NOTE:

Refer to the service manual for Model No. SA-EH500 for information on "Accessories", "Connections", "Installation", "Operations" and "Packaging".

■ Location of Controls

- ① EQ SPACE on/flat button (EQ SPACE ON/FLAT)
- ② Display mode select/demonstration button (DISP MODE/-DEMO)
- ③ Display
- ④ DOLBY PRO LOGIC indicators (SURROUND, 3 STEREO, NORMAL, WIDE, PHANTOM)
- ⑤ Multi control buttons (MULTI CONTROL, ►, ▲, ◀, ▼)
- ⑥ Acoustic image EQ button (ACOUSTIC IMAGE EQ)
- ⑦ EQ SPACE preset/manual select button (PRESET/MANUAL)

■ Operation Checks and Main Component Replacement Procedures

NOTE

1. This section describes procedures for checking the operation of the major printed circuit boards and replacing the main components.
2. For reassembly after operation checks or replacement, reverse the respective procedures. Special reassembly procedures are described only when required.

1. Checking for the IN/OUT terminal P.C.B.

2. Checking for the FL P.C.B.

- Follow the **Step 1** ~ **Step 3** of the item 1 in checking for the IN/OUT terminal P.C.B. on page 3.

Step 2

Release the 5 claws, and then remove the FL P.C.B..

- Check the FL P.C.B. as shown below.

■ To Supply Power Source

This unit SH-EH500 is designed to operate on power supplied from the system connected. (For system connection, refer to Fig.1)

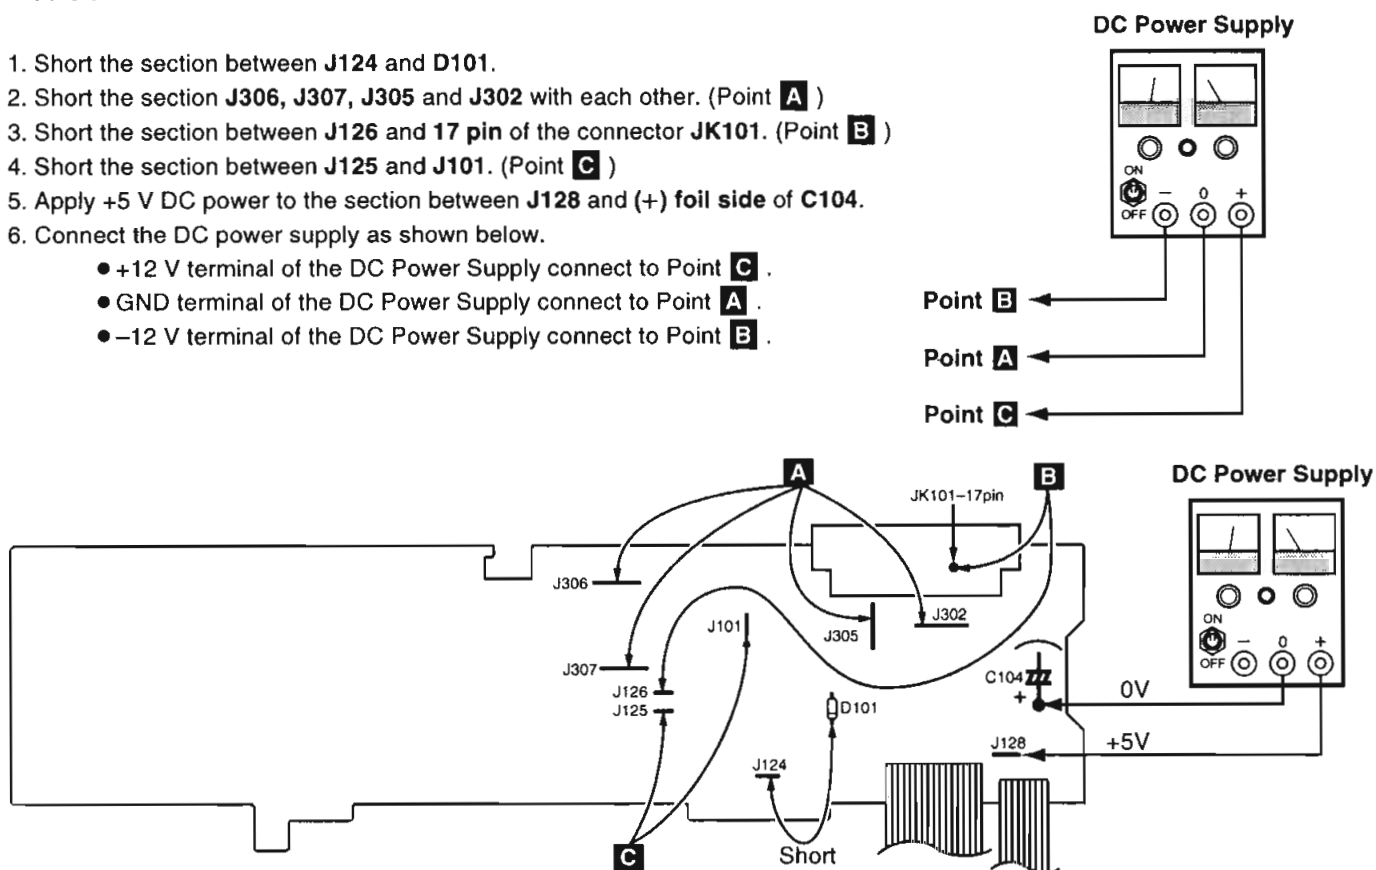

Fig. 1

When you have to test and service the unit SH-EH500 alone, use the following method to supply power source and operate the unit:

1. Short the section between J124 and D101.
2. Short the section J306, J307, J305 and J302 with each other. (Point **A**)
3. Short the section between J126 and 17 pin of the connector JK101. (Point **B**)
4. Short the section between J125 and J101. (Point **C**)
5. Apply +5 V DC power to the section between J128 and (+) foil side of C104.
6. Connect the DC power supply as shown below.
 - +12 V terminal of the DC Power Supply connect to Point **C** .
 - GND terminal of the DC Power Supply connect to Point **A** .
 - -12 V terminal of the DC Power Supply connect to Point **B** .

- Indicated voltage values are the standard values for the unit measured by the DC electronic circuit tester (high-impedance) with the chassis taken as standard. Therefore, there may exist some errors in the voltage values, depending on the internal impedance of the DC circuit tester.
- Voltage values and waveforms are measured as indicated in the schematic diagram when test points between **DG** and **CT-G**, and between **AG** and **DG** are shorted.
- Important safety notice:
Components identified by Δ mark have special characteristics important for safety.
Furthermore, special parts which have purposes of fire-retardant (resistors), high-quality sound (capacitors), low-noise (resistors), etc. are used.
When replacing any of components, be sure to use only manufacturer's specified parts shown in the parts list.
- **Caution!**
IC and LSI are sensitive to static electricity.
Secondary trouble can be prevented by taking care during repair.
Cover the parts boxes made of plastics with aluminum foil.
Ground the soldering iron.
Put a conductive mat on the work table.
Do not touch the legs of IC or LSI with the fingers directly.

Replacement Parts List

Notes: * Important safety notice:

Components identified by Δ mark have special characteristics important for safety.

Furthermore, special parts which have purposes of fire-retardant (resistors), high-quality sound (capacitors), low-noise (resistors), etc. are used.

When replacing any of components, be sure to use only manufacturer's specified parts shown in the parts list.

* All parts are supplied by MESA.
