SAFETY PRECAUTIONS

The following precautions should be observed when servicing.

1. Since many parts in the unit have special safety related characteristics, always use genuine Hitachi's replacement parts. Especially critical parts in the power circuit block should not be replaced with other makers. Critical parts are marked with Δ in the circuit diagram and printed wiring board.
2. Before returning a repaired unit to the customer, the service technician must thoroughly test the unit to ascertain that it is completely safe to operate without danger of electrical shock.

SICHERHEITSMASSNAHMEN

Bei Wartungsarbeiten sind die folgenden Sicherheitsmaßnahmen zu beachten:

1. Da verschiedene Teile dieses Gerätes Sicherheitsfunktionen aufweisen, nur Original-Hitachi-Ersatzteile verwenden. Kritische Teile im Netzteil sollten nicht durch ähnliche Teile anderer Hersteller ersetzt werden. Alle kritischen Teile sind im Schaltplan und im Diagramm der Schaltplatinen mit dem Symbol Δ gekennzeichnet.
2. Vor der Auslieferung eines reparierten Gerätes an den Kunden muß der Wartungstechniker das Gerät einer gründlichen Prüfung unterziehen, um sicherzustellen, daß sicherer Betrieb ohne die Gefahr von elektrischen Schlägen gewährleistet ist.

PRÉCAUTIONS DE SÉCURITÉ

Les précautions suivantes doivent être observées chaque fois qu'une réparation doit être faite.

1. Etant donné que de nombreux composants de l'appareil possèdent des caractéristiques relatives à la sécurité, utiliser uniquement des pièces de rechange d'origine Hitachi pour effectuer un remplacement. Ceci se rapporte notamment aux pièces critiques du bloc d'alimentation qui ne doivent en aucun cas être remplacées par celles d'autres fabricants. Les pièces critiques sont accompagnés du symbole Δ dans le schéma de montage et sur le schéma de plaque de câblage.
2. Avant de retourner l'appareil réparé au client, le technicien doit procéder à un essai complet pour s'assurer qu'il ne présente aucun danger de chocs électriques.

DIAL CORD SETTING · SKALENSEILEINSTELLUNG · EQUIPEMENT DE CADRAN

Specification :
After setting the dial cord, make the pointer go and return three times within the pointer stroke (the variable capacitor opens and closes three times). When the cord tension is thus equalized, make adjustment so that the tip a of the trigger spring matches with the point b shown on the pulley. Set the zero point of the pointer in this status.

Spezifikation :
Bewegen Sie den Zeiger nach dem Einstellen der Skalenantriebsschnur 3 mal über den gesamten Bewegungsbereich hin und her (der Drehkondensator wird 3 mal geöffnet und geschlossen). Wenn die Schnurspannung auf diese Weise ausgeglichen worden ist, so führen Sie Einstellung so durch, daß die Spitze a der Auslösefeder mit dem auf der Schnurscheibe gezeigten Punkt b übereinstimmt. Stellen Sie den Nullpunkt des Zeigers in diesem Zustand ein.

Spécifications :
Après l'installation de la corde à cadran, faire va-et-vient de l'aiguille trois fois dans la course de l'aiguille (le condensateur variable s'ouvre et se ferme trois fois). Lorsque la tension de la corde est ainsi équilibrée, régler de sorte que le bout a du ressort de détente corresponde au point b indiqué sur la poulie. Régler le point zéro de l'aiguille à cet état.

CAUTION

- 1. Short-circuit the OSC stage by earthing the live side of the variable capacitor in that stage. Adjust the core of T103 so that the gain will be max. In this case, reduce the level of the input signal of signal generator so that the wave from will be the same as the one shown in the figure.
- 2. Short-circuit the OSC stage as described in Caution 1. Adjust the core of T201 so that the output is like the S curve shown in illustration of this table with A and B symmetrical with respect to C.
- 3. Connect the DC balance meter to TP.5 and TP.6, and set to 0V±30 mV with no-signal.

VORSICHT

- 1. Die Oszillator-Stufe kurzschließen, indem die spannungsführende Seite des Regelkondensators dieser Stufe an Masse gelegt wird. Den Kern von T103 so einstellen, daß maximaler Gewinn erzielt wird. In diesem Fall ist der Eingangssignalpegel des Signalgenerators zu reduzieren, damit die in der Abbildung gezeigte Wellenform erhalten wird.
- 2. Die in Punkt 1 beschriebene Oszillator-Stufe kurzschließen. Den Kern von T201 einstellen, daß ein der in der Tabelle gezeigten S-Kurve ähnlicher Ausgang erhalten wird, wobei A und B gegenüber C symmetrisch sein müssen.
- 3. Ein Gleichstrom-Balancemeter an TP.5 und TP.6 anschließen und ohne Signal auf 0V±30 mV abgleichen.

ATTENTION

- 1. Court-circuiter l'étage OSC en raccordant le pôle sous tension à l'aide d'un condensateur variable au sein de l'étage. Ajuster le noyau de T103 de telle sorte que le gain soit optimum. Dans ce cas, réduire le niveau du signal d'entrée du générateur de signaux de telle sorte que la forme d'onde soit identique à celle indiquée sur l'illustration.
- 2. Court-circuiter l'étage OSC comme décrit dans le paragraphe Précaution 1. Ajuster le noyau de T201 de telle sorte que la section droite de la courbe en S indiquée sur l'illustration de la table A et B soit symétrique par rapport à C.
- 3. Raccorder un indicateur d'équilibrage à courant continu aux bornes TP.5 et TP.6 et ajuster à 0V±30 mV sans signal injecté.

CAUTION

- 1. In step 1, set the capacitance of the variable capacitor to minimum and adjust red and blue cores of T251 so that the wave form is as shown in Fig. 2. As T251 contains a 450 kHz ceramic filter, sometimes the center of the marker will not correspond to that of the wave form.
- 2. Set the input level to 74 dB in coarse adjustment. Reduce the input level to minimum (55 dB) as adjustment proceeds.

VORSICHT

- 1. In Schritt 1 ist die Kapazität des Regelkondensators auf ein Minimum einzustellen; die roten und blauen Kerne von T251 so einjustieren, daß die in Abb.2 gezeigte Wellenform erhalten wird. Da T251 auch ein 450-kHz-Keramikfilter enthält, kann es vorkommen, das manchmal die Mitte der Anzeige nicht mit der Wellenamplitude übereinstimmt.
- 2. Eine Grobeinstellung auf einen Eingangspegel von 74 dB vornehmen. Im Verlauf der Einstellungen den Eingangspegel auf ein Minimum (55 dB) absenken.

ATTENTION

- 1. Dans le point 1, régler la capacitance du condensateur variable sur la position minimum et ajuster les noyaux rouge et bleu de T251 pour que la forme d'onde soit identique a celle indiquée sur l'illustration (Fig. 2). Etant donné que T251 contient un filtre céramique de 450 kHz, il peut arriver que le centre de l'indicateur ne corresponde pas à la forme d'onde.
- 2. Ajuster le niveau d'entrée sur 74 dB en procédant à un réglage approximatif. Réduire le niveau d'entrée à son minimum (55 dB) au fur et à mesure que le réglage est fait.

Check that exposed parts are acceptably insulated from the supply circuit before returning the instrument repaired to the customer.

● Checking method

Power switch is set to ON.
Next, measure the resistance value between the both poles of attachment cup (Power supply plug) and the exposed parts (Parts such as Ground terminal, Knob, Cover, etc. where the customer is easy to touch.) and check that the resistance value is 500 kohms or more.
