## 4. ADJUSTMENTS

Note: Before adjustments of 4-1 and 4-2, remove the arm rest only.

### 4-1. Adjustment of Automatic Disk Size Selection Operation (See Figs. 4-1, and 4-4)

- 1) By using 30 cm size record, actually carry out the automatic disk size operation (lead-in operation). Adjust the lead-in adjusting cam (See Fig. 4-4), so that the stylus tip may come down to the position (the lead-in groove position) 146 mm away from the disk center (See Fig. 4-1).
- 2) By using 17 cm size record, actually carry out the automatic disk size operation (lead-in operation). Confirm that the stylus tip may come down to the lead-in groove position.

Fig. 4-1

### 4-2. Adjustment of Automatic Music Selection Operation (See Figs. 4-2, 4-3 and 4-4)

#### • Required disc and measuring instruments

- 1) Tester (DC voltmeter)  
Input impedance: 50kohm/V or more. (The higher, the better)
- 2) A vinyl chloride record disc without grooves or with wider lead-out spiral than usual.
- 3) A rule with graduation marks starting from the edge.

#### A. Tone Arm Height Adjustment

Adjust the height as shown in Fig. 4-2, by rotating the tone arm height adjusting screw (See Fig. 4-4) (Stop the stylus at a position about 130 mm away from the disk center.)

Fig. 4-2

#### B. Sensitivity adjustment of E sensor (P-L50)

##### 1. Setting

At the lifter-up position, in case of a record disc without grooves, stop the stylus at a position about 10 cm away from the disc center. In case of a record disc having grooves, stop the stylus lead-out spira.

##### 2. How to adjust (See Fig. 4-3, Top View on Page 14)

- a) Connect the DC voltmeter across the test terminal E and G (ground) and then adjust the voltage to DC 2.5 V by rotating the volume (fVR1) <E sensor adjustment>
- b) Move the tone arm downward. (Check that the stylus stays on a lead-out spiral.)
- c) Connect the DC voltmeter across test terminal F and G (ground) and then adjust the voltage to DC 2.5 V by rotating the volume (fVR2) <F sensor adjustment>

Fig. 4-3

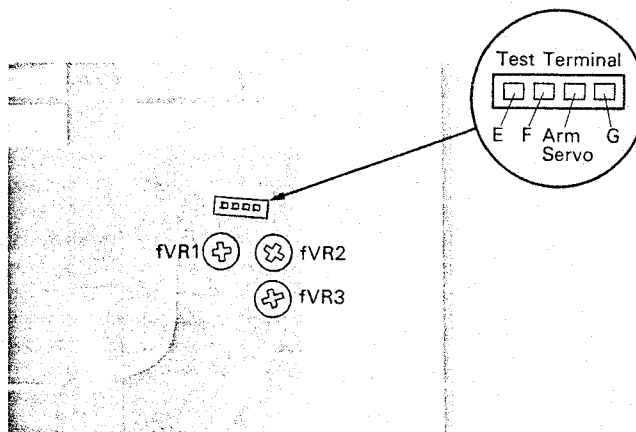

Fig. 4-4

### 4-3. Speed Adjustment

- 1-a) Set the Speed Selector to Normal.
  - 1-b) Mount a 30 cm size record and push the start/stop switch.
  - 1-c) Adjust eVR1 on the D.D. Motor Control Circuit Board (See 4-5) so as to standstill the strobo marking pattern.
  - 2-a) Set the Speed Selector to Normal.
  - 2-b) Mount a 17 cm size record and push the start/stop switch.
  - 2-c) Adjust eVR2 on the D.D. Motor Control Circuit Board (See 4-5) so as to standstill the strobo marking pattern.
- Set eVR3 (S-0121) center position.

Fig. 4-5

### 4-4. Lateral-direction Adjustment of E and F Sensor (P-L50)

1. Setting
  - a) Mount a record disc in which many music groove.
  - b) Set the sensitivity selection switch to H when the music interval groove is narrow, and to M when medium.
2. How to adjust (See Figs. 4-6 and 4-7)
  - a) Push the music selection switch for the first music, and also the start/stop switch.
  - b) Immediately after the stylus begins to come down, move the arm by hand so that the stylus may trace the disc groove beginning from a position 2 mm or more outward from the lead-over groove about 70 mm away from the disc center.
  - c) Immediately after the above tracing, push the lifter switch twice. Be sure to push it with a time interval of 1 sec or more, because of a ready operation to receive F<sub>2</sub> signal.
  - d) Adjust the positions of E and F sensor by rotating the adjusting screws so that the muting switch can be turned ON (a click sound of relay action is heard) when the stylus has passed through the music interval groove. If the muting switch is turned ON earlier, rotate the adjusting screw clockwise to turn ON the switch later. (The thread pitch is 0.4 mm.)

Fig. 4-6

Fig. 4-7

### 4-5. Delay Adjustment of E<sub>2</sub> Signal (P-L50)

#### 1. Setting

Use the record disk in which many musics (about seven music tracks) are recorded, and select three music tracks having lead-over grooves, respectively, near positions 70 mm, 100 mm, and 130 mm away from the disc center.

#### 2. Adjustment (See Figs. 4-8 and 4-9, Top View on Page 14)

Perform the respective lead-in operations for three selected music tracks, and adjust the operations by rotating the volume (fVR3) as shown in Fig. 4-3 so that the stylus comes down on or a little before the lead-over grooves for the three music tracks. If the volume (fVR3) is rotated clockwise, the lift-down position of the stylus is shifted inward.

Note: In the lead-over grooves existing on a 70 mm-or-less from the center, the misplacing of the arm in detection position occurs inevitably.

Fig. 4-8

Fig. 4-9

Note: Remove the cabinet before adjustments of 4-6 and 4-7.

#### • How to remove the cabinet. (See Top View on Page 13)

- 1) Take off turntable sheet and turntable platter.
- 2) Remove the play case cover.
- 3) Loosen 2 screws in holes of top side.
- 4) Loosen 7 screws S to remove cabinet. (See Fig. 4-5)
- 5) Remove the cabinet upward slowly.

Note: Do not strike tone arm with the cabinet.

#### 4-6. Arm Servo Signal Adjustment

(See Figs. 4-3, 4-10, 4-11)

- 1) Move the tone arm leftward and stop it within the record-playable range by depressing the MANUAL key
- 2) Connect the DC voltmeter shown in Fig. 4-10.
- 3) The tone arm servo level goes up more when the tone arm is moved rightward slightly by hand.
- 4) Adjust the voltage of "step 3)" to DC 4 ~ 4.5 V by rotating the volume (fVR6).
- 5) Connect the DC voltmeter across the test terminal arm servo and G (ground) and move the tone arm downward by depressing UP/DOWN key.
- 6) Adjust the arm servo adjusting cam so that the tone arm does not move in either direction, in the state where the tone arm is in the down position, then confirm that indication on DC voltmeter is within  $-IV \pm IV$ .
- 7) Check that the tone arm will not move in either direction when the UP/DOWN key is depressed repeatedly, if necessary, rotating the volume (fVR6) slightly.

Fig. 4-10

Fig. 4-11

#### 4-7. Tension Adjustment of Tone Arm Driving Wire (See Fig. 4-4)

Move the tone arm by depressing the MANUAL key and adjust the tension adjusting screw so that the wire does not slip along the driving gear.

Note: Care must be taken to give too much tension.
