

ENGLISH

SAFETY INSTRUCTIONS

17. Cleaning — The appliance should be cleaned only as described in the instructions.
18. Moving — The appliance should be moved only as described in the instructions.
19. Outlet and Cord Entry — Care should be taken to ensure that the outlet and cord are not damaged and that the appliance is properly secured.

1. Read Instructions — All the safety and operating instructions should be read before the appliance is operated.
2. Antenna — The antenna should be installed as described in the instructions.
3. Location — The appliance should be located in a well-ventilated area and should be kept away from heat and moisture.

ROTEL *hi-fi*

AM/FM STEREO TUNER PREAMPLIFIER

RTC-950AX

owner's manual

CAUTION TO REDUCE THE RISK OF ELECTRIC SHOCK DO NOT REMOVE COVER FOR BACK REPAIR SERVICE ONLY. Check the local AC voltage.

1. Read Instructions — The safety and operating instructions should be read before the appliance is operated.
2. Location — The appliance should be located in a well-ventilated area and should be kept away from heat and moisture.
3. Antenna — The antenna should be installed as described in the instructions.
4. Power Cord — The power cord should be kept away from heat and moisture and should be properly grounded.

EXCLUSIVE NOTE: POWER GROUNDING AS PER NATIONAL ELECTRICAL CODE INSTRUCTIONS
If your unit comes with a 2-prong power cord without a plug, neither cord is to be connected to the terminal of a three-prong plug. Make certain that they are connected according to the proper diagram on the back of the power cord. The proper diagram is on the back of the power cord. The proper diagram is on the back of the power cord.

WARNING
TO PREVENT FIRE OR SHOCK HAZARD,
DO NOT EXPOSE THIS APPLIANCE TO
RAIN OR MOISTURE.

BROWN must be connected to the terminal which is marked "GROUND".
Write your SERIAL NUMBER here.
The number is located near the name plate on the rear panel.

4. Power Cord — The power cord should be kept away from heat and moisture and should be properly grounded.
5. Antenna — The antenna should be installed as described in the instructions.
6. Location — The appliance should be located in a well-ventilated area and should be kept away from heat and moisture.

7. Read Instructions — The safety and operating instructions should be read before the appliance is operated.
8. Antenna — The antenna should be installed as described in the instructions.
9. Location — The appliance should be located in a well-ventilated area and should be kept away from heat and moisture.

10. Power Cord — The power cord should be kept away from heat and moisture and should be properly grounded.
11. Antenna — The antenna should be installed as described in the instructions.
12. Location — The appliance should be located in a well-ventilated area and should be kept away from heat and moisture.

13. Read Instructions — The safety and operating instructions should be read before the appliance is operated.
14. Antenna — The antenna should be installed as described in the instructions.
15. Location — The appliance should be located in a well-ventilated area and should be kept away from heat and moisture.

16. Power Cord — The power cord should be kept away from heat and moisture and should be properly grounded.
17. Antenna — The antenna should be installed as described in the instructions.
18. Location — The appliance should be located in a well-ventilated area and should be kept away from heat and moisture.

19. Read Instructions — The safety and operating instructions should be read before the appliance is operated.
20. Antenna — The antenna should be installed as described in the instructions.
21. Location — The appliance should be located in a well-ventilated area and should be kept away from heat and moisture.

SAFETY INSTRUCTION

1. **Read Instructions**— All the safety and operating instructions should be read before the appliance is operated.
2. **Retain Instructions**— The safety and operating instructions should be retained for future reference.
3. **Heed Warnings**—All warnings on the appliance and in the operating instructions should be adhered to.
4. **Follow Instructions**— All operating and use instructions should be followed.
5. **Water and Moisture**— The appliance should not be used near water – for example, near a bathtub, washbowl kitchen sink, laundry tub, in a wet basement, or near a swimming pool, and the like.
6. **Carts and Stands**—the appliance should be used only with a cart or stand that is recommended by the manufacturer.

**PORTABLE CART
WARNING**
- 6A. An appliance and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the appliance and cart combination to overturn.
7. **Wall or Ceiling Mounting**— The appliance should be mounted to a wall or ceiling only as recommended by the manufacturer.
8. **Ventilation**—The appliance should be situated so that its location or position does not interfere with its proper ventilation. For example, the appliance should not be situated on a bed, sofa, rug, or similar surface that may block the ventilation openings; or placed in a built-in installation such as a bookcase or cabinet that may impede the flow of air through the ventilation openings.
9. **Heat**— The appliance should be situated away from heat sources such as radiators, heat registers, stoves, or other appliances (including amplifiers) that produce heat.
10. **Power Sources**— The appliance should be connected to a power supply only of the type described in the operating instructions or as marked on the appliance.
11. **Grounding or Polarization**— The precautions that should be taken so that the grounding or polarization means of an appliance is not defeated.
12. **Power-Cord Protection**— Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at plugs, convenience receptacles, and the point where they exit from the appliance.

13. **Cleaning**— The appliance should be cleaned only as recommended by the manufacturer.
14. **Nonuse Periods**— The power cord of the appliance should be unplugged from the outlet when left unused for a long period of time.
15. **Object and Liquid Entry**— Care should be taken so that objects do not fall and liquids are not spilled into the enclosure through openings.
16. **Damage Requiring Service**— The appliance should be serviced by qualified factory authorized service personnel when:
 - A. The power-supply cord or the plug has been damaged; or
 - B. Objects have fallen, or liquid has been spilled into the appliance; or
 - C. The appliance has been exposed to rain; or
 - D. The appliance does not appear to operate normally or exhibits a marked change in performance; or
 - E. The appliance has been dropped, or the enclosure damaged.
17. **Servicing**— The user should not attempt to service the appliance beyond that described in the operating instructions. All other servicing should be referred to qualified factory authorized service personnel.

WARNING: To reduce the risk of fire or electric shock, do not expose this appliance to rain or moisture

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

Power Lines – An outdoor antenna should be located away from power lines.

Outdoor Antenna Grounding – If an outside antenna is connected to the receiver, be sure the antenna system is grounded so as to provide some protection against voltage surges and built up static charges. Section 810 of the National Electrical Code, ANSI / NFPA No. 70–1984, provides information with respect to proper grounding of the mast and supporting structure, grounding of the lead-in wire to an antenna discharge unit, size of grounding conductors, location of antenna-discharge unit, connection to grounding electrodes, and requirements for the grounding electrode. See Figure.

- a– Use No. 10 AWG (5.3 mm²) copper, No. 8 AWG (8.4 mm²) aluminum, No. 17 AWG (1.0 mm²) copper-clad steel or bronze wire, or larger, as a ground wire.
- b– Secure antenna lead-in and ground wires to house with standoff insulators spaced from 4–6 feet (1.22 – 1.83 m) apart.
- c– Mount antenna discharge unit as close as possible to where lead-in enters house.
- d– Use jumper wire not smaller than No. 6 AWG (13.3 mm²) copper, or the equivalent, when a separate antenna-grounding electrode is used.

EXAMPLE OF ANTENNA GROUNDING AS PER NATIONAL ELECTRICAL CODE INSTRUCTIONS

FOR U.S.A. ONLY

ENGLISH

AM /FM STEREO TUNER PREAMPLIFIER RTC-950AX

A WORD FROM ROTEL

Rotel take this opportunity to thank you for choosing our equipment for your home entertainment.

Rotel equipment represents a very high state of the art in sound reproduction, as the result of our everlasting determination to achieve the truly hi-fi performance. Please enjoy the sound Rotel have created for many years to come.

To make sure you get the most out of your equipment, please read this owner's manual carefully before you attempt any connections.

BEFORE CONNECTIONS

1. Place for Installation

Ensure to place the unit in a flat surface where it is free from humidity, vibration, high temperature and not exposed to direct sunlight. Also, be careful not to place the unit in a highly enclosed area without adequate ventilation around the unit. Do not block the ventilation openings at the top and the bottom of the unit to prevent excessive heat built up.

2. Electrical Requirements

Your equipment has been designed to be powered by the local AC voltage. Check the setting of your unit by looking at the rear panel name plate. Never try to plug the unit into an outlet of higher voltage, as this causes a serious fire hazard. Consult your dealer if in doubt.

3. Connecting the Power Cord

Always handle the power cord with care. Ensure to connect the cord to the household wall outlet. When plugging and unplugging make sure the power switch on the unit is turned off.

4. Do not Open the Cabinet

There are no user-serviceable parts inside the cabinet of the unit. Do not attempt to open the cabinet or tamper with

the internal components. If water or foreign object falls inside the unit by accident, disconnect the power cord immediately and consult a qualified electrician or your dealer.

5. Cleaning Your Unit

If your unit becomes dirty, wipe it gently with a soft, dry cloth. Never use solvents of any kind.

6. AC Outlet Receptacles

There are three sets of AC outlets for U.S.A. or Canadian version, or two sets of AC outlets, for U.K. or European versions, on the back panel of the unit, through which power can be supplied to equipments, connected to the unit such as your turntable, and or CD player. Each AC outlet is the switched type, so turning the power on and off is controlled by the power switch of unit. The total power consumption of the equipments must not exceed the rating of 500 watt maximum.

CONNECTIONS

1. Installing and Connecting Antenna

a) Indoor FM Antenna – The attached indoor antenna wire will suffice for proper, quiet broadcast reception in most good reception areas. To install it, connect the antenna to the FM Antenna terminals (75 ohm) on the back of the unit. Then, stretch the wire out and secure along a wall or where reception is optimal.

- Indoor T-shap Antenna wire (Applicable for U.S.A., Canada or where approved to the usage)

- Indoor Antenna wire (Applicable for European version)

b) Outdoor FM Antenna – In areas of average to weak reception conditions, an outdoor antenna mounted on the roof or top of the building may be necessary for best results. When using such outdoor type antenna, ensure remove the indoor antenna. A 75 -ohm coaxial cable is usually recommended, if using this type cable, properly hook it up to the designated antenna terminals on the back of the unit.

EXCLUSIVE NOTE FOR U.K.

If your unit comes with a 2-core mains lead without a plug, neither core is to be connected to the earth terminal of a three pin plug, make certain that they are connected, according to the following instruction, to the proper terminals. Check that the terminals are screwed down firmly and no loose strands of wire are present.

IMPORTANT: The wires in this mains lead are coloured in accordance with the following code:

BLUE: NEUTRAL

BROWN: LIVE

As the colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug proceed as follows:

The wire which is coloured **BLUE** must be connected to the terminal which is marked with the letter **N** or coloured **BLUE** or **BLACK**. The wire which is coloured **BROWN** must be connected to the terminal which is marked with the letter **L** or coloured **BROWN** or **RED**.

When in doubt on the FM outdoor antenna system, consult your dealer.

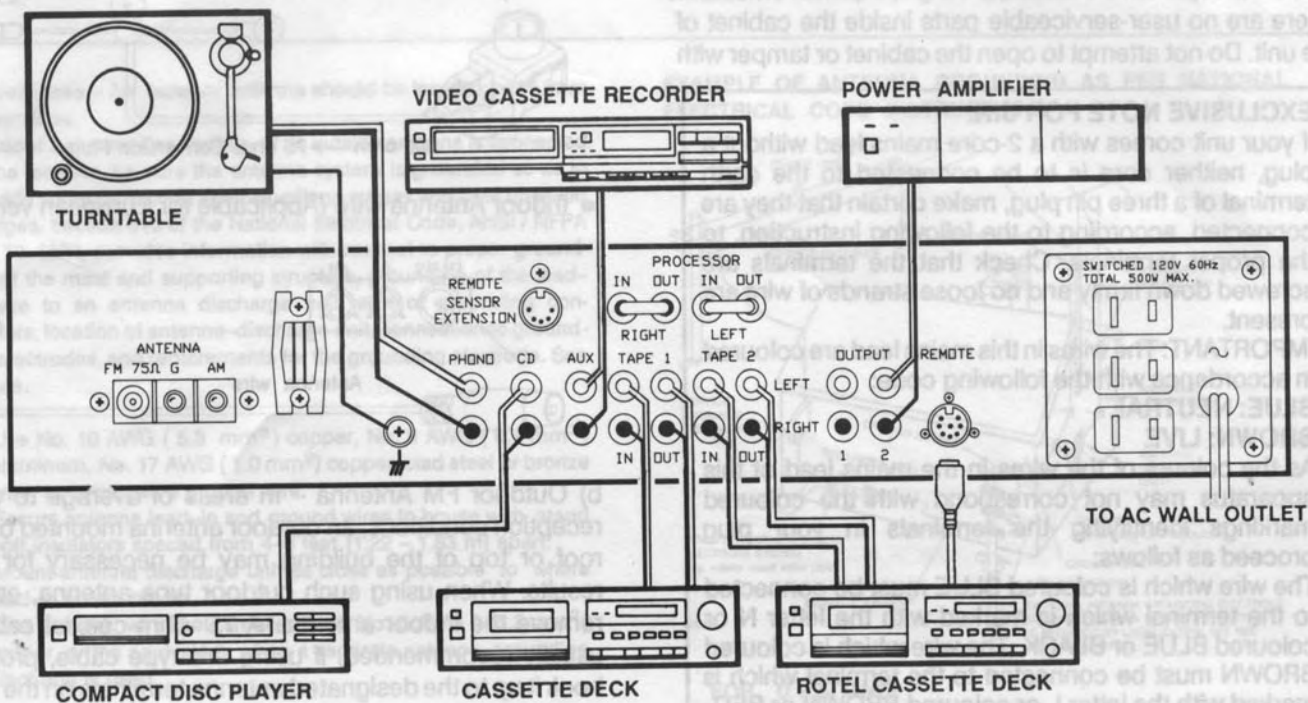

c) AM Antenna- The loop antenna is provided for AM reception. Lock the loop onto the loop holder on the back of the tuner, and connect the two ends to the antenna terminals marked G and AM. Swing out the loop around for finding the best AM reception. In difficult reception areas, connect an outdoor antenna which is usually a long piece of shielded wire to the AM terminal. Make sure the loop is still connected even if the outdoor or another antenna is used.

2. Connecting components

The illustration shows what audio components you can connect to the rear panel of the unit and how they should be properly hooked up via RCA type pin cords. Ensure that the Left and the Right channels are correctly matched between the RCA type sockets of the unit and those on the components.

Connect the grounding wire of the turntable to the GND screw terminal on the back of the unit near the PHONO sockets.

3. Connecting Power Amplifier

a) Normally connect your power amplifier to the OUTPUT 1 on the back of the unit.

b) If you wish to connect another power amplifier, use the OUTPUT 2, OUTPUT 1 and 2 are electronically connected in parallel, so using two identical power amplifiers allows bi-amplification to speakers with one power amplifier driving tweeters and other driving woofers.

You may also connect two different power amplifiers, one driving speakers in the main room and the other driving remote room with the same input source.

In such case, make sure to turn the power off on the other power amplifier when only using one power amplifier.

SINGAL PROCESSOR TERMINALS

Two pairs terminals marked IN and OUT to use with audio equalizer, surround sound decoder etc., simply remove jumper pins and hook up the connecting cord as per the instructions supplied with that components.

Note: When these terminals are not in use, please make sure the jumper pins are plugged in properly.

REMOTE CONTROL SOCKET

This connector is to be used only for the connection to Rotel's RD-955AX or RD-965BX Stereo Cassette Deck. It will allow you to do remote control of the main function of either of these cassette deck.

REMOTE SENSOR EXTENSION

This 5 pin DIN jacks provides to install with other remote sensor unit (available as an accessory). This remote sensor unit fitted with extension cable, allows RTC-950AX to

be operated by Rotel remote control handset or other equivalent throughout your home. The remote sensor unit, and the additional remote control handset are available as options, you may be purchased them from other dealers, consult your dealer when necessary.

SWITCHES AND CONTROLS

(1) Stand-by Button (Power)

Press this button to turn on and off the unit, also can be activated by remote control.

(2) Power Indicator

The LED indicator glows, while the power cord is connected to a live AC outlet, regardless of the stand-by button on / off.

(3) Frequency Display and Multi-function Indicator

1) The frequency of the station selected is displayed. The band chosen, FM or AM, is also shown together with MHz for FM or kHz for AM (both MW and LW) on the frequency display.

2) The word MEMORY lights up while the Memory button is activated.

3) The word STEREO glows when stereo broadcast station is tuned in and when the Muting Off/ Mono button is deactivated for the stereo operation. It will also not light up for very weak stereo signals which the tuner will not receive in stereo.

(4) Signal Indicator

The 5-LED indicator lights up to show the incoming signal strength (sensitivity). Receiving condition for a broadcast is optimized when all 5 LED's or as many LED's illuminated.

(5) Remote Sensor

Receives the operating commands in the form of infrared beams emitted from the remote transmitter unit.

(6) Stations Button

Pressing one of these buttons will tune the tuner to the frequency stored in the memory. Pressing the Memory button followed by one of these buttons will store up to 16 AM or FM stations in the memory. The LED on each station button will light up when station button pressed.

Caution: If the AC power is removed from the tuner for more than 2 weeks, the frequencies stored in the memories will be lost.

Note: Each time you switch the tuner on, it will tune to the station frequency to which it was previously tuned.

(7) +8 Button

The tuner can store up to 16 different frequencies in its memory. The first 8 are selected (or stored) just by pressing the appropriate button. The second 8, numbers 9 to 16, are selected by pressing the +8 button and follow to press the desired station button.

The LED on it will light up when the +8 button pressed.

(8) Memory Button

Stores frequencies in the tuner's memory. To store a frequency first tune to the desired broadcast program using the Tuning button. Then press the Memory button followed by one of the station buttons marked 1 to 8 and 9 to 16 with the +8 button. Although there are only 8 buttons marked for positions 1 to 8, the +8 button converts the buttons to positions 9 to 16. So the buttons have double functions, e.g., the button 1 is also 9 when used with the +8 button.

The Memory indicator in the display will light up during this process. Note that once the Memory button is pressed, you must press the required station button within a few seconds to store the station frequency. If the Memory indicator is no longer light, you must press the Memory button again before storing the required frequency.

For example, to store desired local station in the station button 12, first tune in to the station, press the Memory button, then press the +8 button and follow to press the station button 4.

(9) Tuning Button

Allows to tune in frequencies. Press the right side marked > to tune in the higher frequencies and the left side marked < to tune in the lower frequencies.

(10) Volume Control

Used to regulate the volume level. Turn clockwise to increase the volume level and counterclockwise to reduce it. Due to the high quality material and construction used on the volume control for sound quality, the sound level will not rise sharply at low settings. Normally, the control is recommended to be set between 11:30 to 2:00 o'clock position with other Rotel's equipments connected, but a finite adjustment will depend on the sensitivity of your speakers.

The volume control has a built-in motor drive, which allows to operate by remote transmitter handunit. The LED indicator on the knob shows the position of the level set.

(11) FM Auto Tuning Button

Permits to choose auto or manual tuning. In the auto mode, pressing either end of the Tuning button will cause the

tuner to increase or decrease, depending on which end of the Tuning button pressed, the received frequency until a reasonably strong signal is received. At this point the tuning will stop automatically.

In the manual mode, pressing either end of Tuning button causes the tuner to increase or decrease the received frequency only for as long as the Button is depressed.

NOTE: Auto tuning does not operate for AM (Both MW and LW) band.

(12) Mute Off/ Mono Button

Allows selection of FM mono or stereo operation. When the Mono position is chosen, any broadcast will be received monaurally and the muting switch for suppressing interstation noise will be deactivated to pull weak signals which are normally cut off during the stereo operation. For reception of weak and noisy signals, use the Mute Off/ Mono position. For normal use, choose the stereo operation by deactivating the Button. In this position, stereo broadcasts will be provided in stereo and the STEREO indicator will light up. When mono programs are broadcasted, mono sound is provided and the STEREO indicator will not light.

(13) Band Selection Button

Allows to select reception on FM or AM band (MW or LW) in case of the tuner with both MW and LW).

(14) Audio Muting Button

Pressing the button will immediately cause a large reduction in volume level of sound, and pressing it again to restore the previous one.

This button is most useful when you wish a temporary period of quieter sound. When audio muting is in operation, the LED indicator on it lights up.

(15) Function Selector Button

Allows to choose any input source connected to the unit you wish to listen to.

TAPE— When playing the connected Cassette Tape Deck.
AUX— When playing the connected Video Cassette Recorder, Video Disc Player and or other auxiliary components.

CD— When playing the Compact Disc Player.

PHONO— When playing the connected Turntable.

TUNER— When listening to FM or AM, (MW or LW in case of Tuner with both MW and LW) band.

When the desired source program is in operation, the LED indicator on the function button will light up.

(16) TAPE Selector Button

To select the tape position 1 or 2 on the selector control, depending on the Cassette Tape Deck you wish to play is connected on Tape 1 or Tape 2 terminals on the rear panel.

(17) Balance Control

Set normally at the center position for equal volume level from both speakers. Turning to the right decreases the sound from the left speakers, and turning to the left decreases the sound from the right speakers. Use the control only when there is an unbalance in the sound level between the two speakers.

(18) Tone Control Selector

With the selector at OFF, the signals do not pass through the tone control circuit (in order to prevent deterioration of tone quality).

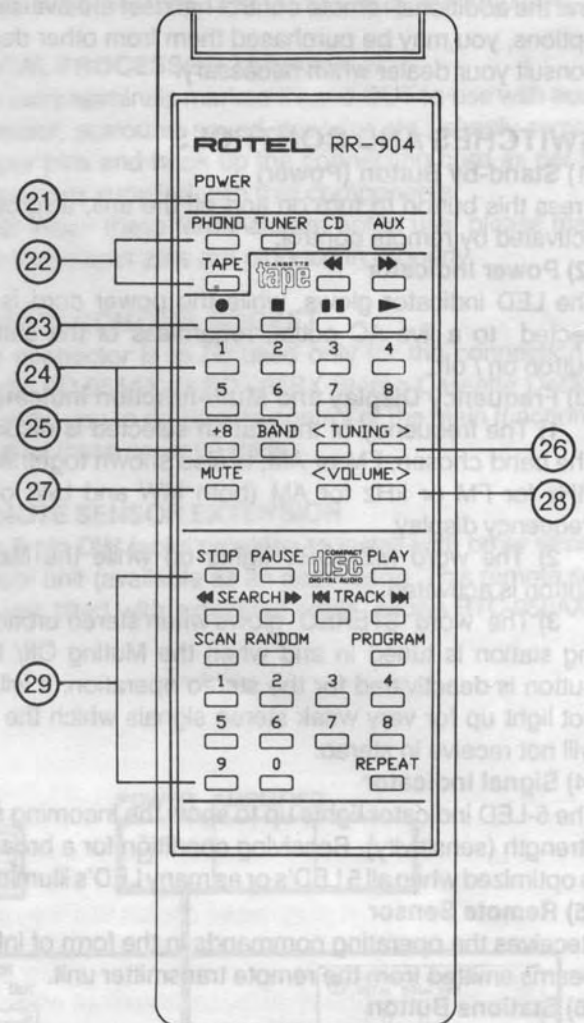

Therefore the tone controls do not function, but this unit provides superior tone quality if the listening room acoustics are extremely lively or dead and the required compensations when adjusts by reallocating the furnitures, or the speakers etc., are failed. Set the selector to ON, and adjusts the tone with the tone controls.

(19) Tone Controls

The BASS control regulates the low frequencies and the TREBLE control regulates the high frequencies. The center points are for the flat frequency response. Turn clockwise to boost the response and counterclockwise to reduce it.

(20) Headphones Jack

For monitoring, plug your headphones into this jack. The volume of the headphone sound can be regulated with the volume control.

Remote Control Function

(21) Power Button for on/off.

(22) Function Selector Buttons (same as item 15).

(23) Cassette Control Buttons— Permit you to remote control Rotel's RD-965BX or RD-955AX cassette deck connected to the REMOTE socket on the rear panel.
Press ◀ ◀ button to rewind tape.
Press ▶ ▶ button to play back tape.
Press ▶ ▶▶ button to advance tape rapidly forward.
Press ■ ■ button for temporary suspension of tape motion during recording or playback. Pressing the

button a second time will restart the tape, returning the tape deck section to mode before interruption.

Use ● button when you wish to record.

Press ■ button to disengage any control mode, be it playback, record, fast forward, or rewind.

(24) Present Station Buttons (same as item 6, 7).

(25) Band Selector Button (same as item 13).

(26) Tuning Buttons (same as item 9).

(27) Audio Muting Button (same as item 14).

(28) Volume Button (same as item 10).

(29) Compact Disc Player control Buttons— Permit you to remote control Rotel's RCD-955AX or RCD-965BX compact disc player.

WORDS ON OPERATIONS

Precautions

1. Before commencing operation, check to see if all connections are properly made.
2. Always ensure to set the Volume control to the minimum position before turning on the Power switch.

Playing Turntable

1. Set to the PHONO position on the Function selector button.
2. Use only a high quality cartridge to obtain the maximum potential from the unit's high quality phono circuit. Usually using cartridges as recommended by your dealers will prevent any grief on the suitable matching.
3. Start playing the turntable, then raise the volume to the desired listening level.

Operating CD Player

1. Set to the CD position on the Function selector button.
2. Read the instruction manual of your player carefully to maximize the full potential. Using higher quality interconnecting cords between your CD player and the amplifier may often improve sound quality.
3. Start playing CD, then raise the volume to the desired listening level.

Tuner Reception

1. Set to the TUNER position on the Function selector button, and select AM or FM by BAND button.
2. Tune in to the desired station, by tuning button, or preset tuning button.
3. Then raise the volume to the desired listening level.

Memory Backup

As explained above, the memory for the preset stations is retained as long as the power cord is plugged into an AC outlet, regardless of the position of the Power button. However, if you leave the power cord unplugged for over 2 weeks, or if there is a power failure for over 2 weeks, the stored frequencies will be lost.

In such case, the operation for storing frequencies in the memory have to be done again from the beginning.

Tuning Modes

Bear in mind that there are 3 modes of tuning with the tuner : auto tuning, manual tuning, and preset (memory) tuning. The simplest is the pereset tuning, as you only have to

stored up to 16 of your favorite FM or AM stations once and recall any one of them with one touch (or two touches in case of the buttons 9 to 16). Make sure to learn the proper method for the storage in the memory as instructed above.

Tape Deck Playback

1. Set to the TAPE position on Function selector button while your tape deck is connected to the TAPE 1 or TAPE 2 inputs on the back of the unit.
2. Use only a good quality cassette tape deck (in terms of sound quality) or a DAT deck, etc. for maximizing the full potential of the amplifier.
3. Please note you may connect another cassette deck or the audio output of your video tape deck to the AUX inputs on the back of the unit, for a playback purpose only as no output supplied for recording. Set to the AUX position on the Function selector if wish to play the tape deck connected to the AUX inputs.

Recording Tape Deck

1. If your tape deck is connected to the TAPE outputs TAPE 1 or TAPE 2, depends on Tape Selector where setting on the back of the unit, you can record any input on the Function selector. Set the Function selector to the input you wish to record, and proceed the recording with your tape deck.
2. During recording operation, the volume control and the Tone controls have no effect on the recorded signal being fed to the TAPE outputs.

Tape Dubbing

Two tape decks are used to perform Tape-to-Tape dubbing. The unit allows dubbing from Tape 1 to Tape 2, or Tape 2 to Tape 1.

1. Set TAPE button ON.
2. Set Tape Selector to TAPE 1, or TAPE 2, depending on the tape deck for playback.
3. Commence recording with other Tape Deck (If the Tape Selector is at Tape 1, play Tape 1 and record with Tape 2 and vice versa).

HUM AND NOISE

In any high fidelity installations, hum may be caused by the interconnection of turntable, tuner, amplifier and speakers as the result of wiring, different grounding or locations of components.

Normally, hum is rarely associated with a faulty tuner, and the most likely cause lies in the installation. If any part of the antenna is in contact with a ground point (copper water pipes for example) hum will almost certainly result if your amplifier has a three core mains lead. It is also important to check that the audio interconnect cords have been pushed fully into their sockets on both tuner and amplifier. Sometimes the problem is actually caused by a signal which is too strong, in which case an antenna attenuator is recommended. If in doubt, please consult your dealer.

SPECIFICATIONS RTC-950AX
