STEREO CASSETTE DECK

SPECIFICATIONS

Recording system 4-track 2-channel stereo
Fast-forward and rewind time
Approx. 90 sec. (with C-60 cassette)
Bias frequency 105 kHz
Signal-to-noise ratio (NAB, at peak level)

Cassette	Dolby NR switch	OFF	B-TYPE ON	C-TYPE ON
TYPE IV (Sony METALLIC)		59 dB	66 dB	72 dB
TYPE III (Sony FeCr)		60 dB	67 dB	73 dB
TYPE II (Sony CD- α)		57 dB	64 dB	70 dB
TYPE I (Sony BHF)		54 dB	61 dB	67 dB

Total harmonic distortion
1.0% (with Sony METALLIC and FeCr
cassettes)

— Continued on page 2 —

Tape Transport Mechanism TCM-110V13

SERVICE MANUAL

Frequency response DOLBY NR OFF

- With TYPE IV cassette (Sony METALLIC)
 - 20 - 19,000 Hz
 - 30 - 17,000 Hz (± 3 dB)
 - 30 - 13,000 Hz (± 3 dB, 0 VU recording)
 - 30 - 17,000 Hz (DIN)
- With TYPE III cassette (Sony FeCr)
 - 20 - 19,000 Hz
 - 30 - 17,000 Hz (± 3 dB)
 - 30 - 17,000 Hz (DIN)
- With TYPE II cassette (Sony CD- α)
 - 20 - 18,000 Hz
 - 30 - 16,000 Hz (± 3 dB)
 - 30 - 16,000 Hz (DIN)
- With TYPE I cassette (Sony BHF)
 - 20 - 17,000 Hz
 - 30 - 14,000 Hz (DIN)

Wow and flutter

0.04 % WRMS (NAB)
 ± 0.14 % (DIN)

Inputs

Microphone inputs (phone jacks)
 Sensitivity 0.25 mV (-70 dB)
 For a low-impedance microphone
 Line inputs (phono jacks)
 Sensitivity 77.5 mV (-20 dB)
 Input impedance 50 k ohms

Outputs

Line outputs (phono jacks)

Output level 0.435 V (-5 dB) at load
 impedance 50 k ohms
 Load impedance over 10 k ohms

Headphone output

Output level variable -20 to -50 dB at a
 load impedance of 8 ohms

General

Power requirements 120 V ac, 60 Hz. US Canadian Model
 220 V ac, 50/60 Hz. AEP Model
 (240 V ac adjustable by authorized
 Sony personnel)
 240 V ac, 50/60 Hz. UK Model
 (220 V ac adjustable by authorized
 Sony personnel)

Power consumption

26 watts

Dimensions

Approx. 430 x 105 x 275 mm (w/h/d)
 ($16\frac{7}{8}$ x $4\frac{1}{4}$ x $10\frac{3}{4}$ inches)
 including projecting parts and controls

Weight

Approx. 5.5 kg (12 lbs 3 oz)

0 dB = 0.775 V

MODEL IDENTIFICATION

— Specification Label —

US, Canadian model: AC 120 V 60 Hz 26 W

AEP model: AC 220 V ~ 50/60 Hz 26 W

UK model: AC 240 V ~ 50/60 Hz 26 W

Handling Precautions for MOS ICs

Generally, the insulation resistance of the oxide layer in MOS IC structures is very high, and the oxide layer is very thin. Because of this, it is possible that the static voltages usually present on clothes and the human body will be enough to generate a potential difference across the insulator, high enough to cause a breakdown of the insulating layer.

The following precautions should be taken while handling these ICs.

(Particular care should be taken under conditions of low humidity.)

3. Equalize any potential difference between the clothes, the tools in use, the work bench, the set being worked on, and the packaged IC by touching them all in succession with the hands or a conductive wire or tool.
4. The following are effective methods for handling ICs that remove the potential difference across the oxide layer.
 - Use a paper clip modified by soldering in a wire braid insert.

Precautions in Replacing MOS ICs

1. Store new ICs by inserting them into a urethane-polyester cushion (which is somewhat conductive), or wrapping it in aluminum foil, so that all the pins are at the same potential. (The ICs should be stored in that manner until mounted on the circuit board.)

Fig. A

Fig. B

For Service Manuals Contact
MAURITRON TECHNICAL SERVICES
 8 Cherry Tree Rd, Chinnor
 Oxon OX9 4QY
 Tel:- 01844-351694 Fax:- 01844-352554
 Email:- enquiries@mauritron.co.uk

2. Check the soldering iron for possible power-line leakage current. Make sure that there is no leakage path by connecting an ohmmeter to the tip of the soldering iron and the plug as shown in Fig. C. If there is a leakage path, use some other soldering iron.

Fig. C

Fig. D

Make sure that there is no solder on the inside.

Fig. E

Fig. F

Make sure that all the pins are in contact with the wire braid (all the pins will then be at the same potential.).

- Take a short length of fine bare wire and wind it around the IC so that it shorts all the pins of the IC, while it is still in the urethane-polyester cushion or aluminum foil. This ensures that all the pins are at the same potential.

Fig. G

- When it is necessary to handle the IC with the fingers, do not touch any pin, and hold the IC at the ends of its plastic-package case as shown in Fig. H.

Fig. H

5. Method of Mounting

Insert the IC while holding it with the modified clip, and solder all the pins with the clip still shorting the pins. (Similarly, solder all the pins while the bare shorting wire is still wound around them.). Remove the clip or the bare shorting wire only after all the pins have been soldered.

Precaution while Checking C-MOS ICs

The C-MOS ICs (Complementary MOS) are MOS ICs that have their output sections made up of N-channel and P-channel push-pull stages to increase their speed of operation. If the output terminal of these ICs comes into contact with B+ or B- voltage, then the FET which is ON at that time will either become shorted or open.

This is valid for all the output sections that are connected together by the interconnections. Even the circuits that are physically separated (and not on the same board) can be destroyed simultaneously.

Example:

Fig. I

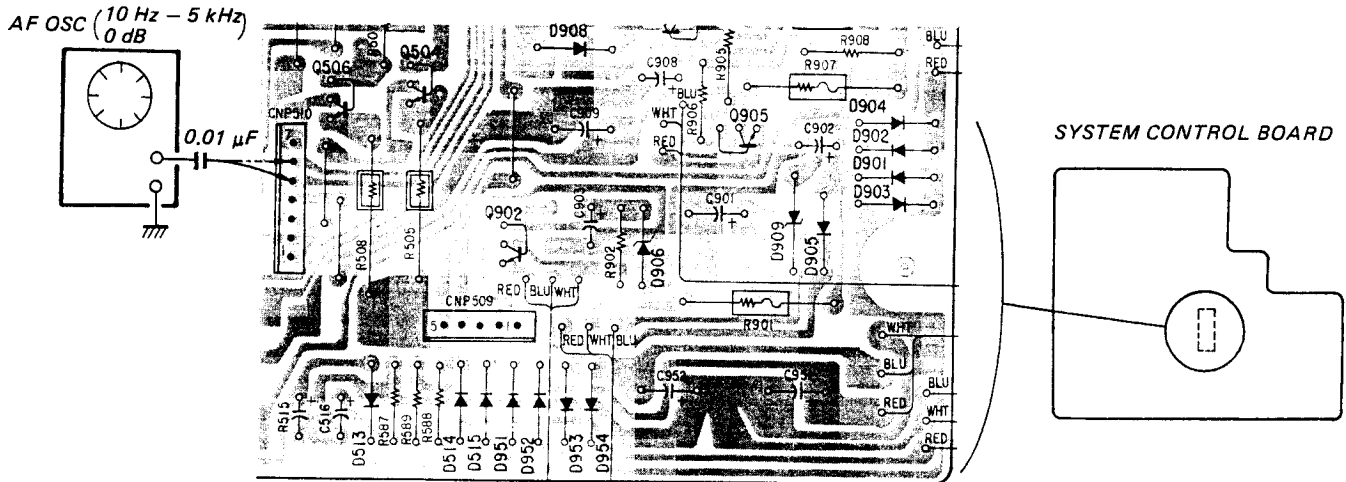

CAUTION ON REPAIRING AND SHUT-OFF DETECTION

This set performs the shut-off detection optically. There are five grooves on each reel table, the lamp light being transmitted with light guide on the back of the ornamental plate is to the phototransistor intermittently by the rotation of reel table.

Phototransistors Q802, 803 produce pulse waves by intermittent lights, which are input to mechanism controller of IC501 and the AMS counter of IC502 after shaped at IC507. Therefore, when it is necessary to repair by removing the ornamental plate, set the oscillator temporarily to the each input terminal of IC507 (input pattern on MD board or terminal 5, 6 of CNP510 on the system control board) not to operate the auto shut-off.

USING THE DIGITAL LINEAR COUNTER

The first two digits of this tape counter show the approximate recording or playback time in minutes, and the last two digits show the seconds.

TO INDEX THE WHOLE TAPE

Before recording or playback, set the counter to "0.00" by pressing the COUNTER RESET button.

As the tape runs, the figures of the counter change. Note the numbers and the program being recorded or played back. Any point of the tape can thus be readily located later by reference to these numbers.

TO CHECK THE AVAILABLE RECORDING TIME ON ONE SIDE OF A CASSETTE

1 At the beginning of the tape, set the counter to "0.00".

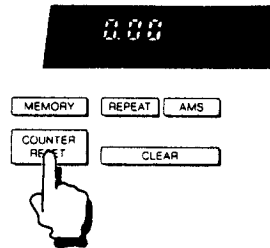

2 Fast-forward the tape to the end. The digits will show the approximate available recording time.

TO DETERMINE THE REMAINING RECORDING TIME

1 Stop the tape at the point at which you wish to begin recording.

2 Set the counter to "0.00".

3 Activate the memory counter.

4 Fast-forward the tape to the end.

The digits will show the approximate remaining recording time.

5 Rewind the tape. The tape will stop at "0.00".

TO MONITOR THE REMAINING RECORDING TIME WHILE RECORDING—Using the minus display

This counter shows the recording or playback time from the "0.00" point preceded by a minus sign when the tape is rewound beyond "0.00".

1 Fast-forward the tape to the end.

2 Set the counter to "0.00".

MEMORY REPEAT AMS

COUNTER CLEAR

3 Rewind the tape to the beginning. The digits will show the approximate recording time on one side of the cassette.

30 min. available

4 Start the recording.

The digits will change from -30.00 to -29.59, -29.58 ... as the recording goes on, and you can monitor the remaining recording time at any point on the tape.

Note

Do not turn off the power while measuring the time because the numbers will return to "0.00" when the power is turned on again.

The accuracy of the counter

This counter is not actually a digital clock, so that the displayed figures are not exactly equal to the actual elapsed time. The accuracy will vary depending on the type of tape being used.

This counter has been designed using C-60 cassettes as the standard. Make sure that the displayed time is greater than the time required when using a C-46 cassette.

Difference between the counter indication and actual running time on one side of a cassette

↔ Sony BHF, AHF, CD-α and FeCr cassettes
 ↔ Sony METALLIC cassettes

The counter indication is less than the actual tape running time. The counter indication is more than the actual tape running time.

WARNING THAT THE TAPE IS ABOUT TO END DURING RECORDING—The pre-end winker

When the tape approaches the end during recording, the digits of the counter will blink, warning that the tape is about to run out (We call this function the pre-end winker.) The blinking will begin 2 to 3 minutes before the end of the tape for a C-46 or C-60 cassette, and 3 to 5 minutes before the end of the tape for a C-90 cassette.

Note that the pre-end winker may not function when using a cassette whose hubs are very thick.

playback

rewind

stop

PROGRAMMING YOUR CASSETTE DECK

With this microprocessor-controlled cassette deck, you can easily locate any particular point on the tape, repeat a selection any number of times, stop playback at a particular point and more. Select the desired operation from the list below, then refer to the numbered selection for detailed instructions.

- To rewind the tape to the desired point **1 MEMORY STOP**
- To play from the beginning of the tape **2 AUTO PLAY**
- To play from a desired point **3 MEMORY PLAY**
- To play from the start of a desired selection **4 AMS (Automatic Music Sensor)**
- To repeat the playback of one side of a cassette from the beginning to the end **5 REPEAT**
- To repeat a favorite selection **6 AMS + REPEAT**
- To stop the playback at a particular point on the tape **7 ENDING CONTROL**
- To repeat an early part or a later part of the tape **8 MEMORY + REPEAT**
- To repeat an early part or a later part of a selection **9 AMS + MEMORY + REPEAT**

THE PROGRAMMING CONTROLS

1 MEMORY STOP

To rewind the tape to the desired point

(If the MEMORY indicator is displayed, do not press the MEMORY button.)

The tape begins to rewind and stops at the "0.00" automatically.

Why does the tape stop around "-0.01"?
—In order to avoid cutting off the starting point.

How does one rewind the tape further than "0.00"?
—Press the ◀ button again.

When should one press the MEMORY button?
—Any time. If the MEMORY indicator is displayed, the tape will stop or replay automatically at the "0.00" point.

2 AUTO PLAY

To play from the beginning of the tape

1 Cancel the previous AMS and repeat programs.

2 If the MEMORY indicator is displayed, cancel the memory counter function.

3 When you rewind the tape,

After the tape is completely rewound, the tape will automatically replay.

3 MEMORY PLAY

To play from a desired point

1 Start playback or recording.

2 At the point from which you wish to listen to later,

3 Activate the memory counter function.

(If the MEMORY indicator is displayed, do not press the MEMORY button.)

4 After playback or recording, rewind the tape.

The tape will replay automatically after rewinding up to the "0.00" point.

1 AUTOMATIC MUSIC SENSOR (AMS) To play from the start of a desired selection

The Automatic Music Sensor locates the program selection you desire by skipping ahead (in the fast-forward mode) or going back past others (in the rewind mode), and plays back the selection automatically.

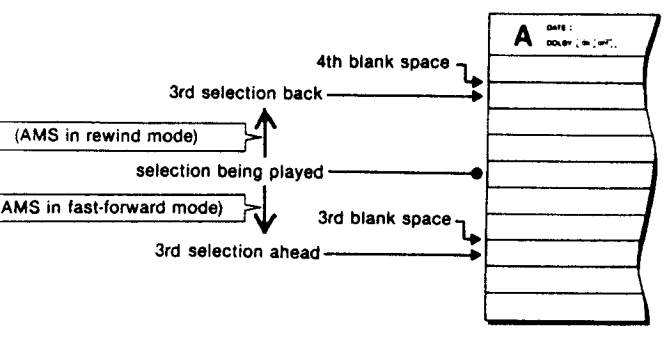

The AMS works by counting the blank spaces between selections.

The AMS can locate a selection as far ahead as 9 selections or as far back as 8 selections. You can increase this capacity even further by pressing the AMS button when the AMS is in midsearch and has already passed a number of selections.

How to count the blank spaces
The number to be set in the display window by pressing the AMS button is the number of blanks from the present position to the blank preceding the desired selection.

To locate the 3rd selection ahead from the selection being played, for example, set the number "3" in the display window so that the AMS finds the 3rd blank space. To locate the 3rd selection back, set "3" so that the AMS finds the 4th blank space.

If the present tape position is at one of the blank spaces, that blank space should not be counted when you set the AMS program.

"0" display

When you start AMS operation with "0" in the display window, playback starts from the beginning of the selection detected first. Set to "0" to quickly locate the beginning of the next selection from the blank space in the fast-forward mode.

To assure AMS operation on recorded tape

Since AMS works by searching out the blank spaces on a tape, it may not operate if there is noise in the space between selections, or if the space is too short to be detected.

The record muting facility of this cassette deck can make a four second blank space that will assure AMS operation on any recorded tape.

Note on AMS operation

If the recorded music includes a long pause, or if it continues for a time at sufficiently low volume, as may happen for instance with classical music, the AMS will treat this space as a blank.

Using a remote control unit

The **M** (record muting) button of the RM-50 and RM-80 remote control units has the same function as the AMS button in the AMS operation. You can set the appropriate number in the display window remotely by pressing the **M** button of the remote control unit connected to this cassette deck.

5 REPEAT

To repeat the playback of one side of a cassette from the beginning to the end

1 Cancel the previous AMS and repeat programs.

2 Set to the number of times you wish it to repeat.

3 Playback.

or Rewind.

When the tape reaches its end after playing back, it stops, then rewinds automatically to the beginning and starts playback again. The tape repeats this cycle the number of times you have set with the REPEAT button, then it stops.

6 AMS + REPEAT

To repeat a favorite selection

1 Cancel the previous AMS and repeat programs.

2 To repeat the selection now being played back:

To skip up to the desired selection and repeat it:

3 Playback.

Rewind or fast-forward.

4 Set to the number of times you wish it to repeat.

When the playback of that selection ends, the tape rewinds back to the beginning of the selection, then repeats playback. The tape repeats this cycle the number of times you have set with the AMS button, then it stops.

7 ENDING CONTROL

To stop the playback at a particular point

To stop the playback at the end of a selection
 —Using the AMS function

1 Cancel the previous AMS and repeat programs.

2 If the MEMORY indicator is displayed, cancel the memory counter function.

3 Set to the number of selections you wish to listen to minus 1.

(For example, to listen to 4 selections, set to 3)

4 Set the REPEAT indicator to "0".

5 Play back.

beginning of tape

blank space

The AMS counts the blank spaces as the tape is played back, and the tape stops automatically after the preset number of selections have been played back.

To stop the playback in the middle of a selection
 —Using the memory counter function

1 Cancel the previous AMS and repeat programs.

2 When the tape reaches the end of the part you wish to listen to later, stop the tape.

3 Set the counter to "0.00".

4 Activate the memory counter function.

5 Set the repeat indicator to "0".

6 Rewind.

beginning of tape

After the tape is completely rewound, the tape will automatically replay and stop at the point "0.00".

8 MEMORY + REPEAT

To repeat an early part or a later part of the tape

1 Cancel the previous AMS and repeat programs.

2 Start playback.

3 When the tape reaches the end of the part you wish to repeat, stop the tape.

4 Set the counter to "0.00".

5 Activate the memory counter function.

6 Set to the number of times you wish it to repeat minus 1.

(For example, to repeat twice, set to 1.)

7 Rewind.

When the tape is played back up to the "0.00" point, the tape rewinds to its beginning, then playback resumes. The tape repeats this cycle the number of times you have set with the REPEAT button, then it stops.

1 Cancel the previous AMS and repeat programs.

2 Start playback.

3 When the tape reaches the point you want to start repeat play, set the counter to "0.00".

4 Activate the memory counter function.

5 Set to the number of times you wish it to repeat.

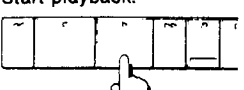

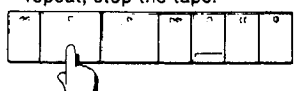

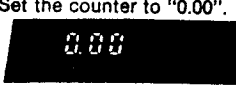

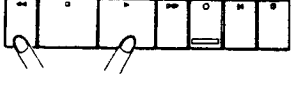

(For example, to repeat twice, set to "2".)

When the tape is played back up to the end, the tape rewinds to the "0.00" point, then playback resumes. The tape repeats this cycle the number of times you have set with the REPEAT button, then it stops.

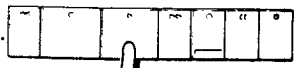

9 AMS + MEMORY + REPEAT
 To repeat an early part or a later part of a selection

To repeat an early part of a selection

- 1 Start playback. 
- 2 When the tape reaches the end of the part you wish to repeat, stop the tape. 
- 3 Set the counter to "0.00". 
- 4 Activate the memory counter function. 
- 5 Set to the number of times you wish it to repeat minus 1.  (For example, to repeat twice, set to "1".)
- 6 Set the AMS to "0". 
- 7 Rewind. 

To repeat a later part of a selection

- 1 Start playback. 
- 2 When the tape reaches the point where you wish to start repeat-play, set the counter to "0.00". 
- 3 Activate the memory counter function. 
- 4 Set to the number of times you wish it to repeat. 
- 5 Set the AMS to "0".

METER BOARD

CASSETTE-ORNAMENT PLATE

Note: This set uses a newly-developed cassette-ornament plate. This plate does not need screws to be installed. So no care is exercised about the screws in this plate-mounting system.

- 1 Press the ejection button and open the cassette lid.
- 2 Remove the cassette lid. Remove the tape cassette from the cassette holder if any.
- 3 Release the two claws from the cassette-ornament plate at both the top corners.
- 4 Depress the two slide-switch levers at the inside of the set and remove the cassette-ornament plate.
(Alternatively, push the two slide-switch levers up from inside of the cassette compartment, and remove the cassette-ornament plate.)
- 5 When reinstalling the cassette-ornament plate, perform the steps in a reverse manner.

**SELECT TUNE LEVER/BRAKE PLATE ASS'Y/
SWITCH BOARD**

Select tune lever: ① ②

Brake plate ass'y: ① - ④

Switch board: ① - ⑨

Note: Be sure to tighten the screws ⑥ - ⑨ in numerical order given. Otherwise motor position may be displaced and decrease the performance.

NOTE ON CASSETTE HOLDER INSTALLATION

LOCK LEVER/FULCRUM PLATE (LEFT)

- 1 Push up the REC detection lever and set the lock lever to positions 2, 3.
- 4 Fit the hole in the fulcrum plate (left) over the projection of mechanism chassis.
- 5 Tighten the screw (BVTT2.6 x 5).
- 6 Hook the spring onto the claw of fulcrum plate (left).

CASSETTE HOLDER

Instal 1 - 3.

Hook the spring to positions 4, 5.

FULCRUM PLATE (RIGHT)

Install 1, 2.

- 3 Fit the hole in the fulcrum plate (right) over the projection of mechanism chassis.
- 4 Tighten the screw (BVTT2.6 x 5).

9. Rear View with Switch Board and Flywheel (T) removed:

SECTION 3 ADJUSTMENTS

3-1. MECHANICAL ADJUSTMENTS

PRECAUTION

1. Clean the following parts with a denatured-alcohol-moistened swab:

record/playback head	pinch roller
erase head	rubber belts
capstan	idlers
2. Demagnetize the record/playback head with a head demagnetizer.
3. Do not use a magnetized screwdriver for the adjustments.
4. After the adjustments, apply suitable locking compound to the parts adjusted.
5. The adjustments should be performed with the rated power supply voltage unless otherwise noted.

Torque Measurement and Back Tension Torque Adjustment

Torque	Torque meter	Meter reading
Forward	CQ-102C	30-60 g · cm (0.41-0.83 oz · inch)
Back tension	CQ-102C	2.5-4.5 g · cm (0.04-0.06 oz · inch)

2. If the specified back-tension torque is not obtained, change the hooking position of the spring.

Confirmation:

Torque	Torque meter	Meter reading
FF REW	CQ201B	100-160 g · cm (1.38-2.22 oz · inch)

Head Height Adjustment

1. Prepare an adjustment cassette as shown below.

2. In playback mode and viewing from the front, adjust the head heights by using the adjustment screw A, B, C, to eliminate tape curl and tape twist at portions shown by arrow (*).
3.
 - a) Remove the tape curl at the erase head guides by turning the screw A.
 - b) Remove the tape curl at the record/playback head guides by turning the screws B and C by the same amount of angle in the same direction.
 - c) After the adjustment, apply suitable locking compound to the screws.

Pinch Roller Pressure Adjustment

Procedure:

1. Clean the pinch roller and the capstan.
2. Set the unit to the forward mode. Measure the pinch roller pressure by using the spring scale. Read the spring scale just when the pinch roller stops rotating without contacting the capstan.

3-2. ELECTRICAL ADJUSTMENTS

Note: The adjustment should be performed in the order given in this service manual. The adjustments should be performed for both L-CH and R-CH.

- Set the TAPE switches according to the tape as follows.

Tape	TAPE switch
CS-10	TYPE I
CS-25	TYPE II
CS-30	TYPE III
CS-40	TYPE IV

- Switches and controls should be set as follows unless otherwise specified.

DOLBY NR switch : OFF
 TAPE switch : TYPE I
 TIMER switch: OFF

- Standard Record :

Deliver the standard input signal level to the input jack and set the REC LEVEL control to obtain the standard output signal level.

Standard Input Level

	MIC	LINE IN
source impedance	300Ω	10kΩ
input level	0.77mV (-60dB)	0.25V (-10dB)

Standard Output Level

	HEADPHONES	LINE OUT
load impedance	8Ω	47kΩ
output level	31 mV (-26dB)	0.435V (-5dB)

Capstan Motor Speed Adjustment

Procedure:

Mode: playback

Specification:

Speed checker	Digital frequency counter
-0.17 ~ +0.17%	2.995 ~ 3.005Hz

Frequency difference between the beginning and the end of the tape should be within 0.34% (10Hz).

Adjustment Location:

Adjust the speed by using screwdriver. When turning the screw clockwise, speed is faster.

Record/Playback Head Azimuth Adjustment

Procedure:

1. Mode: playback

test tape
P-4-A82S
(6.3 kHz, -10 dB)

2. Turn the adjustment screw for the maximum output levels. If these levels do not match, turn the adjustment screw until both of output levels match together within 0.5 dB.

3. Phase Check
Mode: playback

test
P-4-A82S
(6.3 kHz, -10 dB)

TERMINAL NAME, WAVEFORM AND OPERATING VOLTAGES OF IC501

PIN No.	WAVEFORM OR VOLTAGES	PIN No.	WAVEFORM OR VOLTAGES
1	GND (Ground)	16	B/AS 4.8 V
2	Xtal Signal 	17	AMS-Kick Drive Signal 
3	Reset Signal 4.6 V	18	LINE-Muting Drive Signal REC/PLAY mode: 0 V STOP mode: 4.8 V
4	IRQ 5 V	19	REC-Muting Drive Signal REC mode: 0.1 V STOP mode: 1.5 V
5	Not used	20	AMS Muting Drive Signal 0.6 V
6	S1 Signal 4.9 V	21	GND (Ground)
7	SC70 5 V	22	AMS Solenoid Drive Signal REW/FF mode: 0 V STOP mode: 5 V
8	TC 5 V	23	Head-Solenoid Drive Signal PLAY mode: 4.8 V
9	PLAY Lamp Drive Signal PLAY mode: 0.3 V STOP mode: 3.4 V	24	Head-Kick Drive Signal 
10	REC Lamp Drive Signal REC mode: 0.2 V STOP mode: 4.8 V	25	REC/PB Relay Drive Signal REC mode: 0 V STOP mode: 4.8 V
11	PAUSE Lamp Drive Signal PAUSE mode: 0.3 V STOP mode: 3.5 V	26	Timer Signal Timer Switch OFF mode: 4.8 V PLAY mode: 0 V
12	Not used	27	Timer Signal Timer Switch OFF mode: 4.8 V REC mode: 0 V
13	REW-Motor Drive Signal REW mode: 0 V STOP mode: 4.8 V	28	3H/2H 4.8 V
14	PLAY-Motor Drive Signal PLAY mode: 0 V STOP mode: 4.8 V	29	AMS Operating Signal STOP mode: 4.8 V
15	FF-Motor Drive Signal FF mode: 0 V STOP mode: 4.8 V	30	AMS Mode Signal ON mode: 0.05 V OFF mode: 4.8 V
16	Accidental Erasure With cassette: 4.8 V Without cassette: 0 V	31	STOP button kept pressed

Note: Voltage readings on this list are measured by oscilloscope with 10 MΩ probe. Therefore the readings are a little different from those measured by VOM on the schematic and mounting diagrams.

TERMINAL NAME, WAVEFORM AND OPERATING VOLTAGES OF IC502

PIN No.	WAVEFORM OR VOLTAGES	PIN No.	WAVEFORM OR VOLTAGES
1	GND (Ground)	5	S0 4.9 V
2	Xtal Signal 	6	S1 5 V
3	Reset Signal	7	SC70 5 V
4	IRQ Signal 	8	TC 5 V
5	Drive Signal for "a" Segment of Fluorescent Display Tube 1) In case of all six "a" segments are lit, i.e., all of the six digits are "1", "0", "4", "8" or "9", without the AMS and REPEAT. 2) In case of one of "a" segments is lit, i.e., one out of six digits are "1", "0", "4", "8", "9", "5", "6", "7", "3", "2", "0", "9", and all others are "1" or "4". 3) In case of two "a" segments out of six digits are lit as in the case of 2) above. 4) In case of three "a" segments out of six digits are lit as in the case of 2) above. 5) In case of all "a" segments are lit in the same way.	9	Not used
6	AMS Solenoid Drive Signal REW/FF mode: 0 V STOP mode: 5 V	10	Not used
7	Head-Solenoid Drive Signal PLAY mode: 4.8 V	11	Not used
8	Head-Kick Drive Signal 	12	Not used (counter)
9	REC/PB Relay Drive Signal REC mode: 0 V STOP mode: 4.8 V	13	AMS Signal 0 V
10	Timer Signal Timer Switch OFF mode: 4.8 V PLAY mode: 0 V	14	Drive Signal for "i" Segments of Fluorescent Display Tube same as terminal 13 for segments "i".
11	Timer Signal Timer Switch OFF mode: 4.8 V REC mode: 0 V	15	Drive Signal for "j" Segments of Fluorescent Display Tube same as terminal 13 for segments "j".
12	3H/2H 4.8 V	16	Drive Signal for "k" Segments of Fluorescent Display Tube same as terminal 13 for segments "k".
13	AMS Operating Signal STOP mode: 4.8 V	17	Drive Signal for "l" Segments of Fluorescent Display Tube same as terminal 13 for segments "l".
14	AMS Mode Signal ON mode: 0.05 V OFF mode: 4.8 V	18	Drive Signal for "m" Segments of Fluorescent Display Tube same as terminal 13 for segments "m".
15	STOP button kept pressed	19	Drive Signal for "n" Segments of Fluorescent Display Tube same as terminal 13 for segments "n".
16	ACCIDENTAL ERASURE With cassette: 4.8 V Without cassette: 0 V	20	Drive Signal for "Op" (dot) of Fluorescent Display Tube Left Side Dot (lit up constantly) Right Side Dot (Blinking Memory Dot)
17	STOP button kept pressed	21	Drive Signal for "p" Segments of Fluorescent Display Tube same as terminal 13 for segments "p".
18	STOP button kept pressed	22	Drive Signal for "q" Segments of Fluorescent Display Tube same as terminal 13 for segments "q".
19	STOP button kept pressed	23	Drive Signal for "r" Segments of Fluorescent Display Tube same as terminal 13 for segments "r".
20	STOP button kept pressed	24	Drive Signal for "s" Segments of Fluorescent Display Tube same as terminal 13 for segments "s".
21	STOP button kept pressed	25	Drive Signal for "t" Segments of Fluorescent Display Tube same as terminal 13 for segments "t".
22	STOP button kept pressed	26	Drive Signal for "u" Segments of Fluorescent Display Tube same as terminal 13 for segments "u".
23	STOP button kept pressed	27	Drive Signal for "v" Segments of Fluorescent Display Tube same as terminal 13 for segments "v".
24	STOP button kept pressed	28	Drive Signal for "w" Segments of Fluorescent Display Tube same as terminal 13 for segments "w".
25	STOP button kept pressed	29	Drive Signal for "x" Segments of Fluorescent Display Tube same as terminal 13 for segments "x".
26	STOP button kept pressed	30	Drive Signal for "y" Segments of Fluorescent Display Tube same as terminal 13 for segments "y".
27	STOP button kept pressed	31	Drive Signal for "z" Segments of Fluorescent Display Tube same as terminal 13 for segments "z".
28	STOP button kept pressed	32	AMS Signal 0 V
29	STOP button kept pressed	33	Switch 1 Signal Following waveform appears while AMS, REPEAT, MEMORY, CLEAR, or COUNTER switch is kept pressed. 
30	STOP button kept pressed	34	AMS Signal Output 4.8 V
31	STOP button kept pressed	35	AMS MODE 4.8 V
32	STOP button kept pressed	36	Not used
33	STOP button kept pressed	37	REC Lamp Input REC mode: 0.2 V STOP mode: 4.8 V
34	STOP button kept pressed	38	PAUSE Lamp Input 4.8 V
35	STOP button kept pressed	39	FF-Motor Input FF mode: 0 V STOP mode: 4.8 V
36	STOP button kept pressed	40	PLAY-Motor Input PLAY mode: 0 V STOP mode: 4.8 V
37	STOP button kept pressed	41	REW-Motor Input REW mode: 0 V STOP mode: 4.8 V
38	STOP button kept pressed	42	B + Supply Voltage DC 5 V

NOTE:

• Items with no part number and no description are not stocked because they are seldom required for routine service.

• Items marked "♣" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

• Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:

• All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers.
 MF:μF, PF:μμF.

RESISTORS

• All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.

• F : nonflammable

COILS

• MMH : mH, UH : μH

The components identified by shading and mark **Δ** are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque **Δ** sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "♣" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF . Common capacitors are omitted. Refer to the following lists for their part numbers.
 MF: μF , PF: μF .

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.

- F : nonflammable

COILS

- MMH : mH, UH : μH

The components identified by shading and mark Δ are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque Δ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "△" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers. MF:μF, PF:μμF.

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.

- F : nonflammable

COILS

- MMH : mH, UH : μH

The components identified by shading and mark △ are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque △ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

HARDWARE NOMENCLATURE

Screw:

Unless otherwise indicated, it means cross-recessed head (Phillips type).

Nut, Washer, Retaining ring:

Reference Designation	Shape	Description	Remarks
SCREWS			
P		pan-head screw	binding-head (B) screw for replacement
PWH		pan-head screw with washer face	binding-head (B) screw and flat washer for replacement
PS PSP		pan-head screw with spring washer	binding-head (B) screw and spring washer for replacement
PSW PSPW		pan-head screw with spring and flat washers	binding-head (B) screw and spring and flat washers for replacement
R		round-head screw	binding-head (B) screw for replacement
K		flat-countersunk-head screw	
RK		oval-countersunk-head screw	
B		binding-head screw	
T		truss-head screw	binding-head (B) screw for replacement
F		flat-fillister-head screw	
RF		fillister-head screw	
BV		brazier-head screw	

Reference Designation	Shape	Description	Remarks
SELF-TAPPING SCREWS			
TA		self-tapping screw	ex: TA, P 3 x 10
PTP		pan-head self-tapping screw	binding-head self-tapping (TA, B) screw for replacement
PTPWH		pan-head self-tapping screw with washer face	binding-head self-tapping (TA, B) screw and flat washer for replacement
PTTWH		pan-head thread-rolling screw with washer face	binding-head (B) screw and flat washer for replacement
SET SCREWS			
SC		set screw	
SC		hexagon-socket set screw	ex: SC 2.6 x 4, hexagon socket
NUT			
N		nut	
WASHERS			
W		flat washer	
SW		spring washer	
LW		internal-tooth lock washer	ex: LW3, internal
LW		external-tooth lock washer	ex: LW3, external
RETAINING RINGS			
E		retaining ring	
G		grip-type retaining ring
