

INTEGRATED AMPLIFIERS

P M 6 6 5

Harman Kardon designed the PM665 to be the ultimate integrated amplifier...Providing the pure power, sonic excellence and features that the true audiophile demands.

While the PM665 is rated at 100 Watts per channel,* with its HCC of 60 amps it can deliver a full 340 Watts per channel of dynamic power. Its Ultrawideband Frequency Response as well as Low Negative Feedback additionally aid in the delivery of extremely fast and accurate transient response. The result is a virtual elimination of dynamic distortion.

Its unique bass contour feature provides a bass boost to compensate for the sense of reduced low frequencies that results when volume is low or small speakers are used. It also possesses a phase correction circuit that virtually eliminates any phase shift from the lower midrange (300Hz) frequencies up through the audible spectrum.

A discrete Moving Coil head amplifier allows for the use of nearly all MC cartridges, without the need for an expensive add-on component. Capacitance trim with four different values for standard cartridges also ensures precise matching.

Features found in top-of-the-line PM665 integrated amplifier are: Accommodations for two tape decks and two sets of speakers; high and low filters; two-way tape copy capability; audio muting; tone defeat and a Tape Out selector. Separate pre-amp out/main amp in jacks provide the flexibility to connect external components or to use each section independently. Capacitance trim, subsonic filter and built-in head amp all add to the deluxe quality of the PM665.

The PM665...The ultimate integrated amplifier from Harman Kardon.
