REPAIR & ADJUSTMENTS**

**ORDER NO.  
ARP-349-0**

**STEREO AMPLIFIER**

# A-80

**MODEL A-80 COMES IN FIVE VERSIONS DISTINGUISHED AS FOLLOWS:**

Type	Voltage	Remarks
HE	AC220V, 240V (switchable)	European continent model
HB	AC220V, 240V (switchable)	United Kingdom model
S	AC110V, 120V, 220V, 240V (switchable)	General export model
S/G	AC110V, 120V, 220V, 240V (switchable)	U.S. Military model
HEZ	AC220V, 240V (switchable)	West Germany model

- This service manual is applicable to the HE type.  
For servicing of the HB, S and S/G types, please refer to the page 39-40.  
For HEZ type, please refer to the additional service manual (ARP-351-0).
- Ce manuel d'instruction se réfère au mode de réglage, en français.
- Este manual de servicio trata del método de ajuste escrito en español.

## Amplifier Section

**Continuous Average Power Output is 150 watts\* per channel, min., at 8 ohms from 20 Hertz to 20,000 Hertz with no more than 0.003% total harmonic distortion\*\*.**

Continuous Power Output at 1 kHz  
(both channel driven)

T.H.D. 0.003%, 8 ohms ..... 150 watts per channel  
T.H.D. 1%, 8 ohms ..... 220 watts per channel (Din)

Music Power Output at 1 kHz (both channel driven)  
S model

T.H.D. 1%, 8 ohms ..... 313 watts per channel

Total Harmonic Distortion (20 Hertz to 20,000 Hertz, 8 ohms,  
from CD/AUX 1)

continuous rated power output  
..... \*\*No more than 0.003%  
75 watts per channel power output  
..... \*\*No more than 0.003%

Intermodulation Distortion (50 Hertz: 7,000 Hertz = 4 : 1,  
8 ohms, from CD/AUX 1)

continuous rated power output  
..... No more than 0.003%

Damping Factor (20 Hertz to 20,000 Hertz, 8 ohms) ..... 80  
Input (Sensitivity/Impedance)

PHONO MM ..... 2.5 mV/50 kilohms  
PHONO MC ..... 0.25 mV/40 ohms,  
0.15 mV/3 ohm MC transformer  
TUNER, CD/AUX1, AUX2, TAPE PLAY 1, 2  
..... 150 mV/50 kilohms

Phono Overload Level (T.H.D. 0.003%, 1 kHz)

PHONO MM ..... 300 mV  
PHONO MC ..... 18 mV

Output (Level/Impedance)

TAPE REC 1,2 ..... 150 mV/2.2 kilohms  
SPEAKERS ..... OFF, A or B, A and B

Frequency Response

PHONO MM (RIAA Equalization)  
..... 20 Hz to 20,000 Hz  $\pm$  0.2 dB  
TUNER, CD/AUX1, AUX2, TAPE PLAY 1, 2  
..... 5 Hz to 100,000 Hz  $\pm$  3 dB

Tone Control

BASS .....  $\pm$  10 dB (100 Hz)  
TREBLE .....  $\pm$  10 dB (10 kHz)

Filter

LOW (SUBSONIC) ..... 15 Hz (6 dB/oct.)

Hum and Noise (IHF, short circuited A network)

PHONO MM ..... 89 dB  
PHONO MC ..... 75 dB (3/40 ohms)  
TUNER, CD/AUX1, AUX2, TAPE PLAY 1, 2 ..... 109 dB

Hum and Noise (DIN, continuous rated power output/50 mW)

PHONO MM ..... 74 dB/61 dB  
TUNER, CD/AUX 1, AUX 2, TAPE PLAY 1, 2  
..... 88 dB/62 dB

Muting ..... - 20 dB

## Miscellaneous

Power Requirements

HE model ..... a.c. 220 V  $\sim$ , 50/60 Hz  
S, S/G models  
.....  $\sim$  a.c. 110 V/120 V/220 V/240 V (switchable) 50/60 Hz  
HB model ..... a.c. 240 V  $\sim$ , 50/60 Hz

Power Consumption

HE model ..... 1,000 W (max.)  
S, S/G models ..... 300 W (max.)  
HB model ..... 1,000 W (max.)

Dimensions ..... 420(W) x 150(H) x 420 (D) mm  
16-9/16(W) x 5-7/8(H) x 16-9/16(D) in

Weight (without package) ..... 16.8 kg (37lb 1oz)

## Furnished Parts

Operating Instructions ..... 1

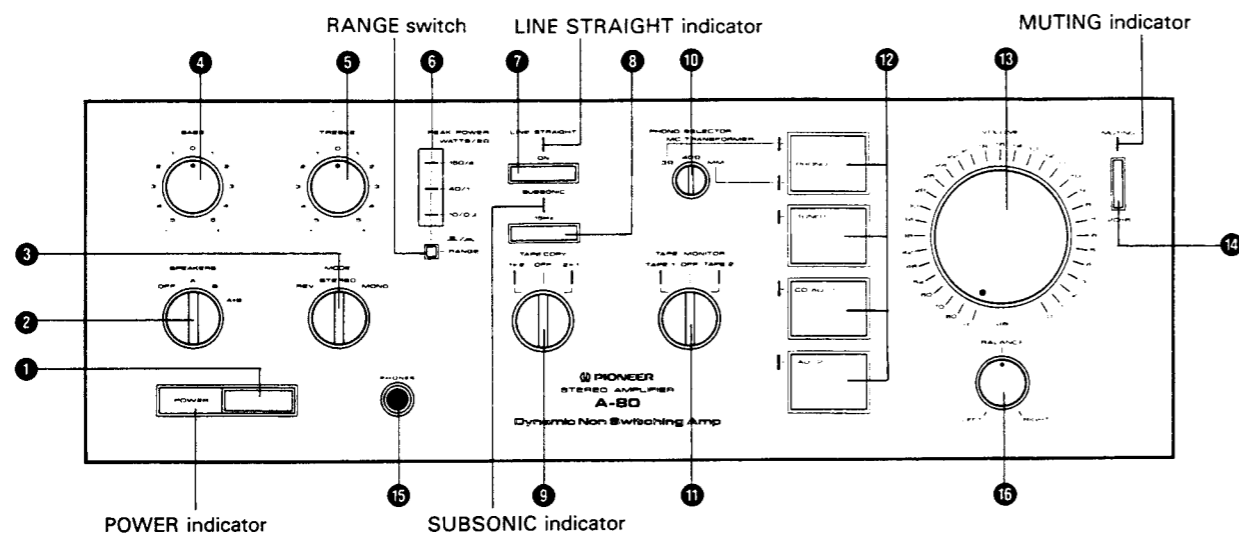

\*Measured pursuant to the Federal Trade Commission's Trade Regulation rule on Power Output Claims for Amplifier.

\*\*Measured by Shibasoku 725 Automatic Distortion Analyzer

NOTE:

Specifications and design subject to possible modification without notice due to improvements.

## 2. FRONT PANEL FACILITIES

### 1 POWER SWITCH

Power is supplied to the stereo amplifier when the switch is depressed and the POWER indicator changes from red to green. The power is turned off when the switch is released to the OFF position.

### 2 SPEAKERS SELECTOR

- OFF ..... There is no output signal from either A or B output terminals. Set in this position when listening through the headphones.
- A ..... Sound is heard from the speakers connected to output A terminals.
- B ..... Sound is heard from the speakers connected to output B terminals.
- A + B ..... Sound is heard from the speakers connected to both A and B terminals.

### 3 MODE SELECTOR

This is used to select the mode.

- REV: Set here to reverse the left channel and right channel stereo input signals and listen in stereo.
- STEREO: Set here for ordinary stereo listening.
- MONO: Set here to mix the left and right channel stereo input signals and hear them in mono through both the left and right speakers.

**NOTE:**  
The MODE selector does not function when the LINE STRAIGHT switch is in ON position

### 4 BASS CONTROL

Adjusts the bass tone. Before adjusting the control, depress the LINE STRAIGHT switch to OFF position. When the control is turned to the plus side (clockwise), the bass is emphasised. Conversely, when turned to the minus side (anti-clockwise), the bass is attenuated.

**NOTE:**  
The BASS control does not operate if the LINE STRAIGHT switch is ON.

### 5 TREBLE CONTROL

Adjusts the treble tone. Before adjusting the control, depress the LINE STRAIGHT switch to OFF position. When the control is turned to the plus side (clockwise), the treble is emphasized. Conversely, when turned to the minus side (counter-clockwise), the treble is attenuated.

**NOTE:**  
The TREBLE control does not operate if the LINE STRAIGHT switch is ON.

### 6 PEAK POWER WATTS/8 Ω INDICATOR

This indicates the output level at 6 stages, when speakers with a nominal impedance of 8 ohm are connected to the speaker terminals. The RANGE switch operates as follows.

- : When released, it indicates the high level output (150, 40, 10) in watts.
- : When depressed, it indicates the low level output (4, 1, 0.3) in watts.

### 7 LINE STRAIGHT SWITCH

When the switch is depressed to OFF position (the Line Straight Indicator goes out), the signal from the input terminals passes through the mode selector and tone control circuits and the tone quality can be adjusted using the TREBLE and BASS controls. When the switch is depressed once again to the ON position (the Line Straight Indicator lights up), the signal from the input terminals is sent directly to the power amplifier, without passing through the mode selector and tone control circuits and a flat frequency response is obtained.

### 8 SUBSONIC FILTER SWITCH

When the switch is depressed to the ON position, the subsonic filter with the 15 Hz cut-off frequency operates. The subsonic filter attenuates frequencies lower than 15 Hz with a 6 dB/oct slope and can be used therefore to suppress the ultra-low range noise, which is generated by record warp and other factors. This noise cannot actually be heard by the ear, but it can cause intermodulation distortion and even damage to the speaker systems. When playing badly warped records, this switch can be used to good effect.

### 9 TAPE COPY SWITCH

Use this switch when copying a tape, using 2 tape decks.

- 1 ► 2 ..... Set to this position when copying a tape (recording) from tape deck 1 to 2.
- OFF ..... Set to this position when not copying. Leave in the OFF position normally.
- 2 ► 1 ..... Set to this position when copying a tape (recording) from tape deck 2 to 1.

### 10 PHONO SELECTOR

To play a record on the turntable, adjust to either MC or MM, depending on the cartridge being used. When using an MC (Moving Coil) Cartridge, position at MC (40 Ω or 3 Ω). When using an MM (Moving Magnet) Cartridge, position at MM. (See the cartridge instruction manual for details of the MC Cartridge impedance).

### 11 TAPE MONITOR SWITCH

Used to play back a tape or monitor a recording.

- TAPE 1 : Set to this position to play back a tape or monitor a recording on the tape deck connected to TAPE 1 PLAY terminal.
- OFF : Set to this position if not playing back a tape or monitoring a recording.
- TAPE 2 : Set to this position to play back a tape or monitor a recording on the tape deck connected to TAPE 2 PLAY terminals.

**NOTE:**  
Simultaneous playback or monitoring on TAPE 1 and TAPE 2 are not possible.

### 12 FUNCTION SWITCHES

These are used to select the program source. At the left of each switch is a Function indicator, which lights up when the corresponding function has been selected.

- PHONO : Depress when playing records on a turntable connected to the PHONO terminals.
- TUNER : Depress when listening to a broadcast on a tuner connected to the TUNER terminals.
- CD/AUX 1, Depress when listening to the sound from a stereo component connected to CD/AUX 1 or AUX 2 terminals.

**NOTE:**  
Since the TAPE MONITOR switch has priority over the Function switches, set the TAPE MONITOR switch to OFF.

### 13 VOLUME CONTROL

This is used to adjust the volume of sound heard through the speakers or headphones. The scale shows the amount of attenuation in dB. No sound is heard when the control is set at "∞". Turn slowly in a clockwise direction ( ◯ ).

### 14 MUTING - 20 dB SWITCH

The volume is attenuated by 20 dB when this switch is depressed to the ON position (MUTING indicator lights up). The switch can be used effectively when the stylus descends onto the record during record play, when the sound is to be turned down temporarily and when you want to adjust the sound precisely as you listen to a program source under low sound level conditions.

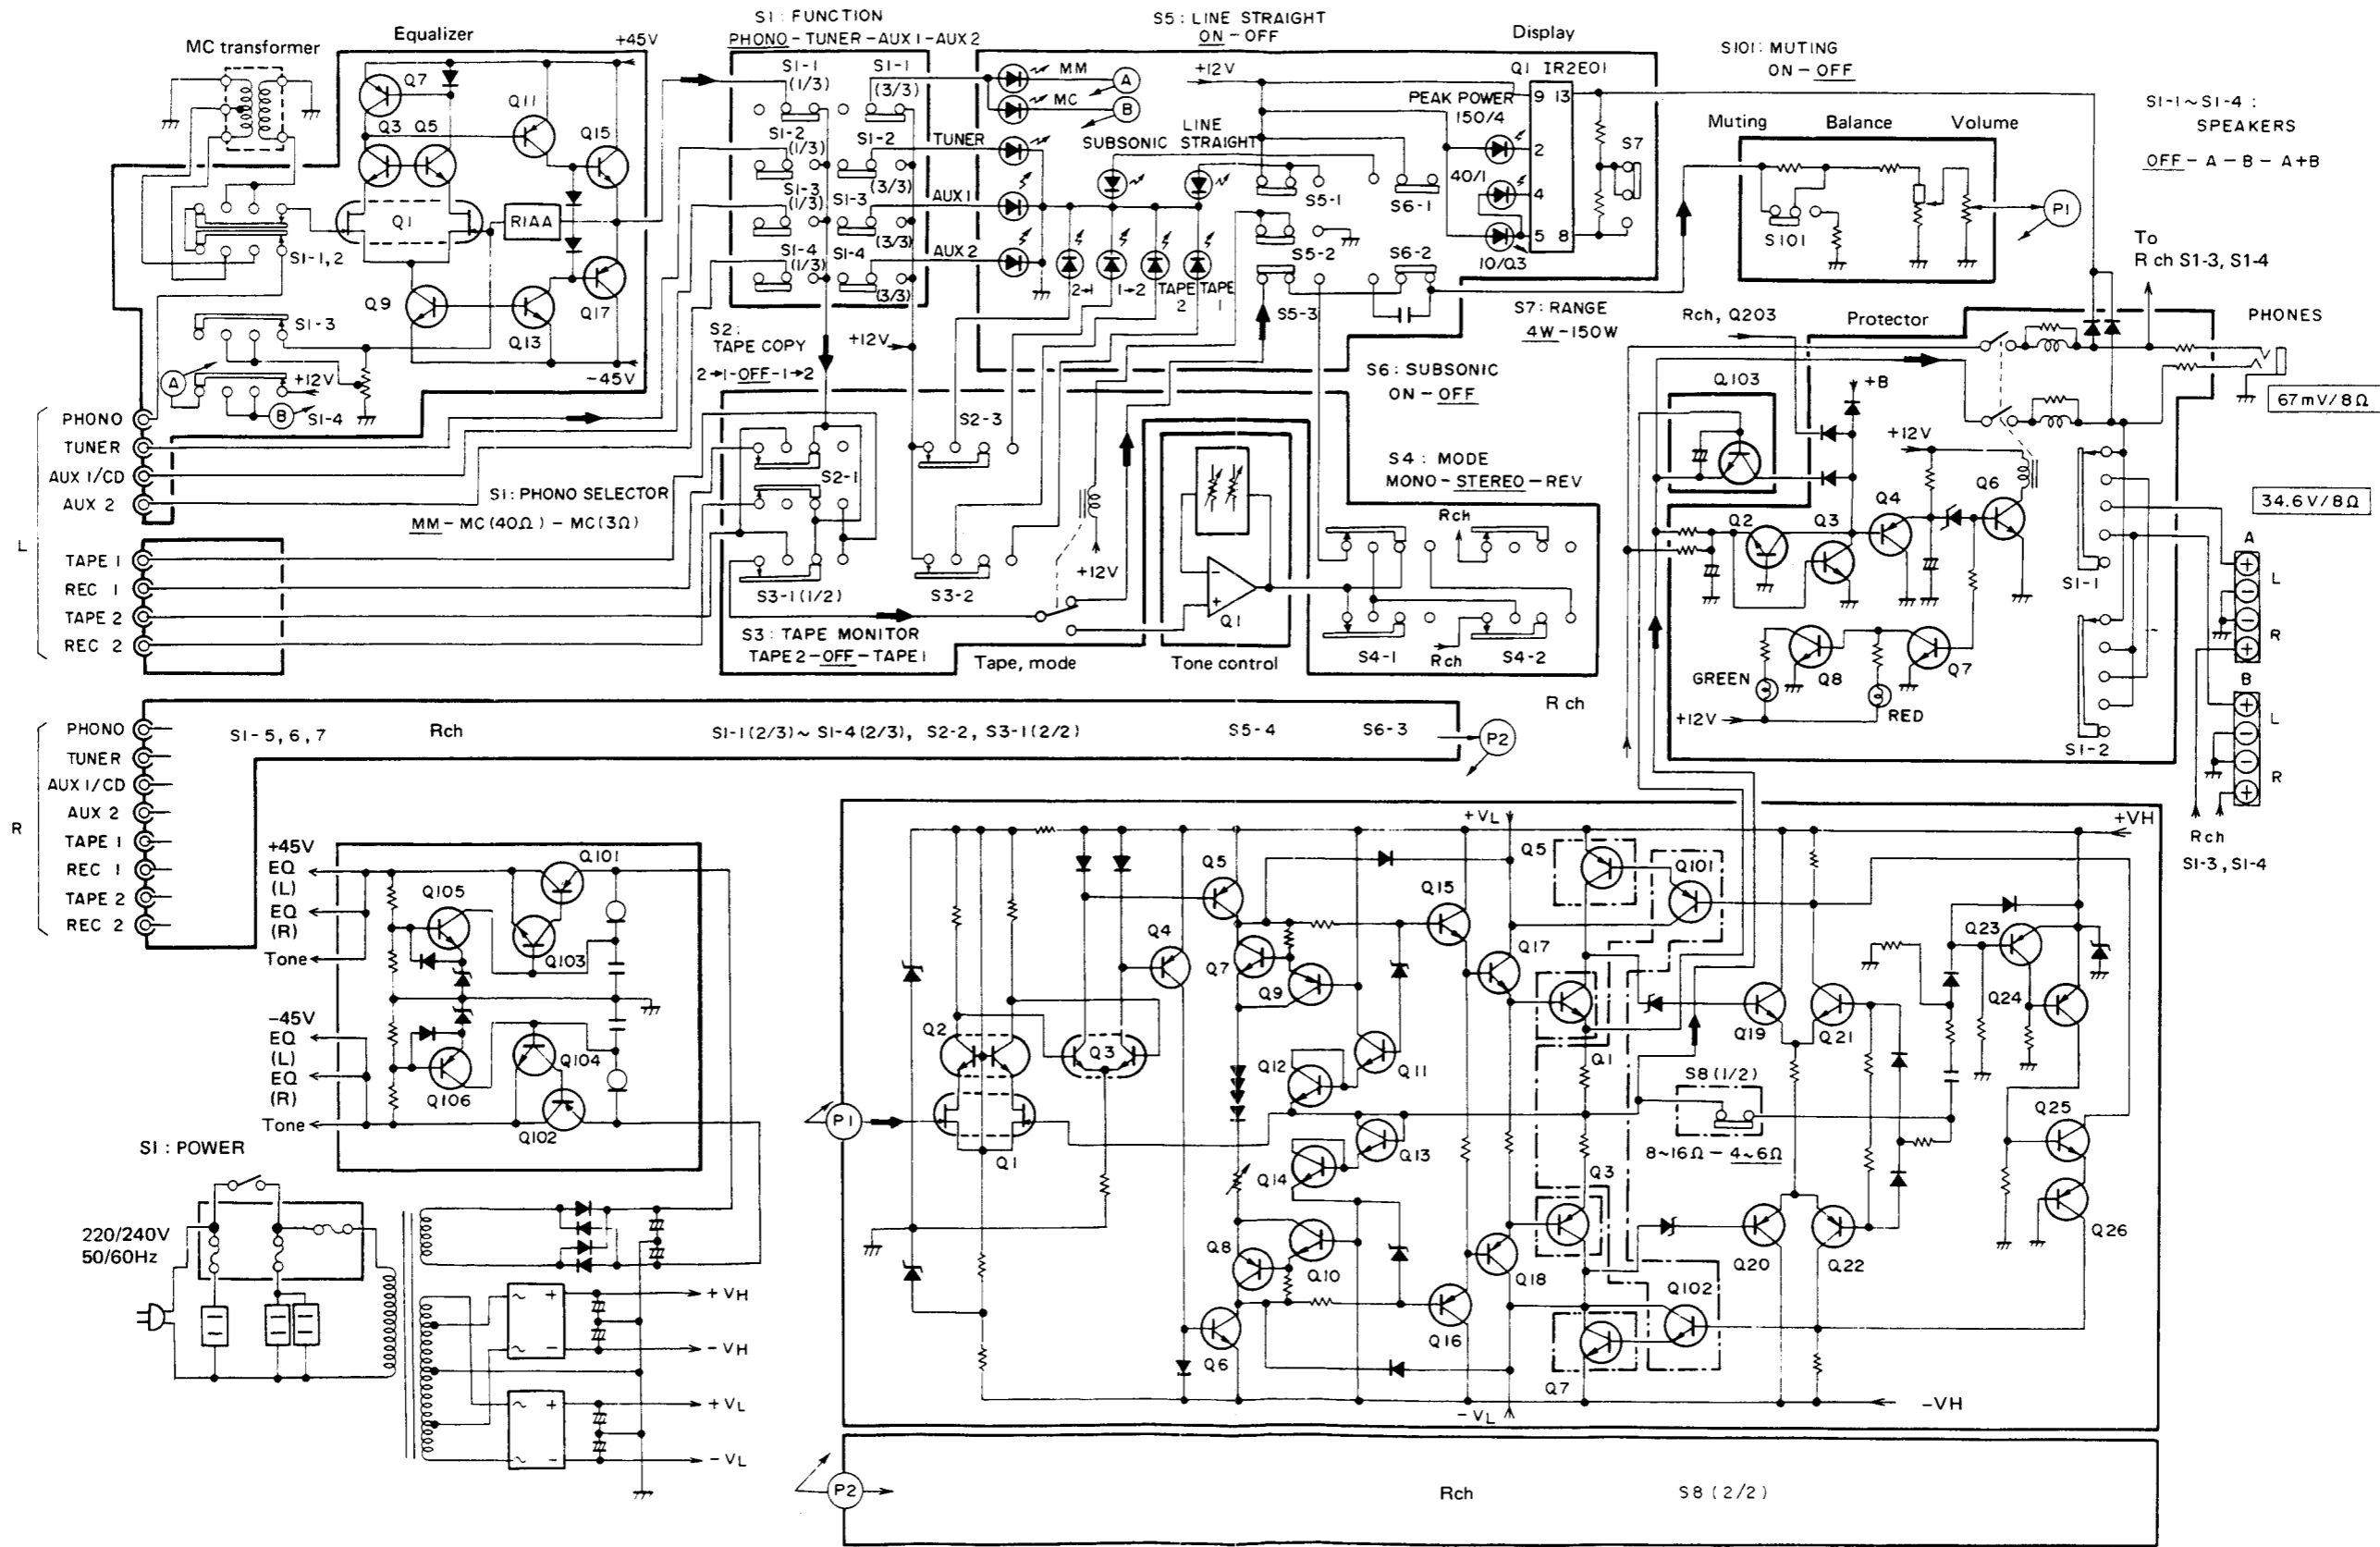

### 15 PHONES TERMINAL

Connect the plug on your headphones to this terminal. To listen to a program source through the headphones, set the SPEAKERS selector to OFF.

### 16 BALANCE CONTROL

Normally left in the central position. Used to adjust the balance of sound from the left and right channels. When the right side is too heavy, turn to the left; when the left side is too heavy, turn to the right.

## 6. PACKING

Mark	No.	Part No.	Description
	1.	AHA-328	Side pad L
	2.	ARE-087	Operating instructions (English, German, French, Italian)
	3.	AHA-329	Side pad R
	4.	AHE-251	Packing case

### Line Voltage Selection

Line voltage can be chosen by connecting transformer cords as shown below. After reconnection, stick line voltage label on the rear panel.

Line voltage	Color of cord	Terminal	Label
220 V	Red	7	AAX-193
	Gray	1	
240 V	Red	1	AAX-192
	Gray	7	

# 7. EXPLODED VIEWS AND PARTS LIST

## Exterior Components

- Parts without part number cannot be supplied.
- The  $\Delta$  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- For your Parts Stock Control, the fast moving items are indicated with the marks **★★** and **★**.  
**★★ GENERALLY MOVES FASTER THAN ★.**  
 This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.

## 4. CIRCUIT DESCRIPTIONS

### 4.1 OUTLINE OF COMPONENT CIRCUITS

#### Equalizer Amplifier

With a switchable gain equalizer used jointly in the MC transformer, the step-up ratio of the transformer is lowered, thereby obtaining better high region response and less noise. The resultant signal-to-noise ratio is 76dB (for an MC input of  $150\mu\text{V}$ ).

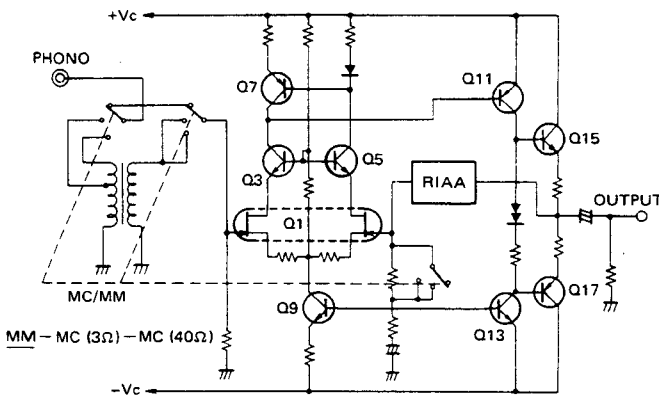

Fig. 4-1 Equalizer circuit

#### Tone Control

The differential single-stage NFB type circuit ensures a high maximum input at high-voltage drive. Both the tone control and mode switching circuits are bypassed when the LINE STRAIGHT switch is on.

Fig. 4-2 Tone control and line straight

#### Power Amplifier

A differential two-stage input, a current mirror push-pull predriver, and a three-stage Darlington connection output have minimized distortion, while a dynamic power supply section assures the amplifier of higher efficiency.

#### Protector Circuit

In addition to standard protector circuit features including a bridge-type overload detector, a DC voltage detector, and relays designed to delay contact when the power is switched on and to cut the power line immediately when the power is switched off, an overcurrent protector circuit and clipper circuit have been used in the power amplifier stage.

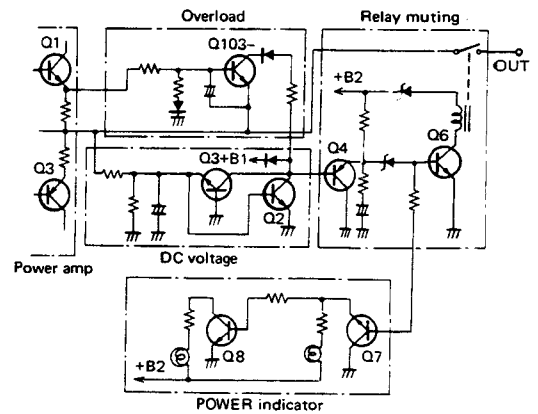

Fig. 4-3 Protection circuit

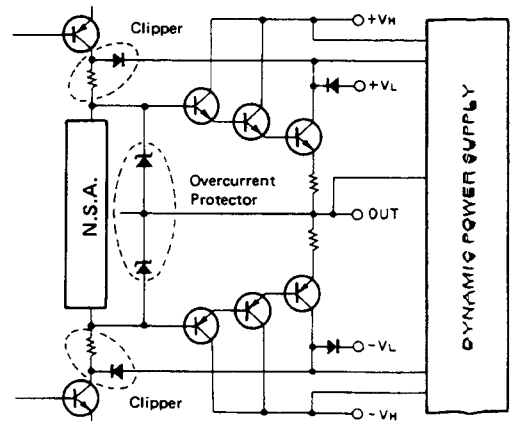

Fig. 4-4 Overcurrent protector and clipper

### 4.2 DYNAMIC POWER SUPPLY CIRCUIT

The dynamic power supply system featured in the final stage of the A-80 power amplifier varies the voltage applied to the power transistor in accordance to the signal level. The result is reduced heat loss and higher efficiency.

#### Operating Principles

The basic circuitry is outlined in Fig. 4-5. There are two  $V_H$  and  $V_L$  power lines. The signal output  $v_o$  is compared with final stage power voltage  $v_a$  by differentiator,  $v_a$  being obtained by controlling  $V_H$ . With the  $v_a$  input applied to the differentiator being offset by  $E_s$  (several volts), the  $v_a$  waveform is traced,  $v_a$  being several volts larger than  $v_o$ . If, however,  $v_o$  is less than  $V_L - E_s$ ,  $v_a$  is fixed at the  $V_L$  level (see Fig. 4-6).

The purpose of the high-region ON circuit is to avoid irregularities from occurring where  $v_a$  can no longer follow  $v_o$  at high signal frequencies, and to prevent high-speed continuous operation in the control transistor. That is, when high frequency signals appear at the output, the control transistors (Q3 and Q4) are turned fully on, and  $v_a$  is fixed at the  $V_H$  level.

#### A-80 Dynamic Power Supply Circuit

The overall circuit structure is outlined in Fig. 4-7.  $V_L$  is fixed so as to obtain the rated output (150W) for a  $4\Omega$  load, and the high region ON circuit is designed to operate at frequencies above 3kHz. The SPEAKER IMPEDANCE switch set to the  $4\Omega \sim 6\Omega$  position fixes the power supply to the final stage transistor at the  $V_L$  level.

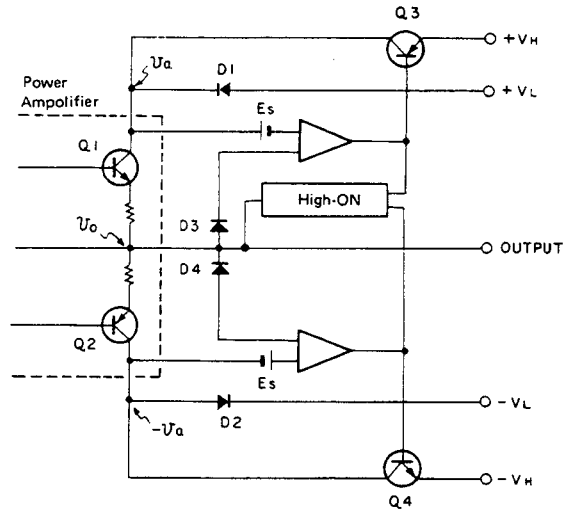

Fig. 4-5 Basic circuitry

Fig. 4-6 Operating waveforms

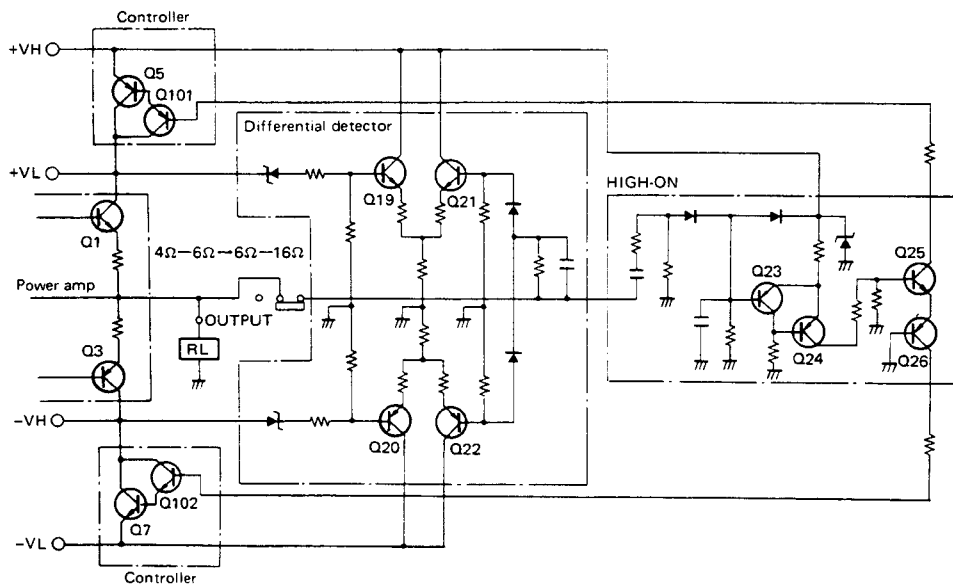

Fig. 4-7 Dynamic power supply circuit of A-80

- Parts without part number cannot be supplied.
- The  $\Delta$  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- For your Parts Stock Control, the fast moving items are indicated with the marks **\*\*** and **\***.  
**\*\* GENERALLY MOVES FASTER THAN \***  
 This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.

# 10. ELECTRICAL PARTS LIST

**NOTES:**

- When ordering resistors, first convert resistance values into code form as shown in the following examples.

*Ex. 1* When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560Ω	56 x 10 <sup>1</sup>	561	.....	RD½PS	561J
47kΩ	47 x 10 <sup>3</sup>	473	.....	RD½PS	473J
0.5Ω	0R5	.....	.....	RN2H	0R5K
1Ω	010	.....	.....	RS1P	010K

*Ex. 2* When there are 3 effective digits (such as in high precision metal film resistors).

5.62kΩ	562 x 100	5621	.....	RN½SR	5621F
--------	-----------	------	-------	-------	-------

- The **△** mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- For your Parts Stock Control, the fast moving items are indicated with the marks **★★** and **★**.  
**★★ GENERALLY MOVES FASTER THAN ★.**  
This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.

## 11. ADJUSTMENTS

### Idle Current Adjustment

1. Turn the VOLUME control down to minimum volume, and switch the LINE STRAIGHT switch on.
2. Rotate VR1 and VR2 counter clockwise.
3. Switch the power on with no input and no load applied to the unit.
4. Adjust VR1 to obtain a reading of  $22\text{mV} \pm 10\text{mV}$  between TP1 (+) and TP2 (-).
5. Repeat the above operation for other channel assemblies.
6. Readjust after aging for at least 10 minutes.

### Reference:

Center DC output voltage tolerance:  $0\text{V} \pm 100\text{mV}$ .

### Equalizer Amplifier Adjustment

1. Short circuit the PHONO terminals.
2. Adjust VR1 to reduce the TP1 voltage to at least  $\pm 100\text{mV}$ .
3. Also adjust VR2 to reduce the TP2 voltage to at least  $\pm 100\text{mV}$ .

Fig. 11-1 Adjusting points (power amplifier)

Fig. 11-2 Adjusting points (equalizer)

## 11. RÉGLAGE

### Réglage des courants déwattés

1. Régler le potentiomètre de volume (VOLUME) au minimum et placer le commutateur de ligne directe (LINE STRAIGHT).
2. Tourner VR1 et VR2 dans le sens des aiguilles d'une montre.
3. Allumer l'appareil, toutes les connexions étant débranchées.
4. Régler VR1 afin d'obtenir une lecture de  $22\text{mV} \pm 10\text{mV}$  entre TP1 (+) et TP (-).
5. Recommencer les réglages ci-dessus pour les autres canaux.
6. Recommencer les réglages après avoir laissé l'appareil en fonction pendant au moins 10 minutes.

### Référence:

Tolérance de la tension de sortie centrale CC:  $0\text{V} \pm 100\text{mV}$ .

### Réglage de l'amplificateur égaliseur

1. Mettre les bornes PHONO en court-circuit.
2. Régler VR1 afin d'abaisser la tension au niveau de TP1 à au moins  $\pm 10\text{mV}$ .
3. Régler aussi VR2 afin d'abaisser la tension au niveau de TP2 à au moins  $\pm 100\text{mV}$ .

Fig. 11-1 Points de réglage (amplificateur de puissance)

Fig. 11-2 Points de réglage (égalisateur)

## 11. AJUSTE

### Ajuste de la corriente reactiva

1. Girar al control VOLUME al nivel mínimo de volumen y activar el interruptor LINE STRAIGHT.
2. Girar VR1 y VR2 hacia la izquierda.
3. Conectar la alimentación sin carga y sin entrada aplicadas al aparato.
4. Ajustar VR1 para obtener una indicación de  $22\text{mV} \pm 10\text{mV}$  entre TP1 (+) y TP2 (-).
5. Repetir la operación de arriba para conjuntos de otros canales.
6. Reajustar después de haber transcurrido por lo menos 10 minutos.

### Referencia:

Tolerancia de tensión de salida de CC central:  $0\text{V} \pm 100\text{mV}$ .

### Ajuste del amplificador ecualizador

1. Cortocircuitar los terminales PHONO.
2. Ajustar VR1 para reducir la tensión de TP1 a  $\pm 100\text{mV}$  por lo menos.
3. Ajustar también VR2 para reducir la tensión de TP2 a  $\pm 100\text{mV}$  por lo menos.

Fig. 11-1 Puntos de ajuste (amplificador de potencia)

Fig. 11-2 Puntos de ajuste (ecualizador)

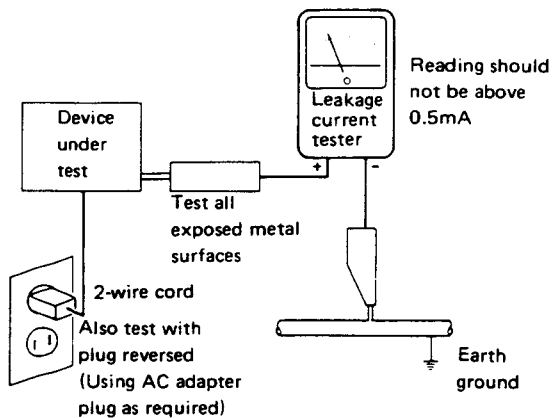

## 12. SAFETY INFORMATION

### 1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

#### LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

### 2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a ⚠ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

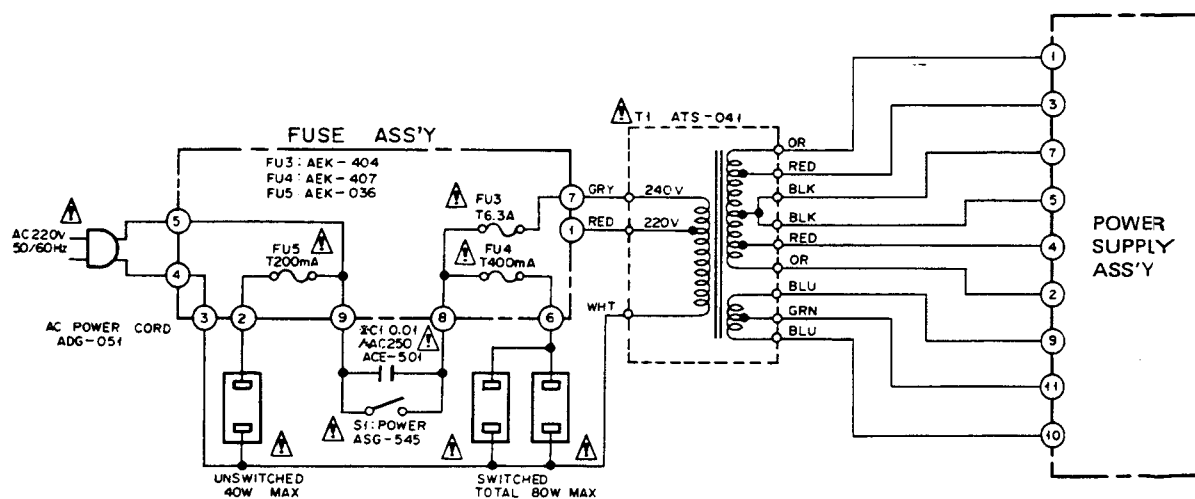

# 13. FOR HB TYPE
