## ■ LOCATION OF CONTROLS

### • Rear panel

**■ OPERATION (ST-300L)**

**Important!**

If this antenna is not installed, AM broadcasts will not be received.

**1** Turn the amplifier on, and prepare it for listening to radio broadcasts.

**Power "stand by" (⏻, on) switch**

**2** "on" (⏻ → ⏻)

This switch turns on and off the secondary circuit power only. The unit is in the "stand-by" condition when this switch is set to the "stand by ⏻" position. Regardless of the switch setting, the primary circuit is always "live" as long as the power cord is connected to an electrical outlet.

**Band selectors (band)**

**3-1** "FM" (⏻ → ⏻) or "AM" (⏻ → ⏻)

**For AM broadcasts only**

**3-2** "MW" (⏻ → ⏻) or "LW" (⏻ → ⏻)

**Note:**

In this instance, be sure to select "AM" in step 3-1.

**Tuning control (tuning)**

**4** Tune to the desired broadcast.

**5** **Volume adjustment:**

Adjust the volume and tone quality, if necessary, by using the controls on the amplifier.

**Power/tuning indicator**

This indicator illuminates when the power is switched ON and, during tuning to an FM or AM broadcast, the illumination becomes brighter at the best tuned position.

**FM stereo indicator (FM stereo)**

This indicator automatically illuminates when an FM stereo broadcast is being received.

**FM muting/FM mode selector (FM muting/mode)**

This selector is used during tuning to eliminate the annoying noise between FM broadcast stations, and to select either stereo or monaural reception of FM broadcasts.

If the broadcast signal is weak, or if there is a large amount of interference in a stereo broadcast, set to the "off/mono" position.

Note that the FM stereo indicator will not illuminate in this position.

## DIAL CORD INSTALLATION GUIDE

### When setting the cord, follow the procedure given below

- The cord should be at least 150 cm long.
- Completely turn the tuning gang (variable capacitor) counterclockwise. (Variable condenser capacity: max. Frequency: min.).
- Make a knot at the cord and as shown in Fig. 1.
- Set the spring to the knot, and set the cord in the order of 1 ~ 8.

**Note:** At step 5, pull the cord strongly, slacken the spring up to the mark of the drum, then go to step 6 ~ 8 to set the cord.

- Fix the cord terminal with adhesive.
- Cut off the cord about 5 mm at its either end.

**RESISTORS AND CAPACITORS**

- Notes:**
- Part numbers are indicated on most mechanical parts. Please use this part number for parts order.
  - Important safety notice. Components identified by  $\Delta$  mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.

- The unit of resistance is OHM ( $\Omega$ ).  
K=1000 $\Omega$ , M=1000k $\Omega$
- The unit of capacitance is MICROFARAD ( $\mu$ F).  
P=10<sup>-6</sup> $\mu$ F.
