Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacture of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (Δ) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.

5. Leakage current check (Electrical shock hazard testing)

After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).

● Alternate check method

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500 Ω 10 W resistor paralleled by a 0.15 μ F AC-type capacitor between an exposed metal part and a known good earth ground.

Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).

Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

Important for Laser Products

1. **CLASS 1 LASER PRODUCT**
2. **DANGER** : Invisible laser radiation when open and interlock failed or defeated. Avoid direct exposure to beam.
3. **CAUTION** : There are no serviceable parts inside the Laser Unit. Do not disassemble the Laser Unit. Replace the complete Laser Unit if it malfunctions.
4. **CAUTION** : The compact disc player uses invisible laser radiation and is equipped with safety switches which prevent emission of radiation when the drawer is open and the safety interlocks have failed or are defeated. It is dangerous to defeat the safety switches.
5. **CAUTION** : If safety switches malfunction, the laser is able to function.
6. **CAUTION** : Use of controls, adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

VARNING : Osynlig laserstrålning när denna del är öppnad och spärren är urkopplad. Betrakta ej strålen.

VARO : Avattaessa ja suojalukitus ohitettaessa olet alttiina näkymättömälle lasersäteilylle. Älä katso säteeseen.

Features

Great sound

Here are some of the things that make your CA-S300 powerful and easy to use.

- To get such **great sound** from such a compact package the CA-S300 has:
 - Pre-programmed live surround effects like **D.CLUB, HALL, STADIUM**, as well as SEA effects like **ROCK, POPS, CLASSIC, MANUAL**, so you don't have to be a sound engineer to get great effects.

Easy operation

- The controls and operations have been redesigned to make them very easy to use so you can spend your time listening to music.
 - With the One Touch Operation feature of JVC's new **COMPUPLAY** you can turn on the CA-S300 and start the radio, the tape deck, or the CD player with a single touch.
 - Four timers, **REC Timer, DAILY Timer, SLEEP Timer** and **AUTO POWER OFF** are extremely easy to set, so you can really use them.
 - The **Display** is large and clear. It's organized so you can tell at a glance what's happening because functions light up as you use them, and blink to tell you they are ready. It gives you some important messages like "NO DISC," "NO TAPE" and some others.
 - **Auto Edit** figures out how to arrange CD tracks on a tape. When you are recording a tape from a CD, the selections aren't cut off if the tape ends before the selection does.

Sing along

- You can use conventional tapes and CDs for singing along with the voice canceller system. With an optional microphone, you can replace the lead singer's voice on your favorite songs with your own.

IMPORTANT CAUTIONS

1. **Installation of the Unit**
 - Select a place which is level, dry and neither too hot nor too cold (between 5°C and 35°C).
 - Leave sufficient distance between the Unit and your TV.
 - Do not use the Unit in a place subject to vibrations.
2. **Power cord**
 - Do not handle the power cord with wet hands!
 - When unplugging from the wall outlet, always pull the plug, not the power cord.
3. **Malfunctions, etc.**
 - There are no user serviceable parts inside. If anything goes wrong, unplug the power cord and consult your dealer.
 - Do not insert any metallic object into the Unit.

How to Put Batteries in the Remote Control

Match the polarity (+ and -) on the batteries with the + and - markings on the battery compartment.

R03(UM-4)/AAA(24F)

CAUTIONS: Observe Proper Handling of Batteries.

To avoid battery leakage or explosion:

- If the range or effectiveness of the remote control decreases, replace the batteries.
- Remove batteries when the Remote will not be used for a long time.
- When you need to replace the batteries, replace both batteries at the same time with new ones.
- Don't use an old battery together with a new one.
- Don't use different types of batteries together.
- Strong impact on the remote control may cause batteries to drop out of the battery compartment.

Read Me First

How to get the most for your money by using this manual.

The Engineers at JVC have made the CA-S300 very easy to use, and if you are experienced at using audio equipment, you can figure out how to use some of the CA-S300 controls by yourself. However, we have built some new features into this model, which you can learn about easily from the manual.

If you are a new user or just want a review, this manual explains how to use the CA-S300 and take advantage of its features for playing and recording music, as well as other sounds. One way to use this manual is to read it through now and refer back to it when you need to refresh your skills for some special operation. Of course you can just look up the topics, such as recording a CD, that you want to do, but remember that you may need to refer to other parts of the manual for some of the instruction: for instance, in explaining how to record a CD, we assume you already know how to load a CD. That's why we recommend that you read the manual through once before starting. We've made it short, and easy to follow.

However before you proceed, please read the Cautions on page 2 and the set-up directions.

How This Manual Is Organized

We have incorporated some special features in this manual:

- Basic information that is the same for many different functions is grouped in one place, and not repeated in each procedure. For instance, in the section on playing a CD, we do not repeat the information about setting the volume and the sound conditioning, which are mentioned in the Common Operations section.
- Names of buttons, controls and function names that light up on the display panel are written in all Capital letters like this: **POWER**.
- When we are talking about the Function, rather than the **BUTTON** or **DISPLAY**, then we just capitalize the first letter of the words.
- The **⚡** alerts you to important information or how to solve special problems that may occur when using the CA-S300.

The column on the left of the page is a special place to make it easier to find just what you want to know about, with little headlines announcing what each part of the page is about. Sometimes illustrations and helpful hints are placed here also.

Basically we use three kinds of information to help you understand and use the CA-S300:

- Information about what you can do (such as record a CD or preset a radio station) and how the Unit is designed to make doing this activity easy.
- Procedures, usually numbered in the order you do the steps, to guide you in exactly what to do to accomplish something, such as tune a radio station or record a tape.
- Information you need to know to make decisions about which functions of the CA-S300 to use for particular tasks (such as when to use Dolby NR to improve tape sound) and special hints to make your work go smoothly, like reminding you to set the sound effects before starting the CD to tape recording, since they cannot be changed once recording begins without starting completely over.

The manual has a table of contents to help you easily look up what you want to know too. We've enjoyed making this manual for you, and hope you will use it to enjoy the sound and many features built into your CA-S300.

Getting Started Right

Unpacking

Of course you have already opened your CA-S300 carton, since you are reading this manual. Although the Unit is quite sturdy, you may want to save the packing to re-pack your CA-S300 in case you are moving it some distance.

Check to be sure you have all of the following things, which are supplied with the CA-S300:

If any are missing, contact your dealer immediately.

Location

You can place the CA-S300 in many different kinds of locations to suit your needs; just observe the Important cautions on page 2: keep away from moisture and heat; leave some space between the Unit and its surroundings, more than 1 cm at the sides of the console and 10 cm at the back.

Set Up

You will need to do the following four things to get your CA-S300 ready to use.

1. Connect the Antenna(s).
2. Connect the Speakers.
3. Put Batteries (included) in the Remote.
4. Connect other sound sources (VCR, Record Player) if used.

1. Connect the Antenna(s)

Follow the diagrams on page 5. Here's what you need to know:

- For AM (MW/LW) (LW: except for Australia) reception you must connect the supplied loop antenna. If reception is poor, connect the outside antenna, but leave the loop antenna in place—the AM (MW/LW) (LW: except for Australia) will not work correctly without it.
- For FM reception, connect the supplied wire as shown. However, if you use an outdoor antenna, disconnect the indoor FM antenna first.
- To avoid noise, keep antennas away from metallic parts of the CA-S300, connecting cords and the AC power cord.

2. Connect the Speakers

Basically, you look at the diagrams on page 6 and follow the pictured instructions.

3. Put Batteries in the Remote

Pay close attention to getting the batteries in correctly—we've made it very easy, just match the + and - marks on the batteries with the + and - markings on the Remote. See page 2 for instructions.

CAUTION: Handle batteries with care. See page 2 for proper use of batteries.

4. Connect Other Sound Sources, such as VCR or Record Player (Optional)

You can play the sound portion of a TV program or video tape through your CA-S300's sound system, often improving it greatly. A VCR or Record Player can also be hooked up to play through the CA-S300. Just follow the diagram on page 6. In order to play a connected source through the CA-S300.

CAUTION: DO NOT connect optional equipment while the power is ON.

Now you can plug the AC power cord into the wall socket. The standby indicator lights up and the clock display starts blinking. Your CA-S300 is at your command!

CAUTION: First make all connections before plugging the Unit into any AC power outlet.

Read on and find out how to use the many features built into your Unit.....

Connection Diagrams and Instructions

Connecting the FM and AM (MW/LW) Antennas

FM Antenna Connections

A Using the Supplied Feeder Antenna

- ① Attach the feeder antenna to the FM connector as shown in the figure.
- ② Connect the FM connector to the FM 75-ohm COAXIAL terminal.

B Using FM 75-ohm Antenna Cable (Not Supplied)

- ① Open the claws at both sides and remove the cover.
- ② Move the conductor wire from ① to ② using tweezers or a similar tool (only when using coaxial cable).
- ③ Fix the coaxial cable and its core.
- ④ Put on the cover.
- ⑤ Connect the FM connector on the FM 75-ohm COAXIAL terminal.

Note:

Make sure the antenna conductor does not touch any other terminals, connecting cords and power cord on the system. This could cause poor reception.

Unfold the loops of the supplied dipole FM feeder antenna and extend them as shown. Fasten them up in the position which gives you the best FM reception.

Before attaching a 75 ohm coaxial lead (the kind of round wire going to an outside antenna), disconnect the supplied dipole indoor antenna.

If reception is poor, connect the outside antenna.

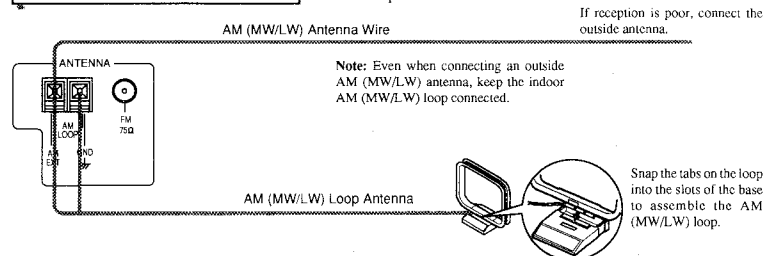

How to Strip the 75-ohm Coaxial Cable

1. Strip back the outside covering of the 75 ohm coaxial cable to expose the braided metallic mesh.
2. Pull the mesh back and twist into a single connector as shown.
3. Strip the insulation about 10 mm back from the central wire.
4. Attach to the supplied Antenna Adaptor, as shown in the diagram above.

AM (MW/LW) Antenna Connections

LW: except for Australia

If reception is poor, connect the outside antenna.

Note: Even when connecting an outside AM (MW/LW) antenna, keep the indoor AM (MW/LW) loop connected.

Snap the tabs on the loop into the slots of the base to assemble the AM (MW/LW) loop.

Inside the packing box....

Where can you put it?

Very little assembly required

Please look at the diagrams on pages 5 and 6 to do these things.

Connecting the Speakers

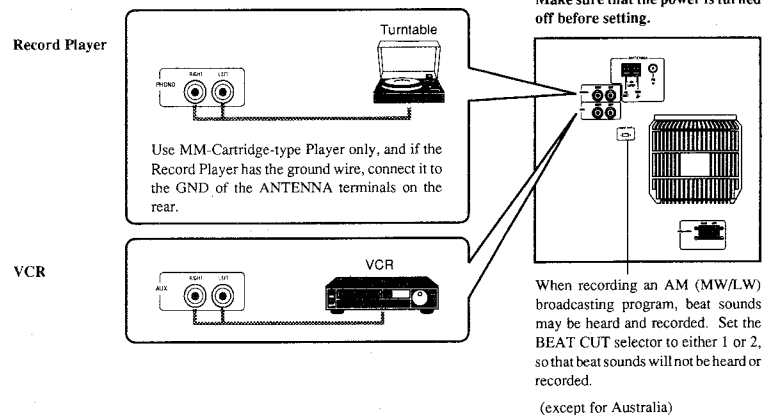

For each speaker connect one end of the speaker wire to the speaker terminals on the back of the CA-S300 and one end to the speaker. On the back panel:

1. Open each terminal.
2. Insert the end of the speaker wire as shown (be sure to remove the insulation at the end of each wire first).
3. Close the terminals to clamp the speaker wires firmly in place.
4. Connect the red (+) and black (-) terminals of the right side speaker to the red (+) and black (-) terminals marked **RIGHT** on the CA-S300.
Connect the red (+) and black (-) terminals of the left side speaker to the red (+) and black (-) terminals marked **LEFT** on the CA-S300.

IMPORTANT: Match the polarity of the speaker terminals with the polarity of the terminals on the CA-S300, red (+) to red (+) and black (-) to black (-).
Check your speakers for correct impedance: from 6 ohms to 16 ohms.

Connecting Auxiliary Equipment

Common Operations

Here are the things that apply to all the functions of your CA-S300. If something in a procedure is unclear to you, check back here.

The Magic of

COMPUPLAY

COMPUPLAY is JVC's new feature that lets you control the most used functions of the CA-S300 with a single touch. This One Touch Operation starts playing a CD, turns on the radio, plays a tape, etc. with a single press of the play button for that function. What One Touch Operation does for you is to turn the power on, then start the function you have called for. If the Unit is not ready, such as no CD or tape in place, the Unit still comes on and then gives you a message on the display so you can put in a CD or tape.
How One Touch Operation works in each case is explained in the respective section about that function.

Turning the CA-S300 On

Press **POWER**; the stand-by indicator on **POWER** goes out.

- The CA-S300 comes on ready to do whatever it was doing when the power was last shut off. So if the last thing you were doing was listening to a tape in deck B, you now are ready to listen to a tape again in deck B, or you can change to another source.
- If you were listening to the radio last, the radio comes on playing that last station.

Turning the CA-S300 Off

Press **POWER** again; the stand-by indicator lights up and the display is blank except for the clock display.

- A small amount of power (13 watts) is always consumed even though the power is turned off (called standby mode).
- To switch the power off completely, unplug the power cord.

NOTE: If the power cord is unplugged, preset stations may be erased and the clock will lose its setting. Resetting is necessary.

Controlling the Sound

Making it sound the way *You* want it to:

•Volume

Volume Control

Rotate clockwise to increase loudness, counter-clockwise to reduce loudness. Be sure to read the caution at the end of this section about high sound levels damaging your hearing or your equipment.

Sound Modes

The CA-S300 has some preset sound effects that let you control the way your music sounds, so you can tailor it for your room and for the quality of the source. We can give you some idea of how each one affects the music, but the only way to really tell is try them yourself.

You can use only one effect at a time selecting from the **MUSIC JOG** dial (**LIVE SURROUND** and **SEA** effects). Feel free to experiment!
To get an effect, press the **SOUND EFFECT ON/OFF** button and the last live surround effects or sound mode is displayed. To select another effect, turn the dial so that the indicator lights up.
To cancel the effect, press the **SOUND EFFECT ON/OFF** button, and "OFF" will appear. You can turn the dial to select another effect.

LIVE SURROUND effects

With these effects, the sound coming from only two speakers approaches the quality of sound from four speakers.

- D.CLUB** — Increase resonance and bass.
- HALL** — Adds depth and brilliance to the sound, like in a concert hall.
- STADIUM** — Adds clarity and spreads the sound, like in an outdoor stadium.

- D.CLUB**
- HALL**
- STADIUM**

Preset SEA (Sound Effect Amplifier) effects

Adjustments of frequency range levels have been preset as four SEA effects.

ROCK — Used for boosting low and high frequencies.

POPS — Used for increasing the richness and fullness of the vocal sound.

CLASSIC — Used for wide and dynamic sounds.

MANUAL — Used for selecting frequencies instead of the preset ones.

To get a manual effect, press SEA CONTROL HIGH/LOW so that "SEA LOW" appears and low frequency level blinks on the display.

Press the button again so that "SEA HIGH" appears and high frequency level blinks on the display. Turn the MUSIG JOG dial to select the effect level while the frequency level is blinking on the display.

The effect level you have selected comes into effect.

On the Remote, you can't find buttons for these preset sound effects. By pressing SOUND MODE on the Remote, you can cycle through the effects one after the other.

Things to remember about using preset effects:

- Set a preset effect before you start recording with Auto Edit, because once recording starts, the preset effect cannot be changed without stopping recording, and often having to start over. If you need different effects for each selection, use the standard recording features described on page 13, rather than Auto Edit.
- Each of the preset effects changes the sound in a different way by increasing or reducing the intensity of the sound. To see how each part of the sound will be changed, watch the display as you select an effect when music is playing. For a short while, the display shows the pattern of enhancement for that effect.

Active BASS Effect

The richness and fullness of the sound is maintained regardless of how high or low you set the VOLUME control.

To get the effect, press A. BASS EX. so that the indicator on the display lights up and "ACT - BASS" will appear for a few seconds.

To cancel the effect, press the button again so that the indicator goes off.

Listening with Headphones

A pair of headphones can be connected to the PHONES jack on the front panel. Be sure to turn down the volume before connecting or putting on headphones, as high volume can damage both the headphones and your hearing.

The Display and the Indicators—Two Very Useful Hints

- The display tells you many useful things about what your Unit is doing. Watch it as you give instructions by pressing buttons. It also gives you some messages like "NO DISC", "NO TAPE", and some others to show you what to do next.
- Some of the controls have a small light, called an indicator, right next to or even right on the button or knob itself. The light comes on when the function is on, and goes off when it is not in use.

CAUTION: Always set the VOLUME control to MIN before turning on a connected source such as a VCR or turntable, or starting any other of the sound sources such as the radio, tape, or CD player. Otherwise, if the VOLUME control is turned up, the sudden blast of sound energy can permanently damage your hearing and/or ruin your speakers.

Listening to the Radio

- You can listen to both MW/LW (AM) (LW: except for Australia) and FM.
- Before listening to the radio, check that both the MW/LW (AM) (LW: except for Australia) and FM antennas are firmly connected (See page 5).
- The FM MW/LW button is labeled differently for the Australia and U.K. models: in the U.K. it is labeled FM MW/LW, and in Australia, FM/AM.

One Touch Radio

Just press FM MW/LW (LW: except for Australia) to turn on the Unit and start playing the most recent radio station tuned in.

- You can switch from any other sound source to the radio by pressing FM MW/LW. (LW: except for Australia)

Tuning in a Station

Press FM MW/LW (LW: except for Australia) to turn on the radio. The display shows the station frequency tuned to.

Three ways to tune in a station

Three ways to select a station

- Press TUNING < or > repeatedly to move from frequency to frequency until you find the one you want.
- Hold down TUNING < or >, the frequency starts changing on the display. When a station is tuned in, "TUNED" lights up on the display and the frequency stops changing.
- Press once and release PRESET < or > to go to the next preset station, or hold PRESET < or > to cycle through the preset stations: release the button when the preset station you want shows on the display. (This method is possible only after presetting stations.)

You can also use the Remote to tune in stations and preset channels:

To tune preselected stations with the Remote:

1. Press TUNER to select the band you want.
2. Select the station by entering the preset channel number in the 10 key pad of the Remote. (Refer to page 20).

How to preset FM and AM (MW/LW) radio stations

1. HOUR MINUTE
TUNING
2. SOURCE/REC TIME
MEMORY
3. PRESET
MEMORY
4. SOURCE/REC TIME
MEMORY

Preset stations may be erased when power is cut off to the Unit, as when it is unplugged from the AC outlet or a power failure occurs. If the preset stations are lost, simply set the stations again using the following procedure.

To preset radio stations

1. Tune in the station you want to set using TUNING < or >.
2. Press MEMORY.

On the display "MEMORY" will blink for 4 seconds.

During these 4 seconds while "MEMORY" is blinking you can assign a channel number to the station and enter it into the memory.

3. Select a channel number by pressing PRESET < or > until you find the channel number you want.
4. Press MEMORY and the station will be assigned to the channel number showing on the display.
- If a station has been previously stored using the same channel number, it will be erased and the newly selected station will be stored.

Receiving in Stereo or Mono

When an FM stereo broadcast is hard to receive or noisy:

- Press FM MODE/MUTE on the remote control so that reception improves, although you lose the stereo effect. In this state, you will hear noise while tuning into stations.
- To restore stereo effect, press FM MODE/MUTE again so that "AUTO" appears on the display.

In this state, when a program is broadcast in stereo, you will hear stereo sound; when in monaural, you will hear monaural sounds. Furthermore, in this state, you won't hear noise while tuning to stations.

The Display and The Indicators

CAUTION:
Too LOUD!

Listening to a Compact Disc

The quickest way to start a CD is with the One Touch Operation:

- ☐ Press **>/II** on the CA-S300 or **▶** on the Remote.
 - If a CD is already loaded, the Unit automatically turns on and starts to play it from track 1.
 - If no CD is loaded, the Unit automatically turns on and the CD tray opens. This is exactly the same as what happens if you press **▲** instead of **>/II**.

Basics of Using the CD Player

Here are the basic things you need to know to play a CD and locate the different selections on it. Each selection is called a track, so when we are talking about locating a track, we are also talking about how you find a certain song or performance.

To Play a CD

1. Press **▲**.
2. Put a CD, printed side up, into the tray.
3. If you want to listen to the CD now, press **>/II** (or **▶** on the Remote).
 - The display shows the track being played and the length of time since it started.

To stop the CD, press **■/CLEAR** (or **■** on the Remote). When you start again, the CD begins with track 1.

To pause the play, press **>/II** while the CD is playing so when you press **>/II** again the CD starts just where you left off.

To remove a CD, press **▲**, take the CD out, and press **▲** again to close the tray.

- ☐ Keep the tray closed except during loading and unloading to protect the mechanism from dust and damage.

How to Find the Track or a Particular Point You Want

Each time you press briefly and release **◀◀** or **▶▶** (or **◀◀** or **▶▶** on the Remote) the track changes by one.

- ☐ Press and release **▶▶** (or **▶▶** on the Remote) to go ahead one track at a time.
- ☐ Press and release **◀◀** (or **◀◀** on the Remote) to go back one track at a time.
- ☐ Holding down **◀◀** or **▶▶** will fast forward or fast reverse the CD so you can quickly find the particular part of a track you want to listen to. Fast forward and fast reverse are only possible by using the buttons on the Unit when the CD is playing.
- ☐ Holding down **◀◀** or **▶▶** on the Remote allows you to change the tracks continuously. (By using the buttons on the Unit, it is only possible when the CD is not playing.)

Locating a Track with the Remote

Using the 10 key pad on the Remote allows you to go directly to the beginning of any track.

1. Press CD 10 KEY.
2. Enter the number of the track you want using the 10 key pad. The selected track will start to play.
 - Example: for track 5, press 5. For track 15, press +10 then 5. For track 20, press +10, then 10.

Programming the Playing Order of the Tracks

In addition to the high quality sound which makes the CD such a good way to listen to music, you can change the order in which the tracks play.

Random Play

The tracks will play in no special order when you use this play mode.

Before starting a CD, press **RANDOM** on the CA-S300.

When all of the tracks have been played, the CD shuts off.

- ☐ Press **REPEAT** before or during random play to instruct the CA-S300 to continue with a different random track selection after the last selection is played.

To cancel random play, press **■/CLEAR** (or **■** on the Remote).

How to use the CD player: from the most basic to advanced

Using the Remote to find a track

With programming, you can play back tracks in any order

How to program: just 3 easy steps

Programming Hints

Repeat a selection or the whole CD

Listen to a tape: How to use your tape deck

▲

To program the CD from the Unit

1. Press **PROGRAM** on the CA-S300.
2. Press **◀◀** or **▶▶** to locate the track you want to start with.
3. Press **PROGRAM** to store the selected track.
4. Repeat steps 2 and 3 until you have entered all the tracks you want to program.
5. Press **>/II** and the Unit will begin playing the tracks in the order you programmed them.

To program the order of CD tracks using the Remote

1. Press **PROGRAM** on the CA-S300.
2. Press **CD 10 KEY** on the Remote.
3. Press the number of the first track you want to hear, then the number of the second track, and so on until you have entered all the track numbers you want to play.
 - ☐ Refer to the section "How to use the Remote Control" on page 20 if you have questions about how to enter numbers above 10.
 - ☐ The unit will only display up to 15 tracks.
 - ☐ Your program can include up to 32 tracks, and you can repeat tracks if you wish.
4. Press **▶** to start the program—the first track you programmed will start to play, followed by the next one you entered, until all the selected tracks are played.

To stop the CD during programmed play, press **■** on the Remote or **■/CLEAR** on the CA-S300.

To cancel the program, press **■/CLEAR** on the CA-S300 while the CD is not playing.

A few hints to make programming easier

- ☐ To add a track to your program, enter the track numbers with the 10 key pad. Any tracks you add will appear at the end of the current program.
- ☐ If you want to change the entire program, press **■/CLEAR** on the CA-S300 while the CD is off, and then you can start over.
- ☐ To check the order of the tracks in your program in **STOP** mode, press **◀◀** or **▶▶** on the Remote to display the order of the tracks. Each time you press **▶▶** the next selection in your program is displayed. (Press **◀◀** for the previous selections.)

Repeating a Selection or the Entire Disc

You can have either the program or the individual selection currently playing repeat as many times as you like by pressing **REPEAT**.

Each time you press **REPEAT**, it cycles from function-off, which turns "REPEAT" out on the display, to "REPEAT" which will repeat all tracks in order or according to the program you have set, and then to "REPEAT 1" which will repeat the currently played track.

To cancel repeat mode, press **REPEAT** until the "REPEAT" or "REPEAT 1" are not displayed any more.

Listening to a Tape

The tape deck allows you to play, record and dub audio tapes.

- ☐ Most tapes are now recorded with the Dolby NR system, so first check which type of the Dolby NR system is used on the tape. Only the Dolby B NR is incorporated into the CA-S300. However, tapes other than the Dolby B type is also available for playing.
- ☐ With Automatic Tape Type Detection, you can listen to type I, II, or IV tapes without changing any settings.
- ☐ To record or dub, see Recording on page 13.

One Touch Play

By pressing either **>** or **<** on either deck A or B (**▶** or **◀** on the Remote), the power will come on, and if a tape is in the deck, it will start to play. If no tape is loaded, the Unit will come on and wait for further instructions.

Regular Play

When the power is already on, you can use this basic procedure:

1. Press **EJECT** of the deck you want to use.
2. When the cassette carrier opens, put the cassette in, with the exposed part of the tape down toward the base of the CA-S300.
 - ☐ If the cassette carrier does not open, turn the Unit off, then back on again and press **EJECT**.
3. Close the carrier gently.
4. Press **>** to play the front side, or **<** to play the reverse side. The arrow indicator on the pressed button starts blinking and tape play starts.

To stop playing, press **■**.

To remove the tape, press **EJECT**.

Finding the place you want: Music Scan

Scan Back

Scan Forward

More Useful Things to Know:

- Reverse Mode
- Continuous Play
- Dolby

Fast Left and Fast Right

- While the tape is stopped, press ◀ and the tape will wind rapidly onto the left side of the cassette without playing.
- While the tape is stopped, press ▶ and the tape will wind rapidly onto the right side of the cassette without playing.

Music Scan

To find the beginning of a music track during play, use the Music Scan function. Music Scan searches for blank portions that usually separate tracks, then plays the next song.

- If you are recording on deck B or put deck B in recording pause mode.

⚠ Music Scan will not work on deck A.

To find the beginning of the current song

Press ◀ or ▶ during play.

- Make sure that you press ◀ or ▶ in the opposite direction to tape play. Searching stops automatically at the beginning of the current song, and the current song starts automatically.

To find the beginning of the next song

Press ◀ or ▶ during play.

- Make sure that you press ◀ or ▶ in the same direction to tape play. Searching stops automatically at the beginning of the next song, and the next song starts automatically.

⚠ The Music Scan works by detecting a 4-second blank at the beginning of each selection. So it won't work well if your tape has:

- No blank at the beginning of a track.
- Noise (often caused by much use or poor quality dubbing) which fills the blank with noise.
- Long very soft passages or pauses in a selection. The scan will detect these instead of the 4-second long blanks. If this happens, just go ahead and scan again until you reach the selection you want.

Other Useful Features Using the Tape Deck

- Use **Reverse Mode** to make the tape automatically reverse at the end of a side and start playing the other side. Press REVERSE MODE to change from Reverse Mode on (the indicator is lit) to Reverse Mode off, or from off, to on.
- **Continuous Play:** When a tape finishes playing, the Unit always checks to see if a tape is in the other deck. If one is there, it automatically starts playing it while rewinding the first tape. This Continuous Play happens regardless of which deck starts first.
 - With the Reverse Mode on, the other tape will start playing when both sides of the first tape have been played. As long as the REVERSE MODE indicator is lit, the tapes will continue to play in the above sequence.
 - With the Reverse Mode off, the tape will play to the end of the current side, switch to the other deck and start playing a tape there while rewinding the first tape. Then when one side of the tape in the other deck is over, the first deck starts playing the same side again. The tapes will continue to play in the above sequence.
- Press DOLBY B NR to switch **Dolby Noise Reduction** on (the indicator lights up) or off (the indicator goes off). If a tape is recorded with Dolby B NR, playing it back with the Dolby NR on will reduce tape noise and improve the clarity of the sound.

Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation. "DOLBY" and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

Listening to an Optional VCR or Turntable

By playing the sound from a VCR or turntable through the CA-S300, you can often dramatically improve the quality, and gain control over how the music or program sounds. Once the connected equipment is playing through the CA-S300, you can apply the sound effects, make recordings, or listen with the headphones.

- First make sure that the connection between optional equipment and the CA-S300 has been done correctly. (See page 6).

1. Make a connection between the VCR or Turntable as shown on page 6.
2. Press AUX or PHONO on either the Remote or the Unit. "AUX" or "PHONO" lights up on the display.
3. Start playing the connected equipment. The sound from the connected source is now played through the CA-S300.
4. Adjust the volume level.

To cancel the AUX/PHONO setting

Change the source by starting any one of the CA-S300's built-in sound sources, such as the radio or CD player.

Advantages in connecting a VCR or turntable

for Australian model

Page 12

Recording

What can you record?

- Tapes
- Radio
- CDs
- Microphone
- Connected source

Recording onto cassette tape from any of the sound sources is easy and the CA-S300 does most of the work. Just have a tape in deck B, have the source ready, make one or two settings, and you're ready to record.

For each source the procedure is a little different and now we'll explain just what to do for each one. If you forget, just go back to the section which has the specific procedures you need. But first, here are a few things to make your recordings better.

Copyright

- It should be noted that it may be unlawful to re-record pre-recorded tapes, records, or discs without the consent of the owner of copyright in the sound or video recording, broadcast or cable programme and in any literary, dramatic, musical, or artistic work embodied therein.

Reduce hiss—Dolby NR

- Press DOLBY B NR — the indicator lights up — to reduce tape hiss, except when dubbing tapes since Dolby NR is inactive in dubbing mode regardless of the setting of DOLBY B NR. The dubbed tape automatically contains the same processing as the source tape.

Recording level

- The recording level, which is the volume at which the new tape is being made, is automatically set correctly, so it is not affected by the VOLUME control on the CA-S300. Thus, you can adjust the sound you are actually listening to without changing the recording.

Erase protection

- Two small tabs on the back, one for side A and one for side B, can be removed to prevent accidental erasure or re-recording. To record on a cassette with the tabs removed, you must cover the holes with adhesive tape first. However, when a Type II tape is used, only cover part of the hole as shown, since the other part of the hole is used to detect the tape type.

Recording sound mode

- When recording, you can select the sound effects with the preset sound effect buttons to condition the music as it is recorded. But when recording using Auto Edit or CD Direct, once recording has started, these settings cannot be changed. When recording from tape deck A to deck B, the sound effects cannot be used, because the signal doesn't go through the amplifier first. This method gives you the highest quality dubbed tapes.

(Type II tape)

Usable tape type

- Type I and type II tapes can be used for recording. While type IV tapes can be played, type IV tapes cannot be used for recording on the CA-S300.

CAUTION: If recordings you make have excessive noise or static, the Unit may be too close to a TV which was on during the recording. Either turn off the TV or increase the distance between the TV and the CA-S300. The use of C-120 (C-120 minutes turn around) or thinner tape is not recommended, since characteristic deterioration may occur and these tape easily jam in the pinch and the capstan.

Standard recording: Any source to tape

Standard Recording

This is the basic method for recording any source. The CA-S300 also has special ways for recording CD to tape, and tape to tape, which save you time and effort, as well as give you some special effects. However, when you need to add a selection to a tape you have made, or are combining selections from several sources on one tape, use the method we describe here; just substitute the source you want, such as a tape in deck A, or CD, or radio in this procedure. You can also record from the microphone or an auxiliary source with this procedure.

To Record Any Sound Source to Tape

Follow these steps to record from any sound source onto a tape in deck B.

1. Insert a blank or erasable tape into deck B.
2. Press REC PAUSE. The REC PAUSE indicator lights up.
3. Press REVERSE MODE if you want to record on both sides of the tape. The REVERSE MODE indicator lights up.
4. Prepare the sound source, for example, tuning in a radio station, loading a CD, turning on a connected VCR or optional equipment for recording.
5. Press either > to record on side A, or < to record on side B of the tape, on deck B.

Source to tape: Step by step

Page 13

CD to tape recording: Introduction

CD to Tape Recording

There are three ways to record from CD to tape:

- ☐ **Standard Recording** described on the previous page.
- ☐ **CD Direct Recording** — Everything on the CD goes onto the tape in the order it is on the CD, or according to an order you have set in a program.
- ☐ **Auto Edit Recording** — Your CA-S300 figures out which selections to put on which side of the tape, so a selection isn't cut off before it's finished when the tape runs out.

CD Direct Recording: Introduction

CD Direct Recording

1. Insert a blank or erasable cassette into deck B.
 - ☐ If you want to record on both sides of the tape, press REVERSE MODE on the tape deck so that the REVERSE MODE indicator lights up.
2. Load a CD into the tray and press  to close the tray.
3. Set the sound mode if you want, since the sound mode cannot be changed once recording starts.
4. Press CD REC START.
 - ☐ At the end of the tape, the CA-S300 automatically goes back to the beginning of the last selection and re-records it, this time gently fading out at the end. If you selected the REVERSE MODE, side B starts with the last selection on side A. (A 10-second blank is also created at the beginning of side B.) When the tape is finished, the Unit shuts off the CD and the tape deck.

To stop any time during the recording process

Press  on deck B.

Auto Edit Recording: Introduction

Auto Edit Recording

Using Auto Edit, you can record the CD tracks to fit the tape, so a selection isn't cut off. Auto Edit is one of the best ways to copy all of a CD onto a tape.

Auto Edit programs the CD tracks in the numerical order. To prevent the end of the last track on side A from being cut off, the last track on side A is selected to fit on the remaining tape length.

Auto Edit Recording: Step by step

1. Insert a blank or erasable cassette into deck B.
 - ☐ If you want to record on both sides of the tape, press REVERSE MODE on the tape deck so that the REVERSE MODE indicator lights up.
2. Load a CD into the tray and press  to close the tray.
3. Set the sound mode if you want, since the sound mode cannot be changed once recording starts.
4. Press AUTO EDIT on the CA-S300. "EDIT" appears on the display and then the minimum standard tape length to use for this CD appears.
 - ☐ You can select a different length of tape, depending on the actual size of the tape you are using, from eleven possibilities programmed into the CA-S300: 40, 46, 50, 54, 60, 64, 70, 74, 80, 84, 90. Cycle through these choices using  or  (or  or  on the Remote) until you find the length closest to your tape's actual length.
 - If you pick a tape length shorter than the total playing time of the CD, the last tracks on both sides of the tape will be faded out as the tape ends.

TAPE C46

5. Press SIDE A/B. The display shows which tracks will go on side A and which on side B. Each time you press SIDE A/B, the display switches between A and B.
6. PRESS CD REC START. The Unit will automatically rewind the tape to the beginning of side A, create a 10 second blank, turn on the CD and start recording.

To stop any time during the recording process

Press  on deck B.

Tape to tape dubbing: Introduction

Tape to Tape Recording (Dubbing)

Recording from one tape to another is called dubbing.

You can dub for the best possible quality.

- ☐ To dub both sides of a tape, start from side A for both deck A and deck B, and press REVERSE MODE so that the REVERSE MODE indicator lights up.
- ☐ It is preferable that the type of tape Type I (Normal) or Type II (CrO₂) you record *from* be the same as the type you record *onto*.

Dubbing: Step by step

Dubbing

1. Insert a source cassette you want to copy *from* into deck A for playback.
2. Insert a blank or erasable cassette you want to copy *onto* into deck B for recording.
3. Press REC PAUSE on deck B.
4. Press  (or ) on deck B. Recording starts.
 - ☐ To advance the leader tape, start recording first and wait about 10 seconds before starting the deck A.
5. Press  (or ) on deck A. Deck A starts playing.

To stop any time during the dubbing process

Press  on both deck A and deck B.

How to use the DUBBING button

1. Insert a source cassette you want to copy *from* into deck A for playback.
2. Insert a blank or erasable cassette you want to copy *onto* into deck B for recording.
3. Press DUBBING. Deck A and deck B will start simultaneously.
4. To stop:
 - Press  on deck A. Recording on deck B will be paused by Rec Mute.
 - Press  on deck B. Deck A and deck B will stop simultaneously.

 Dolby NR is inactive in dubbing mode regardless of the setting of DOLBY B NR. The dubbed tape automatically contains the same processing as the source tape.

 You cannot dub using the sound modes such as D.CLUB, HALL, STADIUM, etc.

Four Timers:
•REC
•DAILY
•SLEEP
•AUTO POWER OFF

How to Set the Clock and Use the Timers

The timers let you control recording and playing functions automatically. With the CA-S300 they are particularly easy to set and use. Four types of timers are available:

- ☐ **REC (Recording) Timer**—unattended recording of radio broadcasts. You can set the starting time and recording duration.
- ☐ **DAILY Timer**—Wake up to music from any source.
- ☐ **SLEEP Timer**—Fall asleep and have your CA-S300 turn off automatically after a certain length of time.
- ☐ **AUTO POWER OFF**—Automatically turns off the Unit when the CD or tape finishes.

Clock Setting

The timers depend on the clock; if the clock is right, the timers will work like you expect, but if the time is incorrect on the clock then the timers will also be incorrect.

Notice: The clock must be set, or the timers cannot be set!

So, let's set the clock first.

1. Press **CLOCK ADJ.**
2. Set the hour by pressing **HOUR**. Each time you press it, the hour advances by one. Hold the button down, and the clock will advance continuously as long as **HOUR** is held down.
3. Set the minutes by pressing **MINUTE**. Each time you press **MINUTE** the minutes advance by one. Hold the button down, and the minutes advance in ten minute increments as long as **MINUTE** is held down.
4. Press **CLOCK ADJ.** again and the clock is set and starts from zero seconds.

⚠ If there is a power failure, the clock loses its setting, the display shows "0:00", and it must be reset.

Setting the REC (Recording) Timer

With the Recording Timer you can make a tape of a radio broadcast automatically whether or not you are there. For the timer to work correctly, you need to make sure of the following in addition to setting the time for the radio and tape recorder to come on:

- ☐ You can set the Recording Timer whether the Unit is on or off.
- ☐ The tape you want to record onto must be in deck B.
- ☐ The radio station whose program you want to tape must be the last one played before timer comes on.

Follow this procedure to set the Recording Timer

1. Press **REC TIMER** so that "REC TIMER" blinks on the display. As long as it is blinking, you can continue with the setting process.
 - ☐ If you wait too long, and it stops before you are done, just press **REC TIMER** twice and start over.
2. Set the time you want the radio to come on and the tape in deck B to start recording.
 - ☐ Press **HOUR** to set the hour and **MINUTE** to set the minute.
3. Press **SOURCE/REC TIME** to set the length of time for the recording.
 - ☐ Each time you press this button, the duration increases by one minute. If you hold the button down, it will advance in ten minute increments up to 120 minutes, which is the maximum time you can set.
 - ☐ At the end of the set length of time the CA-S300 will shut off.
 - If you set no time, but leave the display showing —, the CA-S300 will not shut off, but keep playing until you shut it off.
4. Press **REC TIMER** again, or wait eight seconds. "TIMER OK" appears for a while, then "REC TIMER" lights up on the display. The Unit will memorize the setting. When the set time comes, the CA-S300 turns on and records the last station tuned when the Unit was last turned off.

⚠ If you press any button while the Recording Timer is being activated the function will be deactivated, but recording will not stop.

Before the set time comes

- ☐ Check that tape direction is correct. This is important especially when Reverse Mode is off.
- ☐ Set Reverse Mode on if you want to record on both sides of the tape.
- ☐ Select the sound mode if you want to record with one of the sound mode (D.CLUB, HALL, STADIUM, etc.).
- ☐ Set the VOLUME control to MIN so that no sound comes out from speakers when the recording timer switches on the CA-S300. This is important especially if you will be out during the recording.

To change the Recording Timer setting

Press **REC TIMER** twice ("REC TIMER" reappears) and make any changes you want.

To cancel the Recording Timer setting

Press **REC TIMER** button again so that "REC TIMER" goes off on the display.

Setting the DAILY Timer

With this timer you can wake up to music from a CD, tape or your favorite radio program.

- ☐ You can set the DAILY Timer whether the Unit is on or off.

Follow this procedure to set the DAILY Timer

1. Press **DAILY TIMER** so that "DAILY TIMER" blinks on the display.
2. Set the time you want the Unit to turn on.
 - ☐ Press **HOUR** to set the hour and **MINUTE** to set the minute.
3. Press **SOURCE/REC TIME** to set the source.
 - ☐ Each time you press this button, the display shows one of the four possible sources: CD, TAPE, FM or AM (MW/LW). Leave the one you want lit but select within 15 seconds.
 - If you select AM (MW/LW) or FM as the source, the last played station is the one which comes on at the set time.
4. Press **DAILY TIMER** again, or wait eight seconds. "TIMER OK" appears for a while, then "DAILY TIMER" lights up on the display. The Unit will memorize the setting. When the set time comes, the CA-S300 turns on ("DAILY 60" appears on the display), plays the source you have for 60 minutes, and then the Unit turns off.

⚠ If you press any button while the DAILY Timer is being activated, the Unit will not turn off automatically after 60 minutes.

Before turning off the Unit

- ☐ If the source is tape:
 - Check that the tape transport direction is correct. This is important especially when Reverse Mode is off.
 - Deck B has priority, so if tapes are in both deck, the tape in deck B plays first.
 - Set Reverse Mode on if you want play both sides of the tape.
- ☐ Select the sound mode if you want to listen using a sound mode (D.CLUB, HALL, STADIUM, etc.).
- ☐ Set the volume to an appropriate level.

To change the DAILY Timer setting

Press **DAILY TIMER** twice ("DAILY" reappears) and make any changes you want.

To cancel the DAILY Timer setting

Press **DAILY TIMER** button again so that "DAILY TIMER" goes off on the display.

IMPORTANT! Set your clock!

Recording when you're not there

Wake up to music with the DAILY Timer

Sleep Timer: turns the Unit off automatically after a set time

Setting the SLEEP Timer

Use the SLEEP timer on the remote to turn the Unit off after a certain number of minutes when it is playing. Using this timer, you can fall asleep to music.

- ☐ You can only set the SLEEP Timer when the CA-S300 is on and a source is playing.

Follow this procedure to set the SLEEP Timer

With the CA-S300 on and a source playing, press SLEEP on the remote. "SLEEP" starts blinking on the display.

- ☐ Each time you press SLEEP while "SLEEP" is blinking, it changes the number of minutes shown on the display in this sequence:

When the number of minutes you want shows on the display, just wait 8 seconds until "TIMER OK" appears and "SLEEP" stops blinking, but remains lit.

The Unit will now turn off after the number of minutes you set.

To change the SLEEP Timer setting

Press SLEEP until the number of minutes you want appears on the display.

To cancel the SLEEP Timer setting

Press SLEEP until "SLEEP" goes off on the display.

Turning off the Unit also cancels the SLEEP Timer.

Timer Priority

Since each timer can be set independently, you may have wondered what happens if the settings overlap: for instance, suppose you set the Recording Timer to record a broadcast from 1 am to 1:30 am, and then you set the sleep timer at midnight to run until 2 am. Will you still get your radio program recorded? Here are the priorities for each timer:

- ☐ The Recording Timer always has priority. This means that:
 - If another timer is set to come on during a time the Recording Timer is operating, the other timer just won't come on at all, so you will always get the entire program on tape.
 - If the Recording Timer is set to come on while another timer is being activated, the other timer will shut off 10 seconds before the Recording Timer is set to turn on, and the Recording Timer will then take over.
- ☐ The SLEEP Timer has priority over the DAILY Timer. This is important because if you set the SLEEP Timer to start before and then end after the DAILY Timer would start, the DAILY Timer doesn't come on. So if you want your alarm to go off as scheduled, be sure the SLEEP Timer shuts off before the DAILY Timer is to turn on the Unit.

Turning Off the CA-S300 Automatically

When playing either a tape or a CD, Auto Power Off will shut the Unit off when the tape or CD comes to the end. Although Auto Power Off is very useful for shutting off the CA-S300 at night, you can also use it if you think you might forget to turn the Unit off when leaving the house or your room at other times of the day.

To use Auto Power Off:

Press AUTO POWER OFF so that "AUTO POWER OFF" lights up on the display.

To cancel Auto Power Off:

Press AUTO POWER OFF again so that "AUTO POWER OFF" disappears on the display.

Important information on using Auto Power Off

- ☐ If you press AUTO POWER OFF while the CD is playing in repeat mode ("REPEAT" or "REPEAT 1" lights on the display), repeat mode will be cancelled and Auto Power Off will be able to work even though "REPEAT" or "REPEAT 1" remains lit on the display.

⚠ If you press REPEAT to set the CD player in repeat mode while Auto Power Off is on ("AUTO POWER OFF" lights on the display), Auto Power Off will be cancelled even though "AUTO POWER OFF" remains lit on the display, and REPEAT 1 will not work.

- If you press AUTO POWER OFF while the tape is playing:
 - If Reverse Mode is off (the REVERSE MODE indicator is not lit), the Unit turns off when the current playing side finishes.
 - If Reverse Mode is on (the REVERSE MODE indicator lights up), the Unit plays the side currently playing, reverses and plays the other side, then shuts off.

Auto Power Off: turns off your CA-S300 automatically

What is Vocal Masking?

Singing-Along Procedure

Singing Along

Have you ever wished you could sing with a real band, in place of the lead singer? The VOCAL MASKING (voice canceller) button lets you use regular tapes, CDs or records as sources of sing-along music. When you press VOCAL MASKING, the lead vocal is reduced, and you can replace it by singing into the microphone as the music plays. No microphone is supplied with the CA-S300, so you can select your own from the many kinds available. Remember: the sound quality is greatly affected by the quality of the microphone.

How to Sing Along with Vocal Masking:

1. Turn the MIC LEVEL control all the way counter-clockwise to the MIN position.
2. Attach the microphone (not supplied) by plugging it into the MIC jack.
3. Start the source—CD, Tape, connected VCR, Turntable.
4. Press VOCAL MASKING—the indicator will light up.
5. Now adjust the volume of the source with the main VOLUME control, and the volume of your voice with the MIC LEVEL control as you sing into the microphone.

Important information about Vocal Masking

- ☐ Because the radio signal is not as reliable as signals coming from a tape or CD, you may not always get satisfactory results using the radio as a source for Vocal Masking.
- ☐ Some tapes and CDs are better sources for singing along than others.
 - Mono sources are not suitable for Vocal Masking.
 - On sources with duets, strong echoes, a chorus, or with only a few instruments, the singer's voice may not be completely reduced.
 - Poorly dubbed tapes may not work well for Vocal Masking.

Recording from the Microphone

You cannot use the microphone for two kinds of recording.

- ☐ You cannot record your singing-along when the main source is a tape in deck A.
- ☐ Microphone mixing—Sound going into the microphone is mixed with sound sent to the tape in deck B from some other source, such as the CD or radio.
- ☐ Regular recording—Only sound picked up by the microphone is recorded.

Recording Your Singing-Along

You can record a singing-along session under certain conditions.

- ☐ You cannot record your singing-along when the main source is a tape in deck A.

Here's the procedure for recording your singing-along:

1. Put the cassette you want to record onto in deck B.
2. Press REC PAUSE—see Recording, page 13 if you need more information about tape recording.
3. Follow the above procedure "How to Sing Along with Vocal Masking."
4. Press Play Forward > (or Play Reverse <) on deck B, and deck B will start recording the source together with your voice in place of the lead vocal.

Microphone Mixing

1. Insert a blank or erasable cassette you want to record onto in deck B.
 2. Connect the microphone to the MIC jack.
 3. Press REC PAUSE so that the REC PAUSE indicator lights up.
 4. Start the source (radio, CD, VCR or turntable) and set the VOLUME control.
 5. Adjust the microphone volume with the MIC LEVEL control.
 6. Press > (or <) on deck B, and speak or sing into the microphone.
- Both sound from the microphone and from the playing source is recorded.

Regular Microphone Recording

1. Insert a blank or erasable cassette you want to record onto in deck B.
 2. Connect the microphone to the MIC jack.
 3. Press REC PAUSE so that the REC PAUSE indicator lights up.
 4. Adjust the volume of the microphone with the MIC LEVEL control.
 5. Press > (or <) on deck B.
- Whatever sounds the microphone picks up are recorded.

IMPORTANT!

- ⚠** To prevent howling and squealing when using the microphone, adjust the MIC LEVEL control and the VOLUME control, and try not to point the microphone at the speakers.
- ⚠** When you are not using the microphone, keep the MIC LEVEL control set to MIN. It is best to disconnect the microphone when you will not be using it.

How to Use the Remote Control

The Remote Control makes it easy to control many of the functions of the CA-S300 from a distance of up to 6 m away. You need to point the remote sensor at the CA-S300 front panel.

- ❑ Most of the buttons on the Remote Control do just what the ones on the CA-S300 do.
- ❑ A few functions are available only by using the Remote Control, and those are described below.
- ❑ The buttons whose names or marks are printed in blue can be used for the One Touch Operation.

Using the 10 Key Pad

The 10 key pad is used to specify a CD track or the number you have assigned to a preset radio station. To enter a number using the 10 key pad follow these steps:

- ❑ Before using the 10 key pad, make sure which the 10 key pad functions for, the CD player or tuner. This is depends on which button on the Remote you have pressed before the 10 key pad. For example, if you press TUNER before 10 key pad, it can select a preset station.
- ❑ For numbers between 1 and 10, just press the button with the number you want.
- ❑ For numbers from 11 to 20, first press the +10 key, then the single digit numbers you want on the key pad — to get 15, first press +10, then 5. For 20 press +10 and 10.
- ❑ For numbers from 21 to 30, press the +10 key twice; then press the single digit numbers on the key pad — to get 25, press +10 +10 and 5. For 30, press +10 +10 and 10.
- ❑ For numbers from 31 to 40, follow the same procedure, only press the +10 key three times, then press the single digit numbers on the key pad — to get 32, press +10 +10 +10 and 2.

Using the FM MODE/MUTE Key Pad

When an FM stereo broadcast is difficult to receive or noisy. Functions/steps are available on page 9.

Using the SLEEP Key Pad

The SLEEP function will turn the unit off after a certain time, while you are asleep. With the unit on, press SLEEP. SLEEP will blink. Select the appropriate minutes — 10, 20, 30, 60, 90, 120 — to turn the unit off.

Care and Maintenance—General Notes

Compact Discs

Handle your compact discs, cassette tapes, and tape deck carefully, and they will last a long time.

- Remove the CD from the case by holding it at the edges while pressing the center hole lightly.
- Do not touch the shiny surface of the CD, or bend the CD.

- Place the CD into the open tray with the label facing up.

- Put the CD back in its case after use to prevent warping.
- Be careful not to scratch the surface of the CD when placing it back in the case.
- Avoid exposure to direct sunlight, temperature extremes, and moisture.

- A dirty CD may not play correctly. If a CD does become dirty, wipe it with a soft cloth in a straight line from center to edge.

CAUTION: Do not use any solvent (for example, conventional record cleaner, spray, thinner, benzene, etc.) to clean a CD.

On Moisture Condensation

Moisture may condense on the lens inside the unit in the following cases:

- After starting the heating in the room.
- In a damp room.
- If the unit is brought directly from a cold to a warm place.

Should this occur, the unit may malfunction. In this case, leave the unit turned on for a few hours until the moisture evaporates, unplug the AC power cord, and then plug it in again.

In general, you will have the best performance by keeping your tapes, CDs, and the mechanism clean.

- Store tapes and CDs in their cases, and keep them in cabinets or on shelves.
- Keep the tape deck tape carriers and the CD tray closed when not in use.

Cassette Tapes

- If the tape is loose in its cassette, take up the slack by inserting a pencil in one of the reels and rotating.
- If the tape is loose, it may get stretched, cut, or caught in the cassette.

- Do not touch the tape surface.

- Do not store the tape:
 - In dusty places
 - In direct sunlight or heat
 - In moist areas
 - On a TV or speaker
 - Near a magnet

Tape Deck

- If the heads, capstans, and pinch-rollers of the tape deck become dirty, the following will occur:
 - Impaired sound quality
 - Discontinuous sound
 - Fading
 - Incomplete erasure
 - Difficulty recording

- Clean the heads, capstans, and pinch-rollers using a cotton swab moistened with alcohol.

- If the heads become magnetized, it will produce noise or lose high frequencies.
- To demagnetize the heads, turn off the Unit, and use a head demagnetizer (available at electronics and record shops).

Troubleshooting

- If you are having a problem with your CA-S300, check this list for a possible solution before calling for service.
- If you cannot solve the problem from the hints given here, or the Unit has been physically damaged, call a qualified person, such as your dealer, for service.

SYMPTOM	POSSIBLE CAUSE	ACTION
No sound is heard.	Connections are incorrect, or loose.	Check all connections and make corrections. (See pages 5 and 6.)
Impossible to record.	Cassette record protect tabs are removed.	Cover holes on back edge of cassette with tape.
Hard to listen to broadcasts because of noise.	The antenna is disconnected. The loop antenna is too close to the system. The feeder/wire antenna is not properly extended and positioned.	Re-connect the antenna securely. Change the position and direction of the loop antenna. Extend feeder/wire antenna at the best reception position.
The CD sound is discontinuous.	The CD is scratched or dirty.	Clean or replace the CD.
Unable to operate the Remote.	The path between the Remote and the sensor on the Unit is blocked. The batteries are discharged.	Remove the obstruction. Replace the batteries.
The CD tray cannot be operated.	The main AC power cord is not plugged in.	Plug in the AC power plug.
The CD does not play.	The CD is upside down.	Put the CD in with the label side up.
Operations are disabled.	The built-in microprocessor may malfunction due to external electrical interference.	Unplug the system then plug it back in.
The cassette carrier cannot be opened.	During tape playing, the power cord is unplugged.	Plug in the power cord and press eject.

Specifications

Amplifier

Output Power (IEC 268-3/DIN)

30 watts per channel, min. RMS, both channels driven, into 6 ohms at 1 kHz with no more than 0.9% total harmonic distortion.

Input Sensitivity/Impedance (1 kHz)

PHONO	3 mV/50 kohms
AUX	300 mV/50 kohms
MIC	3.5 mV/10 kohms

Speaker terminals

Main speakers 6 - 16 ohms

Tape deck

Frequency response

Type I (Normal):	30 - 15,000 Hz
Type II (CrO ₂):	30 - 16,000 Hz

Wow and Flutter 0.09% (WRMS) (0.2% DIN)

Tuner

FM Tuner

Tuning Range	87.5 - 108.0 MHz
Usable Sensitivity	0.95 μ V/75 ohms (10.8 dBf)
Signal-to-Noise Ratio (IHF-A weighted)	MONO (at 85 dBf) 80 dB STEREO (at 85 dBf) 73 dB

AM Tuner

MW- Tuning Range	522 - 1,629 kHz
LW- Tuning Range	144 - 288 kHz (only for U.K.)

Compact Disc Player

Dynamic Range (1 kHz)	90 dB
Signal-to-Noise Ratio	95 dB
Wow and Flutter	Unmeasurable

General

Power Requirements

U.K.	AC 230 V \sim , 50 Hz
Australia	AC 240 V \sim , 50 Hz

Power Consumption

U.K.	130 Watts
Australia	125 Watts
	13 Watts (at standby mode)

Dimensions (Approx.)

	245 x 270 x 302 mm (W/H/D) (9 ⁵ / ₈ x 10 ⁵ / ₈ x 11 ¹⁵ / ₁₆ in.)
--	---

Mass (Approx.)

	6.8 kg (15 lbs)
--	-----------------

Supplied Accessories

FM feeder antenna (1)	AM (MW/LW) loop antenna (1)
Remote control (RM-SES300U) (1)	Batteries R03(UM-4)/AAA(24F) (2)
Antenna adaptor (1)

1. Terminal Layout

2. Terminal Functions

Pin No.	Symbol	I/O	Function	Pin No.	Symbol	I/O	Function
1	IN12	I	Leaf switch voltage	41	BFR	O	Reel motor control signal (forward)
2	IN11	I	Leaf switch voltage	42	BRR	O	Reel motor control signal (reverse)
3	PRT	I	Input from protector circuit	43	BRC	O	Cam motor control signal (counterclockwise)
4	AD GND	---	Ground for A/D converter	44	BFC	O	Cam motor control signal (clockwise)
5	RESET	I	Reset in	45	AFR	O	Reel motor control signal (forward)
6	OSC1	---	Oscillation terminal	46	ARR	O	Reel motor control signal (reverse)
7	OSC2	---	Oscillation terminal	47	ARC	O	Cam motor control signal (counterclockwise)
8	LG	---	GND	48	AFC	O	Cam motor control signal (clockwise)
9	---	---	GND	49	---	---	Connected to GND
10	---	---	Not use	50	ACS2	I	Input of mechanism information (deck A)
11	TEST	---	Connected to +5V	51	ACS1	I	Input of mechanism information (deck A)
12	VCC	---	+5V	52	ACS0	I	Input of mechanism information (deck A)
13	CLASSIC	I	CLASSIC Indication signal	53	BCS2	I	Input of mechanism information (deck B)
14	ECHO1	O	Drive signal for the capstan motor(A)	54	BCS1	I	Input of mechanism information (deck B)
15	ECHO2	O	Fade recording control	55	BCS0	I	Input of mechanism information (deck B)
16	POPS	O	POPS Indication signal	56	FADE	O	FADE recording control
17	D.CLUB	O	D.CLUB Indication signal	57	JOG 2	O	JOG pulse to input 2
18	CAP	O	Drive signal for the capstan motor (B)	58	JOG 1	O	JOG pulse to input 1
19	HALL	O	HALL Indication signal	59	DCS IN	I	Compulink signal input
20	C.BASS	O	C.BASS Indication signal	60	DCS OUT	O	Compulink signal output
21	APLS	I	Input of reel pulse (Deck A)	61	RMIN	I	Input from remote signal detector
22	BPLS	I	Input of reel pulse (Deck B)	62	P.IND	O	P.IND Indication signal
23	RMT	O	Recording mute control	63	SPDATA	O	Data output to IC803
24	NR OUT	O	Noise reduction control	64	BIAS	O	Bias circuit control (ON/OFF)
25	NR REC	O	Mode control of NR (REC/PLAY)	65	LATCH	I	Strobe signal from IC402
26	AMC	O	Speed control signal for deck A	66	CLK	O	Clock output to IC403 (Tone selector)
27	BMC	O	Speed control signal for deck B	67	STB	O	Strobe output to IC403 (Tone selector)
28	STADIUM	O	STADIAM Indication signal	68	DATA	O	Data output to IC403 (Tone selector)
29	AIB	O	A/B DECK change control signal	69	POWER	O	Power control (Power on/off)
30	MSI	O	Music scan input	70	SPK	O	Speaker relay control
31	PBMT	O	Play back mute	71	VOL DOWN	O	Master volume control
32	ROCK	O	ROCK Indication signal	72	VOL UP	O	Master volume control
33	AFI		A mecha forward Indication signal	73	S.MUTE	O	Source mute output
34	ARI		A mecha reverse Indication signal	74	HP.IN	O	Head phon detection
35	BFI		B mecha forward Indication signal	75	AD VCC	---	+5V
36	BRI	O	B mecha reverse Indication signal	76	IN 7	I	AMP switch voltage
37	DOL 1	O	Dolby Indication signal	77	IN 6	I	AMP switch voltage
38	REC 1	O	REC Indication signal	78	IN 5	I	DECK switch voltage
39	REV 1		REV Indication signal	79	IN 4	I	DECK switch voltage
40	SEA OFF		SEA OFF Indication signal	80	IN 3	I	DECK switch voltage

■ LC7218JM (IC121) : PLL Synthesizer

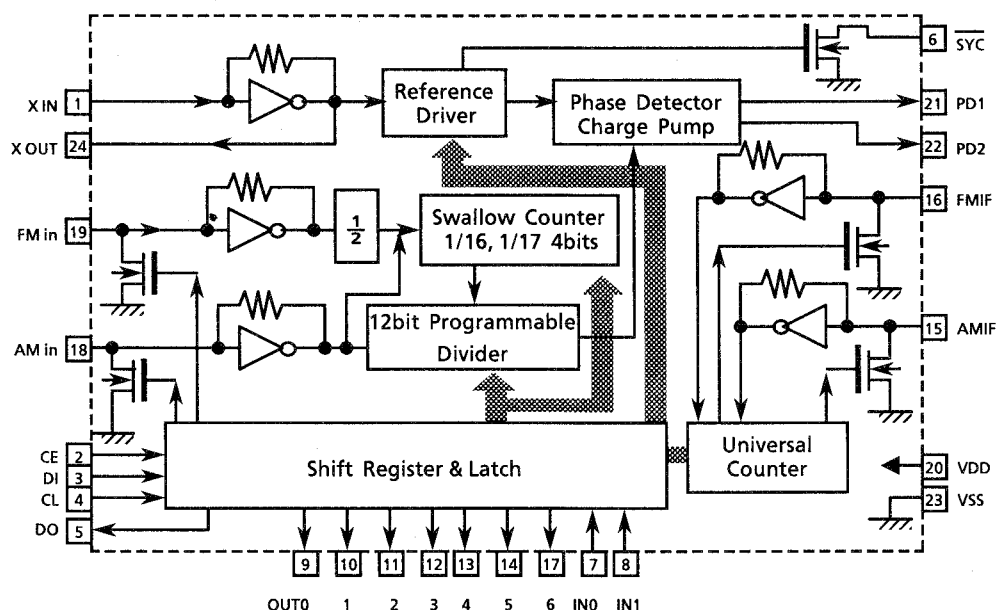

1. The main function descriptions

- (1) It makes the local oscillation frequency by the control data from IC901.
- (2) Decode the control signal and transmit the signal for receiving conditions.
- (3) For the best tuning, count the internal-frequency and transmit the data to IC901.

2. Terminal Layout

3. Block Diagram

4. Pin Functions

Pin No.	Symbol	I/O	Functions
1,24	X in , X out	I/O	Crystal oscillator (7.2MHz).
2	CE	I	Fix the chip enable to "H" when inputting (DI) and outputting (DO) the serial data.
3	DI	I	Receive the control data from the controller (IC801).
4	CL	I	This clock is used to synchronize data when transmitting the data of DI and DO.
5	DO	O	Transmit the data from LC7218 to the controller which is synchronized with CL.
6	SYC	—	Not used.
7	TUNED	I	Receive the tuned signal from IC104 (LA1266A).
8	STOP IN	—	Connected to GND
9	POWER	—	Not used.
10	QSC	—	Not used.
11	MONO	O	It is "H" on FM-monaural, "L" on FM-Stereo.
12	FM	O	It is "L" on FM mode.
13	MW	O	It is "L" on MW mode.
14	LW	O	It is "L" on LW mode.
15	AM-IF	I	Universal counter input for AM-IF from IC104 (LA1266A).
16	FM-IF	I	Universal counter input for FM-IF from IC104(LA1266A).
17	IF REQ	O	Output the "IF-signal request" to IC104 when the pin-7 (tuned in) goes to "H".
18	AM OSC	I	Input the local oscillator signal of AM.
19	FM OSC	I	Input the local oscillator signal of FM.
20	V _{DD}	—	This is a terminal of power supply.
21	PD1	O	PLL charge pump output: When the local oscillator signal frequency is higher than the reference frequency high level signals will output. When it is lower than the reference frequency, low level signals will output. When it is same as reference frequency signals, it will be floating.
22	PD2	—	Not used.
23	V _{SS}	—	Connected to GND

LA1836M (IC102) : FM AM IF AMP & detector

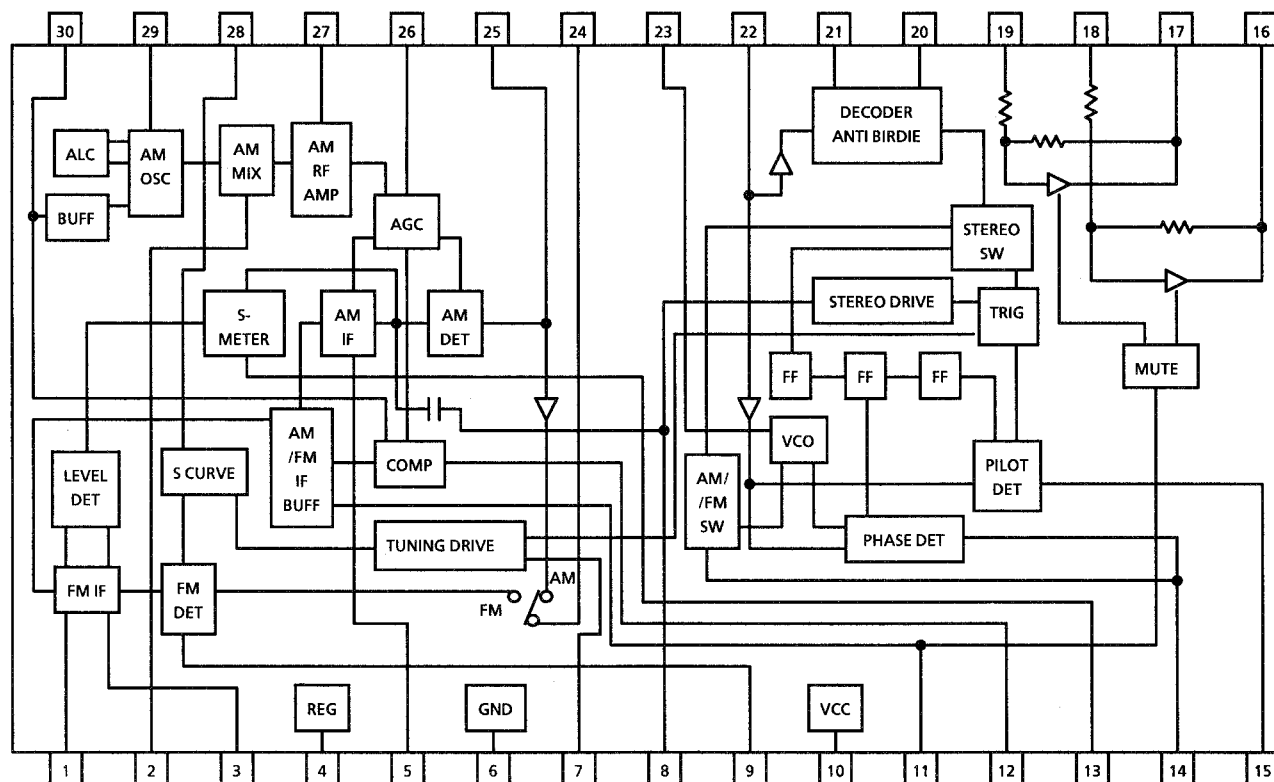

1. Terminal Layout

3. Pin Function

Pin No.	Symbol	I/O	Function
1	FM IN	I	This is an input terminal of FM IF Signal.
2	AM MIX	O	This is an output terminal for AM mixer.
3	FM IF	I	Bypass of FM IF
4	REG	—	Register value between pin4 and pin28 desides the frequency width of the input signal.
5	AM IF	I	Input of AM IF Signal.
6	GND	—	This is the device ground terminal.
7	SIG	O	When the set is tuning, this terminal becomes "L".
8	ST/AM IF	O	Stereo indicator output. Stereo : "L", Mono : "H"
9	FM DET	—	FM detect transformer.
10	VCC	—	This is the power supply terminal.
11	FM/AM IF	O	When the signal of IF REQ of IC121(LC7218) appear, the signal of FM/AM IF output.
12	VSM	O	S Meter output and adjust AM SD sensitivity.
13	AM C.F.	I	This is a terminal of AM ceramic filter.
14	FM/AM	I	Change over the FM / AM input. "H" : FM, "L" : AM
15	MONO/ST	O	Stereo : "H", Mono : "L"
16	L OUT	O	Left channel signal output.
17	R OUT	O	Right channel signal output
18	L IN	I	Input terminal of the Left channel post AMP.
19	R IN	I	Input terminal of the Right channel post AMP.
20	MPX L OUT	O	Mpx Left channel signal output.
21	MPX R OUT	O	Mpx Right channel signal output.
22	MPX IN	I	Mpx input terminal.
23	VCO	I	Voltage controlled oscillator terminal.
24	DET OUT	O	AM/FM detection output.
25	AM DET	—	AM low cut adjustment.
26	AM AGC	I	This is an AGC voltage input terminal for AM.
27	AM RF	I	This is an input terminal for AM RF signal.
28	AFC	—	This is an output terminal of voltage for FM-AFC.
29	AM OSC	—	This is a terminal of AM Local oscillation circuit.
30	OSC BUFFER	O	AM Local oscillation Signal output.

1. Internal Block Diagram

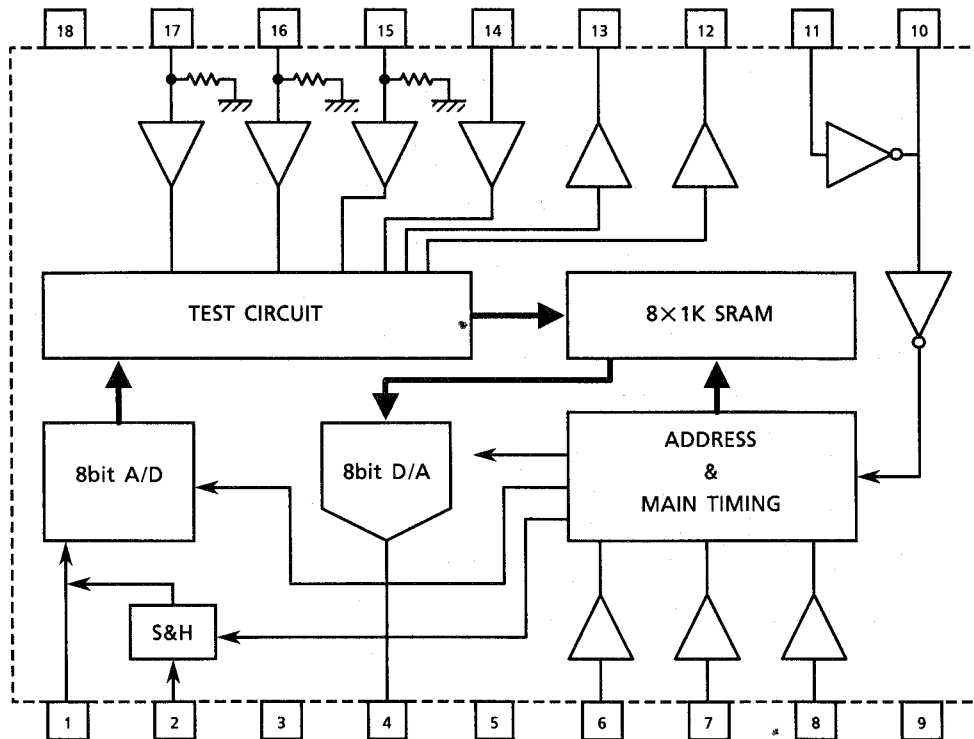

2. Terminal Description

Pin No.	Symbol	Function
1	LINE OUT	Line output
2	LINE IN	Line input
3	NC	Not used
4	ECHO LEV CTRL	Determines echo level. The echo circuit is off when 1 volt is added. The echo level varies according to the voltage from 2 volts to 9 volts.
5	GND	Analog GND
6	LOOP GAIN CTRL	Loop gain control terminal. The gain varies according to the voltage from 2 volts to 9 volts.
7	EXP DET	Detection terminal for expand circuit
8	EXP DET CT	Determines the attack and recovery time of expand circuit
9	EXP BF OUT	Buffer output (Expand circuit side)
10	EXP BF IN	Buffer input (Expand circuit side)
11	DLY BF OUT	Delay buffer output
12	DLY BF IN	Delay buffer input
13	CMP BF OUT	Buffer output (Compress circuit side)
14	CMP BF IN	Buffer input (Compress circuit side)
15	CMP OUT	Compress circuit output
16	CMP DET CT	Determines the attack and recovery time of compress circuit
17	CMP DET	Detection terminal for compress circuit
18	RIPPLE FITER	A capacitor is connected for ripple elimination filter
19	VCC	Power supply
20	NC	Not used
21	MIC AMP OUT	Mic amp output
22	MIC AMP IN	Mic amp input

■ BU9251S: IC999 (D/A DELAY & A/D)

1. Block Diagram

2. Terminal Function

Pin No	Pin Name	Function
1	S&H	Capaciter connected pin for sample and hold
2	AIN	Input for analog signal
3	GND	GND
4	AOUT	Output for analog signal
5	VDD	Power supply
6	DCNT0	Delay time setting
7	DCNT1	Delay time setting
8	DCNT2	Delay time setting
9	GND	GND
10	OSC0	Oscillating 2
11	OSC1	Oscillating 1
12	TDO1	For test (output)
13	TDO0	For test (output)
14	TDIN	For test (input)
15	TST2	Mode setting for test
16	TST1	Mode setting for test
17	TST0	Mode setting for test
18	VCC	Power supply

Disassembly Procedures

(1) Top cover removal

1. Remove 6 screws (A) on the rear side and 2 screws (A) on both sides of the cover.
2. Remove the cover.

Fig1

(2) Rear panel removal

1. Remove the top cover.
2. Remove the 2 screws (B) holding the heatsink cover.
3. Remove the 9 screws.
4. Remove the heat sink cover and rear panel.

Fig2 Rear view

(3) Tuner PCB (ENA-159-1) removal

1. Remove the (1) and (2).
2. Remove J103.
3. Remove JA101.
4. Remove the tuner PCB.

Fig3 Top view

(4) Main VR and Source select PCB (FSB-001) removal

1. Remove the (1), (2) and (3).
2. Remove the main volume knob.
3. Remove the NUT for the volume shaft.
4. Remove the P401 and P402.
5. Remove the Main VR and Source select PCB.

Fig4 Front view

(5) Main PCB(ENH-251-1) removal

1. Remove the (1)AND(2).
2. Remove the 4 screwsⒸ.
3. Remove the J401 J402and ,J410,JA801,FW501 J801,JA601.
4. Remove the P304,P303,and JA852.
5. Remove the Main PCB and AMP PCB.

Fig 5 Top view

(6) AMP PCB(ENH-251-2) removal

1. Remove the (5).
2. Remove the AMP PCB

Fig 6 AMP PCB view

(7) Front panel assembly removal.

1. Remove the (1)(2)and (5).
2. Remove the 2 screwsⒸ.
3. Remove the Fook of the bottom side and both side..
4. Remove the Front panel assembly.

Fig 7 Bottom view

(8) Front PCB(FSB-001-1) removal

1. Remove the (1)(2)and (4).
2. Remove the Front panel ass'y.
3. Remove the 7 screws Ⓔ.
4. Remove the Front PCB.

Fig 8 Front panel rear view

Ⓒ .. SPST2604Z

(9) Cassette mechanism
with the PCB (FSC-002-3) removal

1. Remove the (1),(2)and (5).
2. Remove the screw ⑥ holding the shield plate.
3. Remove the 4screws ⑦ and 4screws ⑧.
4. Remove the Cassette mechanism.

Fig 9 Front panel Rear view

(10) Cassette holder removal

1. Open the cassette door.
2. Remove the Cassette mechanism assembly.
3. Remove the Cassette holder slide up ward.

Fig 10 Side view

(11) Front SW PCB(FSB-001-2) removal

1. Remove the (1),(2),(4)and (5),(7),(10).
2. Remove the Cassette mechanism assembly.
3. Remove the 6 screws ⑤ holding the braket .
4. Remove the 9 screws ⑤ holding the SW PCB.
5. Remove the SW PCB .

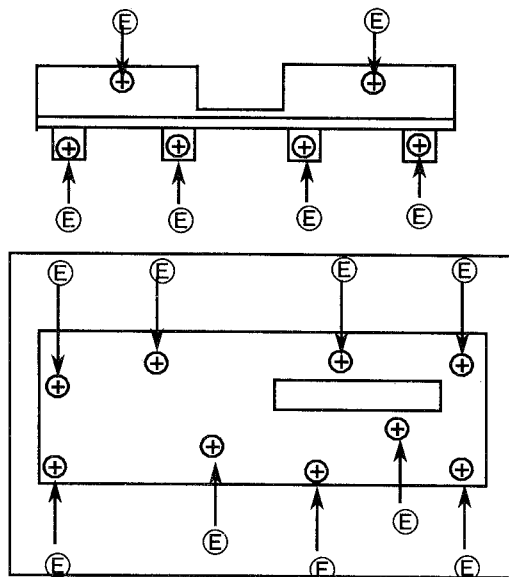

Fig 11 Front panel Rear view

(12) Cassette door lock plate removal

1. Remove the (1),(2)and (5),(9).
2. Remove the 2screw ⑤ holding the door lock plate.
3. Remove the door lock plate.

Fig 12 Front panel Rear view

⑤ ... SDSF2608Z

⑦ ... SBSF3008Z

⑧ ... SBST3006Z

(13) Damper removal

1. Remove the cassette mechanism.
2. Remove the spring holding the cassette holder.
3. Press the tab which secures the damper to remove the damper. (See the arrow shown in the figure below)

Fig 13 Door damper view

(14) Cassette holder removal

1. Remove the Cassette mechanism assembly.
2. Remove the spring holding the cassette holder.
3. Remove Cassette holder.

Fig 14 Side view

(15) Capstan motor removal.

1. Remove the cassette mechanism.
2. Remove the cassette deck control PCB.
3. Remove the 6 screws holding the bracket.
4. Remove the capstan motor with the bracket.
5. Remove the 2 screws fixing the motor and the bracket.

Fig 15 Cassette mechanism bottom view

(16) Head assembly

The direction of the head is changed with the head gear. When servicing, install the head gear according to the direction of the head.

Fig16 Head ass'y side view

(17) Pinch roller arm assembly removal

1. Release the hook holding the pinch roller arm assembly to remove the assembly.

Fig17 Cassette mechanism side view

(18) Fly wheel removal

1. Remove the cassette mechanism assembly.
 2. Remove the cassette controller PCB.
 3. Remove the 8 screws (E) and the bracket
- * The oil on the capstan must be wiped out after re-assembling.

Fig 18 Cassette mechanism bottom view

(19) Fly wheel assembly

1. Install the beltB of bossA, next install the beltA as shown in fig 19 up side.
2. Assemble the d the bracket with the capstan motor.
3. Hang the beltB of the motor pulley using a tweezers and the like as shown in fig 19 down side.

Fig 19 Fly wheel view

(20) Reel and cam motor removal

1. Remove the cassette mechanism assembly.
2. Remove the cassette controller PCB.
3. Remove the (15).
4. Remove the 2screws① and 2screws②.
5. Unsolder the reel and cam motor PCB.
6. Remove the motor.

Fig 20 Cassette mecha Top view

(21) Cam SW PCB removal

1. Remove the (18).
 2. Remove the reel and cam motor PCB.
 3. Remove the screw and hooks fixing the PCB to remove the Cam SW.
- When assembling the cam switch, install it so that the part ④ meets the part ⑤.

Fig 21 AMP PCB view

(22) Cassette controll PCB(ENJ-083)removal.

1. Remove the (1)(2)and (5).
2. Disconnect the 4 J303,J304.
3. Remove the 2screws ③ holding the Cassette controll PCB.
4. Remove the Cassette controll PCB.

Fig 22 Cassette mechanism Bottom view

(23) Head assembly removal

1. Remove the cassette mechanism assembly.
2. Remove the FPC wire to the Cassette controll PCB.
3. Remove the 3 screws ⑥ holding the Cassette controll PCB.

Fig 23 Front panel rear view

(24) CD mechanism removal

1. Remove the (1),(2) and (5).
2. Remove the screw ⑥.
3. Turn the screw located under the mechanism to remove the tray out of the loading mecha.
4. Remove the tray.

Fig 24 CD mechanism

(25) CD mecha Ass'y removal

1. Remove the (1),(2),(5).
2. Disconnect the P601.
3. Remove the 2 screws ⑥ to remove the clamp assembly.
4. Remove the 4 screws to remove the CD mecha Ass'y.

Fig 25 CD mechanism

(26) CD servo PCB removal

1. Remove the (1),(2),(6),(24),(25).
2. Remove the 3 screws ⑥ holding the CD servo PCB.
3. Remove the CD servo PCB.

Fig 10 CD mechanism bottom view

(10) Installing CD mecha. tray

1. Insert the CD mecha. tray after checking that the traverse mecha. is positioned slantingly.
2. If it is set horizontally, press the cam plate until it stops so that the traverse mecha. slants. (See an arrow in the following figure.)

Fig 27

⑥ ... SDSF2608Z

⑥ ... SBSF3008Z

⑥ ... SBST3006Z

(28) Pickup removal

1. Remove the cd mechanism assembly.
2. Release the shaft to remove the pickup (Fig 28).

Screw (K) Fig 28 CD mechanism assembly

(29) Spindle motor removal

1. Remove the cd mechanism assembly.
2. Remove the turntable, and remove the two screws retaining the spindle motor.
3. Remove the screws retaining the spindle and feed motor P.C. Board and unsolder it.

Fig 29

- (31) After inserting the turntable, bond the motor shaft and turntable together (at the section marked by an arrow in fig 15 on the left below).

Fig 31

(30) Spindle motor installation

1. Tighten the 2 screws to the same torque.
2. Fasten the spindle and feed motor P.C. board with the screw and solder.
3. Install the turntable. When installing, press straight down at the center of the turntable until the distance from the surface of the mechanism base to the turntable is exactly $19.4 \pm 0.1\text{mm}$.

Fig 30

- (32) Use "LOCKTITE" #460 bonding agent, and apply as little as possible. Take care not to allow any excess bonding agent to get onto the turntable. Be extremely careful not to allow bonding agent to adhere to the motor bearings (the section marked by an arrow in fig 31 on the right).

Adjustment Procedures

Tuner section

Figure 1

(1) Clock Adjustment

1. After connecting W814(TEST) and W813(GND) with some wire, connect ac power cord into ac outlet.
2. Confirm that the display is off and remove the wire.
3. Connect a frequency counter to W812(F OUT) and W813.
4. Adjust TC801 so that the frequency becomes $50000 \pm 0.29\text{Hz}$.

(2) Tuning voltage

Confirm the voltages in the table below at TP101. If the voltages are not satisfied, replace T101 for AM or FE101 for FM.

FM Tuning voltage (Unit : V)

Frequency	FM		AM	
	87.5MHz	108MHz	522kHz	1629KHz
Tuning voltage	1.6 ± 1.0	8.0 ± 2.0	1.0 ± 0.2	7.5 ± 0.8

(3) FM center meter

TW-2231	—	—	Feed forward / rewind torque measuring
C-120 Tape	—	—	Confirming the tape running

2. Adjustment and repairing the mechanism

Item	Adjustment method	Standard value	Remarks
Head azimuth	Deck A 1. Connect an electronic voltmeter to the DOLBY TP (figure 1) to playback VTT-703L. 2. Adjust screw ① so that the indication of the voltmeter becomes maximum when PLAY (▶) is pressed. 3. Adjust screw ② so that the indication of the voltmeter becomes maximum when PLAY (◀) is pressed. Deck B 4. Adjust screw ③ so that the indication of the voltmeter becomes maximum when PLAY (▶) is pressed. 5. Adjust screw ④ so that the indication of the voltmeter becomes maximum when PLAY (◀) is pressed. 6. After making the adjustment, apply screw lock to prevent screws ①, ②, ③ and ④ coming loose.	Maximum	1. Refer to figure 5. 2. When the specified characteristic cannot be obtained because of head wear, excessive magnetization, etc., replace the head assembly and adjust the head azimuth. Also, perform the electric adjustment. 3. When there is the difference of more than 3 ~ 4 dB between left and right output levels, replace the head assembly to avoid complaints.
Playback torque	1. Measure the torque in the playback mode by the torqu meter.	26 ~ 62 g-cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Fast forward torque	1. Measure the torque in the fast forward mode by the torqu meter.	80 ~ 170 g-cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Wow & flutter	1. Connect the wow & flutter meter to the DOLBY TP (figure 1) and play back VTT-712. 2. Its reading should be within 0.2% (WRMS).	Less than 0.2%	As a complaint may occur if the wow & flutter fluctuates by 0.1% even though it is allowed in the standard, repairing is required.
Auto stop			

Deck A

Deck B

Figure 5

3. Electrical Adjustments (Make the following adjustments after adjusting the head azimuth.)

In principle, the adjustments should be made in the following sequence.

Set the NR switch to OFF and the BEAT CUT switch to "1".

Adjustments marked with an asterisk (*) should always be made after the head is replaced

0dBs = 0.775V

	Item	Adjustment Method	Adjustment Location	Standard Value	Remarks
1	Tape Speed	1. Connect a frequency counter to the DOLBY TP (figure 1) and play back VTT-712. 2. Normal speed Adjustment 1) Mechanism B Play back deck B to adjust the semi-fixed resistor R948. 2) Mechanism A Play back deck A to confirm that the difference between deck A and deck B is within $\pm 51\text{Hz}$.	R948	3,000 Hz $\pm 10\text{Hz}$	1) Adjust the normal speed first, and perform the high speed adjustment.

	Item	Adjustment Method	Adjustment Location	Standard Value	Remarks
* 2	Standard level (Playback Level)	1. Connect an electronic voltmeter to the DOLBY TP (figure 1). Play back VTT-724 (1 kHz : -4dBs) to adjust the semi-fixed resistors.	Deck A L: R311 R: R312 Deck B L: R333 R: R334	-5.5dBs (411mV) $\pm 1\text{dB}$	1) The playback level varies when the head is replaced so should be adjusted. Use an electronic voltmeter with an impedance of 100 k Ω or more.
* 3	Playback Frequency Response	1. Connect an electronic voltmeter to the DOLBY TP (figure 1). 2. Play VTT-703L (10kHz : -10dBs) and adjust semi-fixed resistors to obtain the standard values.	Deck A L: R303 R: R304 Deck B L: R323 R: R324	-11.5dBs (206mV) $\pm 3\text{dB}$	—
* 4	Recording Bias Frequency	1. Connect a frequency counter to the BIAS TP (figure 1), and perform a recording to adjust bias frequency.	L331	100 kHz +10kHz -5kHz	—
* 5	Record / Play Frequency Response (Bias current)	1. Supply 1kHz and 12.5kHz with 30mV signals to PHONO/AUX terminals respectively to record them. 2. Connect an electronic voltmeter to the DOLBY TP (figure 1) to confirm the recorded values. 3. If the values are not satisfied, adjust the semi-fixed resistors and record the signal again to confirm the recorded values.	L: R355 R: R356	$0 \pm 2\text{ dB}$ with 1 kHz as the standard.	Refer to figure 6 below. 1) The recording and playback frequency response of a cassette deck are adjusted by adjusting the bias. 2) Perform the adjustment with normal tape and confirm that the values are within the range for metal tape.
* 6	Record / Playback Sensitivity	1. Input a 1 kHz (-8.2dBs: 300mV) signal to PHONO / AUX terminals and record it on the left and right channels. 2. Connect an electronic voltmeter to the DOLBY TP (figure 1) to confirm the recorded values. 3. If the values are not satisfied, adjust the semi-fixed resistors and record the signal again to confirm the recorded values.	L: R205 R: R206	-5.5dBs (411mV) $\pm 1\text{dB}$	Adjust with normal tape and make sure that the left / right level difference is 1.0dB or less
* 7	Erase ratio check	1. Record a music source using the Metal tape. 2. Rewind and erase the recorded section. 3. Confirm nothing can be heard.	—	—	—
* 8	Music Scan	1. Make sure not to work the music scanning operation at the start of tape wind using TMT-6237. 2. Make sure to work the music scanning operation at the end of tape wind using TMT-6247.	—	—	—

Figure 6

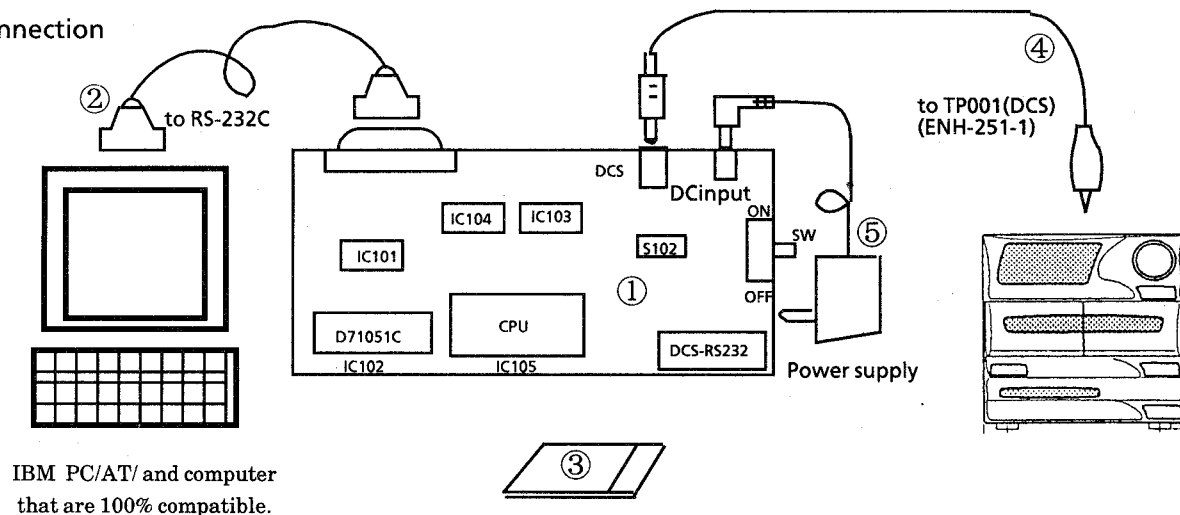

Self-diagnosis for pickup

From DCS output, this model reads automatically adjusted data for CD so that the pickup can be judged defective or not. Following shows its details.

1. Necessary items

- ① DCS → 232C Converting board(No.EBSJ1019)
- ② 232C cord (straight)
- ③ Floppy disc for self-diagnosis (No.EBSJ1021)
- ④ DCS cord
- ⑤ Power supply DC 6.3V (AA-SV11J--America/Canada) (AA-SV11Bs--the UK)
(AA-SV11G--Germany) (AA-SV11EF--Continental Europe) (AA-SV11U--
Universal type)
- ⑥ CD (without scratches or damage)

2. Connection

For this diagnosis, a device driver for RS232C cord (straight type) is necessary.

(Ex.) C:\DOS MODE COM1:9600, N 8 1

↑ ↑ ↑ ↑

adapter number(1or2) band rate parity data bit stop bit

3. Procedure

- ① Turn the converting board's switch on after connecting between CA-S200 and the above necessary items
Set S102(switching DCS positive from/to negative logic) so that GREEN can emit red(positive logic).
- ② Put a disc on the tray and close it to read TOC.
Do not press the play button.
- ③ Input "AUTO 01" on personal computer's keyboard and the CD's automatic adjustment value and judgment for the pickup are displayed on the screen.

4. Judgment

To judge whether pickup is defective or not, firstly process of automatic adjustment is checked by automatic adjustment flag. And, the value(automatic adjustment value for focus gain) displayed on the screen is used for its final judgment.

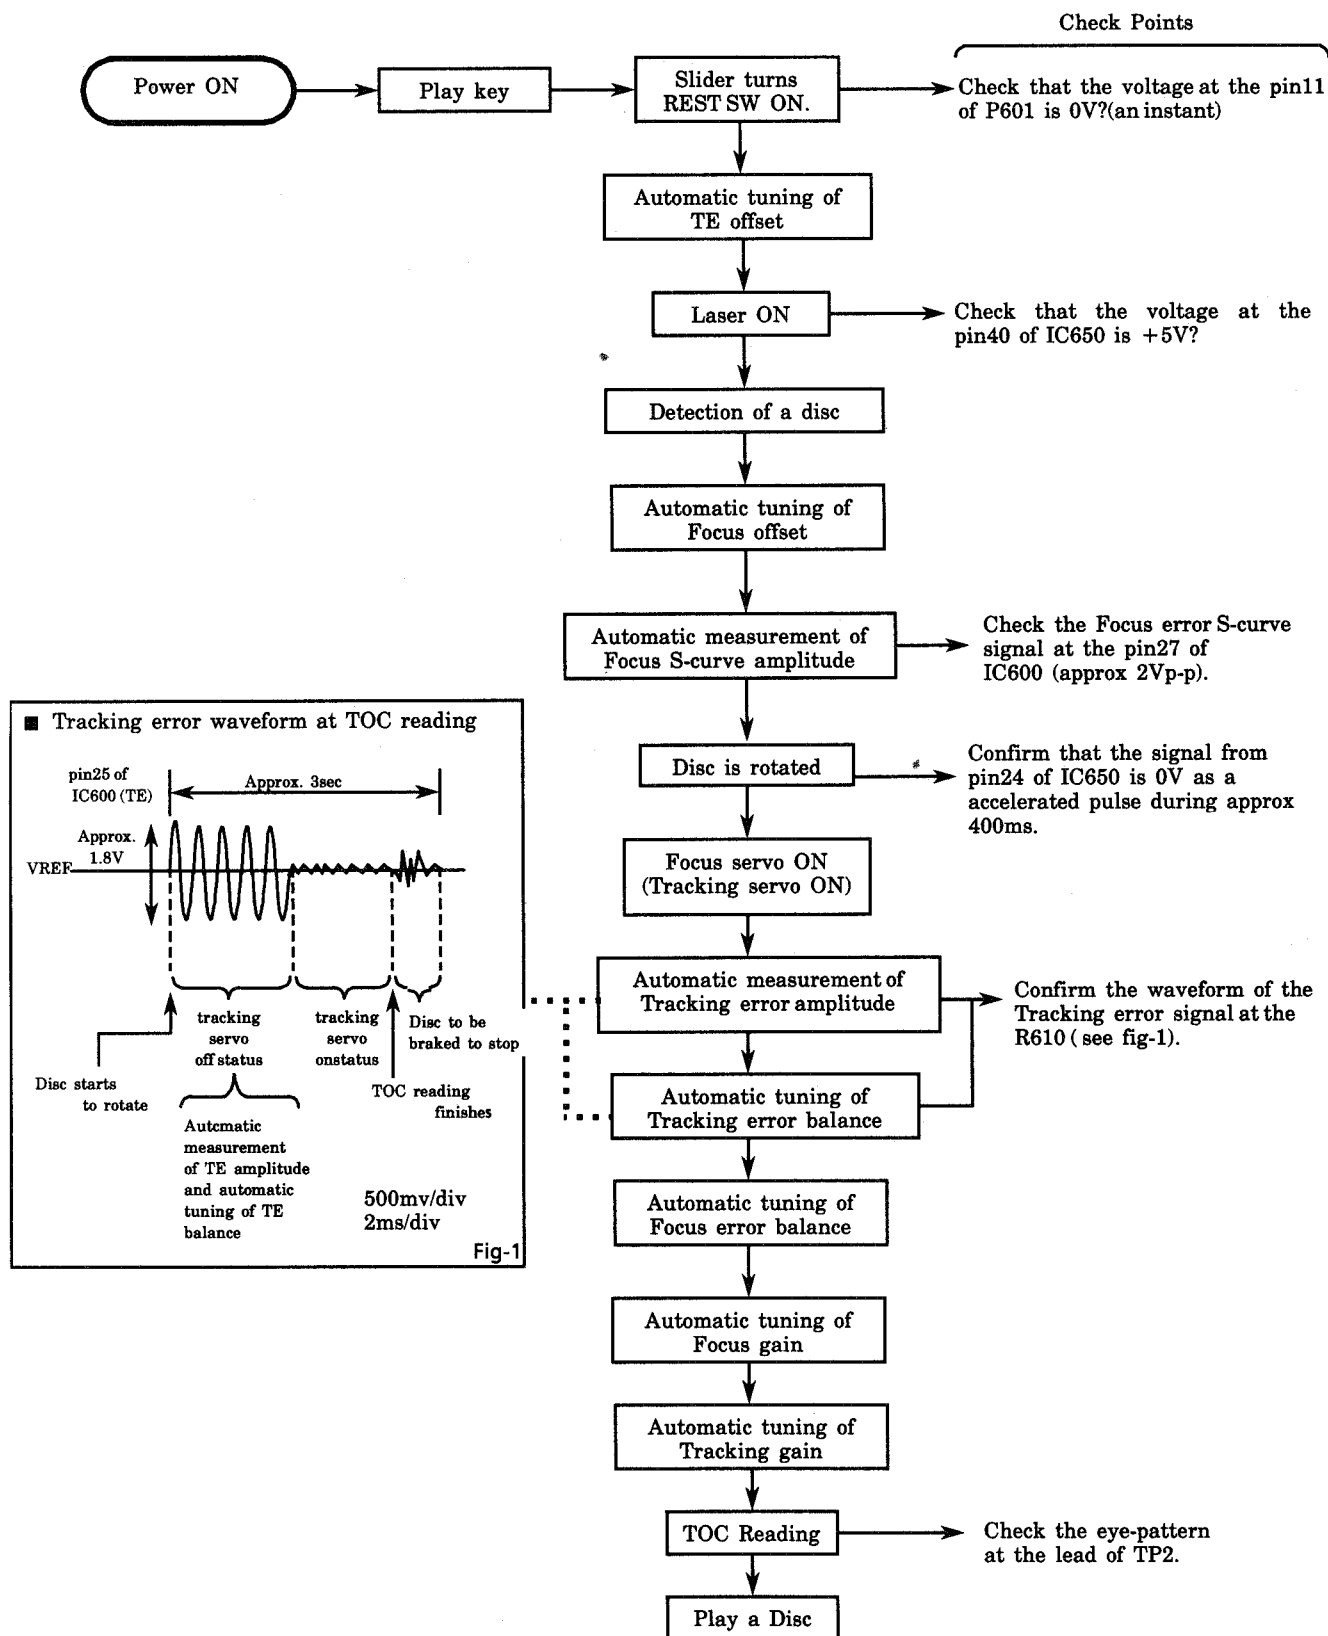

It is supposed that the pickup is defective or the signal path is faulty if the Flag1 or Flag0 indicates not "F" but a figure.

(See the following example.)

Flag1	Flag0	Details	Supposed cause
0	0	Automatic adjustment for tracking offset is failed.	The automatic adjustment is not completed. (Trouble in circuit.)
0	1	Automatic adjustment for focus offset is failed. (Disc does not rotate.)	The lens does not move. (Power supply is not turned on. Wire is cut.)
0	3	Automatic rough adjustment for focus gain is failed.	
0	7	Automatic rough adjustment for tracking gain is failed. (The focus and tracking gain are not locked though the disc rotates.)	Laser deterioration (low RF signal output). Offset beam.
0	F	Disc rotates, focus and tracking gain are locked and automatic rough adjustment for tracking gain is also completed though automatic adjustment for tracking balance is failed.	Laser deterioration (low RF signal output). Offset beam.
1	F	Automatic adjustment for focus balance is failed. (TOC is not read though the disc rotates.)	RF signal output is low. Tracking loop is not turned on. RF jitter is too much.
3	F	Automatic rough adjustment for focus gain is failed.	
7	F	Automatic rough adjustment for tracking gain is failed.	
F	F	All automatic adjustments are completed.	

The pickup is judged defective though the Flag0 and Flag1 indicate "F" and those adjustments are completed if the adjustment value exceeds 19dB.

Flow of Functional Operation Until TOC is Read

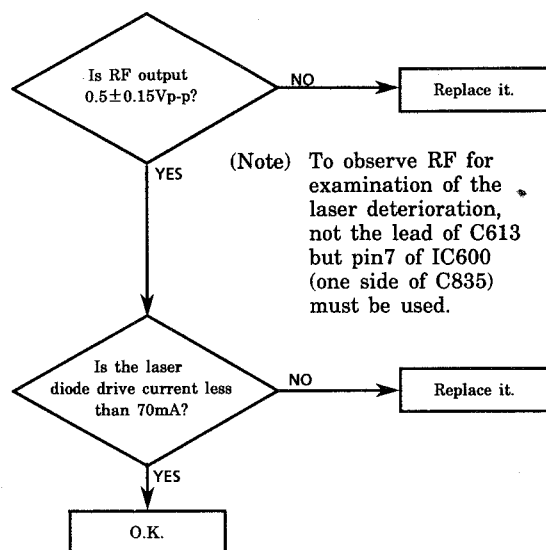

Maintenance of Laser Pickup

(1) Life of the laser diode

When the life of the laser diode has expired, the following symptoms will appear.

1. The level of RF output (EFM output: amplitude of eye pattern) will be low.
2. The drive current required by the laser diode will be increased. In such a case, check the life of the laser diode following the flowchart below.

(2) Measurement of laser diode drive current

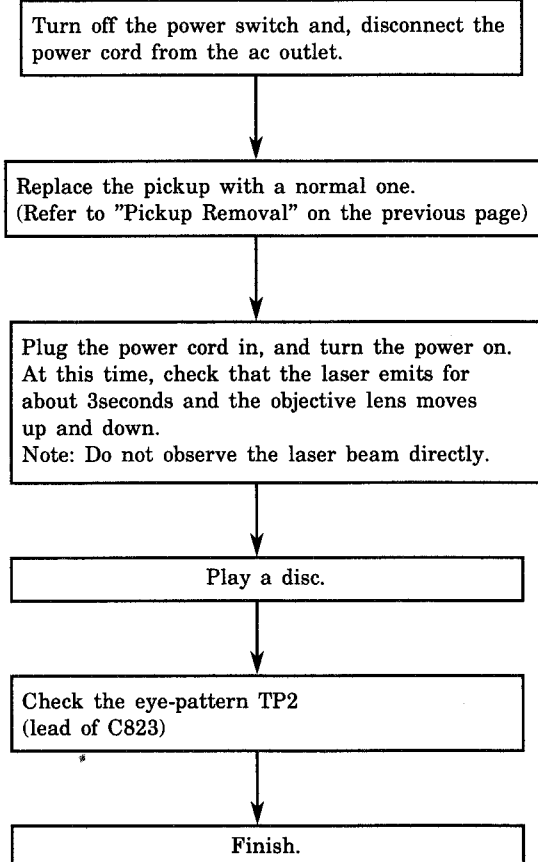

Replace the jump wire (W101) shown below with the resistor (1Ω). Measure the voltage across the resistor (1Ω) with a milli-voltmeter. When the voltage is more than 70mV, it shows that the life of the laser diode has expired.

(3) Semi-fixed resistor on the APC PC board

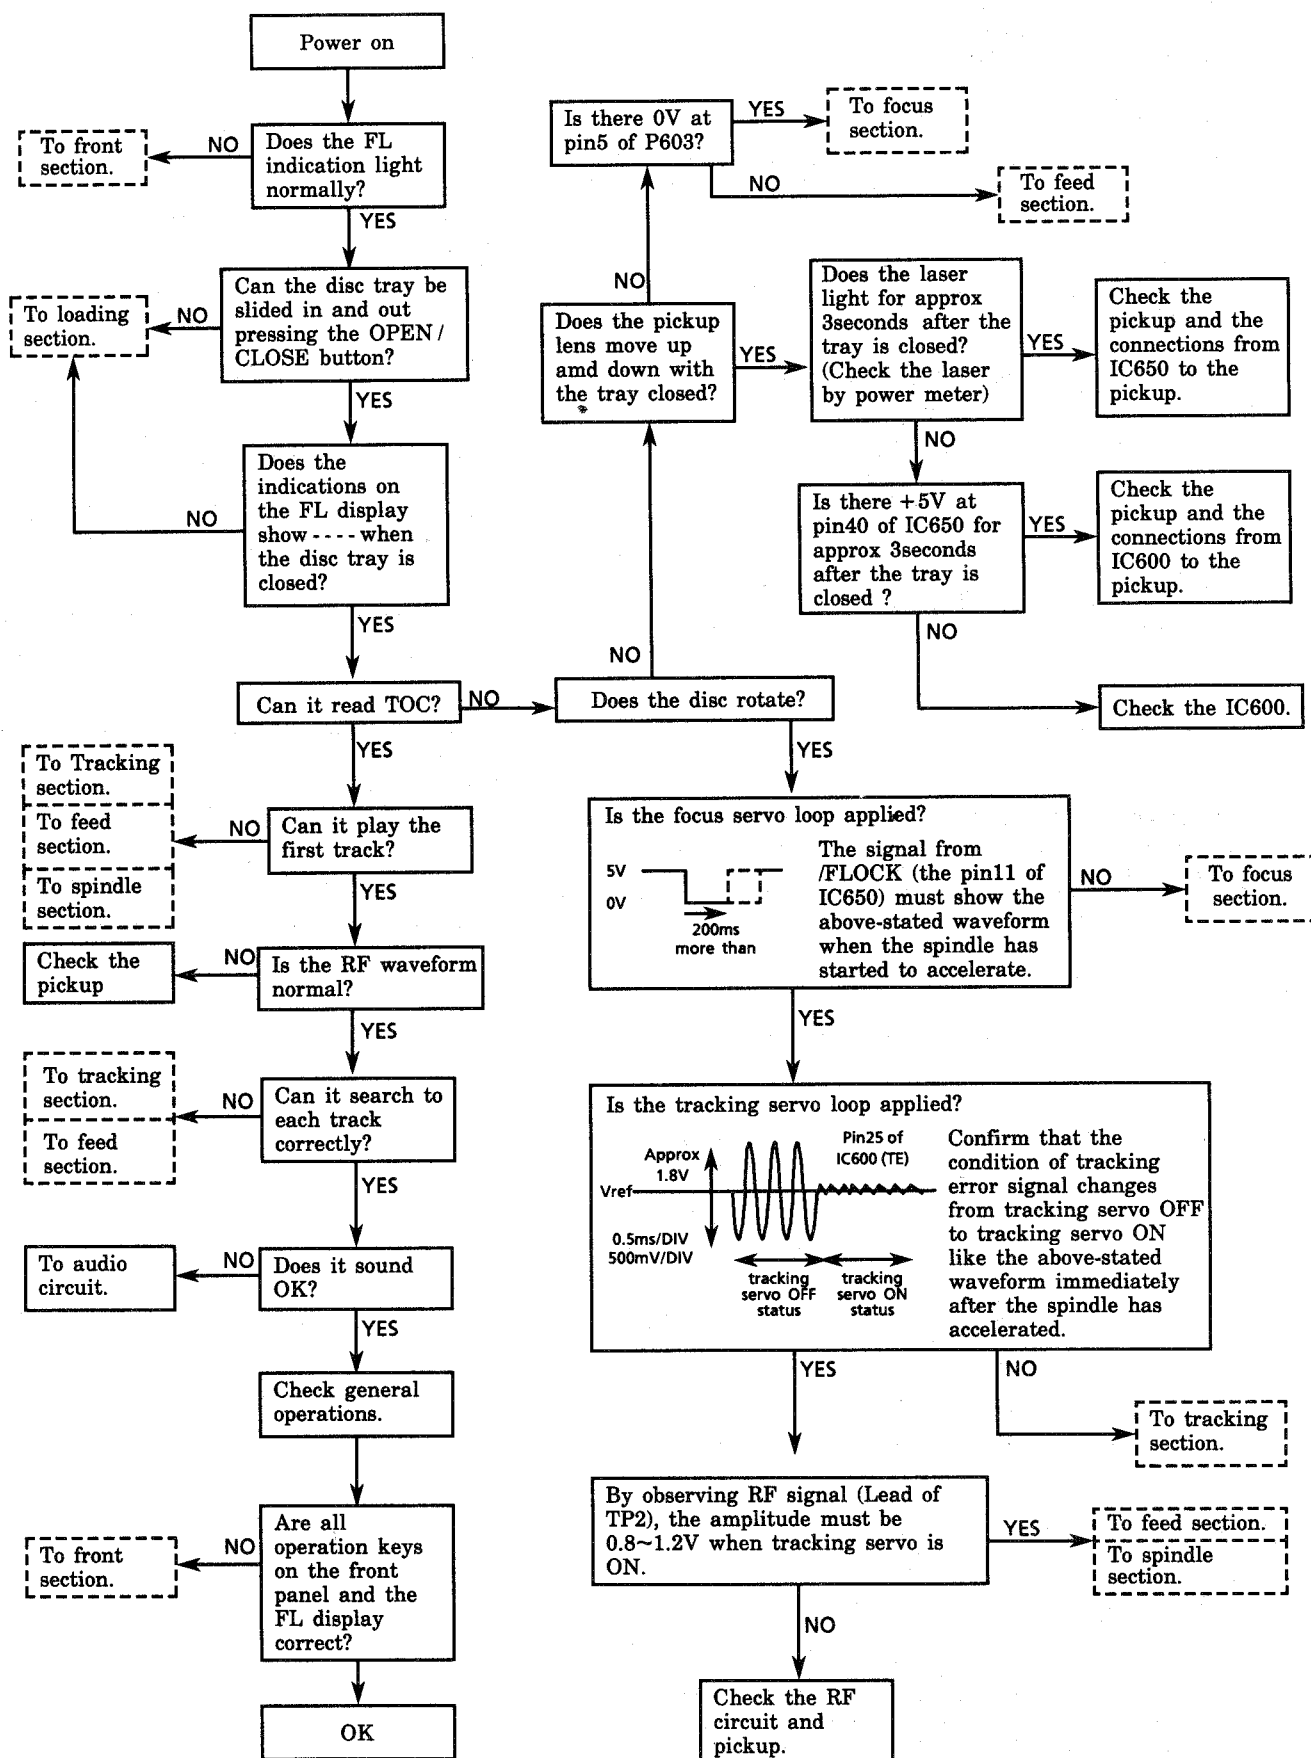

The semi-fixed resistor on the APC printed circuit board which is attached to the pickup is used to adjust the laser power. Since this adjustment should be performed to match the characteristics of the whole optical block, do not touch the semi-fixed resistor. If the laser power is lower than the specified value, the laser diode is almost worn out, and the laser pickup should be replaced. If the semi-fixed resistor is adjusted while the pickup is functioning normally, the laser pickup may be damaged due to excessive current.

Replacement of Laser Pickup

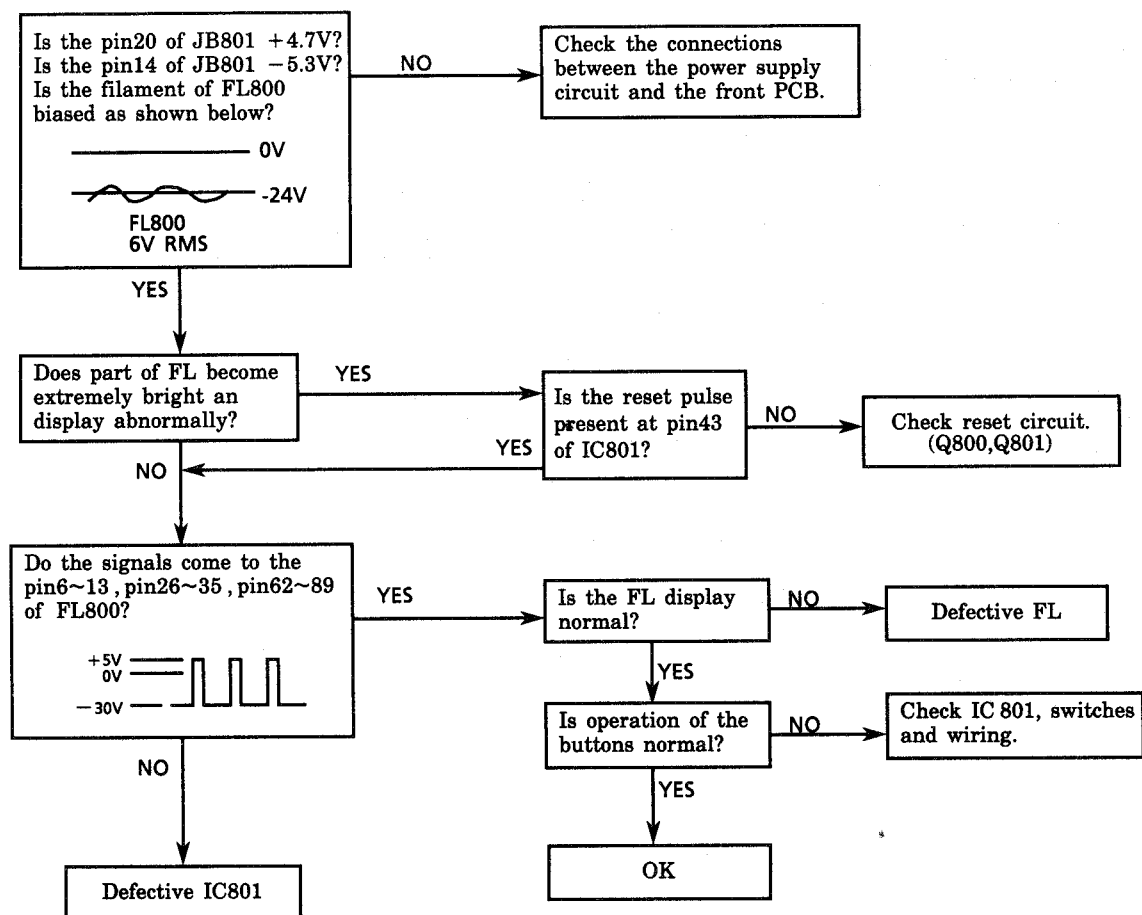

Troubleshooting

The following shows the status of the various circuits from turning on the power to the start of disc play.

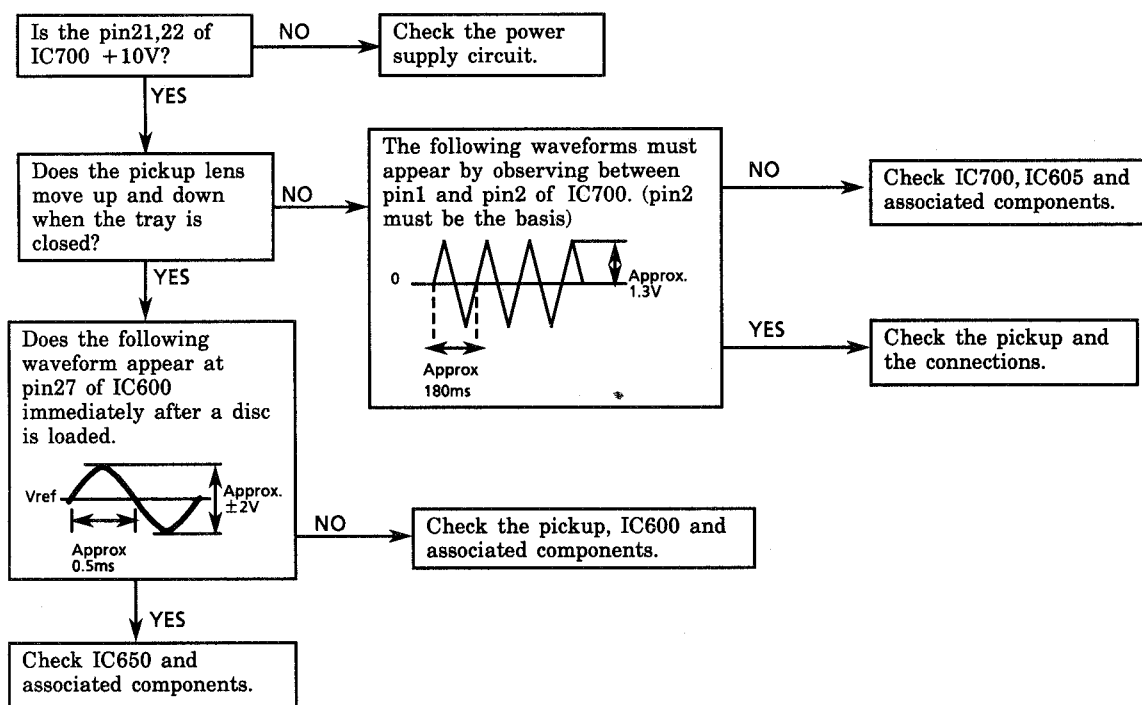

Front Section

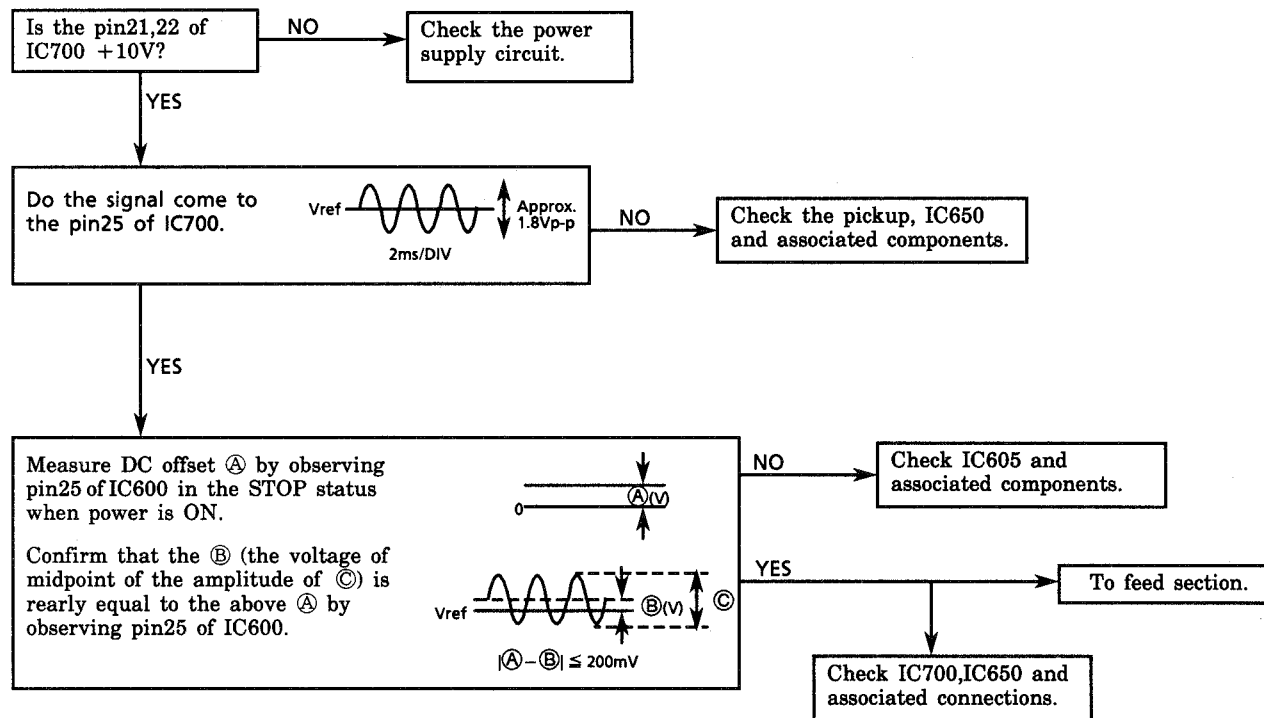

Focus section

Note) When checking the voltages between pin1 and pin2 of IC700 with an oscilloscope, do not connect the other probes.

■ CD Servo P.C. Board (ENN-422)

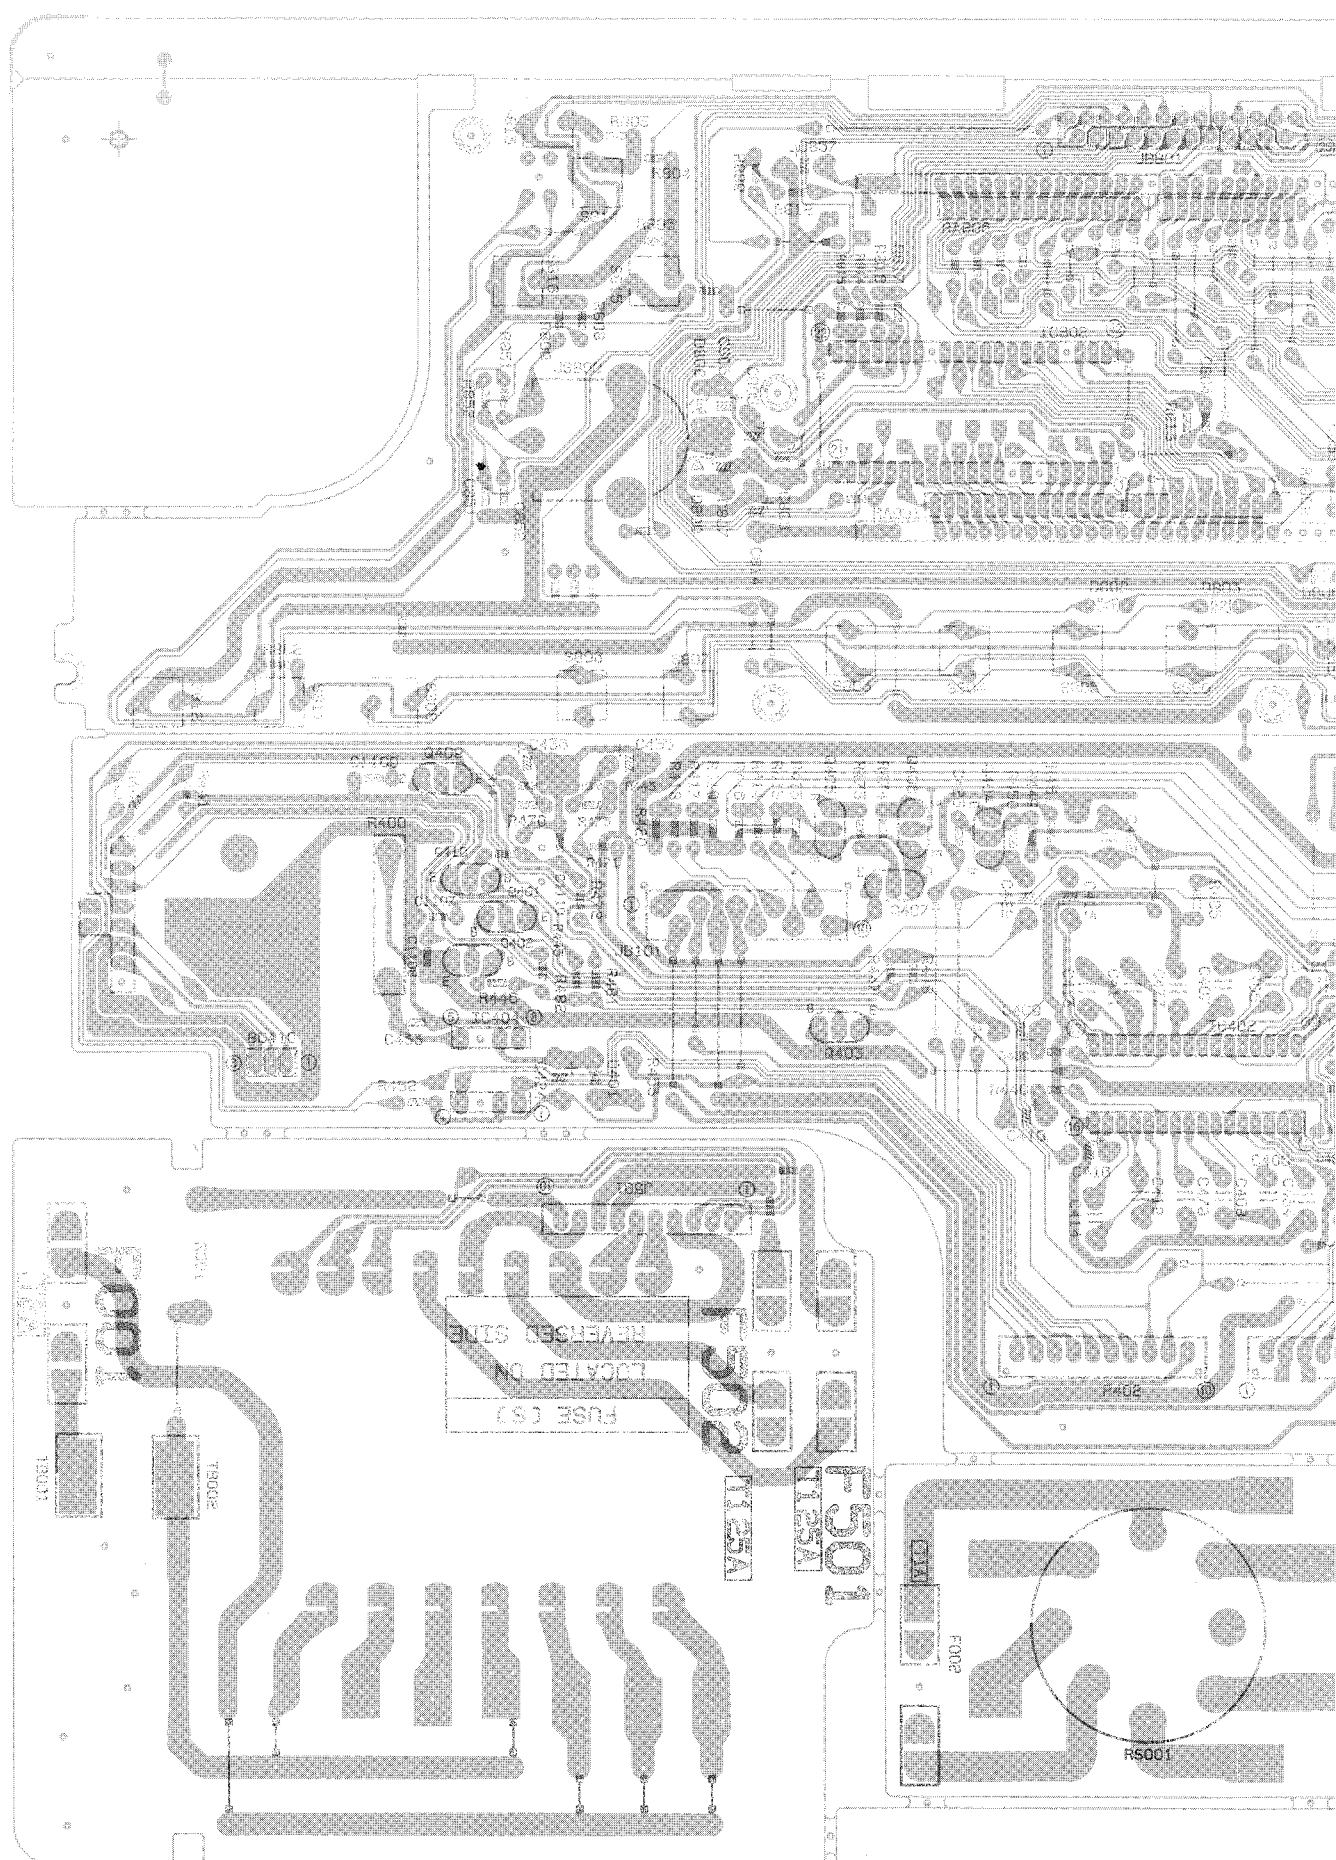

This image shows a top-down view of a printed circuit board (PCB) layout. The board is populated with numerous electronic components, including integrated circuits (ICs), resistors, and capacitors. The components are interconnected by a complex network of copper traces. The layout is dense, with components packed closely together. The PCB is mounted on a dark, textured surface.

Key components and labels visible on the board include:

- ICs:** U101, U102, U103, U104, U105, U106, U107, U108, U109, U110, U111, U112, U113, U114, U115, U116, U117, U118, U119, U120, U121, U122, U123, U124, U125, U126, U127, U128, U129, U130, U131, U132, U133, U134, U135, U136, U137, U138, U139, U140, U141, U142, U143, U144, U145, U146, U147, U148, U149, U150, U151, U152, U153, U154, U155, U156, U157, U158, U159, U160, U161, U162, U163, U164, U165, U166, U167, U168, U169, U170, U171, U172, U173, U174, U175, U176, U177, U178, U179, U180, U181, U182, U183, U184, U185, U186, U187, U188, U189, U190, U191, U192, U193, U194, U195, U196, U197, U198, U199, U200.
- Resistors:** R101, R102, R103, R104, R105, R106, R107, R108, R109, R110, R111, R112, R113, R114, R115, R116, R117, R118, R119, R120, R121, R122, R123, R124, R125, R126, R127, R128, R129, R130, R131, R132, R133, R134, R135, R136, R137, R138, R139, R140, R141, R142, R143, R144, R145, R146, R147, R148, R149, R150, R151, R152, R153, R154, R155, R156, R157, R158, R159, R160, R161, R162, R163, R164, R165, R166, R167, R168, R169, R170, R171, R172, R173, R174, R175, R176, R177, R178, R179, R180, R181, R182, R183, R184, R185, R186, R187, R188, R189, R190, R191, R192, R193, R194, R195, R196, R197, R198, R199, R200.
- Capacitors:** C101, C102, C103, C104, C105, C106, C107, C108, C109, C110, C111, C112, C113, C114, C115, C116, C117, C118, C119, C120, C121, C122, C123, C124, C125, C126, C127, C128, C129, C130, C131, C132, C133, C134, C135, C136, C137, C138, C139, C140, C141, C142, C143, C144, C145, C146, C147, C148, C149, C150, C151, C152, C153, C154, C155, C156, C157, C158, C159, C160, C161, C162, C163, C164, C165, C166, C167, C168, C169, C170, C171, C172, C173, C174, C175, C176, C177, C178, C179, C180, C181, C182, C183, C184, C185, C186, C187, C188, C189, C190, C191, C192, C193, C194, C195, C196, C197, C198, C199, C200.
