SERVICE MANUAL

IMPORTANT NOTICE

This manual has been provided for the use of authorized YAMAHA Retailers and their service personnel.
It has been assumed that basic service procedures inherent to the industry, and more specifically YAMAHA Products, are already known and understood by the users, and have therefore not been restated.

WARNING: Failure to follow appropriate service and safety procedures when servicing this product may result in personal injury, destruction of expensive components, and failure of the product to perform as specified. For these reasons, we advise all YAMAHA product owners that any service required should be performed by an authorized YAMAHA Retailer or the appointed service representative.

IMPORTANT: The presentation or sale of this manual to any individual or firm does not constitute authorization, certification or recognition of any applicable technical capabilities, or establish a principle-agent relationship of any form.

The data provided is believed to be accurate and applicable to the unit(s) indicated on the cover. The research, engineering, and service departments of YAMAHA are continually striving to improve YAMAHA products. Modifications are, therefore, inevitable and specifications are subject to change without notice or obligation to retrofit. Should any discrepancy appear to exist, please contact the distributor's Service Division.

WARNING: Static discharges can destroy expensive components. Discharge any static electricity your body may have accumulated by grounding yourself to the ground buss in the unit (heavy gauge black wires connect to this buss).

IMPORTANT: Turn the unit OFF during disassembly and part replacement. Recheck all work before you apply power to the unit.

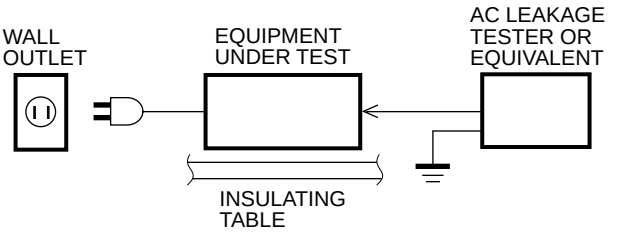
■ TO SERVICE PERSONNEL

1. Critical Components Information
   Components having special characteristics are marked ⚠ and must be replaced with parts having specifications equal to those originally installed.
2. Leakage Current Measurement (For 120V Models Only)
   When service has been completed, it is imperative to verify that all exposed conductive surfaces are properly insulated from supply circuits.

- Meter impedance should be equivalent to 1500 ohm shunted by 0.15μF.
- Leakage current must not exceed 0.5mA.



- Be sure to test for leakage with the AC plug in both polarities.

WARNING: CHEMICAL CONTENT NOTICE!

The solder used in the production of this product contains LEAD. In addition, other electrical/ electronic and/or plastic (where applicable) components may also contain traces of chemicals found by the California Health and Welfare Agency (and possibly other entities) to cause cancer and/or birth defects or other reproductive harm.

DO NOT PLACE SOLDER, ELECTRICAL/ELECTRONIC OR PLASTIC COMPONENTS IN YOUR MOUTH FOR ANY REASON WHATSOEVER!

Avoid prolonged, unprotected contact between solder and your skin! When soldering, do not inhale solder fumes or expose eyes to solder/flux vapor!

If you come in contact with solder or components located inside the enclosure of this product, wash your hands before handling food.

● Starting DIAG

While the opening message appearing at the power ON is on display, press the “DSP” key 3 times; quickly at the first and second times and keep pressing it at the third time until the DIAG function is started.

● Display when DIAG function is started

First, “DIAG” appears on the FL display of the main unit, followed by the version of the microcomputer for 1 second (e.g., 1.223f), the checksum of the microcomputer for 2 seconds (e.g., 83B3) and finally the DIAG menu (e.g., 1: ALL). Also, all the function LED segments light up.

DIAG menu

(*1) If a protection function history has been recorded, the type of the protection function recorded last is displayed.

If the protection function activates after DIAG has been started and the power is turned off ;

When the protection function (*2) activates, the protection function history appears on the display and the power turns off. Repair the faulty parts according to the displayed history.

(*2) When any other faulty condition is found with the power source etc., the protection function forces the power to turn off.

PT PS **display**

(When the power is turned on without this abnormality corrected, the protection function activates to shut off the power relay. Display may not light if there is an abnormality with the power supply for the display.)
Cause: There is an abnormality in the power supply section (voltage).
Supplementary information: As the power from the following sources is detected, it is possible to determine where an abnormality exists.

Stabilizing power source
±15A, +9V, +5A, +5D SW, -VP
+12V(Tuner), Vcc(for power IC)

Besides the above possible causes, the cause may be disconnection of the connector or around the CPU.

● Protection history

When the protection function has activated, its history is stored in memory with a memory backup. Even when no abnormality is noted while the unit is being serviced, an abnormality which has occurred previously can be defined as long as the backup data has been stored. The protection history should always be cleared before returning the unit from service.
The protection history is cleared when DIAG is canceled by selecting “MEMORY” (memory initialization) from the setting items of the DIAG menu No.7 INT or when the backup data is erased.

● Operation procedure of DIAG menu and SUB-MENU

1) Use the UP ▷ (forward) / DOWN ◁ (reverse) keys to select a main menu item.
2) For main menu items 1. ALL and 2. DEV neither of which has sub menu, the menu item is executed when the DSP key is pressed.
3) For main menu items which have sub menu, the sub menu appears when the DSP key is pressed.
4) Use the UP ▷ (forward) / DOWN ◁ (reverse) keys to select a sub-menu item.
5) The sub-menu item is executed when the DSP key is pressed.
6) To return from the sub-menu to the main menu, have “RETURN” displayed by using the UP ▷ (forward) / DOWN ◁ (reverse) keys and press the DSP key.
7) To return to the DIAG initial setting (1.ALL) during DIAG operation, press the MUTE key of remote control unit except for the special case (*3).

(*3) : It is not possible to return to 1.ALL during execution of the AD test.

When using remote controller

Main unit	Remote control key	Remote control code
UP ▷ (forward)	VOLUME UP ▷ (forward)	7B---0D
DOWN ◁ (reverse)	VOLUME DOWN ◁ (reverse)	7B---0E
DSP	ON/OFF	7B---07
MUTE	Return the menu to the 1. ALL	7B---0F

● Functions during DIAG operation

The following functions are available even during the DIAG operation.

• Power ON/OFF
• Master volume

● Canceling DIAG

There are two methods to cancel the DIAG function.

1) Press the “POWER” (STANDBY) key of the main unit or the “POWER” (STANDBY) key of the remote controller to enter the stand-by state.
2) Selecting the DIAG menu item 0. EXIT, cancel the DIAG function. Then the self-diagnosis process ends and the normal operation is restored.

CAUTION: Prior to cancellation of the DIAG function, be sure to execute setting of DIAG menu 7. INIT (reserve / reserve cancel of memory initialization). (To keep the user memory, execute “CANCEL” (cancellation of resetting reservation) of 7. INIT setting before canceling the DIAG function.)

Details of DIAG menu

1. ALL (Sequential test)

This menu is used to execute major five items of the DIAG menu. The items are as follows.
(Set the volume level to the intermediate value before execution.)
Press the DSP key to advance one step to the next item.
To skip a step, press the MUTE key of remote control unit.
(To end the DIAG function during the AD test of Step 5, keep pressing the DSP key for a long period of time.)

The AD test checks if pressing of each key is received properly or not.
Press the key in the order of PC, AUX1, AUX2, TUNER, DSP, P-SET, DOWN (◁) and UP (▷).

For the details of Steps 1 through 5, refer to the item corresponding to each step described hereafter.

2. DEV (Device Test)

This menu checks each of the five devices (IC417, 430, 438, 447, 475) for an error.
"OK" appears when no error is detected.
When an error is detected, its content is displayed as "NG-XX" (XX in hexadecimal notation).

3. DSP (DSP Test)

Using this menu, it is possible to set the sound field effect and input signals. (*1)
There are 14 sub-menus.
(*1) Apply an 1kHz, 150mV signal to ANALOG input terminal. (Sub-menu 1 to 8)

1. **THROUGH** [Remote control code : 7B—16(VDD)]
Passes signals through the DSP section.

2. **DELAY** [Remote control code : 7B—1F(TEST)]
Uses the delay function in the DSP section.

3. **HALL** [Remote control code : 7B—10(HALL)]
Sets the DSP for HALL.

4. **JAZZ** [Remote control code : 7B—11(JAZZ)]
Sets the DSP for JAZZ.

5. **CHURCH** [Remote control code : 7B—12(CHURCH)]
Sets the DSP for CHURCH.

6. **GAME** [Remote control code : 7B—13(GAME)]
Sets the DSP for GAME.

7. **MOVIE** [Remote control code : 7B—14(MOVIE)]
Sets the DSP for MOVIE.

8. **LIVE** [Remote control code : 7B—15(LIVE)]
Sets the DSP for LIVE.

9. **PC-ANA** [Remote control code : 7B—02(PC)]
Sets the input for PC-ANALOG.

10. **PC-Digi**
Sets the input for PC-DIGITAL.

11. **AUX1-A** [Remote control code : 7B—03(AUX1)]
Sets the input for AUX1-ANALOG.

12. **AUX1-D**
Sets the input for AUX1-DIGITAL.

13. **AUX2-A** [Remote control code : 7B—04(AUX2)]
Sets the input for AUX2-ANALOG.

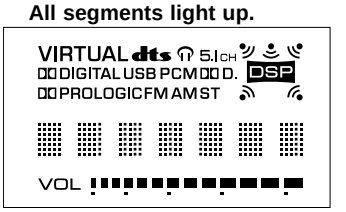
14. **RETURN**
Returns the menu to the main menu (3.DSP).

4. FL (FL Test)

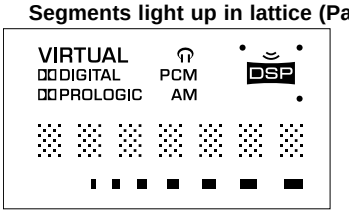
This menu is a lighting program for the FL display.

1. **AUTO** (Automatic FL change)
Changes the display automatically at 1-seond intervals.

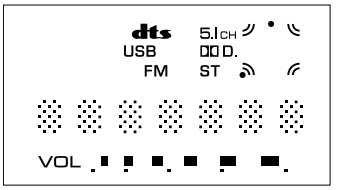
All segments light up.



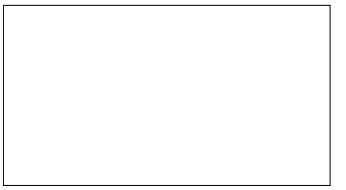
Segments light up in lattice (Pattern A).



Segments light up in lattice (Pattern B)



All segments go off.



2. **MANUAL** (Manual FL change)
Changes the display every time the DSP key is pressed.
The display contents are the same as the above.

3. **RETURN**
Returns the menu to the main menu (4. FL).

5. AD (AD Test)

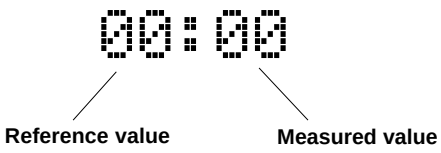
There are 13 sub-menu items.

1. **KEY** (Key reception test)
Checks if pressing of each key is properly received, using the key reception program. Keys should be checked in the order of PC, AUX1, AUX2, TUNER, DSP, P-SET, DOWN (◁) and UP (▷).

When the key reception test is executed, ">PC<" appears, urging to press the PC key.
When the PC key is pressed properly, "OK" appears for a moment followed by ">AUX-1<", urging to press the next AUX1 key.
When all these keys are checked in this way and check results are satisfactory, this mode is over.
If an incorrect key is received, "NG" appears and testing does not proceed to the next key. To exit from this mode, keep pressing the DSP key for a long period of time.

2. **LEVEL** (Display of key voltage level)
Displays the voltage level of the key and the reference value in parallel.
Use the same order for checking keys as the previous key reception test.

When the voltage level test is executed, ">PC<" appears, urging to press the PC key.
When the PC key is pressed, "00:00" appears for 1 second followed by ">AUX-1<", urging to press the next AUX1 key.

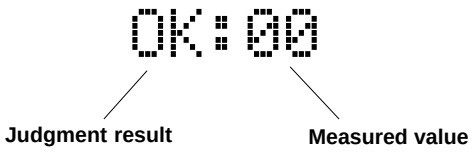


The A/D value is displayed in % (voltage value based on 5V as 100%).

When the voltage level of all the keys is checked in this way, this mode is over.
To exit from this mode before checking all the keys, keep pressing the DSP key for a long period of time.

3. **JUDGE** (Judgment of key voltage level)
Checks if the voltage level of each key is within the normal range by comparing it with the reference value.
Use the same order for checking keys as the previous key reception test.

When the key voltage level judge test is executed, ">PC<" appears, urging to press the PC key.
When the PC key is pressed, "OK:00" appears for 1 second followed by ">AUX-1<", urging to press the next AUX1 key.



When the judgment result is not satisfactory, "NG" appears.

When the voltage level of all the keys is judged in this way, this mode is over.
To exit from this mode before making judgment of all the keys, keep pressing the DSP key for a long period of time.

4. **V-ERR** (Display of power voltage , when abnormal)
Displays for 2 seconds the voltage value when the power supply protection function has worked due to abnormal voltage. (The voltage value is meaningless unless the power supply protection function has worked.)
The voltage value said here is obtained through calculation using 5V as the reference voltage. Note that deviation of the reference voltage will result in an error of the voltage on display.

5. **V-MAX**
Sets the main volume to 0dB.

6. **V-MID60**
Sets the main volume to -20dB.

7. **V-MID55**
Sets the main volume to -25dB.

8. **V-MID52**
Sets the main volume to -28dB.

9. **V-MID49**
Sets the main volume to -31dB.

10. **V-MID29**
Sets the main volume to -51dB.

11. **V-MID1**
Sets the main volume to -79dB.

12. **V-MIN**
Sets the main volume to -80dB.

13. **RETURN**
Returns the menu to the main menu (5. AD).

6. USB (USB loop back test)

1. **START** [Remote control code : 7B—1C (A)]
Starts the loop back of USB.

2. **STOP** [Remote control code : 7B—1D (B)]
Stops the loop back of USB.

3. **RETURN**
Returns the menu to the main menu (6. USB).

* This menu is used for the factory inspection before shipping.

7. INIT (Memory initialization)

1. **MEMORY** (Memory reset reservation)
Reserves the backup RAM to be reset to the factory setting before shipping.

Procedure
1) Using the DIAG function, have “7. INIT” displayed.
2) Press the DSP key. (“MEMORY” on display)
3) Press the DSP key again. (“DONE” on display)
4) Press the DOWN (◁) key. (“RETURN” on display)
5) Press the DSP key. (“7. INIT” on display)
6) Press the UP (▷) key a few times to have “0.EXIT” displayed.
7) Turn off the power by pressing the DSP key.

The actual initialization is executed when the DIAG function is cancelled and the power is turned on.
For the contens of the initialization, see page 14.

2. **CANCEL** (Cancellation of memory reset reservation)
Makes the memory reset reservation invalid. RAM initialization is not executed.

3. **RETURN**
Returns the menu to the main menu (7. INIT).

8. VER (Version information)

1. **SHV**
Displays the version information of the microcomputer (IC436).
The final alphabet indicates the version of the boot area. If the rewrite version is different, it is not transmitted properly.

2. **EGAV**
Displays the version information of the gate array (IC475: LC27287B).

3. **ChckSum**
Displays the checksum information of the microcomputer (IC436).

4. **RETURN**
Returns the menu to the main menu (8.VER).

9. ERROR (Error history)

1 – 8 **E0 –E7** (Error history)
The history of up to 8 errors is stored in memory. The error codes are used to display it.

Error code	Description
00	No error
11 – 14	USB internal error
21 – 2B	USB interrupt error
2C – 2E	USB communication error (*1)
2F	USB interrupt transmission error
41 – 46	USB stream error (*2)
80	Checksum error
81	RAM (IC447) Read/Write error
82	AC3D(IC417) Read/Write error
83	EGAV (IC475) Read/Write error

(*1) : When the AC plug is plugged and unplugged with USB connected, this error may be recorded but it causes no problem in actual use.
(*2) : This error is not as fatal at to cause any problem in actual use.
(*3) : This code is recorded in the error history at least once because the memory is cleared at the time of shipping from the factory.

9. **CLEAR** (Error history clear)
Clears the entire error history in memory and overwrites with the normal value (00).

10. **RETURN**
Returns the menu to the main menu (9. ERROR).

10. DIT (Digital input/output control)

1. **GENERAL**
GENERAL category code output (0x00)

2. **CD**
CD category code output (0x01)

3. **PCM Enc**
PCM Encoder/decoder category code output (0x02)

4. **DAT**

8. **SD**
Solid state memory category code output (0x08)

9. **BS Eur**
BS Euro category code output (0x0E)

10. **MIXER**
Digital signal mixer category code output (0x12)

11. **SFC**
Sampling rate converter category code output (0x1A)

12. **DSP**
Digital sound processor category code output (0x2A)

13. **L Pa:Ch**
Ch Change L bit parent ←→ child

14. **DIR RV**
Digital interface receive code display

15. **RETURN**
Returns the menu to the main menu (10. DIT).

11. U200 (RP-U200 control)

Apply an 1kHz, 150mV signal to ANALOG input terminal.

1. **All 5.1**
Speaker output from all 5.1 channels (L, R contents only)

2. **Main 2ch**
Speaker output from main 2 channels

3. **Rear 2ch**
Speaker output from rear 2 channels

4. **Center 1**
Speaker output from center 1 channel

5. **Sub 1ch**
Speaker output from sub-woofer output 1 channel

6. **Normal 6**
Speaker output from all 5.1 channels (All contents straightly)

7. **Tmute ON**
Tuner mute ON

8. **Tmut OFF**
Tuner mute OFF

9. **Smute ON**
S-MUTE ON

10. **SmutOFF**
S-MUTE OFF

11. **LargeSP**
Speaker size setting → Large

12. **SmallSP**
Speaker size setting → Small

13. **T-Exit**
Tuner frequency setting for factory inspection & exit from DIAG mode.

14. **RETURN**
Returns the menu to the main menu (11. U200).

0. EXIT (DIAG end)

Terminates the DIAG function, executes CPU resetting and restart operation.
Use the input selector PC for restarting operation.
Executing the memory reset reservation setting will set to the standby mode.

NOTE)
The DSP P.C.B. actually has a four-layer pattern structure (part face pattern, internal pattern 1, internal pattern 2 and solder face pattern) but it is shown as "part face pattern + solder face pattern" in this diagram.

NOTE)
ＤＳＰ Ｐ.Ｃ.Ｂ.は、４層パターン構造（部品面パターン、内層１パターン、内層２パターン、ハンダ面パターン）ですが、本図のＤＳＰ Ｐ.Ｃ.Ｂ.は、部品面パターン＋ハンダ面パターンを表記しております。

PARTS LIST

■ ELECTRICAL PARTS

■ **WARNING**

Components having special characteristics are marked ⚠ and must be replaced with parts having specifications equal to those originally installed.

- Carbon resistors (1/6W or 1/4W) are not included in the ELECTRICAL PARTS List. For the parts No. of the carbon resistors, refer to last page.
- Chip resistors are listed on page 52.

ABBREVIATIONS IN THIS LIST ARE AS FOLLOWS :
