SERVICE MANUAL

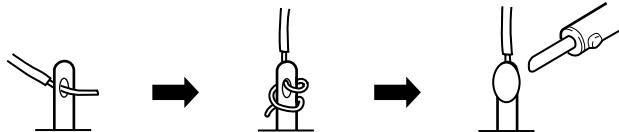

MPC 4000

Music production Center

★ SAFETY INSTRUCTIONS

1. Parts identified by the  symbol are critical for safety.
Replace them only with the parts number specified.
2. In addition to safety, other parts and assemblies are specified for conformance with such regulations as those applying to spurious radiation.
These must also be replaced only with the specified replacements.
Examples : Noise blocking capacitors, noise blocking filters, etc.
3. Use specified internal wiring. Note especially :
 - 1) Wires covered with PVC tubing
 - 2) Double insulated wires
 - 3) High voltage leads
4. Use specified insulating materials for hazardous live parts.
Note especially :
 - 1) Insulation Tape
 - 2) PVC tubing
 - 3) Spacers (insulating barriers)
 - 4) Insulation sheets for transistors
 - 5) Plastic screws for fixing micro switches
5. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.), wrap the ends of the wires securely around the terminals before soldering.

6. Make sure that wires do not contact heat producing parts (heat sinks, oxide metal film resistors, fusible resistors, etc.).
7. Check that replaced wires do not contact sharp edged or pointed parts.
8. Also check areas surrounding repaired locations.
9. Make sure that foreign objects (screws, solder droplets, etc.) do not remain inside the set.

SAFETY CHECK AFTER SERVICING

After servicing, make measurements of leakage-current or resistance in order to determine that exposed parts are acceptably insulated from the supply circuit. The leakage-current measurement should be done between accessible metal parts (such as chassis, ground terminal, microphone jacks, signal input/output connectors, etc.) and the earth ground through a resistor of 1500 ohms paralleled with a 0.15 μ F capacitor, under the unit's normal working conditions.

The leakage-current should be less than 0.5 mA rms AC. The resistance measurement should be done between accessible exposed metal parts and power cord plug prongs with the power switch (if included) "ON". The resistance should be more than 2.2 M ohms.

★ INFORMATIONS

SYMBOLS FOR PRIMARY DESTINATION

Unit destinations are indicated with letters as shown below.

Symbols	Principal Destinations
A	U.S.A
B	England
E	Europe
J	Japan
V	Germany
X1	Japan
X4	Universal Area

MAKE YOUR CONTRIBUTION TO PROTECT THE ENVIRONMENT

Used batteries with the ISO symbol for recycling as well as small accumulators (rechargeable batteries), mini-batteries (cells) and starter batteries should not be thrown into the garbage can.

Please leave them at an appropriate depot.

PRECAUTIONS FOR LITHIUM BATTERY

The lithium battery may explode when incorrectly replaced.
[OBSERVE THE FOLLOWING WHEN REPLACING]

- Replace with the same make and type or equivalent recommended by manufacturer.
- Place battery in correct polarity.
- Do not short the terminals.
- Do not charge battery.
- Do not dispose of battery in fire.

I. SPECIFICATIONS

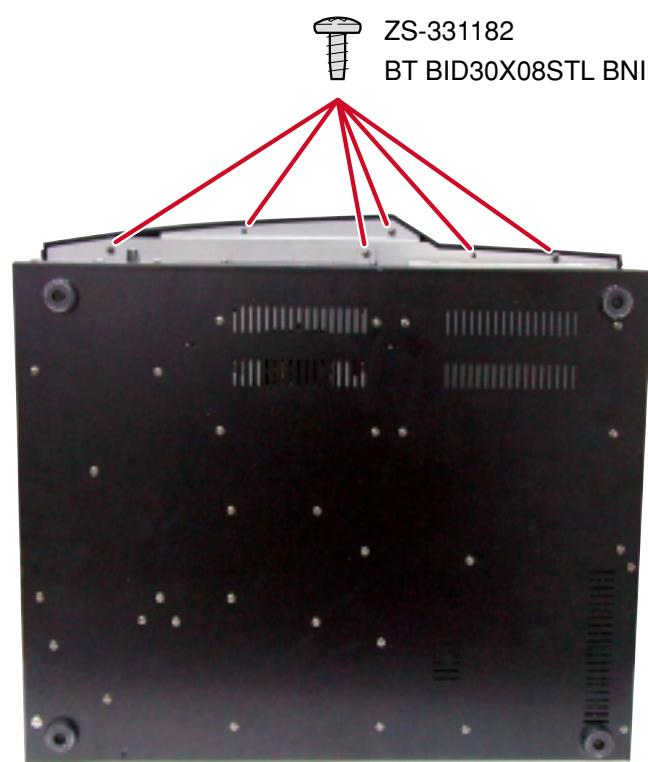

General	Power supply	100-240V AC 50/60Hz 70W (27W without options)
	Dimensions	526 (W) x 170 (H) x 453 (D) mm (with LCD tilted down)
	Weight	10.5kg (without options)
	Display	320 x 240 dots grey-scale graphical LCD w/back light
Sound Generator	Sampling rate	44.1kHz, 48kHz, 96kHz
	Data format	24/16 bit linear
	Sampling time (unexpanded memory)	180/120 (16/24 bit) seconds mono FS=44.1kHz 166/110 (16/24 bit) seconds mono FS=48kHz 82/53 (16/24 bit) seconds mono FS=96kHz 90/60 (16/24 bit) seconds stereo FS=44.1kHz 83/55 (16/24 bit) seconds stereo FS=48kHz 40/26 (16/24 bit) seconds stereo FS=96kHz
	Memory	16MB standard, expandable to 512MB 168-pin DIMM (PC133/PC100, CL2) slot x 2
	Polyphony	64 voices
	Filter	2-pole x 3 with resonance
	Envelope generators	3 x Envelope generators (2 multi-stage)
	LFO	2 x Multi-wave
Sequencer	Maximum events	300,000 notes (equivalent)
	Resolution	960 parts per 1/4-note (ppq)
	Sequences	128
	Tracks per sequence	128
	MIDI output channels	64 (16 channels x 4 output ports)
	Song mode	128 songs, 250 steps per song
	Drum pads	16 (velocity and pressure sensitive)
	Drum pads banks	6
	Sync modes	MTC, MIDI clock, SMPTE
Inputs/Outputs	Rec In LINE/MIC L/R	1/4-inch stereo phone/XLR Combo jack, balanced, 1/4-inch phone, Imp. 18kΩ, 24dBu max./XLR, Imp. 6kΩ, 22dBu max.
	Rec In PHONO L/R	RCA phono x 2 with RIAA EQ, -24dBu max. (1kHz)
	Main Out L/R	1/4-inch stereo phone/XLR Combo jack, balanced, 1/4-inch phone, Imp. 1.7kΩ, 24dBu max./XLR, Imp. 200Ω, 18dBu max.
	Assignable Outs (IB-48P required)	1/4-inch stereo phone x 8, balanced, Imp. 1.7kΩ, 18dBu max.
	Headphone	1/4-inch stereo phone, 60mW (32Ω)
	Digital Input (IB-4D required)	RCA phono x 1, SPDIF
	Digital Main Output (IB-4D required)	RCA phono x 1, SPDIF
	Word Clock Input (IB-4D required)	BNC x 1 (w/75Ω terminator On/Off)
	SMPTE In	1/4-inch stereo phone, balanced
	SMPTE Out	1/4-inch stereo phone, balanced
	Footswitch	1/4-inch phone x 2
	MIDI Input	5-pin DIN x 2
	MIDI Output	5-pin DIN x 4
	SCSI	50-pin high-pitch SCSI connector x 1
	USB	Host x 1, Slave x 1 (V1.1)
Options	IB-4D	Digital Audio (SPDIF) I/O board
	IB-4ADT	Adat Interface board (2-in/8-out)
	IB-48P	Assignable 8-channel Output Board
Standard accessory	Power Cable	x 1
	CD-ROM disc	x 1
	Drive Mounting Kit	x 1
	User Guide	x 1

* The specifications are subject to change without the prior notice.

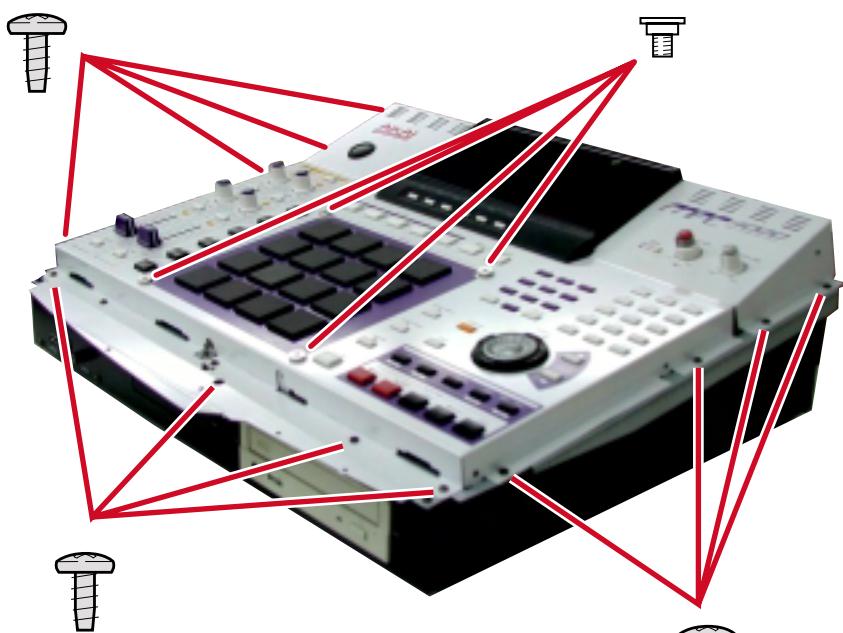

II. DISASSEMBLY

In case of trouble, etc., necessitating dismantling, please dismantle in the order shown in the illustrations. Reassemble in the reverse order.

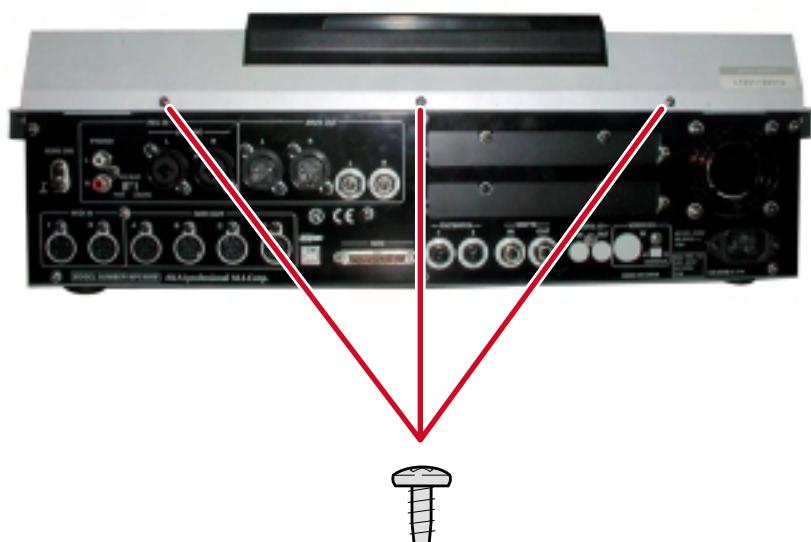

1. Removal of the OPERATION BLOCK

III. PRINCIPAL PARTS LOCATION

IV. OS Update Procedure

OS Update Procedure

[OS Update procedure from USB]

The OS update can be made from the PC via the USB port.

You must have the “OS loader software for MPC4000” besides the OS .bin file.

The OS loader software includes the OS Loader.exe file, USB driver.inf file, and USB Driver.sys file.

1. Install USB Driver to your PC

After all files are un-Zipped, place the USB Driver.inf and USB Driver.sys files into the same folder, e.g. Driver.

Boot up the PC and MPC4000 complete and then connect the sampler to the PC using the USB cable.

This prompts that the PC found the new device and the new driver is required.

Refer it to the Driver folder you just created.

The Driver software will be placed correctly and the MPC4000 is recognized properly.

2. OS update

Double click on the OS Loader.exe icon and specify the OS .bin file. It will send the OS to the MPC4000.

[Caution]

After the update, be sure to initialize the MPC4000 by pressing the GLOBAL key, and then [F6] (INITIAL) and [F5] (DO IT) keys, before turning it off.

[OS update procedure from CD-R]

To update the OS from the CD-ROM, it requires the OS version later than V1.02 software installed on the MPC4000.

You can update the OS from the CD-ROM drive. Be sure to use the CD-ROM that contains the OS for the MPC 4000. You can create the OS disc by using your PC's CD-R/W function to write the “MPC4000.bin” file on to an ISO9660 CD-ROM disc.

1. Turn the MPC4000 on and insert the OS disc.
2. Press the LOAD key and select the MPC4000 OS file (.bin file).
3. Press the [F6] (DO IT) key and then the [F6] (INSTALL) key.
4. The OS Update progress appears, i.e. the messages “Please wait ??.” and then “Upgrading of the Flash ROM was successful.” appear accordingly.
5. Press the [F6] (Restart) key. Be sure to initialize the MPC4000 by pressing the GLOBAL key, and then the [F6] (INITIAL) and [F5] (DO IT) keys, before turning it off.

Writing Panel OS Program

Change the position of the Short Pin P15 on the IO PCB to PROG side.

The OS is automatically written to the Panel CPU RAM when the MPC4000 is switched on.

Switch the unit off when the “Process completed!” prompt message appeared and then replace the Short Pin to the original position.

V. TEST MODE

Panel Test Mode

To enter the Panel Test Mode, press the GLOBAL key while holding down the SHIFT key in the GLOBAL page [F1] of the GLOBAL Mode.

- Moving the Q-link knobs changes the graphics accordingly.
- Tapping the PAD shows the amount of pressure applied on the bar graph.
- Switching the FOOT Pedal on/off changes the graphics accordingly.
- Turning the JOG wheel increases/decreases the value in the Data field.
- Pressing the key shows its name at the bottom of the screen. For those keys with the LED, the LED is turned on/off.
- Pressing the [F1] key stops the key test.
- After stopping the key test, pressing the mode key will abort the test mode.
- While the key test is stopped, pressing the SHIFT key and [F6] key shows the A/D converted value of the Q-link/ PAD.

CPU Board Test Mode

The Test Mode of the MPC4000 CPU Board is performed while the CPU board is mounted on the Z4/Z8 Sampler. When the Z4/Z8 is switched on after the MPC4000 CPU Board is mounted on the Z4/Z8 Sampler, the sampler is turned on with the MPC4000 screen.

Install the Z4/Z8 OS using the “OS Loader” of “Boot Overwrite” type via the USB port.

Similarly, when the CPU Board is mounted back on the MPC4000 after the Z4/Z8 OS is installed for the test, it boots up with the Z4/Z8 screen. Reinstall the MPC4000 OS using the “OS Loader” of “Boot Overwrite” type. Refer to the Z4/Z8 Service Manual for the operation details of the Test Mode for the CPU Board.

VI. PARTS LIST

ATTENTION

1. When placing an order for parts, be sure to list the Part No., Model No. and the description of each part. Otherwise, the non-delivery of the part or the delivery of a wrong part may result.
2. Please make sure that Part No. is correct when ordering. If not, a part different from the one you ordered may be delivered.
3. Since the parts shown in Parts List or Preliminary Service Manual may have been the subject of changes, please use this Parts List for all future reference.

HOW TO USE THIS PARTS LIST

1. This Parts List lists those parts which are considered necessary for repairs.
2. Parts not shown in the Parts List will not in principle be supplied.
3. How to read the Parts List.

LCD BLOCK

VII. INFORMATION OF ICS

1. IC Explanation.

1-1 IC1 SA1110B (Intel CPU)
206MHz version chip.
CPU clock : 176.9MHz.
SDRAM (CPU work memory) : 88.45MHz (=176.9MHz/2)

1-1-2 Pin Descriptions

Signal name	Dir	Explanation
D[31:0]	i/o	Data-bus
A[25:0]	out	Address-bus
SDCKE1	out	SDRAM clock enable for CPU's work memory
SDCLK1	out	SDRAM clock for CPU's work memory.(88.45MHz)
SDCLK2	out	Not used though this is connected.(44.225MHz)
/SDRAS	out	SDRAM RAS for CPU's work memory
/SDCAS	out	SDRAM CAS for CPU's work memory
/SDCS0	out	SDRAM CS for CPU's work memory
DQM[3:0]	out	SDRAM data out mask enable for CPU's work memory
/OE	out	Output enable (/RD)
/WE	out	Write enable
/Cs[5:0]	out	Chip select
RDY	in	Data ready signal for /CS[5:3]
RD/nWR	out	Read/write direction control
/RESET	in	Hard reset. Active low.
PXTAL	in	Input for 3.686MHz crystal (non-CMOS threshold)
PEXTAL	out	Output for 3.686MHz crystal (non-CMOS level)
GP0	in	Interrupt from Voice-LSI
GP1	in	Interrupt from SCSI controller (FAS236U)
GP2	in	Interrupt from IDE
GP3	in	Interrupt from USB-host controller (SL811HST)
GP4	in	Interrupt from effect board
GP5	in	Interrupt from MIDI (Voice-LSI)
GP6	in	Interrupt from USB-function controller (NET2890)
GP7	in	Interrupt from SMPTE option (MPC only)
GP8	in	Interrupt from FPGA
GP9	in	Interrupt from Voice-LSI
GP11	out	Initialize FPGA. active high.
GP13	out	DIMM SPDA for reading information.
GP14	out	DIMM SPCL for reading information.
GP15	out	LCD DISP off. Active low.(MPC only)
GP16	in	SCSI jack board recognition. Low=connected.
GP17	out	Control /PROGRAM pin of FPGA during configuration
GP18	in	effect board recognition. Low=connected.
GP19	in	FPGA /INIT. used during configuration.
GP20	out	D/A converter CDTI (control data input)
GP21	in	FPGA done. used during configuration.
GP22	out	Used for ROM emulator.
GP23	out	CPLD TDI. used during configuration in factory.
GP24	out	CPLD TMS. used during configuration in factory.
GP25	out	CPLD TCK. used during configuration in factory.
GP26	in	8 Para board recognition. Low=connected.
GP27	in	CPLD TDO. used during configuration in factory.
RxD_1	in	DIO board recognition. Low=connected.
TxD_1	in	SMPTE board recognition. Low=connected.
RxD_2	in	RxD. from panel(remocon) 230.4kbps.
TxD_2	out	TxD. to panel(remocon). 230.4kbps.
RxD_3	in	ADAT board recognition. Low=connected.
TxD_3	in	for future. (Low When ADAT board is exist now)
RxD_C	in	CD analog recognition. Low=connected.(MPC only)

Signal name	Dir	Explanation
TxD_C	in	CD digital recognition. Low=connected.(MPC only)
SCLK_C	in	BM1. Machine recognition. Low=Z4/8. High=MPC.
SFRM_C	in	BM0. Connected GND now. for future.
LDD[7:0]	out	LCD controller display data.
L_BIAS	out	LCD ac bias drive.
L_PCLK	out	LCD pixel clock.
L_LCLK	out	LCD line clock.
L_FCLK	out	LCD frame clock.
TXTAL	in	Not used.(Clock for CPU's real-time clock)
ROM_SEL	in	ROM bus width select. Low=16bits.
SMROM_EN	in	SMROM enable. Low= disable.
/PIOR,/PIOW	out	PCMCIA I/o read/write for ROM Emulator
/IOIS16	in	PCMCIA 16-bit I/O data transfers for ROM Emulator
TCK_BYP		
TESTCLK	in	Test pin
GP10,/PCE1		
/PWAIT		
BATT_FAULT		
VDD_FAULT	out	# Not used though this is connected #
VDD	-	Positive supply for the core. +1.75V
VDDX	-	Positive supply for the pins. +3.3V
VSS	-	Ground supply.
VSSX	-	Ground supply for the I/O pins.

1-3. IC3,4 HM5264165FTT (64Mbit SDRAM (4Mword x16bit))

Wave RAM for Voice LSI

The clock changes by the value of sampling frequency.

44.1kHz: 33.869MHz (= fsx768)

48kHz : 36.864MHz (= fsx768)

96kHz : 36.864MHz (= fsx384)

If there is no DIMM, SDRAM is placed in zero address.

If there is DIMM(s), SDRAM is placed in last address.

1-4. IC5,6 HY57V281620AT-P (128Mbit SDRAM (8Mword x16bit))

CPU work RAM

This clock is set to half of CPU core clock by software.

("88.45MHz" When CPU clock is 176.9MHz.)

1-5. IC7 MBM29DL322TE90TN (32Mbit Flash ROM (2M word x16bits))

CPU Boot ROM

(If ROM-card is inserted in J7, system boot up from ROM card.)

1-6. IC8 XC95144XL-7TQ100C (Complex programmable logic (CPLD)).

Address decoder.

Expansion port by using data-latch.

Communication logic for RTC.

Selector.

1-6-2. Pin Descriptions

Signal name	Dir	Explanation
D[7:0]	i/o	Connected with CPU data bus for communication.
A[24:21]	in	Connected with CPU address bus for communication.
/CS[5:0]	in	Chip select for other device.
/RD	in	Data output enable of CPU data bus.
/WR	in	Data strobe of CPU data bus.
/RESET	in	For initializing logic. Active low.
/GWR,/FWR	out	buffered /WR. (= /WR)
/GDB	out	Gate of buffer for logic on CPU board.
/GDB2	out	Gate of buffer for logic except for CPU board.
ROMCARD	in	ROM card. L: not inserted (normal), H: inserted.
/FLASH_CS	out	Chip select for Flash-ROM. /CS0 OR (A24 XOR ROMCARD).
/ROM_CS	out	Chip select for ROM-card. /CS0 OR (/A24 XOR ROMCARD).
/SCSI_CS	out	Chip select for SCSI controller. /CS5 OR A24.
/USBF_CS	out	Chip select for USB host controller. /CS5 OR /A24.
FPCCLK	out	FPGA configuration clock on CPU PCB.
/EB_CS	out	Chip select for DSP on effect PCB.
FP2_CCLK	out	FPGA configuration clock on ADAT PCB.
/ADAT_CS	out	Chip select for FPGA on ADAT PCB.
/SMPTE_CS	out	Chip select for controller on SMPTE PCB.
/DIO_CS	out	Chip select for CPLD on DIO PIB.
/LSI_RESET	out	Reset Voice-LSI. Active low.
/VO_PLLRST	out	Reset PLL of Voice-LSI. Active low.
/IDE_RESET	out	Reset IDE.
/ADAT_INIT	out	Initialize FPGA and IC on ADAT PCB. Active low.
/EB_RESET	out	Reset DSP on effect PCB. Active low.
VO_SIN[1:0]	out	Audio serial data to Voice-LSI's SIN[1:0]
AD_DATA	in	Analog-in audio data from CODEC (A/D at MPC).
DIO_RCV	in	Digital-in audio data from DIO PCB.
ADAT_RCV	in	ADAT-in audio data from ADAT PCB.
EB_RTN[3:2]	out	Effect return.
/SCSI_TERM	out	SCSI termination. H:off, L:on.
/ADA_CS	out	Chip select for CODEC (A/D conv. at MPC).
/ADA_PD	out	/PD of CODEC and A/D on MPC.
AD_DFS	out	DFS of a/d converter on MPC.
DA_CCLK	out	Control clock for CODEC (D/A conv. at MPC).
/DA_CS	out	Chip select for dD/A converter at MPC.
/DA_PD	out	/PD of D/a converter's on MPC and DIO.
/AD_CDSEL	out	Select analog-out of CD player at MPC.
MUTE	out	For mute circuit. H: mute on, L: mute off.
LSI_MCLK	in	MCLK of Voice-LSI. Make synchronous reset for Voice LSI.
RTC_D[7:0]	i/o	RTC data bus.
RTC_AS	out	Control for RTC
RTC_DS		
RTC_RW		
/RTC_SEL		
/RTC_XALM		
WCKE[1:0]	out	Clock enable of wave SDRAM and DIMM.
SEL_XTAL0	out	X2 output enable. H: enable, L: disable.
SEL_XTAL1	out	X3 output enable. H: enable, L: disable.
MOTOR_ON	out	Control fan on MPC.

Signal name	Dir	Explanation
/FP2_PROG	out	For configuration to FPGA on ADAT PCB.
PLD2_TMS PLD2_TDI	out	For configuration to CPLD on DIO.
PLD2_TDO	in	For configuration to CPLD on DIO.
TCK,TMS,TDI	in	For configuration.(TCK is also used for CPLD on DIO)
TDO	out	For configuration.
VCCINT	-	Positive supply for internal logic. +3.3V
VccIO	-	Positive supply for output driver. +3.3V
GND	-	Ground supply.

1-7. IC9 XC2S100-5TQ144C (Field Programmable Gate Arrays (FPGA))

IDE controller.

DMA controller between Voice-LSI and IDE/SCSI.

MIDI interface.

1-7-2. Pin Descriptions

Signal name	Dir	Explanation
CD[15:0]	i/o	Connected with CPU bus for communication.
A[5:0]	in	Connected with CPU address bus for communication.
/IDE_CS	in	Chip select for this FPGA.
/CPU_RD	in	Data output enable of CPU bus.
/CPU_WR	in	Data strobe of CPU bus.
RESET	in	Initialize FPGA logic. Active high.
LSI_D[15:0]	i/o	Connected with DMA data bus of Voice-LSI.
IDE_D[15:0]	i/o	Connected with data bus of IDE.
IDE_DA[2:0]	out	Connected with DA[2:0] of IDE I/F
/IDE_CS1,0	out	Connected with CS[1:0] of IDE I/F.
/IDE_IORD	Out	Connected with /DIOR HD of IDE I/F.
/IDE_DIOW	Out	Connected with /DIOW_STOP of IDE I/F.
IORDY	in	Connected with IORDY of IDE I/F.
/IDE_DMACK	out	Connected with /DMACK of IDE I/F.
IDE_DMARQ	in	Connected with DMARQ of IDE I/F.
CPU_RDY	out	Connected with CPU RDY.
SCSI_DMAREQ	in	Connected with SCSI controller. DMA control.
/SCSI_DMACK	out	Connected with SCSI controller. DMA control.
LSI_DMAREQ	out	Connected with Voice-LSI. DMA control.
/LSI_DMAACK	in	Connected with Voice-LSI. DMA control.
/LSI_DMARD	in	Connected with Voice-LSI. DMA control.
/LSI_DMAWR	in	Connected with Voice-LSI. DMA control.
/INT_DMA	out	Interrupt request output of DMA to CPU. Active low.
LRCK	in	Word clock of system. Connected with Voice-LSI.
SFrame	out	Pin No.133. Frequency= Fs/256. duty cycle= 255:1.
MIDI_IN1,2	in	MIDI 2 input.
MIDI_OUT1-4	out	MIDI 4 output.
/INT_MIDI	out	Interrupt request output of Midi to CPU. Active low.
MCLK	in	Master clock of FPGA logic.
CCLK	in	Configuration clock I/O pin.
/INIT	i/o	For configuration. Active Low.
/PROGRAM	in	Initiates a configuration sequence when asserted Low.
DONE	i/o	Indicates that configuration is complete. open drain.
M0,M1,M2	in	configuration mode pin.
TCK,TMS,TDI	in	# Not used though this is connected #
VCCINT	-	Power supply for internal core logic. +2.5V
VccO	-	Power supply for output driver. +3.3V
GND	-	Ground supply.

1-8. IC10 SL811HST (USB Host/Slave Controllers).

1-8-2. Pin Descriptions

Pin No.	Signal name	Dir	Explanation
3	/WR	in	Write Strobe. Active low.
4	/CS	in	Chip select. Active low.
5	CM	in	Clock mode. H: at 12MHz. L: at 48MHz clock source.
6	USBVDD	-	Power for USB Transceivers.
7	DATA+	i/o	USB Differential Data Signal High Side.
8	DATA-	i/o	USB Differential Data Signal Low Side.
9	USBGND	-	Ground Connection for USB.
16	CLK/X1	in	Clock or External Crystal X1 connection.
17	X2	out	External Crystal X2 connection.
18	/RST	in	SL811HST Device reset. Active low.
19	INTRQ	out	Interrupt Request output. Active high.
21,39	D[7:0]	i/o	Connected with CPU bus for communication.
27-29			
31-33			
40	M/S	in	Master/Slave Mode select. H: Slave. L: Master.
42	A0	in	L:Addr.Pointer.Register. H:Data Buffer or Register.
43	/DACK	in	DMA Acknowledge. Active low.
44	/DRQ	Out	DMA Request. Active low.
45	/RD	in	Read Strobe Input. Active low.
15,41	VDD	-	Device VDD Power.
9,20	GND	-	Device Ground.
30			

1-9. IC11 FAS236U (SCSI Controller)

1-9-2. Pin Descriptions

Pin No.	Signal name	Dir	Explanation
100	DREQ	out	DMA request. H: ready to transfer data.
1	/DACK	in	DMA acknowledge.
2	/DBWR	in	Data-bus write control.
4	IGS	out	Indicates that chip is acting in initiator mode.
5	DIFFSENS	in	H: differential mode.
6	TGS	out	Indicates that chip is acting in target mode.
7	EDIFFS	in	H: Enable "DIFFSENS" function.
8-15	DB[15:0]	i/o	DMA data-bus.
19-26			
16,27	DBP[1:0]	i/o	DMA data-bus parity.
29-36	/SDI[7:0]	in	SCSI data bus.
37	/SDIP	in	SCSI data parity.
42-45	/SDO[7:0]	out	SCSI data bus.
48-51			
52	/SDOP	out	SCSI data parity.
56	/SELO	out	SCSI bus select.
57	/BSYO	out	SCSI bus busy.
58	/REQO	out	SCSI bus request.
59	/ACKO	out	SCSI bus acknowledge.
62	/MSG	i/o	SCSI bus message phase.
63	/CD	i/o	SCSI bus control and data phase.
64	/IO	i/o	SCSI bus I/O phase.
65	/ATN	i/o	SCSI bus attention.
66	/RSTO	out	SCSI bus reset.
69	/SELI	in	SCSI bus select.
70	/BSYI	in	SCSI bus busy.
71	/REQI	in	SCSI bus request.
72	/ACKI	in	SCSI bus acknowledge.
73	/RSTI	in	SCSI bus reset.
74,75	MODE[1:0]	in	Bus configuration mode select.
76	/INT	out	Interrupt output.
77	RESET	in	Power reset.
79	/WR	in	Write control.
80	/RD	in	Read control.
81	/CS	in	Chip select.
82-85	A[3:0]	in	Address bus.
86	CLK	in	Internal chip timing clock.
87	/DIFFM	in	H: single-end mode. L: differential mode.
90-93	PAD[7:0]	i/o	PAD bus. Connected with CPU for communication.
96-99			
38,88	VDD	-	+5V DC power input.
17,18,40	Vss	-	GROUND. 0V DC power return.
41,46,47			
54,55,60			
61,67,68			
94,95

- 1-10 IC12, 16 ALVCH16245 (16 bit Bus bidirectional transceivers)
 1-11 IC13-15 ALVCH16244 (16 bit Bus Buffers)
 1-12 IC17, 18 LVC244 (8 bit Bus Buffers)
 1-13 IC19 LVC245 (8 bit Bus bidirectional transceivers)
 In particular, this is used for changing 5V into 3.3V.
 1-14 IC20 M51957B (System Reset IC. Delay time is about 0.34 sec)
 1-15 IC21, 22 NJM317 (Regulator IC)
 IC21: regulate +2.5V for FPGA.
 IC22: regulate +1.75V for CPU.

1-16. IC23 NET2890 (USB function controllers)

1-16-2. Pin Descriptions (PU:pull-up, PD:pull-down)

Pin No.	Signal name	Dir	Explanation
2	/SOF	out	Start of Frame. Active low.
3,4	DP,DM	i/o	USB data port. differential data.
5-11	D[7:0]	i/o	bi-directional 8-bit data bus.
14			Connected with CPU for communication.
15	/CS	in	Chip select. Active low. (PU)
16	LCLK	out	buffered clock output.
17	/IOR	in	I/O read strobe. Active low. (PU)
18	/IOW	in	I/O write strobe. Active low. (PU)
19	DRQ	out	DMA request.
20	/DACK	in	DMA acknowledge. Active low. (PU)
21	/EOT	in	End of transfer. Active low. (PU)
22	/BUSBWR	in	Indicates that external logic is powered by USB bus. Alternatively general input.
23	/PWRGOOD	in	Indicates that external power supply used for self-powered mode is operational. Alternatively general input.
26	/IRQ	out	Interrupt Request. Active low.
27	/USBOE	i/o	USB port output enable. Active low. (PU)
28	/DEVCFG	out	Device config. Alternatively general output. (PD)
30	TEST	in	Test. Connect this pin to ground. (PD)
32	/LRESET	out	Local reset. Active low. (PU)
33	/SUSP	out	Device suspended. Active low. (PU)
34	/WAKEUP	in	USB remote wakeup. Active low. (PU)
35	/RESET	in	External reset. (PU)
38-42	A[4:0]	in	Address bus.
44	CLKIN	in	48 MHz Oscillator input.
45	CLKOUT	out	48 MHz Oscillator output.
47	TESTOUT	out	Test output. Used for manufacturing test.
31	VDD_LOCAL	-	+3.3V or +5V DC power input for CPU I/F.
1,13,25 37,43	VDD	-	+3.3V DC power input for the core and USB I/F.
12,24,36 46,48	Vss	-	GROUND. 0V DC power return.

Appendix: Installing storage devices (for service engineers)

This appendix explains how to install storage devices (ATA hard disk, CD-ROM drive, Zip drive, etc.) in the MPC4000.

Check the included items

The following items are included with the MPC4000 for use when installing storage devices. Check to make sure that no items are missing.

■ Cables

- Flat cable for ATA drive
- Power cable for drive (without ferrite core)
- Power cable for drive (with ferrite core)
- Analog audio cable for CD-ROM
- Digital audio cable for CD-ROM
- Drive Mount Bracket (S)
- Drive Mount Bracket (L)

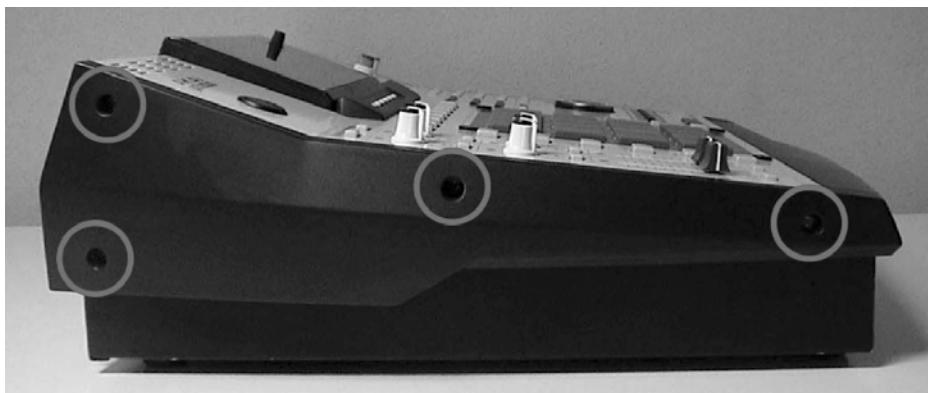

■ Other items

- Screws (inch) for attaching hard disk (4 pcs.)
- Screws (metric) for attaching hard disk (4 pcs.)
- Screw hole plugs (4 pcs.)
- Screws (metric) for attaching Drive Mount Bracket (8 pcs.)

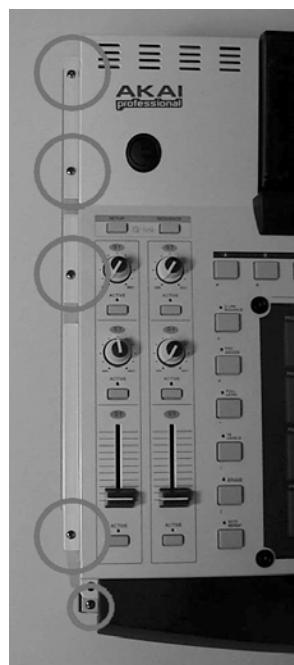

Opening the top panel

When installing a storage device, use the following procedure to open the top panel of the MPC4000.

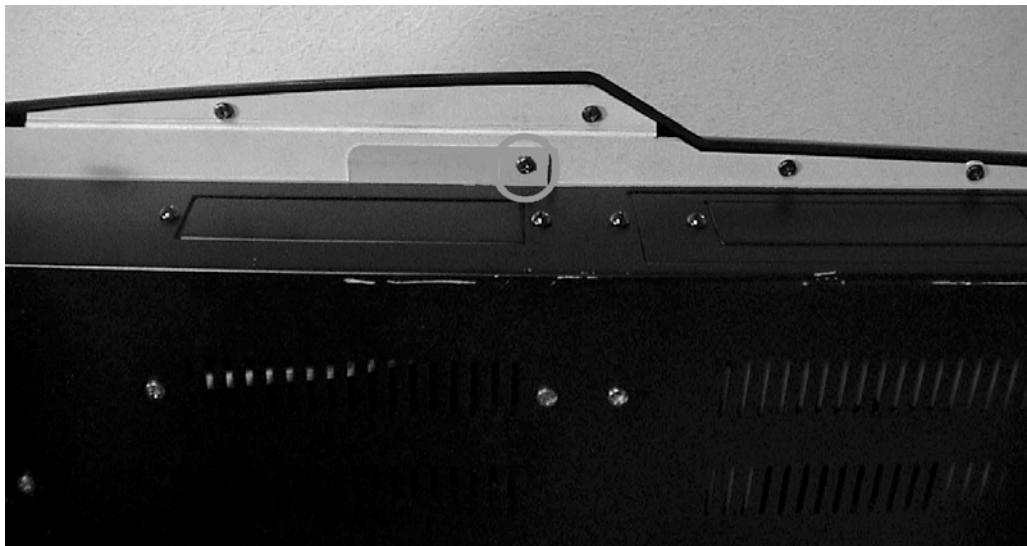

1. Loosen the screws that fasten the side panels (four on each side, left and right), and remove the side panels.

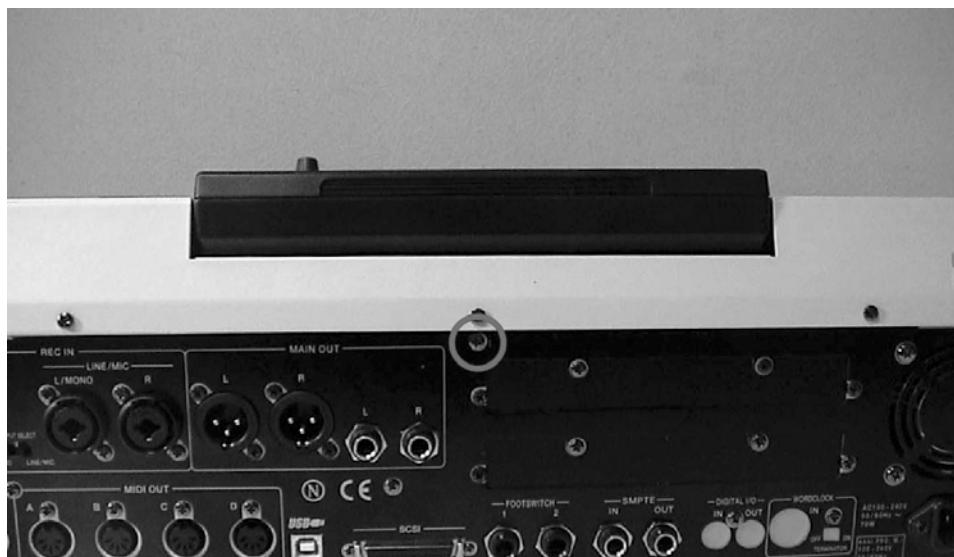

2. Remove the screws (five on each side, left and right) that fasten each side of the top panel to the chassis.

-
3. Remove the screw (located in the center of the front panel) that fastens the top panel from the lower front side.

4. Remove the screw (located in the center of rear panel) that fastens the top panel from the rear side.

5. Use both hands to lift the protrusion on the front of the top panel, and open the top panel.

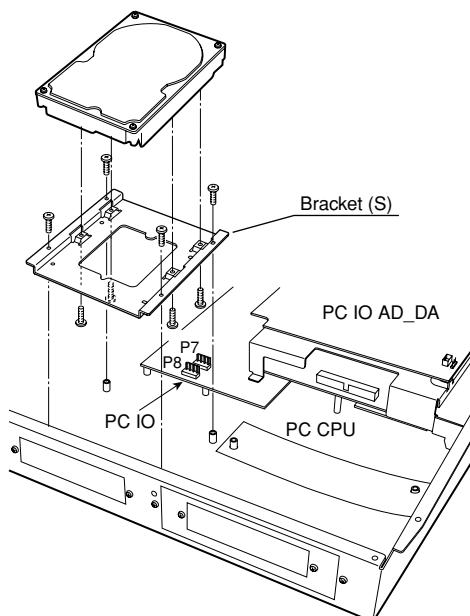

-
6. Use a metal rod or similar object as a prop inside the chassis to hold up the top panel.
The side panels and screws you removed must be kept in a safe place.
To close the top panel, re-tighten the screws in the opposite order to which they were removed.

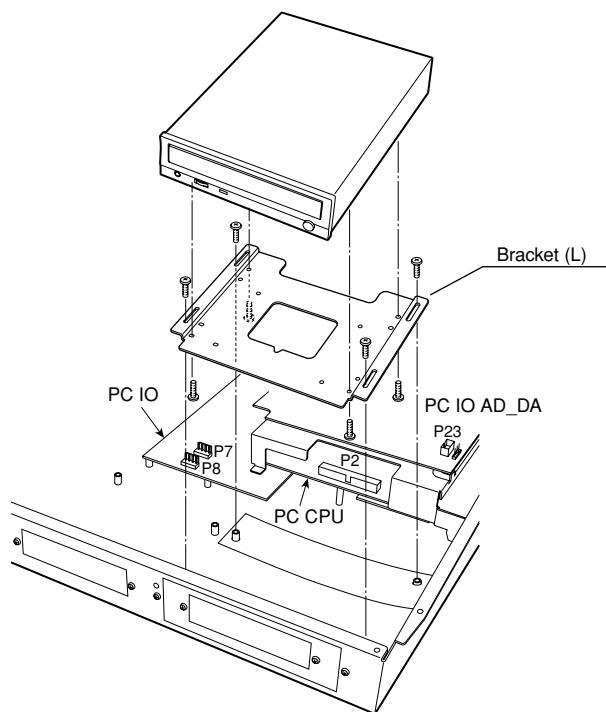

Installing a drive

1. If you are installing a removable-media drive such as a CD-ROM drive or Zip drive, remove the blank panel from the front panel.
2. Use the hard disk attachment screws (included with the MPC4000) to attach the drive to the bracket, and attach the bracket to the bottom panel of the chassis. Use the bracket in the correct direction (as illustrated or on reverse side) according to the drive mounted.

When installing a drive in the 3.5 inch bay

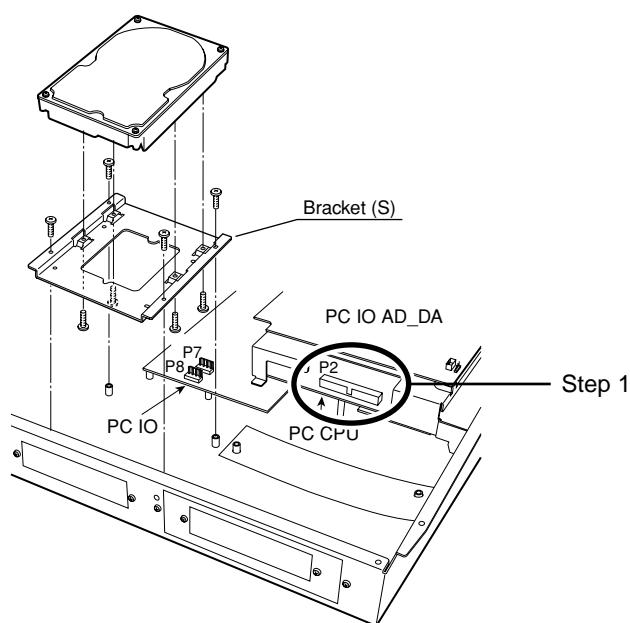

When installing a drive in the 5 inch bay

Cable connections

Connecting the flat cable

1. Remove two screws from the cover that conceals the PC CPU board.
When you remove the cover, you will see the P2 connector for the ATA drive.

2. Insert the blue connector of the included flat cable into the P2 connector of the PC CPU board.
3. Reattach the cover that you removed.
4. Connect the other end of the flat cable to the drive.

Connecting the power cable

1. Insert the connector of the included power cable into the P7 connector or P8 connector of the PC I/O board. Use the power cable with the ferrite core if you are installing a hard disk. Use the power cable without a ferrite core if you are installing a Zip drive or CD-ROM drive.
2. Connect the other end of the power cable to the drive.

Connecting the CD-ROM analog audio cable

If the CD-ROM drive has an analog audio output connector, connect it to the MPC4000's circuit board as follows.

1. Insert the connector of the included CD-ROM analog audio cable into the P23 connector of the PC I/O ADDA board.
2. Insert the other end of the CD-ROM analog audio cable into the analog audio output connector of the CD-ROM drive.
Make connections so that the red cable goes to R (right channel) and the white cable to L (left channel).
3. On the PC I/O ADDA board, plug in the P22 jumper (located in front of P23) at the "SET" position.

Connecting the CD-ROM digital audio cable

If the IB-4D digital I/O option is installed in the MPC4000, connect the digital audio output connector of the CD-ROM drive to the IB-4D as follows.

1. Insert the connector of the included CD-ROM digital audio cable into the digital audio output connector of the CD-ROM drive.
Make connections so that the black cable is the ground.
2. Insert the other end of the CD-ROM digital audio cable into the P1 connector of the IB-4D digital I/O option.
3. On the IB-4D circuit board, plug in the JP1 jumper in the 1-2 (SHORT) position.
* If you connect the analog/digital audio cable and make the correct jumper setting, you will be able to select the CD-ROM playback as the recording source in RECORD mode.

Master/slave settings for ATA drives

If you install two drives, you must set one as the master and the other as the slave. (If a hard disk is installed, set the hard disk as the master.)

For details on how to make master/slave settings, refer to the manual that came with your drive.

Installing Memory Board

The memory slots are on the CPU board and their 2 long DIMM sockets are located on the right-hand side of the unit towards the rear.

Insert the memory board securely in the correct direction. When only one memory board is installed, it can be installed on either slot.

The required memory board is 168-pin DIMM (PC133/PC100, CL2).

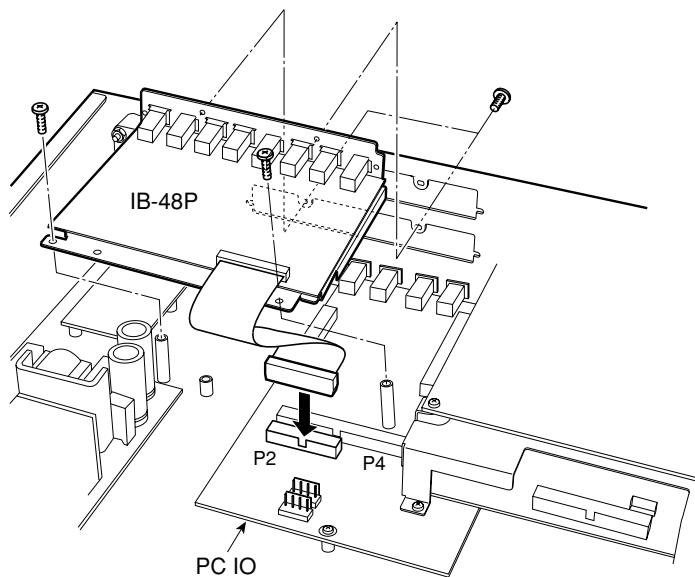

* 256Mbit x 8 ICs type 256Mbyte DIMM is not supported. 128Mbit x 16 ICs type is recommended.

■ Installation - MPC4000

1. Remove the fixing screws of the MPC4000 Side Panels (4pcs. on each side) and remove Side Panels. Next, remove the screws (5pcs. on each side) hidden by the Side Panels and then remove the center screws (2pcs.) located underneath the Armrest and the topmost of Rear Panel. The Top Panel Block can be swing-opened by lifting the Armrest from the front. Save the removed screws.
2. Remove the fixing screws (4pcs.) for the Mask Plate (lower slot) on the Rear Panel and remove the Mask Plate. Save the screws for later use. The Mask Plate is not used.
3. Referring to the illustration, remove the fixing screw (1pc.) on the I/O board and install the Mounting Post (S) in its place. Save the screw for later use.
4. Set the IB-48P on the Rear Panel and Mounting Posts and fix it securely with the screws removed in earlier steps and the Fixing Screw (gold) included.
5. Connect the cable from the IB-48P board to the connector (P2) on the I/O board.
6. Replace and fix the Top Panel Block and Side Panels in the opposite order to which they were removed.

* Be sure to fix the screws and connectors securely to avoid malfunctioning.

MPC4000

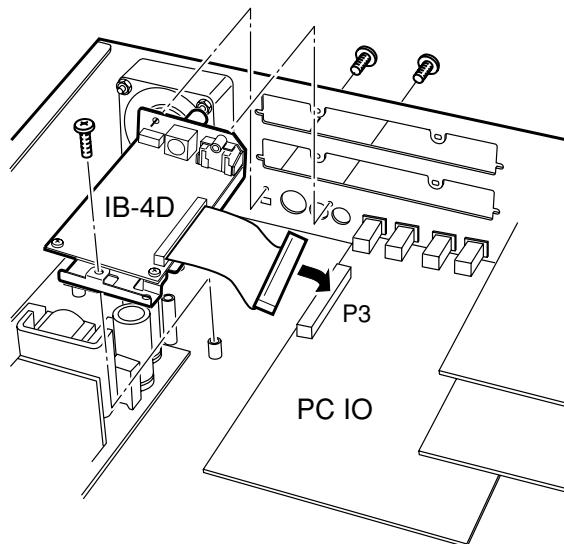

■ Installation - MPC4000

1. Remove the fixing screws of the MPC4000 Side Panels (4pcs. on each side) and remove Side Panels. Next, remove the screws (5pcs. on each side) hidden by the Side Panels and then remove the center screws (2pcs.) located underneath the Armrest and the to pmost of Rear Panel. The Top Panel Block can be swing-opened by lifting the Armrest from the front. Save the removed screws.
2. Remove the fixing screws (2pcs.) for the Mask Plate on the Rear Panel and remove the Mask Plate. Save the screws for later use. The Mask Plate is not used.
3. Referring to the illustration, set the IB-4D on the Rear Panel and Mounting Post and fix it securely with the screws removed in earlier step and the Fixing Screw included.
4. Connect the cable from IB-4D board to the connector (P3) on the I/O board.
5. Replace and fix the Top Panel Block and Side Panels in the opposite order to which they were removed.

* Be sure to fix the screws and connectors securely to avoid malfunctioning.

MPC4000

■ Installation – MPC4000

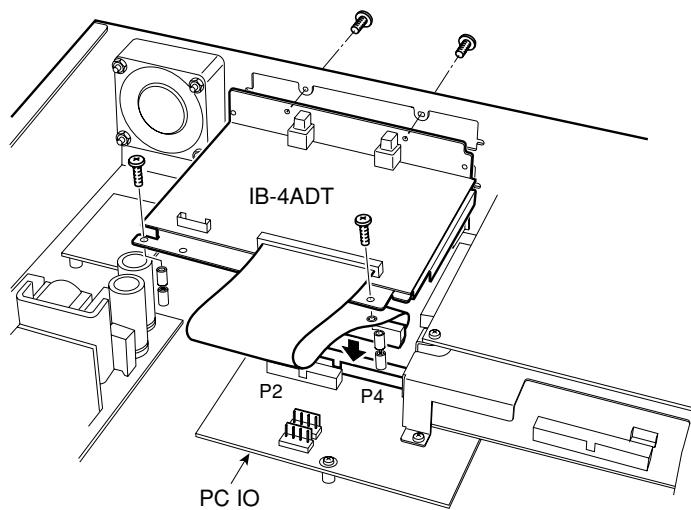

1. Remove the fixing screws of the MPC4000 Side Panels (4pcs. on each side) and remove Side Panels. Next, remove the screws (5pcs. on each side) hidden by the Side Panels and then remove the center screws (2pcs.) located underneath the Armrest and the topmost of Rear Panel. The Top Panel Block can be swing-opened by lifting the Armrest from the front. Save the removed screws.
2. Remove the fixing screws (4pcs.) for the Mask Plate (upper slot) on the Rear Panel and remove the Mask Plate. Save the screws for later use. The Mask Plate is not used.
3. Referring to the illustration, remove the fixing screw (1pc.) on the I/O board and install the Mounting Post (S) in its place. Then extend the 2 Mounting Posts with the 2 Mounting Posts (L) included.
4. Set the IB-48P on the Rear Panel and Mounting Posts and fix it securely with the screws removed in earlier step and the Fixing Screws (gold, 2pcs.) included.
5. Connect the cable from the IB-4ADT board to the connector (P4) on the I/O board.
6. Replace and fix the Top Panel Block and Side Panels in the opposite order to which they were removed.

Note 1: When the IB-48P 8-Individual Output board is installed at the lower slot, remove the fixing screws (2pcs.) of the Mounting Posts for the IB-48P and replace them with the 2 Mounting Posts (L) included and mount the IB-4ADT on them.

Note 2: On the MPC4000 with IB-4D SP-DIF Digital Interface Board installed, Connect the 8-pin Connecting Cable included between the IB-4D (P2) and IB-4ADT (P1) boards.

* Be sure to fix the screws and connectors securely to avoid malfunctioning.
