## SERVICE MANUAL

### IMPORTANT NOTICE

This manual has been provided for the use of authorized YAMAHA Retailers and their service personnel. It has been assumed that basic service procedures inherent to the industry, and more specifically YAMAHA Products, are already known and understood by the users, and have therefore not been restated.

**WARNING:** Failure to follow appropriate service and safety procedures when servicing this product may result in personal injury, destruction of expensive components, and failure of the product to perform as specified. For these reasons, we advise all YAMAHA product owners that any service required should be performed by an authorized YAMAHA Retailer or the appointed service representative.

**IMPORTANT:** The presentation or sale of this manual to any individual of firm does not constitute authorization, certification or recognition of any applicable technical capabilities, or establish a principle-agent relationship of any form.

The data provided is believed to be accurate and applicable to the unit(s) indicated on the cover. The research, engineering, and service departments of YAMAHA are continually striving to improve YAMAHA products. Modifications are, therefore, inevitable and specifications are subject to change without notice or obligation to retrofit. Should any discrepancy appear to exist, please contact the distributor's Service Division.

**WARNING:** Static discharges can destroy expensive components. Discharge any static electricity your body may have accumulated by grounding yourself to the ground buss in the unit (heavy gauge black wires connect to this buss).

**IMPORTANT:** Turn the unit OFF during disassembly and part replacement. Recheck all work before you apply power to the unit.

## ■ TO SERVICE PERSONNEL

1. Critical Components information.  
Components having special characteristics are marked and must be replaced with parts having specifications equal to those originally installed.
2. Leakage Current Measurement (For 120V Model only).  
When service has been completed, it is imperative that you verify that all exposed conductive surfaces are properly insulated from supply circuits.
  - Meter impedance should be equivalent to 1500 ohm shunted by 0.15μF.
  - Leakage current must not exceed 0.5mA.
  - Be sure to test for leakage with the AC plug in both polarities.

#### C. Start-up display

The information of the protection function appears on the front panel display of the main unit.

### ● FL display at start-up of diagnostic program

When the diagnostic program has started, the history (\*2) of the protection function (\*1) is displayed. If the protection function has been activated in the past, the type and voltage value are displayed. After a few seconds the diagnosis function menu will appear.

- (\*1) If a faulty condition is detected such as excessive current, a bad power supply or excessive amplifier DC offset, the Power will be switched OFF automatically.
- (\*2) The protection records will be cleared when "RESERVED" is selected in diagnosis menu No. 8 and FACTORY PRESET is engaged.

### ● History of protection function

Each case of the history of the protection function is displayed as shown below.

1 DVD/LD *NO PROTECT*

Appears when the protection function has not been activated.

1 DVD/LD *I PROTECT*

Appears when the current protection function has been activated. When power is turned on in an abnormal status, the power relay will come on, protection will operate immediately, and power will turn off.

1 DVD/LD *PS : 21%*

Appears when the power protection function has been activated. For the % value, the voltage at that point is shown by 5V/100%. When power is turned on in an abnormal status, power will turn off after half a second.

1 DVD/LD *DC : 19%*

Appears when the power amp DC protection function has been activated. For the % value, the voltage at that point is shown by 5V/100%. When power is turned on in an abnormal status, power will turn off after two seconds.

## (2) RELEASING METHOD

The diagnosis function can be released by any of the following procedures. Take care with the setting of backup memory initialization menu (diagnosis No. 8) when releasing the diagnosis function:

1. Select diagnosis menu No. 11/submenu No. 6 "EXIT".

## 4. CONTENTS OF DIAGNOSIS FUNCTION

This section describes the contents of the self diagnosis function in detail.

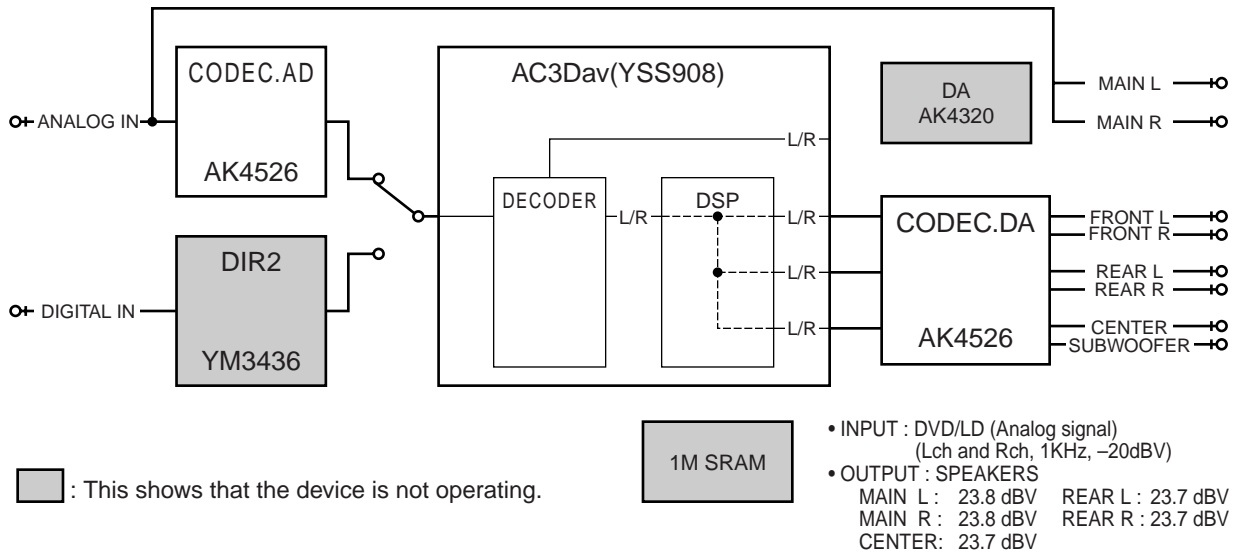

### No.1 ANALOG THROUGH

The input is fixed to analog (A/D). There are two submenus.

#### 1. MAIN BYPASS 1 DVD/LD MAIN BYPAS

The MAIN L/R signals bypass the analog circuits to be output.

For CENTER/SUBWOOFER, FRONT L/R and REAR L/R, the MAIN L/R signals via the DSP are output without being processed (through). (Remote control code 7A-88)

#### 2. DSP 0dB 1 DVD/LD DSP 0DB

MAIN L/R, CENTER/SUBWOOFER/LFE, FRONT L/R and REAR L/R pass through the DSP without being processed.

## No.2 DSP THROUGH

The input is automatically discriminated by signal detection and switched with priorities AC3>PCM Audio>analog. There are the following three submenus.

### 1. YSS908-SRAM

2 DVD/LD YSS908SRAM

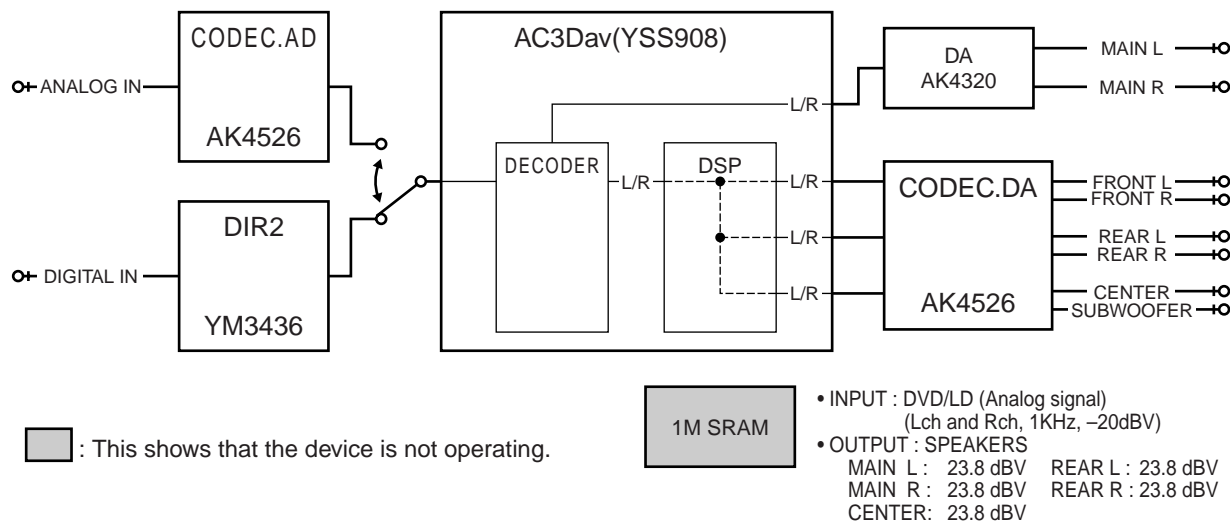

MAIN L/R are input to the DSP via AC3Dav, pass through SRAM, and are then output to all channels without being processed. (Remote control code 7A-89)

### 2. YSS908

2 DVD/LD YSS908

MAIN L/R are input to the DSP via AC3Dav, and then output to all channels without being processed.

### 3. DSP FULL BIT

2 DVD/LD DSP FULL

MAIN L/R are input to the DSP via AC3Dav, and then output to all channels without being processed.

The head margin is abolished, and DSP outputs digital full-bit signals.

Same as the above menu, except that the digital data is output to DA with full bits.

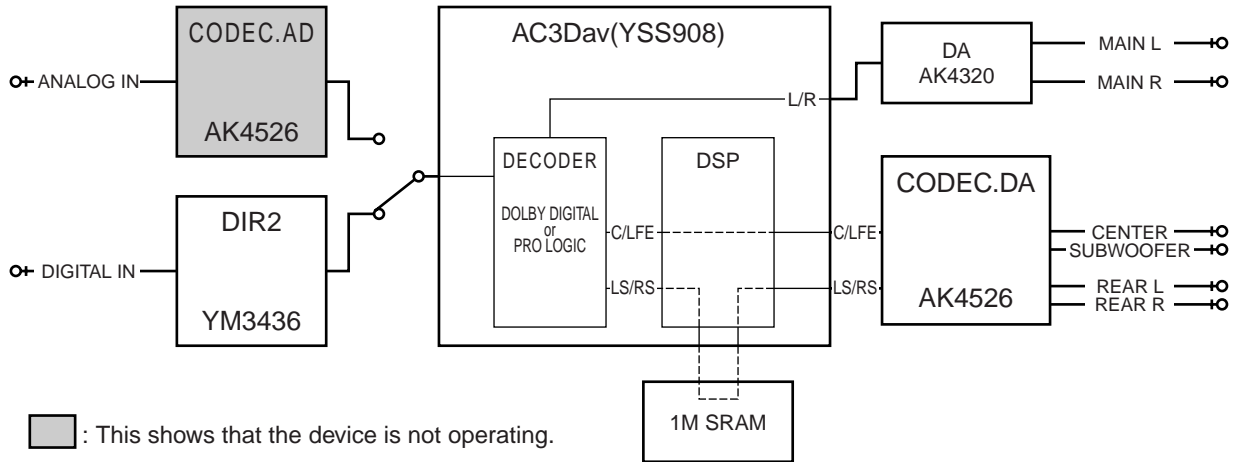

- INPUT : DVD/LD (Analog signal)  
(Lch and Rch, 1KHz, -20dBV)
- OUTPUT : SPEAKERS  
MAIN L : 13.8 dBV REAR L : 22.8 dBV  
MAIN R : 13.8 dBV REAR R : 22.8 dBV  
CENTER : 16.8 dBV

**No.3 AC3 THROUGH**

The input is digital signal only. AC3 (DOLBY DIGITAL) decoding operation is executed, according to the input source.

**1. STATUS(BINARY FORM) 3 DVD/LD 3T0000001**

AC3 (DOLBY DIGITAL) decoded signals are output to each channel via AC3Dav.

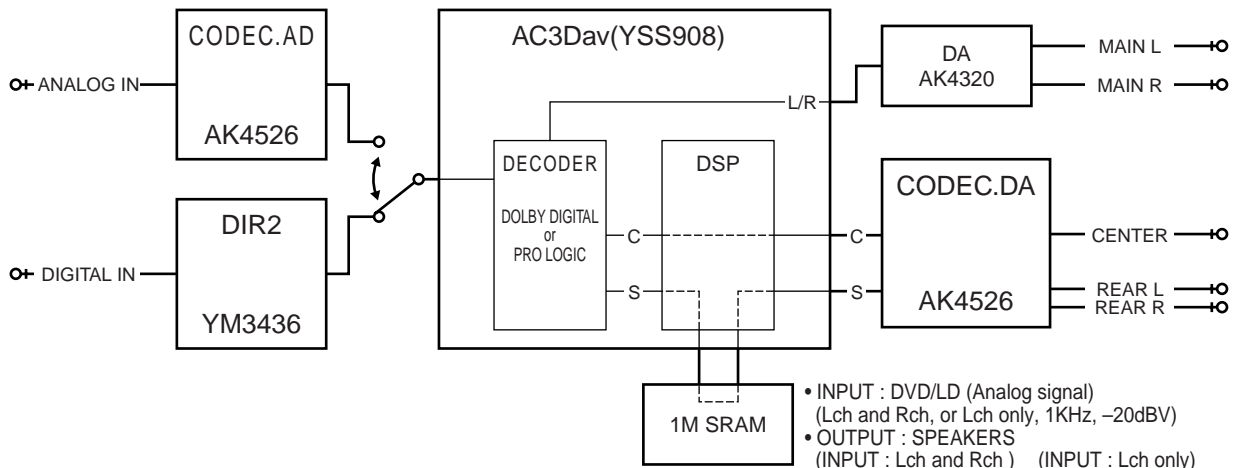

**No.4 PRO LOGIC**

The input is automatically discriminated by PCM>analog. AC3 (DOLBY DIGITAL) is prohibited. The submenu is switched between PRO LOGIC (AUTO BALANCE OFF) and EFFECT OFF.

**1. CENTER LARGE 4 DVD/LD P.LGC C:L**

The input is automatically detected whether it is PCM or analog. With analog, PCM audio or AC3 (DOLBY DIGITAL) 2/0 input, the L, R, C and S signals are PRO LOGIC decoded and output. With AC3 (DOLBY DIGITAL) other than 2/0, PRO LOGIC does not operate, and AC3 (DOLBY DIGITAL) playback is executed. (Remote control code 7A-8A)

- INPUT : DVD/LD (Analog signal)  
(Lch and Rch, or Lch only, 1KHz, -20dBV)
- OUTPUT : SPEAKERS  
(INPUT : Lch and Rch) (INPUT : Lch only)
- MAIN L : -15.4 dBV REAR L : 23.8 dBV
- MAIN R : -14.2 dBV REAR R : -25.0 dBV
- CENTER: 26.6 dBV CENTER : -12.5 dBV
- REAR L : -6.0 dBV REAR L : -6.0 dBV
- REAR R : -6.5 dBV REAR R : -6.2 dBV

**2. EFFECT OFF 4 DVD/LD EFFECT OFF**

MAIN L/R are bypassed and output.

**No.5 SPEAKERS SET**

The input is automatically discriminated by AC3>PCM>analog.

There are the following 9 submenu items: The signal from the DSP block is normally in the effect off status for menu items 1-4. For other menu items, the same signal as in 2. DSP THROUGH: YSS908 menu is output.

The analog switches in each submenu are set as follows:

	SUB MENU	REMOTE CODE	CENTER SP	REAR SP	MAIN SP	MAIN LEVEL	LFE/BASS	OUTPUT
1	MAIN:S 0DB	7A-8B	LARGE	LARGE	SMALL	0dB	SWFR	MAIN L/R

LARGE : Mode in which speakers with high bass-sound playback capability (large unit) are used. Sound in all signal widths is output.

SMALL : Mode in which speakers with low bass-sound playback capability (small unit) are used. Signal of less than 90 Hz is mixed with the channel specified by LFE/BASS.

NONE : Mode in which center speaker is not used. The center components with 3 dB subtracted are branched into MAIN L/R.

LFE/B : MAIN

: Mode in which subwoofer speaker is not used. The subwoofer components with 4.5 dB subtracted are branched into MAIN L/R. But because of the phase difference, the MAIN L/R output is not simply added level.

Purpose of the submenu as follows:

	SUB MENU	PURPOSE
1	MAIN:S 0DB	Verification of the High and low pass filter response and gain in the bass redirection mode.
2	MAIN:L 0DB	Reference of the sub menu No. 1 and 2.
3	MAIN:L -10	Verification of the effect in the main level function.
4	B:MAIN C:N	Verification of the effect the mixing circuit to the main channel.
5	LFE/B:MAIN	Verification of the bass mix gain.
6	LFE/B:SWFR	Verification of the LFE maximum output.
7	C:NONE	Verification of the center mix gain.
8	C:S REAR:S	Verification of the High and low pass filter response and gain in the bass redirection mode.
9	FRONT MIX	Verification of the front mix gain.

**No.6 DISPLAY CHECK**

Check program for FL display. The display status will change as follows with submenu operation. The signal is processed with EFFECT OFF.

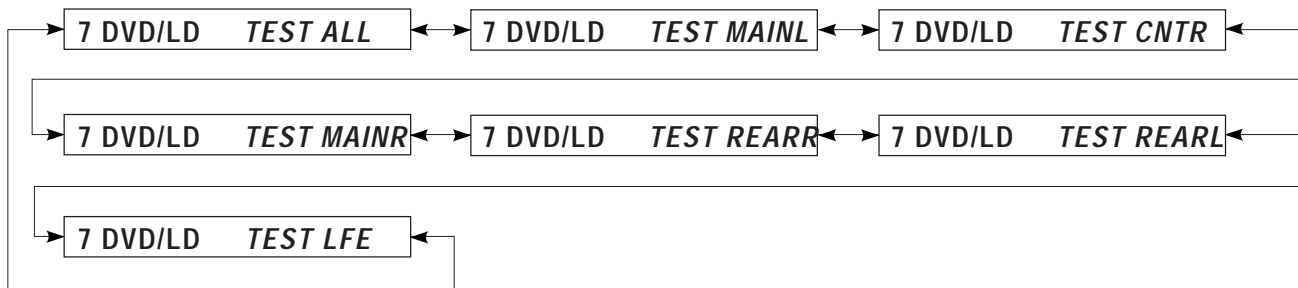

All segments are turned on and off to detect defects in the FL driver and FL display segments. Then the FL driver operation is checked by the dimmer control.

Finally, all segments are turned on and off alternately (in lattice form), to check for a short-circuit between adjacent segments.

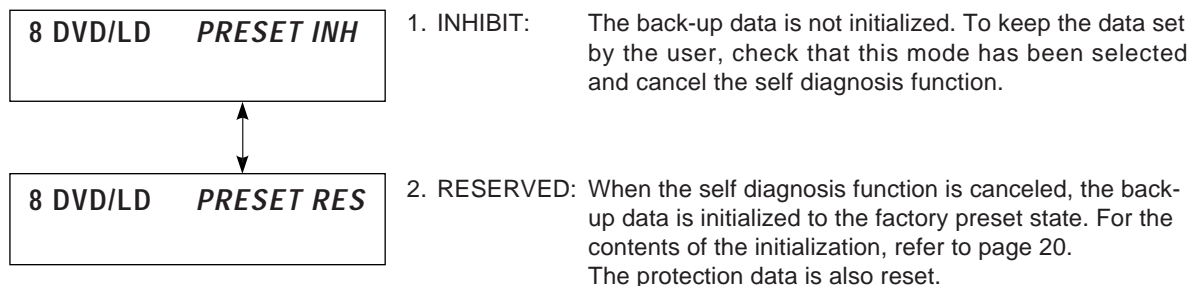

**No.7 MANUAL TEST**

The noise generator built into the DSP outputs test noise from the channel specified by the submenu.

**No.8 FACTORY PRESET**

The menu is used to reserve whether or not to set the back-up data for the effect level, delay time and so on to the factory preset state. The Signal is processed with EFFECT OFF.

**Caution :** Before setting to the PRESET DATA, write down the existing preset memory contents of the Tuner in a table as shown below. (This is because setting to the PRESET DATA will cause the memory contents to be as factory set, i.e., all the preset memory by the user will be erased.)

**No.9 AD DATA CHECK**

The A/D conversion values of the main CPU which detects key scan, protection, etc. are displayed in % (100%: 5V). All signal processing before this menu is executed will be held.

The keys on the main unit cannot be operated to detect the values of all keys in the K1/K2/K3/K4. Turning the rotary encoder (input selector on the main unit) will switch the submenu.

Table 1

AD Value	0	11	23	36	51	67	84
K1	TIME/ LEVEL	SET MENU	-	+	EON	PTY SEEK MODE	PTY SEEK START
K2	TAPE/MD MON /EXT. DECODER	TUNING DOWN	TUNING UP	INPUT MODE	EFFECT	PROGRAM ◁	PROGRAM ▷
K3	7	8	MEMORY	EDIT	TUNING MODE	FM/AM	RDS MODE
K4	A/B/C/D/E	1	2	3	4	5	6

**Cautions:**

1. If K1/K2/K3/K4 are more than -4% from the reference values, normal operation will not be executed.
2. If DC and PS are outside the normal values, the protection function will operate and power will turn off.

**No.10 STATUS FROM DSP MICOM**

The status data from the DSP microprocessor is sequentially displayed in a hexadecimal number.  
All signal processing before this menu is executed will be held.

**[STATUS 0]**

<b>bit4</b>	1 for audio other than PCM linear audio	<b>bit0</b>	IEC958 digital data bit

**[Note]**

IEC958: Standard to identify the PCM bit stream signal. Digital format error refers to a digital signal with the sampling frequency undefined (neither 44.1k, 32k nor 48k). Since the operation of each device cannot be assured at fs outside specifications, the sub-microprocessor handles this status as the forced analog mode (ignored even if decoding is OK from the detection terminal level), and selects the signal from the analog input terminal. Since the sub-microprocessor transmits 000B (analog) for STATUS#0 bits 4-6 to the main microprocessor, the main microprocessor visually operates in the same way as with digital unlocking.

<3rd Byte>

<b>bit7</b>	AC3 KARAOKE	<b>bit3</b>	On-board write mode
<b>bit6</b>	DIR2 LOCKN	<b>bit2</b>	The number of digital inputs is 2 (equivalent to 595)

**No.11 CPU VERSION/CHECK SUM/PORT INFO/EXIT DIAG**

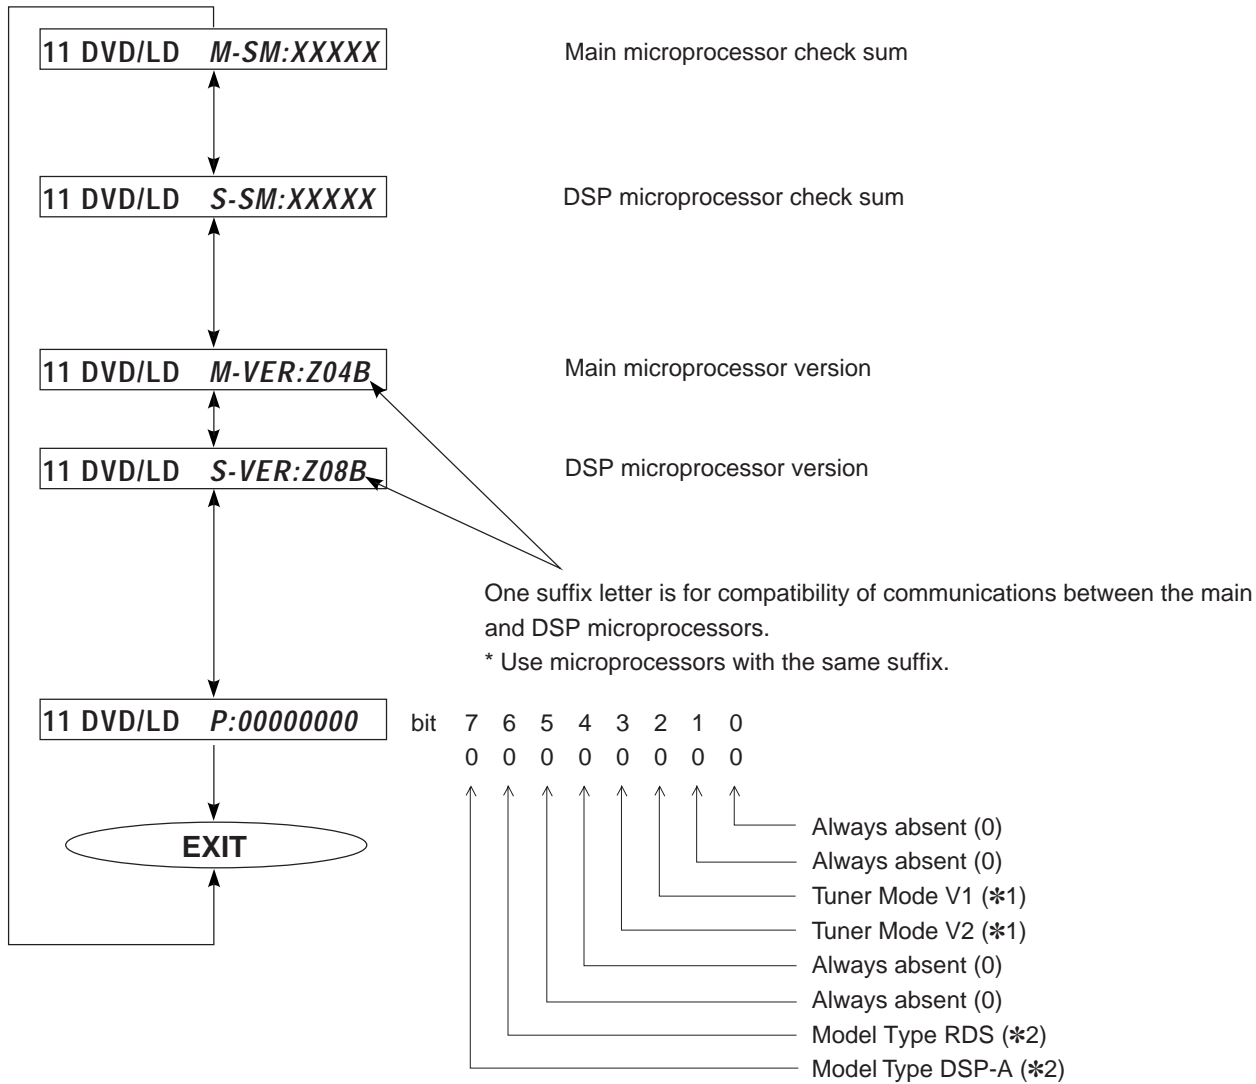

The check sum, version and port setting of main CPU/DSP CPU are displayed.

The signal is EFFECT OFF.

Operating the submenu will finish self-diagnosis, and ordinary operation mode will be restored.

The suffix letter ("B" in the following) of version indication is for compatibility of communications between the main and DSP microprocessors.

Combining microprocessors with different suffixes will make normal operation impossible.

## ■ AMP ADJUSTMENT

### Confirmation of Idling Current of Main Amplifier

- Right after power is turned on, confirm that the voltage across the terminals of R688(Main Lch),R690(Main Rch), R692(Center), R694(Rear Lch), R696(Rear Rch) are between 0.1mV and 5.0mV.
- If it exceeds 5.0mV, open (cut off) R571 (Main Lch), R577 (Main Rch), R589 (Center), R595 (Rear Lch), R583 (Rear Rch) and reconfirm the voltage again.
- Confirm that the voltage is 0.25mV ~ 15.0mV after 60 minutes.

R688(Lch)  
R690(Rch)  
R692(Cch)  
R694(RLch)  
R696(RRch)

R571(Lch)  
R577(Rch)  
R589(Cch)  
R595(RLch)  
R583(RRch)

**Note)**

- If R571, R577, R589, R595 and R583 have already been cut off and idling current does not flow, reconnect R571, R577, R589, R595 and R583.
- Q521 ~ Q525 are transistors for temperature correction. Apply silicone grease to contact surface with the heat sink.
