4-CHANNEL / 2-CHANNEL COMPATIBLE

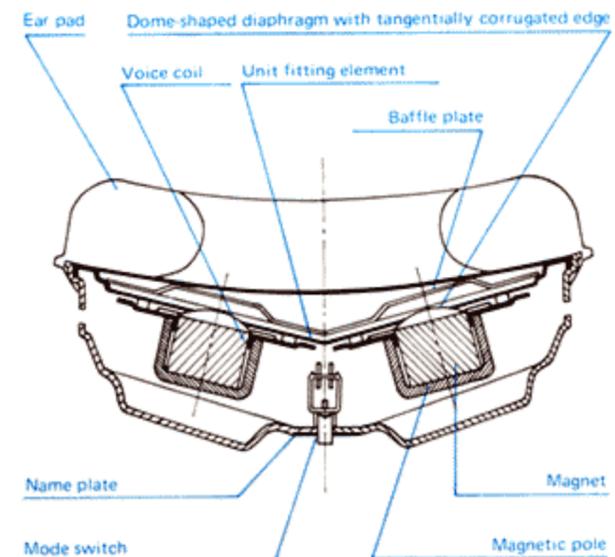

JVC STEREO HEADPHONES

For exciting, private sound you've got to try these headphones

INSIDE CONSTRUCTION VIEW

Sitting in the middle of a noisy party you can enjoy Bach. Or Ellington. Or Bartok. Or the Beatles. All by yourself. The others won't know why you have that secret smile on your face. These headphones give the effect of a 4-channel sound field created by speakers in the four corners of your room. They're 2-channel compatible, of course, but as well as being able to play your 2-channel stereo collection through them this gives the added advantage of lowering distortion in 2-channel play.

4-Channel/2-Channel Compatible

The best and most private 4-channel and 2-channel stereo sound in the world today. The mini-speakers are wired like two pairs of stereo speakers; one pair at the front and one pair at the rear. So with this headphone set you get the whole big world of 4-channel sound. Or 2-channel sound with more brilliance that you have ever heard it before. Whichever way you look at it, these headphones are a bargain.

2-Channel Switch

With the headphone switch set for 2-channel you provide a 2-channel signal and the 5844 headphones divide it and use it to drive the two speaker units in each earpiece. This means that to get the same power output you only have to put in half as much signal. So distortion is reduced and you get better sound.

Dome-Shaped Diaphragm

The four moving coils drive dome-shaped diaphragms which, because of their omni-directional structure, give undistorted sound over a wide range of frequencies. From 20 to 20,000Hz the highs, mid-range and bass are perfectly balanced. The tangentially corrugated edge keeps mechanical stresses down to low values even when signal strength is high, and gives rich, distortion-free lows.

Easy-to-wear

You can wear these headphones for hours without noticing anything except the sound. With the adjustable headband and earcups, you can make them fit you so well that you won't know you're wearing them. You can't feel the cushioning on the headband and the earcups are perfect for comfort and keeping the sound where you want it, right by your ear. With these headphones you won't get leakage, you won't lose those deep, deep lows.

SPECIFICATIONS

Type	: Moving Coil 4-channel/ 2-channel compatible headphones
Frequency response	: 20 – 20,000Hz
Impedance	: 8Ω (speaker unit)
Nominal input	: 1mW
Maximum output	: 100mW
Total harmonic distortion	: Less than 0.5%(at 1mW)
Cord	: 2 meters (6ft 7in) with 3-pole plugs
Weight	: 450g (without cord) 510g (with cord)
Diameter of diaphragm	: 38mm (1-1/2")
Weight of diaphragm	: 185mg (including coil) 80mg (without coil)
Diameter of cdil	: 17.9mm (3/4")
Total magnetic flux	: 7,500 maxwells
Flux density	: 5,300 gauss
