SPECIFICATIONS

(DIN 45 500)

■ AMPLIFIER SECTION

20 Hz~20 kHz continuous power output
both channels driven 2 × 150W (8Ω)
2 × 150W (4Ω)

40 Hz~16 kHz continuous power output
both channels driven 2 × 150W (8Ω)
2 × 150W (4Ω)

1 kHz continuous power output
both channels driven 2 × 150W (8Ω)
2 × 150W (4Ω)

Total harmonic distortion
rated power at 20 Hz~20 kHz 0.002% (8Ω)
0.002% (4Ω)
rated power at 40 Hz~16 kHz 0.002% (8Ω)
0.002% (4Ω)
rated power at 1 kHz 0.002% (8Ω)
0.002% (4Ω)
half power at 20 Hz~20 kHz 0.001% (4Ω)
half power at 1 kHz 0.0005% (4Ω)
−26 dB power at 1 kHz 0.001% (4Ω)
50 mW power at 1 kHz 0.001% (4Ω)

Intermodulation distortion
rated power at 250 Hz: 8 kHz=4:1, 4Ω 0.002%
rated power at 60 Hz: 7 kHz=4:1, SMPTE, 8Ω 0.002%

TIM unmeasurably small

Power bandwidth
both channels driven, −3 dB T.H.D. 0.01%
5 Hz~100 kHz (4Ω)

Residual hum and noise 0.13 mV
Damping factor 50 (4Ω), 100 (8Ω)
Input sensitivity and impedance 1 V/47kΩ
S/N 108 dB (121 dB, IHF, A)
Frequency response
DC ~20 kHz, +0 dB, −0.1 dB
DC ~150 kHz, +0 dB, −3 dB
Channel balance, 250 Hz~6,300 Hz ±0.5 dB
Channel separation, 1 kHz 60 dB
Headphones output level and impedance 800 mV/330Ω
Load impedance
MAIN or REMOTE 4Ω~16Ω
MAIN and REMOTE 8Ω~16Ω
Meter
reading range 0.0001 W~300 W (8Ω)
−60 dB~+5 dB
(logarithmic compression)
frequency response (reading accuracy)
20 Hz~20 kHz ±2 dB (more than −50 dB)
20 Hz~20 kHz ±3 dB (less than −50 dB)

■ GENERAL

Power consumption 950W
Power supply AC 50 Hz/60 Hz, 110V/120V/220V/240V
Dimensions (W×H×D) 430 × 178 × 416 mm
Weight 18.4 kg

Note:
Total harmonic distortion is measured by the digital spectrum analyzer (H.P. 3045 system).

Specifications are subject to change without notice for further improvement.

(DIN 45 500)

■ VERSTÄRKERTEIL

Dauerton-Ausgangsleistung bei 20 Hz ~ 20 kHz
beide Kanäle ausgesteuert 2 × 150W (8 Ω)
2 × 150W (4 Ω)
Dauerton-Ausgangsleistung bei 40 Hz ~ 16 kHz
beide Kanäle ausgesteuert 2 × 150W (8 Ω)
2 × 150W (4 Ω)
Dauerton-Ausgangsleistung bei 1 kHz
beide Kanäle ausgesteuert 2 × 150W (8 Ω)
2 × 150W (4 Ω)
Gesamtklirrfaktor
Nennleistung bei 20 Hz ~ 20 kHz 0,002% (8 Ω)
0,002% (4 Ω)
Nennleistung bei 40 Hz ~ 16 kHz 0,002% (8 Ω)
0,002% (4 Ω)
Nennleistung bei 1 kHz 0,002% (8 Ω)
0,002% (4 Ω)
halbe Nennleistung bei 20 Hz ~ 20 kHz 0,001% (4 Ω)
halbe Nennleistung bei 1 kHz 0,0005% (4 Ω)
−26 dB Leistung bei 1 kHz 0,001% (4 Ω)
50 mW Leistung bei 1 kHz 0,001% (4 Ω)
Intermodulationsfaktor
Nennleistung bei 250 Hz: 8 kHz = 4:1, 4 Ω 0,002%
Nennleistung bei 60 Hz: 7 kHz = 4:1, nach SMPTE, 8 Ω 0,002%
TIM (Intermodulationsverzerrung) unmeßbar
Leistungsbandbreite
beide Kanäle ausgesteuert bei −3 dB T.H.D. 0,01% 5 Hz ~ 100 kHz (4 Ω)
Restbrumm und Geräusch 0,13 mV
Dämpfungsfaktor 50 (4 Ω), 100 (8 Ω)
Eingangsempfindlichkeit und -impedanz 1 V/47 kΩ
Geräuschabstand 108 dB (121 dB nach IHF, A)
Frequenzgang
DC ~ 20 kHz, +0 dB, −0,1 dB
DC ~ 150 kHz, +0 dB, −3 dB
Kanalabweichung (250 Hz ~ 6300 Hz) ±0,5 dB
Übersprechdämpfung (1 kHz) 60 dB
Kopfhörerpegel und -impedanz 800 mV/330 Ω
Lautsprecherimpedanz
MAIN oder REMOTE 4 Ω ~ 16 Ω
MAIN und REMOTE 8 Ω ~ 16 Ω
Instrument
Anzeigebereich 0,0001 W ~ 300 W (8 Ω)
−60 dB ~ +5 dB
(logarithmisch)
Frequenzbereich (Ablesegenauigkeit)
20 Hz ~ 20 kHz ±2 dB (über −50 dB)
20 Hz ~ 20 kHz ±3 dB (unter −50 dB)

■ ALLGEMEINE DATEN

Leistungsaufnahme 950 W
Netzspannung
Wechselstrom 50 Hz/60 Hz, 110V/120V/220V/240V
Abmessungen (B×H×T) 430 × 178 × 416 mm
Gewicht 18,4 kg

Bemerkung:
Der Gesamtklirrfaktor wurde mit einem digitalen Rauschspektrometer (Anlage H.P. 3045) gemessen.

Spezifikationen Können infolge von Verbesserungen ohne Ankündigung geändert werden.

■ CARACTERISTIQUES

(DIN 45 500)

■ SECTION AMPLIFICATEUR

Puissance de sortie continue de 20 Hz~20 kHz,
les deux canaux en circuit 2 × 150W (8Ω)
2 × 150W (4Ω)
Puissance de sortie continue de 40 Hz~16 kHz,
les deux canaux en circuit 2 × 150W (8Ω)
2 × 150W (4Ω)
Puissance de sortie continue à 1 kHz
les deux canaux en circuit 2 × 150W (8Ω)
2 × 150W (4Ω)
Distorsion harmonique totale
à puissance nominale (20 Hz~20 kHz) 0,002% (8Ω)
0,002% (4Ω)
à puissance nominale (40 Hz~16 kHz) 0,002% (8Ω)
0,002% (4Ω)
à puissance nominale (1 kHz) 0,002% (8Ω)
0,002% (4Ω)
à demi-puissance (20 Hz~20 kHz) 0,001% (4Ω)
à demi-puissance (1 kHz) 0,0005% (4Ω)
puissance de −26 dB à 1 kHz 0,001% (4Ω)
puissance de 50 mW à 1 kHz 0,001% (4Ω)
Distorsion d'intermodulation
à puissance nominale à 250 Hz: 8 kHz=4:1, 4Ω 0,002%
à puissance nominale à 60 Hz: 7 kHz=4:1, SMPTE, 8Ω 0,002%
TIM (distorsion d'intermodulation transitoire) infiniment petite
Réponse de fréquences
les deux canaux en circuit, −3 dB T.H.D. 0,01% 5 Hz~100 kHz (4Ω)
Bruit et ronflement résiduels 0,13 mV
Coefficient d'amortissement 50 (4Ω), 100 (8Ω)
Sensibilité et impédance d'entrée 1 V/47kΩ
Signal/Bruit 108 dB (121 dB, IHF, A)
Réponse de fréquence
DC ~20 kHz, + 0 dB, −0,1 dB
DC ~150 kHz, + 0 dB, −3 dB
Equilibrage des canaux, 250 Hz~6,300 Hz ±0,5 dB
Séparation des canaux, 1 kHz 60 dB
Niveau de sortie des casques et impédance 800 mV/330Ω
Impédance de charge
PRINCIPALE ou AUXILIAIRE (MAIN or REMOTE) 4Ω~16Ω
PRINCIPALE et AUXILIAIRE (MAIN and REMOTE) 8Ω~16Ω
Indicateur
gamme de lecture 0,0001 W~300 W (8Ω)
−60 dB~+5 dB
(compression logarithmique)
réponse de fréquence (précision de lecture)
20 Hz~20 kHz ±2 dB (plus que −50 dB)
20 Hz~20 kHz ±3 dB (moins que −50 dB)

■ DIVERS

Consommation 950W
Alimentation CA 50 Hz/60 Hz, 110V/120V/220V/240V
Dimensions (L×H×Pr) 430 × 178 × 416 mm
Poids 18.4 kg

Nota:
La Société NATIONAL-PANASONIC-FRANCE, importateur du matériel MATSUSHITA-ELECTRIC déclare que cet appareil est conforme aux prescriptions de la directive 76/889/C.E.E. (arrêté 14 Janvier 1980).

Remarque:
On mesure la distorsion harmonique totale au moyen d'un analyseur de spectre digital (Système H.P. 3045).

Sujet á changement sans prearis.

■ ESPECIFICACIONES

(DIN 45 500)

■ SECCION AMPLIFICADOR

Potencia continua de 20 Hz~20 kHz
en ambos canales 2 × 150W (8Ω)
2 × 150W (4Ω)

Potencia continua de 40 Hz~16 kHz
en ambos canales 2 × 150W (8Ω)
2 × 150W (4Ω)

Potencia continua de 1 kHz
en ambos canales 2 × 150W (8Ω)
2 × 150W (4Ω)

Distorsión armónica total
potencia de régimen a 20 Hz~20 kHz 0,002% (8Ω)
0,002% (4Ω)
potencia de régimen a 40 Hz~16 kHz 0,002% (8Ω)
0,002% (4Ω)
potencia de régimen a 1 kHz 0,002% (8Ω)
0,002% (4Ω)
mitad de potencia a 20 Hz~20 kHz 0,001% (4Ω)
mitad de potencia a 1 kHz 0,0005% (4Ω)
−26 dB de potencia a 1 kHz 0,001% (4Ω)
50 mW de potencia a 1 kHz 0,001% (4Ω)

Distorsión por intermodulación
potencia de régimen a 250 Hz: 8 kHz=4:1, 4Ω 0,002%
potencia de régimen a 60 Hz: 7 kHz=4:1, SMPTE, 8Ω 0,002%

TIM (distorción intermodular transitoria) insignificante

Ancho de banda de potencia
con ambos canales, −3 dB T.H.D. 0,01%
5 Hz~100 kHz (4Ω)

Zumbido residual y ruido 0,13 mV
Factor de amortiguamiento 50 (4Ω), 100 (8Ω)
Sensibilidad e impedancia de entrada 1V/47 kΩ
Relación de señal a ruido 108 dB (121 dB, IHF, A)
Respuesta de frecuencia
DC ~20 kHz, +0 dB, −0,1 dB
DC ~150 kHz, +0 dB, −3 dB
Equilibrio de canales, 250 Hz a 6,300 Hz ±0,5 dB
Separación de canales, 1 kHz 60 dB
Impedancia y nivel de salida de los auriculares 800 mV/330Ω
Impedancia de carga
MAIN o REMOTE 4Ω~16Ω
MAIN y REMOTE 8Ω~16Ω
Medidor
campo de lectura 0,0001 W~300 W (8Ω)
−60 dB~+5 dB
(compresión logarítmica)
respuesta de frecuencia (precisión de lectura)
20 Hz~20 kHz ±2 dB (más de −50 dB)
20 Hz~20 kHz ±3 dB (menos de −50 dB)

■ GENERAL

Consumo de energía 950W
Alimentación de energía
CA 50 Hz/60 Hz, 110V/120V/220V/240V
Dimensiones (An.×Al.×Prof.) 430 × 178 × 416 mm
Peso 18,4 kg

Nota:
La distorsión armónica total se mide con el analizador de espectro digital (sistema H.P. 3045).

Estas especificaciones están sujetas a cualquier cambio sin previo eviso.

■ BEFORE REPAIR AND ADJUSTMENT

1. Turn off the power supply and short-circuit of power supply capacitors (C401 ~ C404, 8200μF) at resistance (about 10Ω, 5W) in order to discharge the charged voltage. Do not short between C401 ~ C404 by screwdriver. It may damage the component.
2. Before turning on the power supply after completion of repair, slowly apply the primary voltage by using a power supply voltage controller to make sure that the consumed current is free of abnormality. The consumed current at 60Hz/50Hz in no signal mode is shown below with respect to supply voltage 110V/120V/220V/240V.

Power supply voltage		AC110V	AC120V	AC220V	AC240V
Cousumed current	50 Hz	410 ~ 930mA	370 ~ 840mA	210 ~ 460mA	190 ~ 440mA
	60 Hz	−	360 ~ 820mA	−	−

MC-Service

■ LOCATION OF CONTROLS

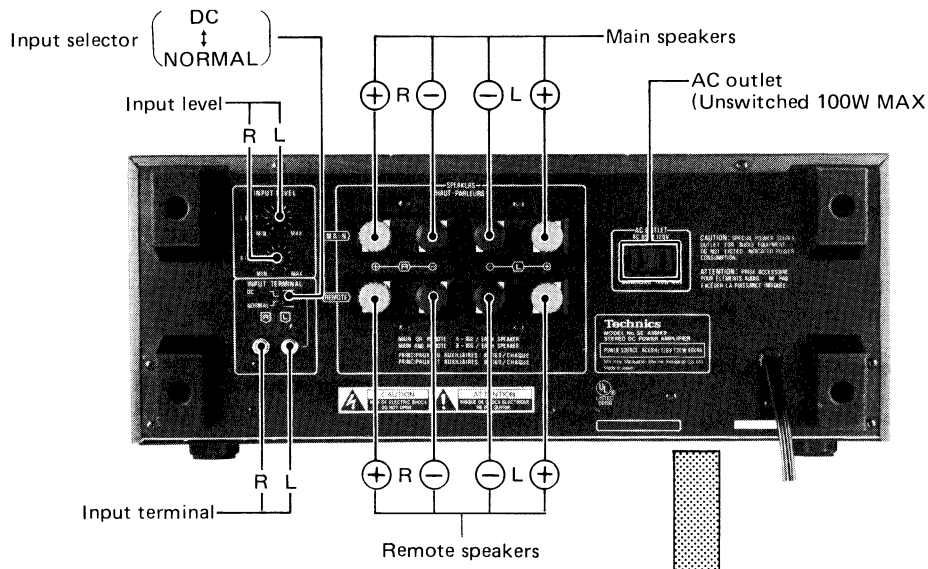
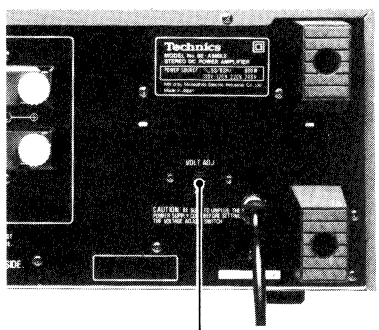
[M] area

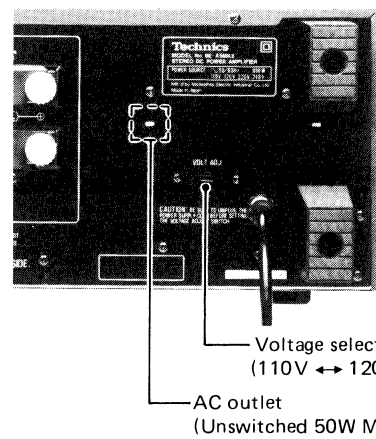


Change

For [D],[EW],[EK],[EF],[XL], [Ei],[EH],[EB] and [EGA] areas.



For [XA],[PA],[PC] and [PE] areas.



■ MESSUNGEN UND JUSTIERUNGEN

1. Leerlauf-(ICQ)-Justierung (nach Reparatur des Hauptverstärkers) [Abb. 7]

(1) Nach erfolgter Reparatur ist der Lautstärkeregler auf Maximum einzustellen, bevor der Netzschalter eingeschaltet wird, und an die Lautstrecher-Ausgangsanschlüsse ist nichts anzuschließen.

(2) Die ICQ-regler (VR301, VR302) entgegen dem Uhrzeigersinn drehen.

(3) Die dem Verstärker zugeführte Spannung allmählich von 0V mittels eines Stromversorgungs-Spannungsreglers erhöhen und überprüfen, daß der in der Abbildung auf Seite 4 gezeigte Wert eingehalten wird, bevor mit der Justierung begonnen wird.

(4) Das elektronische Gleichstrom-Voltmeter an **TP301** (+) und **TP303** (–) (L. Kanal) order **TP302** (+) und **TP304** (–) (R. Kanal) anschließen.

(5) VR301 (L. Kanal) order VR302 (R. Kanal) so justieren, daß die Spannung ca. 15 Sekunden nach Einschalten des Natzschalters 4mV beträgt.

In diesem Gerät wird ICQ durch einen Mikrocomputer geregelt, und ICQ von etwas mehr als dem normalen Pegel wird durch "PREHEAT" ca. 15 Sekunden lang nach Einschalten der Stromzufuhr angelegt. Danach werden der Ausgangspegel und die Transistortemperatur durch "Auto" erfaßt, wodurch ICQ automatisch geregelt wird.

2. Pegeljustierung des Spitzenleistungsmeters (nach Reparatur der Meterverstärkungs-Schaltung oder Auswechseln des Spitzenleistungsmeters)

(1) Den Eingangspegelregler in die Maximum-Position stellen.
(2) Einen Blindwiderstand von 8 Ohm oder einen Lautsprecher von 8 Ohm Impedanz und ein Wechselstrom-Voltmeter an den Lautsprecheranschluß anschließen.
(3) Ein 1kHz-Sinuswellensignal an den AUX/CD/VIDEO-Anschluß einspeisen und die Eingangsleistung so regeln, daß die Ausgangsleistung am Lautsprecheranschluß 28,3V beträgt.
(4) Beide Kanäle mit VR101 (L. Kanal) und VR102 (R. Kanal) so abgleichen, daß das Meter 100W anzeigt.

3. Prüfen der Stummschaltung während Ein- und Ausschalten der Stromzufuhr

(1) Eine 8 Ohm-Last und das Wechselstrom-Voltmeter an den Lautsprecheranschluß anschließeb.
(2) Den Eingangspegelregler in die Maximum-Position stellen.
(3) Ein Sinuswellensignal von 1kHz, 0,5V an den Lautsprecheranschluß einspeisen.
(4) Überprüfen, ob die Ausgangsleistung ca. 3 ~5 Sekunden nach Einschalten des Netzschalters ausgegeben wird.
(5) Die Ausgangsleistung sollte beim Ausschalten des Netzschalters sofort verschwinden.

4. Prüfen der Gleichstrom-Detektionsschaltung

(1) Den Eingangspegelschalter in die Maximum-Position stellen.
(2) Gleichspannung +1V (an L. Kanal) und −1V (an R. Kanal an den Gleichstrom-Eingangsanschluß anlegen.
(3) Überprüfen, daß
- das Relais ausgeschaltet ist.
- die "auto"-Anzeige erlöscht.
- die "safety operation"-Anzeige blinkt.

5. Prüfen der Überlast-Detektions- und Schutzschaltung

(1) Eine 8 Ohm-Last (Widerstand oder Lautsprecher) und Wechselstrom-Voltmeter an den Hauptlautsprecher-Anschluß anschließen.
(2) Den Hauptlautsprecher-Wahlschalter in die "on"-Position stellen.
(3) Einen 0,33 Ohm-Widerstand (5W) and den Nebenlautsprecher-Anschluß anschließen.
(4) Ausgangssignal von ca. 5V (1kHz) an den Eingangsanschluß eingeben.
(5) Überprüfen, daß keine Ausgangsleistung ausgegeben wird, wenn der Nabenlautsprecher-Schalter auf "on" gestellt wird.

Wenn die Schutzschaltung aktiviert wird, funktioniert das Gerät erst wieder nach Aus- und Wiedereinschalten der Stromzufuhr.

■ MESURAGES ET RÉGLAGES

1. Réglage de la marche à vide (ICQ) (après réparation de l'amplif. principal) [Fig. 7]

(1) Après la réparation, régler le volume sonore au maximum avant de mettre en circuit le commutateur d'alimentation, et ne rien raccorder aux bornes des haut-parleurs.
(2) Tourner complètement la commande ICQ (VR301, VR302) dans le sens inverse des aiguilles d'une montre.
(3) Augmenter peu à peu la tension appliquée à l'amplificateur à partir de 0V au moyen d'un contrôleur de tension d'alimentation en courant et s'assurer de la valeur indiquée à la Figure de la page 4 avant de commencer le réglage.
(4) Raccorder le voltmètre électronique à C.C. à TP301 (+) et à TP303 (−) (Canal de gauche) ou à TP302 (+) et à TP304 (−) (Canal de droite).
(5) Ajuster VR301 (Canal de gauche) ou VR302 (Canal de droite) de telle sorte que la tension soit de 4mV à peu près 15 secondes après avoir mis en circuit ("on") le commutateur d'alimentation.

Dans cet appareil, ICQ est contrôlé par un micro-ordinateur, et ICQ légèrement plus élevé que le niveau normal est appliqué par "PRECHAUFFAGE" pendant à peu près 15 secondes après la mise sous tension. Après cela, le niveau de sortie et la température du transistor sont détectés par "AUTO", contrôlant automatiquement de ce fait ICQ.

2. Réglage du niveau du mesureur de puissance de crête (après la réparation du circuit de l'amplificateur du mesureur ou le remplacement du mesureur de puissance de crête).

(1) Régler l'ajustement du niveau d'entrée sur la position maximale.
(2) Raccorder une résistance fictive de 8Ω ou un haut-parleur d'une impédance de 8Ω et un voltmètre à C.A. à la borne du haut-parleur.
(3) Appliquer une onde sinusoïdale de 1kHz à la borne AUX/CD/VIDEO et régler l'entrée de telle sorte que la puissance de sortie à la borne du haut-parleur soit de 28,3V.
(4) Ajuster à la fois les canaux de VR101 (Canal de gauche) et de VR102 (Canal de droite) de telle sorte que l'indication du mesureur soit de 100W.

3. Vérification du circuit d'accord silencieux pendant le fonctionnement de la "mise en circuit" — "hors circuit" de l'énergie.

(1) Raccorder une charge de 8Ω et un voltmètre à C.A. à la borne du haut-parleur.
(2) Régler l'ajustement du niveau d'entrée à la position maximale.
(3) Appliquer une onde sinusoïdale de 1kHz de 0,5V à la borne du haut-parleur.
(4) S'assurer que la puissance de sortie soit délivrée à peu près 3 ~ 5 secondes après la mise en circuit ("on") de l'interrupteur d'alimentation.
(5) La puissance de sortie devra immédiatement se modifier lorsque l'interrupteur d'alimentation est tourné sur la "mise hors circuit ("off").

4. Vérification du circuit de détection à C.C.

(1) Régler l'ajustement du niveau d'entrée sur la position maximale.
(2) Appliquer une tension C.C. de +1V (au canal gauche) et de −1V (au canal droit) à la borne d'entrée à C.C.
(3) S'assurer que
- le relais soit hors circuit.
- la "mise en circuit" de l'indicateur "auto" s'éteigne.
- l'indicateur du "fonctionnement de sécurité" clignote.

5. Vérification de la détection de surcharge et du circuit de protection.

(1) Raccorder 8Ω (résistance ou haut-parleur) et un voltmètre à C.C. à la borne du haut-parleur principal.
(2) Le sélecteur du haut-parleur principal est sur la position de "mise en circuit" ("on").
(3) Raccorder une résistance de 0,33Ω (5W) à la borne du hautparleur auxiliaire.
(4) Appliquer un signal de sortie d'environ 5V à 1kHz à la borne d'entrée.
(5) S'assurer qu'aucune puissance de sortie ne soit délivrée lorsque le commutateur du haut-parleur auxiliaire est réglé sur "on" (mise en circuit).

Lorsque l'ensemble des circuits de protection fonctionne, l'appareil ne se mettra pas en marche à moins que l'énergie ne soit d'abord mise hors circuit puis remise à nouveau en circuit.

■ MEDICIONES Y AJUSTE

1. Ajuste de marcha en vacío (ICQ) (Después de reparar el amplificador principal.) [Fig. 7]

(1) Después de la reparación, ponga el volumen de sonido en máximo antes de conectar el interruptor de corriente, y no conecte nada a los terminales de altavoz.
(2) Gire completamente el control ICQ (VR301, VR302) a la izquierda.
(3) Aumente el voltaje aplicado al amplificador gradualmente dese 0V por medio del controlador de voltaje de suministro de energía, y asegúrese del valor en la Figura de la página 4 antes de comenzar el ajuste.
(4) Conecte el voltímetro electrónico de CC a TP301 (+) y TP303 (−) (Ch. I) o TP302 (+) y TP304 (−) (Ch. D).
(5) Ajuste VR301 (Ch. I) o VR302 (Ch. D) de manera que el voltaje sea 4mV unos 15 seg. después de poner en "on" (conectado) el interruptor de alimentación.

En este aparato, ICQ es controlado mediante microcomputador, y ICQ, un poco más del nivel normal, es aplicado "PRECALENTAMIENTO" por unos 15 seg. después de conectar. Después de eso, el nivel de salida y temperatura de transistor son detectados mediante "AUTO", por lo cual controlando automáticamente ICQ.

2. Ajuste de nivel de medidor de potencia de cresta (después de reparar el circuito de amp. de medidor o reemplazar el medidor de potencia de cresta.)

(1) Ponga el ajuste de nivel de entrada en la posición máxima.
(2) Conecte un resistor ficticio de 8Ω o un altavoz de impedancia de 8Ω y voltímetro CA al terminal de altavoz.
(3) Aplique onda sinusoidal al terminal AUX/CC/VIDEO y ajuste la entrada de manera que la salida a la terminal de altavoz sea 28,3V.
(4) Ajuste ambos canales de VR101 (Ch. I) y VR102 (Ch. D) de manera que la indicación del medidor sea 100W.

3. Comprobación de circuito silenciador durante operación de "conexión" — "desconexión" de corriente.

(1) Conecte una carga de 8Ω y un voltímetro de CA al terminal de altavoz.
(2) Ponga el ajuste de nivel de entrada en la posición máxima.
(3) Aplique onda sinusoidal de 1kHz, 0,5V al terminal de altavos.
(4) Asegúrese de que la salida es suministrada unos 3 ~ 5 seg. después de poner en "on" (conectado) el interruptor de alimentación.
(5) Salida debe desparecer inmediatamente cuando se pone en "off" (desconectado) el interruptor de alimentación.

4. Comprobación de circuito de detección de CC

(1) Ponga el ajuste de nivel de entrada en la posición máxima.
(2) Aplique voltaje CC + 1V (a Ch. I), −1V (a Ch. D) al terminal de entrada de CC.
(3) Asegúrese de que
- el relé está en "off".
- indicador "auto" "on" se apaga.
- ilndicador de "operación segura" parpadea.

5. Comprobación de detección de sobrecarga y circuito de protección

(1) Conecte 8Ω (resistor o altavoz) y voltímetro CA al terminal de altavoz principal.
(2) Selector de altavoz principal está en posición "on".
(3) Conecte resistor de 0,33Ω (5W) al terminal de altavoz remoto.
(4) Aplique señal de salida de unos 5V a 1kHz a terminal de entrada.
(5) Asegúrese de que no se suministra salida cuando el interruptor de altavoz remote es peusto en "on".

Cuando la circuitería de protección funciona, la unidad no operará a no ser que primero se desonecte la corriente y luego se conecte de nuevo.

CHANGE

■ CHANGE OF THE REPLACEMENT PARTS LIST

Notes: 1. part numbers are indicated on most mechanical parts. Please use this part number for parts orders.
2. Important safety notice: Components identified by ⚠ mark have special characteristics important for safety. When replacing any of these components use only manufacturer's specified parts.
3. The " Ⓢ " mark is service standard parts and differ from production parts.

■ REPLACEMENT PARTS LIST

Notes:

1. Part numbers are indicated on most mechanical parts. Please use this part number for parts orders.
2. Important safety notice: Components identified by ⚠ mark have special characteristics important for safety. When replacing any of these components use only manufacturer's specified parts.
3. Bracketed indications in Ref. No. columns specify the area. Parts without these indicators can be used for all areas.
4. The " Ⓢ " mark is service standard parts and may differ from production parts.
5. The parenthesized numbers in the column of description stand for the quantity per set.

Areas

* [D] is available in Scandinavia.
* [EW] is available in Switzerland.
* [EK] is available in United Kingdom.
* [EF] is available in France.
* [XA] is available in Southeast Asia, Oceania, Africa, Middle Near East and Central South America.
* [PE] is available in European Military.
* [PA] is available in Far East PX.
* [XL] is available in Australia.
* [Ei] is available in Italy.
* [EH] is available in Holland.
* [EB] is available in Belgium.
* [PC] is available in European Audio Club.
* [EGA] is available in Germany.

* [MC] is available in Canada.

Specifications

Specifications are subject to change without notice for further improvement.
Weights and dimensions shown are approximate.

(IHF '78)

■ AMPLIFIER SECTION

Rated minimum sine wave RMS power output
20 Hz~20 kHz both channels driven
0.002% total harmonic distortion
150W per channel (8 ohms)
20 Hz~20 kHz both channels driven
0.002% total harmonic distortion
150W per channel (4 ohms)

1 kHz continuous power output	
both channels driven	
0.002% total harmonic distortion	150W per channel (8 ohms)
0.002% total harmonic distortion	150W per channel (4 ohms)
Dynamic headroom	1.5 dB (8 ohms)
	3.6 dB (4 ohms)
Total harmonic distortion	
rated power at 20 Hz~20 kHz	0.002% (8/4 ohms)
half power at 20 Hz~20 kHz	0.001% (8 ohms)
half power at 1 kHz	0.0005% (8 ohms)
Power bandwidth	
both channels driven, −3 dB T.H.D. 0.01%	5 Hz~100 kHz (8 ohms)
Transient intermodulation distortion	unmeasurably small
SMPTE intermodulation distortion	0.002% (8 ohms)
Frequency response	
	DC~20 kHz (+0 dB, −0.1 dB)
	DC~150 kHz (+0 dB, −3 dB)
Input sensitivity	90 mV (1V, IHF '66)
S/N (IHF, A)	102 dB (121 dB, IHF '66)
Residual hum and noise	0.13 mV
Input impedance	47 kilohms
Low frequency damping factor	100 (8 ohms)
	50 (4 ohms)
Load impedance	
MAIN or REMOTE	4~16 ohms
MAIN and REMOTE	8~16 ohms
Meter	
reading range	0.0001W~300W
	−60 dB ~+5 dB
	(logarithmic compression)
frequency response (reading accuracy)	
	20 Hz~20 kHz ±2 dB (more than −50 dB)
	20 Hz~20 kHz ±3 dB (less than −50 dB)

■ GENERAL

Power consumption	720W, 900 VA
Power supply	AC 120V, 60 Hz
Dimensions (W×H×D)	430 × 178 × 416 mm
	(16-15/16" × 7" × 16-3/8")
Weight	18.4 kg
	(40.61 lb.)

Note:
Total harmonic distortion is measured by the digital spectrum analyzer (H.P. 3045 system).

SE-A5MK2

■ CONTENTS

■ FEATURE

- Power as high as 150W + 150W (8Ω/4Ω, 20Hz ~ 20kHz) suitable for the digital audio age.
- Technics original circuit — new class A system that has eliminated both switching and crossover distortions.
- Computer drive circuit that has eliminated transient crossover distortion in playback of music.
- Linear feedback circuit that has completely eliminated theoretical value distortion.
- Power linear circuit that does not allow distortion caused by change in speaker impedance.
- Dual-line speaker terminals that allow the comparison of sounds by one-push operation.
- Dual-line input terminals DC-Normal.

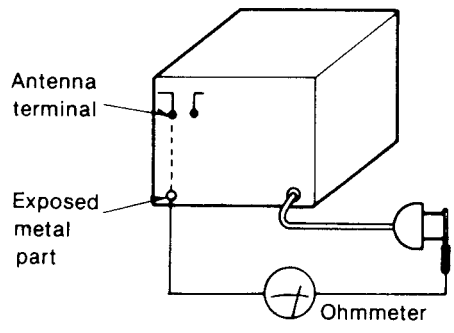
■ SAFETY PRECAUTION

1. Before servicing, unplug the power cord to prevent an electric shock.
2. When replacing parts, use only manufacturer's recommended components for safety.
3. Check the condition of the power cord. Replace if wear or damage is evident.
4. After servicing, be sure to restore the lead dress, insulation barriers, insulation papers, shields, etc.
5. Before returning the serviced equipment to the customer, be sure to make the following insulation resistance test to prevent the customer from being exposed to a shock hazard.

• INSULATION RESISTANCE TEST

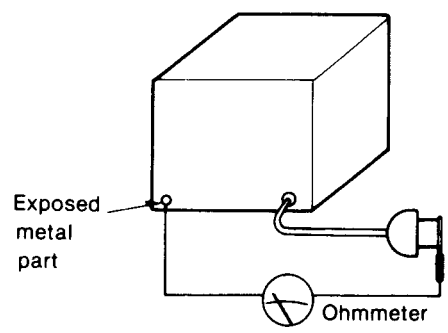
1. Unplug the power cord and short the two prongs of the plug with a jumper wire.
2. Turn on the power switch.
3. Measure the resistance value with ohmmeter between the jumpered AC plug and each exposed metal cabinet part, such as screwheads antenna, control shafts, handle brackets, etc. Equipment with antenna terminals should read between 3MΩ and 5.2MΩ to all exposed parts. (Fig. A) Equipment without antenna terminals should read approximately infinity to all exposed parts. (Fig. B)

Note: Some exposed parts may be isolated from the chassis by design. These will read infinity.



(Fig. A)

Resistance = 3MΩ—5.2MΩ



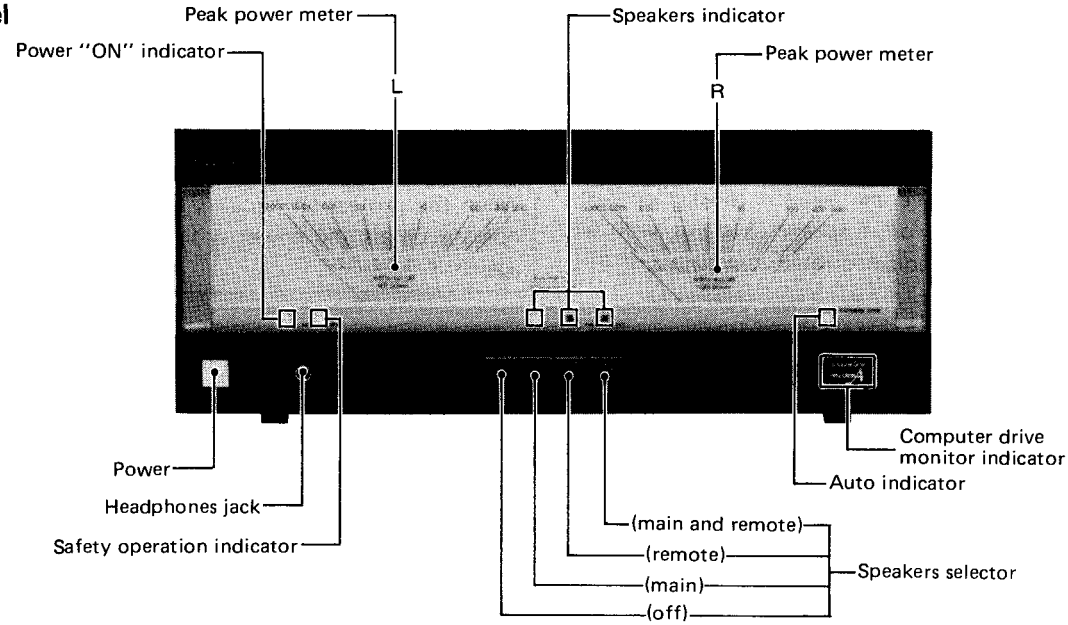
(Fig. B)

Resistance = Approx ∞

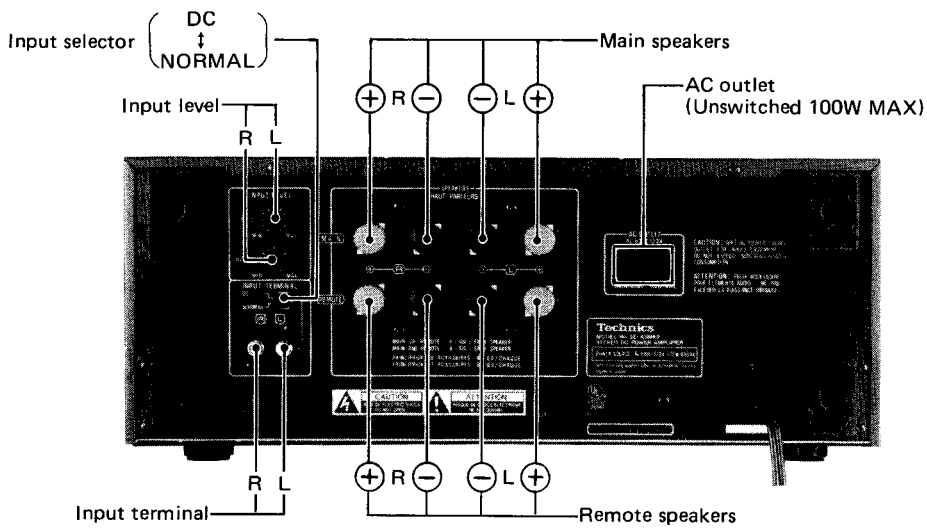
4. If the measurement is outside the specified limits, there is a possibility of a shock hazard. The equipment should be repaired and rechecked before it is returned to the customer.

■ LOCATION OF CONTROLS

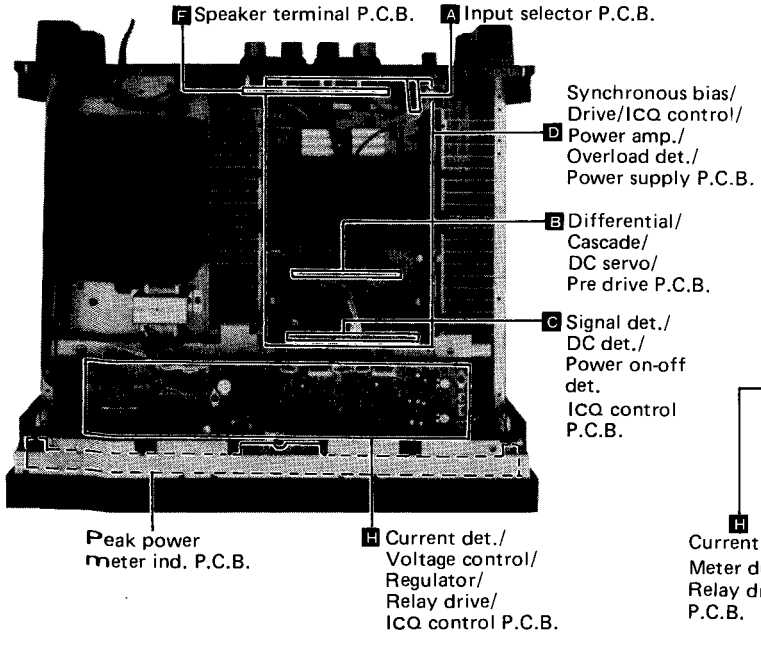
• Front panel



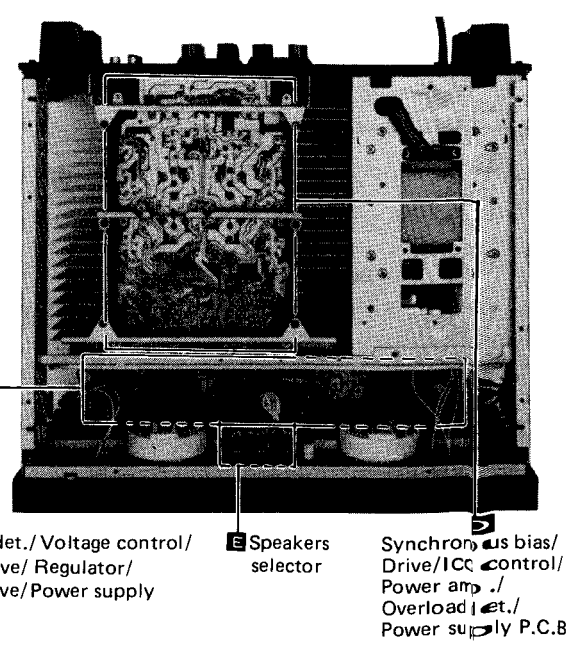
• Rear panel



• Top view



• Bottom view



• Phono input capacitance is about 150pF.

■ PROTECTION CIRCUITRY

The protection circuitry may have operated if either of the following conditions is noticed:

- No sound is heard when the power is turned on.
- Sound stops during a performance.

The function of this circuitry is to prevent circuitry damage if, for example, the positive and negative speaker connection wires are "shorted", or if speaker systems with an impedance less than the indicated rated impedance of this unit are used.

If this occurs, follow the procedure outlines below:

1. Turn off the power.
2. Determine the cause of the problem and correct it.
3. Turn on the power once again after one minute.

Note

When the protection circuitry functions, the unit will not operate unless the power is first turned off and then on again.

■ BEFORE REPAIR AND ADJUSTMENT

1. Turn off the power supply and short-circuit of power supply capacitors (C401 ~ C404, 8200μF) at resistance (about 10Ω, 5W) in order to discharge the charged voltage. Do not short between C401 ~ C404 by screwdriver. It may damage the component.
2. Before turning on the power supply after completion of repair, slowly apply the primary voltage by using a power supply voltage controller to make sure that the consumed current at 120V, 60Hz in no-signal mode is 360mA ~ 820mA.

■ DISASSEMBLY INSTRUCTIONS

• How to remove the cabinet

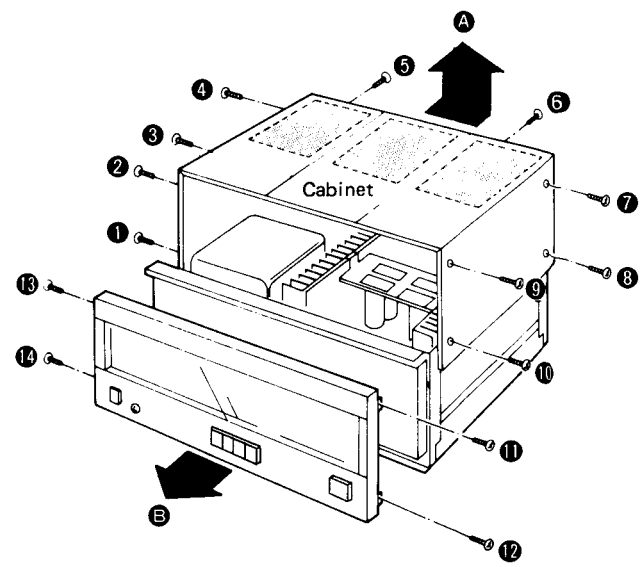
1. Remove the 10 setscrews (Fig. 1: ❶ ~ ⑩) of the cabinet.
2. Remove the cabinet in the direction of the arrow Ⓐ in Fig. 1.

• How to remove the front panel

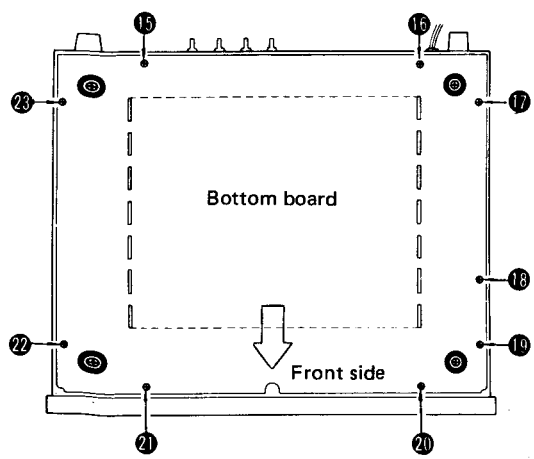
1. Remove the 4 setscrews (Fig. 1: ⑪ ~ ⑭) of the front panel.
2. Remove the front panel in the direction of the arrow Ⓑ in Fig. 1.

• How to remove the bottom board

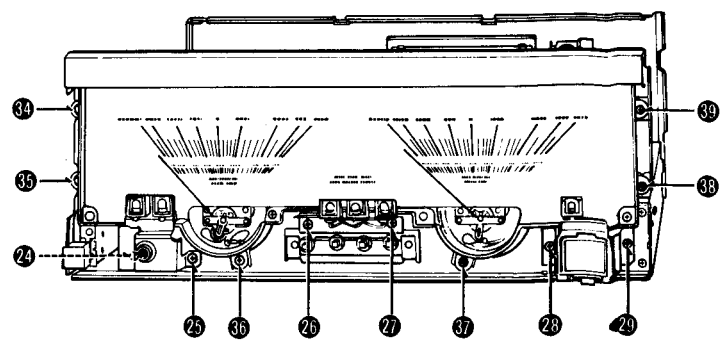
1. Remove the 9 setscrews (Fig. 2: ⑮ ~ ㉓) of the bottom board.



[Fig. 1]



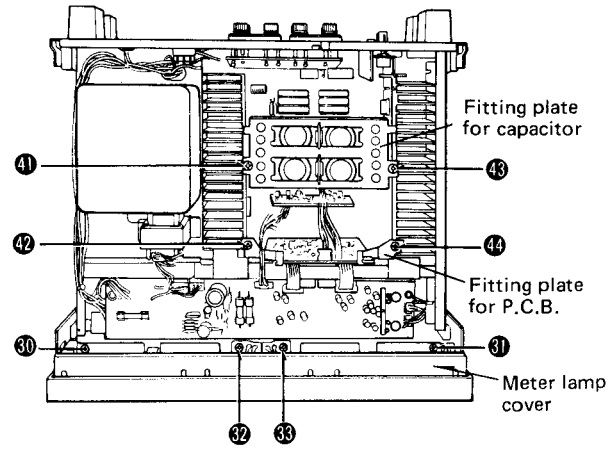
[Fig. 2]



[Fig. 3]

• How to remove the peak power meter

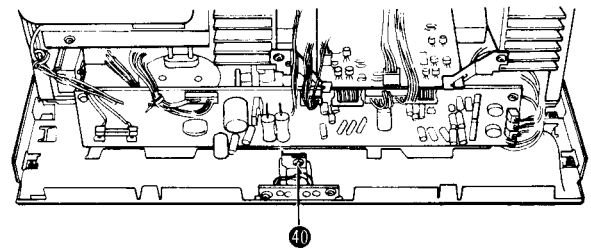
1. Remove the cabinet and front panel.
2. Remove the 6 setscrews (Fig. 3: ㉔ ~ ㉙), and then detuch the headphones jack, speakers indicator and computer drive indicator bracket from the chassis.
3. Remove the 2 setscrews (Fig. 4: ㉚ , ㉛) and then detuch the meter cover.
4. Remove the 2 setscrews (Fig. 4: ㉜ , ㉝) of the detuch the meter lamp P.C.B.
5. Remove the 6 setscrews (Fig. 3: ㉞ ~ ㉟) of the peak power meter.
6. Remove the 1 setscrew (Fig. 5: ㊵) and then detuch the peak power meter.



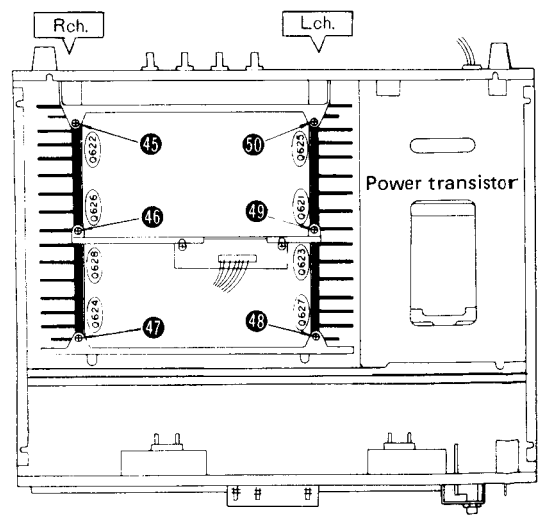
[Fig. 4]

• How to remove the power transistor

1. Remove the cabinet and bottom board.
2. Remove the 4 setscrews (Fig. 4: ㊶ ~ ㊹) and the detuch the fitting plate.
3. Unsolder of power transistor. (R or L channel) [Fig. 6]
4. Remove the 3 setscrews (Fig. 6: ㊺ ~ ㊼ or ㊽ ~ ㊿) of the heat sink.
5. Remove the heat sink and power transistor.
6. When fitting it, apply silicone compound (**SZZ0L15**) to both sides of mica plate. Also apply silicone compound (**SZZ0L15**) to the heads of temperature compensation/ bias control transistors (**Q337, 338**) and thermistor (**TH501**), then fit them to the heat sink with the retaining plate.



[Fig. 5]



[Fig. 6]

■ MEASUREMENTS AND ADJUSTMENTS

1. Idling (I_{CQ}) Adjustment (after reparing the main amp.) [Fig. 7]

(1) After the repair, set the sound volume to maximal before turning on the power switch, and connect nothing to the speaker terminals.
(2) Completely turn I_{CQ} control (VR301, VR302) counter-clockwise.
(3) Increase the voltage applied to the amplifier gradually from 0V by means of a power supply voltage controller, and make sure of the value in the Figure on page 4 before starting the adjustment.
(4) Connect the DC electronic voltmeter to TP301 (+) and TP303 (−) (L ch) or TP302 (+) and TP304 (−) (R ch).
(5) Adjust VR301 (L ch) or VR302 (R ch) so that the voltage is 4mV about 15 sec. after power switch "on".

In this set, I_{CQ} is controlled by microcomputer, and I_{CQ} a little more than the normal level is applied by "PREHEAT" for about 15 sec. after power ON. After that, the output level and transistor temperature are detected by "AUTO", thereby automatically controlling I_{CQ}.

2. Peak Power Meter Level Adjustment (after reparing the meter amp circuit or replacing the peak power meter.)

(1) Set the input level adjustment to the maximal position.
(2) Connect a dummy resistor of 8Ω or a speaker of 8Ω impedance and AC voltmeter to the speaker terminal.
(3) Apply 1kHz sine wave to the AUX/CD/VIDEO terminal and adjust the input so that the output to the speaker terminal is 28.3V.
(4) Adjust both channels of VR101 (L ch) and VR102 (R ch) so that the meter indicating is 100W.

3. Check of Muting Circuit During Power "on"–"off" Operation.

(1) Connect 8Ω load and AC voltmeter to the speaker terminal.
(2) Set the input level adjustment to the maximal position.
(3) Apply 1kHz sine wave, 0.5V to the speaker terminal.
(4) Make sure that output is delivered about 3 ~ 5 sec. after turning the power switch "on".
(5) Output should Immediately be gone when power switch is turned "off".

4. Check of DC Detection Circuit

(1) Set the input level adjustment to the maximal position.
(2) Apply DC voltage +1V (to L ch), −1V (to R ch) to the DC input terminal.
(3) Make sure
- relay is off.
- "auto" indicator "on" goes out.
- "safety operation" indicator blinks.

5. Check of Overload Detection and Protection Circuit

(1) Connect 8Ω (resistor or speaker) and AC voltmeter to the main speaker terminal.
(2) Main speaker selector is "on" position.
(3) Connect 0.33Ω (5W) resistor to the remote speaker terminal.
(4) Apply output signal of about 5V at 1kHz to input terminal.
(5) Make sure that no output is delivered when remote speaker switch is set to "on".

When the protection circuitry functions, the unit will not operate unless the power is first turned off and then on again.

■ RESISTORS & CAPACITORS

Notes:
1. Part numbers are indicated on most mechanical parts. Please use this part number for parts orders.
2. Important safety notice: Components identified by ⚠ mark have special characteristics important for safety. When replacing any of these components use only manufacturer's specified parts.
3. The "Ⓢ" mark is service standard parts and may differ from production parts.
4. The unit of resistance is Ω(ohm), K = 1000Ω, M = 1000kΩ.
5. The unit of capacitance is μF (microfarad). P = 10^{-6} μF
6. Bracketed indications in Ref. No. columns specify the area. Parts without these indications can be used for all areas.

Resistor Type	Wattage	Tolerance
ERD : Carbon	10 : 1/8W	J : ±5%
ERG : Metal Oxide	25 : 1/4W	G : ±5%
ERO : Metal Film	2 : 2W

■ TERMINAL NAMES AND FUNCTION OF ICQ CONTROL (MN1404STE)

No.	Symbol	Name of block	Description of terminal
1	VSS	Power supply input terminal	Grounded. (0V)
2	A13	Input port A	Temperature detection circuit. When 60°C (140°F) sensor of power amplifier operates, "H" is put in causing the outputs of terminals 14 ~ 16 to go "H".
3	A12		When effective output 5V signal sensor of L-ch power amplifier operates, "L" is put in causing the output of terminal 14 to go "H".
4	A11		When effective output 2V signal sensors of both-ch power amplifiers operate, "L" is put in causing the output of terminal 15 to go "H".
5	A10		When effective output 5V signal sensor of R-ch power amplifier operates, "L" is put in causing the output of terminal 16 to go "H".
6	TST	Test input terminal	Terminal for testing LSI. (Ground)
7	$\overline{RST}$	Reset input terminal	All outputs are cleared or reset with input at "L". (It is connected to power supply circuit)
8	SNSO	Sensor input terminal	When overload detection circuit of power amplifier output operates, "H" is put in causing the output of terminal 12 to go "L".
9	VDD	Power supply input terminal	Apply 5V.
10	OSC	OSC input terminal	Clock signal (about 415kHz) can be obtained by internal oscillation circuit.
11	CO5	Output port C	When protection circuit operates, "H" and "L" outputs are repeated and "safety operation" indicator blinks.
12	CO4		Output relay and meter relay turn ON with "H" output.
13	CO3		Indicator "auto" lights up at "H".
14	CO2		ICQ control signal is emitted from A input port (temp. sensor, signal sensor). ("H" output)

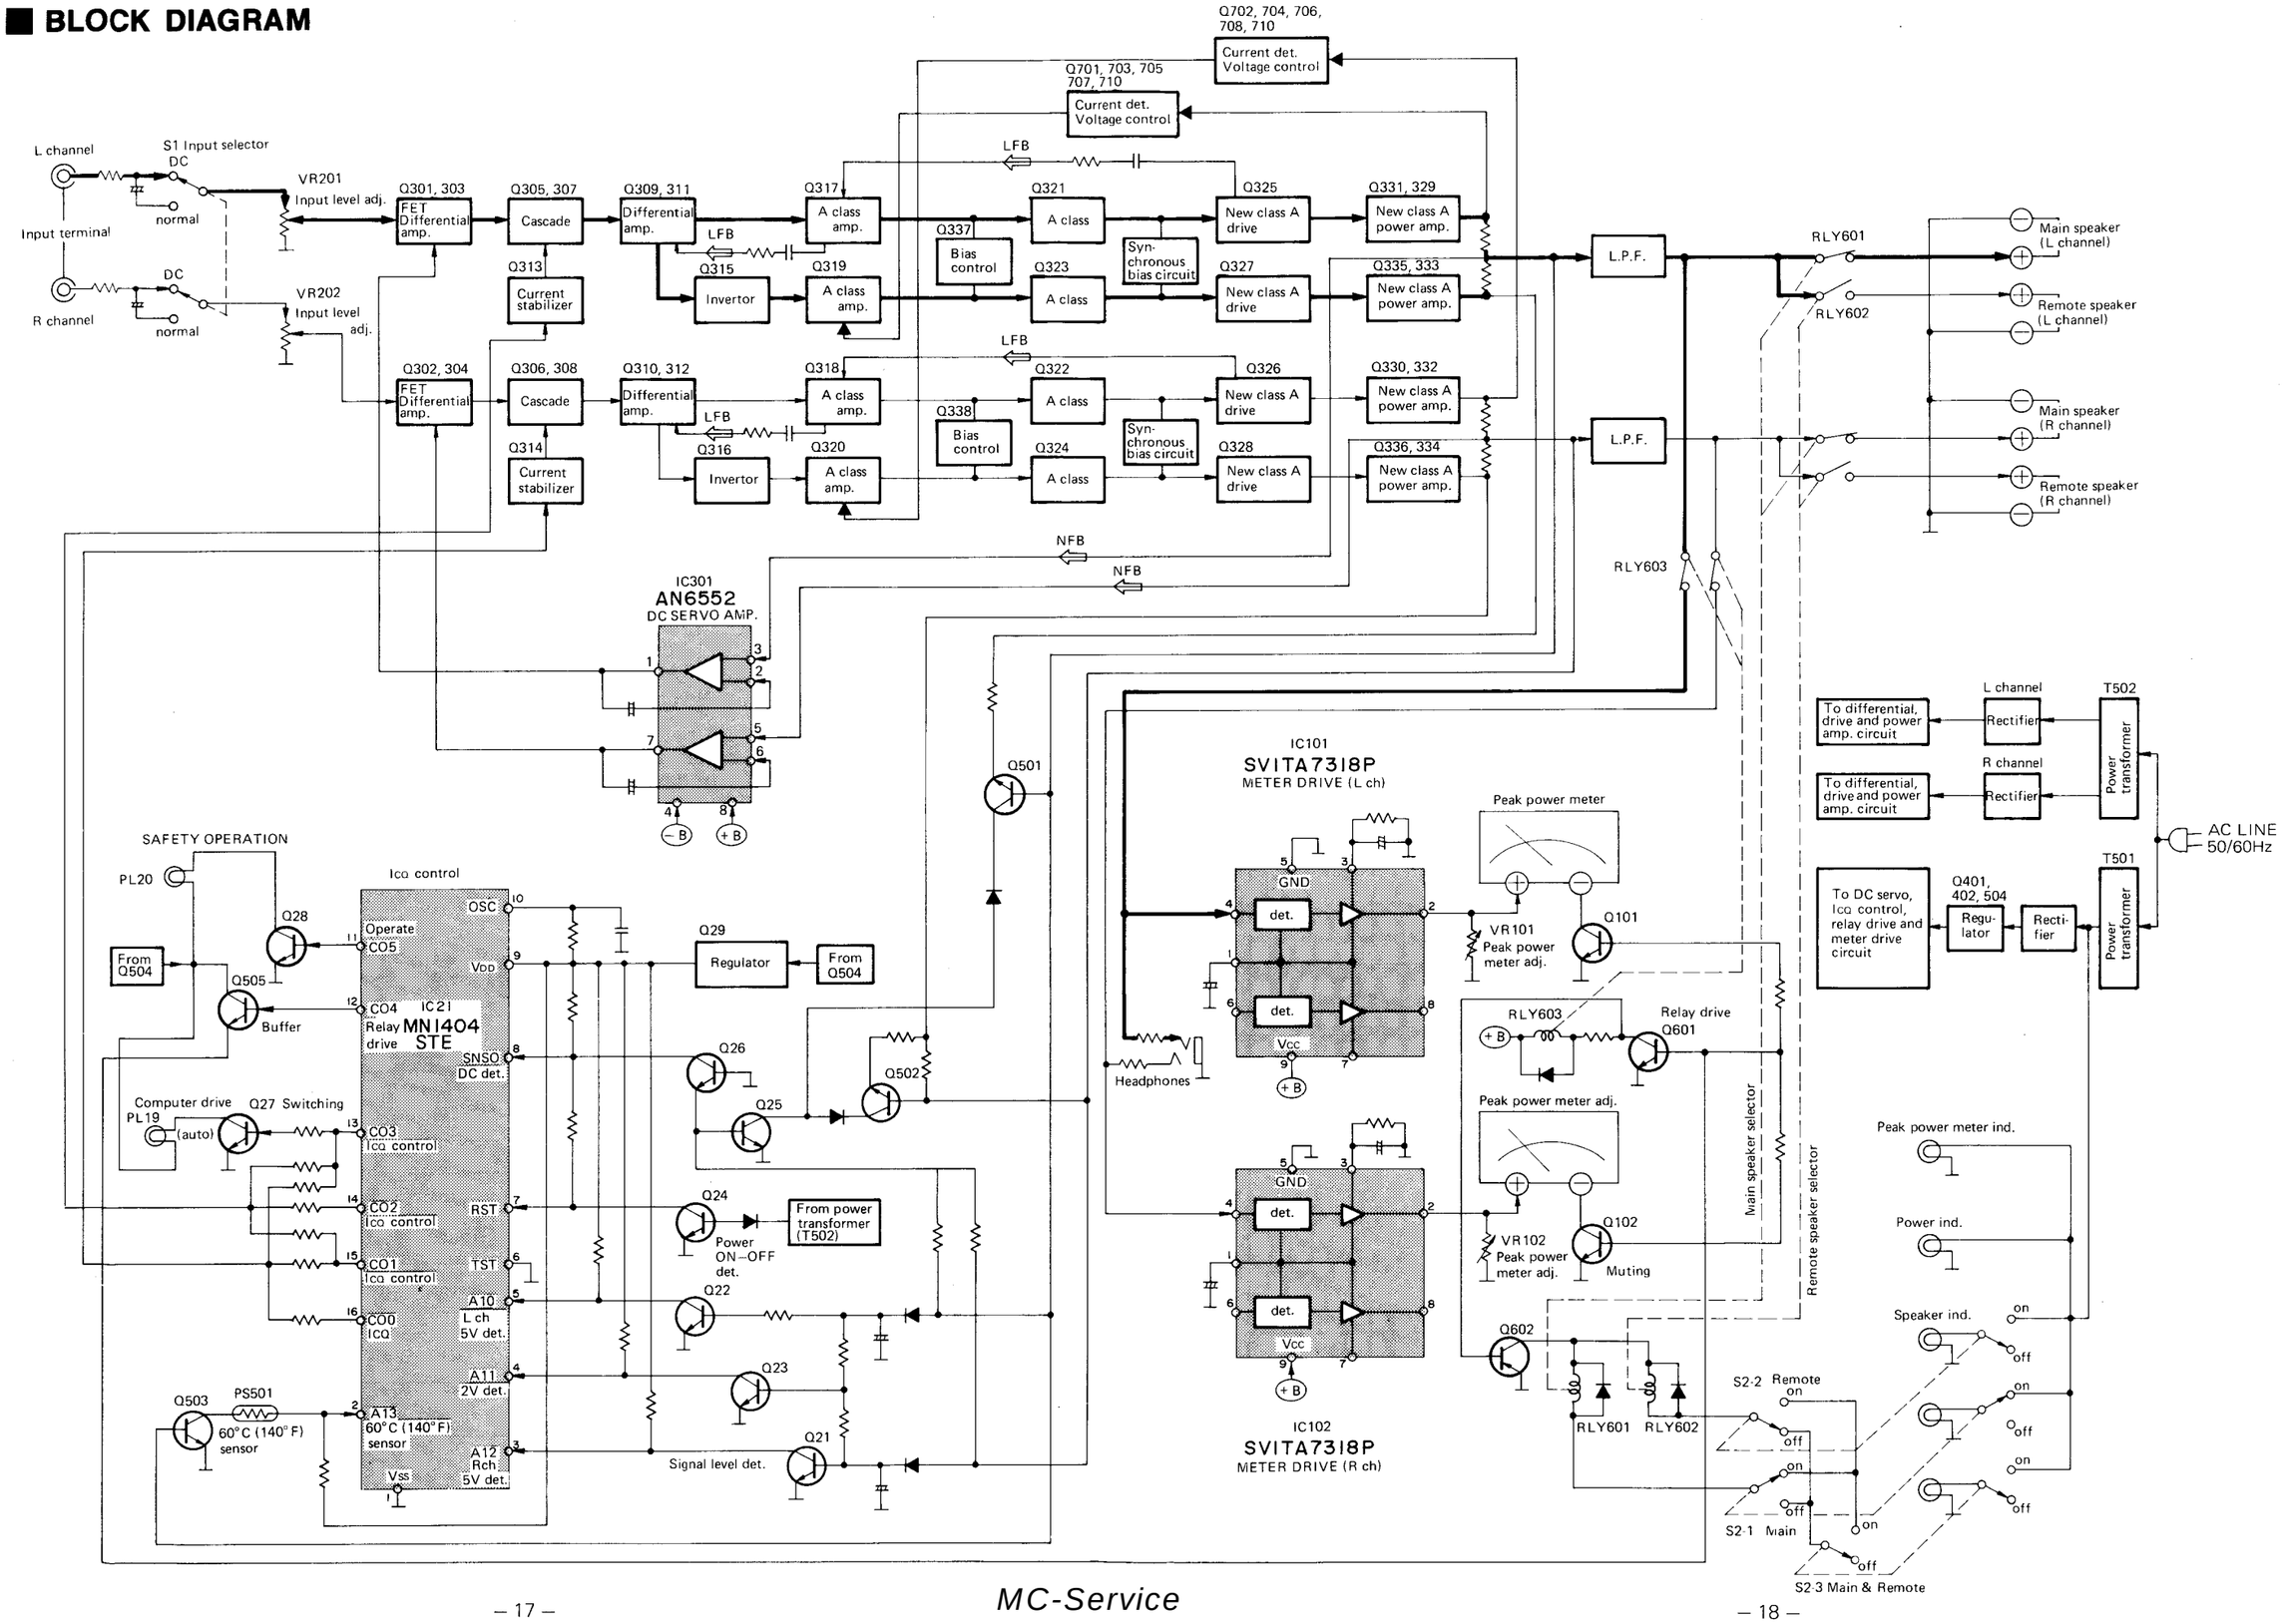
■ BLOCK DIAGRAM



■ DESCRIPTION OF Icq CONTROL CIRCUIT

- **Signal and temperature detection (See Fig. 9.)**

1. Music signal of power amplifier is applied to IC21 terminal ③ (⑤) of D21 (D22) and Q21 (Q22). When the signal rectified by D21 (D22) and C21 (C22) exceeds about 5V, Q21 (Q22) turns "on" causing "L" input to be applied to IC21 terminal ③ (⑤). Also, when the signal is over 2V, Q23 turns "on" causing "L" put to be applied to IC21 terminal ④ . As "L" is put into IC21 terminals ③ ~ ⑤ , the outputs of terminals ⑭ ~ ⑯ go "H" to make Icq control.
2. PS501 is the thermistor (positor) for heat sink temperature detection which detects the temperature [60°C (140°F)] of the heat sink. When the heat sink temperature becomes [60°C (140°F)] , the resistance of PS501 increases causing "H" input to be applied to IC21 terminal ② . As "H" is put into IC21 terminal ② , the outputs of IC21 terminals ⑭ ~ ⑯ go "H" to make Icq control.

- **Overload detection circuit (See Fig. 9.)**

When speaker terminals are shorted, great current flows to R503 (R504) causing the base potential of Q501 (Q502) (overload detection circuit) to increase, then the base voltage of Q501 (Q502) rises and Q501 (Q502) turns "on". With Q501 (Q502) turned ON, both Q25 and Q26 turn "on" causing "L" input to be applied to IC21 terminal ⑧ . Then, "L" output is applied to IC21 terminals ⑫ and ⑬ . As terminal ⑫ goes "L", Q501, Q601 and Q602 turn "off" causing RLY601 ~ 603 to turn "off". When terminal ⑬ goes "L", Q27 turns "off" causing "auto" indicator to turn "off". Also, "H" and "L" outputs are delivered from terminal ⑪ at 0.1 sec. intervals, then the "safety operation" indicator blinks.

■ CURRENT DETECTION TYPE VOLTAGE CONTROL CIRCUIT

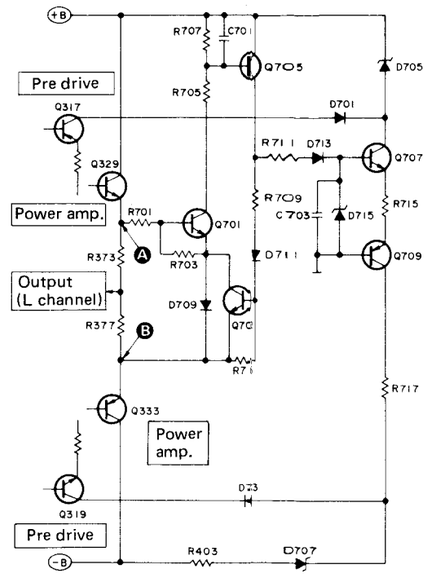
① With 4Ω speaker connected, great current flows to the power transistor, then voltage is generated between Ⓐ – Ⓑ , and Q701 turns "on" when the voltage exceeds V1. **(Note 1)**

② When Q701 turns "on", current flows to R707 and R705, causing Q705 to turn "on".

③ As (+B) voltage comes to the collector of Q705, each of Q703, Q707 and Q709 turns "on", and voltage is applied to D715, D705 and D707, then the collector voltage of pre-drive Q317 and Q319 is controlled to a degree 16V lower than (+B) voltage. Controlling the collector voltage of Q317 and Q319 is intended to control the great current of power transistor.

④ As Q703 is "on", even if the current of power transistor is then reduced, ③ is not reset allowing output control to continue when the voltage between Ⓐ – Ⓑ is higher than V2. **(Note 2)**

⑤ When the voltage between Ⓐ – Ⓑ is lower than V2 **(Note 2)** as the current of power transistor is reduced, then Q701 turns "off" and ③ is reset.



[Note 1] $V1=\frac{R1+R2}{R2}\cdot Vbe + VF$

[Note 2] $V2=\frac{R1+R2}{R2}\cdot Vbe + Vsat$

R1 : Resistance value of R701
R2 : Resistance value of R703
Vbe : Base – emitter voltage to turn Q701 "on"
VF : Forward voltage of Q709
V sat : Collector – emitter saturation voltage of Q701

■ SCHEMATIC DIAGRAM

(This schematic diagram may be modified at any time with the development of new technology.)

- The part No. of transistors, IC and diodes mentioned in the schematic diagram stand for production part No. Regarding the Part No. with ✪ mark, the production part No. are different from the replacement part No. Therefore, when placing an order for replacement parts, pleases use the part No. in the replacement parts list.

Notes:

1. **S1** : Input level selector switch in "**DC**" position. DC ⟷ normal
2. **S2-1 ~ S2-3** : Speaker selector switch in "**main**" position. S2-1: main, S2-2: remote, S2-3: main and remote
3. **S501** : Power switch in "**on**" position.
4. ▭ Indicated voltage values are the standard values for the DC electronic circuit tester (high impedance) with the chassis taken as standard. Therefore, there may exist some errors in the voltage values, depending on the internal impedance of the DC circuit tester.
5. ⟿ Phono signal lines of left channel.
6. ——— Positive (+B) voltage lines or negative (–B) voltage lines.

IMPORTANT SAFETY NOTICE

The shaded area on this schematic diagram incorporates special features important for protection from fire and electrical shock hazards. When servicing it is essential that only manufacturer's specified parts be used for the critical components in the shaded areas of the schematic.

■ REPLACEMENT PARTS LIST .... Cabinet & Chassis Parts

Notes:
1. Part numbers are indicated on most mechanical parts. Please use this part number for parts orders.
2. Important safety notice:
   Components identified by ⚠ mark have special characteristics important for safety.
   When replacing any of these components use only manufacturer's specified parts.
3. The "Ⓢ" mark is service standard parts and many differ from production parts.
4. The parenthesized numbers in the column of description stand for the quantity per set.
5. Bracketed indications in Ref. No. columns specify the areas. Parts without these indications can be used for all areas.

Areas
* [M] is available in the U.S.A.
* [MC] is available in Canada.

Ref. No.	Part No.	Part Name & Description
INTEGRATED CIRCUITS		
IC21	MN1404STE	ICQ Controller
IC101,102	SVITA7318P	Meter Drive
