## Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by ( $\Delta$ ) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.
5. Leakage current check (Electrical shock hazard testing)
 

After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

  - Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).
  - Alternate check method
 

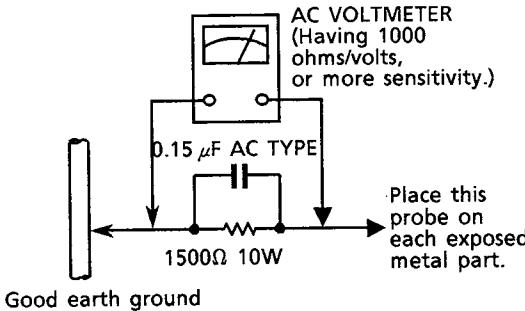

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a  $1,500\Omega$  10 W resistor paralleled by a  $0.15 \mu F$  AC-type capacitor between an exposed metal part and a known good earth ground.

Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor.

Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.).

This corresponds to 0.5 mA AC (r.m.s.).

## Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

# Important for Laser Products

1. CLASS 1 LASER PRODUCT
2. DANGER : Invisible laser radiation when open and interlock failed or defeated. Avoid direct exposure to beam.
3. CAUTION : There are no serviceable parts inside the Laser Unit. Do not disassemble the Laser Unit. Replace the complete Laser Unit if it malfunctions.
4. CAUTION : The compact disc player uses invisible laser radiation and is equipped with safety switches which prevent emission of radiation when the drawer is open and the safety interlocks have failed or are defeated. It is dangerous to defeat the safety switches.
5. CAUTION : If safety switches malfunction, the laser is able to function.
6. CAUTION : Use of controls, adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.
7. CAUTION : The compact disc player provides a laser diode of wavelength 780-790nm and optical output power typical 3mW at the laser diode.

**VARNING :** Osynlig laserstrålning när denna del är öppnad och spärren är urkopplad. Betrakta ej strålen.

**VARO :** Avattaessa ja suojalukitus ohittaaessa olet alittiina näkymättömälle lasersäteilylle. Älä katso sääteeseen.

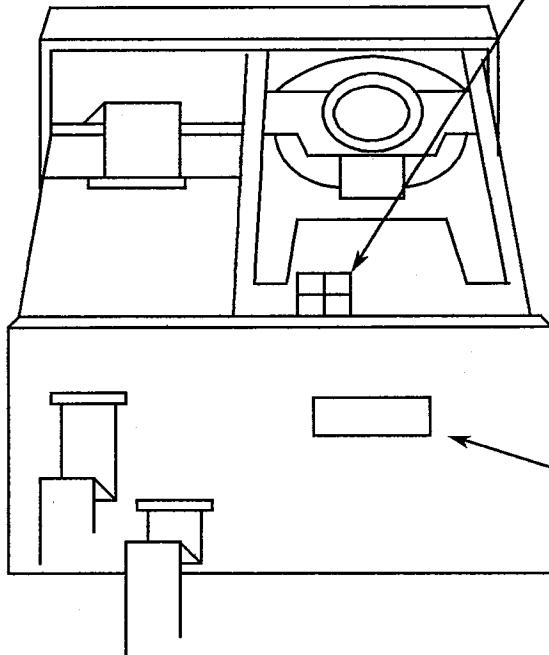

**ADVARSEL :** Usynlig laserstråling ved åbning, når sikkerhedsafbrydere er ude af funktion. Undgå udsættelse for stråling.

**ADVARSEL :** Usynlig laserstråling ved åpning, når sikkerhetsbryteren er avslott. unngå utsettelse for stråling.

## ■ YM7121C (IC841)

## 1. Outline

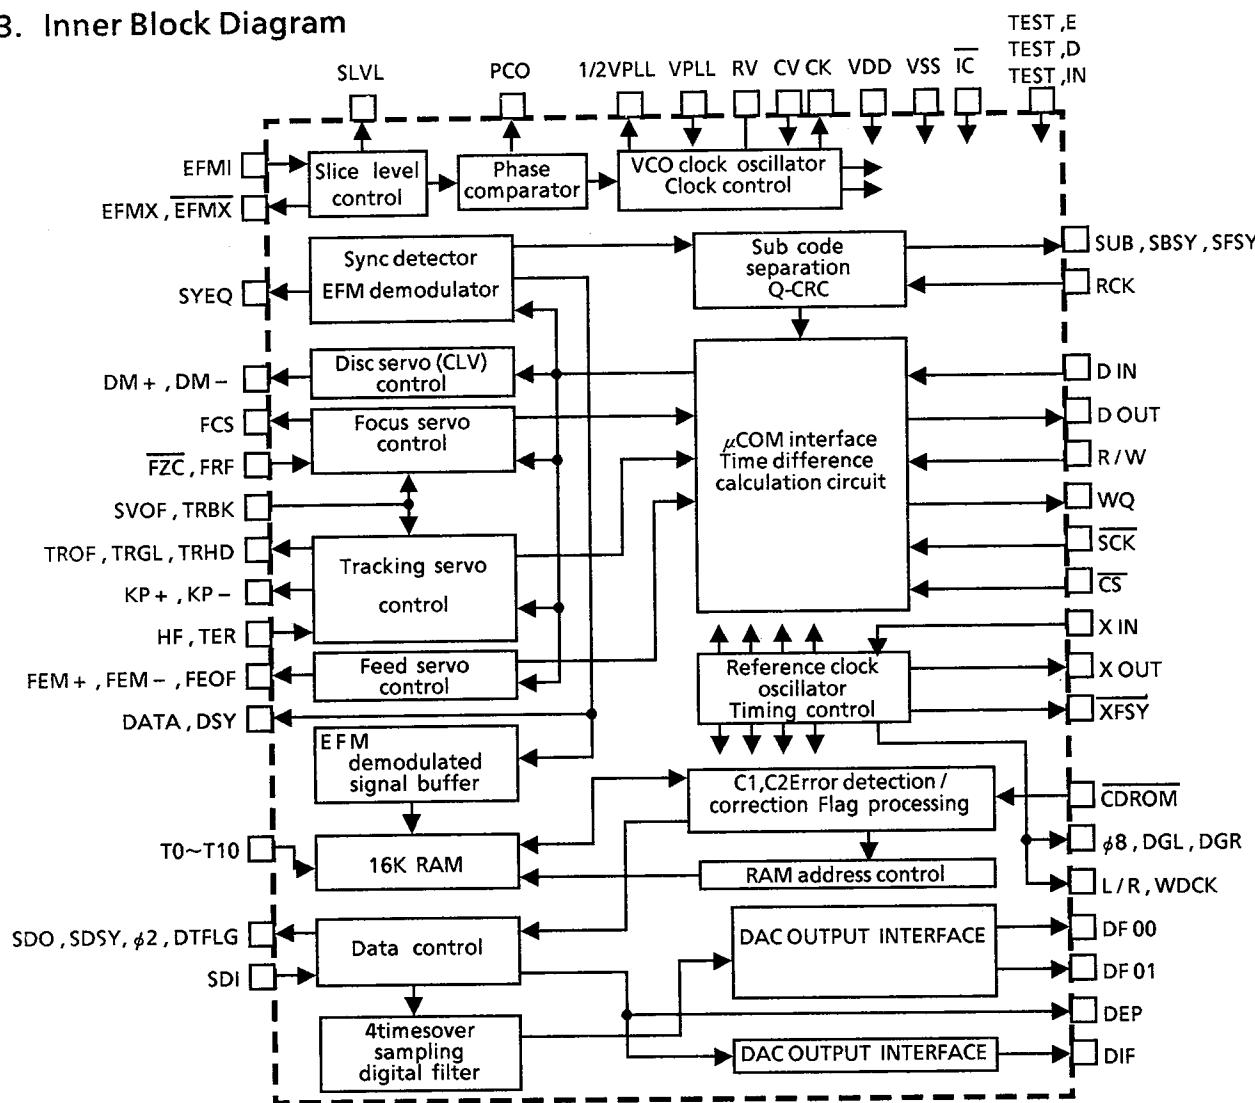

YM7121 is a C-MOS LSI for signal processing and servo control (SVC) in a CD player. It is used for the demodulation of the EFM signal from the laser pick up , detection / correction of the error signal , signal processing in digital filtering , etc. and for various servo controls (focusing , disc , tracking and feed servos).

And it contains digital interface which output the audio digital signals in S-RAM and CD-player. This digital interface matches EIAJ standards.

## 2. Top View

## 3. Inner Block Diagram

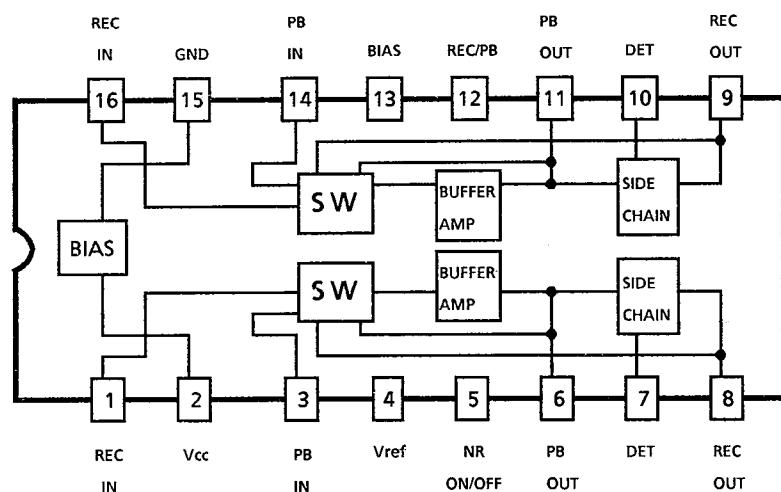

#### 4. Terminal Function

Pin No.	Symbol	I/O	Function and Operation
1	CV	I	Adequate time constant is added to this terminal and input the PCO output. This makes the structure of clock reproduce circuit by inner VCO circuit.
2	RV	-	RV terminal is standard voltage terminal of inner VCO. And capacity for stabilizing is added to this terminal.
3 32 72	VDD	-	These are +5V power supply terminals.
4 5 70	TEST. IN TEST. E TEST. D	I I I	These terminals are for test.
6	SYEQ	O	This is the check output terminal, it becomes high when flame synchronizing signal detected from EFM pattern coincides frame synchronizing signal from internal counter.
7	DSY	O	DSY is synchronizing signal which becomes high when first signal of data output comes in. This terminal is the check terminal.
8	DATA	O	This terminal is for checks. The DATA is a serial signal of CK bit rate and it contains 8 bit EFM demodulation signal and 5 bit data control signal in 17 bit.
9	CK	O	CK has 4.3218 MHz clock.
10~19	T0~T9	I	This terminal is internal RAM test terminal, and connected GND.
22	DEP	O	De-emphasis is necessary when this terminal is high.
23	DIF	O	DIF is digital audio interface format output matched EIAJ standards.
24	SDO	O	SDO is a serial signal output of $\phi 2$ bit rate. (The MSB puts in at first.)
25	SDI	I	SDI is the input terminal of 4 times over sampling digital filter. It is usually connected with SDO.
26	SDSY	O	This terminal changes the Lch/Rch by LSB of the SDO.
27 30 33 34 35 36 37 38 39 40 41 42 43 44 45	DTFLG <u>XOUT</u> XFSY SUB SBSY RCK <u>SFSY</u> CDROM $\phi 8$ WDCK L/R DGL DGR DF01 DF00	O O O O O I O O O O O O O O O	Not used.
28	$\phi 2$	O	$\phi 2$ is 2.1168 MHz crystal clock.
29, 52, 77	VSS	-	GND
31	XIN	I	Input from crystal clock.
46	<u>SCK</u>	I	This terminal is connected to $\mu$ COM. It is an input terminal that carries the clock signal for data transfers.
47	R/W	I	This connects with microcomputer and it is an output terminal for switching data transmission mode. It enables to transmit data from SVC to microcomputer when R/W is "L" and from microcomputer to SVC when R/W is "H".
48	<u>CS</u>	I	This is a chip select terminal for YM7121.
49	DOUT	O	This terminal is the data output terminal connected to $\mu$ COM. When R/W is low, data is transfer-red from YM7121 to $\mu$ COM, according to the SCK clock input.
50	WQ	O	This terminal is connected to $\mu$ COM. It is a request signal which demands to $\mu$ COM inputting the data transfer (YM7121 to $\mu$ COM).
51	DIN	I	This is a data input terminal connected to $\mu$ COM. When R/W is high, the data is transferred from $\mu$ COM to YM7121 according to the SCK clock input.

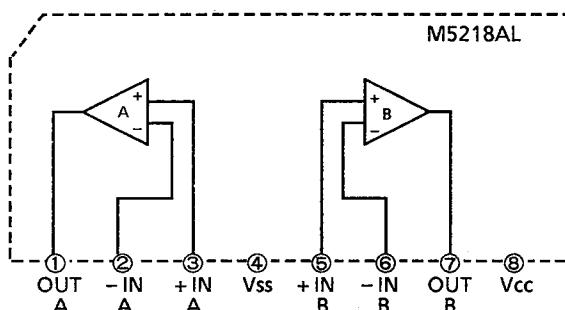

Pin No.	Symbol	I/O	Function and Operation
53 54	DM+ DM-	O O	These terminals output the PWM to control the speed of spindle motor. The speed of the motor goes up when DM+ is high, and slows down when DM- is high; both terminals can not become high simultaneously.
55 56 60 61 62 63 64	HF TER TRHD TRGL TROF KP- KP+	I I O O O O O	When tracks are being crossed during searches, the amplitude variation of the generated HF signal is sampled at the zero-cross point of the tracking error signal TER and the TROF signal is output. The level variations of this signal turn the servo on and off, greatly facilitating track acquisition. KP+ or KP- is output to conduct tracking, and TRHD is output during tracking to cause generation of the tracking error signal. The TRGL signal is for increasing the tracking gain after tracking is completed.
57 58 59	FEM+ FEM- EOF	O O O	The FEM+ and FEM- are output as high speed feed signals, and EOF signal is output for cutting the feed servo during high speed feed.
65	TRBK	I	TRBK is input to apply tracking brake from outside. TRGL becomes low with high input and inner control signal TBKE becomes high.
66	SVOF	I	When the signal inputs to SVOF, tracking and feed servo set to OFF. TROF and EOF become "H" with high input, and TRHD, KP+, KP- become low.
67 58 59	FZC FCS FRF	I O I	These terminals are used for controlling the focus servo. The FCS is for a leading signal of Focusing; the signal, generated when the focus point is achieved, terminates the focusing operation; and FCO flag is dropped internally by FRF signal generated when reflected light is detected.
71	IC	I	YM7121 needs initializing when power supply turns on. IC will be low more than 400μs since XIN is input clock with VDD standard.
73 74 75	SLVL EFMX EFMX	O O O	Amplitude limited, mutually anti-phased signals are output from EFMX and EFMX. Slice level is controlled by these signals and external amplifier. SLVL is output amplitude alteration component of both terminals. When integral circuit is connected to external, YM7121 easily can control slice level.
76	EFMI	I	This terminal is input EFM signal. (1~2 Vpp)
78	PCO	O	This terminal outputs the phase difference when the polarity of the clock and the EFM pattern changes.
79	VPLL	I	This terminal is input D.C. voltage matched VCO free run frequency. (17.2872 MHz)
80	1/2 VPLL	O	This terminal outputs a half of VPLL input, and capacity for stabilizing is added to this terminal.

# Disassembly Procedures

## (NOTE) Cassette deck control P.C.Board

※ Install JB311 on the PCB. (ENJ-074-1) so that it's pin1 which is marked with white will face the front panel side.

### ■ Top cover removal

1. Remove the screws fastening both sides of the Top cover and rear side.
2. Remove the Top cover spreading both sides and lifting the rear up.

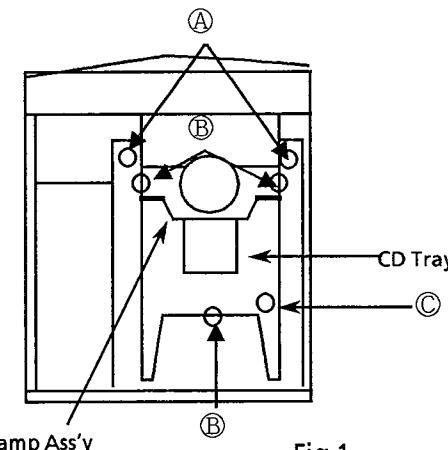

Fig 1

### ■ Front panel block removal

1. Remove the 2 screws (A).
2. Disconnect the connectors (P331, P333, P490, P491, P492, P493, P901, FW495, FW496).
3. Remove the 2 screws (F) fixing the front panel.
4. Remove the screw (G) on the bottom.
5. Release the 3 hooks (E) and remove the front panel block.

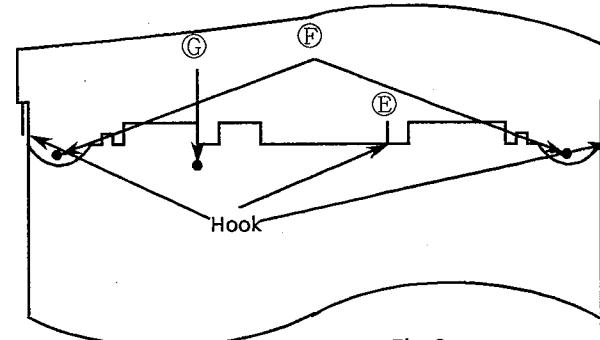

Fig 2

### ■ CD mechanism assembly removal

1. Remove the 3 screws of the rear side.
2. Remove the 2 screws (A) fixing the CD mechanism chassis.
3. Take out the CD mechanism assembly with CD PCB after unplugging the connectors (J701, J702, P901).
4. Remove the 3 screws (B) fixing the CD mechanism assembly.
5. Remove the connectors (P801, P802, P803) and CD the mechanism assembly.

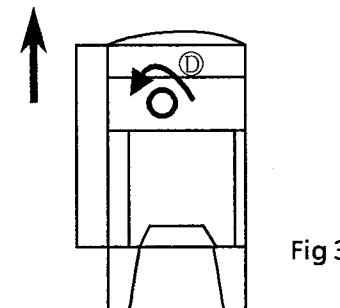

Fig 3

### ■ Tray removal

1. Remove the CD mechanism assembly.
2. Switch on the power of RX-MXS4BK . Press the OPEN / CLOSE switch to bring the tray forward and with the tray forward, switch off the power.
3. Remove the screw (C) on the tray .
4. Pull the tray toward the front to move it.

#### (Note)

If the power does not come on due to breakdown or the insert a Philips screwdriver through the hole at the bottom of the CD the mechanism assembly and turn it counter-clockwise to bring the tray forward (D).

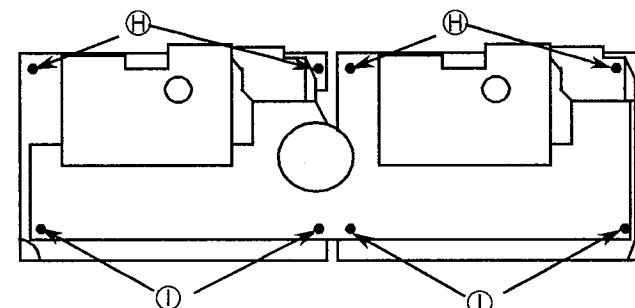

Fig 4

### ■ Cassette mechanism assembly removal

1. Remove the front panel assembly.
2. Remove the 8 blue colored screws (H) (I) fixing the cassette mechanism.
3. Push the cassette button and remove the cassette mechanism assembly.

#### (Note)

The cassette mechanism is grounded through the bottom cover, so when checking the operations with the bottom cover removed (especially when checking the signal system), be sure to ground the chassis by using an alligator clip or other suitable gadget. Also, this mechanism is designed for pack sensing, remember that it can not be operated without any tape.

Fig 5

### ■ Cassette lid removal

1. Open the doors and slide them in the direction of the arrows.

# Disassemble of the CD mechanism assembly

## ■ Pickup removal

1. Remove the cd mechanism assembly.
2. Release the shaft to remove the pickup (Fig 6).

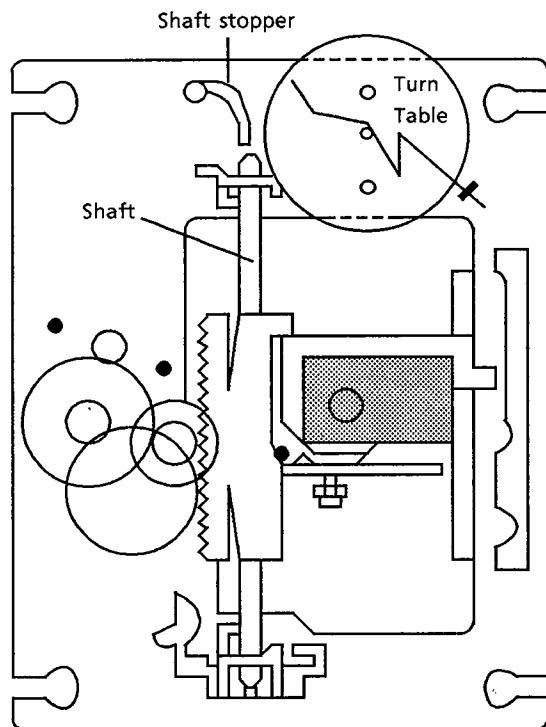

Fig 6 CD mechanism assembly

## ■ Spindle motor removal

1. Remove the cd mechanism assembly.
2. Remove the turntable, and remove the two screws retaining the spindle motor.
3. Remove the screws retaining the spindle and feed motor P.C. Board and unsolder it.

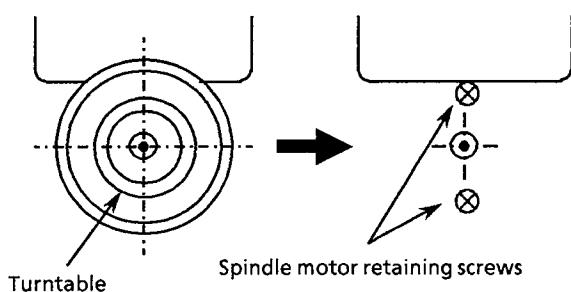

Fig 7

## ■ Spindle motor installation

1. Tighten the 2 screws to the same torque.
2. Fasten the spindle and feed motor P.C. board with the screw and solder.
3. Install the turntable. When installing, press straight down at the center of the turntable until the distance from the surface of the mechanism base to the turntable is exactly  $19.4 \pm 0.1\text{mm}$ .

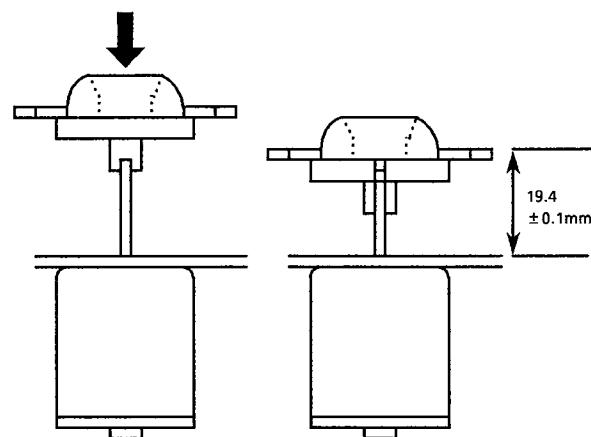

Fig 8

4. After inserting the turntable, bond the motor shaft and turntable together (at the section marked by an arrow in fig 9 on the left below).

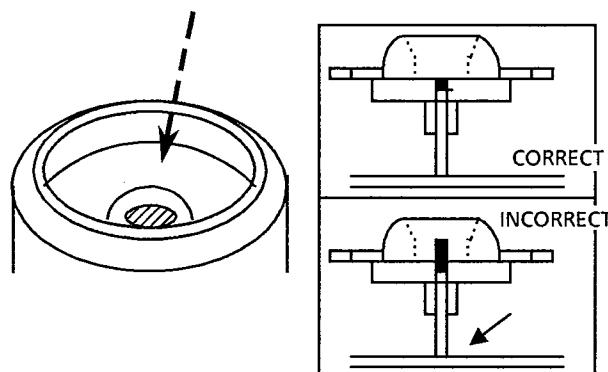

Fig 9

5. Use "LOCKTITE" #460 bonding agent, and apply as little as possible. Take care not to allow any excess bonding agent to get onto the turntable. Be extremely careful not to allow bonding agent to adhere to the motor bearings (the section marked by an arrow in fig 9 on the right).

# Disassemble of the cassette mechanism

## ■ Cassette controller PCB (ENJ-074-2) removal

1. Remove the cassette mechanism assembly.
2. Release the 8 hooks to remove the controller PCB (Fig 10).

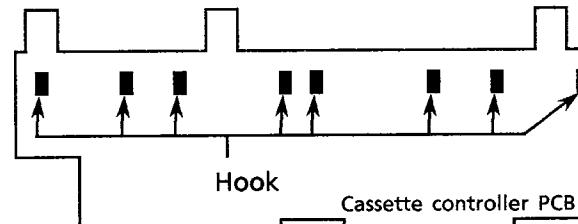

Fig 10

## ■ Head assembly removal

1. Remove the cassette mechanism assembly.
2. Unsolder the flexible wire (Fig 12).
3. Remove the 2 screws  $\odot$  fixing the head assembly (Fig 17).

### ※ Note

The direction of the head is changed with the head gear.  
When servicing, install the head gear according to the direction of the head. Refer to fig 11.

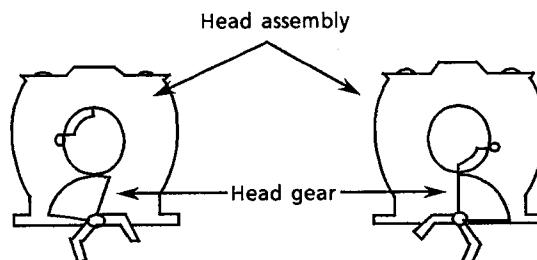

Fig 11

## ■ Pinch roller arm assembly removal

1. Release the return spring (Fig 17).
2. Release the hook holding the pinch roller arm assembly to remove the assembly (Fig 12).

## ■ Reel motor PCB removal

1. Remove the cassette mechanism assembly.
2. Remove the cassette controller PCB.
3. Remove the screw  $\textcircled{I}$  fixing the reel motor PCB.
4. Unsolder the reel motor PCB.
5. Remove the PCB.  
Be careful so that stress is not added to the terminals of the motor.

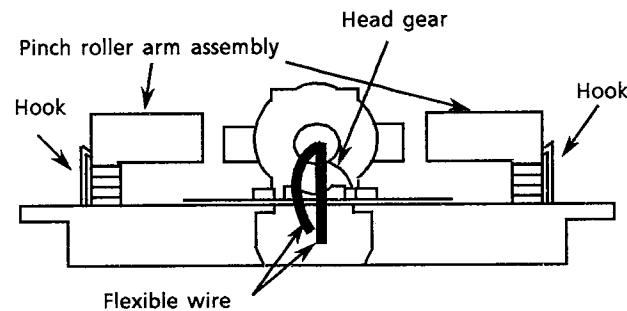

Fig 12

## ■ Capstan motor removal

1. Remove the cassette mechanism assembly.
2. Remove the reel motor PCBs.
3. Remove the 4 screws  $\textcircled{K}$  fixing the bracket (Fig 13).
4. Remove the motor with the bracket.
5. Remove the 2 screws fixing the motor and the bracket.

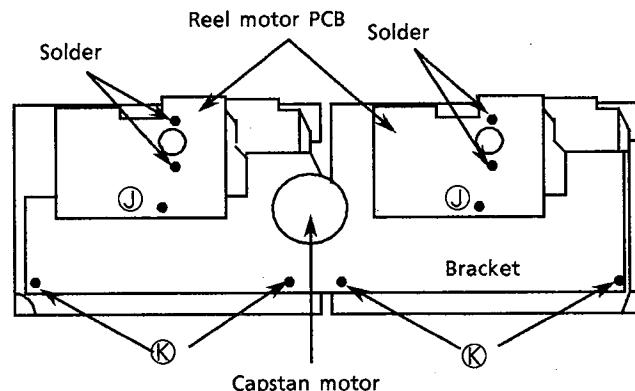

Fig 13

## ■ Reel motor removal

1. Remove the cassette mechanism assembly.
2. Remove the reel motor PCB.
3. Remove the FR arm assembly (Fig 17).
4. Remove the screw  $\textcircled{N}$  fixing the motor (Fig 17).
5. Remove the hooks fixing the motor to remove the motor.

### ■ Fly wheel removal

1. Remove the cassette mechanism assembly.
  2. Remove the reel motor PCB.
  3. Remove the screws ⑩ and the bracket (Fig 13).
- ※ To install the bracket
1. Install the belt of mechanism A as shown in fig 14.
  2. Assemble the mechanism A and the bracket with the capstan motor.
  3. Hang the belt of the mechanism A to the motor pulley using a tweezers and the like.
  4. Hang the part ⑪ to the Idler pulley.
  5. Install the mechanism B installed the belt as shown in fig 16 to the bracket which is assembled with the mechanism A.
  6. Hang the part ⑫ to the motor pulley using a tweezers and the like.

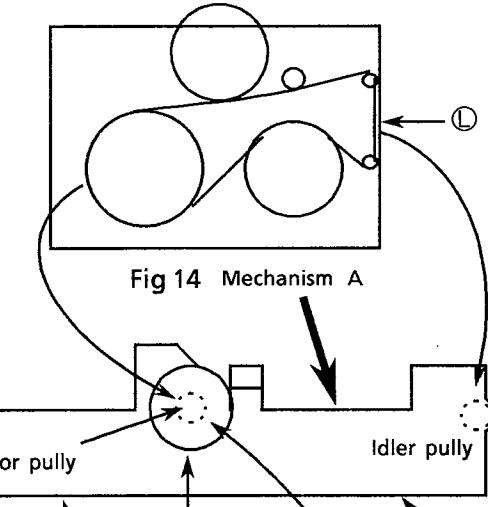

Fig 14 Mechanism A

# Adjustment Procedures

## ■ CD section

### \* Use RX-MXS4BK when adjusting .

#### 1. PLL free-running adjustment

- 1) Measuring instrument : Frequency counter
- 2) Adjusting procedure
  - (1) Connect a frequency counter with TP1 (CK :W608) and W634 (GND) on the main PC board .
  - (2) Adjust R865 for setting the frequency counter's value becomes  $4.295 \pm 0.005\text{MHz}$ .

#### 2. Tracking gain adjustment

- 1) Measuring instruments : Oscilloscope, Normal disc
- 2) Adjusting procedure
  - (1) Connect an oscilloscope with TP6 (TE) and TP7 (GND) on the main PC board.
  - (2) Play a disc.
  - (3) Short circuit TP5 (TEST) to TP7 (GND).
  - (4) Adjust R825 for setting tracking error signal becomes  $2.0\text{ V}_{\text{P.P.}}$ .

#### 3. Tracking offset adjustment

- 1) Measuring instruments : Oscilloscope, Normal disc
  - 2) Adjusting procedure
    - (1) Connect an oscilloscope with TP6 (TE) and TP7 (GND) on the main PC board.
    - (2) Play a disc.
    - (3) Short circuit TP5 (TEST) to TP7 (GND).
    - (4) Adjust R829 for setting the DC level of the tracking error (offset) becomes 0.
- Note : Adjust R829 for setting the waveform becomes symmetrical around the 0 level.

# Adjustment Procedures (Cassette Deck)

## 1. Measuring instruments

Audio frequency signal generator ( 0db output at the 600 ohm output terminal from 50Hz to 20KHz)  
 Electronic voltmeter  
 Frequency counter  
 Wow & Flutter meter  
 Distortion Meter with band pass filter  
 Attenuator (600 ohm impedance)  
 A resistor with 600Ω

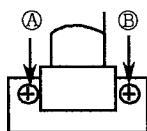

### Standard Tape

0dBs = 0.775V

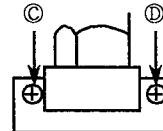

Tape No.	Frequency	Level (Wow & Fkutter)	Purpose
VTT-703L	10kHz	-10dBs	Head azimuth , Frequency Response
VTT-712	3000Hz	0dBs 0.025%WRMS	Tape Speed , Wow & Flutter
VTT-724	1kHz	-4dBs	Standard Level
TMT-6447	-	-	Blank Skip
TMT-6247 , TMT-6237	-	-	Music Scan
TMT-7046	-	-	Recording standard Normal : UR
AC-712	-	-	Recording standard METAL :MA
AC-513	-	-	Recording standard CrO <sub>2</sub> :SA
TW-2111, TW-2121	-	-	Forward / reverse play torque measuring
TW-2231	-	-	Feed forward / rewind torque measuring
C-120 Tape	-	-	Comfirming the tape running

## 2. Adjustment and repairing the mechanism

Item	Adjustment method	Standard value	Remarks
Head azimuth	<p>Deck A</p> <ol style="list-style-type: none"> <li>Connect an electronic voltmeter to the DOLBY TP(figure 3) to playback VTT-703L.</li> <li>Adjust screw Ⓐ so that the indication of the voltmeter becomes maximum when PLAY (▶) is pressed.</li> <li>Adjust screw Ⓑ so that the indication of the voltmeter becomes maximum when PLAY (◀) is pressed.</li> </ol> <p>Deck B</p> <ol style="list-style-type: none"> <li>Adjust screw Ⓒ so that the indication of the voltmeter becomes maximum when PLAY (▶) is pressed.</li> <li>Adjust screw Ⓓ so that the indication of the voltmeter becomes maximum when PLAY (◀) is pressed.</li> <li>After making the adjustment,apply screw lock to prevent screws Ⓐ , Ⓑ , Ⓒ and Ⓓ coming loose .</li> </ol>	Maximum	<ol style="list-style-type: none"> <li>Refer to figure 1.</li> <li>When the specified characteristic cannot be obtained because of head wear, excessive magnetization, etc., replace the head assembly and adjust the head azimuth. Also, perform the electric adjustment.</li> <li>When there is the difference of more than 3 ~ 4 dB between left and right output levels, replace the head assembly to avoid complaints.</li> </ol>
Playback torque	1. Measure the torque in the playback mode by the torque meter.	26 ~ 62 g-cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Fast forward torque	1. Measure the torque in the fast forward mode by the torque meter.	80 ~ 200 g-cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Rewind torque	1. Measure the torque in the rewind mode by the torque meter.	80~ 200 g-cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Wow & flutter	<ol style="list-style-type: none"> <li>Connect the wow &amp; flutter meter to the DOLBY TP(figure 3) and play back VTT-712.</li> <li>Its reading should be within 0.2% (WTD).</li> </ol>	Less than 0.2%	As a complaint may occur if the wow & flutter fluctuates by 0.1% even though it is allowed in the standard, repairing is required.

Deck A

Deck B

Figure 1

### 3. Electrical Adjustments (Make the following adjustments after adjusting the head azimuth.)

In principle, the adjustments should be made in the following sequence.

Set the NR switch to OFF and the BEAT CUT switch to "1".

Adjustments marked with an asterisk (\*) should always be made after the head is replaced

**0dBs = 0.775V.**

Item	Adjustment Method	Adjustment Location	Standard Value	Remarks
Tape Speed	1. Connect a frequency counter to the DOLBY TP (figure 3) and play back VTT-712. 2. Adjust the semi-fixed resistor VR481 on ENJ-074-1.	VR481	3,000 Hz $\pm 10\text{Hz}$	Connect a wow & flutter meter with a built-in frequency counter to the speaker terminals.
Standard level (Playback Level)	1. Connect an electronic voltmeter to the DOLBY TP (figure 3). Play back VTT-724 (1 kHz : -4dBs) to adjust the semi-fixed resistors.	<b>Deck A</b> L: VR281 R: VR282  <b>Deck B</b> L: VR453 R: VR454	400mV	1) The playback level varies when the head is replaced so should be adjusted. Use an electronic voltmeter with an impedance of 100 k $\Omega$ or more.
Playback Frequency Response	1. Connect an electronic voltmeter to the DOLBY TP (figure 3). 2. Play VTT-703L (10kHz : -10dBs) and adjust semi-fixed resistors to obtain the standard values.	<b>Deck A</b> L: VR451 R: VR452  <b>Deck B</b> L: VR283 R: VR284	200mV	—
Recording Bias Frequency	1. Connect a frequency counter to the BIAS TP (figure 3), and perform a recording to adjust bias frequency.	L331	100 kHz $\pm 5\text{kHz}$	Set the BEAT CUT SWITCH to "1".
Record / Play Frequency Response (Bias current)	Supply 100Hz / 1kHz / 10kHz, 30mV signals to AUX terminal. Record them with the NR switch off. While playing back, adjust VR331 and VR332 so that the variation of output of 100Hz / 10kHz to the output of 1kHz satisfies the standard value.	L: VR331 R: VR332	0 $\pm 3\text{ dB}$ for 100Hz  0 $\pm 2\text{dB}$ for 10kHz	<b>Refer to figure 2 below.</b> 1) The recording and playback frequencies of a cassette deck are adjusted by adjusting the bias. 2) Perform the adjustment with normal tape and confirm that the values are within the range for metal tape.

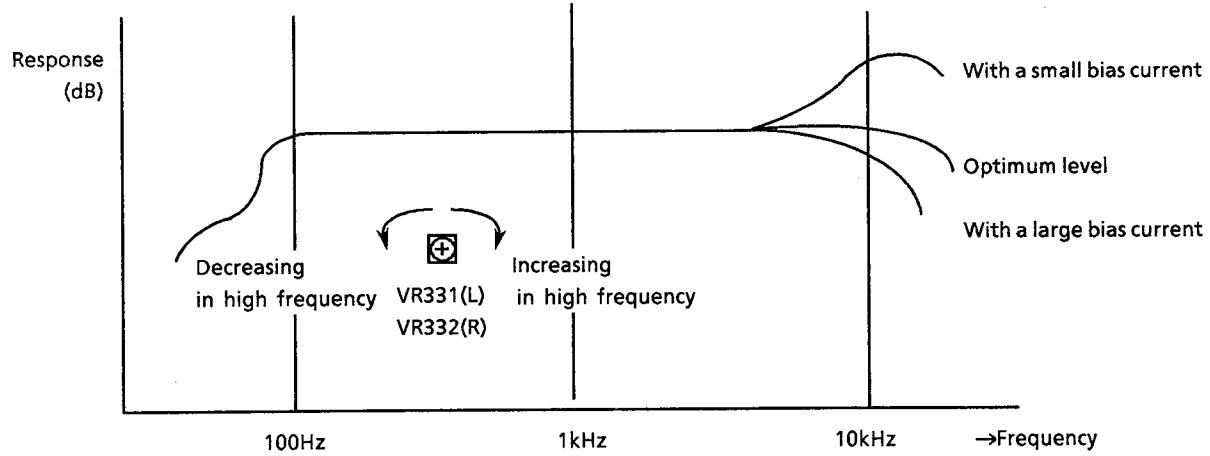

Figure 2

Item	Adjustment Method	Adjustment Location	Standard Value	Remarks
Record / Playback Sensitivity	1. Input a 1kHz (300mV) signal to AUX terminal and record it with a normal tape. 2. Connect an electronic voltmeter to the DOLBY TP(figure 3) to confirm the values. 3. If the values are not satisfied , adjust the semi-fixed resistors and record the signal again to confirm the values.	L : VR311 R : VR312	400mV	Adjust with normal tape and make sure that the left/right level difference is 1.0dB or less
Recording / playback distortion	1) Input a 1 kHz (300mV) to AUX terminal and record it. 2) Play it back and check the speaker out with a distortion meter to make sure it is within the criterion.		less than 3% (Normal/ CrO <sub>2</sub> )	Perform after the record / play frequency response and recording /playback sencitivty adjustments.
Recording / playback S/N ratio	1) Input a 1 kHz (300mV) signal to AUX terminal and record it. While recording, remove the input and record without the signal. 2) Connect a electronic voltmeter to the speaker terminals to measure the output levels. 3) Confirm that the output level ratio between the signals with a 1kHz and no signal is more than 40dB.		more than 40 dB (Normal/ CrO <sub>2</sub> )	
Erase ratio check	1. Record a music source using the Metal tape. 2. Rewind and erase the recorded section. 3. Comfirm nothing can be heard.	—	—	—
Music Scan	1. Make sure not to work the music scanning operation at the start of tape wind. 2. Make sure to work the music scanning operation at the end of tape wind.	—	—	—

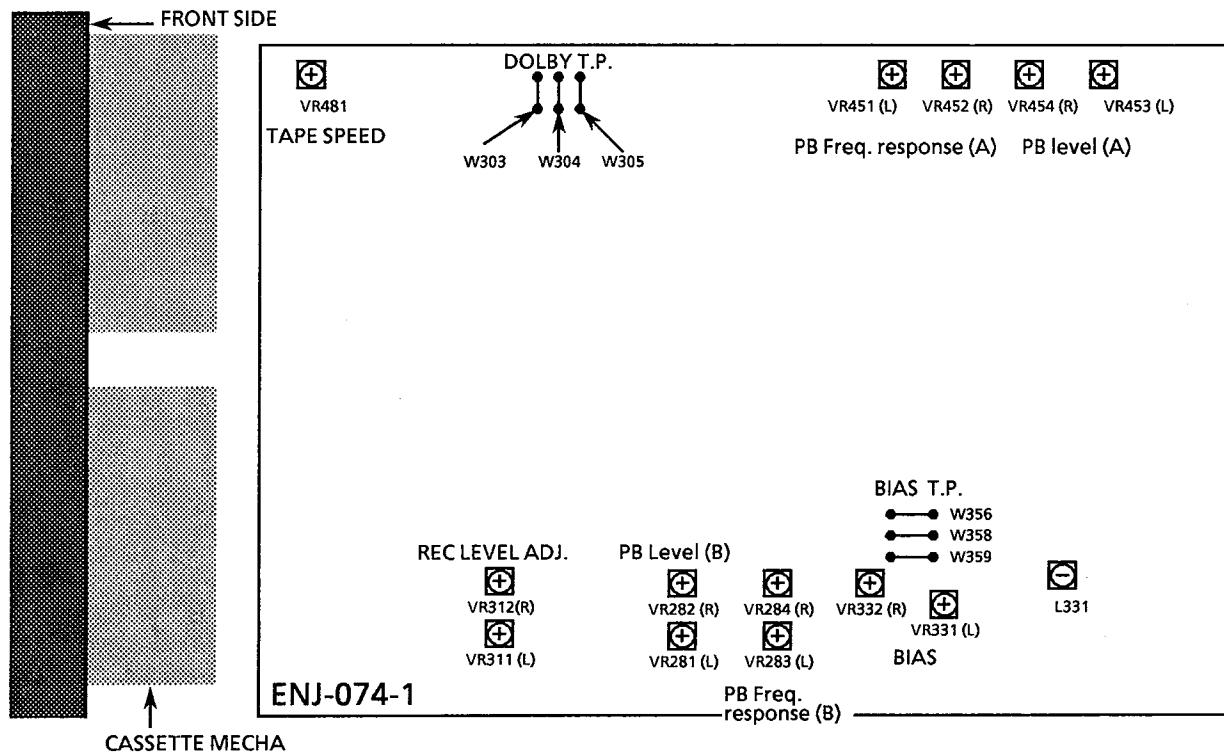

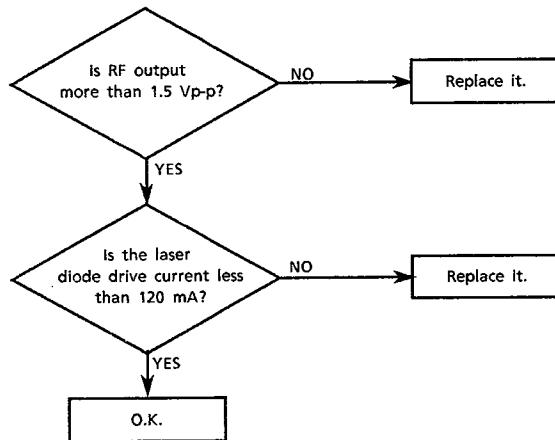

Figure 3

## Maintenance of Laser Pickup

### 1. Life of the laser diode

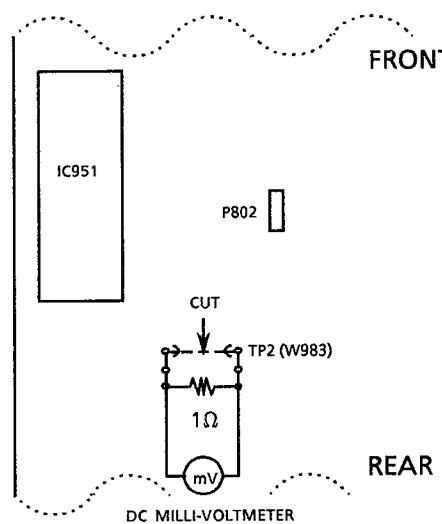

When the life of the laser diode has expired, the following symptoms will appear.

- (1) The level of RF output ( EFM output: amplitude of eye pattern) will be low.
- (2) The drive current required by the laser diode be increased. In such a case, check the life of the laser diode following the flowchart below

### 2. Measurement of laser diode drive current

Replace the jump wire TP2(W983) shown below with the resistor ( $1\Omega$ ). Measure the voltage across the resistor with a millivoltmeter. When the voltage is more than 180mV, it shows that the life of the laser diode has expired.

### 3. Semi-fixed resistor on the APC PC board

The semi-fixed resistor on the APC printed circuit board which is attached to the pickup is used to adjust the laser power. Since this adjustment should be performed to match the characteristics of the whole optical block, do not touch the semi-fixed resistor.

If the laser power is lower than the specified value, the laser diode is almost worn out, and the laser pickup should be replaced.

If the semi-fixed resistor is adjusted while the pickup is functioning normally, the laser pickup may be damaged due to excessive current.

## Replacement of Laser Pickup

Turn off the power switch of RX-MXS4BK and, disconnect the power cord from the AC outlet, then disconnect the system connector.

Replace the pickup with a normal one. (Refer to "Laser pickup Removal" on the previous page.)

Plug in the system connector and the AC cord of RX-MXS4BK, then turn the power switch on. At this time, check that the laser emits for about 3 seconds and the objective lens moves up and down.

Play a disc, and when it starts rotating, short circuit between TP5 (TEST) and TP7 (GND).

Adjust tracking gain.

Adjust tracking offset.

Disconnect TP5 (TEST) from TP7 (GND).

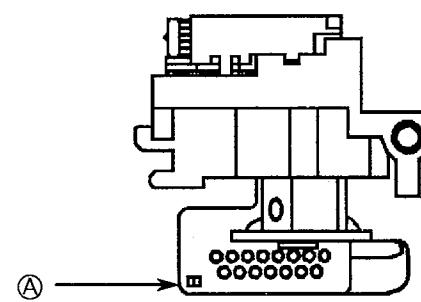

Check the eye-pattern at the TP8 (RF).

Finish.

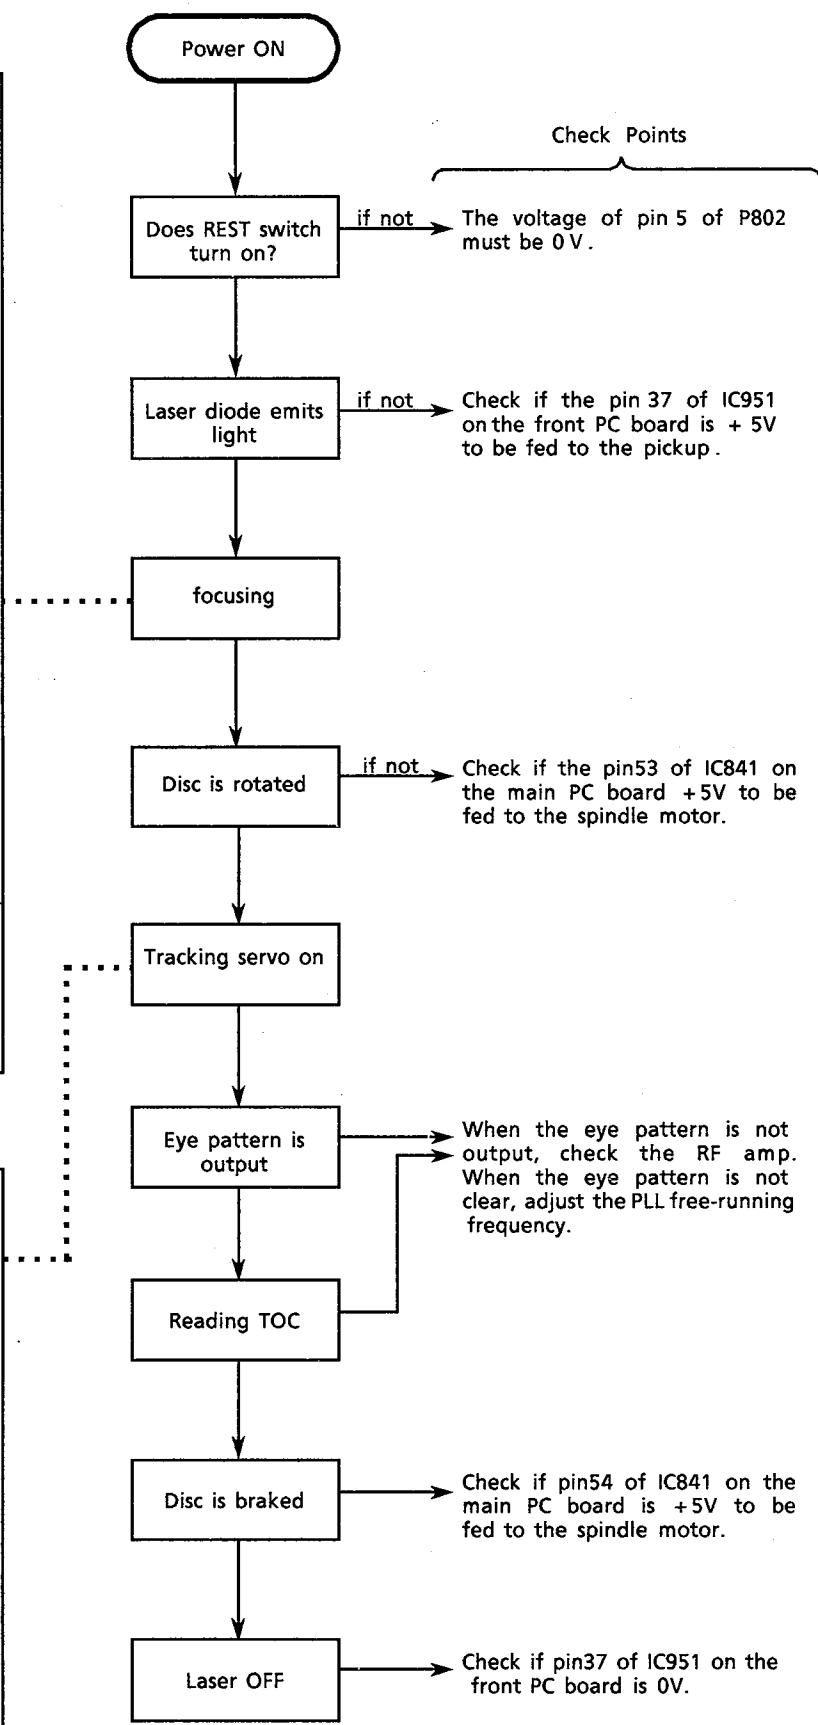

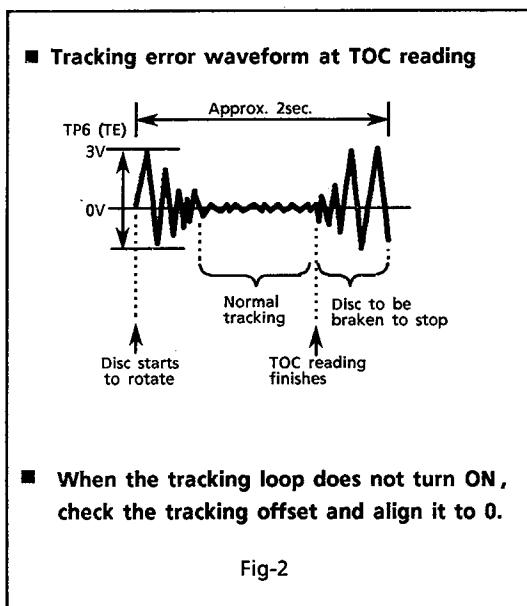

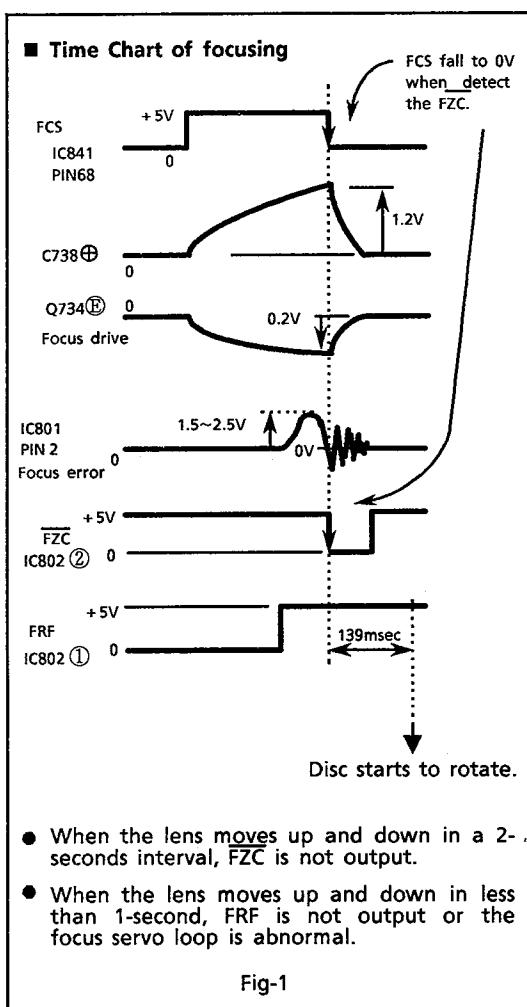

Note : Since one adjustment may affect other settings, repeat these adjustments a few times.

### Before installing the pickup

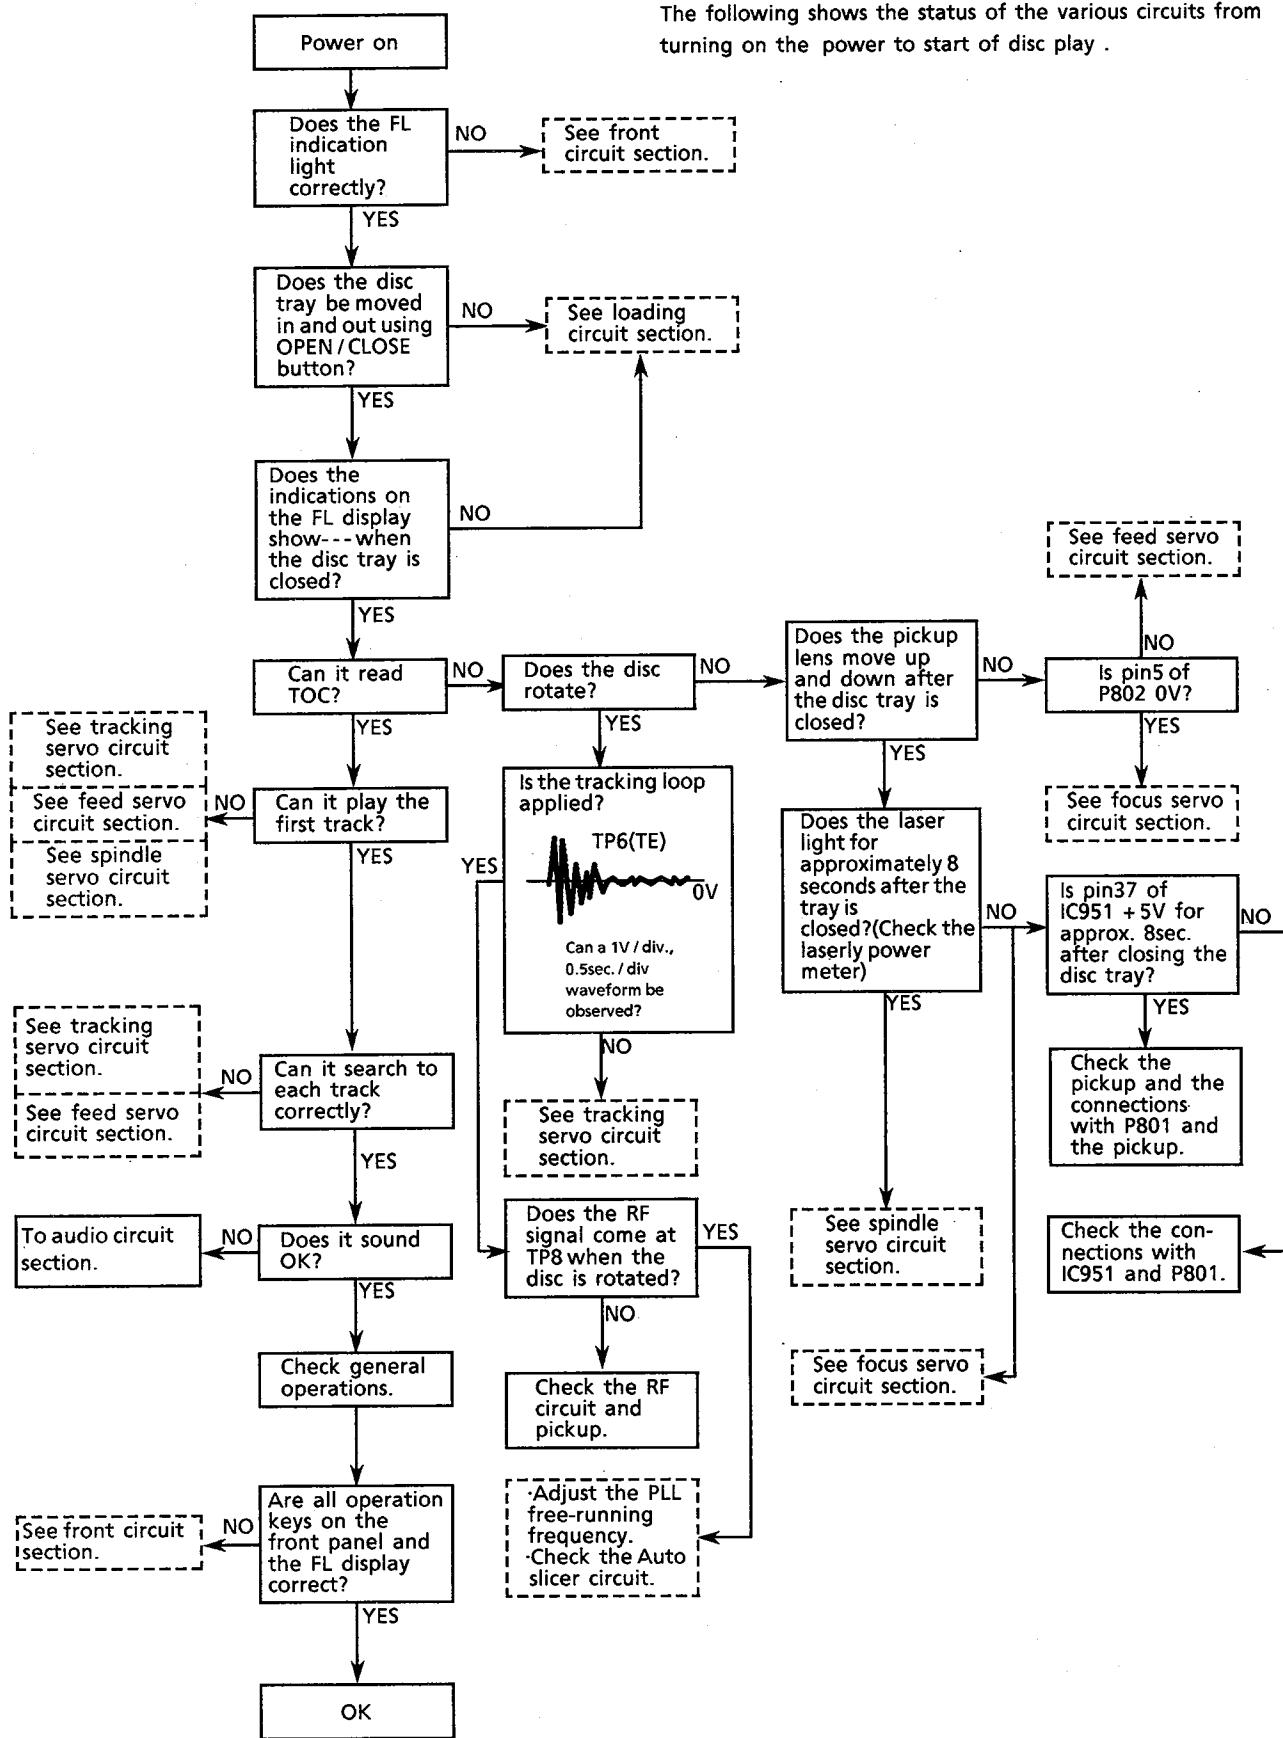

Unsolder the part  $\oplus$ , which is used for countermeasure for static electricity.
