HANDLING PRECAUTIONS FOR TRAVERSE DECK

The laser diode in the traverse deck (optical pickup) may break down due to potential difference caused by static electricity of clothes or human body.

So, be careful of electrostatic breakdown during repair of the traverse deck (optical pickup).

• Handling of traverse deck (optical pickup)

1. Do not subject the traverse deck (optical pickup) to static electricity as it is extremely sensitive to electrical shock.
2. To prevent the breakdown of the laser diode, an antistatic shorting pin is inserted into the flexible board (FPC board). When removing or connecting the short pin, finish the job in as short time as possible.
3. Take care not to apply excessive stress to the flexible board (FPC board).
4. Do not turn the variable resistor (laser power adjustment). It has already been adjusted.

• Grounding for electrostatic breakdown prevention

1. Human body grounding
Use the anti-static wrist strap to discharge the static electricity from your body.
2. Work table grounding
Put a conductive material (sheet) or steel sheet on the area where the traverse deck (optical pickup) is placed, and ground the sheet.

Caution :

The static electricity of your clothes will not be grounded through the wrist strap. So, take care not to let your clothes touch the traverse deck (optical pickup).

■ INTERNAL CONNECTIONS OF LCD (Liquid Crystal Display)
(Z802 : RSL5085-L)

(COMMON)

(SEGMENT)

■ NEW DIGITAL SERVO CIRCUIT

This model employs a new digital servo circuit. Compared to the old digital servo circuit, the following points have been improved.

1. Reduced operated noise

Loading mechanism 2-level speed reducer

2. Reduced access time

[(old) 2.9 seconds → (new) 1.9 seconds]

Change of traverse gear

3. Improved vibration resistance

Rubber and spring 2-level floating mechanism

[$f_0=50$ Hz (old) → 20 Hz (new)]

4. Reduced number of parts

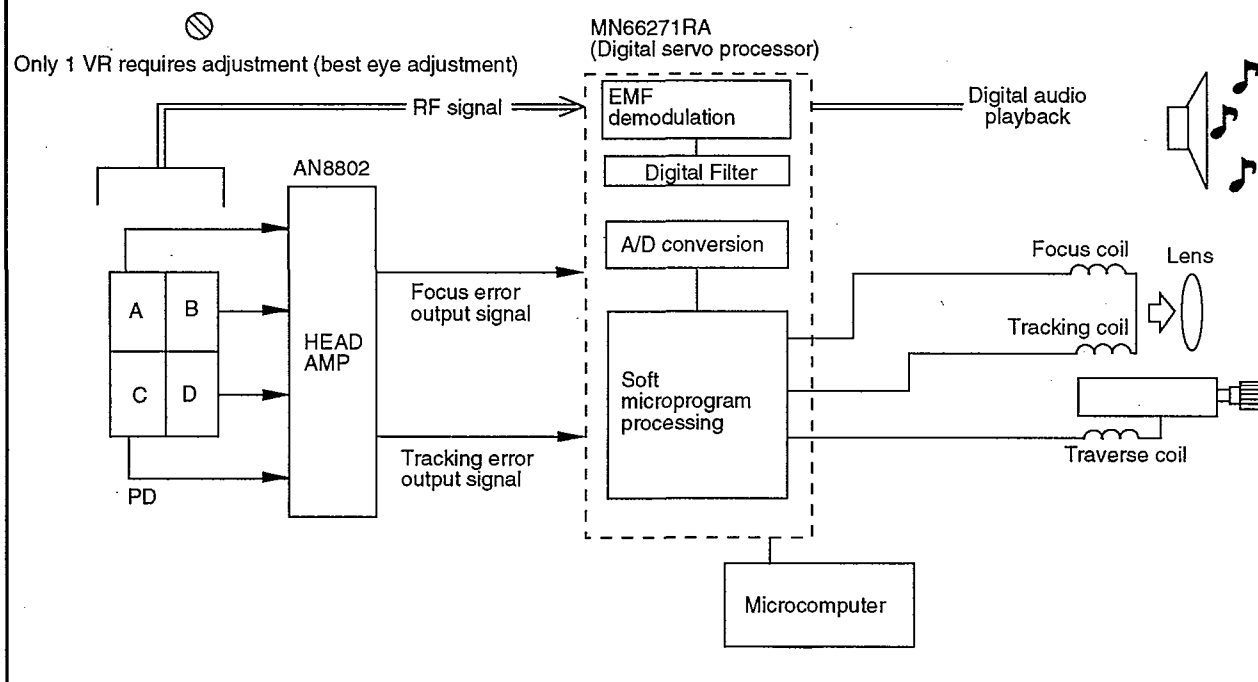

Use of a single super IC chip

3 chips (MN6626, MN6650, MN6475) are reduced to a single chip (MN66271RA)

DIGITAL SERVO SYSTEM (OLD)

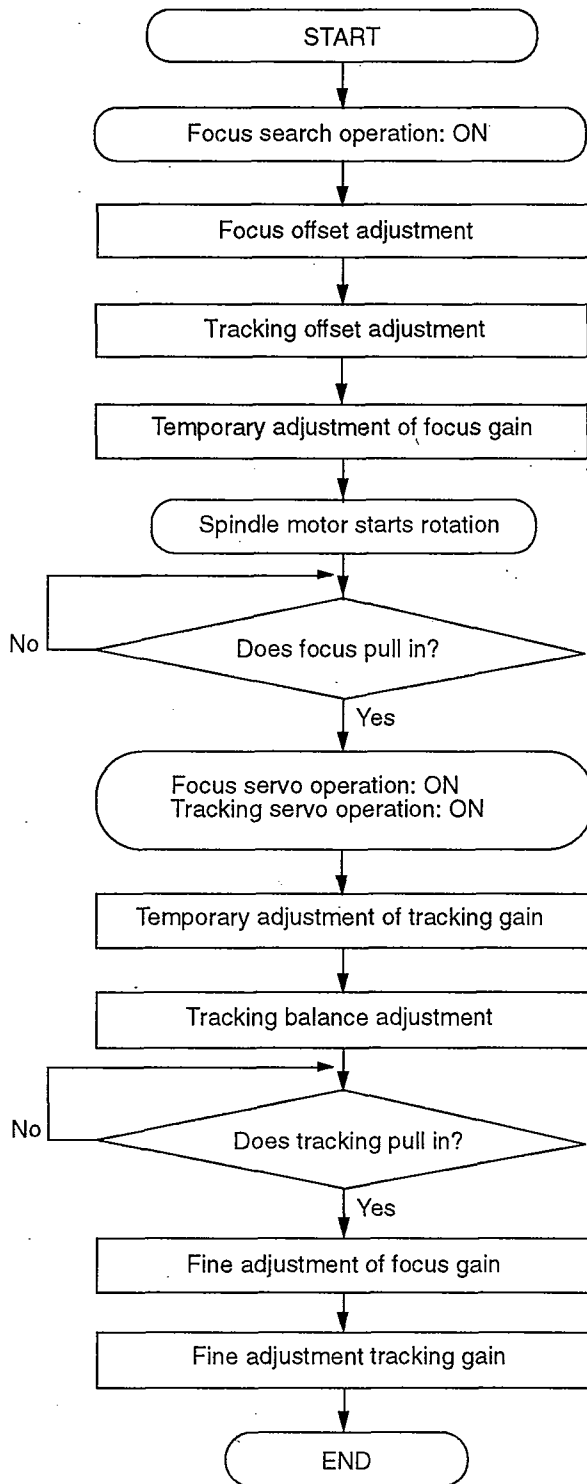

DIGITAL SERVO SYSTEM (NEW)

5. The servo processor IC (MN66271RA) of the newly-developed digital servo circuit automatically performs the following adjustments which were originally adjusted manually in the conventional analog servo circuit: (1) Focus offset, (2) Tracking offset, (3) Focus gain, (4) Tracking gain, and (5) Tracking balance. Therefore, you do not have to perform the above-mentioned electrical adjustments. The unit optimizes the servo for each loaded disc. [You must perform the best eye (PD balance) adjustment manually.]

The following flow chart shows the sequence of automatic adjustments.

• **Flow chart on automatic adjustment sequence**

* Because the microcomputer precisely performs automatic adjustments as shown in the flow chart, it will take approx. 5 seconds to finish reading TOC data if a used disc is eccentric one or its surface is warped.

Approx. 2.5 sec.

Oscilloscope setting : VOLT. 200mV
 SWEEP. 0.5ms.
 Input coupling. AC
 2. Switch the player power **ON**, and play track 19 on the test disc (SZZP1056C).
 (Playing any other track will prevent the mechanical adjustment screws from being accessed.)
 3. Leave the player in the play mode .
 4. Alternately adjust the mechanical adjustment screws with the 2.0mm allen wrench (SZZP1101C) until the vertical fluctuation of RF signal is minimized and the eye pattern is most stretched.
 (Refer to Fig.2 on page)
 5. After completing the adjustment, lock the mechanical adjustment screws with lock paint (RZZ0L01).

* Most stretched eye pattern

(2) BEST EYE (PD BALANCE) ADJUSTMENT

1. Connect the oscilloscope's CH. 1 probe across **TJ701** (RF) (+) and **TJ702** (VREF) (-) on the servo P.C.B.
Oscilloscope setting : VOLT. 200mV
 SWEEP. 0.5 μ s.
 Input coupling. AC
2. Switch the player power **ON**, and play the 1 kHz (track1) on the test disc (SZZP1054C).
3. Adjust **VR701** until the vertical fluctuation of RF signal is minimized and the eye pattern is most stretched.
 (Refer to Fig.1 on page).

* Most stretched eye pattern

(3) CHECK OF PLAY OPERATION AFTER ADJUSTMENT*** Checking Skip Search**

1. Play an ordinary musical program disc.
2. Press the skip button to check for normal skip search operation (in both the forward and reverse directions).

*** Checking Manual Search**

1. Play an ordinary musical program disc.
2. Press the manual search button to check for smooth manual search operations at either low or high speed (in both the forward and reverse directions).

*** Checking Playability**

1. Play the 0.7 mm black dot and the 0.7 mm wedge on the test disc (SZZP1054C) and verify that no sound skip or noise occurs.
2. Play the middle tracks of the uneven test disc (SZZP1056C) and verify that no sound skip or noise occurs.
