## 8. PANEL FACILITIES

### [FRONT PANEL]

The illustration shows model A-225.  
Model A-115 is not equipped with ⑥,  
⑩ and ⑪.

#### ① POWER switch/indicator

Press to turn power to the unit ON and OFF.

##### ON:

Indicator lights.

##### OFF:

Indicator goes out.

#### ② INPUT SELECTOR switch

Use to select the playback source.

##### TUNER:

For AM or FM broadcast reception with a tuner.

##### PHONO:

For record playback with a turntable.

##### CD:

For compact disc playback with a CD player.

##### DAT/TAPE 1:

For playback with a tape deck or digital audio tape deck connected to the DAT/TAPE 1 terminals.

#### ③ VOLUME CONTROL

Use to adjust the volume level.

#### ④ ADPT/TAPE 2 monitor switch/indicator

Use when there is an adaptor component (graphic equalizer, etc.) or tape deck connected to the ADPT/TAPE 2 terminals.

##### OFF:

Indicator goes out when not in use.

##### ON:

Indicator lights when using the adaptor component or listening to the tape deck.

##### NOTE:

- When no connections are made to the ADPT/TAPE 2 terminals, or when they are not in use, be sure to set this switch to the OFF position. (No sound will be heard if it is set to the ON position.)
- When the DIRECT switch is set to ON, the input to be reproduced is always selected with the INPUT SELECTOR, regardless of whether the ADPT/TAPE 2 indicator lights or not. Furthermore, when the ADPT/TAPE 2 indicator is ON, signals input through ADPT/TAPE 2 are output at DAT/TAPE 1 REC OUT. (A-225 only)

### ⑤ LOUDNESS switch/indicator

Use when listening at low volume levels.

#### ON:

The indicator lights: Boosts low and high frequencies to give added punch to playback even at low volume levels.

#### OFF:

The indicator goes off: Should normally be left in this position.

### ⑥ DIRECT switch/indicator (A-225 only)

Use this switch when you do not wish to pass the output from input terminal equipment through the various frequency adjusting circuits (BASS, TREBLE, BALANCE.)

#### ON:

The indicator lights: The signals input through the input terminals are reproduced without passing through the various frequency adjusting circuits. This results in flat, pure sound which is a more faithful reproduction of the input source.

#### OFF:

The indicator goes out: The signal passes through the various frequency adjusting circuits.

### ⑦ BALANCE control

Should normally be left in the center position. Adjust the balance if the sound is louder from one of the speakers. If the right side is louder, turn toward the L(left) position and if the left side is louder, turn toward the R(right) position.

#### NOTE:

*This control does not operate when the DIRECT switch is in the ON position. (A-225 only)*

### ⑧ TREBLE tone control

Use to adjust the high-frequency tone. The center position is the flat (normal) position. When turned to the right, high-frequency tone is emphasized; when turned to the left, high-frequency tone is de-emphasized.

#### NOTE:

*This control does not operate when the DIRECT switch is in the ON position. (A-225 only)*

### ⑨ BASS tone control

Use to adjust the low-frequency tone. The center position is the flat (normal) position. When turned to the right, low-frequency tone is emphasized; when turned to the left, low-frequency tone is de-emphasized.

#### NOTE:

*This control does not operate when the DIRECT switch is in the ON position. (A-225 only)*

### ⑩ SPEAKERS B selector switch (A-225 only)

Use this switch to listen to the speaker systems connected to the SPEAKERS B terminals.

#### ON ( — ):

Depressed position: Sound is heard from the speaker systems.

#### OFF ( ■ ):

Released position: No sound is heard from the speaker systems. Set to this position when listening with headphones.

### ⑪ SPEAKERS A selector switch (A-225 only)

Use this switch to listen to the speaker systems connected to the SPEAKERS A terminals.

#### ON ( — ):

Depressed position: Sound is heard from the speaker systems.

#### OFF ( ■ ):

Released position: No sound is heard from the speaker systems. Set to this position when listening with headphones.

### ⑫ PHONES jack

When using headphones, insert the plug into this jack. With model A-115 the output to the speakers is cut automatically when connecting headphones.

## [A-225 only]

Model A-225 can be placed on another component with less depth by changing the position of the rear feet. (However, a minimum depth of 200 mm is required.)

### Change the position of the rear feet as follows:

1. Remove the AC plugs, connection cords etc., connected to the A-225, and turn the unit upside down.
2. Remove the screws holding the rear feet using a (+) screwdriver.
3. Move the rear feet to the holes located towards the center of the unit (see the arrows in the diagram).
4. Secure the feet by tightening the screws removed in step 2 with a (+) screwdriver.
