

ARCAM DiVA

AVP700 preamp processor

The **AVP700** has been designed for home cinema enthusiasts who insist on products that deliver superlative performance on both movies and music.

The use of a separate preamp processor enables the use of power amplifiers or connects straight to an active speaker setup.

The **AVP700** incorporates HDMI switching for use with today's high performance screen and tomorrow's high definition set top boxes.

P1000 power amplifier

The **P1000** 7-channel power amplifier is rated at over 135 watts per channel. It uses an innovative class 4 amplifier topology that offers high current capability with a cool-running operation.

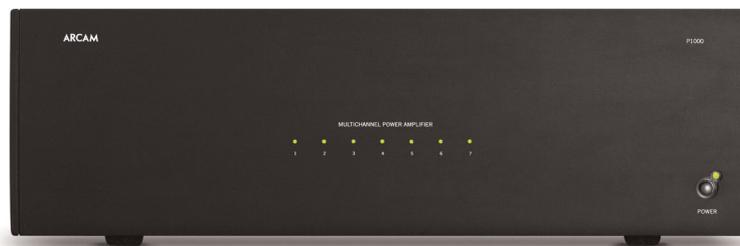

As you would expect from Arcam's audiophile heritage, great emphasis has been put on achieving a level of sound quality that is clearly better than the competition.

The **AVR700** and **P1000** build on the reputation Arcam has for producing products that set the standard.
