

ARCAM

DiVA A70 Integrated Amplifier

- 50 wpc continuous output amplifier
- Ultra short signal path with class leading fidelity
- Sophisticated menu with text display
- MM phono stage included
- Massive toroidal based power supply
- Mask of Silence technology inc. "Stealth Mat"
- Full function remote control

Brand New Integrated Amplifier for the DiVA Range

Few companies can boast a 30 year history in making world class integrated amplifiers. Arcam is one of the few. Not only does the company enjoy a top-level reputation for the quality of its amplifiers, it remains the UK's number one producer of integrated amps.

While in recent years the Arcam has excelled in developing stunning home cinema units, its heart remains in music reproduction and in designing hi-fi systems that music fans love.

Arcam's design team features some of the most skilled engineers in the business, each dedicated to different areas of design. The A70 represents a balance of cutting edge electrical design and painstaking listening trials to ensure a truly unique level of insight into any recording.

Arcam favours electronic user controls, avoiding the need to pass delicate audio signals through mechanical devices such as potentiometers and switches. Although more costly to implement, this technique allows a more faithful reproduction of the music by ensuring the shortest possible signal path and long-term reliability. The A70 makes full use of this approach, a first for an entry-level amplifier from Arcam.

Going above and beyond normal amplifier design, Arcam has utilized their proprietary "Mask of Silence" technologies with the A70. In particular, much use has been made of the "Stealth Mat" material normal found in the company's premium FMJ range. This strategy, for reducing stray electromagnetic interference in combination with critical vibration dampening, ensures every last ounce of performance is realised from the unit's audiophile grade components. Gold plated RCA phono and speaker sockets complete what is a feature packed amplifier with stunning performance at the price.

Recognising that not all stereo systems operate in isolation, the A70 features both IR control and 12v trigger sockets for integration into bigger systems. Full remote control is enabled thorough the included handset.

Arcam's dedication to getting right to the heart of a sonic performance has won them legions of fans and literally hundreds of awards. Arcam is proud to introduce the A70 in time for its 30th Anniversary.

The A70 is scheduled for release September 2006
