

# CL-P1 TURNTABLE BASE

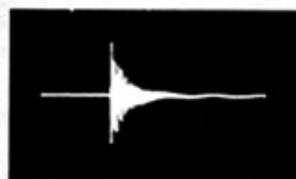

Customized turntable installations benefit in better sound *and* better appearance with this handsome unit crafted in the finest of materials by JVC. It is sized to accept the JVC Quartz-Locked Turntable units TT-101 and TT-81. The tonearm board accepts all arms easily.

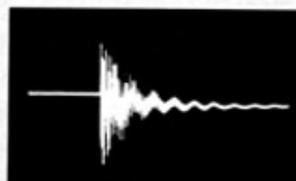

## Resonance-Free Seven-Layered Cabinet

The cabinet is so heavy and dense it would sink

## VIBRATION ATTENUATION RESPONSES OF VARIOUS CABINET MATERIALS

Layered Particleboard sandwiching Special Inorganic Board

Layered Wooden Board

Die-Cast Metal Board

if you put it in water. It is made of four layers of high-density particleboard sandwiching three layers of special inorganic material to completely absorb all external and internal vibrations. Cabinet resonance is avoided by a special design. The CL-P1 is finished in beautiful natural walnut veneer.

## Tonearm Board

The board is constructed of NR (Non-Resonant) polymer materials to attenuate external vibrations effectively. Any tonearm with an effective length from 230mm to 245mm can be mounted. An additional board, Model PB-1, is also available.

## Double-Cushion Insulators

To prevent howling and to absorb external vibration, the CL-P1 uses double-cushion insulators that are twice as effective as conventional types. The height of each insulator can be adjusted to maintain horizontal leveling.

## Acrylic Dust Cover

The cover is so heavy that it resists vibration caused by high sound pressure. Its free-hinged design lets it be left open at any angle from 30 to 60 degrees.

## SPECIFICATIONS

Dimensions (H x W x D) (including Cover):	202mm x 510mm x 410mm (7-61/64" x 20-5/64" x 16-9/64")
Weight:	8.8kg (19.4 lbs.) including cover
Suitable Motor Units:	TT-101, TT-81
