SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

Check the antenna terminals, metal trim, “metallized” knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microampers). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The “limit” indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2V AC range are suitable. (See Fig. A)

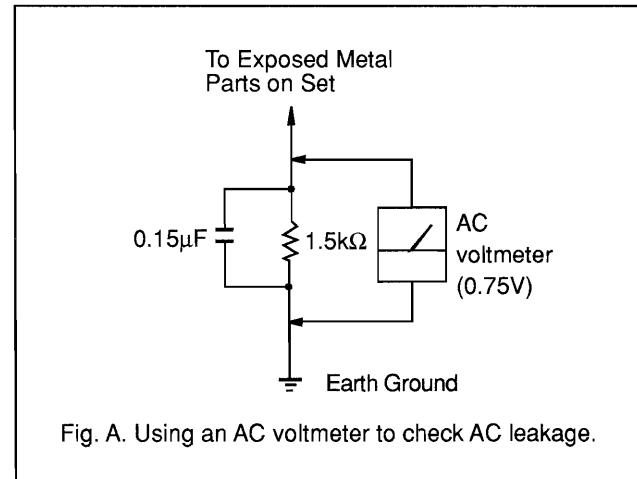

Fig. A. Using an AC voltmeter to check AC leakage.

Notes on chip component replacement

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

SAFETY-RELATED COMPONENT WARNING !!

COMPONENTS IDENTIFIED BY MARK Δ OR DOTTED LINE WITH MARK Δ ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!!

LES COMPOSANTS IDENTIFIÉS PAR UNE MARQUE Δ SUR LES DIAGRAMMES SCHÉMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

3. AM 9kHz STEP

During AM 10kHz STEP TUNING, set to AM and turn off the power. Then press and hold down [INDEX SELECT/ TUNING +] key, turn on the power, and change AM TUNING STEP to 9kHz to initialize all the preset channels. (When this procedure is performed during AM 9kHz STEP, AM TUNING STEP is changed to 10kHz.)

4. SURROUND CLEAR

When [TONE ON/DEFEAT] key is held down and the power is turned on, SOUND FIELD memory is initialized.

5. FL TUBE CHECK/KEY CHECK

When ten-keys [7], [8] and [9] key are pressed simultaneously and the power is turned on, FL Tube TEST Display starts.

- All lighting
- One segment lighting for each digit
- Key count indication

The count is decremented for each key input. When it is down to zero, the [POWER] key is used to terminate this check.

SECTION 2 GENERAL

6. DEMO

When SOUND FIELD is turned off and **DISPLAY** key continues to be held down (for 3 seconds), Demonstration starts. If any other key is input, this DEMO stops and processing for that key is done.

* DEMO causes TONE data for ACOUSTIC and DOLBY SURROUND to be changed and set as follows:
DOLBY SUR's CENTER MODE=PHANTOM
REAR/CENTER LEVEL=+6dB
DELAY TIME=20mS

In case of any key input, the state when DEMO is suspended by key input will be maintained.

• ANOTHER FUNCTION

The function that makes FUNCTION INDEX NAME return into FUNCTION NAME. The way of returning is that select any FUNCTIONS you want then press the same FUNCTION KEY during the INDEX input mode.

Programming Signals of Other Audio/Video Equipment

The remote commander RM-P341 learns various functions of other remote commanders emitting infrared rays and allows you to control most of audio and video equipment from a distance.

1 Select the function to be programmed with the **FUNCTION** buttons.

2 Press the **LEARN** button so that the **LEARN** indicator lights up.

3 Program a signal.
The buttons you can program differ among the functions. Only the buttons listed in "Operative Buttons" can learn new signals for each function.

① Press the button which shall "learn" the remote-control signal and the **LEARN** indicator blinks slowly.

② Press and hold the button of other manufacturer's remote commander whose signal is to be learned.

③ Remove your finger(s) from the button(s) after the **LEARN** indicator lights up.

Note
If the button which cannot be programmed is pressed in step ①, the **LEARN** indicator blinks rapidly.

4 Repeat operation for each button to be programmed.

5 Press the **LEARN** button.
The **LEARN** indicator lights for a few seconds. After the indicator goes off, you can control other equipments with the programmed buttons.

The two remote commanders must:

- face straight each other.
- be placed at a distance of approx. 5 cm (2 inches).
- not be moved during programming operation.

After programming

Be sure to test if the equipment really works with the programmed signals.

Note

If you do not perform the following operation in about one minute after steps 2 and 3-③, the learning mode will be canceled.

Number of signals that the commander can learn

It depends on the format of the signal. If you program signals of Sony equipment, approximately 30 signals can be programmed.

Memory capacity

If the **LEARN** indicator does not blink or light in step 3-①, ②, the memory capacity has become full. This occurs when other signals stronger than the remote-control signals have been stored because the signals were programmed in a noisy environment or the remote commanders were placed too far apart from each other.

In this case, clear all the signals following the procedure described below and program again from the beginning under the proper conditions.

Notes on programming

- Remote-control signals of equipment of manufactures other than Sony can be programmed only when they are compatible with the infrared wireless remote control system. Since the programmable commander can "learn" only the signals output from another remote commander, it cannot control equipment that does not use a remote commander.
- Don not attempt to use the programmable commander with an air conditioner or other household appliances.
- Note that there are some special remote-control signals that cannot be programmed.
- Even if the **POWER** of the other manufacture's remote commander is learned, you can not turn on this unit and the other equipment simultaneously with the **SYSTEM CONTROL/FUNCTION** button.

RM-P341/U241

Programming a New Signal onto a Previously Programmed Button

Follow the programming procedure. The previously programmed signal is cleared and replaced by the new signal.

To clear a programmed signal

- 1 Press the **LEARN** button so that the **LEARN** indicator lights up.
- 2 Press the button to be cleared while pressing the **BACK GROUND** button until the **LEARN** indicator goes off.

To program a signal onto the ● button for recording

It is not possible to operate any equipment with only the ● button. You can program the rec standby signal and rec start signal under the ● + ► button on RM-P341. With a tape deck, you can also program the signal under the ● + ◀ button (in the reverse direction).

Notes on battery

If the **LEARN** indicator does not light when a button is pressed, the batteries are almost exhausted. When the batteries are exhausted, the remote commander can no longer operate the unit or programming becomes impossible. If this happens, replace both batteries with new ones. We recommend the use of alkaline batteries for prolonged use.

Changing the Settings of the FUNCTION Buttons

You can replace the functions stored in the **FUNCTION** buttons.

Hold down one of the **FUNCTION** buttons you want to change and press one of the numeric (1 to 0) buttons to select the desired function.

After changing the setting of the **FUNCTION** button, the equipment can be operated with the **FUNCTION** button you have changed.

To return the function to the initial mode, perform the same operation above.

With the numeric buttons from 1 to 0, each function can be selected as described in the following table:

Numeric buttons	The function to be selected
1	CD player
2	DAT deck
3	MD recorder
4	DECK A
5	DECK B
6	LD player
7	VCR 1 (Remote control mode)
8	VCR 2 (Remote control mode)
9	VCR 3 (Remote control mode)
0	TV

Example: To change the **CD** **FUNCTION** button to the **DAT** function button.

Note

The settings of the **TUNER** button and the **PHONO** button cannot be changed.
