Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (Δ) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.
5. Leakage current check (Electrical shock hazard testing)

After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

 - Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).
 - Alternate check method

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a $1,500\Omega$ 10 W resistor paralleled by a $0.15 \mu F$ AC-type capacitor between an exposed metal part and a known good earth ground.

Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor.

Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).

**Warning**

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

Important for Laser Products

1. CLASS 1 LASER PRODUCT
2. DANGER : Invisible laser radiation when open and interlock failed or defeated. Avoid direct exposure to beam.
3. CAUTION : There are no serviceable parts inside the Laser Unit. Do not disassemble the Laser Unit. Replace the complete Laser Unit if it malfunctions.
4. CAUTION : The compact disc player uses invisible laser radiation and is equipped with safety switches which prevent emission of radiation when the drawer is open and the safety interlocks have failed or are defeated. It is dangerous to defeat the safety switches.
5. CAUTION : If safety switches malfunction, the laser is able to function.
6. CAUTION : Use of controls, adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

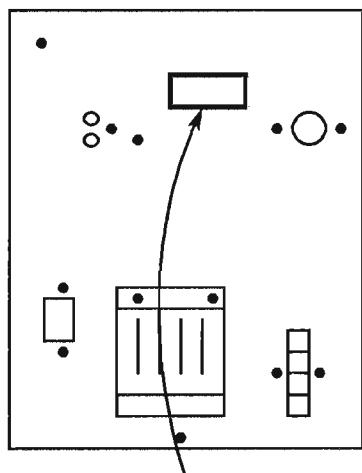

VARNING : Osynlig laserstrålning när denna del är öppnad och spärren är urkopplad. Betrakta ej strålen.

VARO : Avattaessa ja suojalukitus ohittaaessa olet altiina näkymättömälle lasersäteilylle. Älä katso sääteeseen.

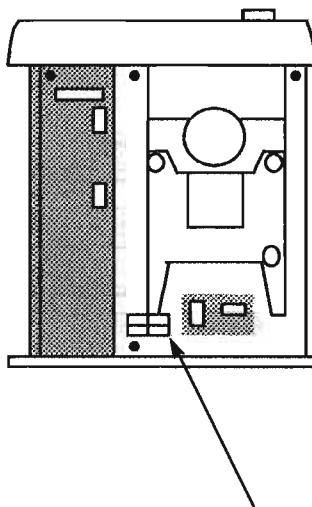

ADVARSEL : Usynlig laserstråling ved åbning, når sikkerhedsafbrydere er ude af funktion. Undgå udsættelse for stråling.

ADVARSEL : Usynlig laserstråling ved åpning, når sikkerhetsbryteren er avslott. unngå utsettelse for stråling.

Troubleshooting

- If you are having a problem with your CA-S20BK, check this list for a possible solution before calling for service.
 - If you cannot solve the problem from the hints given here, or the Unit has been physically damaged, call a qualified person, such as your dealer, for service.

Symptom	Possible Cause	ACTION
No sound is heard.	Connections are incorrect, or loose.	Check all connections and make corrections. (See pages 3 and 4.)
Impossible to record.	Cassette record protect tabs are removed.	Cover holes on back edge of cassette with tape.
Hard to listen to broadcasts because of noise.	The antenna is disconnected. The loop antenna is too close to the system. The feeder/wire antenna is not properly extended and positioned.	Re-connect the antenna securely. Change the position and direction of the loop antenna. Extend feeder/wire antenna at the best reception position.
The CD sound is discontinuous.	The CD is scratched or dirty.	Clean or replace the CD.
Unable to operate the Remote.	The path between the Remote and the sensor on the Unit is blocked. The batteries are discharged.	Remove the obstruction. Replace the batteries.
The CD tray cannot be operated.	The main AC power cord is not plugged in.	Plug in the AC power plug.
The CD does not play.	The CD is upside down.	Put the CD in with the label side up.
Operations are disabled.	The built in microprocessor may malfunction due to external electrical interference.	Unplug the system then plug it back in.
The cassette carrier cannot be opened.	The system was turned off because the timer was operated while the tape was running.	Turn On the system.

Specifications

Amplifier

25 watts per channel, min. RMS, both channels driven into 6 ohms, from 60 Hz to 20 kHz, with no more than 0.9% total harmonic distortion.

Design and specifications subject to change without notice.

CA-S20BK

Features

Great sound Here are some of the things that make your CA-S20BK powerful and easy to use.

- To get such great sound from such a compact package the CA-S20BK has:
 - Pre-programmed live surround effects like STADIUM, DANCE CLUB, JAZZ, as well as SEA effects like BGM, CAR, HI, PHONE so you don't have to be a sound engineer to get great effects.

Easy operation

The controls and operations have been redesigned to make them very easy to use so you can spend your time listening to music.

- With the One Touch Operation feature of JVC's new COMPUPLAY you can turn on the CA-S20BK and start the radio, the tape deck, or the CD player with a single touch.
- Two timers, DAILY Timer and SLEEP Timer are extremely easy to set so you can really use them.
- The Display is large and clear. It's organized so you can tell at a glance what's happening because functions light up as you use them, and blink to tell you they are ready. It gives you some important messages like "NO DISC", "NO TAPE" and some others.
- Auto Edit figures out how to arrange CD tracks on a tape. When you are recording a tape from a CD, the selections aren't cut off if the tape ends before the selection does.

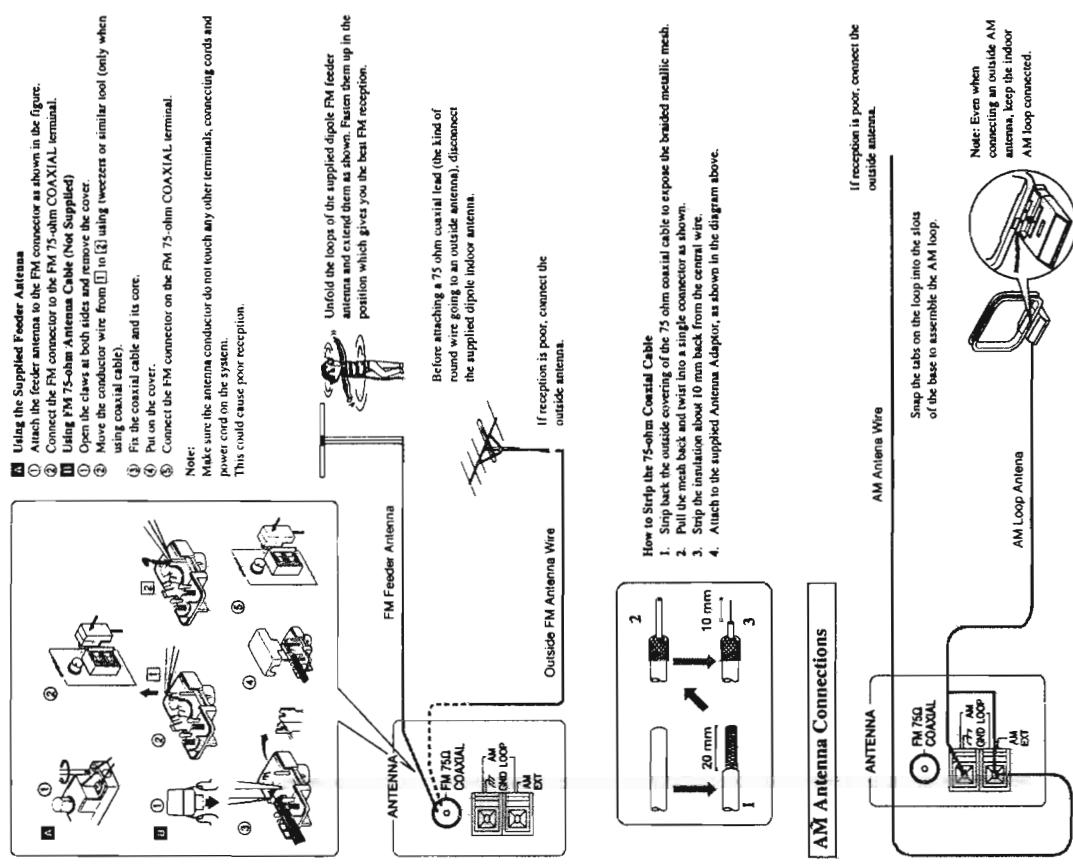

IMPORTANT CAUTIONS

- Installation of the Unit**
 - Select a place which is level, dry and neither too hot nor too cold (between 5°C and 35°C).
 - Leave sufficient distance between the Unit and your TV.
 - Do not use the Unit in a place subject to vibrations.
- Power cord**
 - Do not handle the power cord with wet hands!
 - When unplugging from the wall outlet, always pull the plug, not the power cord.
- Malfunctions, etc.**
 - There are user serviceable parts inside. If anything goes wrong, unplug the power cord and consult your dealer.
 - Do not insert any metallic object into the Unit.

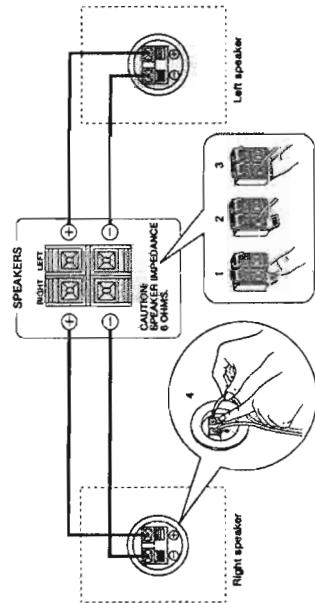

Connection Diagrams and Instructions

Connecting the FM and AM Antennas

FM Antenna Connections

Connecting the Speakers

- IMPORTANT:** Match the polarity of the speaker terminals with the polarity of the terminals on the CA-S20BK; red (+) to red (+) and black (-) to black (-). Check your speakers for correct impedance: 6 ohms only.
1. Open each terminal.
 2. Insert the end of the speaker wire as shown (be sure to remove the insulation at the end of each wire first).
 3. Close the terminals to clamp the speaker wires firmly in place.
 4. Connect the red (+) and black (-) terminals of the right side speaker to the red (+) and black (-) terminals marked RIGHT on the CA-S20BK.
 5. Connect the red (+) and black (-) terminals of the left side speaker to the red (+) and black (-) terminals marked LEFT on the CA-S20BK.

Read Me First

How to get the most for your money by using this manual.

The Engineers at JVC have made the CA-S20BK very easy to use, and if you are experienced using audio equipment, you can figure out how to use some of the CA-S20BK controls by yourself. However, we have built some new features into this model, which you can learn about easily from the manual.

If you are a new user or just want a review, this manual explains how to use the CA-S20BK and take advantage of its features for playing and recording music, as well as other sounds. One way to use this manual is to read it through now and refer back to it when you need to refresh your skills for some special operation. Of course you can just look up the topics, such as recording a CD, that you want to do, but remember that you may need to refer to other parts of the manual for some of the instruction; for instance, in explaining how to record a CD, we assume you already know how to load a CD. That's why we recommend that you read the manual through once before starting. We've made it short, and easy to follow.

However before you proceed, please read the Cautions on page 2 and the set-up directions.

How This Manual Is Organized

We have incorporated some special features in this manual:

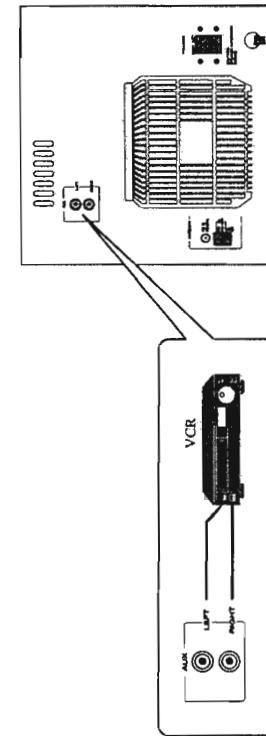

- A G2 page to look at while you read the instructions showing the front controls of the CA-S20BK. Some procedures have the illustrations of which control to use right with them, and for some you will need to look at the fold-out for the illustration.
- Basic information that is the same for many different functions is grouped in one place, and not repeated in each procedure. For instance, in the section on playing a CD, we do not repeat the information about setting the volume and the sound conditioning, which are mentioned in the Common Operations section.
- Names of buttons, controls and function names that light up on the display panel are written in all Capital letters like this; POWER.
- When we are talking about the function, rather than the BUTTON or DISPLAY, then we just capitalize the first letter of the words.
- The F2 prints you to important information or how to solve special problems that may occur when using the CA-S20BK.

The column on the left of the page is a special place to make it easier to find just what you want to know about, with little boldness announcing what each part of the page is about. Sometimes illustrations and helpful hints are placed here also.

Basically we use three kinds of information to help you understand and use the CA-S20BK.

- Information about what you can do (such as record a CD or preset a radio station) and how the Unit is designed to make doing this activity easy.
- Procedures, usually numbered in the order you do the steps, to guide you in exactly what to do to accomplish something, such as tune a radio station or record a tape.
- Information you need to know to make decisions about which functions of the CA-S20BK to use for particular tasks, such as when to use Dolby NR to improve tape sound), and special hints to make your work go smoothly, like reminding you to set the sound effects before starting the CD to tape recording, since they cannot be changed once recording begins without starting completely over.

The manual has a table of contents to help you easily look up what you want to know. We've enjoyed making this manual for you, and hope you will use it to enjoy the sound and many features built into your CA-S20BK.

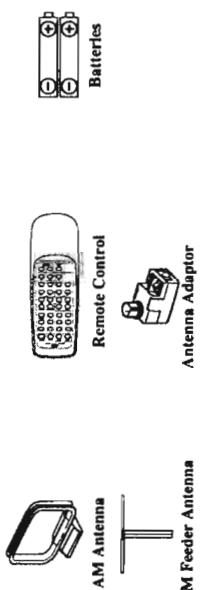

Connecting Auxiliary Equipment

VCR

Common Operations

Unpacking
Of course you have already opened your CA-S20BK carton, since you are reading this manual. Although the Unit is quite sturdy, you may want to save the packing to re-pack your CA-S20BK in case you are moving it some distance. Check to be sure you have all of the following things, which are supplied with the CA-S20BK:

If any are missing, contact your dealer immediately.

Location

You can place the CA-S20BK in many different kinds of locations to suit your needs; just observe the cautions on page 2: keep away from moisture and heat; leave some space between the Unit and its surroundings, more than 1 cm at the sides of the console and 10 cm at the back.

Set Up

You will need to do the following four things to get your CA-S20BK ready to use.

1. Connect the Antenna(s).
2. Connect the Speakers.
3. Put Batteries (included) in the Remote.
4. Connect other sound sources (VCR) if used.

1. Connect the Antenna(s)

Follow the diagrams on page 3. Here's what you need to know:

- For AM reception you must connect the supplied loop antenna. If reception is poor, connect the outside antenna, but leave the loop antenna in place—the AM will not work correctly without it.
- For FM reception, connect the supplied wire as shown. However, if you use an outdoor antenna, disconnect the indoor FM antenna first.
- To avoid noise, keep antennas away from metallic parts of the CA-S20BK, connecting cords and the AC power cord.

2. Connect the Speakers

Basically, you look at the diagrams on page 4 and follow the pictured instructions.

3. Put Batteries In the Remote

Pay close attention to getting the batteries in correctly—we've made it very easy, just match the + and - marks on the batteries with the + and - markings on the Remote. See page 2 for instructions.

CAUTION: Handle batteries with care. See page 2 for proper use of batteries.

4. Connect Other Sound Sources, such as VCR

You can play the sound portion of TV program or video tape through your CA-S20BK's sound system, often improving it greatly. A VCR can also be hooked up to play through the CA-S20BK. Just follow the diagram on page 4.

CAUTION: DO NOT connect optional equipment while the power is ON.

Now you can plug the AC power cord into the wall socket, and your CA-S20BK is at your command!

CAUTION: First make all connections before plugging the Unit into any AC power outlet.

Read on and find out how to use the many features built into your Unit.....

Here are the things that apply to all the functions of your CA-S20BK. If something in a procedure is unclear to you, check back here.

COMPULPLAY

COMPULPLAY is JVCKENWOOD's new feature that lets you control the most used functions of the CA-S20BK with a single touch. This One Touch Operation starts playing a CD, turns on the radio, plays a tape, etc., with a single press of the play button for that function. What One Touch Operation does for you is to turn the power on, then start the function you have called for. If the Unit is not ready, such as no CD or tape in place, the Unit still comes on and then gives you a message on the display so you can put in a CD or tape.

How One Touch Operation works in each case is explained in the respective section about that function.

Turning the CA-S20BK On

Press POWER, the STANDBY indicator on POWER goes out.

The CA-S20BK comes on ready to do whatever it was doing when the power was last shut off. So if the last thing you were doing was listening to a tape in deck B, you now are ready to listen to a tape again in deck B, or you can change to another source.

□ If you were listening to the radio last, the radio comes on playing that last station.

Turning the CA-S20BK Off

Press POWER again; the stand-by indicator lights up and the display blanks, except for the clock display.

□ A small amount of power (.3 Watts) is always consumed even though the power is turned off (called standby mode).

□ To switch the power off completely, unplug the power cord.

Controlling the Sound

The same set of buttons and knobs control the sound, no matter which function is producing it. Here we will briefly explain how these controls work, and how you can use them to increase your enjoyment of the music.

Volume Control

Rotate clockwise to increase loudness, counter-clockwise to reduce loudness. Be sure to read the caution at the end of this section about high sound levels damaging your hearing or your equipment.

Sound Modes

The CA-S20BK has some preset sound effects that let you control of way your music sounds, so you can tailor it for your room and for the quality of the source. We can give you some ideas of how each one affects the music, but the only way to really tell is try them yourself.

You can use only one effect at a time selecting from the LIVE SURROUND and SEA effects. Feel free to experiment! To get an effect, press a preset button so that the "Effect" is shown on the display.

To cancel the effect, press the button again, or press another preset button to select another effect.

LIVE SURROUND effects

With these effects, the sound coming from only two speakers approaches the quality of sound from four speakers.

SEA (Sound Effect Amplifier) effects

Adjustments of frequency range levels have been preset as three SEA effects.

BGM (Background Music)

Used as a background music.

CAR (Car)

Used for recording tapes to listen to in a car.

H. PHONE (Headphones)

Used for recording tapes to listen to with headphones.

■ On the Remote, you can't find buttons for these preset sound effects. By pressing SOUND MODE on the Remote, you can cycle through the effects one after the other.

Things to remember about using preset effects:

□ Set a preset effect before you start recording with REW/CD REC or CDR REC START, because once recording starts, the preset effect cannot be changed without stopping recording and often having to start over. If you need different effects for each selection, use the standard recording features described on page 13, rather than REW/CD REC or CDR REC START.

□ Each of the preset effects changes the sound in a different way by changing which parts of the sound are increased or reduced.

Active BASS Effect
The richness and fullness of the sound is maintained regardless of how high or low you set the VOLUME control.
To get the effect, press ACTIVE BASS EX so that the indicator on the button lights up.
To cancel the effect, press the button again so that the indicator goes off.

Listening with Headphones

A pair of headphones can be connected to the PHONO jack on the front panel. Be aware to turn down the volume before connecting or putting on headphones, as high volume can damage both the headphones and your hearing.

The Display and the Indicators—Two Very Useful Hints

□ The display tells you many useful things about what your Unit is doing. Watch it as you give instructions by pressing buttons. It also gives you some messages like "NO DISC", and some others to show you what to do next.
□ Some of the controls have a small light, called an indicator, right next to or even right on the button or knob itself. The light comes on when the function is on, and goes off when it is not in use.

CAUTION: Always set the VOLUME control to MIN before turning on a connected source such as a VCR or starting any other of the sound sources such as the radio, tape, or CD player. Otherwise, if the VOLUME control is turned up, the sudden blast of sound energy can permanently damage your hearing and/or ruin your speakers.

Listening to the Radio

You can listen to both AM and FM.

One Touch Radio
Just press AM to turn on the Unit and start playing the most recent AM station tuned in, or press FM to start the most recent FM station tuned in.
□ You can switch from any other sound source to the radio by pressing either AM or FM.

Tuning in a Station

Press AM or FM to turn on the radio. The display shows the station frequency tuned to.

**Three ways to tune
in a station**

1. Press TUNING/TIMER < or > repeatedly to move from frequency to frequency until you find the one you want.
2. Hold down TUNING/TIMER < or >, the frequency starts changing on the display. When a station is tuned in, "TUNED" lights up on the display and the frequency stops changing.
3. Press once and release PRESET < or > to go to the next preset station, or hold PRESET < or > to cycle through the preset stations: release the button when the preset station you want shows on the display. (This method is possible only after presetting stations.)

You also use the Remote to tune in stations and preset channels:
To tune preselected stations with the Remote:

1. Press FM or AM depending on which band you want.
2. Select the station by entering the preset channel number in the 10 key pad of the Remote.

Presetting Stations

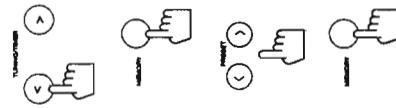

Once a station is assigned to a channel number, the station can be quickly tuned either from the Remote using the 10 key pad of the Remote or the CA-S20BK itself using PRESET < or > to call up the channel number.

- You can preset 40 AM and FM stations at random.
- Preset stations may be erased when power is cut off to the Unit, as when it is unplugged from the AC outlet or a power failure occurs. If the preset stations are lost, simply set the stations again using the following procedure:
To preset radio stations
 1. Tune in the station you want to set using TUNING/TIMER < or >.
 2. Press MEMORY.

On the display "MEMORY" will blink for 8 seconds.

 - During these 8 seconds while "MEMORY" is blinking, you can assign a channel number to the station and enter it into the memory.
 - 3. Select a channel number by pressing PRESET < or > until you find the channel number you want.
 - 4. Press MEMORY and the station will be assigned to the channel number showing on the display.
 - If a station has been previously stored using the same channel number, it will be erased and the newly selected station will be stored.

How to preset AM and FM radio stations

Receiving in Stereo or Mono

When an FM stereo broadcast is hard to receive or noisy:

- Press FM MODE/MUTE on the remote control so that reception improves, although you loose the stereo effect. In this state, you will hear noise while tuning and stations.
- To restore stereo effect, press FM MODE/MUTE again so that "AUTO" appears on the display.
- In this state, when a program is broadcast in stereo, you will hear stereo sound; when in monaural, you will hear monaural sounds. Furthermore, in this state, you won't hear noise while tuning into stations.

Listening to a Compact Disc

The quickest way to start a CD is with the One Touch Operation.

Press **DII** on the CD player or **▶** on the Remote.

* If a CD is already loaded, the Unit automatically turns on and starts to play it from track 1.

* If no CD is loaded, the Unit automatically turns on and the CD tray opens. This is exactly the same as what happens if you press **▲** instead of **DII**.

Basics of Using the CD Player

Here are the basic things you need to know to play a CD and locate the different selections on it. Each selection is called a track, so when we are talking about locating a track, we are also talking about how you find a certain song or performance.

To Play a CD

1. Press **▲**.
2. Put a CD, printed side up, into the tray.
3. If you want to listen to the CD now, press **DII** again (or **▶** on the Remote).

The display shows the track being played and the length of time since it started.

To stop the CD

1. Press **◀**.
2. Put a CD, printed side up, into the tray.
3. If you want to listen to the CD now, press **DII** again (or **▶** on the Remote).

To pause the play, press **DII** while the CD is playing so when you press **DII** again (or **▶** on the Remote) the CD starts just where you left off.

To remove a CD, press **▲**, take the CD out, and press **▲** again to close the tray. Keep the tray closed except during loading and unloading to protect the mechanism from dust and damage.

How to Find the Track or a Particular Point You Want

Each time you press briefly and release EDIT TIME **◀** or **▶** (or **◀** or **▶** on the Remote) the track changes by one. Press and release EDIT TIME **◀** or **▶** (or **◀** or **▶** on the Remote) to go ahead one track at a time.

Holding down EDIT TIME **◀** or **▶** will fast forward or fast reverse the CD so you can quickly find the particular part of a track you want to listen to. Fast (forward and fast reverse are only possible by using the buttons on the Unit when the CD is playing.

Holding down **◀** or **▶** (or **◀** or **▶** on the Remote) allows you to change the tracks continuously. (By using the buttons on the Unit, it is only possible when the CD is not playing.)

Locating a Track with the Remote

1. Press **▶**.
2. Enter the number of the track you want using the 10 key pad. The selected track will start to play.
- Example: for track 5, press 5. For track 50, press +10, then 5. For track 20, press +10, then 10.

Using the Remote to find a track

With programming, you can play back tracks in any order

In addition to the high quality sound which makes the CD such a good way to listen to music, you can change the order in which the tracks play.

Programming the Playing Order of the Tracks

Before starting a CD, press RANDOM on the CD player. When all of the tracks have been played, the CD shuts off.

Press REPEAT before or during random play to instruct the CA-S20BK to continue with a different random track selection after the last selection is played.

To cancel random play, press **CLEAR** (or **■** on the Remote).

Program with the Remote

You can arrange the tracks to play in any order you like with the Program function. The Remote is very useful for this because you can select tracks by number with the 10 key pad. See "How to Use the Remote Control," page 18, if you need more information about its use. You can also use the main Unit.

The tape deck allows you to play, record and dub audio tapes.

Most of tapes are now recorded with the Dolby NR system, so first check which type of the Dolby NR system is used on the tape. Only the Dolby NR is incorporated into the CA-S20BK.

With Automatic Tape Type Detection, you can listen to type I, II, or IV tapes without changing any settings.

To record or dub, see Recording on page 13.

Listening to a Tape

Repeating a Selection or the Entire Disc

You can have either the program or the individual selection currently playing repeat as many times as you like by pressing REPEAT.

If you want to change the number of a track you just entered, press CANCEL on the Remote, and enter another number. (When the display shows the total program time, press CANCEL twice to remove the last selection entered.)

If you want to change the entire program, press **CLEAR** on the Unit while the CD is off, and then you can start over.

To check the order of the tracks in your program in STOP mode, press **◀** or **▶** on the Remote to display the order of the tracks. Each time you press **◀** or **▶** the next selection in your program is displayed. (Press **◀** for the previous selections.)

To cancel repeat mode, press REPEAT until the "REPEAT" or "REPEAT 1" goes off on the display.

Playback Procedure

Regular Play

When the power is already on, you can use this basic procedure:

1. Press EJECT of the deck you want to use.
2. When the cassette carrier opens, put the cassette in, with the exposed part of the tape down toward the base of the CA-S20BK.
3. Close the carrier gently.
4. Press **▷** to play the front side, or **◁** to play the reverse side. The arrow indicator on the pressed button starts blinking and tape play starts.

To stop playing, press **■**.

To remove the tape, press EJECT.

Recording

Fast Left and Fast Right

- While the tape is stopped, press **◀◀** and the tape will wind rapidly onto the left side of the cassette without playing.
- While the tape is stopped, press **▶▶** and the tape will wind rapidly onto the right side of the cassette without playing.

Music Scan

- To find the beginning of a music track during play, use the Music Scan function. Music Scan searches for blank portions that usually separate tracks, then plays the next song.
- If you are recording on deck B or put deck B in recording pause mode, Music Scan will not work on deck A.

Scan Forward

- To find the beginning of the current song Press **◀◀** or **▶▶** during play.
- Make sure that you press **◀◀** or **▶▶** in the same direction to tape play. Searching stops automatically at the beginning of the current song, and the next song starts automatically.

- ※** The Music Scan works by detecting a 4-second long blank at the beginning of each selection. So it won't work well if your tape has:
 - No blank at the beginning of a track.
 - Noise (often caused by much use or poor quality dubbing) which fills the blank with noise.
 - Long very soft passages or pauses in a selection. The scan will detect these instead of the 4-second long blanks. If this happens, just go ahead and scan again until you reach the selection you want.

More Useful Things to Know:

- Use Reverse Mode to make the tape automatically reverse at the end of a side and start playing the other side. Press REVERSE MODE to change from Reverse Mode on (the indicator is lit) to Reverse Mode off, or from off, to on.
- Continuous Play: When a tape finishes playing, the Unit always checks to see if a tape is in the other deck. If one is there, it automatically starts playing it while rewinding the first tape. This Continuous Play happens regardless of which deck starts first.

- As long as the REVERSE MODE indicator is lit, the tapes will continue to play in the above sequence.
 - With the Reverse Mode off, the tape will play to the end of the current side, switch to the other deck and start playing a tape there while rewinding the first tape. Then when one side of the tape in the other deck is over, the first deck starts playing the same side again. The tapes will continue to play in the above sequence.
 - If a tape is recorded with Dolby B NR, playing it back with the Dolby NR on will reduce tape noise and improve the clarity of the sound.

Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation.
"DOLBY" and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

Recording onto cassette tape from any of the sound sources is easy and the CA-S20BK does most of the work. Just have a tape in deck B, have the source ready, make one or two settings, and you're ready to record. For each source the procedure is a little different and how we'll explain just what to do for each one. If you forget, just go back to the section which has the specific procedures you need. But first, here are a few things to make your recordings better.

Things to Know before You Start Recording:

- Press DOLBY B NR — the indicator lights up — to reduce tape hiss, except when dubbing tapes since Dolby NR is inactive in dubbing mode, regardless of its setting of DOLBY B NR. The dubbed tape automatically contains the same processing as the source tape.
- The recording level, which is the volume at which the new tape is being made, is automatically set correctly, so it is not affected by the VOLUME control on the CA-S20BK. Thus, you can adjust the sound you are actually listening to without changing the recording.

- Two small tabs on the back, one for side A and one for side B, can be removed to prevent accidental erasure or re-recording. To record on a cassette with the tabs removed, you must cover the holes with adhesive tape first. However, when a Type II tape is used, only cover part of the hole as shown, since the other part of the hole is used to detect the tape type.

- When recording, you can select the sound effects with the preset sound effect buttons to condition the music as it is recorded. But when recording using CD REC START or REW/CD REC, once recording has started, these settings cannot be changed. When recording from tape deck A to deck B, the sound effects cannot be used, because the signal doesn't go through the amplifier first. This method gives you the highest quality dubbed tapes.

- Type I and type II tapes can be used for recording. While type IV tapes can be played, type IV tapes cannot be used for recording on the CA-S20BK.

- CAUTION:** If recordings you make have excessive noise or static, the Unit may be too close to a TV which was on during the recording. Either turn off the TV or increase the distance between the TV and the CA-S20BK.

Standard Recording

- Any source to tape:** This is the basic method for recording any source. The CA-S20BK also has special ways for recording CD to tape, and tape to tape, which save you time and effort, as well as give you some special effects.

- However, when you need to add a selection to a tape you have made, or are combining selections from several sources on one tape, use the method we describe here, just substitute the source you want, such as a tape in deck A, or CD, or radio in this procedure. You can also record from the microphone or an auxiliary source with this procedure.

To Record Any Sound Source to Tape

- Follow these steps to record from any sound source onto a tape in deck B.
1. Insert a blank or erasable tape into deck B.
 2. Press REC PAUSE.

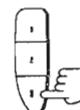

The REC PAUSE indicator lights up.

3. Press REVERSE MODE if you want to record on both sides of the tape.
4. Prepare the source, for example, tuning in a radio station, loading a CD, turning on a connected VCR or turntable.
5. Press either **▷** to record on side A, or **◁** to record on side B of the tape, on deck B.

Listening to a VCR

Advantages in Connecting a VCR

- By playing the sound from a VCR through the CA-S20BK, you can often dramatically improve the quality, and gain control over how the music or program sounds. Once the connected equipment is playing through the CA-S20BK, you can apply the sound effects, make recordings, or listen with the headphones.
1. Set the Unit's volume to MIN.
 2. Press AUX on either the Remote or the Unit.
 3. "AUX" lights up on the display.
 4. Adjust the volume level.
- To cancel the AUX setting Change the source by starting any one of the CA-S20BK's built in sound sources, such as the radio or CD player.

CA-S20BK

CD to Tape Recording

There are three ways to record from CD to tape.

Standard Recording — Everything on the CD goes onto the tape in the order it is on the CD, or according to an order you have set in a program.

Auto Edit Recording — Your CA-S20BK figures out which selections to put on which side of the tape, so a selection isn't cut off before it's finished when the tape runs out.

REW/CD Recording

1. Insert a blank or erasable cassette in deck B.
 If you want to record both sides of the tape, press REVERSE MODE on the tape deck so that the REVERSE MODE indicator lights up.
2. Load a CD into the tray and press **▲** to close the tray.
3. Set the sound mode if you want, since the sound mode cannot be changed once recording starts.
4. To record on the tape from its beginning, press REW/CD REC on the CD player.
The Unit will automatically rewind that tape to the beginning of side A, create a 10 second blank, turn on the CD and start recording.
- To record on the tape from any portion of tape rather than its beginning, press CD REC START on the CD player.
Without rewinding the tape and creating a 10 second blank, the Unit turns on the CD and starts recording.
 The CD REC START button is convenient for recording from many CDs.

At the end of the tape, the CA-S20BK automatically goes back to the beginning of the last selection and re-records it, this time gently fading out at the end. (If you selected the Reverse Mode, side B starts with the last selection on side A. (A 10 second blank is also created on the beginning of side B.)

When the tape is finished, the Unit shuts off the CD and the tape deck.

To stop any time during the recording process
Press **■** on deck B.

In case of any operation during CD Recording, please use buttons on the Unit. (Don't press ones on the Remote Control.)

Auto Edit Recording

Using Auto Edit, you can record the CD tracks to fit the tape, so a selection isn't cut off. Auto Edit is one of the best ways to copy all of a CD onto a tape.

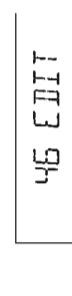

Auto Edit programs the CD tracks in the numerical order. To prevent the end of the last track on side A from being cut off, the last track on side A is selected to fit on the remaining tape length.

1. Insert a blank or erasable cassette in deck B.
 If you want to record on both sides of the tape, press REVERSE MODE on the tape deck so that the REVERSE MODE indicator lights up.

2. Load a CD into the tray and press **▲** to close the tray.
3. Set the sound mode if you want, since the sound mode cannot be changed once recording starts.
4. Press AUTO EDIT on the CD player.

"EDIT" appears on the display and then the minimum standard tape length to use for this CD appears.
 You select a different length of tape, depending on the actual size of the tape you are using, from item possibilities programmed into the CA-S20BK: 40, 46, 50, 54, 60, 64, 70, 74, 80, 84, 90. Cycle through these choices using EDIT TIME **◀** or **▶** (left or right on the Remote) until you find the length closest to your tape's actual length.

* If you pick a tape length shorter than the total playing time of the CD, the last tracks on both sides of the tape will be faded out as the tape ends.

5. Press SIDE A/B.

The display shows which tracks will go on side A and which on side B. Each time you press SIDE A/B, the display switches between A and B.

6. Press REW/CD REC on the CD player.

The Unit will automatically rewind the tape to the beginning of side A, create a 10 second blank, turn on the CD and start recording. (A 10 second blank is also created on the beginning of side B.)

To stop any time during the recording process
Press **■** on deck B.

Tape to tape dubbing; Introduction

Recording from one tape to another is called dubbing. Recording from a tape to another is called dubbing. You can dub at regular speed for the best possible quality, or with a slight loss in sound quality you can dub at high speed. With high speed it takes only about half the time to copy a tape.

To dub both sides of a tape, start from side A for both deck A and deck B, and press REVERSE MODE so that the REVERSE MODE indicator lights up.
 It is preferable that the type of tape (Normal or C-90) you record from be the same as the type you record onto.

REW/CD Recording

If you want to record both sides of the tape, press REVERSE MODE on the tape deck so that the REVERSE MODE indicator lights up.

1. Load a CD into the tray and press **▲** to close the tray.
2. Set the sound mode if you want, since the sound mode cannot be changed once recording starts.
3. To record on the tape from its beginning, press REW/CD REC on the CD player.
4. To record on the tape from its beginning, press REW/CD REC on the CD player.

The Unit will automatically rewind that tape to the beginning of side A, create a 10 second blank, turn on the CD and start recording.

To record on the tape from any portion of tape rather than its beginning, press CD REC START on the CD player.

Without rewinding the tape and creating a 10 second blank, the Unit turns on the CD and starts recording.

The CD REC START button is convenient for recording from many CDs.

At the end of the tape, the CA-S20BK automatically goes back to the beginning of the last selection and re-records it, this time gently fading out at the end. (If you selected the Reverse Mode, side B starts with the last selection on side A. (A 10 second blank is also created on the beginning of side B.)

When the tape is finished, the Unit shuts off the CD and the tape deck.

To stop any time during the recording process
Press **■** on deck B.

In case of any operation during CD Recording, please use buttons on the Unit. (Don't press ones on the Remote Control.)

Auto Edit Recording

Using Auto Edit, you can record the CD tracks to fit the tape, so a selection isn't cut off. Auto Edit is one of the best ways to copy all of a CD onto a tape.

Auto Edit programs the CD tracks in the numerical order. To prevent the end of the last track on side A from being cut off, the last track on side A is selected to fit on the remaining tape length.

1. Insert a blank or erasable cassette in deck B.
 If you want to record on both sides of the tape, press REVERSE MODE on the tape deck so that the REVERSE MODE indicator lights up.

2. Load a CD into the tray and press **▲** to close the tray.
3. Set the sound mode if you want, since the sound mode cannot be changed once recording starts.
4. Press AUTO EDIT on the CD player.

"EDIT" appears on the display and then the minimum standard tape length to use for this CD appears.
 You select a different length of tape, depending on the actual size of the tape you are using, from item possibilities programmed into the CA-S20BK: 40, 46, 50, 54, 60, 64, 70, 74, 80, 84, 90. Cycle through these choices using EDIT TIME **◀** or **▶** (left or right on the Remote) until you find the length closest to your tape's actual length.

* If you pick a tape length shorter than the total playing time of the CD, the last tracks on both sides of the tape will be faded out as the tape ends.

5. Press SIDE A/B.

The display shows which tracks will go on side A and which on side B. Each time you press SIDE A/B, the display switches between A and B.

6. Press REW/CD REC on the CD player.

The Unit will automatically rewind the tape to the beginning of side A, create a 10 second blank, turn on the CD and start recording. (A 10 second blank is also created on the beginning of side B.)

To stop any time during the recording process
Press **■** on deck B.

How to Set the Clock and Use the Timers

Two Timers:
DAILY
SLEEP

The timers let you control recording and playing functions automatically. With the CA-S20BK they are particularly easy to set and use. Two types of timers are available:

- **DAILY Timer**—Wake up to music from any source.
- **SLEEP Timer**—Fall asleep and have your CA-S20BK turn off automatically after a certain length of time.

IMPORTANT!
Set your clock!

The timers depend on the clock. If the clock is right, the timers will work like you expect, but if the time is incorrect on the clock then the timers will also be incorrect.

Notice: The clock must be set, or the timers cannot be set!

So, let's set the clock first.

1. Press CLOCK ADJUST button.
2. Set the hour by pressing the TUNING/TIMER < or > button. Press the > button increase the hour, and pressing the < button decreases it.
3. Press the MEMORY button.
4. Set the minutes by pressing TUNING/TIMER < or > button. Press the > button increase the minute, and pressing the < button decreases it.
5. Press the MEMORY button again and the clock is set and starts from zero second.

NOTE: If there is a power failure, the clock loses its setting, the display shows "AM 12:00", and it must be reset.

So, let's set the clock first.
 1. Press CLOCK ADJUST button.
 2. Set the hour by pressing the TUNING/TIMER < or > button. Press the > button increase the hour, and pressing the < button decreases it.

3. Press the MEMORY button.
4. Set the minutes by pressing TUNING/TIMER < or > button. Press the > button increase the minute, and pressing the < button decreases it.
5. Press the MEMORY button again and the clock is set and starts from zero second.

NOTE: If there is a power failure, the clock loses its setting, the display shows "AM 12:00", and it must be reset.

**Wake up to music
with the DAILY
Timer**

With this timer you can wake up to music from a CD, tape or your favourite radio program.

□ You can set the DAILY Timer whether the Unit is on or off.

Follow this procedure to set the DAILY Timer

1. Press DAILY so that "DAILY TIMER" blinks on the display.
2. Set the time you want the Unit to turn on.
3. Use the TUNING/TIMER < or > button just like setting the clock, then press MEMORY.
4. Select the sound source with the TUNING/TIMER < or > button.
5. Each time you press this button, the display shows one of the four possible sources: CD, TAPE, FM or AM.
- Leave the one you want lit.
- If you select AM or FM as the source, the last played station is the one which comes on at the set time.
- Press DAILY or MEMORY again, or wait eight seconds. "DAILY TIMER" lights up on the display.

The Unit will memorize the setting.
 When the set time comes, the CA-S20BK turns on ("DAILY" appears on the display), plays the source you have selected for 60 minutes, and then the Unit turns off.

- If you press any button while the DAILY Timer is being activated, the Unit will not turn off automatically after 60 minutes.

Before turning off the Unit

□ If the source is tape.

- Check that the tape transport direction is correct. This is important especially when Reverse Mode is off.
- Deck A has priority, so if tapes are in both deck, the tape in deck A plays first.

□ Set Reverse Mode on if you want to play both sides of the tape.

□ Select the sound mode if you want to listen using a sound mode (STADIUM, DANCE CLUB, HALL, etc.).

□ Set the volume to an appropriate level.

To change the DAILY Timer setting

Press DAILY twice ("DAILY" reappears) and make any changes you want.

To cancel the DAILY Timer setting

Press DAILY button again so that "DAILY TIMER" goes off on the display.

Setting the SLEEP Timer

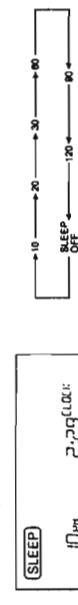

Use the SLEEP timer to turn the Unit off after a certain number of minutes, when it is playing. Using this timer, you can fall asleep to music.

□ You can only set the SLEEP Timer when the CA-S20BK is on and a source is playing.

Follow this procedure to set the SLEEP Timer.

With the CA-S20BK on and a source playing, press SLEEP on the Remote Control. "SLEEP" starts blinking on the display.

- Each time you press SLEEP, while "SLEEP" is blinking, it changes the number of minutes shown on the display in this sequence:

When the number of minutes you want shows on the display, just wait 8 seconds until "TIMER OK" appears and "SLEEP" stops blinking, but remains lit.

The Unit will now turn off after the number of minutes you set.

To change the SLEEP Timer setting

Press SLEEP until the number of minutes you want appears on the display.

To cancel the SLEEP Timer setting

Press SLEEP until "SLEEP" goes off on the display.

Turning off the Unit also cancels the SLEEP Timer.

Timer Priority

The SLEEP Timer has priority over the DAILY Timer. This is important because if you set the SLEEP Timer to start before and then end after the DAILY Timer would start, the DAILY Timer doesn't come on. So if you want your alarm to go off as scheduled, be sure the SLEEP Timer shuts off before the DAILY Timer is turned on the Unit.

How to Use the Remote Control

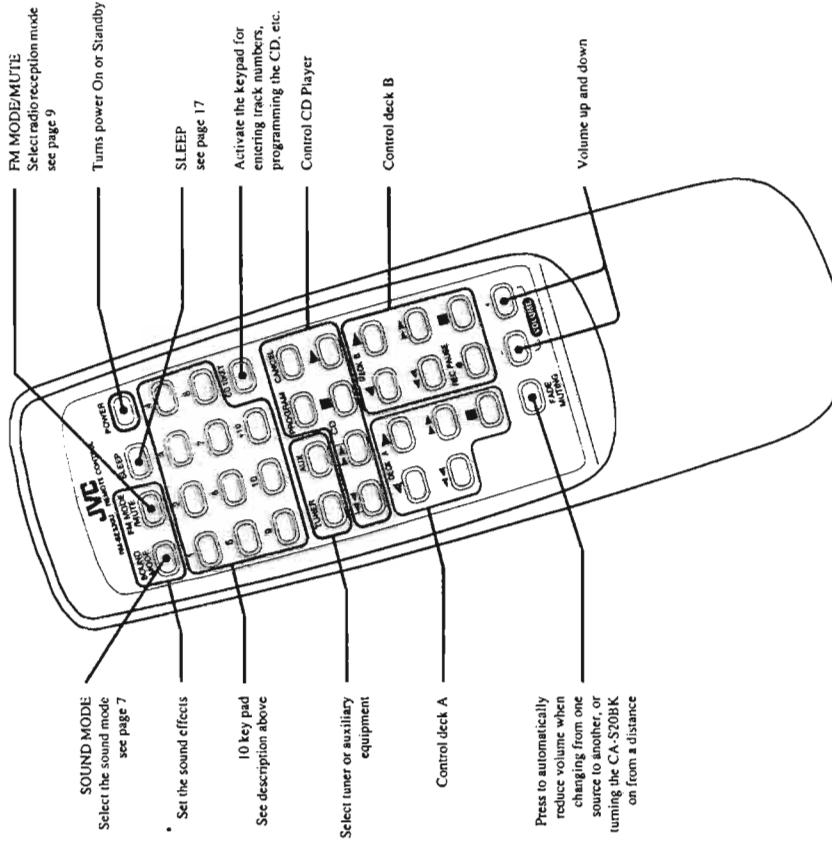

The Remote Control makes it easy to control many of the functions of the CA-S20BK from a distance of up to 6 m away. You need to point the remote sensor at the CA-S20BK front panel.

- Most of the buttons on the Remote Control do just what the ones on the CA-S20BK do.
- A few functions are available only by using the Remote Control, and those are described below.
- The buttons whose names or marks are printed in blue can be used for the One-Touch Operation.

Using the 10 Key Pad

The 10 key pad is used to specify a CD track or the number you have assigned to a preset radio station. To enter a number using the 10 key pad follow these steps:

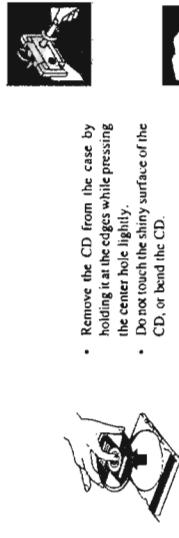

- Before using the 10 key pad, make sure which the 10 key pad functions for, the CD player or tuner.
- This is depends on which button on the Remote you have pressed before 10 key pad. For example, if you press AM or FM before 10 key pad, it can select a preset station. If you press ▶ for the CD player, it can select a CD track.
- For numbers between 1 and 10, just press the button with the number you want — to get 15, first press +10, then 5. For 20 press +10 and 10.
- For numbers from 21 to 30, press the +10 key twice, then press the one's digit — to get 25, press +10 +10 and 5.
- For numbers from 31 to 40, follow the same procedure, only press the +10 key three times, then the one's digit — to get 32, press +10 +10 +10 and 2.

Care and Maintenance—General Notes

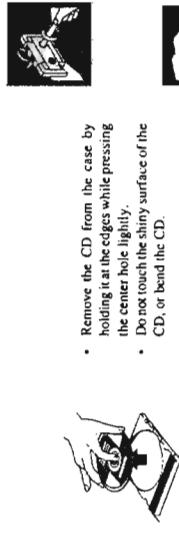

Compact Discs

Handle your compact discs, cassette tapes, and tape deck carefully, and they will last a long time.

Cassette Tapes

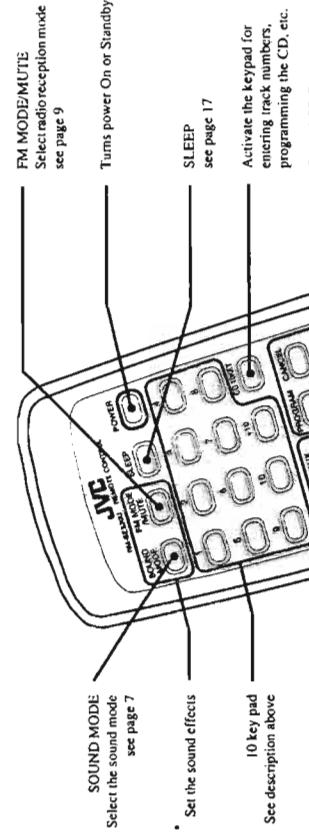

Handle your compact discs, cassette tapes, and tape deck carefully.

Using the 10 Key Pad

The 10 key pad is used to specify a CD track or the number you have assigned to a preset radio station. To enter a number using the 10 key pad follow these steps:

- Before using the 10 key pad, make sure which the 10 key pad functions for, the CD player or tuner.
- This is depends on which button on the Remote you have pressed before 10 key pad. For example, if you press AM or FM before 10 key pad, it can select a preset station. If you press ▶ for the CD player, it can select a CD track.
- For numbers between 1 and 10, just press the button with the number you want — to get 15, first press +10, then 5. For 20 press +10 and 10.
- For numbers from 21 to 30, press the +10 key twice, then press the one's digit — to get 25, press +10 +10 and 5.
- For numbers from 31 to 40, follow the same procedure, only press the +10 key three times, then the one's digit — to get 32, press +10 +10 +10 and 2.

CAUTION: Do not use any solvent (for example, conventional record cleaner, spray, thinner, benzine, etc.) to clean a CD.

- Do not store the tape:
 - In dusty places
 - In direct sunlight or heat
 - On moist areas
 - On a TV or speaker
 - Near a magnet

Tape Deck

- Remove the CD from the case by holding it at the edges while pressing the center hole lightly.
- Place the CD into the open tray with the label facing up.
- Put the CD back in its case after use to prevent warping.
- Be careful not to scratch the surface of the CD when placing it back in the case.
- Avoid exposure to direct sunlight, temperature extremes, and moisture.
- If the heads, capstans, and pinch-rollers of the tape deck become dirty, the following will occur:
 - Impaired sound quality
 - Discontinuous sound
 - Fading
 - Incomplete erasure
 - Difficulty recording
- Clean the heads, capstans, and pinch-rollers using a cotton swab moistened with alcohol.

On Moisture Condensation

- Moisture may condense on the lens inside the unit in the following cases:
- After starting the heating in the room.
 - In a damp room.
 - If the unit is brought directly from a cold to a warm place.
- Should this occur, the unit may malfunction. In this case, leave the unit turned on for a few hours until the moisture evaporates, unplug the AC power cord, and then plug it in again.

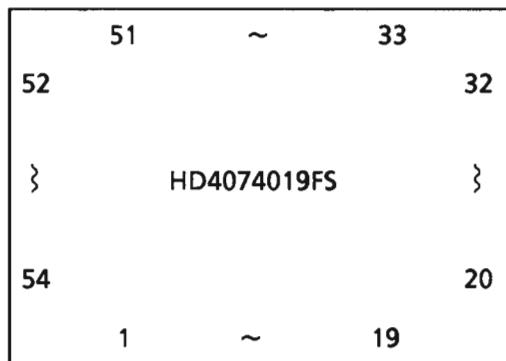

In general, you will have the best performance by keeping your tapes, CDs, and the mechanism clean.

- Store tapes and CDs in their cases, and keep them in cabinets or on shelves.
- Keep the tape-deck tape carriers and the CD tray closed when not in use.

4. Pin Functions

Pin No.	Symbol	I/O	Functions
1,24	X in , X out	I/O	Crystal oscillator (7.2MHz).
2	CE	I	Fix the chip enable to "H" when inputting (DI) and outputting (DO) the serial data.
3	DI	I	Receive the control data from the controller (IC801).
4	CL	I	This clock is used to synchronize data when transmitting the data of DI and DO.
5	DO	O	Transmit the data from LC7218 to the controller which is synchronized with CL.
6	SYC	—	Not used.
7	TUNED	I	Receive the tuned signal from IC104 (LA1266A).
8	STOP IN	—	Connected to GND
9	POWER	—	Not used.
10	QSC	—	Not used.
11	MONO	O	It is "H" on FM-monaural, "L" on FM-Stereo.
12	FM	O	It is "L" on FM mode.
13	MW	O	It is "L" on MW mode.
14	LW	O	It is "L" on LW mode.
15	AM-IF	I	Universal counter input for AM-IF from IC104 (LA1266A).
16	FM-IF	I	Universal counter input for FM-IF from IC104(LA1266A).
17	IF REQ	O	Output the "IF-signal request" to IC104 when the pin-7 (tuned in) goes to "H".
18	AM OSC	I	Input the local oscillator signal of AM.
19	FM OSC	I	Input the local oscillator signal of FM.
20	V _{DD}	—	This is a terminal of power supply.
21	PD1	O	PLL charge pump output : When the local oscillator signal frequency is higher than the reference frequency high level signals will output. When it is lower than the reference frequency, low level signals will output. When it is same as reference frequency signals, it will be floating.
22	PD2	—	Not used.
23	Vss	—	Connected to GND

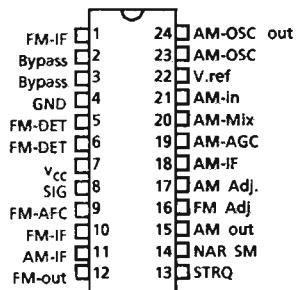

CA-S20BK

■ LA1266A (IC104) : FM AM IF AMP & detector

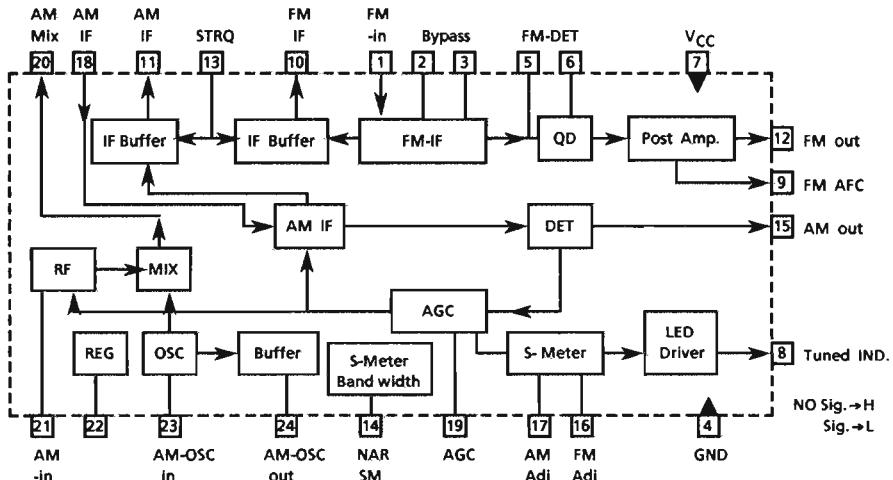

1. The main function descriptions

- (1) Amplify and detect of FM intermodulation frequencies.
- (2) It has local oscillator and mixer for AM, and amplify the AM-IF signal.

2. Top View

3. Block Diagram

4. Pin Function Description

Pin No.	Symbol	I/O	Functions and Operations
1	FM IF	I	This is an input terminal of FM IF Signal.
2, 3	Bypass	—	Bypass of FM IF Amp.
4	GND	—	This is the device ground terminal.
5, 6	FM DET	—	FM detect transformer.
7	V _{cc}	—	This is the power supply terminal.
8	SIGNAL	O	Mute drive and signal stop drive output when tuning. Active Low
9	FM AFC	O	This is an output terminal of voltage for FM - AFC.
10	FM IF	O	When the IF REQ signal of IC251(LC7218) applies to pin13, the signal of FM IF outputs.
11	AM IF	O	When the IF REQ signal of IC251(LC7218) applies to pin13, the signal of AM IF outputs.
12	FM out	O	FM detection output.
13	STRQ	I	The IF-signals come out from pin10 (FM-IF) or pin11 (AM-IF) while this terminal goes to "High".
14	NAR SM	—	Control the Band-width of AMsignal meter.
15	AM out	O	AM detection output.
16	FM Adj	—	For adjust the stop level (or mute level) of FM.
17	AM Adj	—	For adjust the stop level (or mute level) of AM.
18	AM-IF	I	Input of AM IF Signal.
19	AM-AGC	I	This is an AGC voltage Input terminal for AM.
20	AM-MIX	O	This is an output terminal for AM mixer.
21	AM-IN	I	This is an input terminal for AM RF Signal.
22	V.REF	—	Control the Band-width of FM signal meter.
23	AM-OSC	—	This is a terminal of AM Local oscillation circuit.
24	AM-OSC out	O	AM Local Oscillation Signal output.

■ LA3401 (IC105) : FM MPX Detector

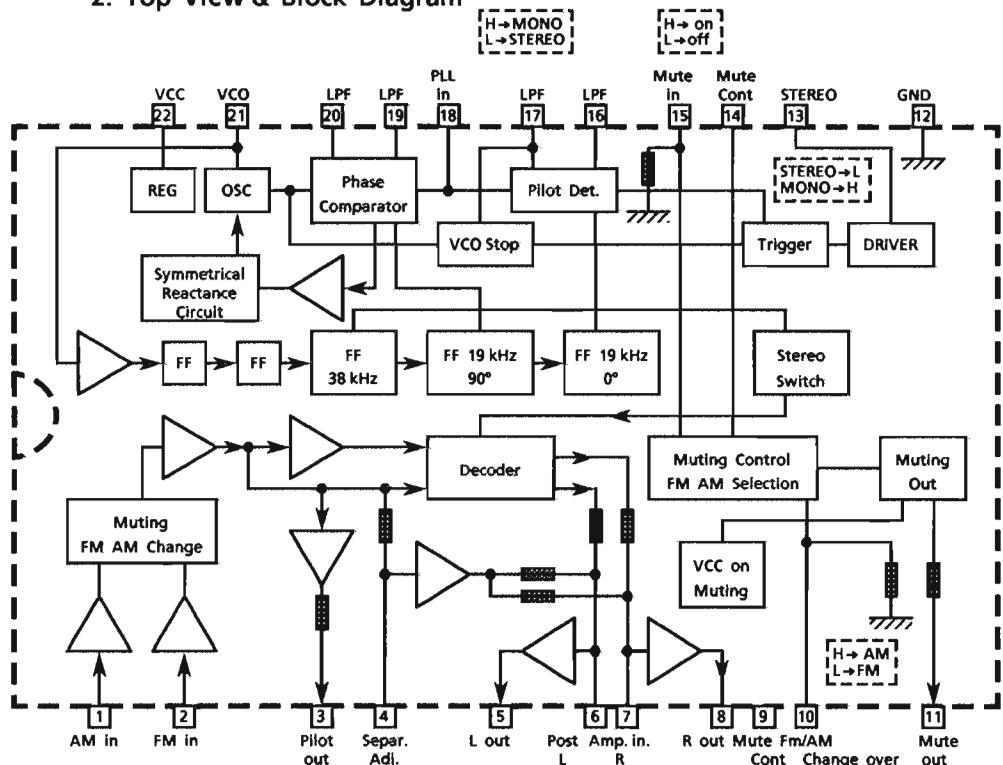

1. The main function descriptions

- (1) Detect the FM Multiplex Signal (Stereo signal).
- (2) When receiving FM Stereo Signal, it outputs the signal for indicator.
- (3) AM/FM Audio Amplifier.

(1) Terminal Layout

AM in	1	V _{CC}	22
FM in	2	VCO	21
Pilot	3	LPF	20
Sepa.	4	LPF	19
L out	5	PLL in	18
L in	6	LPF	17
R in	7	LPF	16
R out	8	Mute in	15
mute	9	Mute Cont	14
FM/AM	10	STEREO	13
Mute out	11	GND	12

2. Top View & Block Diagram

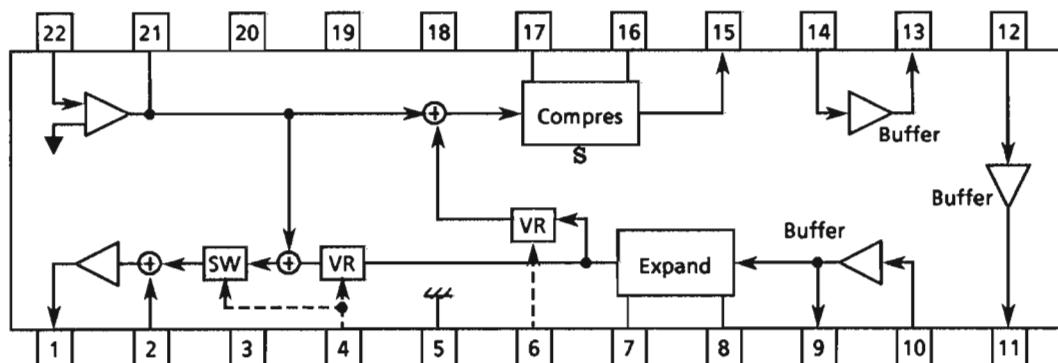

3. Pin Function Description

Pin No.	Symbol	I/O	Functions and Operations
1	AM in	I	This is an input terminal for AM detection signal.
2	FM in	I	This is an input terminal for FM detection signal.
3	Pilot out	O	Output of MPX pilot signal (Connect to Pin18).
4	Sepa. Adj.	--	Separation adjustment.
5	L. out	O	Left channel signal output.
6	L	O	Reversal output of Pin5.
7	R	O	Reversal output of Pin8.
8	R out	O	Right channel signal output
9	Mute Cont	--	The mute time is controlled by the connected capacitor when turning the power switch on.
10	FM / AM	I	Change over the FM / AM input. "H" : AM, "L" : FM
11	Mute out	--	Not use
12	GND	--	Ground terminal.
13	Stereo	O	Stereo indicator output. Stereo : "L", Mono : "H"
14	Mute Cont	--	The mute time is controlled by the connected capacitor when changing over the FM / AM .
15	Mute in	I	Mute signal input. "H" : Mute on, "L" : Mute off.
16	LPF	--	Low pass filter of pilot detector.
17	LPF	--	While this terminal goes to "H", the VCO stop.
18	Pilot in	I	PLL input.
19	LPF	--	Low-pass filter of PLL.
20	LPF	--	Low-pass filter of PLL.
21	VCO	I	Voltage controlled oscillator terminal.
22	V _{CC}	--	Power supply.

■ BA7725S (IC998) : Echo circuit

1. Internal Block Diagram

2. Terminal Description

Pin No.	Symbol	Function
1	LINE OUT	Line output
2	LINE IN	Line input
3	NC	Not used
4	ECHO LEV CTRL	Determines echo level. The echo circuit is off when 1 volt is added. The echo level varies according to the voltage from 2 volts to 9 volts.
5	GND	Analog GND
6	LOOP GAIN CTRL	Loop gain control terminal. The gain varies according to the voltage from 2 volts to 9 volts.
7	EXP DET	Detection terminal for expand circuit
8	EXP DET CT	Determines the attack and recovery time of expand circuit
9	EXP BF OUT	Buffer output (Expand circuit side)
10	EXP BF IN	Buffer input (Expand circuit side)
11	DLY BF OUT	Delay buffer output
12	DLY BF IN	Delay buffer input
13	CMP BF OUT	Buffer output (Compress circuit side)
14	CMP BF IN	Buffer input (Compress circuit side)
15	CMP OUT	Compress circuit output
16	CMP DET CT	Determines the attack and recovery time of compress circuit
17	CMP DET	Detection terminal for compress circuit
18	RIPPLE FITER	A capacitor is connected for ripple elimination filter
19	VCC	Power supply
20	NC	Not used
21	MIC AMP OUT	Mic amp output
22	MIC AMP IN	Mic amp input

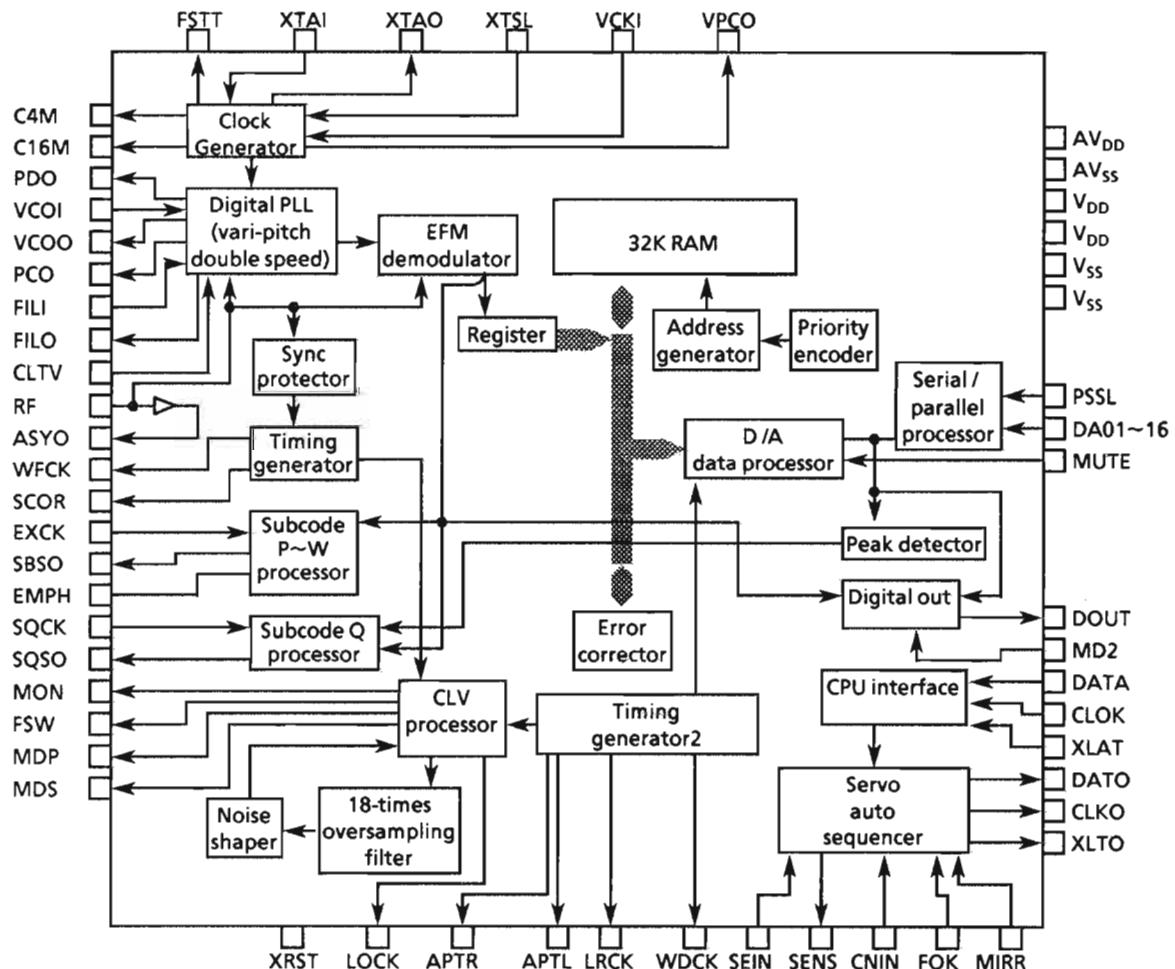

■ CXD2500BQ(IC701) : DIGITAL SIGNAL PROCESSOR

1. Outline

The CXD2500BQ is a digital signal processing LSI designed for use in compact disc players. It has the following functions:

- All digital signals for regeneration are processed using one chip.
- The built-in RAM enables high-integration mounting.
- Generation by the use of a digital PLL of bit clock pulses for strobing the EFM signal.
- EFM data demodulation
- Subcode demodulation and subcode Q data error detection
- Digital spindle servo system (incorporating an oversampling filter)

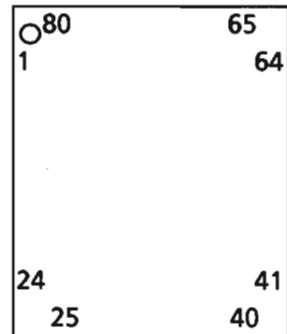

3. Internal Block Diagram

Notes:

- The data at the 64-bit slot is output in 2's complements on an LSB-first basis. The data at the 48-bit slot is output in 2's complements on an MSB-first basis.
- GTOP monitors the state of Frame Sync protection. ("H" : Sync protection window released)
- XUFG is a negative Frame Sync pulse obtained from the EFM signal before Frame Sync protection is effected.
- XPLCK is an inversion of the EFM PLL clock. The PLL is designed so that the falling edge of XPLCK coincides with a change point of the EFM signal.
- The GFS signal turns "H" upon coincidence between Frame Sync and the timing of interpolation protection.
- RFCK is a signal generated at 136- μ s periods using a crystal oscillator.
- C2PO is a signal to indicate a data error.
- XRAOF is a signal issued when a jitter margin of $\pm 28F$ is exceeded by the 32K RAM.

2. Terminal Layout

CA-S20BK

4. Terminal Function

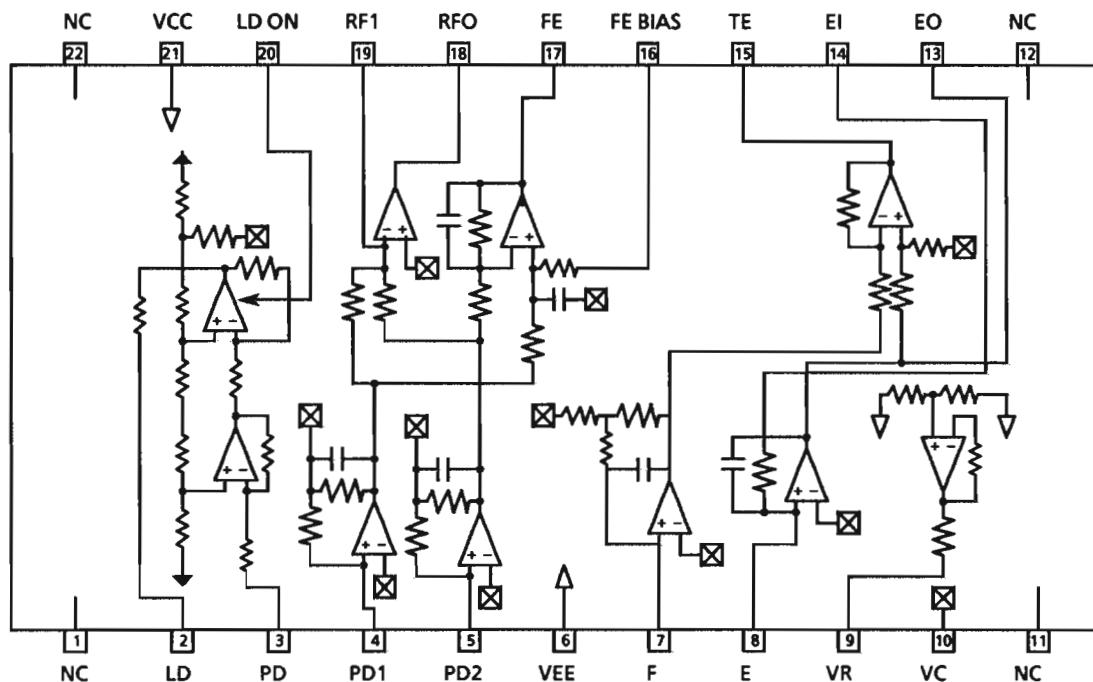

Pin No.	Symbol	I/O	Description
1	FOK	I	Focus OK input pin. Used for SENS output and servo auto sequencer.
2	FSW	O	Non connection
3	MON	O	Output for spindle motor ON / OFF control.
4	MDP	O	Output for spindle servo control.
5	MDS	O	Output for spindle servo control (Non connection).
6	LOCK	O	This terminal is "H" when the GFS signal sampled at 460Hz is "H". It turns "L" when the GFS signal turns out "L" 8 or more times in succession.
7~9	—	—	Non connection
10	TEST	I	Test pin (Normally at 0V)
11	PDO	O	Output of charge pump for analog EFM PLL (Non connection).
12	Vss	—	GND
13~16	—	—	Non connection
17	VCKI	I	Clock input from external VCO for vari-pitch control. $f_c = 16.9344\text{MHz}$.
18	FILO	O	Output of filter for masterPLL (Slave = Digital PLL)
19	FILI	I	Input to filter for master PLL.
20	PCO	O	Output of charge pump for master PLL.
21	AVss	—	Analog GND
22	CLTV	I	VCO control voltage input for master PLL.
23	AV _{DD}	—	Analog power supply
24	RF	I	EFM signal input
25	TEST2	I	TEST pin (Connected to GND)
26	TEST3	I	TEST pin (Connected to GND)
27	ASYO	O	EFM full-swing output
28	TEST4	I	TEST pin (Connected to GND)
29	NC	—	Non connection
30	PSSL	I	Input used to switch the audio data output mode. "L" for serial output, "H" for parallel output.
31	WDCK	O	D/A interface for 48-bit slot. Word clock $f = 2F_s$.
32	LRCK	O	D/A interface for 48-bit slot. LR clock $f = F_s$.
33	V _{DD}	—	Power supply
34	DA16	O	Output DA16(MSB) when PSSL = 1 or serial data from 48-bit slot(2's complements,MSB first) when PSSL = 0.
35	DDA15	O	Output DA15 when PSSL = 1 or bit clock from 48-bit slot when PSSL = 0.
36~51	—	—	Non connection
52	VSS	—	GND
53	XTAI	I	Input to 16.9344MHz Xtal oscillation circuit or 33.8688MHz input.
54	XTAO	O	Output of 16.9344 MHz Xtal oscillation circuit.
55	XTSL	I	Xtal selection input pin. "L" for 16,344MHz Xtal, "H" for 33.8688 MHz Xtal.
56~58	—	—	Non connection
59	MD2	I	Digital-Out ON/OFF control. "H" for ON, "L" for OFF.
60	DOUT	O	Digital-Out output pin.
61	EMPH	O	H : emphasis on L : emphasis off
62	—	—	Non connection
63	SCOR	O	Turns "H" when subcode Sync S0 or S1 is detected.
64	SBSO	O	Serial output of Sub P to W.
65	EXCK	I	Clock input for reading SBSO.
66	SQSO	O	Outputs 80-bit Sub Q and 16-bit PCM peak-level data.
67	SQCK	I	Clock input for reading SQSO.
68	MUTE	I	"H" for muting, "L" for release.
69	SENS	O	SENS output to CPU.
70	XRST	I	System reset. "L" for resetting.
71	DATA	I	Inputs serial data from CPU.
72	XLAT	I	Latches serial data input from CPU at falling edge.
73	V _{DD}	—	Power supply(+ 5V)
74	CLOK	I	Inputs serial data transfer clock from CPU.
75	SEIN	I	Inputs SENSE from SSP.
76	CNIN	I	Inputs track jump count signal.
77	DATO	O	Outputs serial data to SSP.
78	XLTO	O	Latches serial data output to SSP at falling edge.
79	CLKO	O	Outputs serial data transfer clock to SSP.
80	MIRR	I	Inputs mirror signal to be used by auto sequencer when jumping 128 or more tracks.

■ CXA1571S(IC702) : RF AMP FOR COMPACT DISC

1. Outline

The CXA1571S IC for compact disc #‐point method optical pickup output has following functions.
 •RF amplifier •Focus error amp •Tracking error •APC circuit

2. Internal Block Diagram

3. Pin Description

Pin No.	Symbol	I/O	Description
2	LD	O	APC amp output pin.
3	PD	I	APC amp input pin.
4	PD1	I	RF I-V amp inverted input pins; they are connected to the A + C and B + D pins of the photodiode and receive current input.
5	PD2	I	
7	F-IN	I	F and E I-V amp inverted input pin; they are connected to Photodiodes F and E and receive current input.
8	E-IN	I	
9	VR	O	(VCC + VEE) / 2 DC voltage output pin.
10	VC	I	VC intermediate voltage input pin; when dual $\pm 5V$ power supplies are used, this pin is connected to GND; for a single $+5V$ power supply, it is connected to the VR pin.
13	EO	O	Monitor output pin for I-V amp E.
14	EI	I	Gain adjustment pin for I-V amp E.
15	TE	O	Tracking error amp output pin.
16	FE-BIAS	I	Bias adjustment pin for the mon-inverted side of the focus error amp.
17	FE	O	Focus error amp output pin.
18	RFO	O	RF amp output pin.
19	RF1	I	RF inverted side input pin; the resistor connected between this pin and the RFO pin determines the gain of the RF amp.
20	LD-ON	I	This pin switches the APC amp on / off: on for VCC, off for ground.

■ CXA1372S (IC703) : RF SIGNAL PROCESSING SERVO AMPLIFIER

1. Outline

The CXA1372S is a bipolar IC developed for RF signal processing (focus OK, mirror, defect detection, EFM comparator) and servo control.

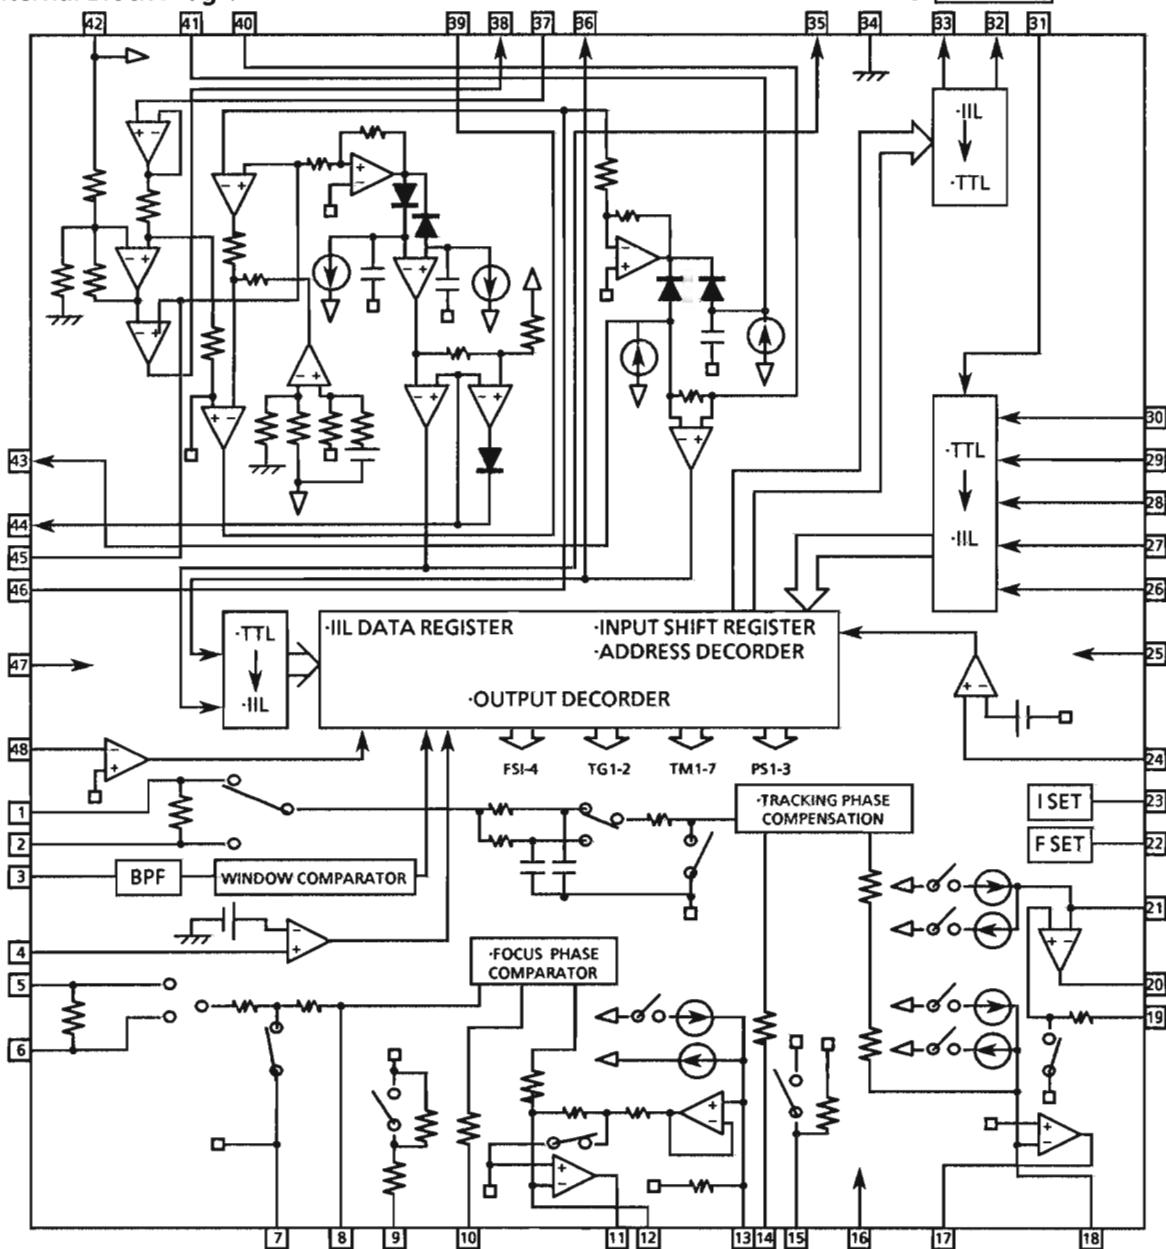

2. Functions

- Auto asymmetry control
- Focus OK detection circuit
- Mirror detection circuit
- Defects detection, counter measures circuit
- EFM comparator
- Focus servo control
- Tracking servo control
- Sled servo control

3. Terminal Layout

5.Pin Functions

Pin No	Symbol	I/O	Function
1	TE	I	Input pin of tracking error amplifier.
2	TDFCT	I	Capacitor connecting pin for time constant during defects.
3	ATSC	I	Window comparator input pin for ATSC detection.
4	FZC	I	Pin for focus zero-cross comparator input.
5	FE	I	Input pin of focus error.
6	FDFCT	I	Capacitor connecting pin for time constant during defect functions.
7	VC	I	Center voltage input pin. For dual power: GND For single power supply: (VCC + GND)/2
8	FGD	I	Connect a capacitor between this pin and pin3 to reduce high-frequency gain.
9	FS3	I	The high-frequency gain of the focus servo is switched through FS3 ON and OFF.
10	FLB	I	Time constant external pin to raise the low bandwidth of the focus servo.
11	FEO	O	Focus drive output.
12	FE-	I	Inverse input for focus amplifier.
13	SRCH	I	Time constant external pin for formation of focus search waveform.
14	TGU	I	Time constant external pin for the selection of tracking high band gain.
15	TG2	I	Time constant external pin for the selection of tracking high band gain.
16	AVCC	-	Power supply
17	TAO	O	Tracking drive output.
18	TA-	I	Inverse input pin for tracking amplifier.
19	SL +	I	Non-inverse input pin for sled amplifier.
20	SLO	O	Sled drive output.
21	SL-	I	Inverse input pin for sled amplifier.
22	F SET	I	Pin to set peak frequency of focus tracking phase compensation and fo of CLV LPF.
23	I SET	I	Current is input to determine focus search, track jump, and sled kick height.
24	S STOP	I	Limit SW ON/OFF signal detection pin for disc inner periphery detection.
25	AVEE	-	-5V
26	DIRC	I	Pin for one-track jump. Contains 47kΩ pull-up resistor.
27	LOCK	I	At "L" sled runaway prevention circuit operate. Contains a 47kΩ pull-up resistor.
28	CLK	I	Serial data transfer clock input from CPU.
29	XLT	I	Latch input from CPU.
30	DATA	I	Serial data input from CPU.
31	XRST	I	Reset input pin, reset at "L".
32	C.OUT	O	Track number count signal output.
33	SENS	O	Outputs FZC, AS, TZC and S STOP through command from CPU.
34	DGND	--	GND
35	MIRR	O	MIRR comparator output pin.
36	DFCT	O	Output pin of DEFECT comparator.
37	ASY	I	Input pin of auto asymmetry control.
38	EFM	O	Output pin of EFM comparator.
39	FOK	O	Output pin of FOK comparator.
40	CC1	I	Output pin of DEFECT bottom hold.
41	CC2	O	Input pin for the capacitance coupled output of DEFECT bottom hold.
42	DVCC	--	-5V
43	CB	I	Connection pin of DEFECT bottom hold capacitor.
44	CP	I	Connecting pin of MIRR hold condenser. Non-inverted input pin of MIRR comparator.
45	RFI	I	Input pin with coupling capacitor where RF summing amplifier output is connected.
46	RFO	O	Output pin of RF summing amplifier and check point of eye pattern.
47	DVEE	--	-5V
48	TZC	I	Input pin of tracking zero-cross comparator.

Disassemble of the CD mechanism assembly

(1) Pickup removal

1. Remove the cd mechanism assembly.
2. Release the shaft to remove the pickup (Fig 12).

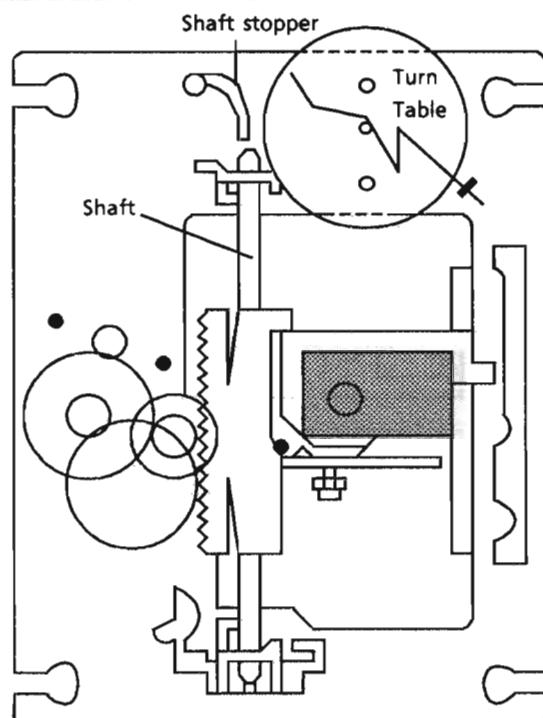

Fig 12 CD mechanism assembly

(2) Spindle motor removal

1. Remove the cd mechanism assembly.
2. Remove the turntable , and remove the two screws retaining the spindle motor.
3. Remove the screws retaining the spindle and feed motor P.C. Board and unsolder it.

(2) Spindle motor removal

1. Remove the cd mechanism assembly.
2. Remove the turntable , and remove the two screws retaining the spindle motor.
3. Remove the screws retaining the spindle and feed motor P.C. Board and unsolder it.

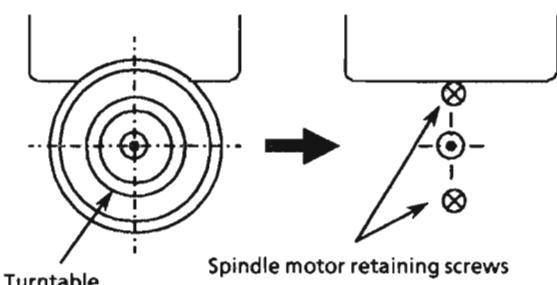

Fig 13

4. After inserting the turntable , bond the motor shaft and turntable together (at the section marked by an arrow in fig 15 on the left below).

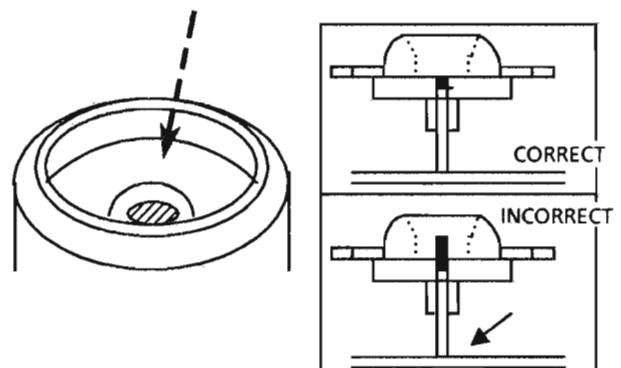

Fig 15

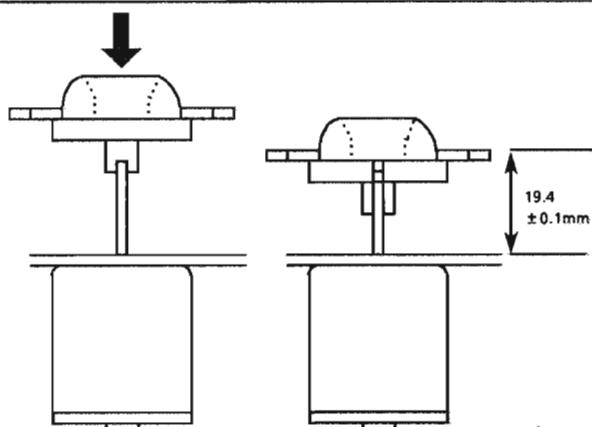

Fig 14

5. Use "LOCKTITE" #460 bonding agent, and apply as little as possible . Take care not to allow any excess bonding agent to get onto the turntable . Be extremely careful not to allow bonding agent to adhere to the motor bearings (the section marked by an arrow in fig 15 on the right).

Disassemble of the cassette mechanism

- (1) Cassette controller PCB (FSC-002-3) removal
1. Remove the cassette mechanism assembly with the PCB.
 2. Remove the 2 screws Ⓐ.

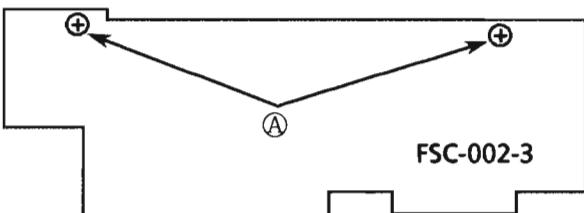

Fig 16

- (2) Head assembly removal
1. Remove the cassette mechanism assembly.
 2. Remove the FPC holder (Fig 19).
 3. Remove the 3 screws Ⓛ fixing the head assembly (Fig 18).

* Note

The direction of the head is changed with the head gear. When servicing, install the head gear according to the direction of the head. Refer to fig 18.

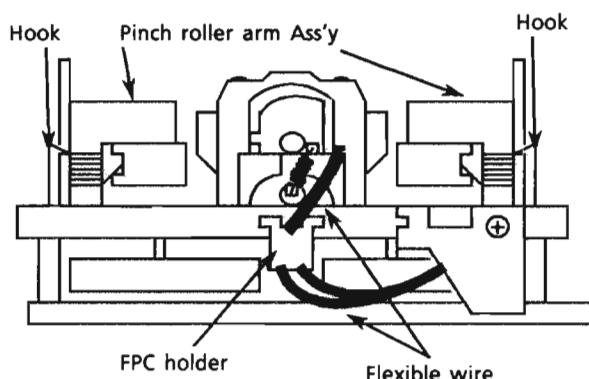

Fig 17

- (3) Pinch roller arm assembly removal
1. Release the hook holding the pinch roller arm assembly to remove the assembly (Fig 19).

- (4) Capstan motor removal
1. Remove the cassette mechanism assembly.
 2. Remove the cassette controller PCB.
 3. Remove the screw Ⓚ to remove the echo PCB (Fig 19).
 4. Remove the 7 screws Ⓜ, Ⓝ fixing the bracket (Fig 20).
 5. Remove the motor with the bracket.
 6. Remove the 2 screws fixing the motor and the bracket.

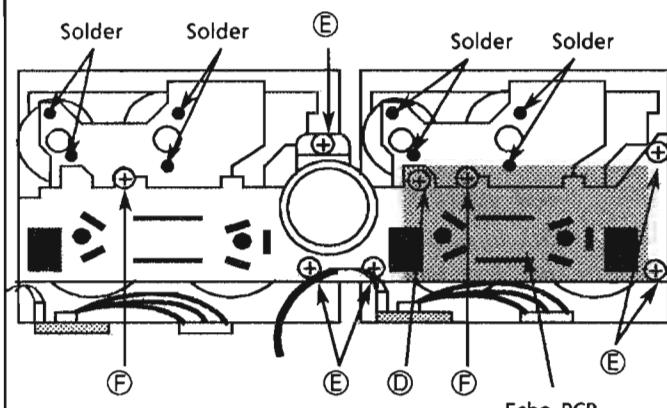

Fig 20

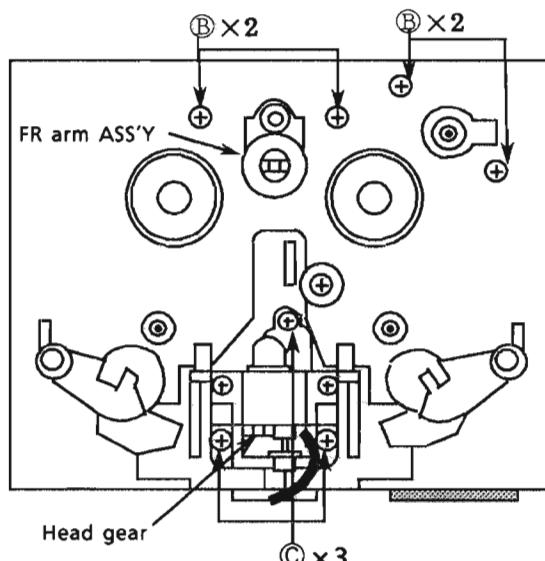

Fig 18

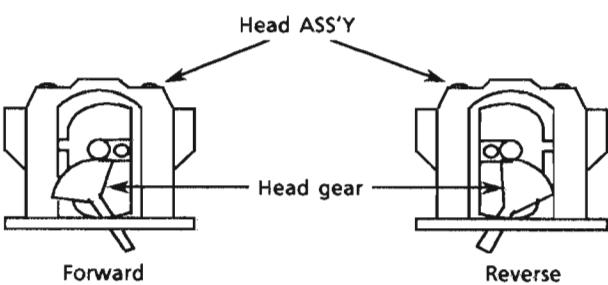

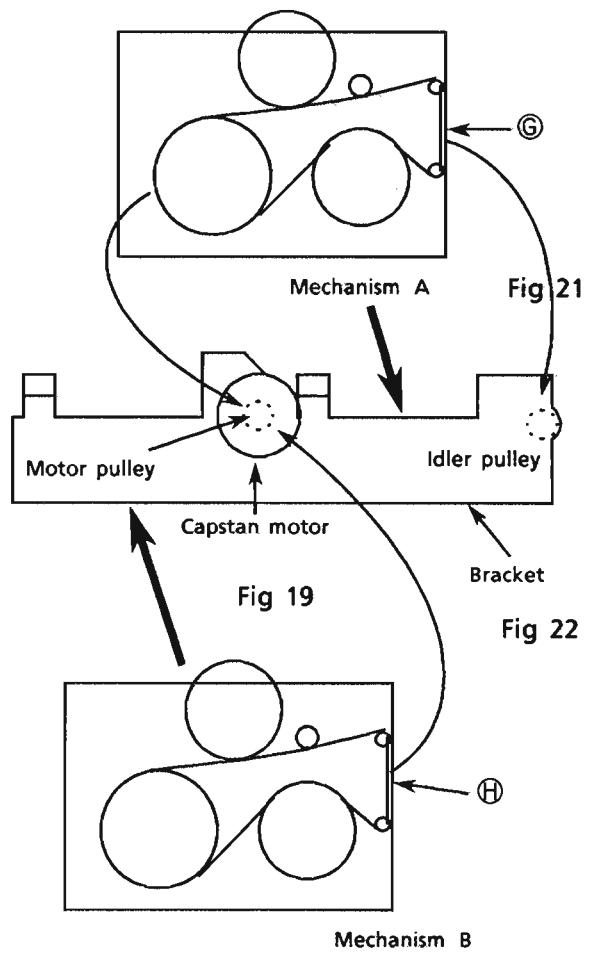

Fig 19

(5) Reel and cam motor PCB**with reel and cam motor removal**

1. Remove the cassette mechanism assembly.
 2. Remove the cassette controller PCB (FSC-002-3).
 3. Remove the 7 screws ④,⑤ fixing the bracket (Fig 20).
 4. Remove the motor with the bracket.
 5. Remove the 4 screws ⑥ fixing the reel and cam motor.
 6. Unsolder the reel and cam motor PCB.
 7. Remove the PCB with motor.
- Be careful so that stress is not added to the terminals of the motor.

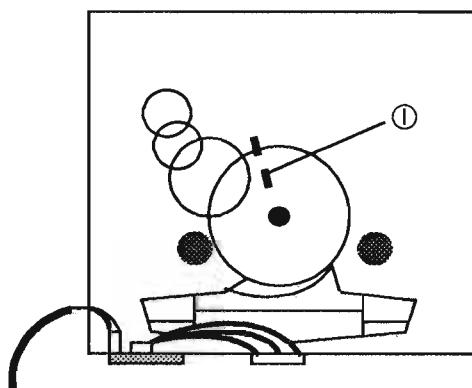

**(6) Fly wheel removal**

1. Remove the cassette mechanism assembly.
2. Remove the cassette controller PCB.
3. Remove the 7 screws ④,⑤ and the bracket (Fig 22).

* The oil on the capstan must be wiped out after re-assembling.

***To install the bracket**

1. Install the belt of mechanism A as shown in fig 22.
2. Assemble the mechanism A and the bracket with the capstan motor.
3. Hang the belt of the mechanism A to the motor pulley using a tweezers and the like.
4. Hang the part ④ to the Idler pulley.
5. Install the mechanism B installed the belt as shown in fig 23 to the bracket which is assembled with the mechanism A.
6. Hang the part ⑤ to the motor pulley using a tweezers and the like.

**(6) Cam switch PCB removal**

1. Remove the fly wheel.
2. Remove the screw fixing the PCB.
3. Remove the hooks fixing the PCB to remove the cam switch.

When assembling the cam switch, install it so that the part ① meets the part ② (Fig 24).

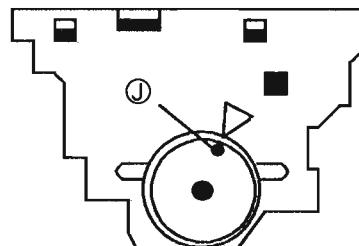

Fig 24

Adjustment Procedures

■ Tuner section

(1) Clock Adjustment

- After connecting W649 and W650 with some wire, connect ac power cord into ac outlet.
- Confirm that the display is off and remove the wire.
- Connect a frequency counter to W774 and W650.
- Adjust TC781 so that the frequency becomes $34952.5 \pm 0.15\text{Hz}$.

(2) Tuning voltage

Confirm the voltages in the table below at TP101. If the voltages are not satisfied, replace T101 for AM or FE101 for FM.

FM Tuning voltage (Unit : V)

Frequency	FM		AM	
	76MHz	108MHz	522kHz	1629kHz
Tuning voltage	1.6 ± 1.0	8.0 ± 2.0	1.0 ± 0.2	7.5 ± 0.8

(3) FM center meter

Receive a broadcast by using the function of 'AUTO STOP'.

Adjust T105 (detector coil) so that the voltage at TP102 becomes $0 \pm 1.5\text{mV}$.

■ CD section

(1) Adjustment measure

Oscilloscope , Test disc (CRG-1117)

(2) Procedures

1) EF balance

- Connect TP2(TEST) with TP4(GND).
- Connect a oscilloscope between TP8(TEIN) and TP4(GND) and play the test disc.
- Adjust R684 so that the center voltage of the waveform becomes $0 \pm 0.05\text{V}$.

2) Gain adjustment

If the gain is out of adjustment, the symptoms below will appear.

● Gain too low

Focus gain : Focus is not obtained and disc does not rotate.

Tracking gain : Mechanical shock occurs easily and sound is interrupted. Or time counter display stops counting.

● Gain too high

Focus gain : Scratches (on the disc) easily interrupt play, and noise is increased during play.

Tracking gain : Since the follow-up ability of the pickup is too high, the pickup may oscillate and oscillating sound may output.

As described above, the focus and tracking gain adjustment are performed to satisfy mutually contradictory characteristics.

A simplified adjustment procedure is described below. However, since exact adjustment can not be performed prior to adjustments, note(or mark) the positions of the semi-fixed resistors.

If the positions after the adjustment are only different, return the VRs to their original position.

Tracking gain adjustment

- Connect an oscilloscope to TP 8(TEIN) and TP 4(GND).
- Load the test disc and press the PLAY button.
- Adjust R704 (T.GAIN ADJ.) so that the correct waveform as shown in figure 3 is obtain.

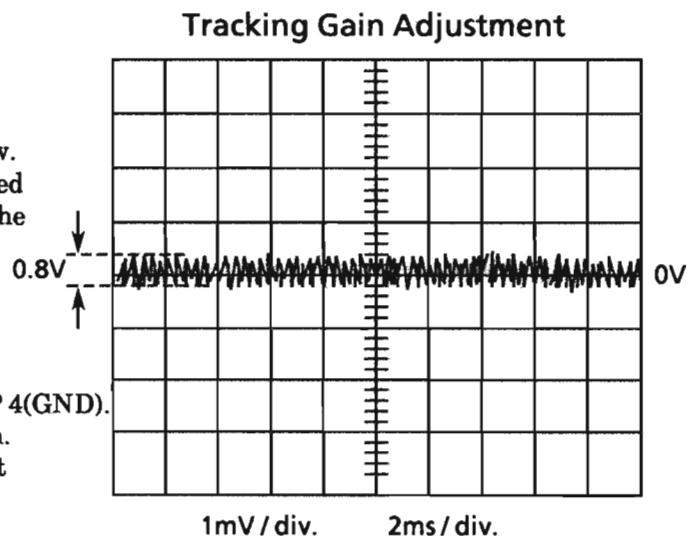

Figure 3

TW-2231	--	--	Feed forward / rewind torque measuring
C-120 Tape	--	--	Confirming the tape running

2. Adjustment and repairing the mechanism

Item	Adjustment method	Standard value	Remarks
Head azimuth	<p>Deck A</p> <ol style="list-style-type: none"> Connect an electronic voltmeter to the DOLBY TP(figure 1) to playback VTT-703L. Adjust screw Ⓛ so that the indication of the voltmeter becomes maximum when PLAY (▶) is pressed. Adjust screw Ⓜ so that the indication of the voltmeter becomes maximum when PLAY (◀) is pressed. <p>Deck B</p> <ol style="list-style-type: none"> Adjust screw Ⓝ so that the indication of the voltmeter becomes maximum when PLAY (▶) is pressed. Adjust screw Ⓞ so that the indication of the voltmeter becomes maximum when PLAY (◀) is pressed. <p>6. After making the adjustment, apply screw lock to prevent screws Ⓛ, Ⓜ, Ⓝ and Ⓞ coming loose .</p>	Maximum	<p>1. Refer to figure 1.</p> <p>2. When the specified characteristic cannot be obtained because of head wear, excessive magnetization, etc., replace the head assembly and adjust the head azimuth. Also, perform the electric adjustment.</p> <p>3. When there is the difference of more than 3 ~ 4 dB between left and right output levels, replace the head assembly to avoid complaints.</p>
Playback torque	1. Measure the torque in the playback mode by the torque meter.	26 ~ 62 g-cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Fast forward torque	1. Measure the torque in the fast forward mode by the torque meter.	80 ~ 170 g-cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Wow & flutter	<ol style="list-style-type: none"> Connect the wow & flutter meter to the DOLBY TP(figure 1) and play back VTT-712 . Its reading should be within 0.2% (WRMS). 	Less than 0.2%	As a complaint may occur if the wow & flutter fluctuates by 0.1% even though it is allowed in the standard, repairing is required.
Auto stop	Confirm that "AUTO STOP" works at the end of the tape and doesn't work tape is running.		

Deck A

Deck B

Figure 3

3. Electrical Adjustments (Make the following adjustments after adjusting the head azimuth.)

In principle, the adjustments should be made in the following sequence.

Set the NR switch to OFF and the BEAT CUT switch to "1".

Adjustments marked with an asterisk (*) should always be made after the head is replaced

0dBs = 0.775V

	Item	Adjustment Method	Adjustment Location	Standard Value	Remarks
1	Tape Speed	1. Connect a frequency counter to the DOLBY TP (figure 1) and play back VTT-712. 2. Normal speed Adjustment 1) Mechanism B Play back deck B to adjust the semi-fixed resistor R948. 2) Mechanism A Play back deck A to confirm that the difference between deck A and deck B is within $\pm 51\text{Hz}$. 3. High-speed adjustment 1) Mechanism B Play back deck B, check 6000Hz.	R948	3,000 Hz $\pm 10\text{Hz}$ 6,000Hz $\pm 600\text{Hz}$	1) Adjust the normal speed first, and perform the high speed adjustment.
* 2	Standard level (Playback Level)	1. Connect an electronic voltmeter to the DOLBY TP (figure 1). Play back VTT-724 (1 kHz : -4dBs) to adjust the semi-fixed resistors.	Deck A L: R221 R: R222 Deck B L: R389 R: R390	-5.5dBs (411mV) $\pm 1\text{dB}$	1) The playback level varies when the head is replaced so should be adjusted. Use an electronic voltmeter with an impedance of $100 \text{ k}\Omega$ or more.
* 3	Playback Frequency Response	1. Connect an electronic voltmeter to the DOLBY TP (figure 1). 2. Play VTT-703L (10kHz : -10dBs) and adjust semi-fixed resistors to obtain the standard values.	Deck A L: R203 R: R204 Deck B L: R205 R: R206	-11.5dBs (206mV) $\pm 3\text{dB}$	—
* 4	Recording Bias Frequency	1. Connect a frequency counter to the BIAS TP (figure 1), and perform a recording to adjust bias frequency.	L335	100 kHz $+10\text{kHz}$ -5kHz	—
* 5	Record / Play Frequency Response (Bias current)	1. Supply 1kHz and 12.5kHz with 30mV signals to PHONO/AUX terminals respectively to record them. 2. Connect an electronic voltmeter to the DOLBY TP (figure 1) to confirm the recorded values. 3. If the values are not satisfied, adjust the semi-fixed resistors and record the signal again to confirm the recorded values.	L: R335 R: R336	$0 \pm 2 \text{ dB}$ with 1 kHz as the standard.	Refer to figure 5 below. 1) The recording and playback frequency response of a cassette deck are adjusted by adjusting the bias. 2) Perform the adjustment with normal tape and confirm that the values are within the range for metal tape.

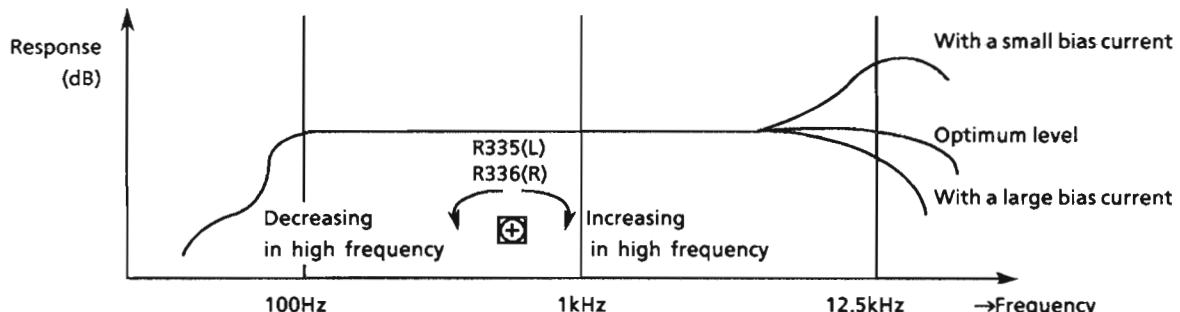

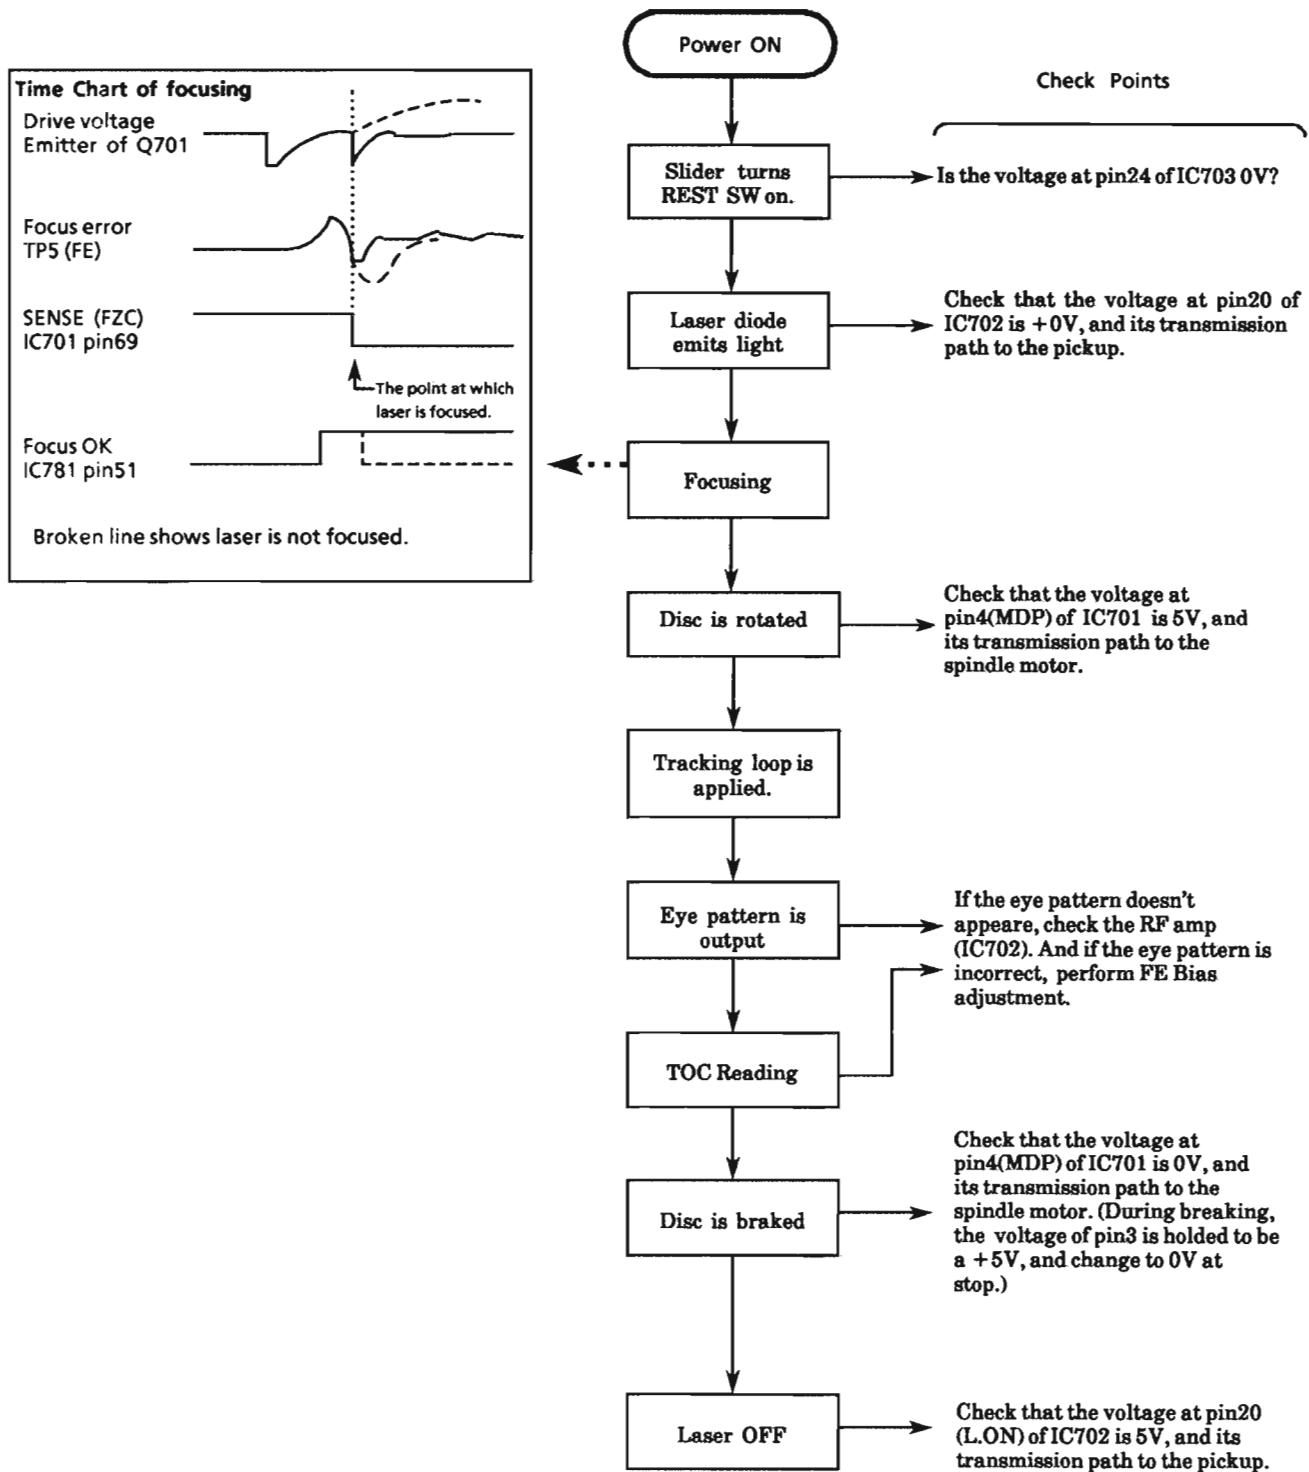

Figure 5

	Item	Adjustment Method	Adjustment Location	Standard Value	Remarks
* 6	Record /Playback Sensitivity	<ol style="list-style-type: none"> 1. Input a 1 kHz (-8.2dBs: 300mV) signal to PHONO/AUX terminals and record it on the left and right channels . 2. Connect an electronic voltmeter to the DOLBY TP (figure 1) to confirm the recorded values . 3. If the values are not satisfied , adjust the semi-fixed resistors and record the signal again to confirm the recorded values. 	L : R367 R : R368	-5.5dBs (411mV) ±1dB	Adjust with normal tape and make sure that the left/right level difference is 1.0dB or less
7	Erase ratio check	<ol style="list-style-type: none"> 1. Record a music source using the Metal tape. 2. Rewind and erase the recorded section. 3. Comfirm nothing can be heard. 	—	—	—
8	Music Scan	<ol style="list-style-type: none"> 1. Make sure not to work the music scanning operation at the start of tape wind using TMT-6237. 2. Make sure to work the music scanning operation at the end of tape wind using TMT-6247. 	—	—	—

Flow of Functional Operation Until TOC is Read

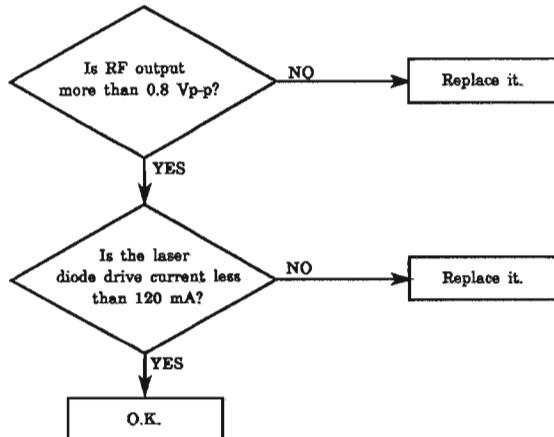

Maintenance of Laser Pickup

(1) Life of the laser diode

When the life of the laser diode has expired, the following symptoms will appear.

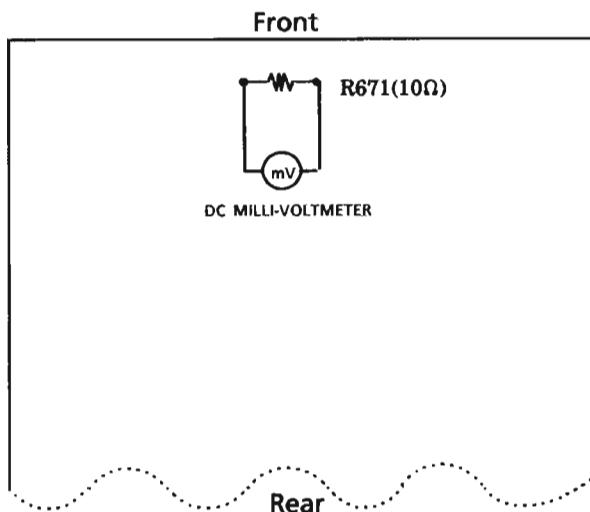

1. The level of RF output (EFM output: amplitude of eye pattern) will be low.
2. The drive current required by the laser diode will be increased.

In such a case, check the life of the laser diode by the flowchart below

(2) Measurement of laser diode drive current

Measure the voltage across the resistor R671 by using a milli-voltmeter. When the voltage is more than 1.2V, it shows that the life of the laser diode has expired.

(3) Semi-fixed resistor on the APC PC board

The semi-fixed resistor on the APC printed circuit board which is attached to the pickup is used to adjust the laser power. Since this adjustment should be performed to match the characteristics of the whole optical block, do not touch the semi-fixed resistor.

If the laser power is lower than the specified value, the laser diode is almost worn out, and the laser pickup should be replaced.

If the semi-fixed resistor is adjusted while the pickup is functioning normally, the laser pickup may be damaged due to excessive current.

Replacement of Laser Pickup

Turn off the power switch and, disconnect the power cord from the ac outlet.

Replace the pickup with a normal one. (Refer to "Pickup Removal" on the previous page)

Plug the power cord in, and turn the power on. At this time, check that the laser emits for about 3 seconds and the objective lens moves up and down.
Note: Do not observe the laser beam directly.

Play a disc, and when it starts rotating, short circuit between TP2(TEST) and GND.

Adjust EF balance.

Disconnect TP2 (TEST) from GND, and play a disc.

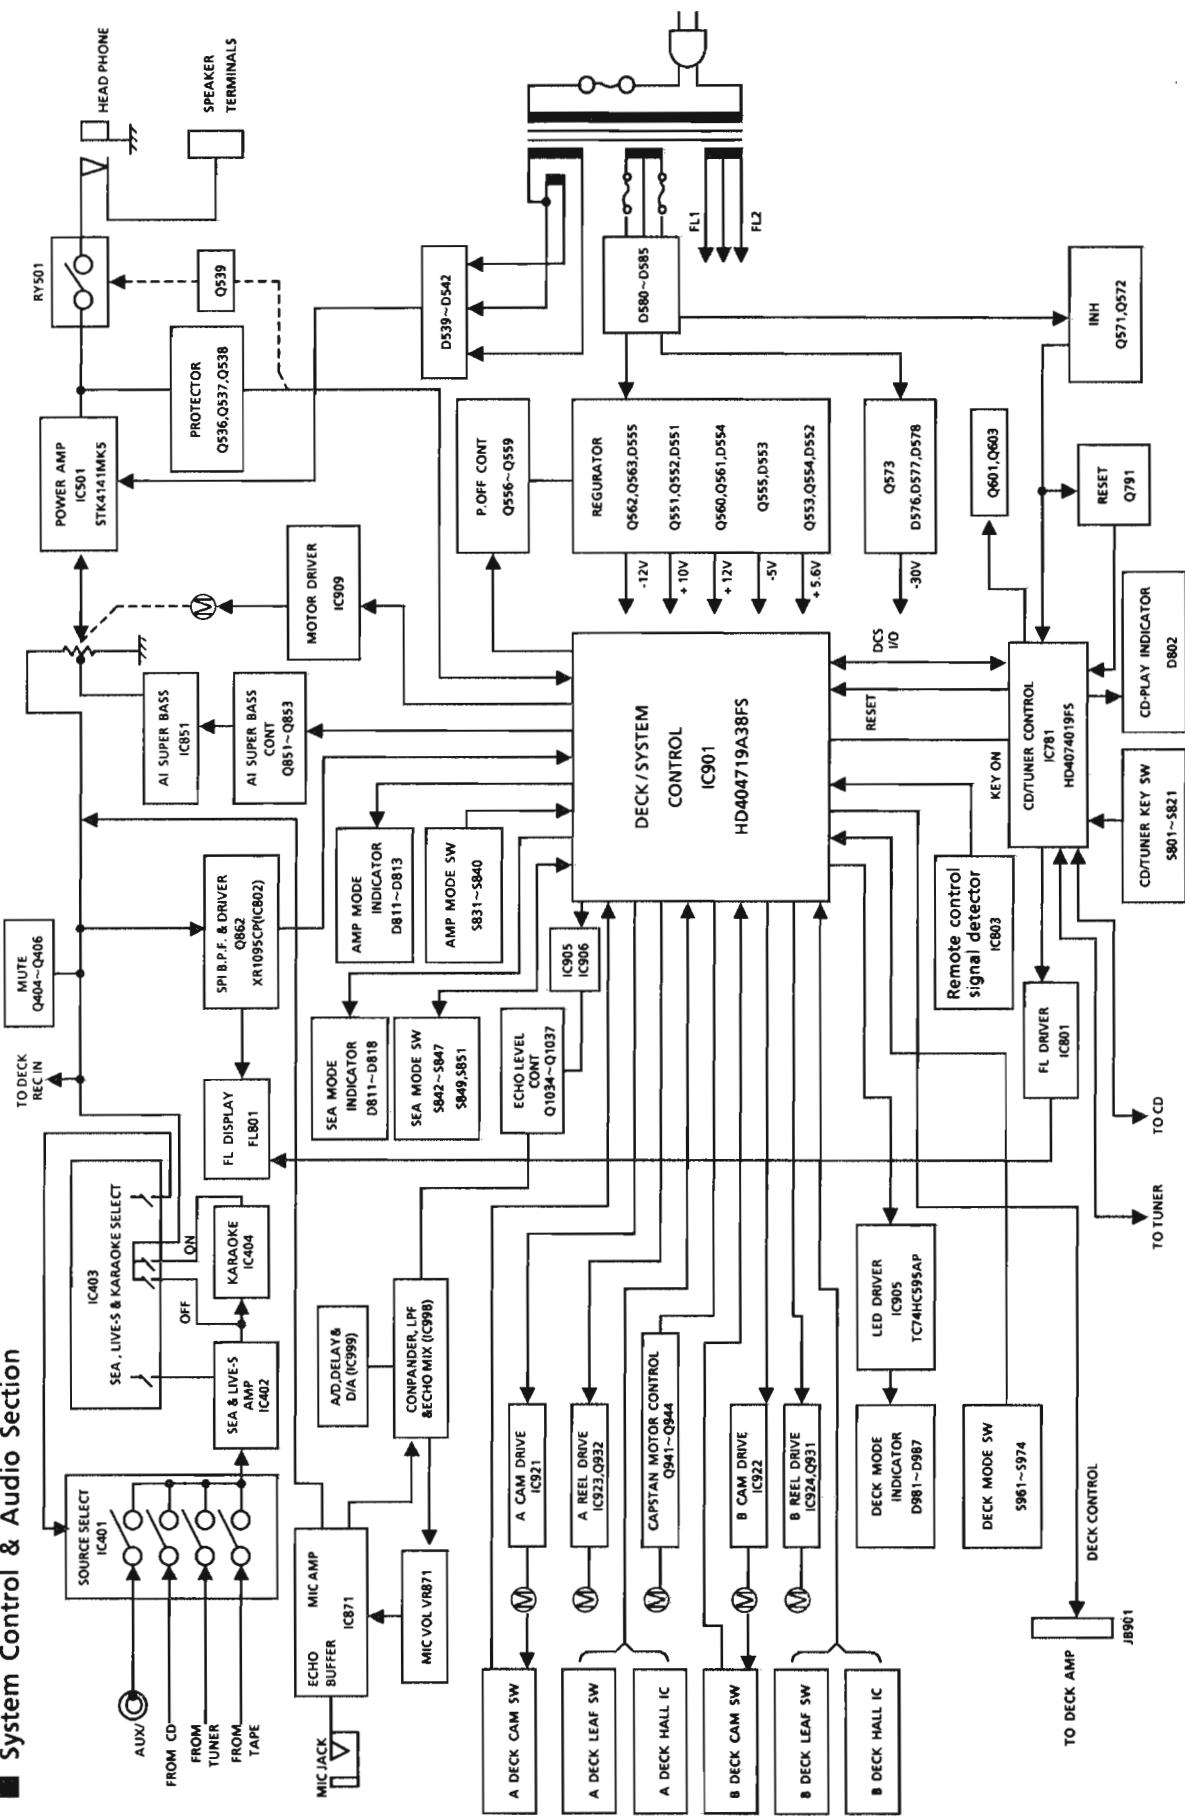

Adjust tracking gain .

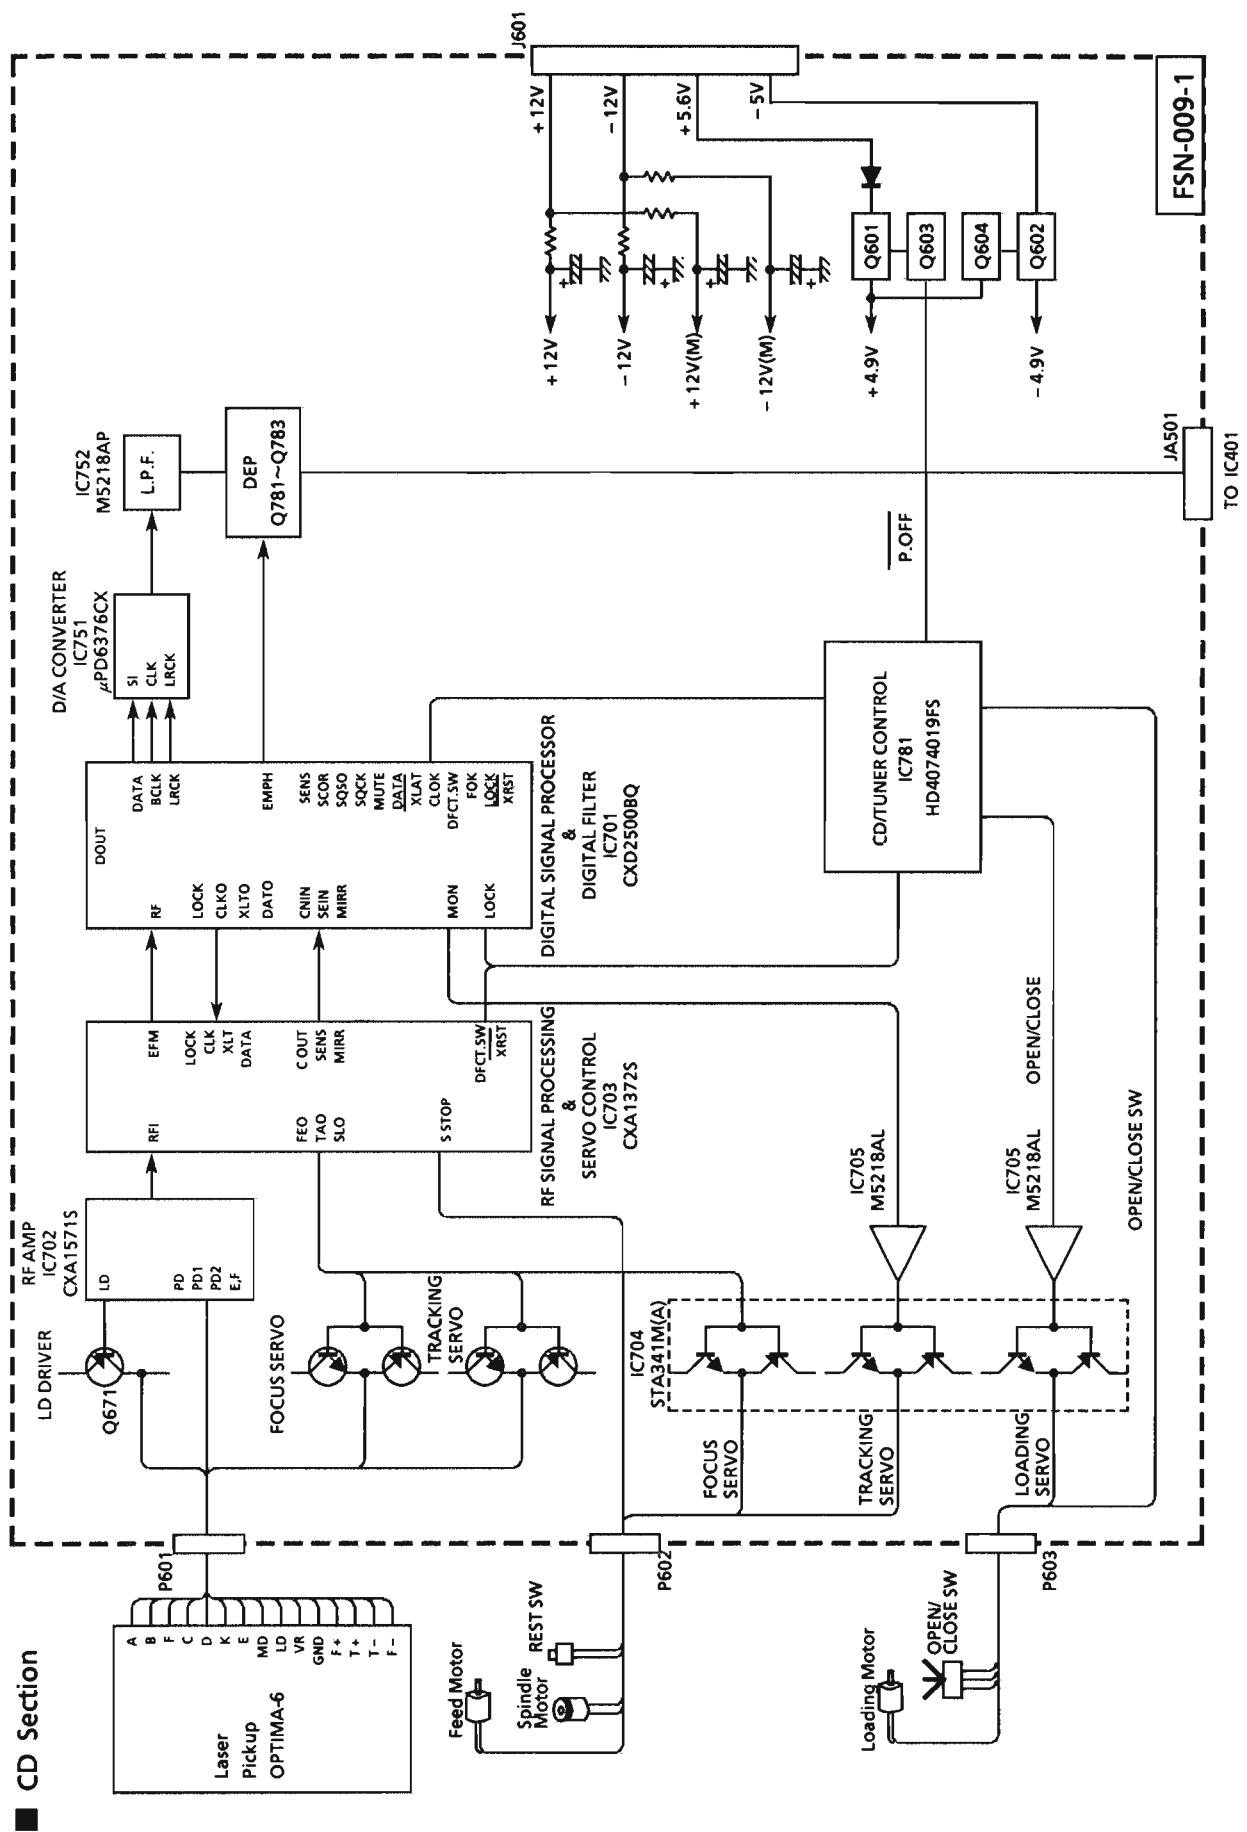

Check the eye-pattern at TP3(RF)

Finish.

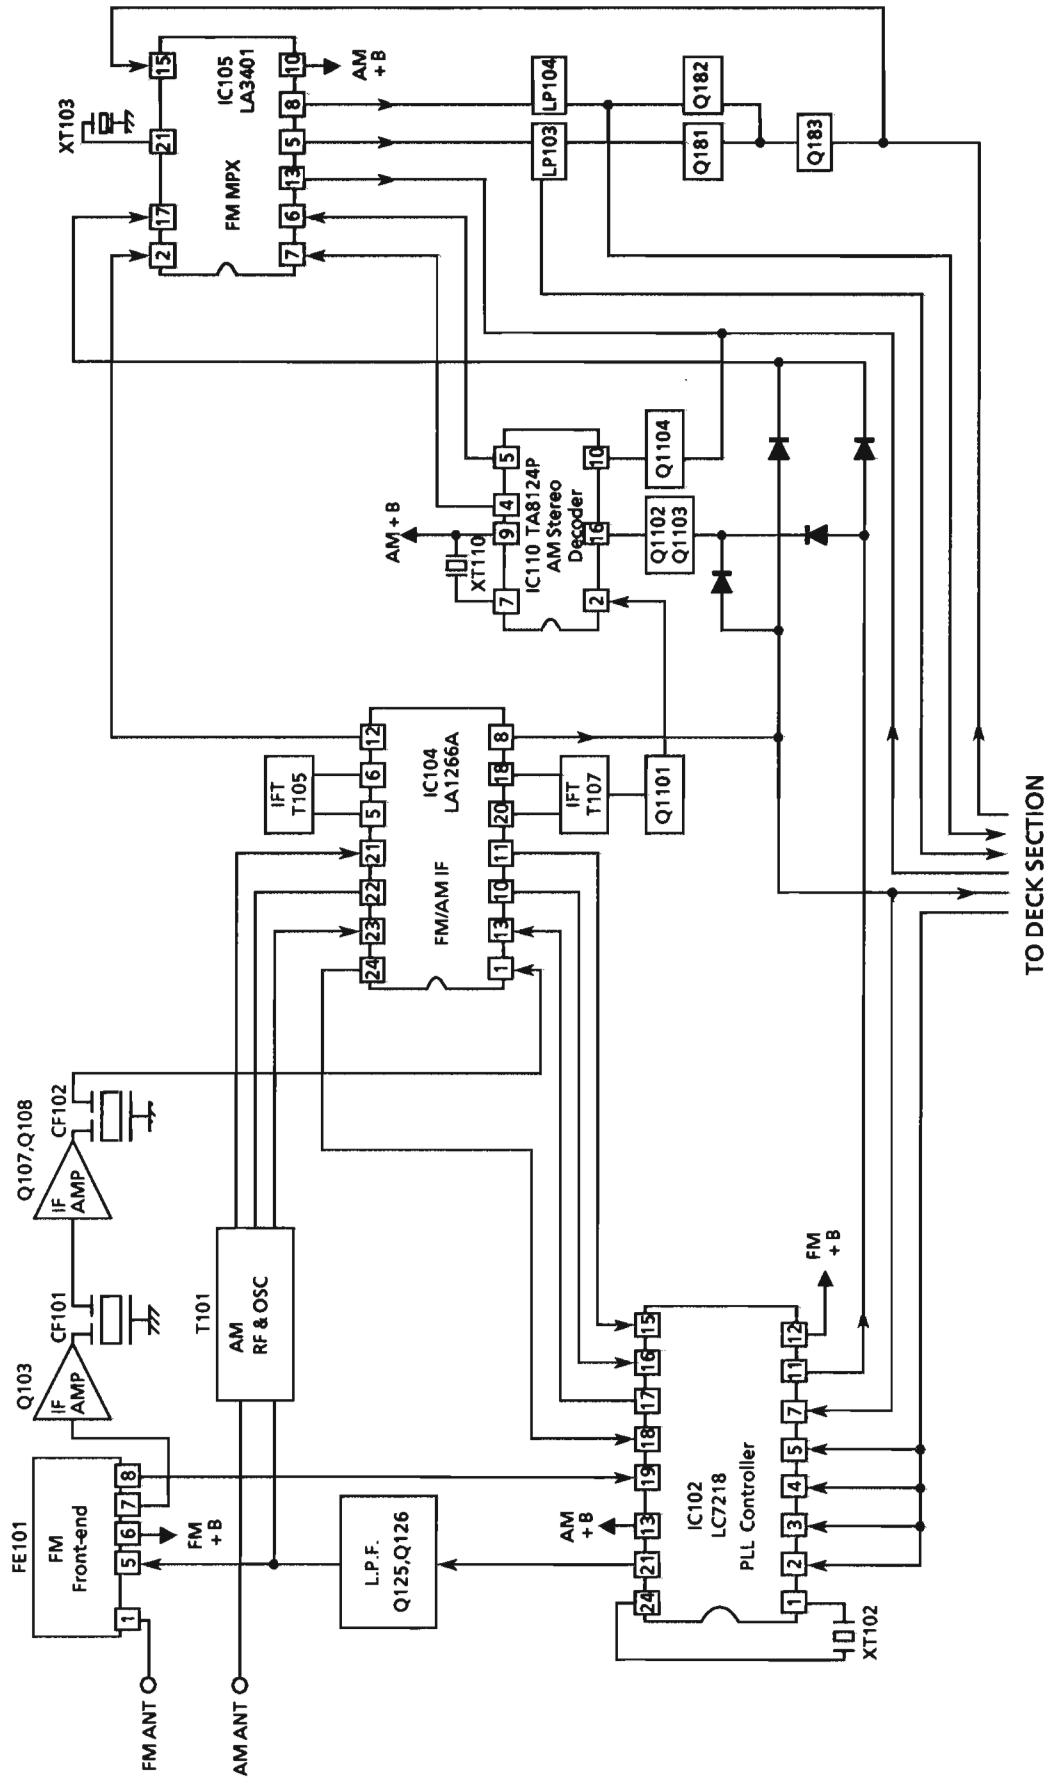

Note: Since one adjustment may affect other settings, repeat these adjustments a few times.
