Table 2

Distortion

- (1) Set up the various controls as shown in Table 1, with the Out jack level switch to -6 and the input level switch to -50.
- (2) Feed a 1kHz signal through the Input jack for that channel. Set the input level so that the output at the Out jack is -6dBm .
- (3) The distortion factor should be within 1%.

Maximum Output

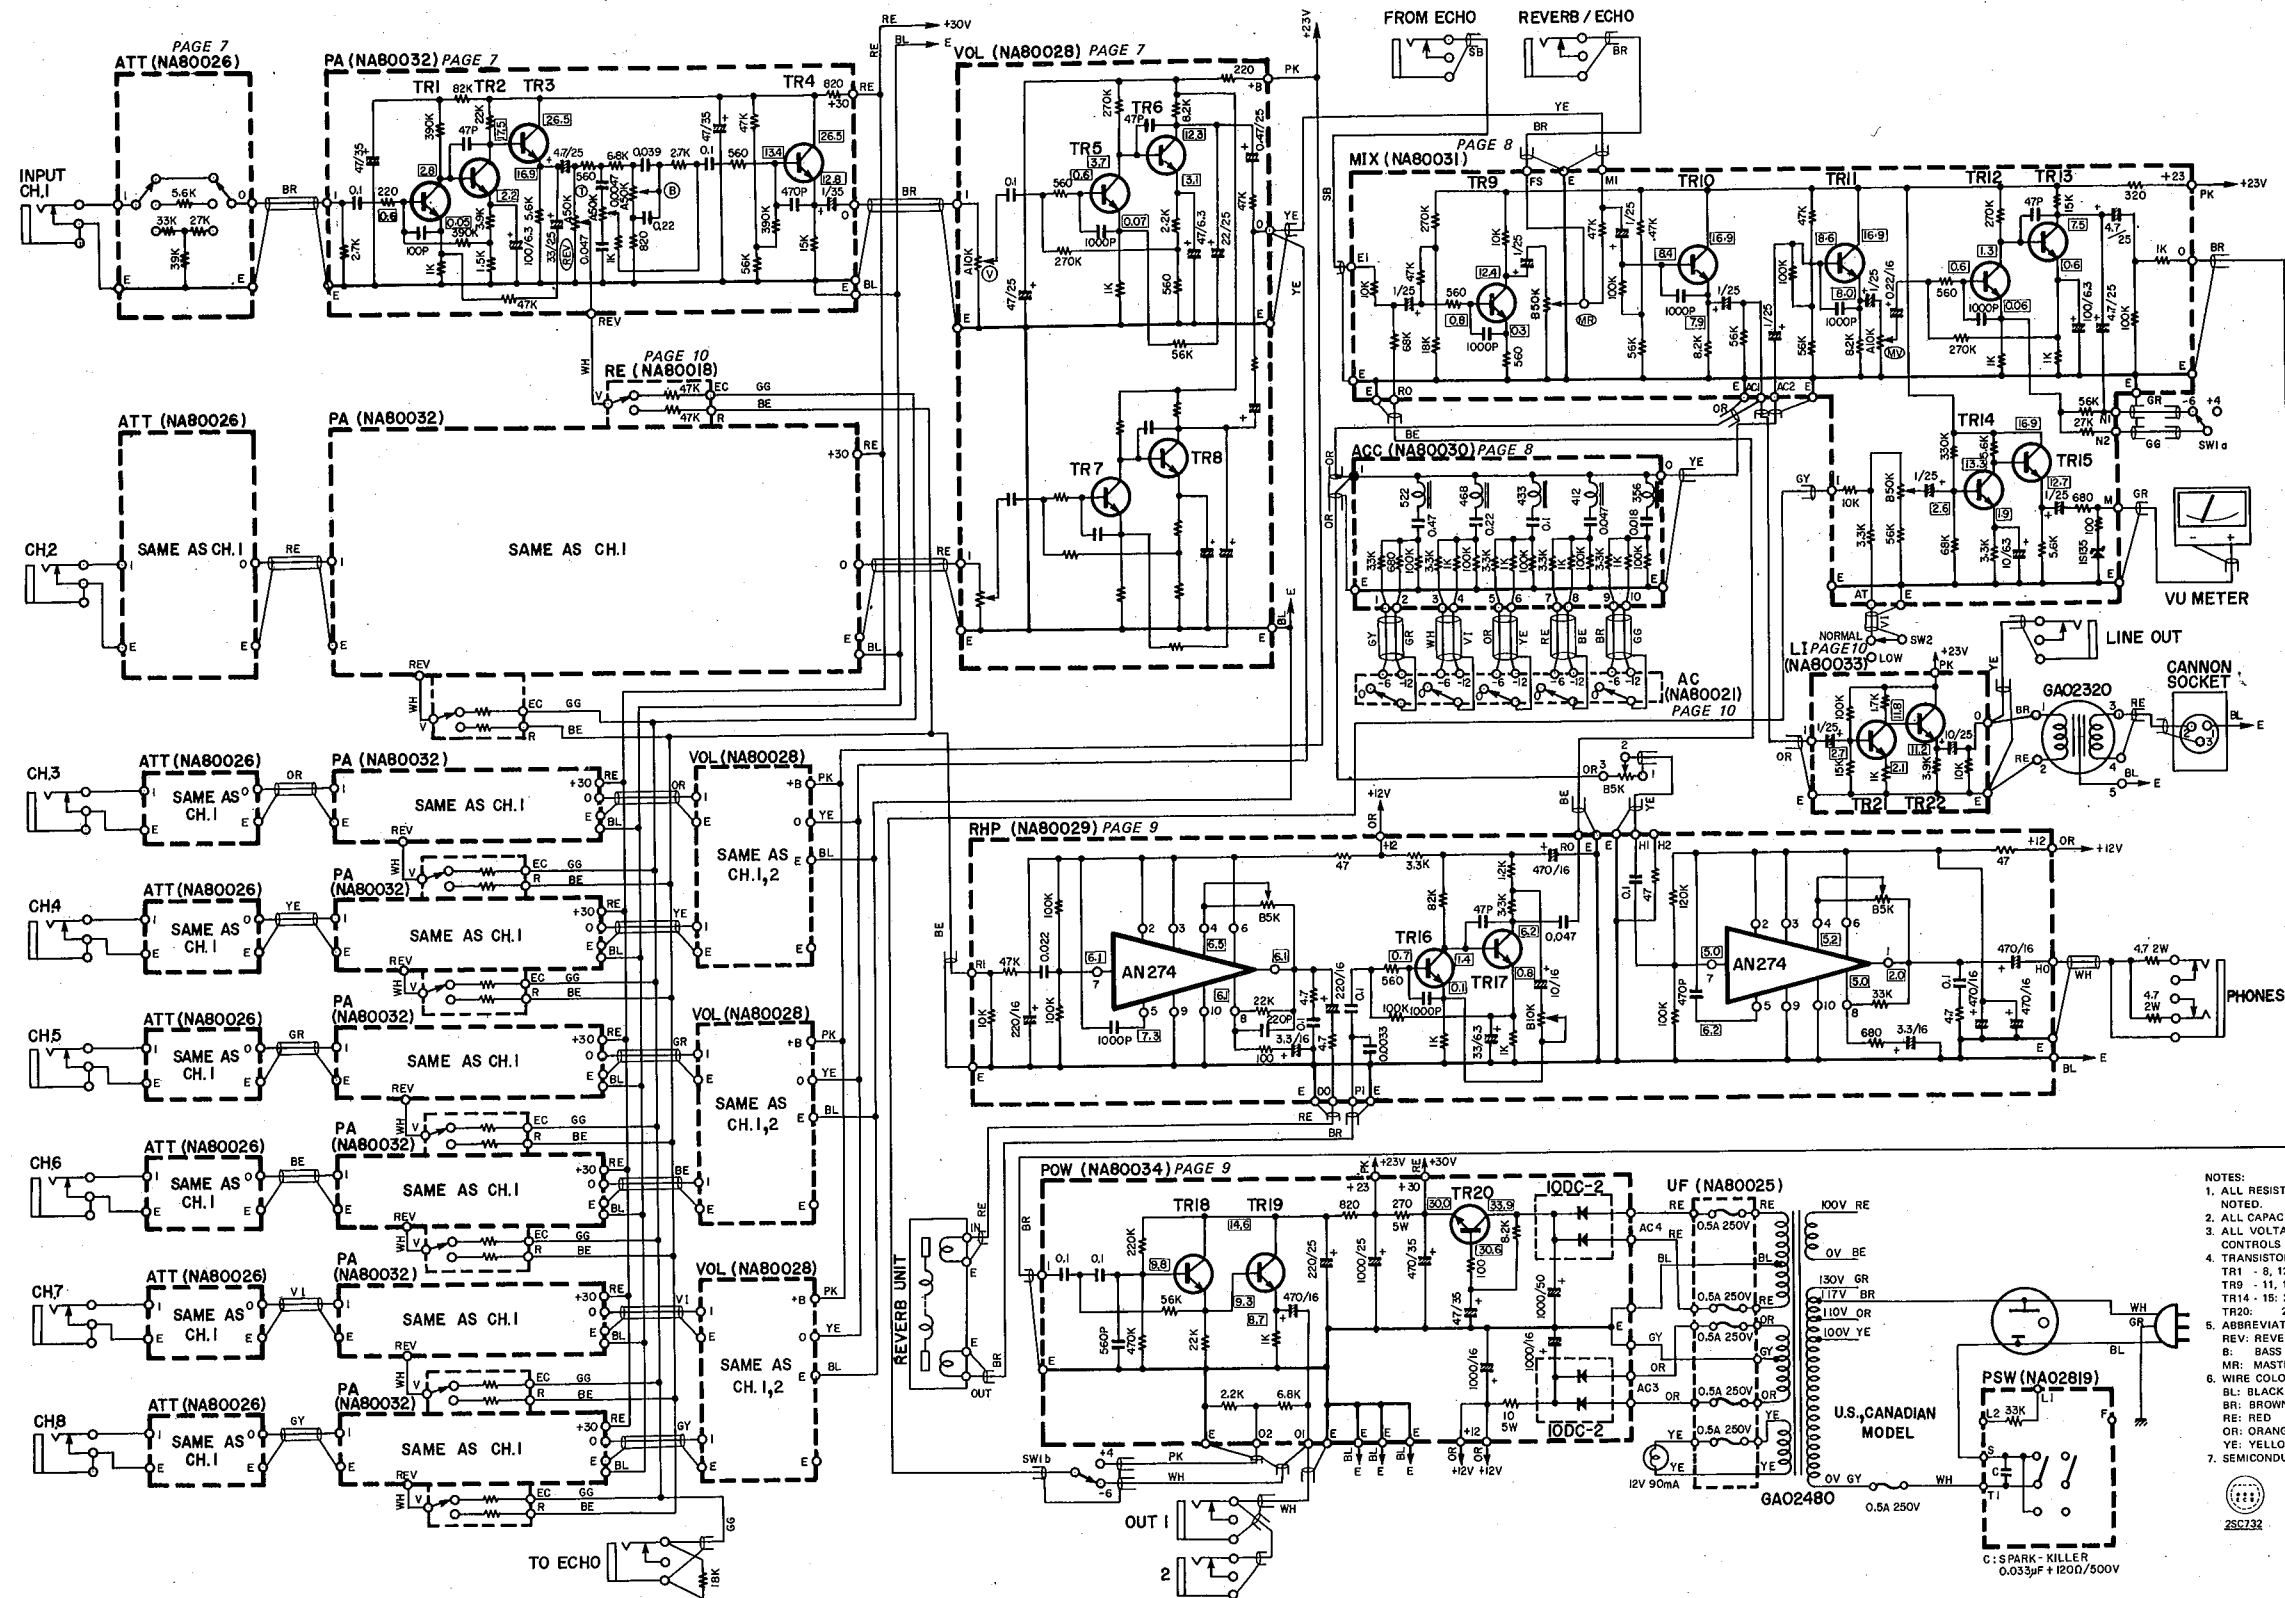

- (1) Set up the various controls as shown in Table 1, with the Out jack level switch to -6 and the input level switch to -50.
- (2) Feed a 1kHz signal through the Input jack for that channel. Set the input level at the point where the output waveform clips (distortion factor: 3%).
- (3) The output at the Out jack should be more than $+11\text{dBm}$.

VU Meter

- (1) Set the various controls as shown in Table 1, with the input level switch to -50.
