## SERVICE MANUAL

CRX-E100 is composed of RX-E100 and CDX-E100.

This is a service manual for the RX-E100 (including NX-E100).

For service manuals of CDX-E100, please refer to the service manuals with the following publication numbers :

### IMPORTANT NOTICE

This manual has been provided for the use of authorized YAMAHA Retailers and their service personnel. It has been assumed that basic service procedures inherent to the industry, and more specifically YAMAHA Products, are already known and understood by the users, and have therefore not been restated.

**WARNING:** Failure to follow appropriate service and safety procedures when servicing this product may result in personal injury, destruction of expensive components, and failure of the product to perform as specified. For these reasons, we advise all YAMAHA product owners that any service required should be performed by an authorized YAMAHA Retailer or the appointed service representative.

**IMPORTANT:** The presentation or sale of this manual to any individual or firm does not constitute authorization, certification or recognition of any applicable technical capabilities, or establish a principle-agent relationship of any form.

The data provided is believed to be accurate and applicable to the unit(s) indicated on the cover. The research, engineering, and service departments of YAMAHA are continually striving to improve YAMAHA products. Modifications are, therefore, inevitable and specifications are subject to change without notice or obligation to retrofit. Should any discrepancy appear to exist, please contact the distributor's Service Division.

**WARNING:** Static discharges can destroy expensive components. Discharge any static electricity your body may have accumulated by grounding yourself to the ground buss in the unit (heavy gauge black wires connect to this buss).

**IMPORTANT:** Turn the unit OFF during disassembly and part replacement. Recheck all work before you apply power to the unit.

## ■ TO SERVICE PERSONNEL

1. Critical Components Information.  
Components having special characteristics are marked  $\triangle$  and must be replaced with parts having specifications equal to those originally installed.
  2. Leakage Current Measurement (For 120V Models Only).  
When service has been completed, it is imperative to verify that all exposed conductive surfaces are properly insulated from supply circuits.
- Meter impedance should be equivalent to 1500 ohm shunted by 0.15 $\mu$ F.

- Leakage current must not exceed 0.5mA.
- Be sure to test for leakage with the AC plug in both polarities.

## WARNING: CHEMICAL CONTENT NOTICE!

The solder used in the production of this product contains LEAD. In addition, other electrical/electronic and/or plastic (where applicable) components may also contain traces of chemicals found by the California Health and Welfare Agency (and possibly other entities) to cause cancer and/or birth defects or other reproductive harm.

DO NOT PLACE SOLDER, ELECTRICAL/ELECTRONIC OR PLASTIC COMPONENTS IN YOUR MOUTH FOR ANY REASON WHATSOEVER!

Avoid prolonged, unprotected contact between solder and your skin! When soldering, do not inhale solder fumes or expose eyes to solder/flux vapor!

If you come in contact with solder or components located inside the enclosure of this product, wash your hands before handling food.

## ■ DISASSEMBLY PROCEDURES (Remove parts in disassembly order as numbered.)

### 1. Removal of Top Cover

- a. Remove 4 screws ( ① ) and 4 screws ( ② ) in Fig. 1.

Fig. 1

### 2. Checking the Amp Unit and replacing parts

- a. Disconnect the power plug from AC outlet.
- b. Remove 2 screws ( ③ ) attaching the rear panel to the chassis. (Fig. 2)
- c. Disconnect the connector for the fan.
- d. Remove 3 screws ( ④, ⑤ ) attaching the fan to the chassis and then remove the fan. (Fig. 2)
- e. Remove 3 screws ( ⑥ ) attaching the Main P.C.B. to the Heat Sink. (Fig. 2)
- f. Loosen the wiring harness.
- g. Move the Amp Unit toward the rear. (Fig. 2)
- h. As shown in Fig. 3, set the Amp Unit upright.
- i. Fit insulating material (thick paper, etc.) to prevent the chassis and the transformer from contacting the Main P.C.B..
- j. Using a wire, connect the pin jack ground to the chassis.  
(If they are left unconnected, the grounding remains open and the unit fails.)
- k. Connect the power plug and turn on the power switch.
- l. When replacing parts, remove 5 screws ( ⑦, ⑧ ) fixing the P.C.B. Tuner and then remove the P.C.B. Tuner. (Fig. 3)

■ AMP ADJUSTMENTS

● Confirmation of Idling Current

- 1) No signal applied.
- 2) Non-loaded condition.
- 3) Aging is not necessary.

Item	Test Poin	Rating (DC)	Note
MAIN L	R214 (Between terminal)	0.1mV—5mV	If the measured voltage exceeds 5mV, cut the lead wire of R197(L ch) or R204(R ch) and then check again if each measured value satisfies the rating.
MAIN R	R220 (Between terminal)		

\* Confirm that the idling current is 0.25mV — 15mV after 60 minutes.

Note)

- If R197(L ch) or R204(R ch) have already been cut off and idling current does not flow, reconnect R197(1kΩ) or R204(1kΩ).
- Q112 and Q115 are transistors for temperature correction. Apply silicone grease to the contact surface with the heat sink.

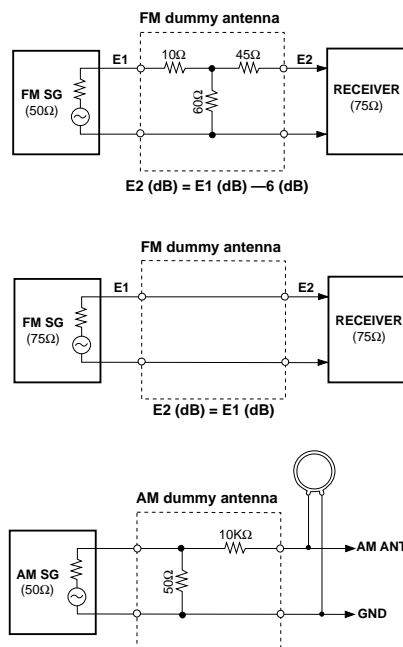

## ■ TUNER ADJUSTMENTS

### ● Measuring Instruments

- FM signal generator (FM SG)
- Stereo signal generator (SSG)
- AM signal generator (AM SG)
- Distortion meter (DIST. M)
- AC voltmeter (ACVM)
- DC voltmeter (DCVM)
- Oscilloscope
- Low pass filter (YLF-15,  $f_c=15\text{kHz}$ )
- Oscillator

### ● Dummy antenna

## FM Adjustment

### ● Before Adjustment

- 1) For dB,  $1\mu\text{V}=0\text{dB}\mu$   
**Example** :  $60\text{dB}\mu=1\text{mV}$
- 2) 100% modulation means that the frequency deviation is  $\pm 75\text{kHz}$ .

- 3) Install the Matching Transformer and connect FM SG.
- 4) Set each switch to the following position unless otherwise specified.

INPUT SELECTOR ..... TUNER  
 TUNING MODE ..... AUTO

# PARTS LIST

## ■ ELECTRICAL PARTS

### ■ WARNING

Components having special characteristics are marked  $\triangle$  and must be replaced with parts having specifications equal to those originally installed.

- Carbon resistors (1/6W or 1/4W) are not included in the ELECTRICAL PARTS List. For the part Nos. of the carbon resistors, refer to the last page.

**! : Note on the Operation PCB**

Of the Operation PCB part Nos., only the silver (SI) type part Nos. are included in the table.

The only different part between the gold (GD) and silver (SI) type parts is the sheet/FL that is attached to the fluorescent character display tube. When a GD type Operation PCB becomes necessary, order a SI type Operation PCB and a GD type sheet/FL (VR519500) and replace the sheet/FL of the SI type Operation PCB with the GD type sheet/FL.

## RX-E100

# EXPLODED VIEW

### ! : Note on the Operation PCB

Of the Operation PCB(1-1) part Nos., only the silver (SI) type part Nos. are included in the table.

The only different part between the gold (GD) and silver (SI) type parts is the sheet/FL that is attached to the fluorescent character display tube. When a GD type Operation PCB becomes necessary, order a SI type Operation PCB and a GD type sheet/FL (VR519500) and replace the sheet/FL of the SI type Operation PCB with the GD type sheet/FL.

# SYSTEM CONTROL

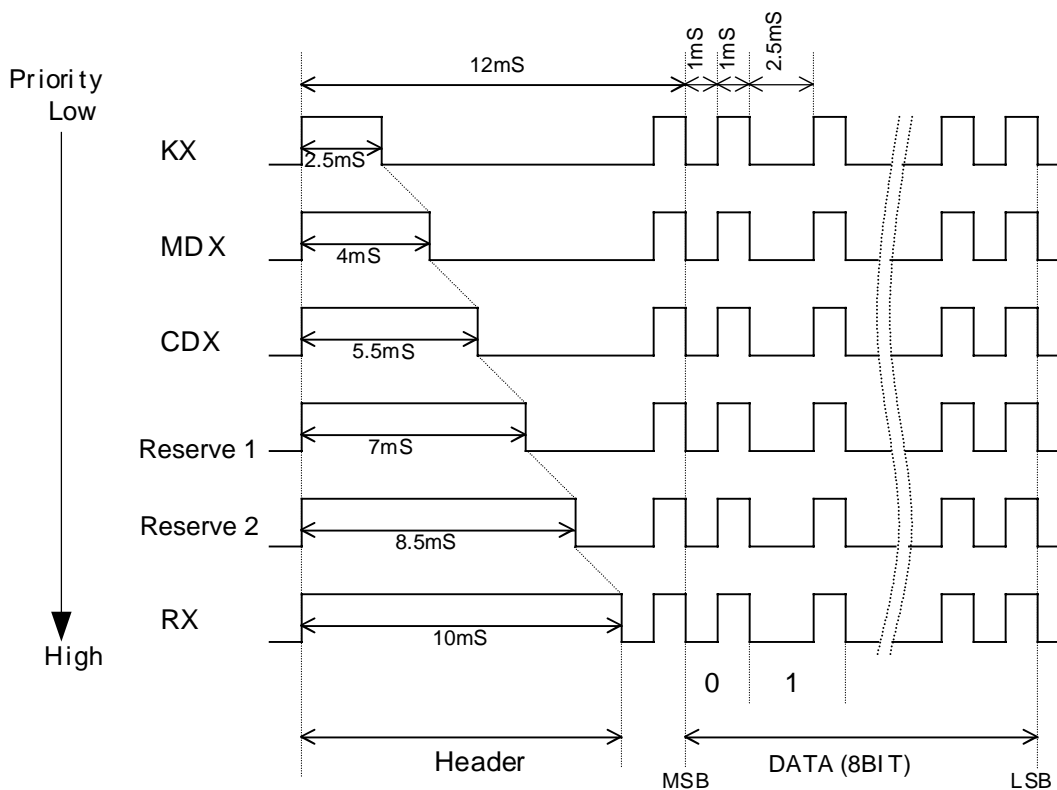

## Features

- One bus line controls all the units.
- Units are connected in series, using monaural mini jacks.
- Units can be connected in any order

## Description of Operation

## Serial Data Format

Note) When transmitting a data following the previous data, leave at least 2mS space between them. (at least 4mS only when transmitting the CD text data)

**Microprocessor peripheral circuit**

**Description of data transmission and reception**

- ① Although there is only 1 bus line, prepare special ports for data transmission and reception at each CPU.
- ② The bus data consists of a header and data (8 bits). CPU receives and transmits at a 0.5mS or less timer interruption.
- ③ The header is used to identify the model and to prevent butting by changing the length for each unit.
- ④ At each CPU, data transmission and reception are carried out independently. Before transmitting the data, be sure to check the reception status. If the data is being received, wait until the data has been received and then transmit the data.
- ⑤ When the data transmission is completed, each CPU also checks the received data. If the header of the received data does not agree with its own head, the data may have been overlapped by that of the other model. In such case, stop the data transmission and restart it after confirming that the the data transmission of other model has been completed. This means that the unit with a longer header has a higher priority.

**Description of main system operation**

1) POWER ON/OFF processing [(1) to (4)]

- The power cord of each unit is connected to the AC outlet in series and switched on and off through the RX relay.
- Turning off the RX power switch will turn off the power to other units (primary connection) but turning off the power switch of any other unit will turn off the secondary connection of each unit only (i.e., the microprocessor remains on).
- Each unit has a backup function to save the secondary connection status when unplugged (taking use of a unit alone into consideration)
- The indicators of units are turned on after a dimmer level signal is fed from RX so that they light up simultaneously when the RX power switch is turned on. However, as the indicator of a unit does not light up when the unit is used alone in this setting, the indicator is forced to turn on when 2 seconds have elapsed without a dimmer level signal being fed (and the power for the backup function is turned on). When the CD unit is used alone, the timer play mode is set regardless of the backup function status.
- Make sure that the power off processing of each unit has been completed before turning off the power by using the RX relay.

RX-E100

## 2) FUNCTION [(5) to (6)]

- No source other than that selected by the input selector will be reproduced.
- The functions are selected automatically to be suitable for the source to be reproduced.
- Selecting the functions is prohibited during recording.

## 3) TIMER operation [(7) to (8)]

- TIMER PLAY to start reproduction at a specified time
- TIMER REC to start recording at a specified time

## 4) AUTO POWER OFF [(9)]

The RX power is turned OFF when the FUNCTION setting is other than TUNER and AUX and no key operation has been made for half an hour while all the connected units are at stop.

## 5) AUTO POWER ON [(10)]

If the power of the connected units has been turned off while the RX power is on and when a key involving reproduction is pressed, the power is turned on automatically.

## 6) CD TEXT compatible

When recording the contents of the CD TEXT compatible CD into an MD in the SYNCHRONOUS or EDIT mode, the text data is recorded as well although limited up to 127 characters of the track name only for SYNCHRONOUS recording, and names of the disc, artist and track for EDIT recording.

## 7) Dimmer

There are 7 dimmer level settings. The dimmer level data is transmitted from the receiver when the power is turned on. The dimmer level is "0" when a unit is used alone.

( 1 ) POWER ON PROCESSING ( Receiver )

When the power is turned on at the receiver, the relay of the AC outlet is turned on to supply power to each unit.  
Each unit informs the receiver of its status when started (secondary connection status).

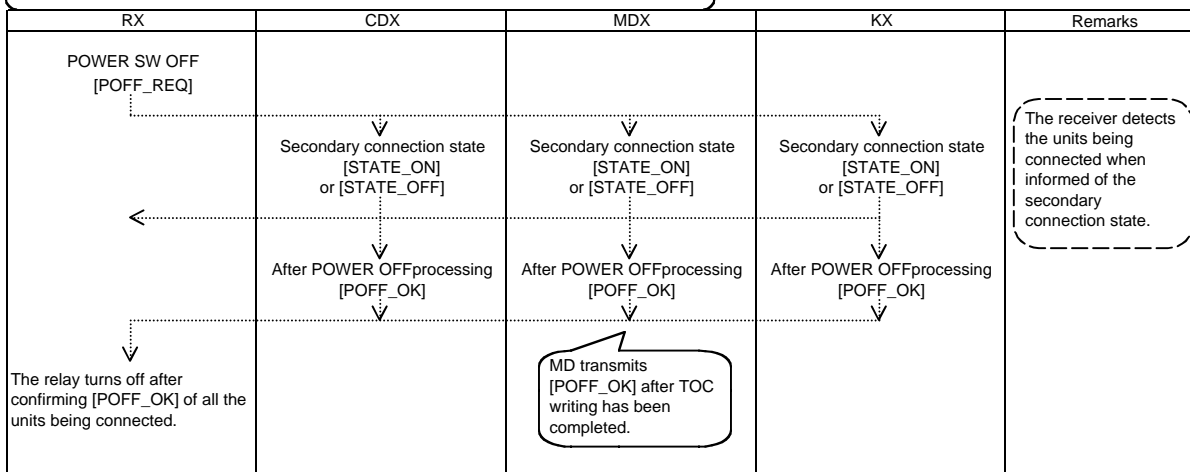

(2) POWER ON PROCESSING (except receiver)

When the power is turned on at a unit other than the receiver, the unit informs the receiver of the status then.

(3) POWER OFF PROCESSING (Receiver)

The receiver turns off the AC outlet when the power off processing of each unit has been completed.

(4)POWER OFF processing (except receiver)

When the power is turned off at a unit other than the receiver, the unit informs the receiver of the status when the power off processing has been completed.

RX	CDX	MDX	KX	Remarks

Principle of switch rec operation reception

- The POWER SW has priority regardless of any other conditions.
- During EDIT recording, no switch operation other than discontinuing the EDIT function (STOP SW of recording and reproduction units) is received. However, if it is clear that the switch operation would not affect the EDIT function, it will be accepted.
- During SYNCHRONOUS or MANUAL recording, the switch operation of the recording and reproduction units is accepted but switch operation of other units that would affect recording are not accepted.

**AUTO POWER ON RECEPTION SW**

(This switch can turn on the power instead of the POWER SW when the secondary switch has been turned off.)
