### 1-7. NOTES ON OPERATION

1. For 270 mm (10½ inch) metal reel, use a reel spacer and a Sony Reel Adaptor RAD-10.
2. Thread a tape as illustrated. Be sure to pass the tape under the tension-arm guides, and above the tape guides.

3. For protection against the high bias voltage the upper head cover is fastened with the two head cover bosses.
4. Set the BIAS and EQ (TAPE SELECT) switches according to the tape used.

BIAS switch	EQ switch	Tapes
LOW	NORMAL	SONY SUPER 150, SUPER A TDK 150 SCOTCH 150 Other 150 type tapes
LOW	SPECIAL	SONY SLH MAXELL LNE 35 AGFA PE 35 BASF LP 35, 35LH
HIGH	NORMAL	SCOTCH 203, 206 TDK SD 150
HIGH	SPECIAL	When using some tapes, frequency response range may be wide but distortion level may be high.

5. Do not leave the TC-756-2 in PAUSE mode for a long time, since the normal rated voltages are still applied to the reel motors in PAUSE mode. Place the TC-756-2 in stop mode instead.
6. REC TIMER LOCK button can be moved to the right only when L and/or R RECORD buttons are pushed in stop mode. Once the RECORD buttons are locked, they cannot be released and remain illuminated even though any function button (stop, fast forward, rewind or forward button) is pushed. The TC-756-2 can be placed in record mode only by pushing the forward button, but not by pushing the stop, fast forward or rewind button.
7. Before setting the timer-activated recording, be sure to turn POWER switch OFF. Otherwise the tension arms may be turned OFF by the momentary tape slack and the TC-756-2 may be placed in stop mode.
8. PB LEVEL controls adjust the playback signal level at the LINE OUTPUTS and the HEADPHONE jack. This adjustment reflects on VU meters with a 0 VU reading corresponding to 0.43 volt output. During normal use, set the inner knob (R channel) to the center click position and align the outer knob (L channel) with the inner knob.
9. The TC-756-2 is designed only for vertical use, and therefore no rubber feet are provided for horizontal use.
10. All function buttons except the stop button have self lock mechanisms.

Note: The above description is applied to both TC-756 and TC-756-2.

## 1-8. NOTES ON REPAIR

### 1. Disassembly

To remove the reel panel, unscrew the 14 screws indicated by \* in the photo below. To remove the cabinet, unscrew the 10 screws attached to the cabinet (4 screws on both sides and 6 screws on the back).

When turning the tape height adjustment screw, the following precaution must be taken: After the screw is turned clockwise as far as it will go, it must not be turned counterclockwise more than  $3\frac{1}{2}$  turns. The tape height may be adjusted with this screw within these limits. If the screw is turned beyond these limits, the washer indicated by \* will be damaged. (See photo.)

The screw indicated by ▲ has been adjusted at the factory and should not be turned. If, however, it happens to be turned, care must be taken that the microswitch (S117) is not touched by the tension arm spacer even if the tape height adjustment screw is turned within the limits mentioned above. Otherwise S117 will be damaged.

3. Lead wires for the complete circuit board of the bias oscillator should be arranged through the areas and between the parts indicated by ● as shown in the photo.

Also, make sure that the lead wires and other parts do not interfere with the ranges within which the switches operate.

complete circuit board of bias osc.

4. Be sure to insert the function spring projection (indicated by ⊙) into the lever of the EQ (TAPE SELECT) switch as shown in the photo.

## SECTION 2 ADJUSTMENTS

### 2-1. MECHANICAL ADJUSTMENTS

#### 1. Brake Adjustment (1)

Perform this adjustment for both left and right brakes. After the adjustment, apply locking compound to the adjusted screw.

– Playback mode –

*adjustment screw*  
Adjust the brake adjusting plate for the appropriate brake stroke

– Right side –

– Left side –

#### 2. Brake Adjustment (2)

Perform this adjustment for both left and right brakes. After the adjustment, apply locking compound to the adjusted screw.

Specification:

Take-up Reel	Supply Reel	Brake Torque
clockwise	counterclockwise	800~2,500 g·cm (11.1~34.8 oz·inch)
counterclockwise	clockwise	600~700 g·cm (8.3~9.7 oz·inch)

– Stop mode –

– Right side –

– Left side –

### 3. Adjustor Adjustment

In playback mode and with PAUSE switch to ON, slowly push the pinch lever A in the direction shown by the arrow. When the supply side pinch roller contacts the capstan shaft and starts to rotate, the gap between the take-up side pinch roller and the capstan shaft should be less than 0.5 mm ( $1/64$ "), so that the take-up side pinch roller starts rotating slightly after or almost simultaneously with the start of the supply side pinch roller, if necessary, adjust the adjustor.

### 4. Pinch Roller Solenoid (R) (PM2) Position Adjustment

After the adjustment, apply locking compound to the adjusted screws.

*These two springs should expand 0.5 mm ( $1/64$ " ) longer after the pinch rollers contact the capstans in playback mode. If necessary, adjust the PM2 solenoid position.*

Specification for your reference:

Pinch roller pressure: 1000 g ~ 1600 g (2 lb 3 oz ~ 3 lb 8 oz)

### 5. Pinch Roller Solenoid (L) (PM1) Position Adjustment

After the adjustment, apply locking compound to the adjusted screws.

With a tape threaded along the tape path and in playback mode (PM1 solenoid should be energized), turn PAUSE switch ON. At this time the shift lever shafts should not contact the tape and the pinch rollers should separate from the capstans. If necessary, adjust the PM1 solenoid position.

**Note:** The shift lever shaft indicated by \* in the above figure may slightly contact the tape but the other one should not.

Pinch Roller Solenoid (L) (PM1)

### 6. RECORD Button Lock Adjustment

After the adjustment, apply locking compound to the adjusted screw.

Push L and R RECORD buttons, move REC TIMER LOCK knob in the direction shown by arrow A and then push the 'forward' button. At this time REC TIMER LOCK lever should slightly contact REC TIMER LOCK lever ass'y as shown. If necessary, adjust the REC TIME LOCK spacer.

**Note:**

After the adjustment, and with the L and R RECORD buttons pushed and the REC TIMER LOCK knob pushed in the direction shown by arrow A, and also the forward button pushed, make sure of the following functions.

1. RECORD buttons cannot be released by releasing REC TIMER LOCK knob.
2. REC TIMER LOCK knob cannot be released by moving the REC TIMER LOCK knob further in the direction shown by the arrow A.
3. Push L and R RECORD buttons and then push forward button. At this time the RECORD buttons should not be released.
4. In stop mode L and R RECORD buttons should be released.
5. When L and R RECORD buttons are released, REC TIMER LOCK knob cannot be moved in the direction shown by the arrow A.

### 7. Actuator Adjustment (1)

Perform this adjustment after the Pinch Roller Solenoid (L) (PM1) Position Adjustment. After the adjustment, apply locking compound to the adjusted screw.

**Note:** The microswitch should turn OFF (click) in 0.5 to 2 seconds after forward button is pushed.

### 8. Actuator Adjustment (2)

Perform this adjustment after the Brake Adjustments (1) and (2). After the adjustment, apply locking compound to the adjusted screw.

Move the actuator bracket right and left for the appropriate position.

**Note:** The microswitch should turn OFF (click) in 0.5 to 2 seconds after forward button is pushed.

### 9. Fast Forward and Rewind Back-Tension Adjustment

1. Supply the rated power voltage.
2. Fasten the tension arms with rubber bands as shown, thus activating them.
3. Pull the spring scale at a speed of between 9.5 cm/s to 19 cm/s in the direction shown by the arrow for rewind or fast forward mode with REEL SIZE switch at "7" and "10". Measure the back tension torque for rewind and fast forward modes. Torques should be as shown in the following table.

Specification:

Mode	REEL SIZE Switch	Back-Tension Torque
rewind	10	110 to 140 g·cm (1.53 to 1.95 oz·inch)
	7	80 to 100 g·cm (1.11 to 1.39 oz·inch)
fast forward	10	110 to 140 g·cm (1.53 to 1.95 oz·inch)
	7	80 to 100 g·cm (1.11 to 1.39 oz·inch)

If necessary, adjust the torque by moving the sliders of the adjustable resistor (R901).

— Right side —

Fasten the tension arms with rubber bands to operate the unit.

### 10. Playback Take-up Torque Adjustment

1. Supply the rated power voltage.
2. Fasten the tension arms with rubber bands as shown, thus activating them.
3. Turn the TAPE SPEED switch to "19 cm 7½."
4. Place the unit in playback mode.
5. Pull the spring scale in the direction shown by the arrow and measure the take-up torque with REEL SIZE switch at "10" and "7". Torques should be as shown in the following table.

Specification:

REEL SIZE switch	Take-up Torque
10	580 to 620 g·cm (80.5 to 86.1 oz·inch)
7	280 to 320 g·cm (38.9 to 44.5 oz·inch)

If necessary, adjust the torque by moving the sliders of the adjustable resistor (R902).

— Left side —

Fasten the tension arms with rubber bands to operate the unit.

### 11. Reel Table Height Adjustment

After the adjustment, apply locking compound to the adjusted screws.

1. Thread the tape from a 180 mm (7 inches) plastic reel as shown.
2. Fasten the tension arms with rubber bands as shown.
3. Adjust the reel table height so that the tape travels in the center of both reel flanges in fast forward and rewind modes.

### 12. Tape Guides Adjustment (1)

1. Thread the tape from a 180 mm (7 inches) plastic reel as shown.
2. Turn the two screws indicated by ★ counterclockwise until it stops, and then turn them clockwise in 1 1/4 turns.
3. Turn the two screws indicated by ● so that the tape travels in the center of both reel flanges in rewind and fast forward modes.
4. Turn the two tape guides indicated by ▲, for fine adjustment, so that the tape travels in the center of the guides without tape curl in playback mode.
5. When the tape curls, repeat the above steps.

### 13. Tape Guide Adjustment (2)

Perform this adjustment after the reel table height adjustment and the tape guides adjustment (1) are completed. Tape should not curl at each tape guide B and D.

If necessary, adjust the tape guides B and D with the tape guide D as standard.

- Note:**
1. Make sure that the three heads are correctly positioned as specified. If necessary, perform the head height adjustments on page 19 and 21.
  2. If all the tape guides B and D are not correctly positioned, adjust them so that the tape travels in the center of the pinch roller.

### 14. Tape Shifter Position Check

Perform this check for both left and right shifters with the unit in horizontal position.

1. In playback mode the shift levers should not touch the head deck.

2. At tape end in rewind and fast forward modes, there should be more than 2 mm ( $\frac{3}{32}$  inch) gap between the tape and the record and playback heads. At this time the tape may touch the erase head.

### 15. Function Switch Operation Check

1. Push the POWER switch ON with the tension arms released. Next push each function button. No operation should take place, and each function button should not lock.
2. When the tension arm L and/or R are activated, the stop solenoid should be de-energized. The solenoid can be seen when looked at in the direction of the arrow indicated by \*. When the solenoid is de-energized, a click can be heard.
3. Activate the tension arm L or R, and make sure of the following functions.
  - 3-1. Push the forward button. The button should lock. When the activated tension arm is released, the locked button should release itself.
  - 3-2. Push the forward button. Then push the stop button. At this time, the locked forward button should release itself.
  - 3-3. Push the forward button. Then push the POWER switch OFF. The locked forward button should remain locked. Next push the POWER switch ON. The forward button should still remain locked.
  - 3-4. Push the fast forward button. The button should lock. When the activated tension arm is released, the locked button should release itself.
  - 3-5. Push the fast forward button. Then push the stop button. At this time the locked button should release itself.
  - 3-6. Push the rewind button. The button should lock. When the activated tension arm is released, the locked button should release itself.
  - 3-7. Push the rewind button. Then push the stop button. At this time the locked button should release itself.

### 16. Tension Regulator Adjustment (Not normally performed)

**Note:** For this adjustment a super low frequency oscillator (3 Hz to 10 Hz) is required. Without the oscillator, do not perform this adjustment and only replace the defective parts. When adjusting adjustable resistors, turn them in the direction of increasing torque, so that the torque rises to the specified value.

1. Supply the rated power voltage.
2. Unsolder the three lead wires of the FG (frequency generator) coil in the supply reel motor M1, connect a super low frequency oscillator of 1 Vp-p output across R70) through a 100 $\mu$ F electrolytic capacitor.
3. Set TAPE SPEED switch to "9.5 cm 3 $\frac{3}{4}$ " and REEL SIZE switch to "10".
4. Adjust the oscillator frequency so that the voltage between the emitter of Q712 transistor and the chassis ground is 9 volts in playback mode.
5. With the frequency adjusted in step 4, adjust R731 so that the supply motor torque is 250 g-cm (3.47 oz-inch).
6. Change the oscillator frequency to 10 Hz and adjust R717 so that the torque is 80 g-cm (1.11 oz-inch).
7. Change the oscillator frequency to 3.3 Hz and adjust R736 so that the torque is 310 g-cm (4.30 oz-inch).
8. Repeat steps 6 and 7 once more.
9. Set TAPE SPEED switch to "38 cm 15" and change the oscillator frequency to 6.6 Hz. Then adjust R737 so that the torque is 310 g-cm (4.30 oz-inch).

## 2-2. ELECTRICAL ADJUSTMENTS

### Precaution:

- Clean the following parts with a swab moistened with alcohol:
 

record head	pinch roller
playback head	rubber belts
erase head	idlers
capstan	tape guides
- Demagnetize record, playback and erase heads with a head demagnetizer.
- Do not use magnetized screwdriver for adjustments.
- After adjustments, apply locking compounds to the adjusted parts.
- Adjustments should be performed in the order listed in this service manual.
- Adjustments and measurements should be performed for each L and R channel with the rated power supply voltage unless otherwise specified.
- Switches and controls, which are not given in "Settings" for the each adjustment, can be set in any modes or positions. Power switch, however, should be ON unless otherwise noted.

Note: Difference between the highest levels of L and R and the finally adjusted level should be within 1 dB.

### Adjustment Location:

record head azimuth adjustment screw

### 12. Bias Trap Adjustment

Settings:

Procedure:

In record mode turn L102 (L-channel) and L202 (R-channel) for the lowest VTVM reading (~40 dB (7.7 mV) or less).

Adjustment Location:

### 13. Record Bias Adjustment

Settings:

- REEL SIZE switch: 7
- TAPE SPEED switch: 19 cm 7 1/2
- BIAS (TAPE SELECT) switch: LOW
- EQ (TAPE SELECT) switch: SPECIAL
- MONITOR switch: TAPE
- LINE IN control: mechanical mid
- PB LEVEL control: mechanical mid

Procedure:

Mode: record and simultaneous playback

As trimmer capacitor C511 (L-channel) or C518 (R-channel) is slowly turned clockwise, VTVM reading will go up to a maximum and then start falling again. Adjust the capacitor until VTVM reads 0.5 dB below and beyond the maximum reading.

Adjustment Location:

#### 14. Overall Frequency Response (SPECIAL RECORD EQ) Adjustment

##### Settings:

REEL SIZE switch: 7  
 TAPE SPEED switch: 38 cm 15, 19 cm 7½  
 BIAS (TAPE SELECT) switch: LOW  
 EQ (TAPE SELECT) switch: SPECIAL  
 MONITOR switch: TAPE  
 LINE IN control: mechanical mid  
 PB LEVEL control: mechanical mid

##### Procedure:

Mode: record and simultaneous playback

Tape Speed	Input Signal		Adjust		VTVM Reading
	Freq.	Level	L-ch	R-ch	
38 cm/s (15 ips)	1 kHz	-30 dB (25 mV)	—	—	Memorize
	15 kHz		R515	R516	for +0.5 dB relative to the reading at 1 kHz
	30 kHz		L503	L504	for the same reading relative to the reading at 1 kHz
19 cm/s (7½ ips)	1 kHz	-30 dB (25 mV)	—	—	Memorize
	10 kHz		C323 C324	C423 C424	for +0.5 dB relative to the reading at 1 kHz
	25 kHz		—	—	Make sure of the same reading relative to the reading at 1 kHz.

##### Adjustment Location:

Adjust by soldering or unsoldering the portions indicated.

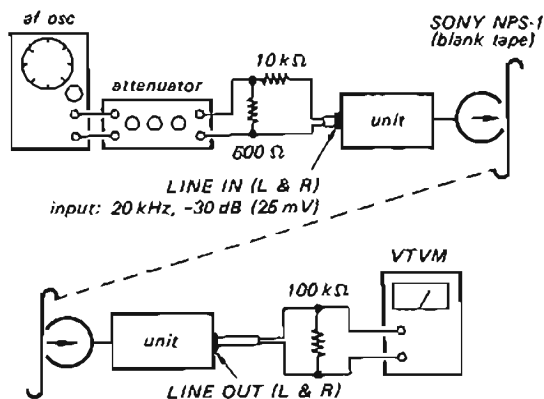

### 15. Overall Frequency Response (NORMAL RECORD EQ) Adjustment

#### Settings

REEL SIZE switch: 7  
 TAPE SPEED switch: 38 cm 15, 19 cm 7½  
 BIAS (TAPE SELECT) switch: LOW  
 EQ (TAPE SELECT) switch: NORMAL  
 MONITOR switch: TAPE  
 LINE IN control: mechanical mid  
 PB LEVEL control: mechanical mid

#### Procedure:

Mode: record and simultaneous playback

Tape Speed	Input Signal		Adjust		VTVM Reading
	Freq.	Level	L-ch	R-ch	
38 cm/s (15 ips)	1 kHz	-30 dB (25 mV)	—	—	Memorize
	15 kHz		R517	R518	for +0.5 dB relative to the reading at 1 kHz

Note: All resistors are in  $\Omega$  and  $k\Omega$  unless otherwise indicated (K = 1000).  
 All capacitors are in  $\mu F$  unless otherwise indicated ( $\mu = \mu$ ).  
 (N) indicates low noise resistor.  
 Values in [ ] for coils and transformers are DC resistance.  
 Voltage values shown are measured with a voltmeter (20k $\Omega$  V) in playback mode and without signal inputs.  
 Voltages in ( ) are for record mode.  
 Voltages marked with \* are measured with VTVM.
