1. SPECIFICATIONS

Amplifier Section

Continuous Average Power Output is 200 watts* per channel, min., at 8 ohms from 20 Hertz to 20,000 Hertz with no more than 0.002 % total harmonic distortion.**

Continuous Power Output at 1kHz (both channel driven)
T. H. D. 0.002%, 8 ohms ..... 220watts per channel
Total Harmonic Distortion (20 Hertz to 20,000 Hertz, 8 ohms)
continuous rated power output
..... **No more than 0.002%
100 watts per channel power output
..... **No more than 0.002%
Intermodulation Distortion (50 Hertz: 7,000 Hertz = 4 : 1, 8 ohms)
continuous rated power output
..... No more than 0.002%
Damping Factor (20 Hertz to 20,000 Hertz, 8 ohms)
..... 100
Input (Sensitivity/Impedance)
PHONO MM ..... 2.5mV/50 kilohms
PHONO MC ..... 150μV/100 ohms, 33 ohms
TUNER, CD/AUX1, AUX2, TAPE PLAY 1, 2
..... 150 mV/50 kilohms
Phono Overload Level (T.H.D. 0.008%, 1,000Hz)
PHONO MM 300mV
PHONO MC 18mV
Output Level/Impedance
TAPE REC 1, 2 ..... 150mV/2.2 kilohms
Frequency Response
PHONO MM (RIAA Equalization)
..... 20Hz to 100,000Hz±0.2dB
TUNER, CD/AUX1, AUX2, TAPE PLAY 1, 2
..... 5Hz to 100,000Hz $^{+0}_{-3}$dB
Tone Control
BASS ..... ±6dB (100Hz) at 200Hz Position
.....Turnover frequency: 100Hz/200Hz/400Hz
TREBLE ..... ±6dB (10kHz) at 4kHz Position
Turnover frequency: 2kHz/4kHz/8kHz
Filter
LOW (SUBSONIC) ..... 15Hz (-6dB/oct.)
Hum and Noise (IHF, short circuited A network)
PHONO MM 89dB
PHONO MC 74dB
TUNER, CD/AUX1, AUX2, TAPE PLAY 1, 2 .. 113dB
Muting ..... -20dB

Miscellaneous

Power Requirements 120V, 50/60Hz
Power Consumption ..... 350 W (UL)
Dimensions ..... 420(W) x 150(H) x 420(D) mm
16-9/16(W) x 5-7/8(H) x 16-9/16(D) in
Weight (without package) ..... 19.6kg (43 lb 3 oz)

Furnished Parts

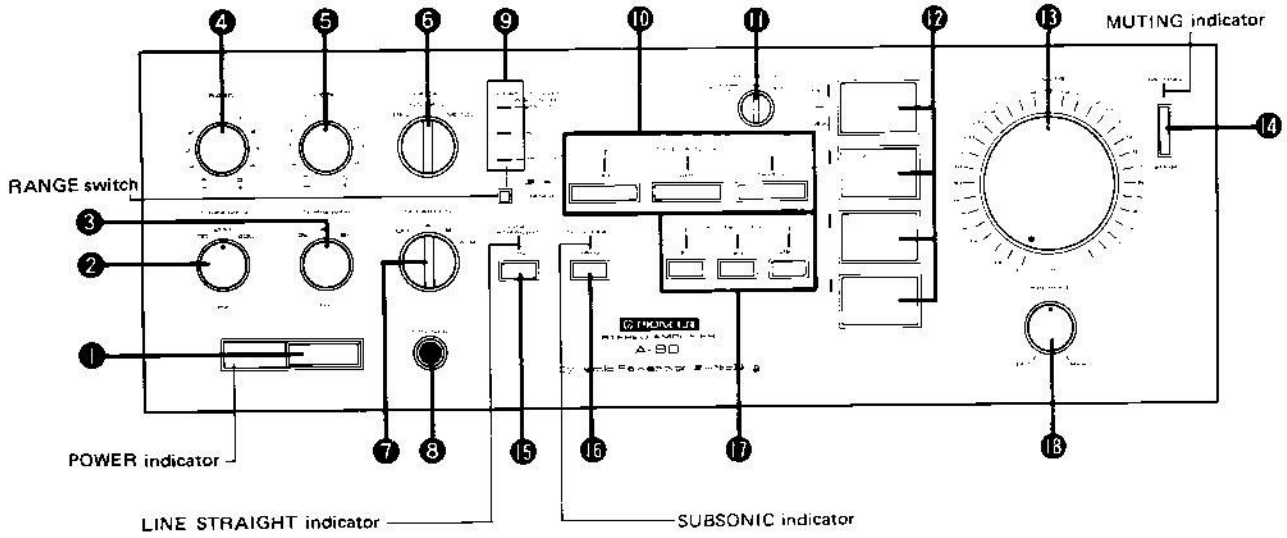
Operating Instructions 1

**Measured pursuant to the Federal Trade Commission's Trade Regulation rule on Power Output Claims for Amplifier.*

***Measured by Shibasoku 725 Automatic Distortion Analyzer.*

NOTE:
Specifications and design subject to possible modification without notice.

2. FRONT PANEL FACILITIES



❶ POWER SWITCH

Power is supplied to the stereo amplifier when the switch is depressed, and the power indicator changes from red to green. The power is turned off when the switch is released to the OFF position.

❷ BASS TURNOVER CONTROL

This is used to select the frequency at which the BASS control starts to have an effect on the tone quality when it is used for adjustment.

400 . . . . Allows the frequency band below 400Hz to be adjusted.

200 . . . . Allows the frequency band below 200Hz to be adjusted.

100 . . . . Allows the frequency band below 100Hz to be adjusted.

❸ TREBLE TURNOVER CONTROL

This is used to select the frequency at which the TREBLE control starts to have an effect on the tone quality when it is used for adjustment.

2k . . . . . Allows the frequency band above 2kHz to be adjusted.

4k . . . . . Allows the frequency band above 4kHz to be adjusted.

8k . . . . : Allows the frequency band above 8kHz to be adjusted.

❹ BASS CONTROL

This is used to adjust the BASS (low frequency range) sound. When the control is turned clockwise, the level of sound below the frequency selected by the BASS TURNOVER control is emphasised. Conversely, when the control is turned counter-clockwise (↺) from the "0" positon, the level of sound below the frequency selected by the BASS TURNOVER control is attenuated.

NOTE:

The control does not operate if the LINE STRAIGHT switch is ON.

❺ TREBLE CONTROL

This is used to adjust the TREBLE (high frequency range) sound. When the control is turned clockwise, the level of sound above the frequency selected by the TREBLE TURNOVER control is emphasised. Conversely, when the control is turned counter-clockwise (↺) from the "0" position, the levle of sound above the frequency selected by the TREBLE TURNOVER control is attenuated.

NOTE:

The control does not operate if the LINE STRAIGHT switch is ON.

❻ MODE SELECTOR

This is used to select the mode.

REV . . . . . Set here to shunt the left channel and right channel stereo input signals and listen in stereo.

STEREO . . . . . Set here for ordinary stereo listening.

MONO . . . . . Set here to mix the left and right channel stereo input signals and hear them in mono through both the left and right speakers.

NOTE:

The MODE selector does not function when the LINE STRAIGHT switch is in ON position.

❼ SPEAKER SWITCHES

OFF . . . . There is no output signal from either A or B output terminals.

A . . . . . Sound is heard from the speakers connected to SPEAKERS A terminals.

B . . . . . Sound is heard from the speakers connected to SPEAKERS B terminals.

A + B . . . Sound is heard from the speakers connected to both SPEAKERS A and B terminals.

❽ PHONES JACKS

Connect the plug on your headphones to this jack. To listen to a program through the headphones, turn the SPEAKER switches to OFF.

⑨ PEAK POWER WATTS/8Ω INDICATOR

This indicates the output level at 6 stages, when speakers with a nominal impedance of 8 ohm are connected to the SPEAKERS terminals. (When the SPEAKER switches are OFF, it does not light up)

The RANGE SWITCH functions as follows

- ▬ : When released, it indicates the high level output (200, 50, 15) in watts.
- ▬ : When depressed, it indicates the low level output (5, 1, 0.3) in watts.

⑬ TAPE MONITOR SWITCHES

Used to play back a tape or monitor a recording.

TAPE 1 . . . . Depress to play back a tape or monitor a recording on the tape deck connected to TAPE 1 PLAY terminals.

TAPE 2 . . . . Depress to play back a tape or monitor a recording on the tape deck connected to TAPE 1 PLAY terminals.

OFF . . . . . Depress if not playing back a tape or monitoring a recording.

NOTE:
Simultaneous playback or monitoring on TAPE 1 and TAPE 2 is not possible.
Always be careful to depress the TAPE MONITOR switch properly.
If the switch is not depressed, both of the indicators for TAPE 1 and TAPE 2 light up and no sound is heard.

⑪ PHONO SELECTOR

To play a record on the turntable, adjust either MC or MM depending on the cartridge being used.
When using an MC (Moving Coil) Cartridge, position at MC (100Ω or 33Ω).

⑫ FUNCTION SWITCH

This is used to select the program source. At the left of each switch is a FUNCTION indicator, which lights up when the corresponding function has been selected.

PHONO . . . . Depress for playing records on a turntable connected to the PHONO terminals.

TUNER . . . . Depress for listening to a broadcast on a tuner connected to the TUNER terminals.

CD/AUX1 . . . Depress for listenning to the sound from a stereo component connected to the CD/AUX1 jacks.

AUX2 . . . . . Depress for listenning to the sound from a stereo component connected to the AUX2 jacks.

⑧ VOLUME CONTROL

This is used to adjust the volume of sound heard through the speakers or headphones. The scale shows the attenuation of the dB display. No sound is heard wheh the control is set at "∞". Turn slowly in a clockwise direction (↻).

⑭ MUTING – 20dB SWITCH

The volume is attenuated by 20dB when this switch is depressed to the ON position (MUTING indicator lights up). The switch can be used effectively when the stylus descends onto the record during record play, when the sound is to be turned down temporarily and when you want to adjust the sound precisely as you listen to a program source under low sound level conditions.

⑤ LINE STRAIGHT SWITCH

When the switch is depressed to OFF position (the LINE STRAIGHT indicator goes out), the signal from the input jacks passes through the Balance mode and the tone control circuits and the tone quality can be adjusted using the TREBLE and BASS controls.
When the switch is depressed once again to ON position (LINE STRAIGHT indicator lights up), the signal from the input jacks is sent directly to the Power Amplifier, without passing through the balance mode and tone control circuits and a flat frequency is obtained.

⑯ SUBSONIC FILTER SWITCH

When the switch is depressed to the ON position, the subsonic filter with the 15Hz cut off frequency operates. The subsonic filter attenuates frequencies lower than 15Hz with a 6dB/oct slope, and can be used, therefore, to suppress the ultra-low range noise, which is generated by record warp and other factors. This noise cannot actually be heard by the ear, but it can cause intermodulation distortion and even damage to the speaker systems. When playing badly warped records, this switch can be used to good effect.

⑰ TAPE COPY SWITCHES

Use these switches when copying a tape, using 2 tape decks.

1 ► 2 . . . . . Depress when copying a tape (recording) from tape deck 1 to 2.

2 ► 1 . . . . . Depress when copying a tape (recording) from tape deck 2 to 1.

OFF . . . . . Depress when not copying. Leave in the OFF position normally.

⑱ BALANCE CONTROL

Used to adjust the balance of sound from the left and right channels. To increase the volume from the right channel, turn in a clockwise direction from the centre (↻). To increase the volume from the left channel, turn in an counter-clockwise direction from the center (↺). The control does not function if the LINE STRAIGHT switch is ON.

4. CIRCUIT DESCRIPTIONS

4.1 OUTLINE OF MAIN CIRCUITS

MC Head Amplifier

This is an input-parallel positive/negative DC amplifier with DC servo controlling the stage 3 bias circuit to prevent deterioration in the signal-to-noise ratio when the signal level is very low. The amplifier gain is 24.4dB and the S-to-N ratio is 74dB (150μV input).

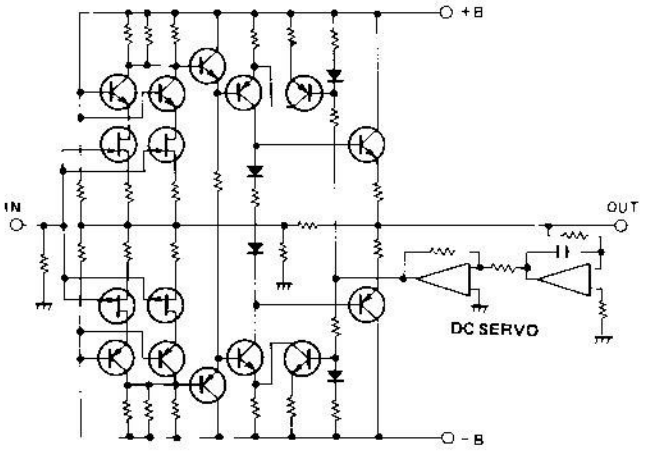

Fig. 4-1 MC head amplifier

Equalizer Amplifier

The use of an input stage FET and DC servo control has eliminated the need for input/output coupling capacitors. Amplifier gain is 35.6dB (1kHz).

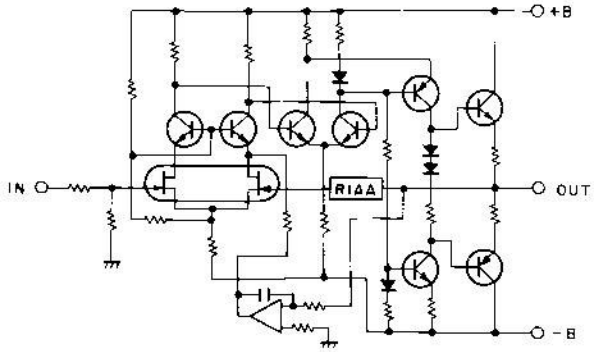

Fig. 4-2 Equalizer amplifier

Phono System Muting Circuit

Transient noise generated when the power is switched on and off, and the noise generated when the PHONO SELECTOR is switched are muted by a relay type muting circuit in the equalizer amplifier output (see Fig. 4-3).

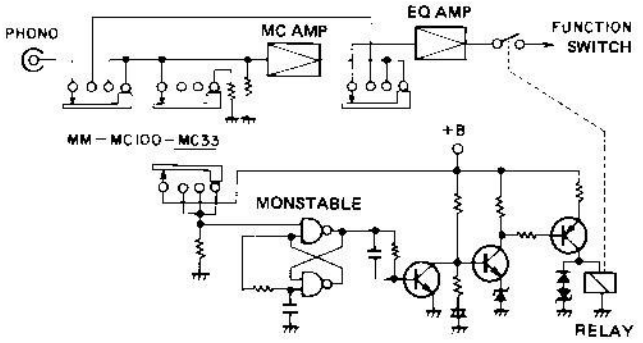

Fig. 4-3 Phono system muting circuit

Tone Control

NFB type tone control circuit with separate 3-step switchable turnover frequencies for low and high frequency regions.

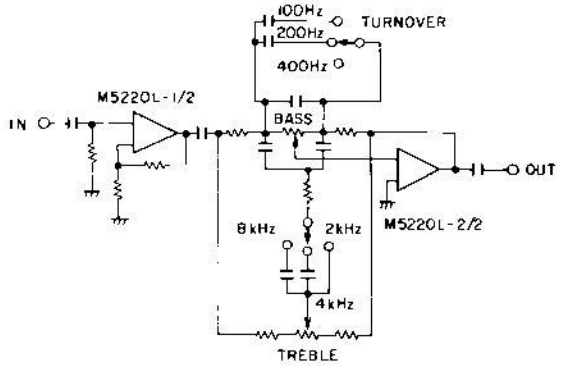

Fig. 4-4 Tone control

Line Straight Circuit

The LINE STRAIGHT switch in the A-90 simplifies the signal path by bypassing the tone control circuit, the mode switching circuit, and the balance control circuit. (See Fig. 4-5).

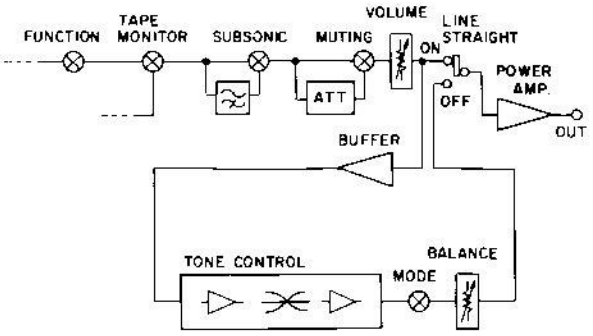

Fig. 4-5 LINE STRAIGHT circuit

Power Amplifier

The A-90 features high efficiency with a dynamic power supply system, high-speed bias servo control non-switching mechanism, and a first stage FET differential input and DC servo control DC amplifier system.

The FET buffer circuit between the voltage amplifier and power amplifier stages further reduces distortion and lessens the effects due to the load. (see Fig. 4-6).

The advantages of inserting the FET buffer between stages are enumerated below.

(1) The power amplifier stage is set to constant voltage, thereby suppressing non-linearity in the hfe factor of the power transistor.
(2) High loop gain stability uneffected by changes in the load.
(3) Big reduction in the open-loop output impedance.
(4) Power transistor driven at very low impedance, thereby reducing the effects of the storage carrier, and enabling high-speed operation.
(5) With the very high load impedance at the predriver stage, distortion is minimal at high gain in this stage.

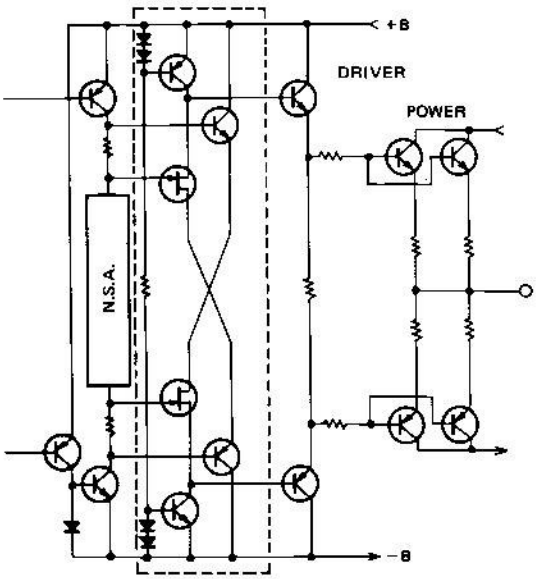

Fig. 4-6 FET Buffer

Protector Circuit

Standard protector circuit with bridge type overload detector, DC voltage detector, delayed relay action when the power is switched on, and rapid relay action when the power is switched off. Furthermore, a muting relay is also used in speaker switching. (see Fig. 4-7).

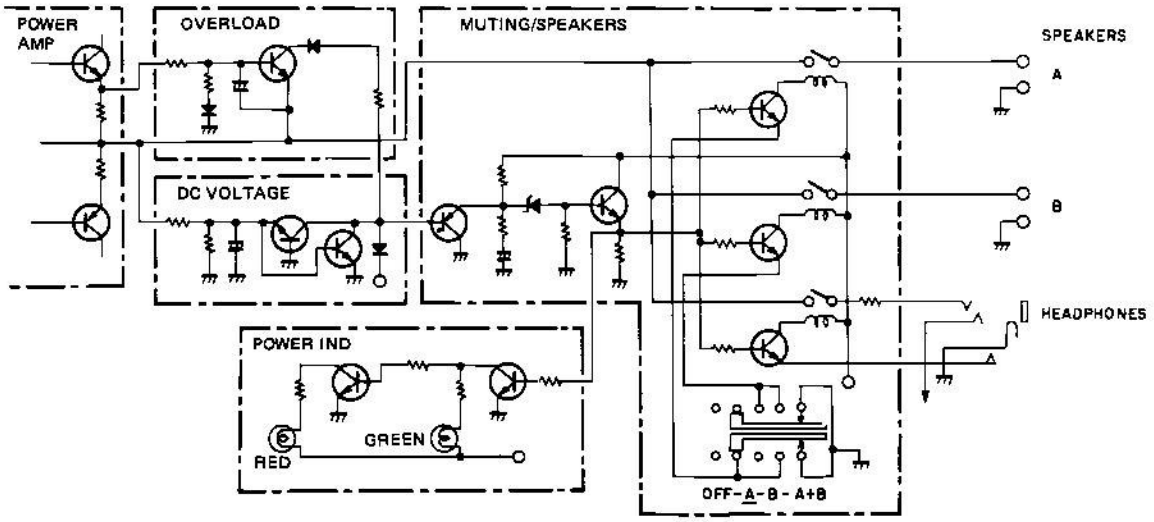

Fig. 4-7 Protector circuit

4.2 DYNAMIC POWER SUPPLY CIRCUIT

The dynamic power supply system featured in the final stage of the A-90 power amplifier varies the voltage applied to the power transistor in accordance to the signal level. The result is reduced heat loss and higher efficiency.

Operating Principles

The basic circuitry is outlined in Fig. 4-8. There are two power lines, V_H and V_L. The signal output *va* is compared with final stage power voltage *va* by differentiator, *va* being obtained by controlling V_H. With the *va* input applied to the differentiator being offset by Es (several volts), the *va* waveform is traced, *va* being several volts larger than *vo*. If, however, *vo* is less than V_L — Es, *va* is fixed at the V_L level (see Fig. 4-9).

The purpose of the high-region ON circuit is to avoid irregularities from occurring where *va* can no longer follow *vo* at high signal frequencies, and to prevent high-speed continuous operation in the control transistor. That is, when high frequency signals appear at the output, the control transistors (Q3 and Q4) are turned fully on, and *va* is fixed at the V_H level.

A-90 Dynamic Power Supply Circuit

The overall circuit structure is outlined in Fig. 4-10. V_L is fixed so as to obtain the rated output (200W) for a 4Ω load, and the high region ON circuit is designed to operate at frequencies above 3kHz. The SPEAKER IMPEDANCE switch set to the 4Ω ~ 6Ω position fixes the power supply to the final stage transistor at the V_L level.

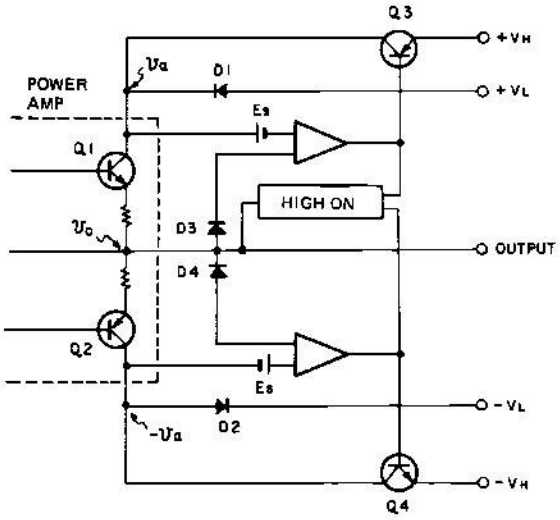

Fig. 4-8 Basic circuitry

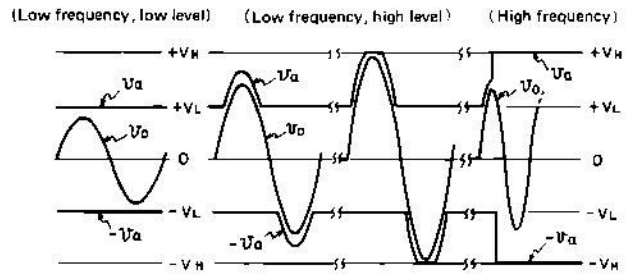

Fig. 4-9 Operating waveforms

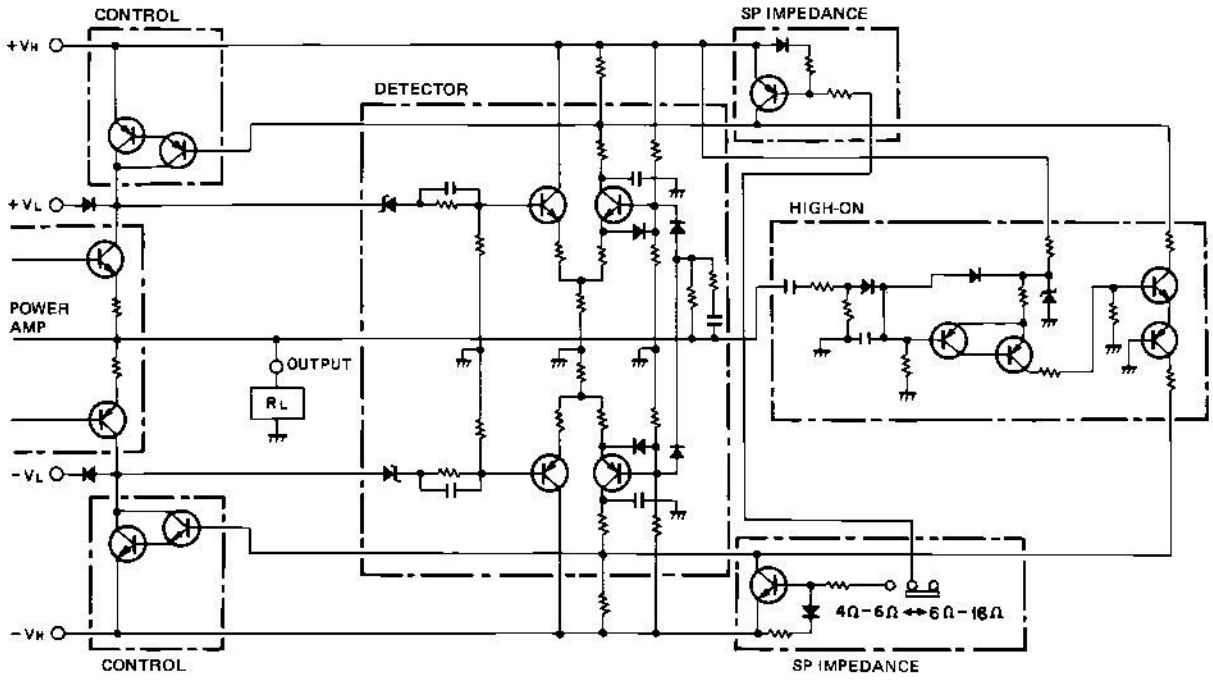

Fig. 10 Dynamic power supply circuit

1. RESISTORS:
Indicated in Ω, ¼W, ½ W,±5% tolerance unless otherwise noted k; kΩ, M; MΩ. (F); ±1%, (G); ±2%, (K); ±10%, (M); ±20% tolerance

2. CAPACITORS:
Indicated in capacity (μF)/voltage (V) unless otherwise noted p; pF. Indication without voltage is 50V except electrolytic capacitor.

3. VOLTAGE, CURRENT:
V; Signal voltage at (200 W+ 200W, 8Ω) output (1kHz)
; DC voltage (V) at no input signal
Value in ( ) is DC voltage at rated power.

4. OTHERS:
➡ ; Signal route.
⊘ ; Adjusting point.
The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
✱ marked capacitors and resistors have parts numbers.

This is the basic schematic diagram, but the actual circuit may vary due to improvements in design.

SWITCHES.

OUTSIDE OF PC BOARD

S1 : POWER	ON – OFF
S2 : IMPEADANCE SELECTOR	4~6Ω – 6~16Ω

MC AMP Ass'y

S1 : PHONO SELECTOR	MC/33Ω – MC/100Ω – MM

FUNCTION SWITCH Ass'y

S1-1 : FUNCTION PHONO	ON – OFF
1-2 : FUNCTION TUNER	ON – OFF
1-3 : FUNCTION AUX 1	ON – OFF
1-4 : FUNCTION AUX 2	ON – OFF

TAPE SWITCH Ass'y

S2-1 : TAPE MONITOR OFF	ON – OFF
2-2 : TAPE MONITOR 1	ON – OFF
2-3 : TAPE MONITOR 2	ON – OFF
S3-1 : TAPE COPY OFF	ON – OFF
3-2 : TAPE COPY 1 ▶ 2	ON – OFF
3-3 : TAPE COPY 2 ▶ 2	ON – OFF
S4-1 : SUBSONIC	ON – OFF
4-2 : LINE STRAIGHT	ON – OFF
S5 : RANGE	ON – OFF

TONE BASS Ass'y

S1 : BASS TURNOVER	400Hz – 200Hz – 400Hz

TONE TREBLE Ass'y

S2 : TREBLE TURNOVER	2kHz – 4kHz – 8kHz

MODE SWITCH Ass'y

S3 : SPEAKERS	OFF – A – B – A+B
S4 : MODE	REV – STEREO – MONO

MUTING SWITCH Ass'y

S301 : MUTING (–20dB)	ON – OFF

The underlined indicates the switch position.

9. ELECTRICAL PARTS LIST

NOTES:

- ***When ordering resistors, first convert resistance values into code form as shown in the following examples.***

  Ex. 1 ***When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).***

560Ω	*56 x 10¹*	*561*	*RD¼PS* 5 6 1 *J*
47kΩ	*47 x 10³*	*473*	*RD¼PS* 4 7 3 *J*
0.5Ω	*0R5*	. . . . .	*RN2H* 0 R 5 *K*
1Ω	*010*	. . . . .	*RS1P* 0 1 0 *K*

  Ex. 2 ***When there are 3 effective digits (such as in high precision metal film resistors).***

5.62kΩ	*562 x 100*	*5621*	*RN¼SR* 5 6 2 1 *F*

- ***The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.***
- ***For your Parts Stock Control, the fast moving items are indicated with the marks ★★ and ★.***

  ★★ GENERALLY MOVES FASTER THAN ★.

  This classification shall be adjusted by each distributor because it depends on model number , temperature, humidity, etc.

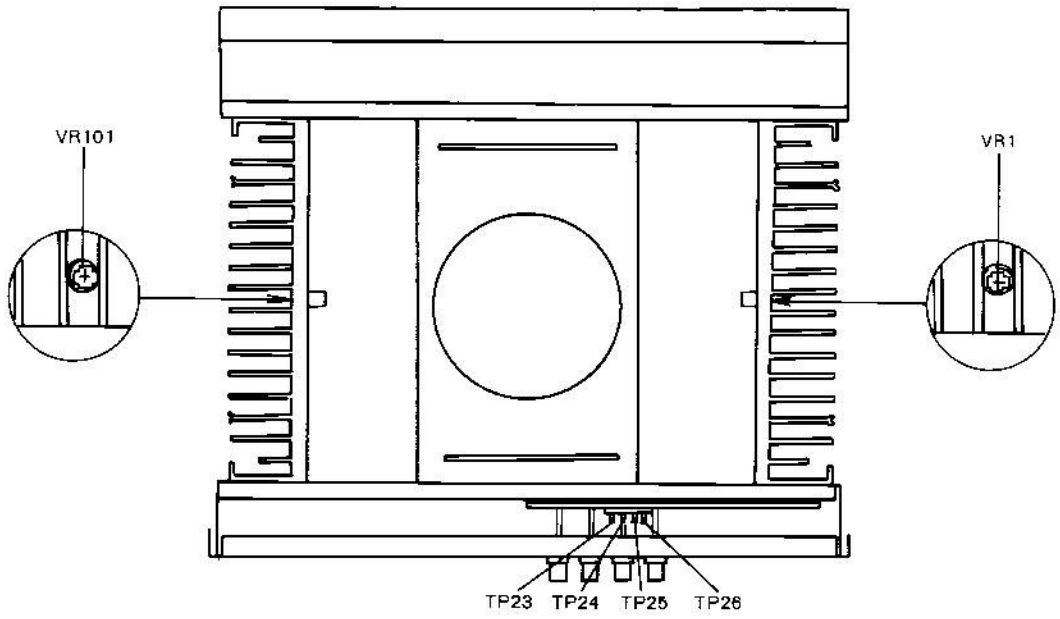
10. ADJUSTMENTS

Idle Current Adjustment

1. Turn the VOLUME control down to minimum volume, and switch the LINE STRAIGHT switch on.
2. Rotate VR1 and VR101 counter clockwise.
3. Switch the power on with no input and no load applied to the unit.
4. Adjust VR1 to obtain a reading of 25mV ~ 30mV between TP25 (+) and TP26 (-). (L ch)
5. Adjust VR101 to obtain a reading of 25mV ~ 30mV between TP24 (+) and TP23 (-). (R ch)
6. Readjust after aging for at least 30 minutes.

Reference:
Center DC output voltage tolerance: 0V±50mV.



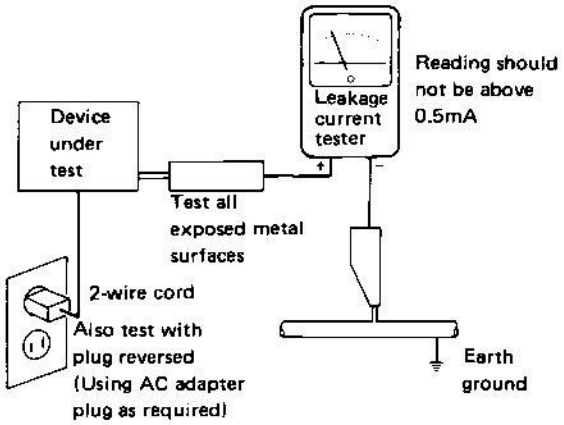
11. SAFETY INFORMATION

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.



AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a ⚠ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which dose not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.
