Digital Sound Field Processor DSP-3000

マルチチャンネル時代の到来を予感させる

20プリセット・36パターンの音場プログラムを装備。

デジタルダイレクト入力にも対応したハイエンドDSP。

The 2nd generation machine =DSP-3000 of digital sound field プロセッサー which appears in 1987 digital direct input and the 6chD/A converter, equipment of high accuracy 6 connected master volume as one member of the ど and the high-class audio component was the model which furthermore raises quality and システム characteristic. If as for the knitting machine largest appeal point, if it is you question, "OPERA HOUSE" if Balcony (the balcony seat) with Mezzanine (the first floor seat), "JAZZ CLUB" as Village Gate and Village Vanguard, with said, it means that all the 20 pre-setting 36 pattern thing abundant sound fields which it is subdivided are converted on the basis of the up-to-date data become the selection べる way. Furthermore "MOVIE THEATER" of the front and back 2 sound field processing which become prototype of present シネマ DSP as a program for the movie, (6 variations) it loads. The fresh experience that "you can taste リアリテイ of the screen and the appearance impression of the theater simultaneously", is not different arrival was something of multiplexer channel age strongly estimate impression.
