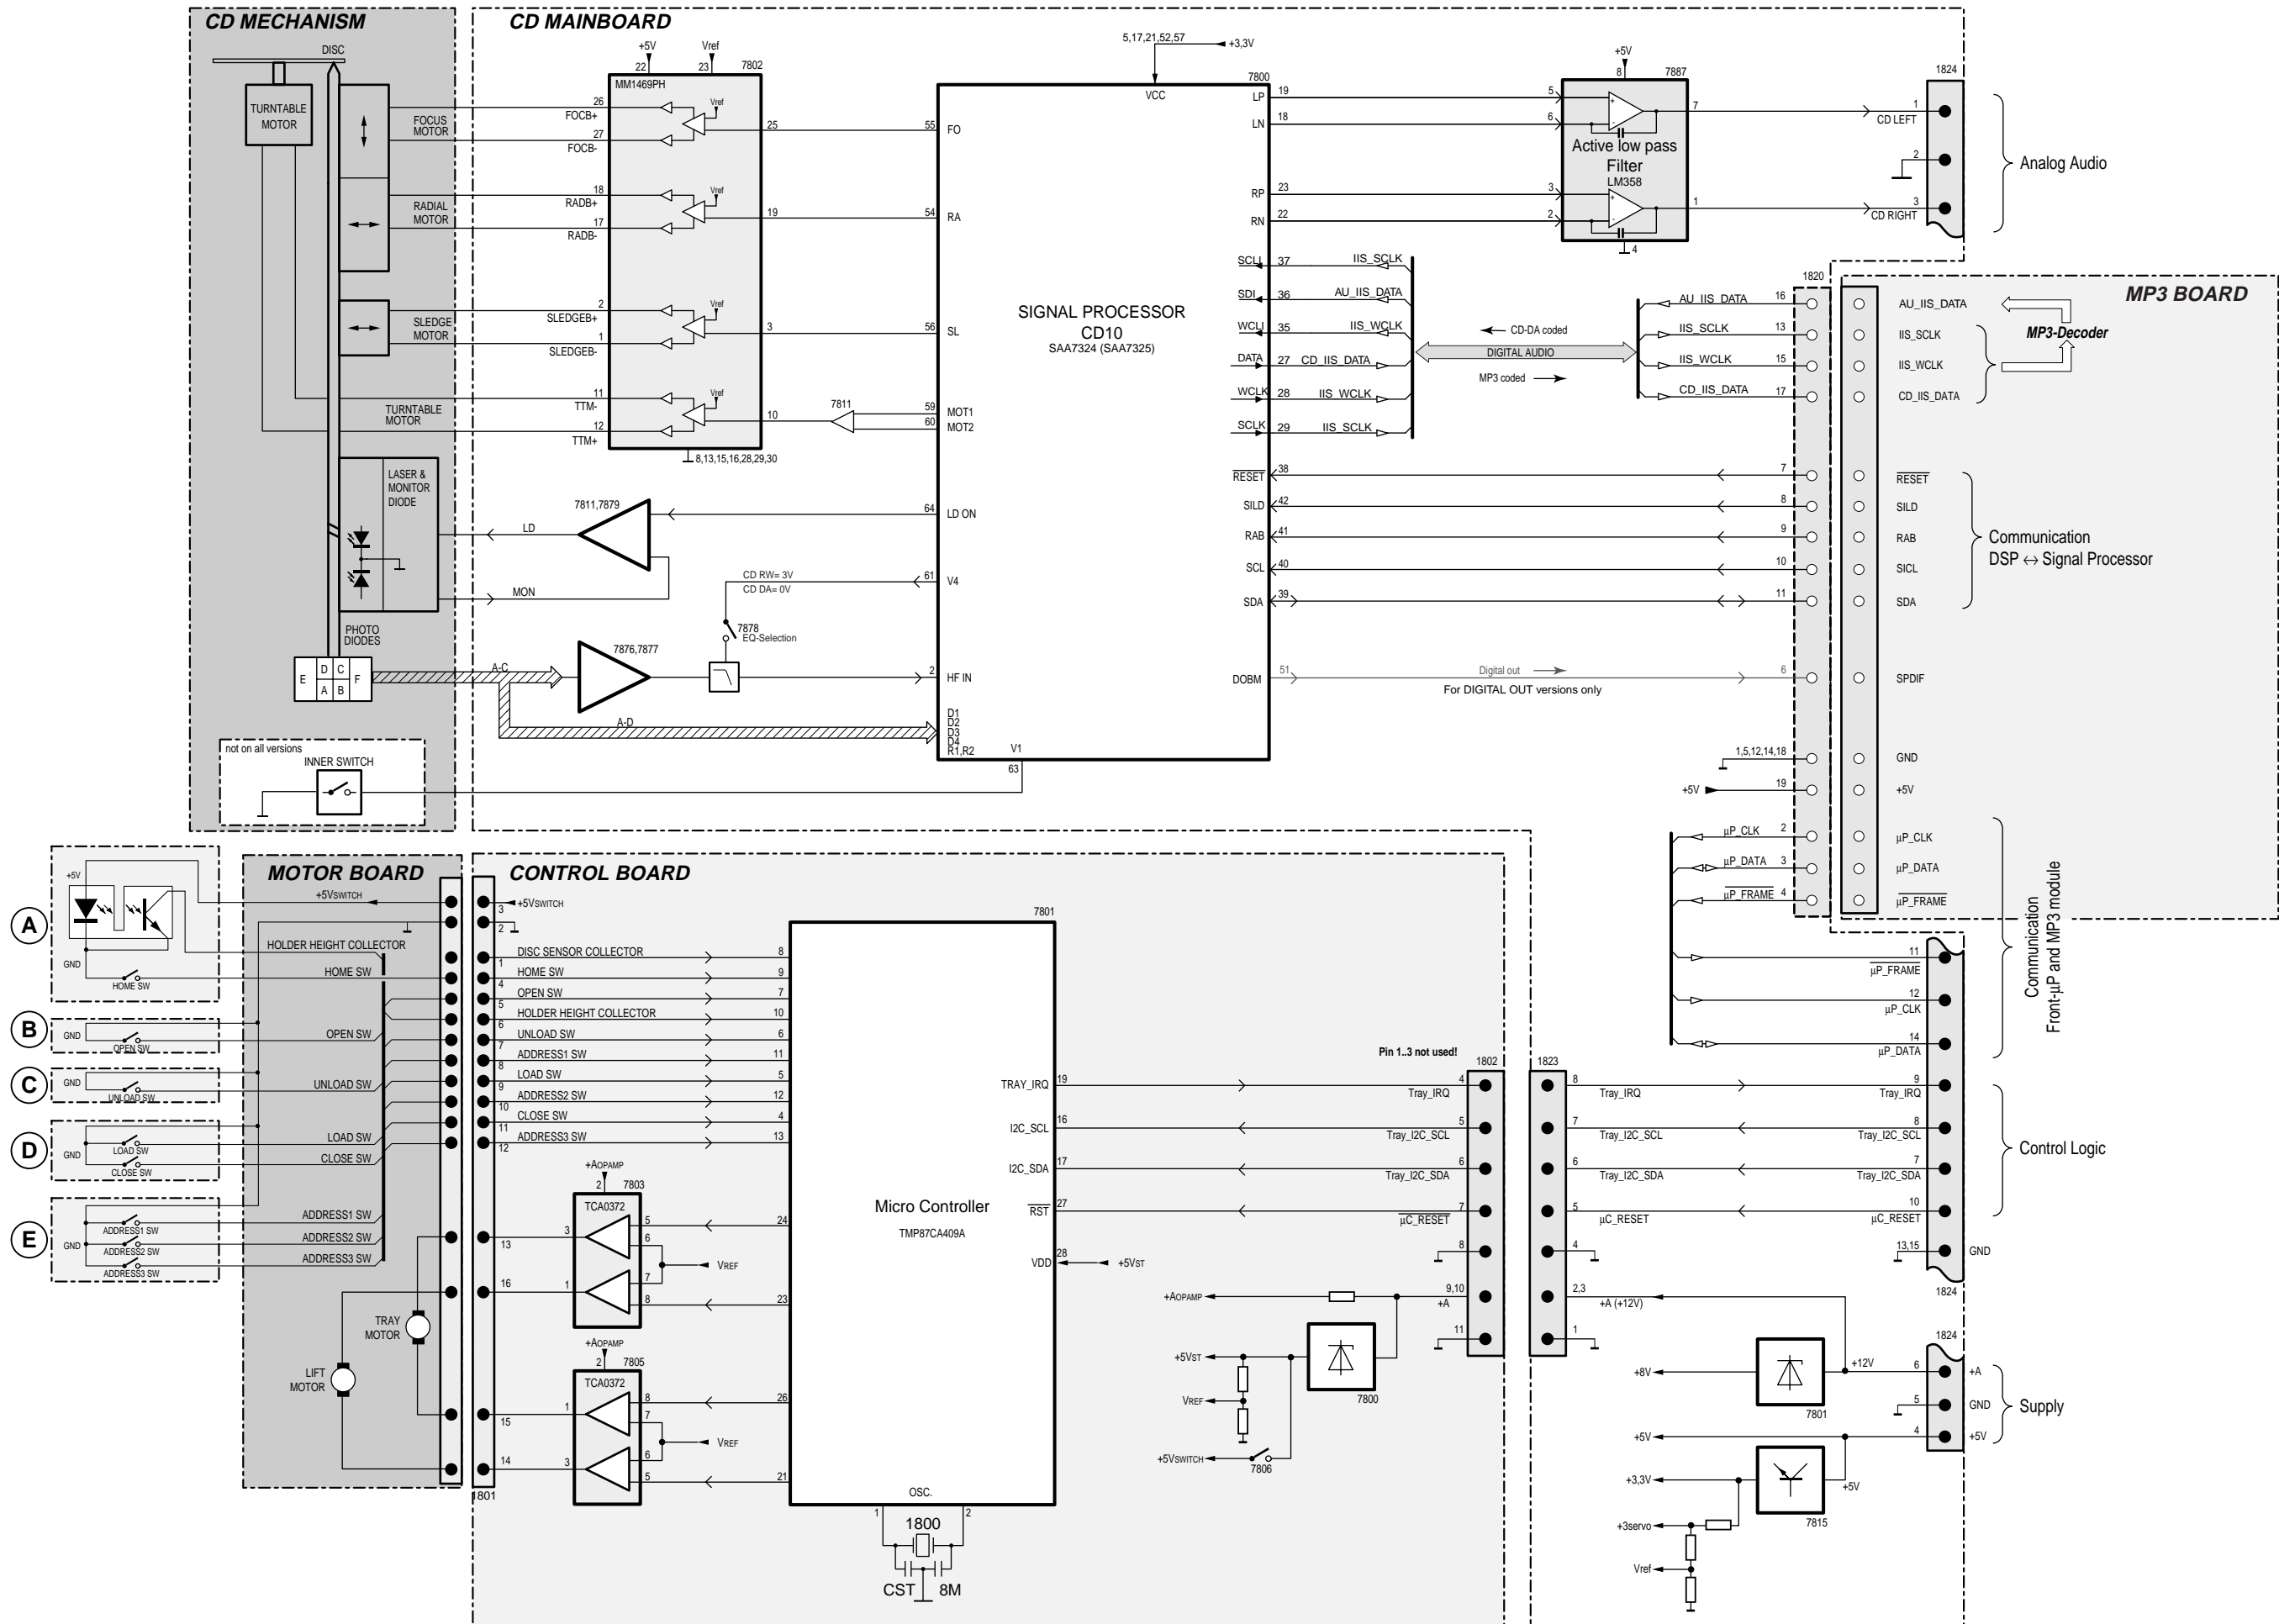

5. Remove CD.

Class-D Circuit Description (BASED ON POWER 2003 MODULE 75-150W CLASS D)

Basically Class-D works by transforming the LF audio input to a square wave signal with a fixed frequency and a variable duty cycle. See simplified drawing below.

The amplitude of the square wave signal is equal to the supply voltage of the amplifier. With the audio signal the square wave signal is pulse-width modulated.

Compared to a conventional power amplifier the benefits of the Class D amplifier are:

- higher efficiency
- lower power dissipation
- smaller cooling fin
- smaller mains transformer

Disadvantage of this concept is:

- 500kHz square wave signal with high current requires a shielding box to suppress radiation.

Required Circuitries:

• 500kHz square wave oscillator.

The oscillator frequency is created by 7312-3; it is a dual-frequency oscillator with ceramic resonators 5300 and 5302, which resonate at 500kHz and 425kHz respectively. The resonators are switched by transistors 7309 and 7316, controlled by the "OZ_SW" line from the port expander 7406.

The reason for 2 frequencies is to avoid tuner disturbances in the AM-band.

The oscillator signal is shaped to square wave with 7312-2, afterwards buffered and fed to the amplifier modulators (ROZ to the right channel, LOZ to the left). One channel gets inverted clock to balance supply loading.

• Modulator

The modulator forms the pulse width modulated signal. For each channel a separate modulation is required.

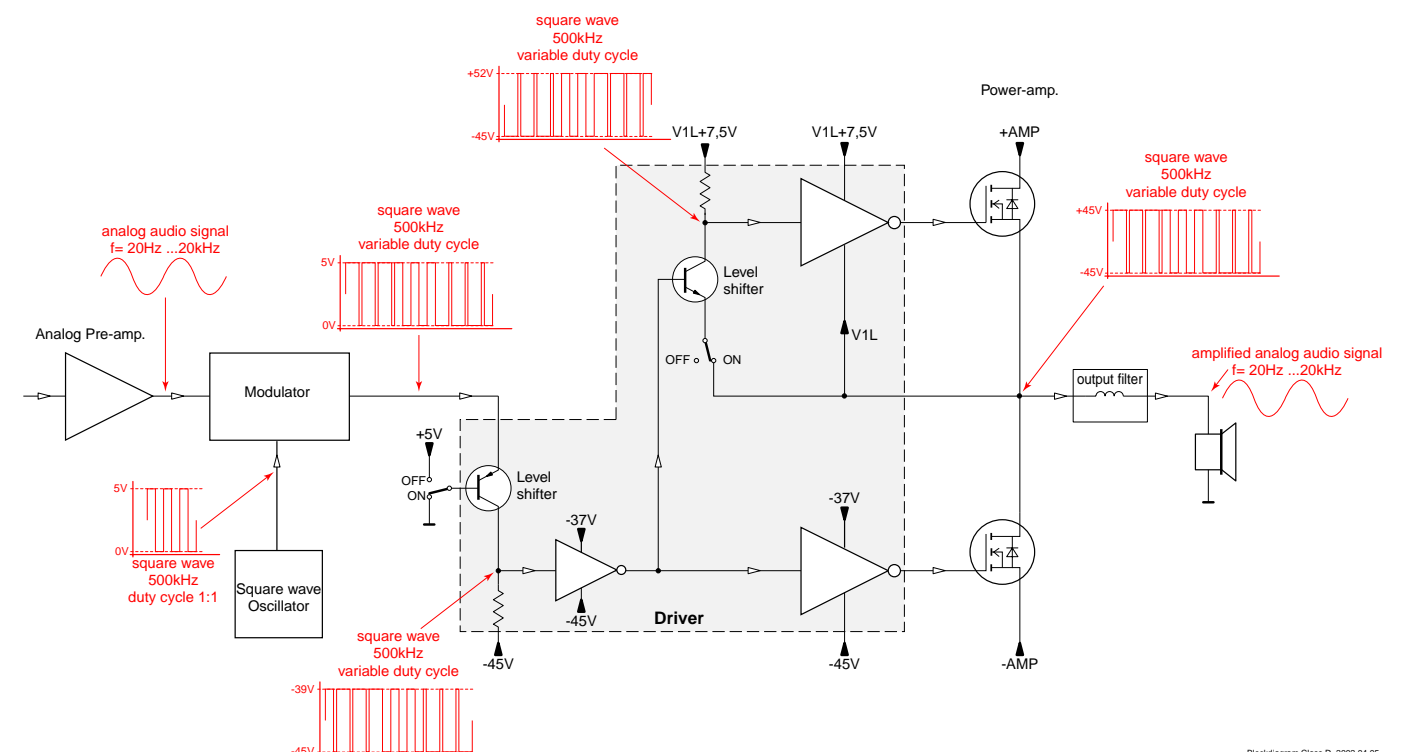

• Power FETs

The FETs require drivers which supply the gates. One for the high-side-FET and one for the low-side-FET. Because of the different supply voltages also an additional level shifter is necessary per driver.

• Output filter

The output filter is necessary to block the 500kHz square wave signal from the speaker. Refers to the left channel in schematic diagrams. It consists of a series-mode coil 5101 and a capacity of approx. 550nF (2116, 2134), which forms a Chebycheff filter with 40kHz cut-off frequency at 6Ω load. For EMC reasons both, the speaker output and the return ground are fed through a common mode coil (5102). The filter is further improved by splitting the output capacity into 2116 before and 2134 after the common mode coil.

Blockdiagram Class D

All above mentioned circuitries are located inside the metal shielding box.

Class-D Circuit Description (BASED ON POWER 2003 MODULE 75-150W CLASS D)

Functional Description:

Refers to the left channel in schematic diagrams. The first stage of the modulator is an error integrator which compares the input to the (24 dB amplified) output signal of the power stage. The difference is leading to a current, which loads the integrator 7122-A. The second stage (7122-B) adds the 500kHz rectangular oscillator signal, creates high gain and low distortion and is again integrating. The output signal leads to a triangle wave form (see oscillogram ⑤). The DC value of this triangle signal is floating, dependent on the amplitude of the analog input signal. The next stage is a comparator, which compares the integrated voltage with the internal switching levels - thus creating a voltage controlled duty cycle. 7122 C and D improve the shape of the pulses. For details see oscillograms ④-⑥. At pin 8 of IC7122 there is a square wave with the same frequency and duty cycle as the desired output.

The next task is to feed this information to the output FETs. Both FETs are n-channel types, so they are modulated by feeding the gate in respect to the source connection. Inverters 74LV14 are used as drivers. The driver for the low-side FET (7121) is supplied by the negative supply -VL2 and a voltage +VL (generated by 7115 and 6113), which is 7.5V higher than -VL2. The digital signal is level-shifted by 7128 to the low side driver stage. 3142, 6111 and 2126 together form a delay circuit for rising edges by approx. 100ns for the low side FET. 3154, 6109 and 2137 delay the rising edge by 50ns for the high side FET. This to compensate the switch-off delay of the FETs and ensures that both FETs are not conducting at the same time. The high-side FET (7109) is controlled by the inverted signal taken from pin 2 of 7118, which is level-shifted by transistor 7119. The driver for the high-side FET is supplied by a floating voltage between the amplifier output -V1L and +V1L, created by the charge pump 6110, 2114 regulated by 7114 and 6114 to a 7.5V higher level. The pump is additionally supplied (via 3151) by +45V to ensure supply at start-up (no signal). The last stage in the gate driver consists of three gates in parallel for increased output current for the capacitive load of the FET. For additional increase of the switching speed push/pull transistors 7132/7111 are added.

Protection Circuits:

The amplifier is protected against low load impedance (including short circuit). Current is sensed by shunts 3101, 3130 in both supplies. Overcurrent at the positive supply is then sensed by 7104, the negative supply overcurrent triggers 7117, which then also triggers 7104. The collector current in turn triggers the monoflop 7122-5 and -6, giving a "High" pulse at pin 10. This shuts off level-shifter 7128 and blocks transistor 7129 and 7131, which draws current into the emitter resistor 3134 of level-shifter 7119. It is now also shut off. So, both FETs are shut off within approx. 0,2 sec. The monoflop can be reset by:

- switching mains off and on again
- pressing Standby button and afterwards any source button
- plugging headphone in for a short moment

When a headphone is used the amplifier is shut off. This is done by pulling pin 13 of 7122 via signal line "AMP_OFF" and transistor 7130 to high level. The line "AMP_OFF" is controlled by the port expander 7406 which detects the headphone via signal line "HP_DET".

The loudspeakers are protected against DC voltages resulting e.g. from defective FETs. Voltages higher than ±2V are detected by 7110 respectively 7112. The transistors conduct and pull the "DC_PROT" line down, blocking transistor 7243 which in turn disables speaker relay 1201.

Adjustments:

The gain of the class-D amplifier is 24dB, adjusted by the feedback resistors 3155, 3136, 3149 and the input resistors 3139, 3340. The input reference voltage for 7122-A is approx. half the supply, therefore 3144, 3148 are used for offset compensation. This compensation has to be fine-tuned with trimpotentiometers 3306 and 3307 to obtain <1mV DC output.

Service Hints:

The analog part of the Combi Board can be repaired without opening the metal shielding box. In case of a 'Class D' problem it is advised to disassemble the board first, desolder the metal bottom cover of the shielding box and assemble the board again. This takes a few minutes only.

To de-solder the metal bottom cover proceed as follows:

- 1) Remove top cover of shielding box to reduce heat flow
- 2) Do not use de-solder wick
- 3) Simply hold the board upright down as shown in picture 1. Heat up solder joints and move tip of soldering iron slowly along the edge of the metal frame. Solder will flow along the soldering tip and rest on the metal plate. A small amount will drop off. A small gap will become visible as indication that the solder connection is released. When all solder joints are released the cover can be removed by help of a screwdriver. Begin at the corner indicated by an arrow → see picture 2.

To re-mount the metal bottom cover proceed as follows:

- 1) The solder connections are not distributed evenly. Therefore the cover has to be mounted in that way that the arrow indicator on the cover is positioned in line with the arrow printed on the printed board → see picture 3.

Service Hints

- 2) Press the metal cover smoothly down until the gap between cover and printed board becomes a minimum. This is important for proper shielding.
- 3) Heat up the residual solder on the metal cover. The solder will flow back to the solder areas. If necessary apply additional new solder.
- 4) Take care that all solder joints are re-soldered again.

Attention: Poor soldering of the metal shielding box results in disturbance of the tuner.

In most cases the FETs 7109 and/or 7121 for the left channel, respectively 7218 and/or 7231 for the right channel will be defective. This can easily be checked with an ordinary Ohm-meter.

LEFT CHANNEL:

In case **7109** is defect replace following parts: 7109, 7111, 7132, 7105, 7119, 7104, 3101, 3103 and 2106

In case **7121** is defect replace following parts: 7121, 7113, 7133, 7118, 7117, 3129, 3130 and 2118

RIGHT CHANNEL:

In case **7218** is defect replace following parts: 7218, 7221, 7244, 7209, 7228, 7208, 3205, 3209 and 2206

In case **7231** is defect replace following parts: 7231, 7210, 7245, 7235, 7227, 3241, 3243 and 2220

Attention: Do not forget to adjust the DC-offset after replacing the FET!

If none of the FETs is defective the fault is most probably located in the modulator. To check the operation - follow the given signals.

General description of Oscilloscope setup:

The following signals are measured on condition: AUX in = 500mV/1kHz, Volume = -28dB Load = 2 x 6Ω

Measuring point ① can be found on circuit diagram ③. All other measuring points are shown on circuit diagram ④ respectively ⑤.

Measuring point ①: Output pre-amplifier

Normal analog signal measured (1kHz- Timebase 1μs). If this signal can't be measured - the fault is outside the shielding box.

Measuring point ②: Input Modulator

The 1kHz signal is not visible anymore. Reducing the timebase to 1μs shows the oscillogram below.

Service Hints

Measuring point (C):

The first stage of the modulator is an integrator. An integrated rectangle results in a triangle.

Measuring point (D):

The oscillator signal (squarewave) is fed to the second integrator (7122-B).

Measuring point (E):

The integrated rectangle results in a triangle. 7122-C works as a comparator. 7122-D improves the shape of the pulses.

Measuring point (F): Output modulator

In this pulse width modulated square wave the analog Audio signal is included. Measurements with an analog scope will show a jitter on the falling edge.

The modulator frequency is still fixed to 500kHz. Similar to a frequency modulation - in this case the amplitude of the analog audio signal varies the pulse width, the frequency defines the speed.

Measuring point (G):

The low-side driver signal <G1> (Ch2) is the modulator output level-shifted by transistor 7128. The high-side driver signal <G2> (Ch1) is the inverted low-side driver signal level-shifted by transistor 7119.

Service Hints

Measuring point (H): gate-signal of the FETs

Ch1 = H1, CH2 = H2

Measuring point (I):

Digital output signal.

Measuring point (J):

The following three signals are measured after output filter 5101 with different timebases.

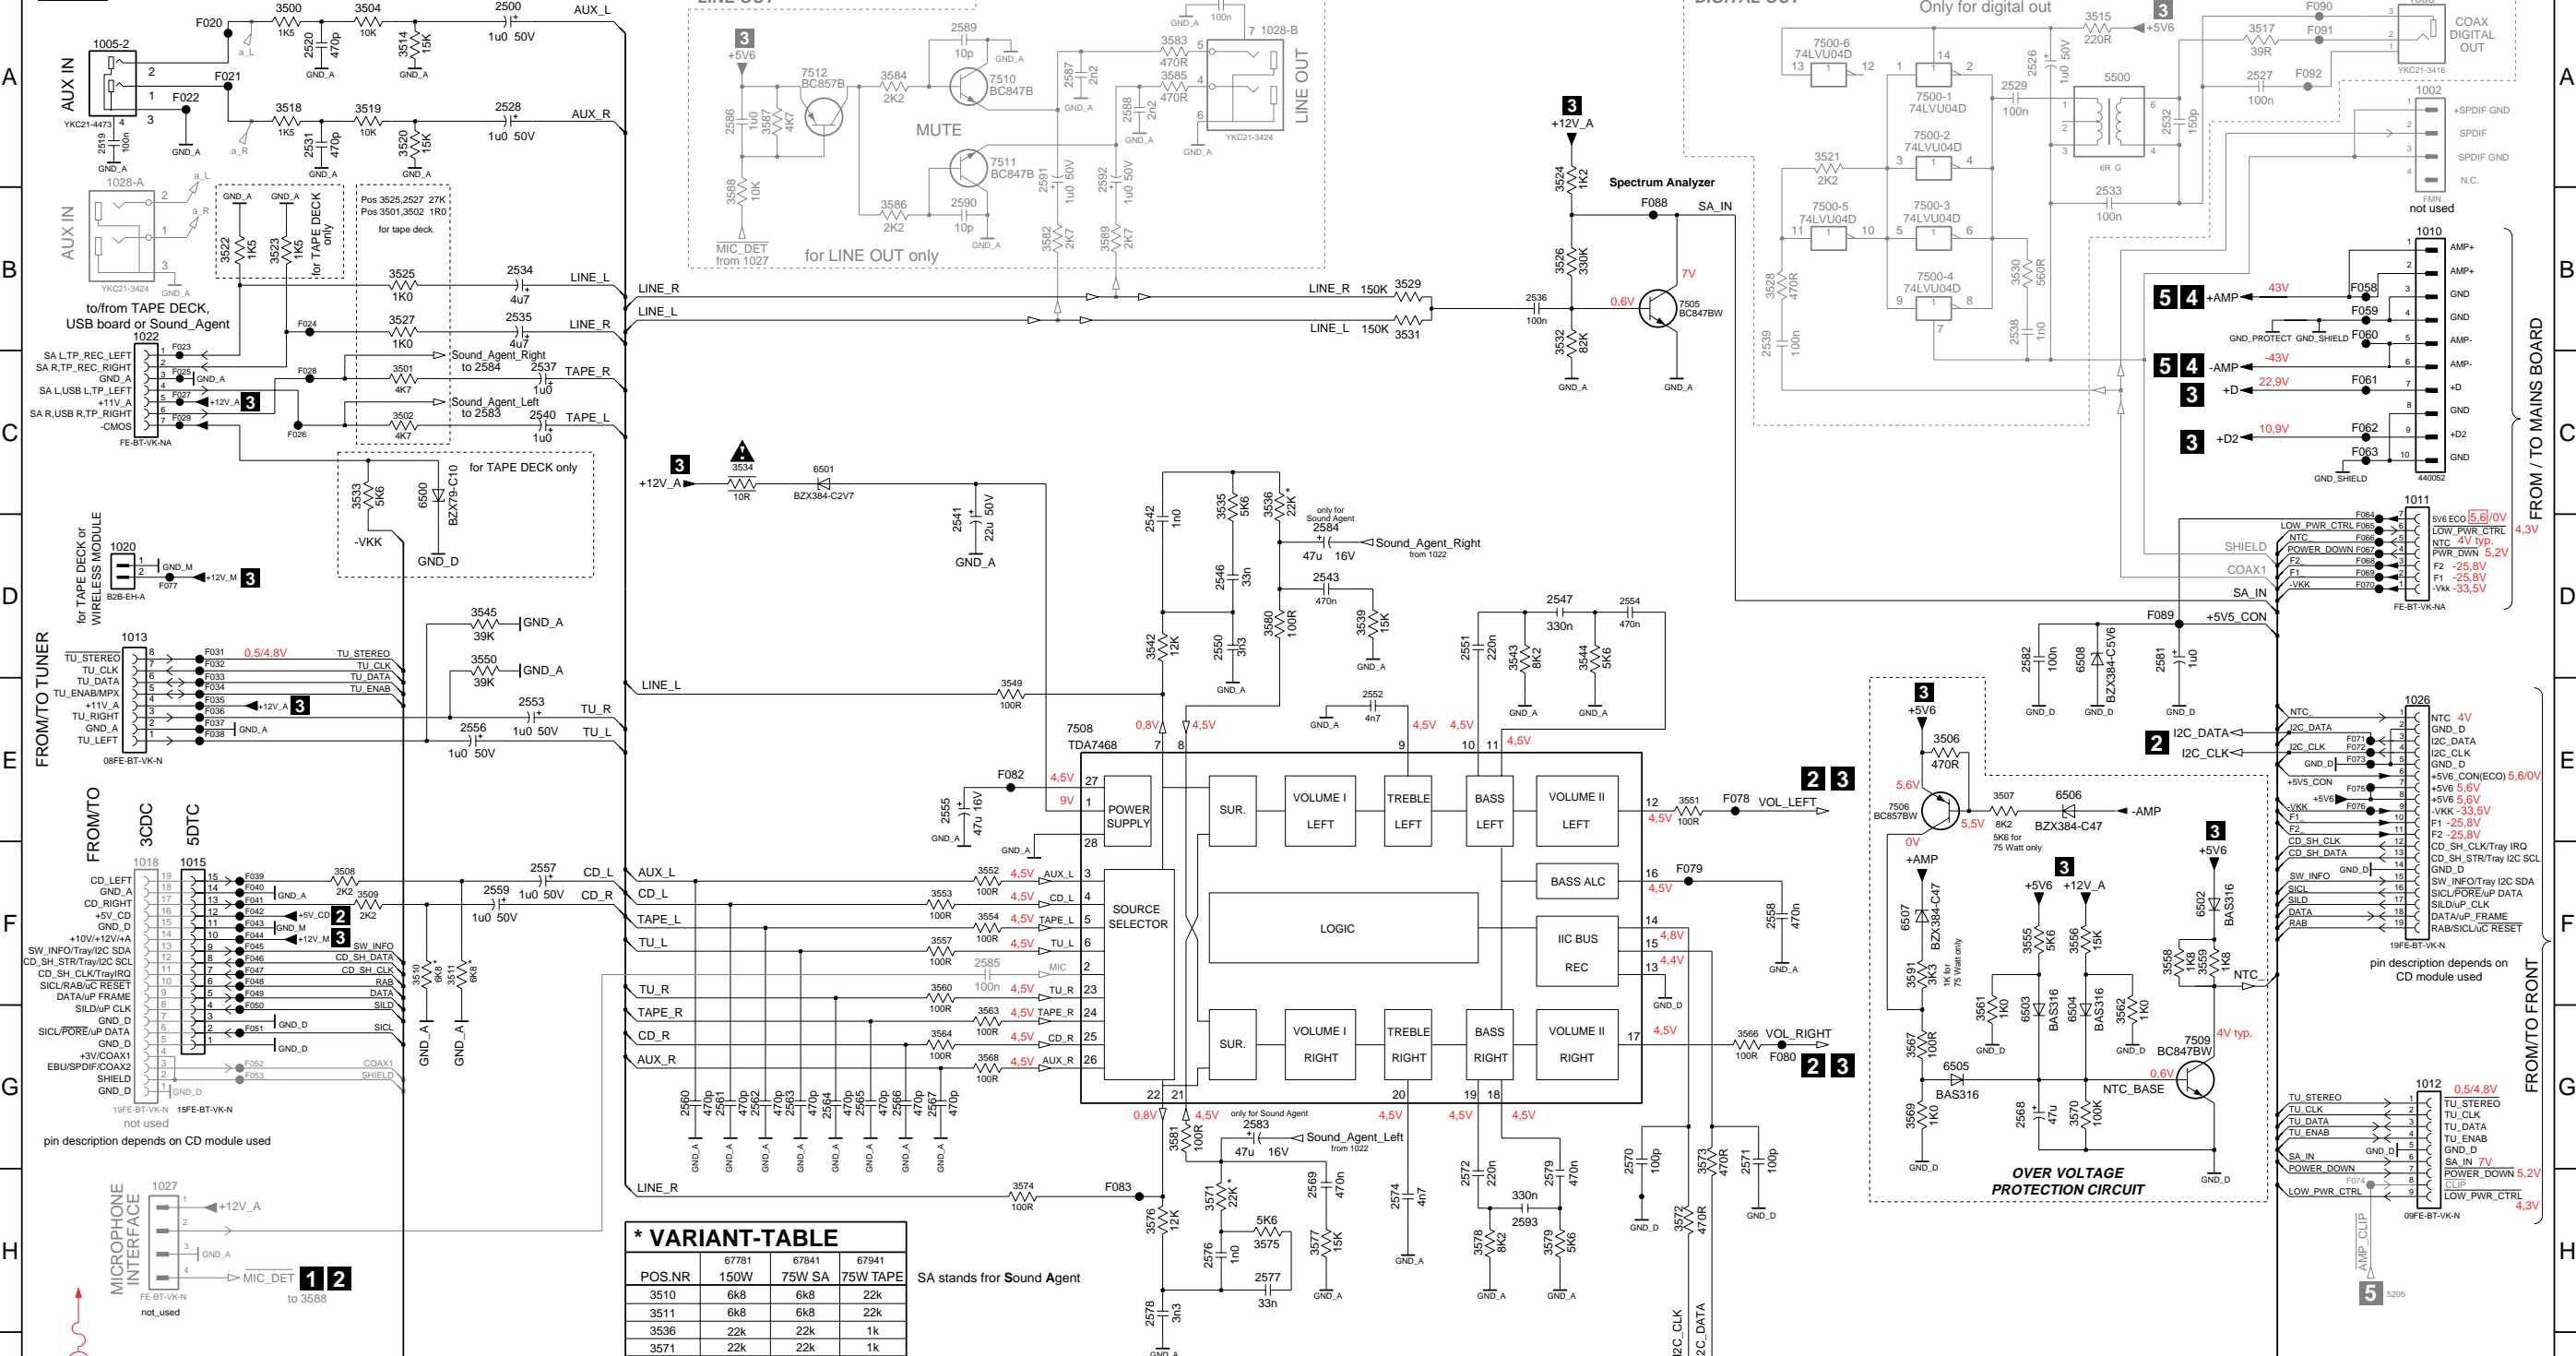

After common mode coil 5102 - the audio signal is restored.

ELECTRICAL PARTSLIST POWER 2003 75&150W Class-D COMBI BOARD

CAPACITORS

Table of capacitors with columns for part number, value, tolerance, and voltage. Includes parts like 2416, 2417, 2418, 2419, 2420, 2421, 2500, 2519, 2520, 2528, 2531, 2534, 2535, 2536, 2537, 2540, 2541, 2542, 2543, 2546, 2547, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2574, 2576, 2577, 2578, 2579, 2581, 2582, 2585, 2593.

RESISTORS

Table of resistors with columns for part number, value, tolerance, and power. Includes parts like 3100, 3101, 3102, 3103, 3106, 3107, 3108, 3109.

RESISTORS

Table of resistors with columns for part number, value, tolerance, and power. Includes parts like 3109, 3110, 3111, 3112, 3113, 3114, 3115, 3116, 3117, 3119, 3120, 3121, 3122, 3125, 3126, 3127, 3129, 3130, 3133, 3134, 3135, 3136, 3137, 3138, 3139, 3140, 3142, 3143, 3144, 3145, 3146, 3147, 3148, 3149, 3151, 3152, 3153, 3154, 3155, 3156, 3201, 3202, 3203, 3205, 3207, 3209, 3210, 3211, 3212, 3213, 3215, 3216, 3218, 3219, 3220, 3221, 3222, 3223, 3224, 3225, 3227, 3228, 3229, 3231, 3232, 3236, 3237, 3240, 3241, 3243, 3244, 3245, 3246, 3247, 3248, 3251, 3252, 3253, 3254, 3255, 3256, 3258, 3259, 3261, 3262, 3263, 3264, 3265, 3266, 3267, 3268, 3269, 3270, 3271, 3272, 3273, 3274, 3275, 3276, 3277, 3278, 3279, 3280, 3281, 3282, 3283, 3284, 3285, 3286, 3287, 3288, 3289, 3290, 3291, 3292, 3293, 3294, 3295, 3296, 3297, 3298, 3299, 3300, 3301, 3302, 3303, 3304, 3305, 3306, 3307, 3308, 3309, 3310, 3311, 3312, 3313, 3314, 3315, 3316, 3317, 3318, 3319, 3320, 3321, 3322, 3323, 3324, 3325.

ELECTRICAL PARTSLIST POWER 2003 75&150W Class-D COMBI BOARD

RESISTORS

Table of resistors with columns for part number, value, tolerance, and power. Includes parts like 3217, 3218, 3221, 3225, 3227, 3228, 3228, 3229, 3231, 3232, 3236, 3237, 3240, 3241, 3243, 3244, 3245, 3246, 3247, 3248, 3251, 3252, 3253, 3254, 3255, 3256, 3258, 3259, 3261, 3262, 3263, 3264, 3265, 3266, 3267, 3268, 3269, 3270, 3271, 3272, 3273, 3274, 3275, 3276, 3277, 3278, 3279, 3280, 3281, 3282, 3283, 3284, 3285, 3286, 3287, 3288, 3289, 3290, 3291, 3292, 3293, 3294, 3295, 3296, 3297, 3298, 3299, 3300, 3301, 3302, 3303, 3304, 3305, 3306, 3307, 3308, 3309, 3310, 3311, 3312, 3313, 3314, 3315, 3316, 3317, 3318, 3319, 3320, 3321, 3322, 3323, 3324, 3325.

RESISTORS

Table of resistors with columns for part number, value, tolerance, and power. Includes parts like 3326, 3327, 3328, 3329, 3330, 3331, 3332, 3334, 3336, 3337, 3337, 3338, 3339, 3340, 3340, 3341, 3342, 3343, 3344, 3345, 3346, 3350, 3400, 3401, 3403, 3404, 3405, 3406, 3407, 3408, 3409, 3411, 3412, 3413, 3415, 3422, 3423, 3424, 3425, 3426, 3427, 3428, 3429, 3430, 3431, 3432, 3433, 3434, 3435, 3436, 3437, 3438, 3439, 3440, 3500, 3501, 3501, 3502, 3502, 3504, 3506, 3507, 3507, 3508.

ELECTRICAL PARTSLIST POWER 2003 75&150W Class-D COMBI BOARD

RESISTORS

Table of resistors for the first board, including part numbers (e.g., 3509, 3510), values (e.g., 2.2kΩ, 6.8kΩ), tolerances (e.g., 5%), and power ratings (e.g., 0.06W).

RESISTORS

Table of resistors for the second board, including part numbers (e.g., 3591, 4211), values (e.g., 1kΩ, 3.3kΩ), tolerances (e.g., 5%), and power ratings (e.g., 0.06W).

ELECTRICAL PARTSLIST POWER 2003 75&150W Class-D COMBI BOARD

DIODES

Table of diodes for the second board, including part numbers (e.g., 6210, 6211), values (e.g., 1N4148, BAS316), and power ratings (e.g., 0.1W).

TRANSISTORS

Table of transistors for the second board, including part numbers (e.g., 7323, 7324), values (e.g., BC817-25W), and power ratings (e.g., 250mW).

INTEGRATED CIRCUITS

Table of integrated circuits for the second board, including part numbers (e.g., 7105, 7118), values (e.g., 74LV14D), and power ratings (e.g., 100mW).

TRANSISTORS

Table of transistors for the first board, including part numbers (e.g., 7104, 7109), values (e.g., BC856B, STP14NF12FP), and power ratings (e.g., 0.5W).

Note: Components printed in grey colour are considered as standard spareparts and thus not available on service stock. Code numbers are published for orientation only.
