Important Safety Precautions

Prior to shipment from the factory, JVC products are strictly inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

●Precautions during Servicing

1. Locations requiring special caution are denoted by labels and inscriptions on the cabinet, chassis and certain parts of the product. When performing service, be sure to read and comply with these and other cautionary notices appearing in the operation and service manuals.

2. Parts identified by the Δ symbol and shaded (■) parts are critical for safety.

Replace only with specified part numbers.

Note: Parts in this category also include those specified to comply with X-ray emission standards for products using cathode ray tubes and those specified for compliance with various regulations regarding spurious radiation emission.

3. Fuse replacement caution notice.

Caution for continued protection against fire hazard.
Replace only with same type and rated fuse(s) as specified.

4. Use specified internal wiring. Note especially:

- 1) Wires covered with PVC tubing
- 2) Double insulated wires
- 3) High voltage leads

5. Use specified insulating materials for hazardous live parts.

Note especially:

- | | | |
|--------------------|--------------------------------------|------------|
| 1) Insulation Tape | 3) Spacers | 5) Barrier |
| 2) PVC tubing | 4) Insulation sheets for transistors | |

6. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.) wrap ends of wires securely about the terminals before soldering.

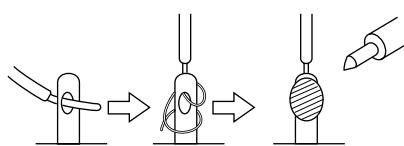

Fig.1

7. Observe that wires do not contact heat producing parts (heatsinks, oxide metal film resistors, fusible resistors, etc.)

8. Check that replaced wires do not contact sharp edged or pointed parts.

9. When a power cord has been replaced, check that 10-15 kg of force in any direction will not loosen it.

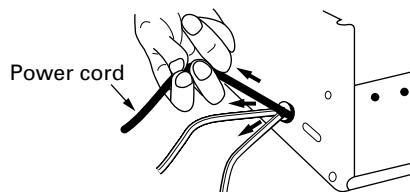

Fig.2

10. Also check areas surrounding repaired locations.

11. Products using cathode ray tubes (CRTs)

In regard to such products, the cathode ray tubes themselves, the high voltage circuits, and related circuits are specified for compliance with recognized codes pertaining to X-ray emission. Consequently, when servicing these products, replace the cathode ray tubes and other parts with only the specified parts. Under no circumstances attempt to modify these circuits. Unauthorized modification can increase the high voltage value and cause X-ray emission from the cathode ray tube.

12. Crimp type wire connector

In such cases as when replacing the power transformer in sets where the connections between the power cord and power transformer primary lead wires are performed using crimp type connectors, if replacing the connectors is unavoidable, in order to prevent safety hazards, perform carefully and precisely according to the following steps.

1) **Connector part number :** E03830-001

2) **Required tool :** Connector crimping tool of the proper type which will not damage insulated parts.

3) **Replacement procedure**

(1) Remove the old connector by cutting the wires at a point close to the connector.

Important : Do not reuse a connector (discard it).

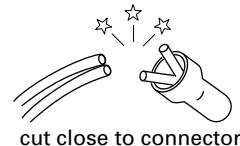

Fig.3

(2) Strip about 15 mm of the insulation from the ends of the wires. If the wires are stranded, twist the strands to avoid frayed conductors.

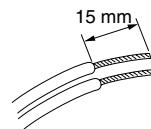

Fig.4

(3) Align the lengths of the wires to be connected. Insert the wires fully into the connector.

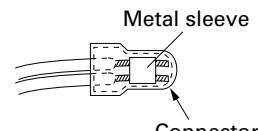

Fig.5

(4) As shown in Fig.6, use the crimping tool to crimp the metal sleeve at the center position. Be sure to crimp fully to the complete closure of the tool.

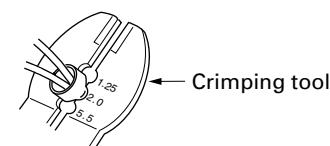

Fig.6

(5) Check the four points noted in Fig.7.

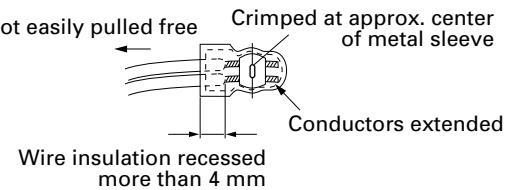

Fig.7

● Safety Check after Servicing

Examine the area surrounding the repaired location for damage or deterioration. Observe that screws, parts and wires have been returned to original positions. Afterwards, perform the following tests and confirm the specified values in order to verify compliance with safety standards.

1. Insulation resistance test

Confirm the specified insulation resistance or greater between power cord plug prongs and externally exposed parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

2. Dielectric strength test

Confirm specified dielectric strength or greater between power cord plug prongs and exposed accessible parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

3. Clearance distance

When replacing primary circuit components, confirm specified clearance distance (d), (d') between soldered terminals, and between terminals and surrounding metallic parts. See table 1 below.

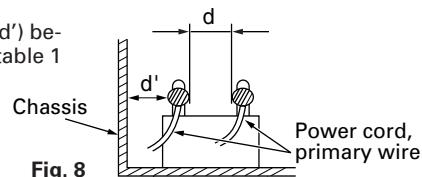

Fig. 8

4. Leakage current test

Confirm specified or lower leakage current between earth ground/power cord plug prongs and externally exposed accessible parts (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.).

Measuring Method : (Power ON)

Insert load Z between earth ground/power cord plug prongs and externally exposed accessible parts. Use an AC voltmeter to measure across both terminals of load Z. See figure 9 and following table 2.

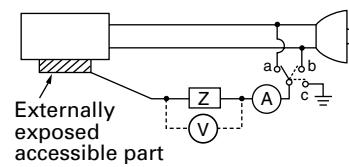

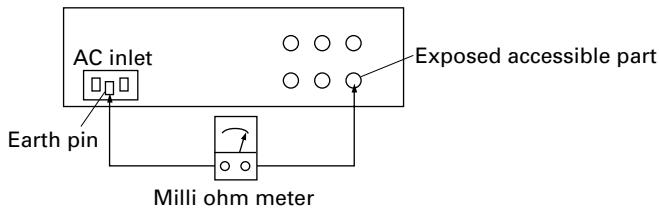

Fig. 9

5. Grounding (Class I model only)

Confirm specified or lower grounding impedance between earth pin in AC inlet and externally exposed accessible parts (Video in, Video out, Audio in, Audio out or Fixing screw etc.).

Measuring Method:

Connect milli ohm meter between earth pin in AC inlet and exposed accessible parts. See figure 10 and grounding specifications.

Grounding Specifications

Region	Grounding Impedance (Z)
USA & Canada	$Z \leq 0.1 \text{ ohm}$
Europe & Australia	$Z \leq 0.5 \text{ ohm}$

Fig. 10

AC Line Voltage	Region	Insulation Resistance (R)	Dielectric Strength	Clearance Distance (d), (d')
100 V	Japan	$R \geq 1 \text{ M}\Omega/500 \text{ V DC}$	AC 1 kV 1 minute	$d, d' \geq 3 \text{ mm}$
100 to 240 V			AC 1.5 kV 1 minute	$d, d' \geq 4 \text{ mm}$
110 to 130 V	USA & Canada	—	AC 900 V 1 minute	$d, d' \geq 3.2 \text{ mm}$
110 to 130 V 200 to 240 V	Europe & Australia	$R \geq 10 \text{ M}\Omega/500 \text{ V DC}$	AC 3 kV 1 minute (Class II) AC 1.5 kV 1 minute (Class I)	$d \geq 4 \text{ mm}$ $d' \geq 8 \text{ mm} \text{ (Power cord)}$ $d' \geq 6 \text{ mm} \text{ (Primary wire)}$

Table 1 Specifications for each region

AC Line Voltage	Region	Load Z	Leakage Current (i)	a, b, c
100 V	Japan	$\textcircled{o} - \textcircled{\wedge} \textcircled{\wedge} - \textcircled{o}$ 1 k Ω	$i \leq 1 \text{ mA rms}$	Exposed accessible parts
110 to 130 V	USA & Canada	$0.15 \mu\text{F} - \textcircled{\wedge} \textcircled{\wedge} - 1.5 \text{k}\Omega$	$i \leq 0.5 \text{ mA rms}$	Exposed accessible parts
110 to 130 V 220 to 240 V	Europe & Australia	$\textcircled{o} - \textcircled{\wedge} \textcircled{\wedge} - \textcircled{o}$ 2 k Ω	$i \leq 0.7 \text{ mA peak}$ $i \leq 2 \text{ mA dc}$	Antenna earth terminals
		$\textcircled{o} - \textcircled{\wedge} \textcircled{\wedge} - \textcircled{o}$ 50 k Ω	$i \leq 0.7 \text{ mA peak}$ $i \leq 2 \text{ mA dc}$	Other terminals

Table 2 Leakage current specifications for each region

Note: These tables are unofficial and for reference only. Be sure to confirm the precise values for your particular country and locality.

SECTION 1

SERVICE CAUTIONS AND DISASSEMBLY

1.1 HOW TO REMOVE THE COSMETIC PARTS

1.1.1 Left side cover

- (1) Remove the two screws ①, slide the cassette cover downward and pull out to remove.

Fig. 1.1.1 (1)

Note :

When attaching the cassette cover, make sure to insert the hook of the cassette cover to the correct position of the cassette housing.

- (2) Remove the two screws ②.

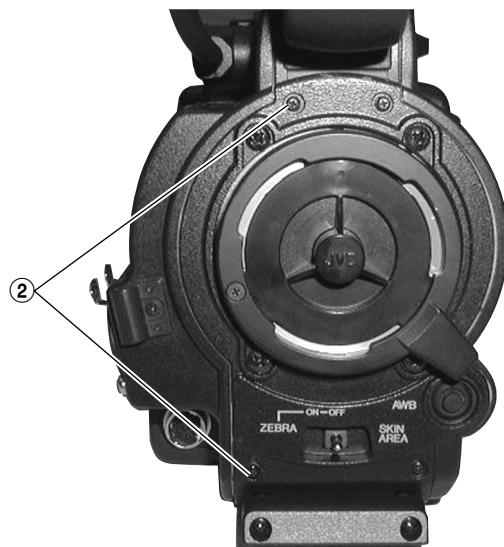

Fig. 1.1.1 (2)

- (3) Remove the two screws ③ and open the left side cover.

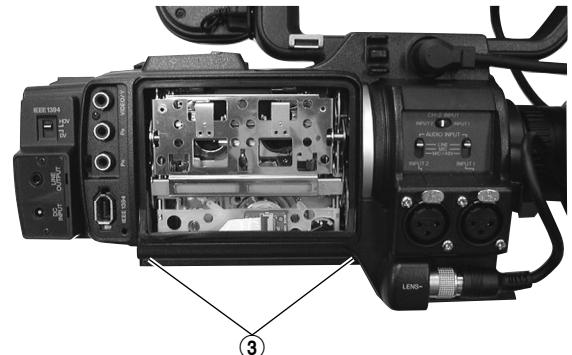

Fig. 1.1.1 (3)

- (4) Disconnect the cables CN13 and CN43.

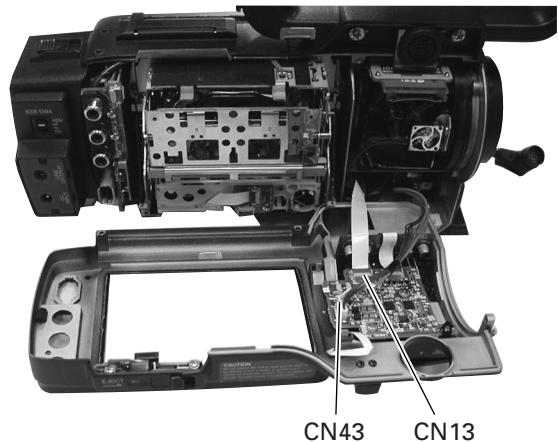

Fig. 1.1.1 (4)

1.1.2 Right side cover

- (1) Remove the five screws ④ and open the right side cover.

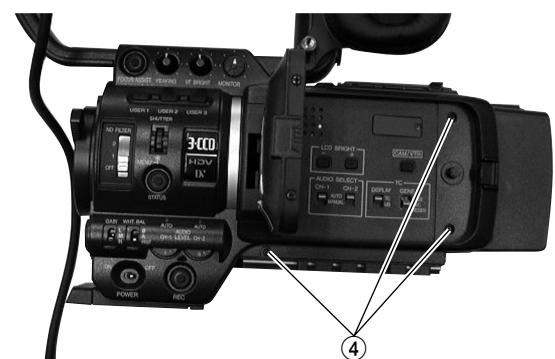

Fig. 1.1.2 (1)

1.2 HOW TO REMOVE THE OPTICAL BLOCK ASSEMBLY

CAUTION

When removing/mounting the optical block assembly in the camera, take care not to damage cables, also the positioning of the wire assembly is important. A malfunction may occur if a wire is somehow caught up.

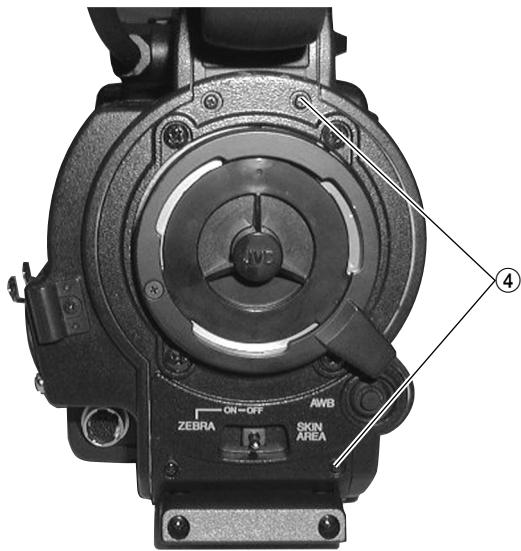

Fig. 1.1.2 (2)

- (2) Disconnect the cables CN14, CN24 and CN43 on AUDIO board, CN10 and CN52 on STA board, CN52 on SWP board.

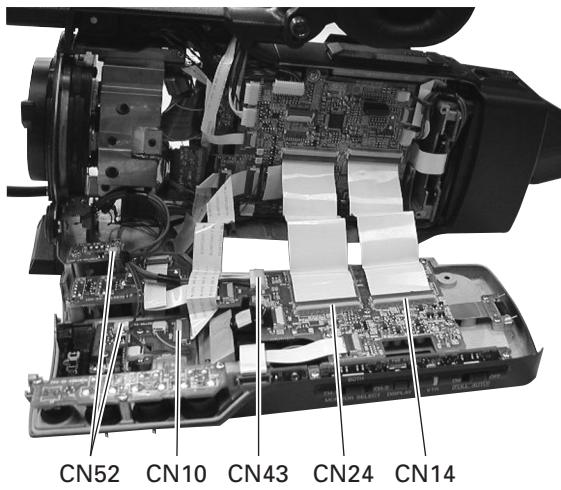

Fig. 1.1.2 (3)

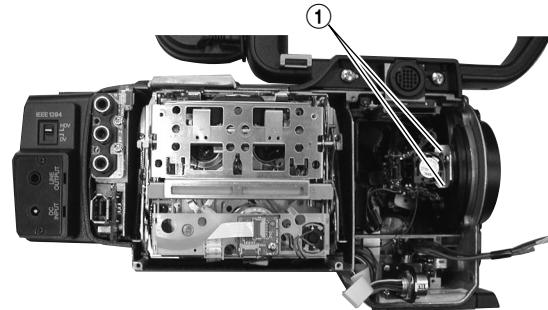

Fig. 1.2 (1)

- (3) Remove the two screws ② and remove the SD board.
(4) Disconnect the cables CN26, CN27 and CN28.

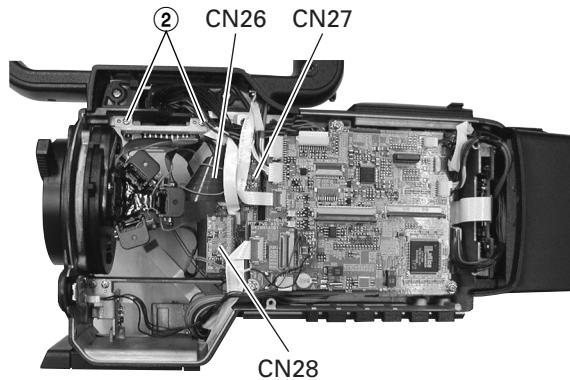

Fig. 1.2 (2)

- (5) Remove the five screws ③ 3 and ④ , then remove the optical block assembly carefully not to damage boards and cables.

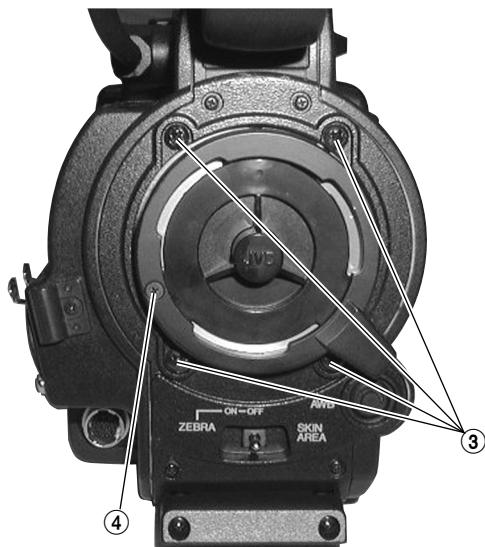

Fig. 1.2 (3)

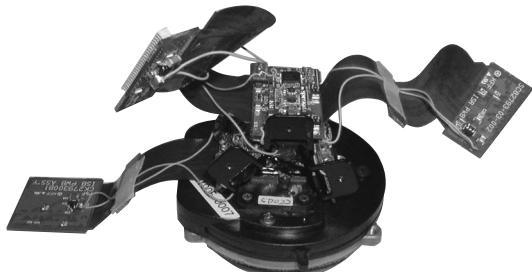

Fig. 1.2 (4)

Note :

- The CCDs are bonded precisely to the prism. In case of trouble with a CCD, it is not possible to replace an individual CCD, but the entire optical block assembly should be replaced.
- The optical block assembly supplied as a service part.
- When replacing the optical block, attach the original FAN and FNC board to the new optical block because those are not included on the optical block assembly.

1.3 HOW TO REMOVE VCR UNIT

1.3.1 Mechanism unit

- (1) Remove the left side cover. (see section 1.1.1)
- (2) Remove the four screws ①.

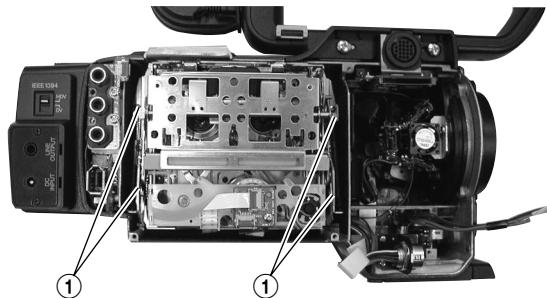

Fig. 1.3.1(1)

- (3) Lift up the mechanism unit gently and disconnect the cables CN75, CN16 and CN17.

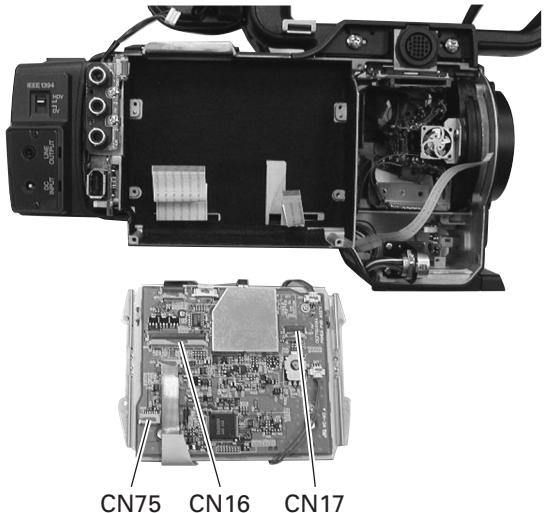

Fig. 1.3.1(2)

1.3.2 Cassette housing

- (1) Remove the mechanism unit. (see section 1.3.1)
- (2) Remove CN1 and release the motor wire. Release the lock sideways and remove the tape guard

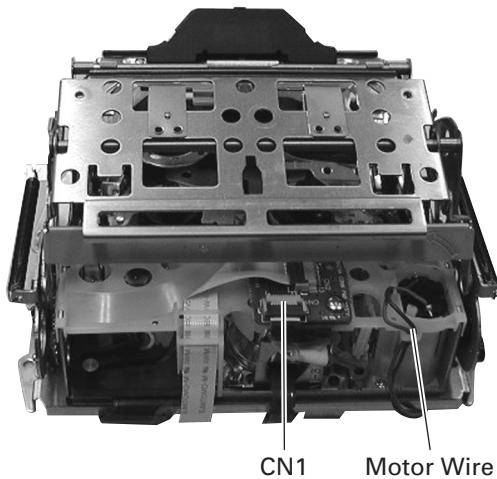

Fig. 1.3.2(1)

- (4) Slide the outer unit to rear direction and lift up slightly. Pull out to side direction to release the outer unit. Perform same manner other side.

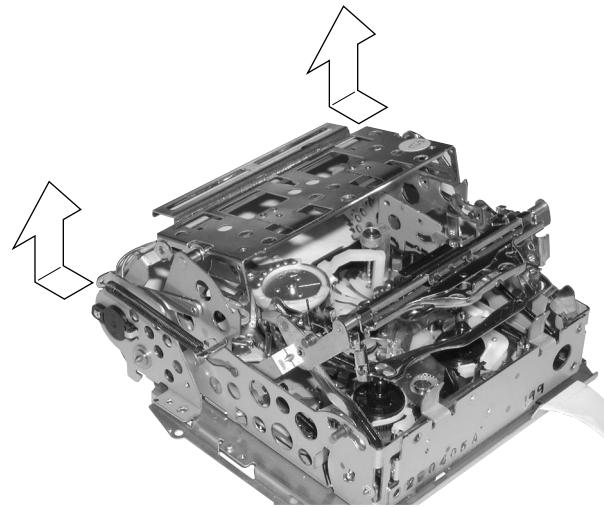

Fig. 1.3.2(3)

- (3) Pop up the cassette housing by sliding release lever and remove the two screws ②.

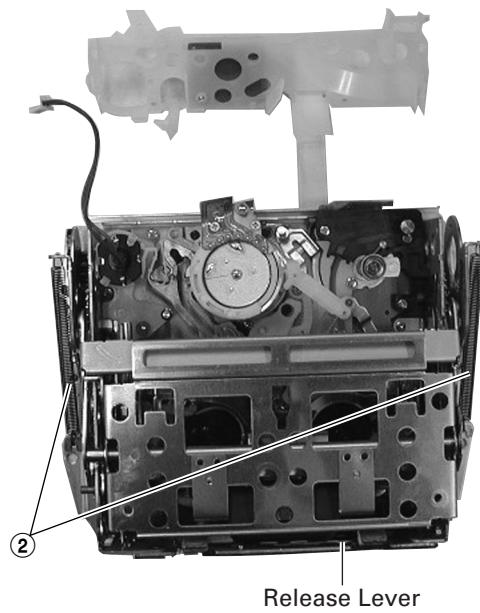

Fig. 1.3.2(2)

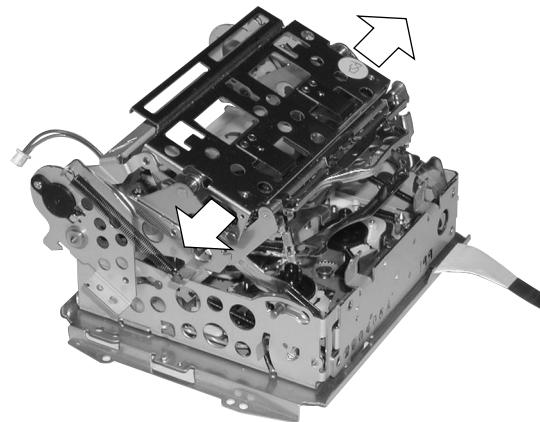

Fig. 1.3.2(4)

- (5) Slide the cassette housing to the position of fig.1.3.2(5) and hold the cassette housing slightly to inside direction to release it.

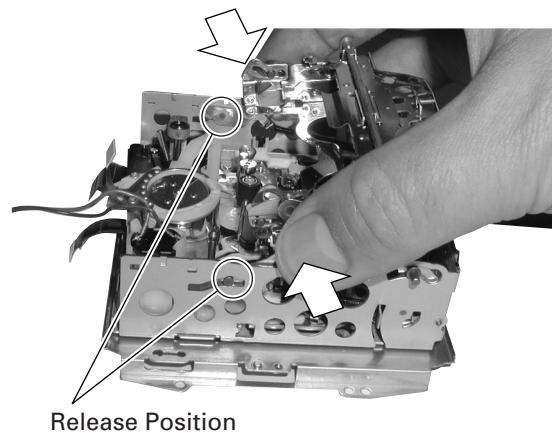

Fig. 1.3.2(5)

- (6) Release bosses of the cassette housing from the mechanism unit.

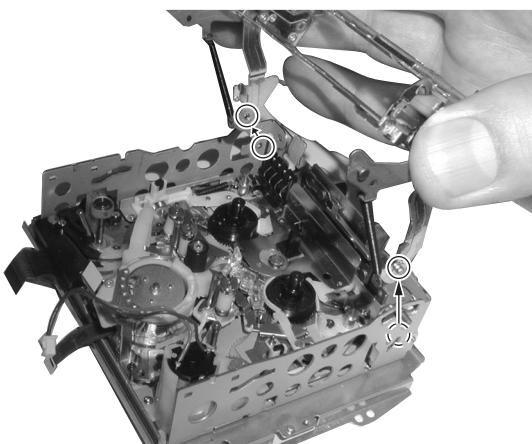

Fig. 1.3.2(6)

Fig. 1.4.1(2)

1.4 HOW TO REMOVE THE MAJOR BOARDS

1.4.1 Audio board

- (1) Remove right side cover. (see section 1.1.2)
- (2) Disconnect cables CN44, CN45 and CN62.
- (3) Remove six screws ① and ②.

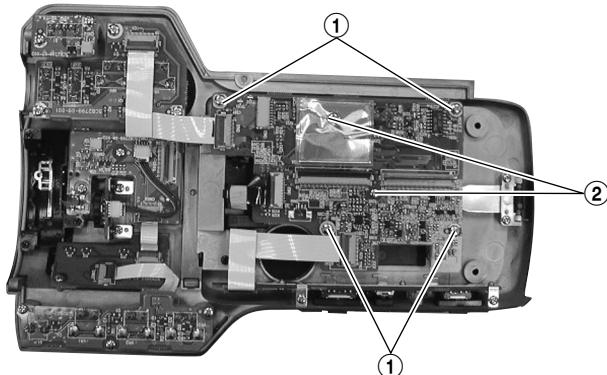

Fig. 1.4.1(1)

Note :

CN62 may be slightly hard to connect FPC cable. Make sure to insert the cable to correct position.

1.4.2 LCD monitor

- (1) Remove Audio board. (see section 1.4.1)
- (2) Remove two screws ③.

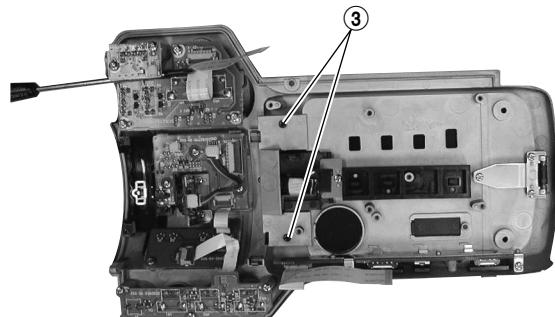

Fig. 1.4.2(1)

- (3) Remove the hinge cover and remove two screws ④.

Fig. 1.4.2(2)

1.4.3 MIF board

- (1) Remove the right side cover. (see section 1.1.2)
- (2) Remove four screws ⑤.
- (3) Remove the cables CN4, CN9, CN11, CN12, CN13, CN22, CN23, 34 and CN48, then lift up MIF board to release B to B connector between MIF board and MAIN board.

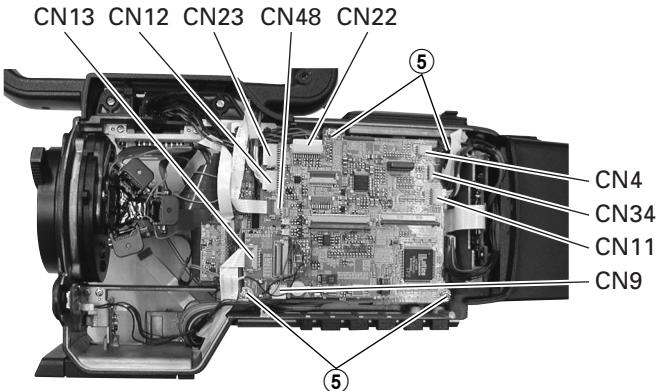

Fig. 1.4.3

1.4.4 MAIN board

- (1) Remove MIF board. (see section 1.4.3)
- (2) Remove six screws ⑥ and ⑦.
- (3) Remove the cables CN3, CN16, CN17, CN18, CN19, CN26, CN27, CN28, CN29 and CN30.

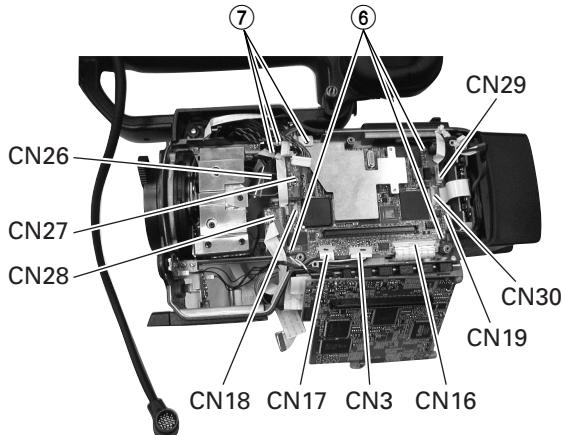

Fig. 1.4.4(1)

- (4) Slide the MAIN board downward and pull out.
Do not bend the Heat Pipe.

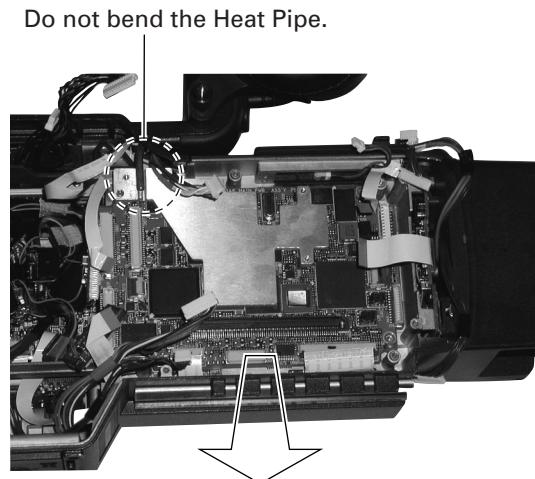

Fig. 1.4.4(2)

- (5) Remove the two screws ⑧. Remove the heat sink carefully because it is being fitted sticky.

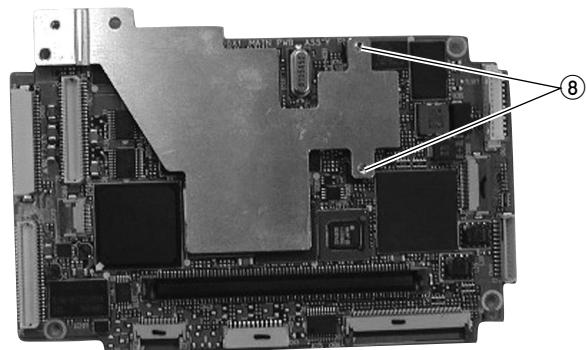

Fig. 1.4.4(3)

1.4.5 HANDLE assembly

- (1) Remove left side cover and right side cover. (see section 1.1.1 and 1.1.2)
- (2) Remove two screws ⑨.

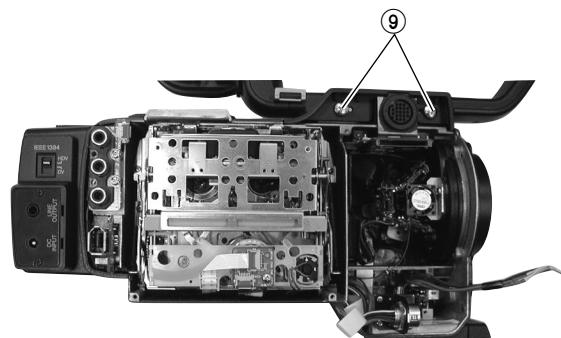

Fig. 1.4.5(1)

- (3) Remove the cables CN12 and CN48. Remove the two screws ⑩ and lift up the handle assembly.

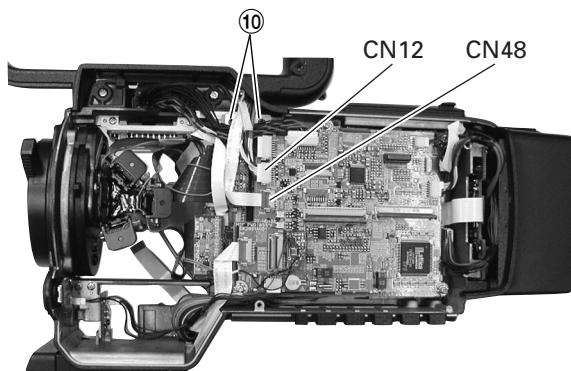

Fig. 1.4.5(2)

Note :

When connecting the LED connector on EAR board, ensure the polarity that the red wire should be connected longer pin of LED.

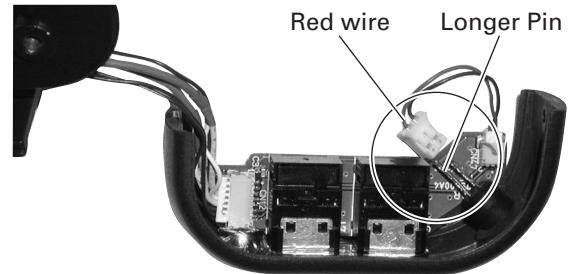

Fig. 1.4.5(5)

- (4) Remove three screws ⑪.

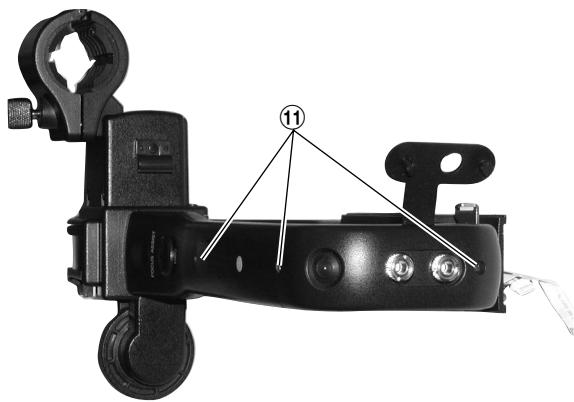

Fig. 1.4.5(3)

- (5) Remove the handle cover R and handle cover T.

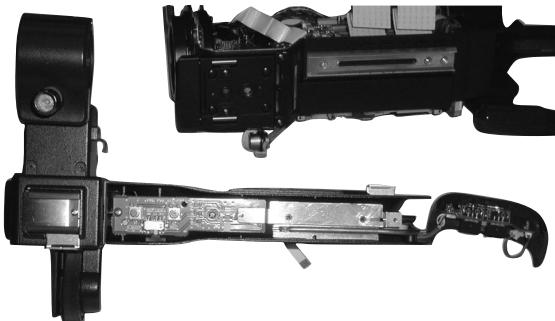

Fig. 1.4.5(4)

Note :

When removing the Heat Sink Ass'y, bend the Heat Pipe slightly like Fig. 1.4.5(6).
Return the bend after attaching the Heat Sink Ass'y.
Do not bend the other portion of Heat Pipe.

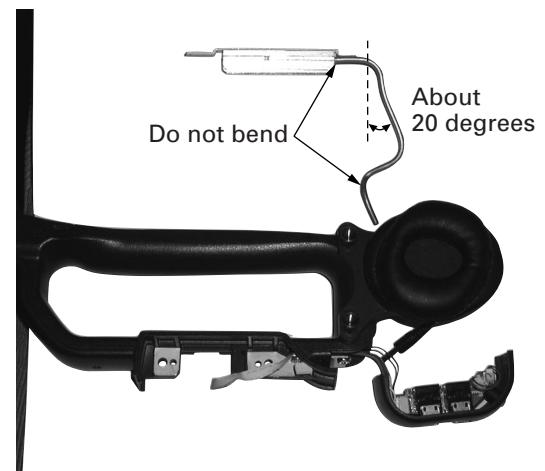

Fig. 1.4.5(6)

1.4.6 PS board

- (1) Remove the four screws ⑫.

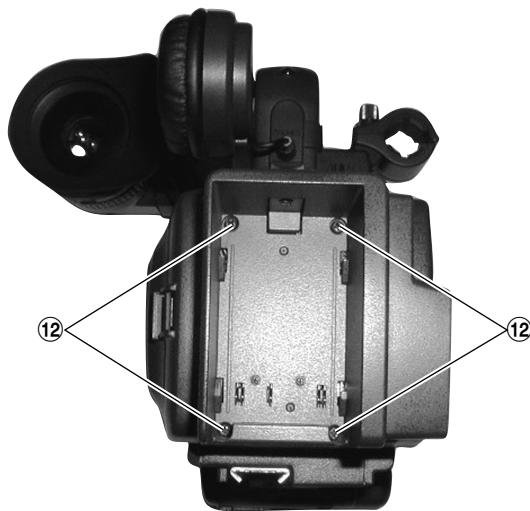

Fig. 1.4.6(1)

- (2) Remove the four screws ⑬ and ⑭. Disconnect the cables CN1, 29, CN30, CN53 and CN75.

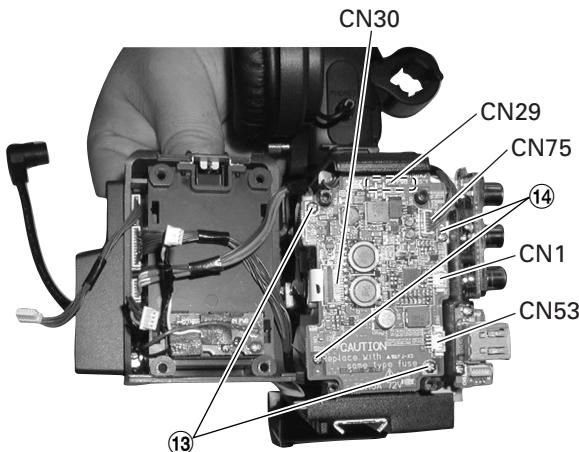

Fig. 1.4.6(2)

Note :

When replacing the fuse F1, ensure to replace with same type fuse. (refer to the parts list)

1.5 SERVICE MENUS

1.5.1 Modes required in servicing

- (1) While holding down the specified button(s) (FOCUS ASSIST, USER 3), press and hold the STATUS button for more than 1 second in order to display the first-level menu of the service menu hierarchy. The items in the first-level menu vary according to which specified button is being held at the moment the STATUS button is pressed. (Characters are displayed on LCD monitor screen or View finder.)

Item	Displayed Content	When power up		
		—	Holding DISPLAY button	Holding DISPLAY button
		FOCUS ASSIST	USER 3	FOCUS ASSIST + USER 3
CAMERA1 MENU	Camera setting, blemish detect	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
CAMERA2 MENU	Error correct ON/OFF	—	<input type="radio"/>	<input type="radio"/>
CAMERA3 MENU	AW data reset menu	—	—	<input type="radio"/>
VTR1 MENU	Repeat, FF/REW speed setting	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
VTR2 MENU	Long pause, shutdown setting	—	<input type="radio"/>	<input type="radio"/>
VTR3 MENU	Reserved, BATT, Info.	—	—	<input type="radio"/>
DIP SW	DIP SW MENU	—	<input type="radio"/>	<input type="radio"/>
HOUR METER	Hour Meter indication	—	<input type="radio"/>	<input type="radio"/>
ERROR HISTORY	Error History	—	<input type="radio"/>	<input type="radio"/>
OTHERS	MENU SAVE etc.	—	<input type="radio"/>	<input type="radio"/>
VERSION	CPU Version indication	<input type="radio"/>	—	—

Table 1-5-1 Service Menu First Tier List

1.5.2 Operation in the first-level of the service menu

- While holding down the specified button(s) (FOCUS ASSIST or USER 3), press and hold the STATUS button for more than 1 second.
- The first-level of the service menu is displayed.
- Rotate the SHUTTER dial to move the cursor (▷) on to the item to be modified.
- Push into the SHUTTER dial to direct the item on which the cursor (▷) is located.
 - Pressing the STATUS button returns to the MENU display.
 - Can not open the service MENU while recording.

```
--- ADVANCED MENU ---
▷ VERSION CHECK..
CAMERA1..
VTR1..
EXIT
```

Fig. 1-5-2 (1)

While holding down the FOCUS ASSIST button, press and hold STATUS button for more than 1 second, this MENU screen is shown on the monitor. (Refer to Fig. 1-5-2(1))

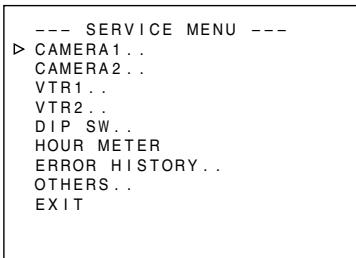

Fig. 1-5-2 (2)

At first, while holding down the DISPLAY button, turn ON the power switch, and then, while holding down the USER 3 button, press and hold STATUS button for more than 1 second, this MENU screen is shown on the monitor. (Refer to Fig. 1-5-2(2))

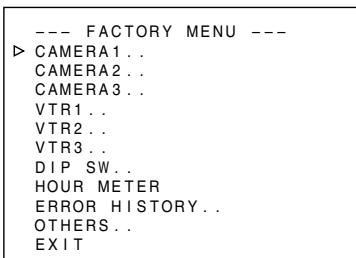

Fig. 1-5-2 (3)

At first, while holding down the DISPLAY button, turn ON the power switch, and then, While holding down the FOCUS ASSIST and USER 3 button, press and hold STATUS button for more than 1 second, this MENU screen is shown on the monitor. (Refer to Fig. 1-5-2(3))

1.5.3 CAMERA 1 menu

- (1) In a service menu, place the cursor (▷) on "CAMERA 1" and push the SHUTTER dial to display the CAMERA1 menu.

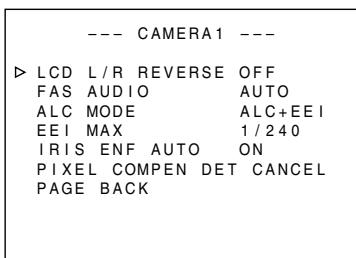

Fig. 1-5-3 (1)

- (2) Rotate the SHUTTER dial to move the cursor (▷) on the mode to be adjusted.
 (3) Push the SHUTTER dial so that the parameter blinks.
 (4) Rotate the SHUTTER dial to vary the parameter.
 (5) After completing the parameter setting, push the SHUTTER dial to stop the blinking of the parameter and store the setting in memory.
 (6) After completing the setting, move the cursor (▷) to "PAGE BACK" and push the SHUTTER dial to return to the display at the higher hierarchy level.

Item	Parameter	
LCD L/R REVERSE	OFF	When the face of LCD screen is turned toward the camera subject, does not invert the left and right of the LCD display. (normal image)
	ON	When the face of LCD screen is turned toward the camera subject, inverts the left and right of the LCD display. (mirror image)
FAS AUDIO	AUTO	When selected FAS mode, audio recording Level will be automatically set to AUTO mode.
	SW SET	When selected FAS mode, audio recording level will be depending on switch setting.
ALC MODE	ALC + EEI	When selected ALC mode including FAS mode, EEI function will be activated.
	ONLY ALC	When selected ALC mode including FAS mode, EEI function will not be activated.
EEI MAX	U MODEL	1/240 Maximum shutter speed is set to 1/240 second. 1/480 Maximum shutter speed is set to 1/480 second. 1/960 Maximum shutter speed is set to 1/960 second.
	E MODEL	1/200 Maximum shutter speed is set to 1/200 second. 1/400 Maximum shutter speed is set to 1/400 second. 1/800 Maximum shutter speed is set to 1/800 second.
IRIS ENF. AUTO	OFF	When selected FULL AUTO mode, IRIS mode will be depeng on IRIS MODE switch of the lens.
	ON	When selected FULL AUTO mode, Auto Iris mode will be activated even Manual Iris mode is selected.
PIXEL COMPEN DET	CANCEL	Does not execute blemish detection.
	EXECUTE	Execute blemish detection.

(indicates the factory setting.)

Table 1-5-3 (1)

■ White blemish detection

Open the User MENU, select "VIDEO FORMAT", "REC", set to "HDV-HD24P" and push the SHUTTER dial.

Select "FRAME RATE", set to "24" and push the SHUTTER dial. Select "EXECUTE", push the SHUTTER dial, then GY-HD100 is automatically rebooted.

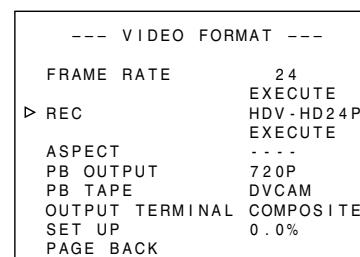

Fig. 1-5-3 (2)

Open the Service MENU, select "CAMERA1", "PIXEL COMPEN DET", "EXECUTE" and push the SHUTTER dial, then CCD white blemish detect operation start automatically. At this time, the lens is closed and the camera is in the SLOW SHUTTER mode.

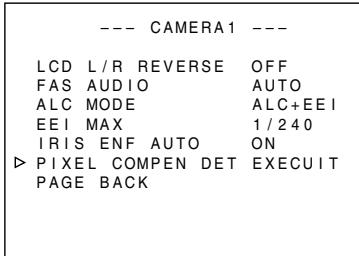

Fig. 1-5-3 (3)

After completing white blemish detection, return "REC" and "FRAME RATE" setting to original one's.

When the white blemish detection completes, the result data is stored in the memory of CPU, end message is shown as below, then please turn off.

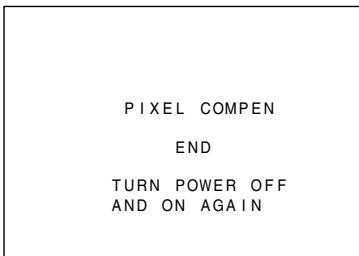

Fig. 1-5-3 (4)

If any errors occurs during the detection operation, an error message is displayed , and return to MENU display.

Message	Error details	Treatment
LENS NOT CLOSED?	The lens does not close for detection.	No result is stored in the EEPROM.
COUNT OVER	The number exceeds the specified count.	Only the specified count of data is stored in the EEPROM.

Table 1-5-3 (2)

■ Details on correctable white blemish

Up to 127 errors with composite video levels of 50mV or more can be corrected. No limitation of errors per line within 127 however, the maximum consecutive errors are 4 and the correction results may be inferior to the case of single error correction.

Oblique noise may be observed on the screen during white blemish detection. This is due to the principles of error correction and is not a malfunction.

White blemish can be detected in the following area.

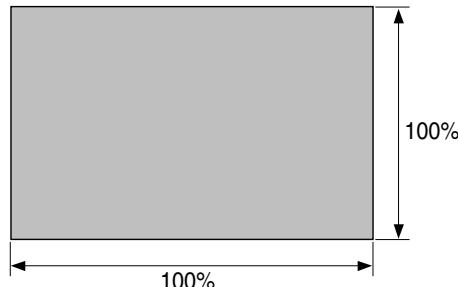

Fig. 1-5-3 (5)

1.5.4 CAMERA 2 menu

- In a service menu, place the cursor on "CAMERA 2" and push the SHUTTER dial to display the CAMERA2 menu.

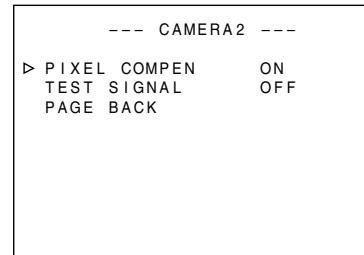

Fig. 1-5-4

Operation ways are almost same as CAMERA 1 MENU, so please refer it.

Item	Parameter	
PIXEL COMPEN *1	OFF	Does not correct the detected white blemish.

(indicates the factory setting.)

Table 1-5-4

*1: This mode is automatically set to ON when the power is turned on.

The OFF mode is enabled only after it is set to OFF at this screen until the power is turned off.

1.5.5 CAMERA 3 menu

In a service menu, place the cursor on "CAMERA 3" and push the SHUTTER dial to display the CAMERA3 menu.

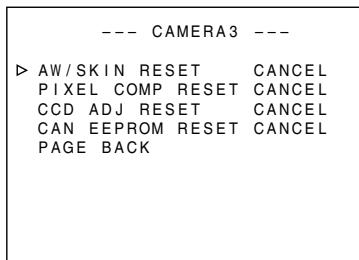

Fig. 1-5-5

Operation ways are almost same as CAMERA 1 MENU, so please refer it.

Item	Parameter	
AW/SKIN RESET	<input type="button" value="CANCEL"/>	Does not reset the auto white data and the skin detect data.
	<input type="button" value="EXECUTE"/>	Resets the auto white data and the skin detect data.
PIXEL COMP RESET	<input type="button" value="CANCEL"/>	Does not reset the detected white blemish data.
	<input type="button" value="EXECUTE"/>	Resets the detected white blemish data.
CCD ADJ RESET	<input type="button" value="CANCEL"/>	Does not reset the CCD adjustment data.
	<input type="button" value="EXECUTE"/>	Resets the CCD adjustment data.
CAM EEPROM RESET	<input type="button" value="CANCEL"/>	Does not reset the EEPROM data for CAMERA CPU.
	<input type="button" value="EXECUTE"/>	Resets the EEPROM data for CAMERA CPU.

(indicates the factory setting.)

Table 1-5-5

1.5.6 VTR 1 menu

In a service menu, place the cursor on "VTR 1" and push the SHUTTER dial to display the VTR 1 menu.

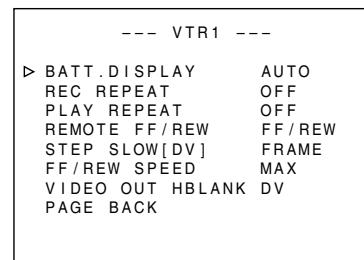

Fig. 1-5-6

Operation ways are almost same as CAMERA 1 MENU, so please refer it.

Item	Parameter	
BATT. DISPLAY	<input type="button" value="OFF"/>	Does not indicate the Battery information.
	<input type="button" value="AUTO"/>	Show the Battery information as Battery Info of VTR3 MENU.
REC REPEAT	<input type="button" value="OFF"/>	Disable repeat recording
	<input type="button" value="2"/>	Perform repeat recording 2 times.
	<input type="button" value="5"/>	Perform repeat recording 5 times.
	<input type="button" value="12"/>	Perform repeat recording 12 times.
PLAY REPEAT	<input type="button" value="OFF"/>	Disable repeat playback.
	<input type="button" value="ON"/>	Enable repeat playback.
REMOTE FF/REW	<input type="button" value="FF/REW"/>	When FF/REW command is received from REMOTE, it runs as FF/REW mode.
	<input type="button" value="SEARCH"/>	When FF/REW command is received from REMOTE, it runs as search FWD/REV mode.
STEP SLOW [DV]	<input type="button" value="FIELD"/>	
	<input type="button" value="FRAME"/>	
FF/REW SPEED	<input type="button" value="X5"/>	Maximum FF/REW speed is limited up to x5.
	<input type="button" value="X7.5"/>	Maximum FF/REW speed is limited up to x7.5.
	<input type="button" value="X10"/>	Maximum FF/REW speed is limited up to x10.
	<input type="button" value="MAX"/>	*1No limitation
VIDEO OUT HBLANK	<input type="button" value="DV"/>	Horizontal effective pixels are 720.
	<input type="button" value="STANDARD"/>	Horizontal effective pixels are 710 at 60/30 frame rate and 702 at 50/25 frame rate.

(indicates the factory setting.)

Table 1-5-6

*1: Maximum speed is x20 at VTR mode, but no function at CAM mode.

1.5.7 VTR 2 menu

In a service menu, place the cursor on "VTR 2" and push the SHUTTER dial to display the VTR 2 menu.

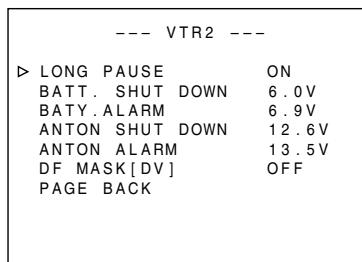

Fig. 1-5-7

Operation ways are almost same as CAMERA 1 MENU, so please refer it.

Item	Parameter	
LONG PAUSE	OFF	Disable the long pause function.
	ON	Enable the long pause function.
BATT. SHUTDOWN *1	6.8V	Setting of the battery voltage when shutdown should occur. (Setting in 0.1V steps between 6.3V and 7.5V.)
BATT. ALARM *1	6.9V	Setting of the battery voltage when battery alarm is indicated. (Setting in 0.1 V steps between 6.3V and 8.0V.)
ANTON SHUT DOWN	12.0V	Setting of the ANTON battery voltage when shutdown should occur. (Setting in 0.1V steps between 10.5V and 13.6V.)
ANTON ALARM	13.5V	Setting of the ANTON battery voltage when battery alarm is indicated. (Setting in 0.1 V steps between 10.5V and 13.6V.)
DV DF MASK *2	OFF	"1" is recorded as per format.
	ON	"0" is always recorded.

(indicates the factory setting.)

Table 1-5-7

*1 : When operating by DC input, then "SHUT DOWN" will be set to 6.0V, and "ALARM" will be set to 6.9V automatically, and these setting will not relate to menu setting.

*2 : FRAME RATE 50/25 only

1.5.8 VTR 3 menu

In a service menu, place the cursor on "VTR 3" and push the SHUTTER dial to display the VTR 3 menu.

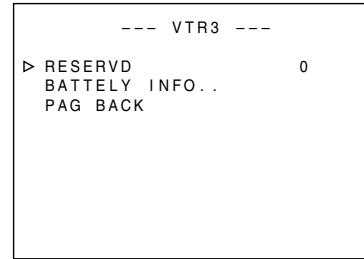

Fig. 1-5-8 (1)

Changing of setting is prohibited.

Item	Parameter
RESERVED	<input checked="" type="checkbox"/> Normal setting
BATTERY INFO	Refer to next page. (<input type="checkbox"/> indicates the factory setting.)

Table 1-5-8 (1)

■ BATTERY INFO Display

Display method

Move the cursor to the "BATTERY INFO.." in "VTR3" screen and press SHUTTER dial. BATTERY INFO screen (right figure) will be displayed.

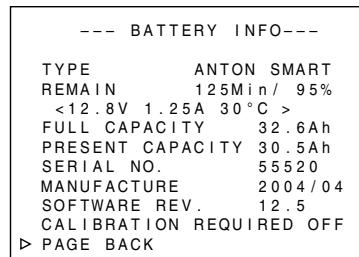

Fig.1-5-8 (2) BATTERY INFO
(When the Anton/Bauer Smart Battery is detected)

Item		Descriptions	
TYPE	ANTON SMART	When ANTON/BAUER SMART BATTERY is connected	
	AFG	When BATTERY with I/F of AFG (AnalogFuelGauge) is connected	
	OTHERS	When other BATTERY is connected	
	NO DETECT	When no BATTERY is connected	
REMAIN	Minute	Remaining battery lasting time [min] calculated based on current power consumption	
	%	Current remaining capacity [%] corresponding to total battery capacity	
	Voltage	Output voltage of battery	
	Current	Output current of battery	
	Temperature	Temperature of battery	
FULL CAPACITY		Capacity [Ah] when the BATTERY is fully charged	
PRESENT CAPACITY		Current BATTERY capacity [Ah]	
SERIAL NO.		Manufactured serial number	
MANUFACTURE		Manufactured date	
SOFTWARE REV.		Software revision number	
CALIBRATION REQUIRED	OFF	Calibration not required	
	ON	Calibration required	

Table 1-5-8 (2)

1.5.9 DIP SW menu

- (1) In a service menu, place the cursor on "DIP SW" and push the SHUTTER dial to display the DIP SW menu.

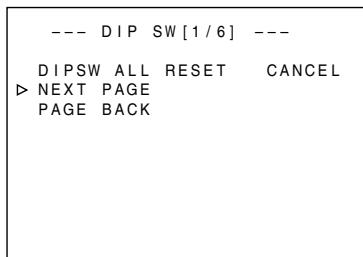

Fig. 1-5-9 (1)

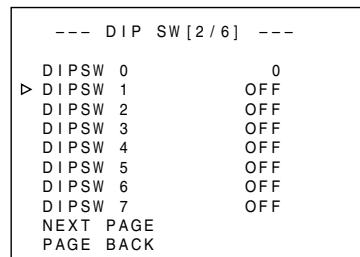

Fig. 1-5-9 (2)

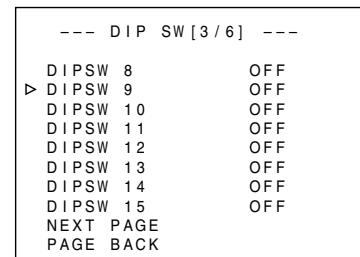

Fig. 1-5-9 (3)

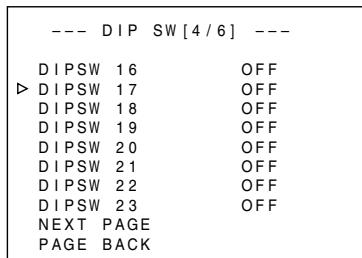

Fig. 1-5-9 (4)

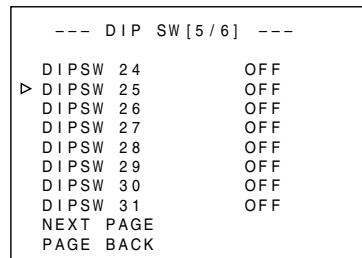

Fig. 1-5-9 (5)

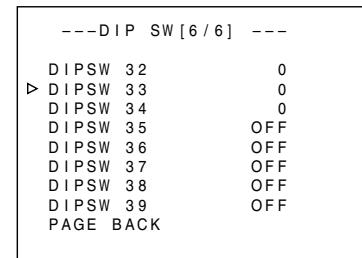

Fig. 1-5-9 (6)

Operation ways are almost same as CAMERA 1 menu, so please refer it.

All DIP Switch settings which are shown below should not be changed except for repair or maintenance. And do not forget to return original position after repair.

Item	Parameter	Factory setting
--- DIP SW 1/6 ---		
DIP SW ALL RESET	CANCEL Cancel to reset all DIPSW settings. EXECUTE Execute to reset all DIPSW settings.	CANCEL
--- DIP SW 2/6 ---		
DIP SW 0	1 : Displays error rate monitor and CPU port information	0

Table 1-5-9

ERROR RATE MONITOR screen

By setting "DIP SW 0" to "1", error rate and each CPU port information display screen will appear on the LCD monitor, View finder and monitor.

The values which are pointed by arrow are the error rate value. Error rate of CH-1 shown in upper row, and CH-2 shown in lower row, and these value are indicated total AUDIO/VIDEO error rate.

When the error rate increase, the warning message "HEAD CLEANING REQUIRED" is displayed. And this message is indicate when the error rate value is over 4,500 (one-channel AUDIO/VIDEO total) for 7 seconds consecutively.

ERROR RATE indicator

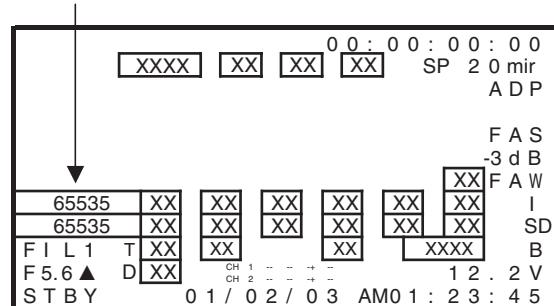

Fig. 1-5-9 (7)

1.5.10 HOUR METER

In a service menu, place the cursor on "HOUR METER" and push the SHUTTER dial to display the HOUR METER menu.

```
--- HOUR METER[1 / 2] ---
▷ DRUM           CLEAR
TOTAL DRUM      000000H
FAN             000000H

CLEANING TAPE   0000000
PAGE BACK
```

Fig. 1-5-10 (2)

Operation ways are almost same as CAMERA 1 menu, so please refer it.

Item	Parameter
DRUM	000000 Displays the drum hour meter(maintenance for drum) CLEAR Resets the drum hour meter.
TOTAL DRUM	000000 Displays the total drum hour meter. CLEAR Resets the total drum hour meter. (This does not work unless the special setting)
FAN	000000 Displays the fan hour meter. CLEAR Resets the fan hour meter.
POWER	000000 Displays the power hour meter. CLEAR Resets the power hour meter.
CAPSTAN	000000 Displays the capstan hour meter. CLEAR Resets the capstan hour meter.
SEARCH	000000 Displays the search hour meter. CLEAR Resets the search hour meter.
FF/REV	000000 Displays the FF/REW hour meter. CLEAR Resets the FF/REW hour meter.
LOADING	000000 Displays the loading count. CLEAR Resets the loading count.
EJECT	000000 Displays the eject count. CLEAR Resets the eject count.
FWD/REV	000000 Displays the forward/reverse switching count. CLEAR Resets the forward/reverse switching count.
CLEANING TAPE	000000 Displays the cleaning tape working count. CLEAR Resets the cleaning tape working count.

Table 1-5-10

1.5.11 ERROR HISTORY

In a service menu, place the cursor on "ERROR HISTORY" and push the SHUTTER dial to display the ERROR HISTORY menu.

```
--- ERROR HISTORY ---
▷ (HISTORY - 1)    7101
CAP MOTOR FAILURE
(HISTORY - 2)    7101
CAP MOTOR FAILURE
(HISTORY - 3)    7101
CAP MOTOR FAILURE
(HISTORY - 4)    7101
CAP MOTOR FAILURE
CLEAR           CANCEL
PAGE BACK
```

Fig. 1-5-11

- (1) Rotate the SHUTTER dial to move the cursor onto the item to show details.
- (2) Push the SHUTTER dial so that the details of ERROR HISTORY is shown.
- (3) Rotate the SHUTTER dial to move cursor onto the "CLEAR", push the SHUTTER dial, then ERROR HISTORY will be deleted.

Note :

ERROR HISTORY was stored from "HISTORY-1" box to "HISTORY-4" box. Latest error was stored "HISTORY-4" box, and if there will be occur another error then latest error history will be rewrite on "HISTORY-4". From "HISTORY-1" to "HISTORY-3" will not rewrite, except to "CLEAR" operation.

1.5.12 Detail indication of ERROR HISTORY

In a ERROR HISTORY display, place a cursor onto the item and push SHUTTER dial, then detail display (MECHANISM INFO) picture will be shown.

MECHANISM INFO has 2 pages.

Fig. 1-5-12 (2)

Item	Content	Displayed Content
PTM	POWER HOUR METER	Power hour meter is displayed.
SYS MODE	SYSCON CPU mode when error occurred PLAY (03, 00) 	SFF/SREW parameter is speed display. (Refer to Table 1-9-11 (2) Speed parameter) Parameters of other modes are irrelevant.
MSD MODE	MSD CPU mode and target mode when error occurred PLAY (01, 00) 	EJECT (01) : Eject STOP (02) : Stop PLAY (03) : Play REC (13) : Rec STL (04) : Still RECP (14) : Rec Pause FF (05) : FF DVRC (15) : DV Rec REW (06) : Rew DVRP (16) : DV Rec Pause SFF (07) : Search Fwd POFF (1A) : Power Off SREW (08) : Search Rev NDEF (1F) : During initial operation SFF/SREW parameter is speed display (See Table 1-9-11 (2))
LAST KEY	Final Key code when error occurred PLAY (E7, 01) 	Other parameters are 01: ON, 00: OFF REC (E0) : Rec SFF (EB) : Search Fwd RECP (E1) : Rec Pause SREW (EC) : Search Rev DVRP (E2) : DV Rec Pause STOP (F0) : Stop ADUB (E5) : Audio Dub EJECT (F1) : Eject ADBP (E6) : Audio Dub Pause HWUP (F2) : Housing Up PLAY (E7) : Play HWDN (F3) : Housing Down STL (E8) : Still POFF (F4) : Power Off FF (E9) : FF DVRC (F5) : DV Rec REW (EA) : Rew PON (FA) : Power on
TAPE REM	TAPE REMAIN	Displays tape remaining in minutes ([FFFF] : not detected)
DEW	DEW sensor A/D intake value	DEW display at over [48]
TEMP	Temperature sensor A/D intake value The value "49" [5°C] is threshold of detecting low temperture. The value "DC" [60°C] is the threshold of displaying "OVER HEATING" message.	Temperature is displayed in hexadecimal value. -10°C → [22] 20°C → [7C] 50°C → [CC] -5°C → [2D] 25°C → [8C] 55°C → [D4] 0°C → [3A] 30°C → [9C] 60°C → [DC] 5°C → [49] 35°C → [AA] "OVER HEATING" message 10°C → [59] 40°C → [B7] 65°C → [E1] 15°C → [6A] 45°C → [C2] 70°C → [E6]
DIAMETER	Displays wound tape diameter (Take-up, Supply)	[00]—[FF] : 0mm-82mm (Diameter) ([00] is non-detected)
M. POSI	Mechanism position and target mechanism position	[2EJ], [EJ], [EJ2CAIN], [CAIN], [CAIN2HLD], [HLD], [HLD2REV], [REV], [REV2FWD], [FWD], [FWD2STP], [STP], [STP2], [CLNOFF], [INIT]
CAP	Capstan status	[ON] : Rotate [FWD/REV]: Direction display [OFF] : Stop
REL	Reel status	[ON] : Rotate [FWD/REV]: Direction display [OFF] : Stop
DRM	Drum status	[ON] : Rotate [OFF] : Stop
DIR	Direction of tape running (Direction of target)	[FWD/REV]: Direction display
DRV	Drum control voltage	[00-FF] : 0—3V
CAPV	Capstan control voltage	[00-FF] : 0—3V
RELV	Reel control torque value	[00-FF] : 0—3A

Item	Content	Displayed Content	
MCV/SPD	Loading/cassette housing control voltage (when error code 4xxx and error code 3xxx is displayed.)	[00-FF] : 0—8V	(Displays mode motor control voltage during error code 3xxx) (Displays cassette motor control voltage during error code 4xxx)
	Tape speed (When the code excepting error code 4xxx and error code 3xxx is displayed.)	[00-FA] : 0—25X	(FF is displayed when the speed is faster than this.) “Tape speed” is a function to convert the hexadecimal value into a decimal value, and no speed parameter of the tape. (ex. FAh = 250 → The speed is 25.0X.)
RELI	Reel current (Cassette housing motor current only during housing-related warning)	[00-FF] : 0—1.2A	
BGN	Begin sensor	[ON] : Leader tape detected [OFF] : Magnetic tape detected	
END	End sensor	[ON] : Trailer tape detected [OFF] : Magnetic tape detected	
CAS	Cassette SW status	[ON] : No cassette [OFF] : Cassette detected	
THIN	Thin tape detection	[ON] : THIN [OFF] : NORMAL

Table 1-5-12 (3) DV Speed parameter

Error code	Display	Content of occurrence	Method of detection	Detected signal
0201	CONDENSATION ON DRUM	DEW detected	If DEW sensor detects condensation	IC71 (MSD) –detects voltage of pin E16
3200	LOADING FAILURE	Does not load	If mechanism position does not move in loading direction within 5 seconds	IC71 (MSD) –detects output of pin F14, rotary encoder
3300	UNLOADING FAILURE	Does not unload	If mechanism position does not move in unloading direction within 5 seconds	IC71 (MSD) –detects output of pin F14, rotary encoder
	No display	Does not intake	If intake is not completed within 5 seconds (Ejects without warning)	IC71 (MSD) –pin M9, CASSETTE SW is not detected within 5 seconds
4100	CASSETTE EJECT FAILURE	Does not eject	If eject is not completed within 5 seconds	IC71 (MSD) –pin P9, HOUSING SW is not detected within 5 seconds
5605	DEFECTIVE TAPE	Tape abnormality during intake	If begin or end side sensor is ON after intake	IC71 (MSD) –pin E15, START sensor and pin E14, END sensor are both detected
5606	DEFECTIVE TAPE	Tape tear during unloading	If reel FG is excessive during unloading	IC71 (MSD) –pin R14, TU REEL FG is detected
5607	DEFECTIVE TAPE	Tape tear during loading	If reel FG is insufficient during loading	IC71 (MSD) –pin R14, TU REEL FG is detected
5608	DEFECTIVE TAPE	Tape tear on the loading side	If only supply side reel does not rotate during FWD/REV	IC71 (MSD) –pin R13, SUP REEL FG is not detected
5609	DEFECTIVE TAPE	Tape tear during slack takeup	If tape slack takeup is not completed within 10 seconds	IC71 (MSD) –pin R14, TU REEL FG and pin R13, SUP REEL FG are both detected
5702	TAPE END DET. ERROR	End sensor abnormality	If trailer tape sending is not completed within 3 seconds	IC71 (MSD) –pin E14, END sensor is detected for over 3 seconds
5802	TAPE BEGIN DET. ERROR	Begin sensor abnormality	If leader tape sending is not completed within 3 seconds	IC71 (MSD) –pin E15, START sensor is detected for over 3 seconds
7001	DRUM MOTOR FAILURE	Drum motor does not rotate	If drum motor does not rotate for over 4 seconds	IC71 (MSD) –pin T14, DRUM FG is not detected for over 4 seconds
7101	CAP MOTOR FAILURE	Capstan motor does not rotate	If capstan motor does not rotate for over 2 seconds	IC71 (MSD) –pin T13, CAP FG is not detected for over 2 seconds
7202	SUPPLY REEL FAILURE	SUP reel does not rotate	If SUP reel does not rotate for over 3 seconds	IC71 (MSD) –pin R13, SUP REEL FG is not detected for over 3 seconds
7203	SUPPLY REEL FAILURE	SUP side tape slack	If only SUP reel does not rotate during REV	IC71 (MSD) –pin R13, SUP REEL FG is not detected
7302	TAKE UP REEL FAILURE	TU reel does not rotate	If TU reel does not rotate for over 3 seconds	IC71 (MSD) –pin R14, TU REEL FG is not detected for over 3 seconds
7303	TAKE UP REEL FAILURE	TU side tape slack	If only TU reel does not rotate during FWD	IC71 (MSD) –pin R14, TU REEL FG is not detected
7305	TAKE UP REEL FAILURE	Tape slack during unloading	If TU reel FG is insufficient during unloading	IC71 (MSD) –pin R14, TU REEL sensor is detected

Table 1-5-12 (4) Error Code Contents

1.5.13 OTHERS menu

In a service menu, place the cursor on "OTHERS" and push the SHUTTER dial to display the OTHERS menu.

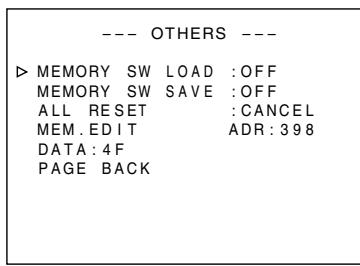

Fig. 1-5-13

Operation ways are almost same as CAMERA1 MENU, so please refer it.

Item	Parameter
MEMORY SW LOAD	<input checked="" type="checkbox"/> Standard setting <input type="checkbox"/> START Menu SW information is loaded from a store area.
MEMORY SW SAVE	<input checked="" type="checkbox"/> Standard setting <input type="checkbox"/> START Menu SW information is saved to a store area.
ALL RESET	<input checked="" type="checkbox"/> CANCEL Standard setting <input type="checkbox"/> EXECUTE Resets all EEP-ROM data to default settings except adjustment data, hour meter data, and IEEE1394 ID data. Default settings at time of shipment differ by market region. I: for Japan, U: for USA, E: for EU, EC: for China
MEM.EDIT	Contents of the EEP-ROM can be edited directly ADR: Address (0x000-0x7DF) display DATA: Display of data embedded in address shown by ADR Operation procedure <ol style="list-style-type: none"> 1. Rotate the SHUTTER dial to move the cursor to MEM.EDIT. 2. Push the SHUTTER dial to blink the "ADR" parameter. 3. Then rotate the SHUTTER dial to adjust the specified value. 4. Next, push the SHUTTER dial to blink the DATA parameter. 5. Rotate the SHUTTER dial to adjust the specified value. 6. Finally, push the SHUTTER dial to store the data. (NOTE) Data that is crucial for the system is stored in the EEP-ROM, and making unadvised changes to it can cause the unit to stop operating correctly. Please do not use anything other than the IEEE1394 ID setting.

(□ is default setting when shipped from factory)

Table 1-5-13 OTHERS Menu Setting Items List

1.5.14 CPU version menu

Displays version of SYSCON CPU, Camera CPU , VTR CPU, ENC CPU, PACKAGE, FPGA2, FPGA3 and FPGA4.

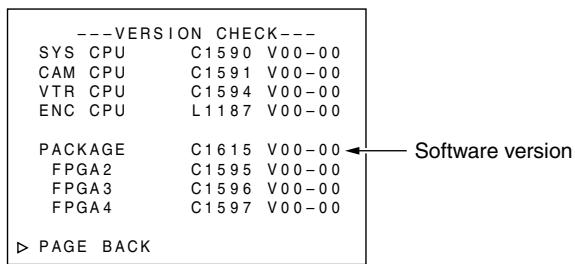

Fig. 1-5-14 CPU Version

1.5.15 EEP-ROM

(1) EEP-ROM and maintenance data

GY-HD100 is equipped with three EEP-ROMS for the purpose of data maintenance, and their contents are as per the following list. When the circuit board or EEP-ROM is replaced, there will be no data in the EEP-ROM. When the unit is powered up, and the SYSCON CPU recognizes that there is no data in the EEP-ROM, it automatically writes initial data into the EEP-ROM to initialize it. The memory data shown in Table 1-5-15 will all be reset back to default settings, so it will be necessary to perform necessary adjustments and settings again.

EEP-ROM	Board name	Memory data content
IC70	MAIN board (MSD CPU)	<ul style="list-style-type: none"> • Adjusted data (DVC section) • IEEE1394 ID data • HOUR METER data
IC57	MAIN board (Camera CPU)	<ul style="list-style-type: none"> • Blemish data
IC61	MIF board (SYSCON CPU)	<ul style="list-style-type: none"> • Adjusted data (Camera section) • User menu and Service menu settings data • ERROR HISTORY

Table 1-5-15 EEP-ROM Memory Data Content

(2) IEEE1394 ID setting method

IEEE1394 equipped units have an ID, as defined by the IEEE1394 standard, stored in the internal EEP-ROM (IC 70). At the time of production, the ID numbers allotted to each individual unit are written into the unit's memory, and a sticker bearing the ID is affixed inside the unit. When the EEP-ROM or MAIN circuit board is replaced, the ID needs to be set again.

Procedure for setting IEEE1394 ID

The ID is an 8 digit, hexadecimal code, with 1 high-end Byte being the model code, and 3 low-end Bytes being unique to the unit. The model code is automatically initialized, so only the lower 3 Bytes of unique code need to be set manually. Go from Service Menu → OTHERS Menu → MEM. EDIT (Memory Edit) to select the address in the ID data section and make the setting directly. The 3 low-end Byte address is as follows. Make the setting while confirming the ID printed on the label (GY-HD100U/E ID: 4Fxxxxxx, GY-HD101E ID: 4Exxxxxx) pasted on the inside of the GY-HD100 (See Fig. 1-5-15).

IEEE1394 ID data : 4F xx xx xx (Indicates on the label of GY-HD100 inside.)
 ↓ ↓ ↓

MEMORY Address number "391" "392" "393" (Each 1 Byte ID data are stored for every one Memory Address number.)

Setting procedure

- (1) Rotate the SHUTTER dial to move the cursor to MEM. EDIT.
- (2) Push the SHUTTER dial to make the ADR parameter blink.
- (3) Select ADR parameter "391".
- (4) Push the SHUTTER dial to make the DATA parameter blink.
- (5) Rotate the SHUTTER dial to set the ID data for ADR = "391".
- (6) Push the SHUTTER dial to confirm the DATA parameter.
- (7) In the same manner, select ADR parameter "392" and "393" to set the ID data.

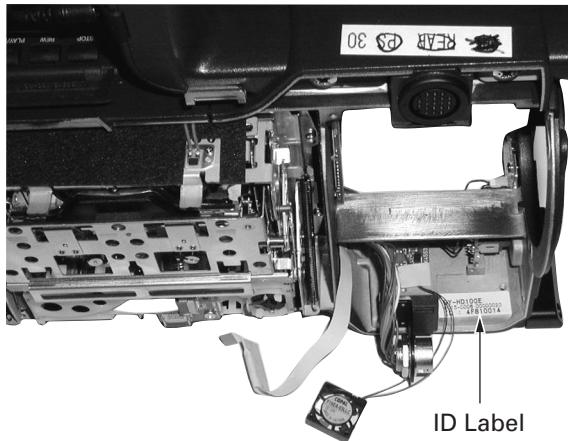

Fig. 1-5-15 ID Label Attachment Position

1.6 HOW TO UPDATE FIRMWARE

Note :

- When replacing MIF board or MAIN board, firmware update is essential.
- Do not turn the power off during the update, otherwise CPU may be destroyed and replacement of CPU or board will be required.
- Under the battery operation firmware update can not be allowed, use the AC adapter.
- When update is failed audio AUTO LED's are flashing alternately. In this case try again after removing SD memory card.
- Remove the IEEE1394 cable, otherwise it may cause some troubles on GY-HD100.
- Do not format the SD memory card by PC.

The SD memory card formatted by PC will not work correctly due to wrong formatting. In this case format the SD memory card on GY-HD100.

You can also format the SD memory card using the general digital still camera equipped SD memory card slot, or formatting software supplied from SD memory card manufacturer such as Panasonic.

1.6.1 Preparation (Copy firmware to SD memory card)

Note: 32MB - 512 MB of Panasonic SD memory card is recommended.

- (1) Download the update file from JS-NET and unzip it to a PC.
- (2) Insert the SD memory card to the PC and confirm that no file is in the SD memory card. If there are some files, delete them.
- (3) Copy the unzipped update file(s) to the SD memory card.

1.6.2 Update procedure

- (1) Eject and take out the cassette if loaded, and close the cassette cover.
- (2) While pressing USER2 and USER3 buttons, turn on the power. Both HDV and DV LED will turn on a light.
- (3) Insert the SD memory card to the card slot of GY-HD100.
- (4) Rotate the SHUTTER dial, move the cursor to UPGRADE and press SHUTTER dial.
- (5) Rotate the SHUTTER dial, select EXECUTE and press SHUTTER dial.
- (6) Rotate the SHUTTER dial, move the cursor to CONTINUE? and press SHUTTER dial.
- (7) Rotate the SHUTTER dial, select EXECUTE and press SHUTTER dial.

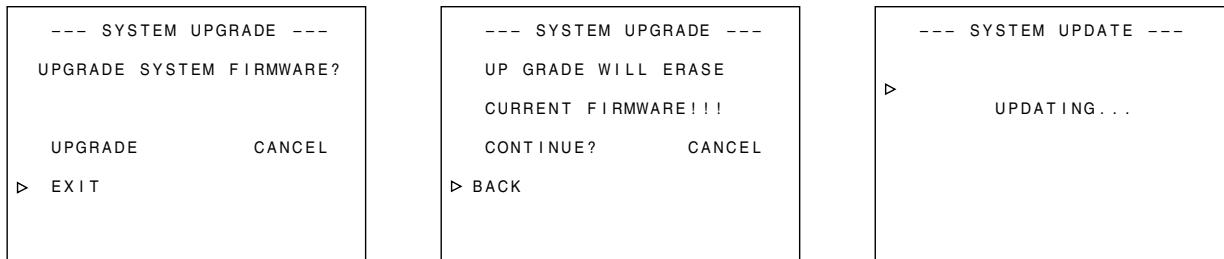

Fig.1.6.2 SYSTEM UPDATE Menu Screen

- (8) When update is completed, audio AUTO LED's of AUDIO CH-1 and CH-2 are blinking slowly. It will take about seven minutes to complete.
- (9) Remove the SD memory card, then GY-HD100 will reboot automatically.
- (10) Turn off the power and turn on again.
- (11) Enter the Service Menu to check CPU VERSION.

SECTION 2

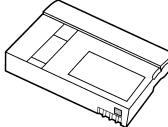

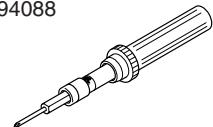

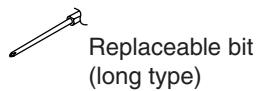

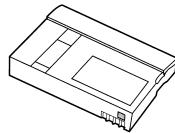

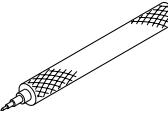

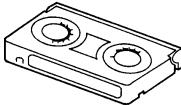

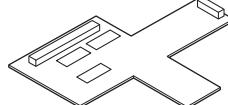

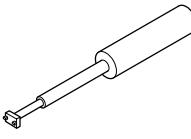

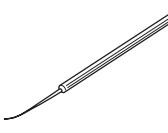

MECHANICAL ADJUSTMENTS

2.1 BEFORE ADJUSTMENTS

2.1.1 Precautions

- 1) Be sure to apply a screw securing torque when attaching a part.
The securing torque should be 0.04 N·m (0.4 kgf·cm) unless otherwise specified.
- 2) Always unplug the power cord of the set before attaching, removing or soldering a part.
- 3) When unplugging a connector, do not pull the wire but grasp the connector body.
- 4) Do not make an adjustment or rotate a potentiometer blindly while the source of trouble is not identified.
- 5) Before adjusting electrical circuitry, be sure to wait for more than 10 minutes after turning the power on.

2.1.3 Equipment required for adjustments

1	Alignment tape MC-1 (NTSC) MC-2 (PAL)		5	Torque screwdriver YTU94088		YTU94088-003 
2	DV tape For use in self-recording/playback. (M-DV 63PRO BU)		6	Slit washer attaching tool YTU94121A		
3	Cassette torque meter YTU94150A (or YTU94151A)		7	Connector board (REWRITE PWB) CK453800C		
4	Guide screwdriver YTU94085		8	Chip IC replacement tool PTS40844-2		

2.1.2 Measuring instruments required for adjustments

Instrument	Condition
Oscilloscope	Calibrated instrument with measuring bandwidth of 100 MHz or more.

Table 2-1-1

2.2 BASICS OF MECHANISM DISASSEMBLY/ASSEMBLY

2.2.1 Assembly mode

The disassembly and assembly of the mechanism can be done in the ASSEMBLY mode (see Table 2-2-1).

The ASSEMBLY mode is provided in the intermediate position between C-IN and Hard LOAD. As the C-IN (Cassette IN) mode is usually set when a cassette tape is ejected, the ASSEMBLY mode should be entered after entering the C-IN mode.

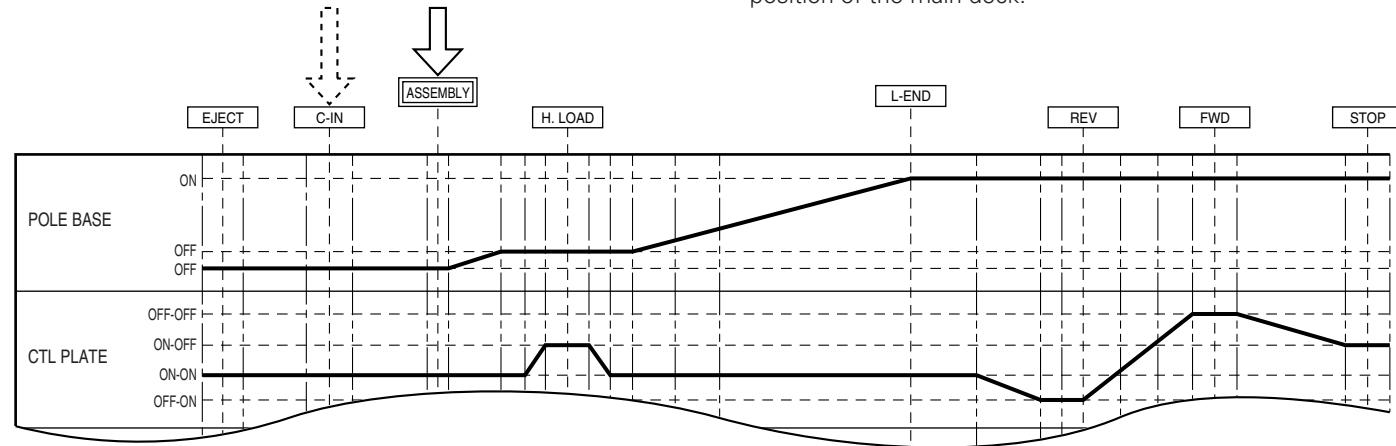

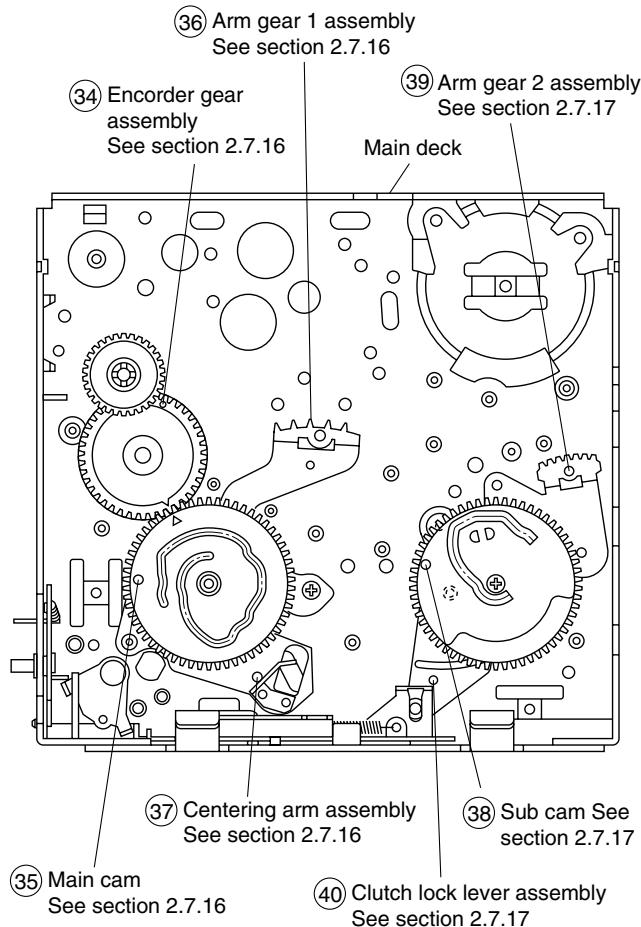

Table 2-2-1

— Top view —

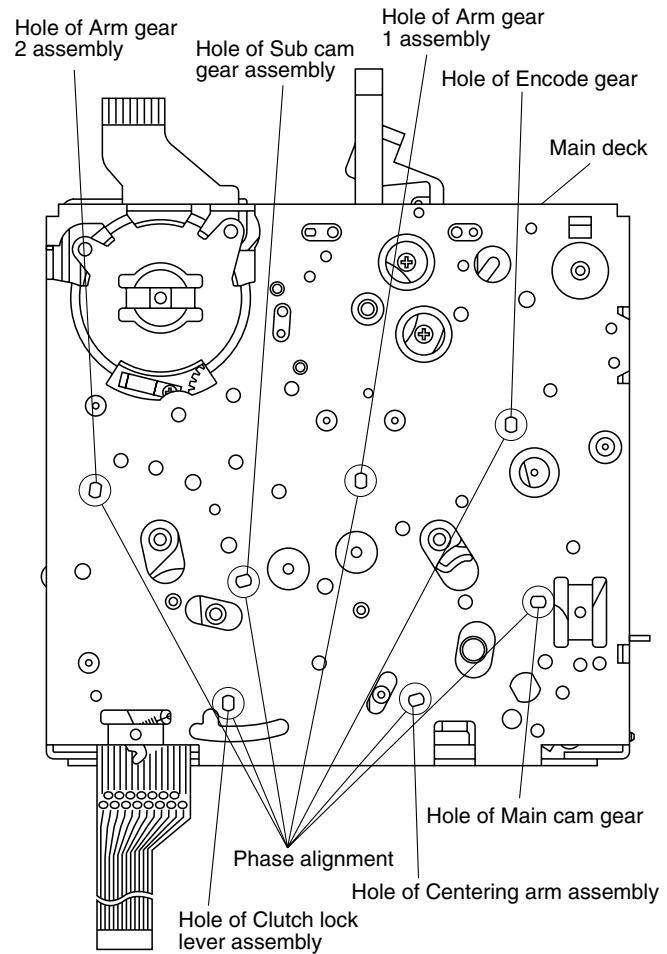

Fig. 2-2-1

There are 2 ways to set to ASSEMBLY mode as shown below:

- 1) Apply DC 3 V to the motor.
- 2) Remove the motor from the bracket (Gear cover) and turn the wheel gear 2 using screwdriver.

As shown in Fig. 2-2-1, the ASSEMBLY mode position refers to where the hole position of 7 cm component matches the hole position of the main deck.

2.3 MECHANISM TIMING CHART

See following table (Table 2-3-1).

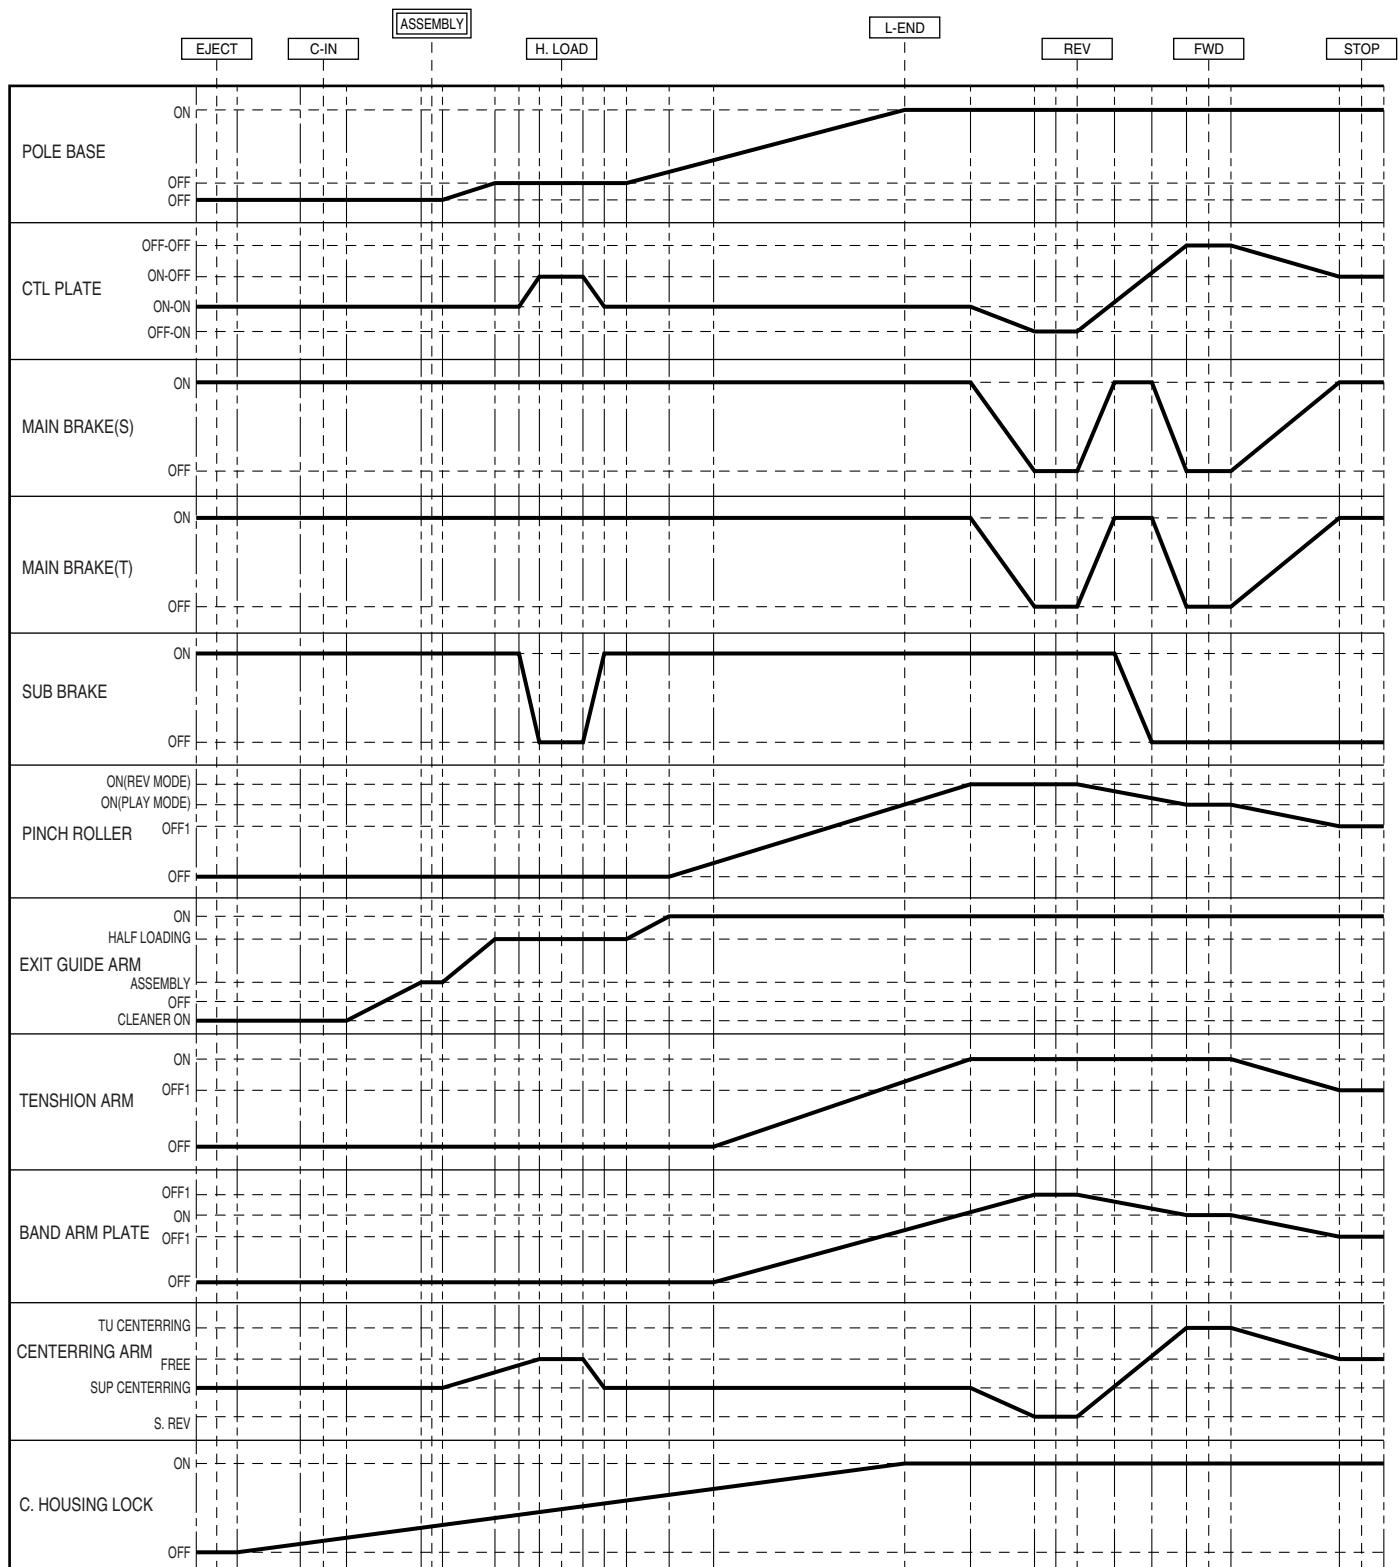

Table 2-3-1

2.4 MAINTENANCE AND INSPECTION OF MAJOR PARTS

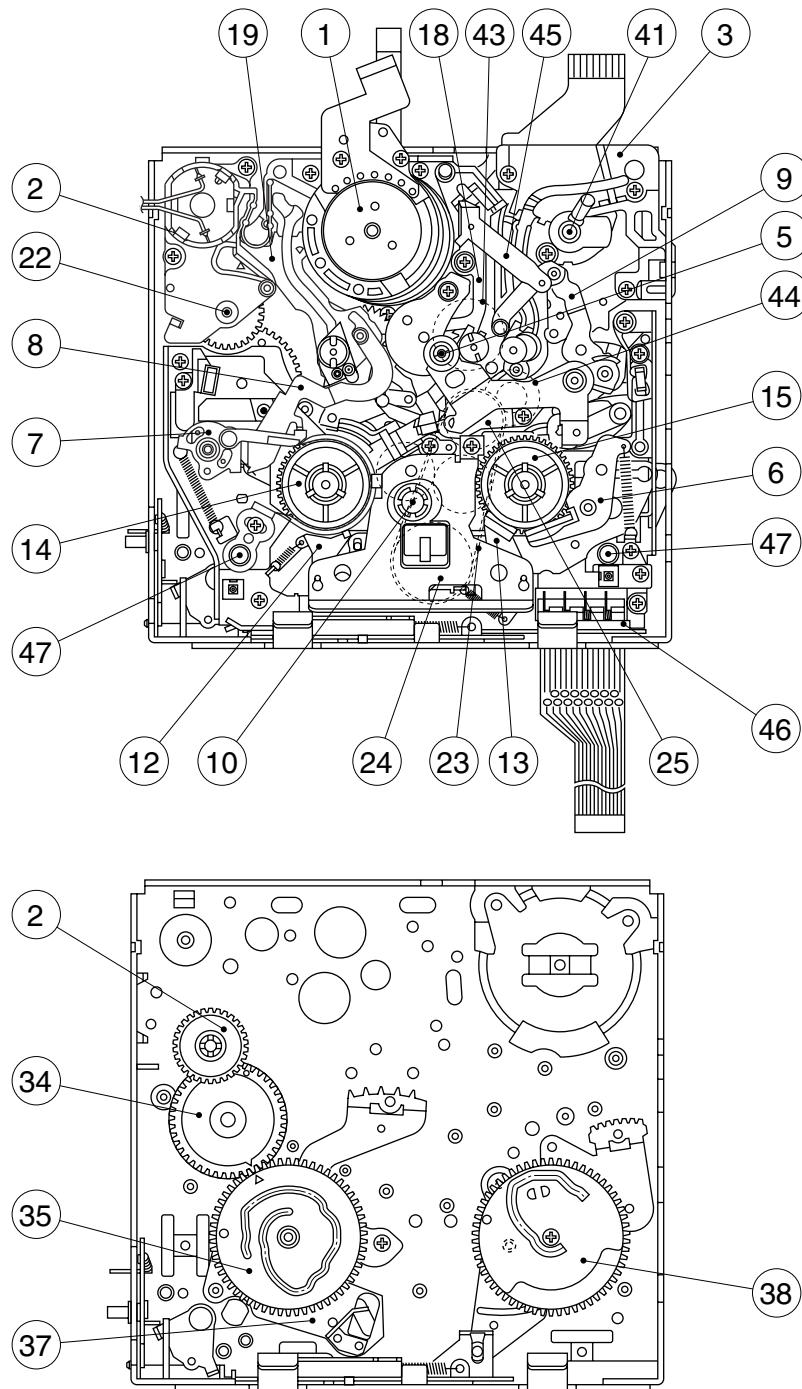

Periodical inspection and maintenance are requisite to maintain the initial performance and reliability of the product. Table 2-4-1 (Maintenance & Inspection List) has been compiled assuming standard operating conditions, and the specifications in the table are greatly variable depending on the actual operating environment and conditions. Remember that, if the maintenance and inspection are not enforced properly, the operating hours of

the product will not only reduce considerably but other unfavorable influences may produce.

Rubber parts may deform or degrade after long period of storage even if they are not used in this period.

The service life of the drum is variable depending on the tape used and operating environment.

2.4.1 Layout of major parts

2.4.2 Maintenance and inspection list

- 1) The 6000 H maintenance consists of a replacement of the entire mechanism assembly.
- 2) When mounting the capstan motor on the main deck, control of the verticality is required. Therefore, when the capstan motor reaches the end of its service life, the entire mechanism assembly should be replaced.

	Part Name	Symbol No.	Operating Hours (DRUM Hour Meter)												Ref.

★: Clean with ethanol. ○: Check and replace if required. ●: Replace. Δ: Oil the shaft.
After replacing a part, apply lubricant to the required points.

Table 2-4-1

2.4.3 Cleaning

The mechanism incorporates a video head cleaner that is effective for the removal of magnetic dust, etc. However, tape lubricant adhering to the head surface produces a spacing loss, it is recommended to polish the heads using a head cleaning tape. When the video heads become soiled an increase in the error rate results. Eventually, when the error rate increase is too much to be corrected by the error correction circuit, block noise will be observed in the picture.

1) Cleaning the video heads

Use the DVC cleaning cassette for cleaning the video heads. Always be sure to use the cleaning cassette, Part No. M-DV12CLAUX.

The video heads should be cleaned periodically. Moreover, care should be taken about the operating environment as the tape running time standard varies accordingly. Please refer to "Precautions for Use of Head Cleaning Tape" in the instructions.

Caution

- As the DVC cleaning tape has a much higher lapping effect than VHS cleaning tapes, frequent use of the DVC cleaning tape will reduce the head service life. Do not play the DVC cleaning tape for more than 10 seconds per run or for more than 4 times per cleaning session.
- The cleaning tape can be used effectively for up to about 4 passes. It cannot improve the cleaning effect even if it is run for more than 4 times.

2) Cleaning the upper/lower drums

Use a cleaning cloth or high-quality paper sheet to clean the upper drum. Moisten the cloth or paper sheet with a small amount of ethyl alcohol, apply it lightly against the upper drum while turning it by hand.

After this operation, wipe it with a dry cloth or paper sheet without alcohol. Be sure to play the cleaning tape to its end. The lower drum tends to gather magnetic dust, etc. in its lead section, and linearity cannot be achieved if this becomes excessively dirty. The tape inlet and outlet areas are contaminated particularly easily, causing trouble such as dropout in FM signal reproduction, block noise on one side of a monitored picture, absence of audio output or incapability of time code readout. To clean the lead section, use a toothpick and rub lightly along the lead section. Be careful not to scratch the video head when this is done.

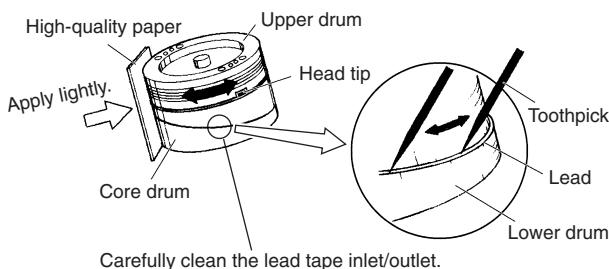

Fig. 2-4-1

3) Cleaning the tape transport system

Moisten the tip of a cotton swab with alcohol and use it to clean the tape transport parts. Take special care of the TU/SUP guide roller flanges and the rear sides of the inclined poles, as these are the parts that most frequently collect magnetic dust.

Caution

Do not wipe the capstan shafts using alcohol. Otherwise, the oil in the bearings may be diluted by the alcohol and become attached to the tape.

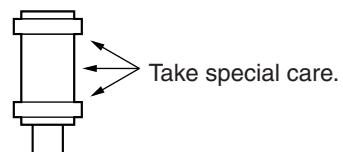

Fig. 2-4-2 Guide Roller

2.4.4 Oiling and greasing

Table 2-4-2 shows the oil and greases used with the set.

Classification	Name	Part No.
Oil	Cosmo Hydro HV100	YTU94027
Grease	Maltemp SH-P	KYODO-SH-P
	Hanal	RX-410R

Table 2-4-2

- 1) Oiling should be performed periodically. Oil the shafts by referring to the maintenance table.
- 2) After replacing a part, grease the required points. For the parts to be greased see the exploded diagram in chapter 5, "DISASSEMBLY DRAWINGS AND PARTS LIST".
- 3) As Hanal separates over time, be sure to mix it (shake) well before use.
- 4) Take care not to leave grease or oil on the tape transport parts which come into contact with the tape or on the brake pads.
- 5) Take care not to apply too much oil or grease. The standard oiling quantity is one drop and the standard greasing quantity is the quantity with which the grease does not overflow.

2.5 PERIODICAL MAINTENANCE

Perform maintenance at the correct times in accordance with the maintenance table.

Fig. 2-5-1 shows the flow chart of periodical maintenance procedures at different operating hours.

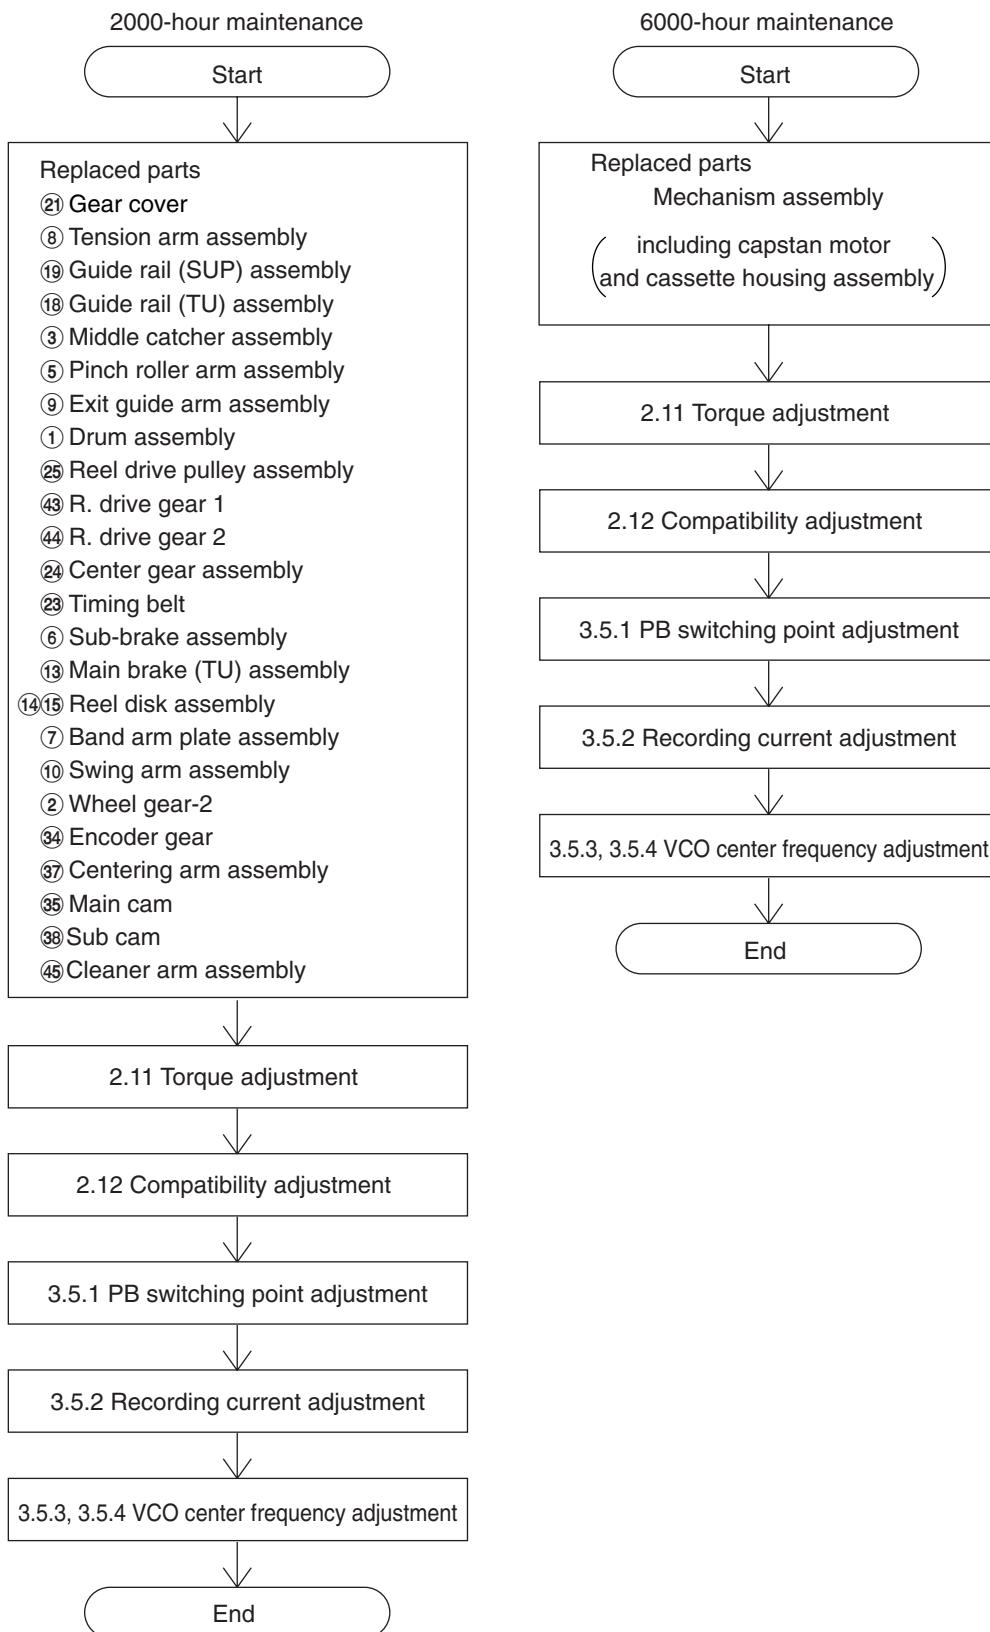

Fig. 2-5-1

2.6 DISASSEMBLY/ASSEMBLY OF MECHANISM ASSEMBLY

2.6.1 Assembly/disassembly

The following table shows the mechanism assembly/disassembly procedures.

- ① : Names of the disassembled/assembled parts.
- ② : Items of disassembly.
- ③ : Parts to be removed for disassembly, such as screws, washers and springs, and points.

Symbol	Name or Point
S	Screw
W	Washer
P	Spring
*	Connector, lock (L), soldering (SD), shield, etc.

2.6.2 Screws and washers used in mechanism assembly/disassembly/assembly

Table 2-6-1 shows the symbols, designs, part numbers and colors of the screws and washers used with the Mechanism assembly.

When disassembling or assembling the Mechanism assembly, be sure to attach the correct screws and washers by referring to the following table.

Symbol	Design	Part No.	Color
(S1)		QYSDSP2005Z	Gold
(S2)		YQ43893	Silver

2.6.4 Mechanism disassembly/assembly procedure chart

<How to read the chart>

- The following chart shows the disassembly/assembly procedures by dividing them into blocks A to I.
- To remove the tension arm sub-assembly which is located in block D; start disassembly from block A. The tension arm sub-assembly can be removed as the fourth operation after the removals of the cassette housing assembly (block A) → reel cover assembly (block B) → band arm plate assembly (block C).
- The parts enclosed in thick frames are the maintenance parts listed in the maintenance table.
- For details on the disassembly/assembly, see section 2.7, "Replacement of Major Parts".

2.11 TORQUE ADJUSTMENTS

1	SUP backup torque adjustment	•Cassette torque meter	Play	<p>◎ Supply side indication of cassette torque meter ☆ $3.9^{+1.47}_{-0.39} \times 10^{-4}$ N·m $(4.0^{+1.5}_{-0.4} \text{ gf}\cdot\text{cm})$</p> 	<p>(1) Insert the cassette torque meter and enter play mode. (2) The supply backup torque should be as specified. (If it fluctuates, read the center value.) (3) If it is out of specification, eject the tape, remove the cassette housing, loosen the screw (black) slightly and fine-adjust the band holder. Slightly turn the band holder as follows. - To increase torque: Counterclockwise - To decrease torque: Clockwise.</p> <p>NOTE The screw securing torque should be 0.0588 N·m (0.6 kgf·cm).</p> <p>4) Check the supply backup torque again and repeat the above steps until it becomes as specified.</p>
2	Take-up wind torque adjustment	Cassette torque meter YTU94150A	PLAY, Adjustment menu No. 110	<p>◎ Take-up side reading of cassette torque meter ☆ $4.9^{+4.90}_{-1.96} \times 10^{-4}$ N·m $(5.0^{+5.0}_{-2.0} \text{ gf}\cdot\text{cm})$</p>	<p>1) Select adjustment menu [119. FWD TORQUE]. (For the adjustment menu, see 3.3, "Adjustment menu".)</p> <p>2) Insert the torque cassette meter YTU94150A and press the [PLAY] button.</p> <p>3) Adjust the TU wind torque so that it is within the specified range.</p> <ul style="list-style-type: none"> • Press JOG dial to enter the adjustment mode. • To increase the torque → Rotate JOG dial to the clockwise. • To decrease the torque → Rotate JOG dial to the counter-clockwise. <p>4) After adjustment, press JOG dial to store the adjustment data.</p>

2.12 COMPATIBILITY ADJUSTMENT

2.12.1 Compatibility adjustment flow chart

Fig. 2-12-1 shows the flow chart of compatibility adjustment.

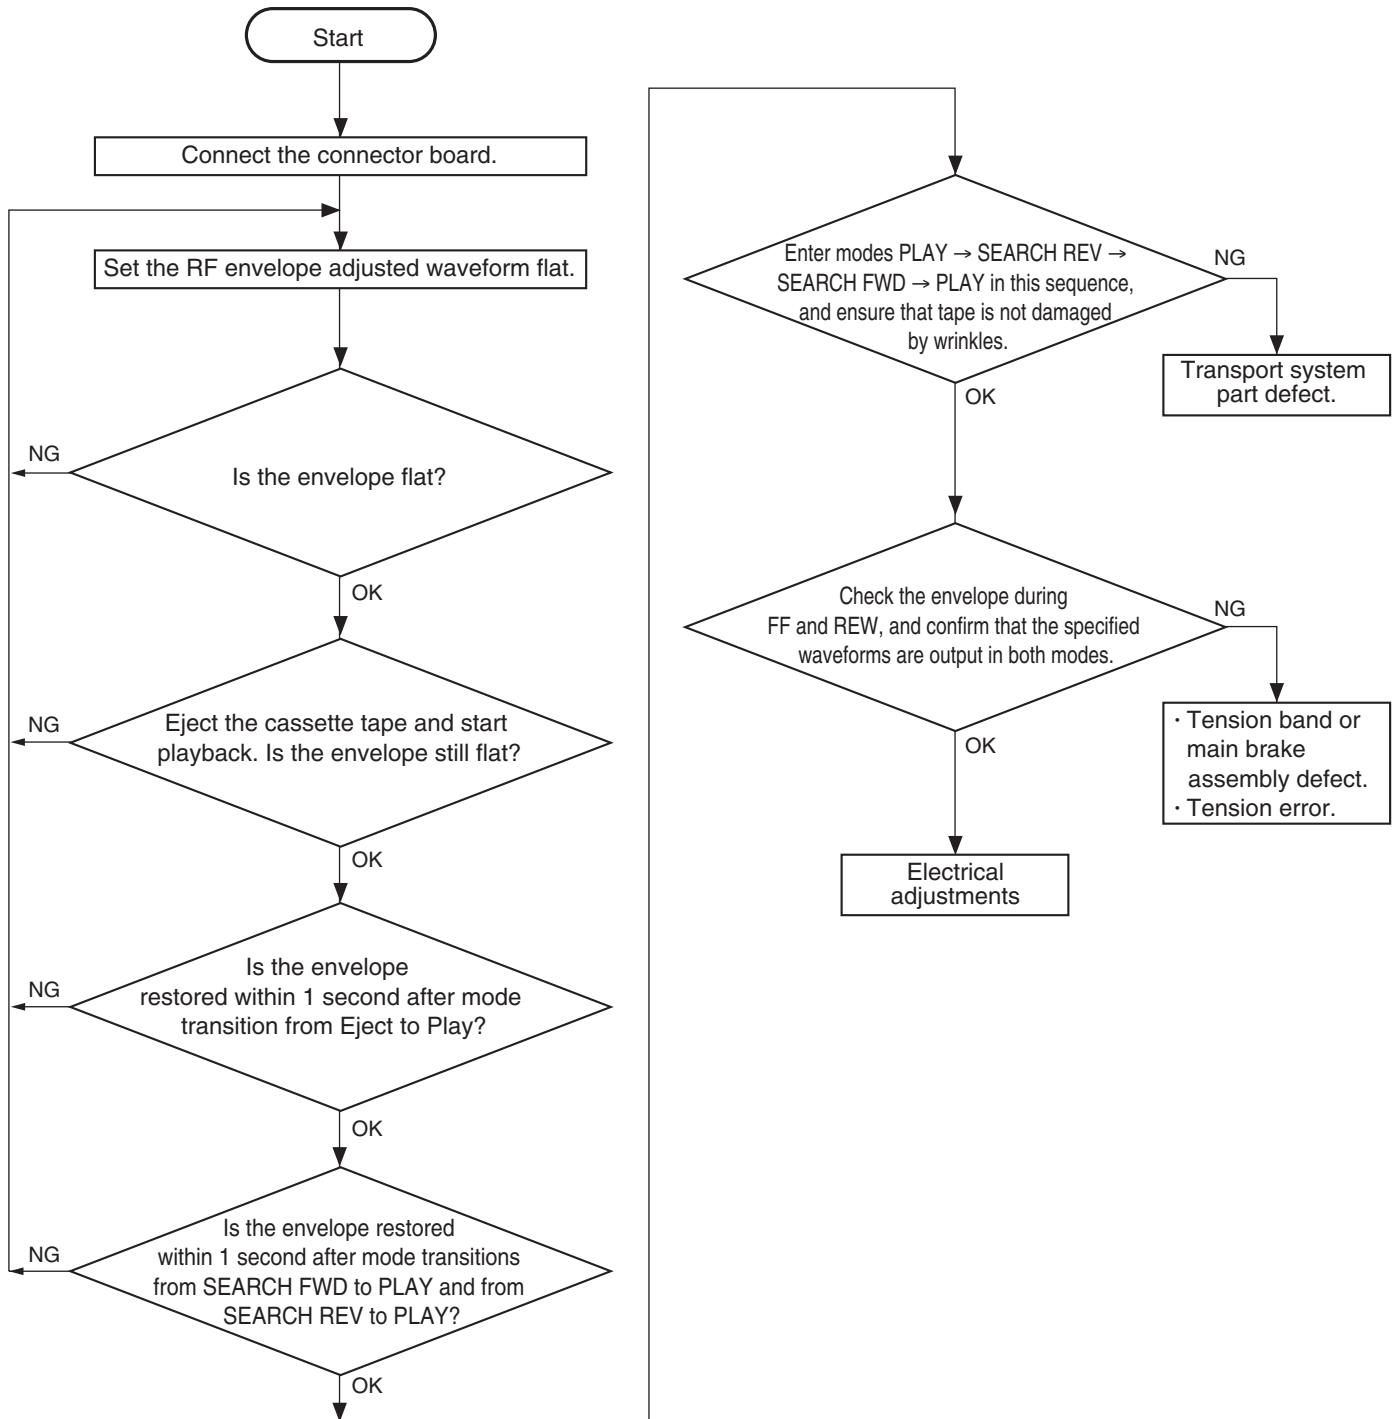

Fig. 2-12-1

2.12.2 Tape transport restriction

The unit uses only the SUP guide roller and TU guide roller to restrict the tape transport. The tape is free (no restriction) from other parts.

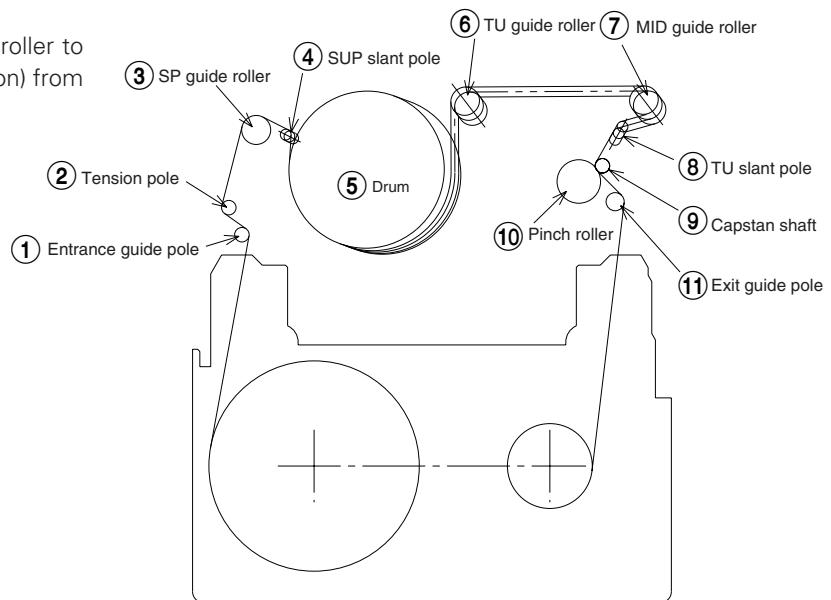

Fig. 2-12-2

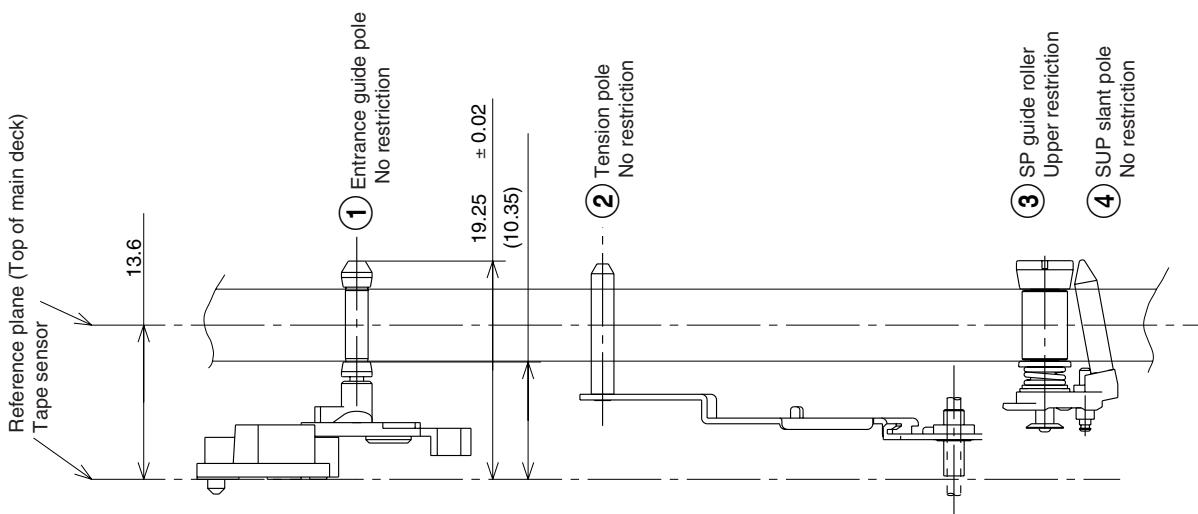

Fig. 2-12-3 Tape Restriction on Supply Side

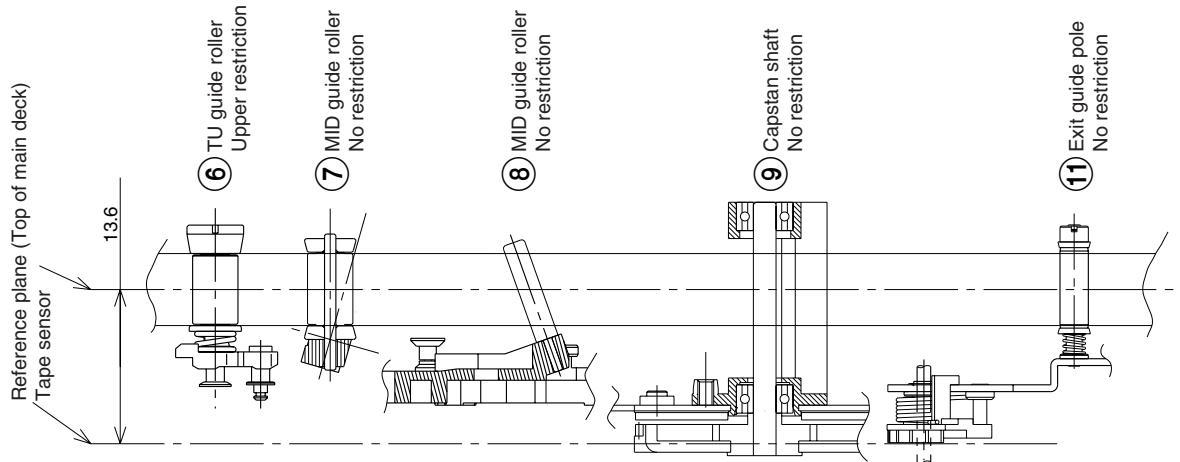

Fig. 2-12-4 Tape Restriction on Take-up Side

No.	Item	Measuring instruments & Input signals	Mode	Measuring point (◎) Adjustment parts (↑) Adjustment level (☆)	Adjustment procedure
-----	------	---------------------------------------	------	---	----------------------

2.12.3 Compatibility adjustment

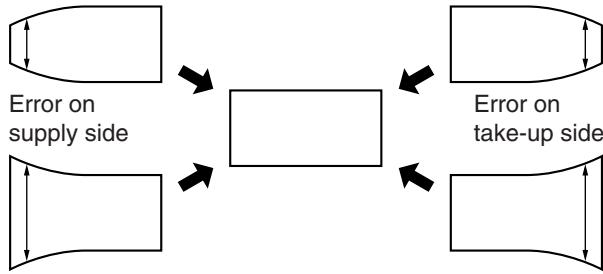

1	Preparation				<p>(1) Mount a connector board to the CN23 on the A/L/S board by inserting it in the slot that is provided to accommodate it. This may be achieved without removing the R. side cover. (See Fig. 2-12-6.)</p> <p>NOTE</p> <ul style="list-style-type: none"> • Make sure the component surface of the connector board is upside. <p>NOTE</p> <ul style="list-style-type: none"> • Be sure to clean the tape transport parts and play a cleaning tape before proceeding to the compatibility adjustment.
2	RF envelope adjustment	<ul style="list-style-type: none"> • Oscilloscope, alignment tape MC-1(NTSC) MC-2(PAL) Color bar portion 	Play	<ul style="list-style-type: none"> ◎ TP9 ENV OUT [connector board] ◎ TP5 HID [connector board] ↑ Supply guide roller ↑ Take-up guide roller ☆ Make the waveforms flat. The drop level should be less than 3 dB with both SUP and TU levels. ☆ Flatness variation should be less than 2 dB. 	<p>(1) Play alignment tape color bar portion.</p> <p>(2) Observe the measuring points and adjust the supply guide roller and take-up guide roller so that the RF waveform is flat.</p> <p>(3) Set the mode to EJECT, then set to the PLAY mode and ensure that the RF waveform is flat.</p> 

Fig. 2-12-5 How to mount a connector board

Fig. 2-12-6

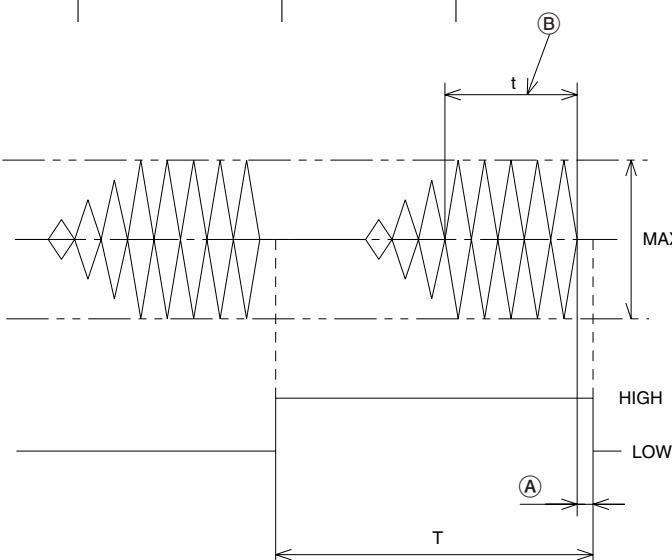

No.	Item	Measuring instruments & Input signals	Mode	Measuring point (◎) Adjustment parts (↑) Adjustment level (☆)	Adjustment procedure
3	Waveform rise check	•Oscilloscope, alignment tape MC-1(NTSC) MC-2(PAL) Color bar portion	Eject → Play Search FWD → Play Search REV → Play	◎ TP9 ENV OUT [Rewrite board] ◎ TP5 HID [Rewrite board] ☆ The envelope waveform should be restored within 1 sec.	<p>(1) Switch the mode from Eject → Play and ensure that the envelope waveform is restored in less than 1 sec.</p> <p>(2) Switch the mode from Search FWD → Play and from Search REV → Play, and ensure that the envelope is restored in less than 1 sec. in both cases.</p> <p>(3) If the waveform does not restore in the specified period, fine-adjust the supply/take-up guide rollers as far as the envelope waveform specification is met, then restart checking from the above procedure 1 again.</p>
4	Damage check	•Self-recorded/played tape 60ME	Play ↓ Search REV ↓ Search FWD ↓ Play	◎ TP9 ENV OUT [Rewrite board] ◎ TP5 HID [Rewrite board] ☆ The tape should not be damaged by wrinkle.	<p>(1) Transport the self-recorded/played tape from the beginning by changing modes in order of Play → Search REV → Search FWD → Play, and ensure that wrinkles due to strong restriction by the guide rollers and guide pole are not produced on tape.</p> <p>(2) Perform the same check at the section near the end of tape.</p> <p>(3) Make sure that no tape damage occurs when a tape is being loaded, unloaded or ejected.</p>
5	Envelope check during FF/REW	•Oscilloscope, alignment tape MC-1(NTSC) MC-2(PAL) Color bar portion	FF REW	◎ TP9 ENV OUT [Rewrite board] ◎ TP5 HID [Rewrite board] ☆ (A) > 55μsec. ☆ (B) $\geq T/3$	<p>(1) Insert the alignment tape and enter Stop mode.</p> <p>(2) Enter FF mode.</p> <p>(3) Ensure that the envelope output is present at 55 μs before the HID switching timing.</p> <p>(4) Check the take-up side of the envelope to see that the MAX output duration is more than 1/3 the HID duration.</p> <p>This checking should be done after completing the switching point adjustment.</p> <p>(5) Enter REW mode and check the same items as (3) and (4) above.</p> <p>(6) If the envelope is out of specification, check the tension band and main brake assembly and replace as required. Confirm the playback switching point.</p>

3.3 ADJUSTMENT MENU

3.3.1 Switches and Functions Used in Adjustments

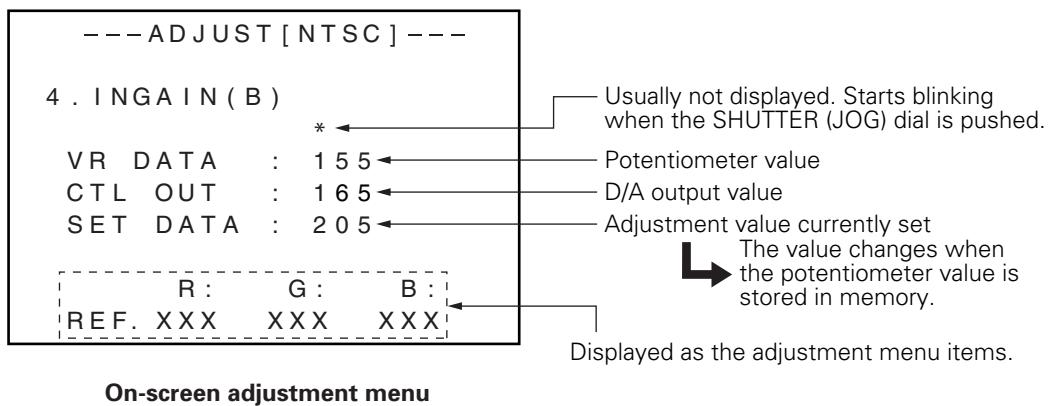

Most of the adjustment items employ microcomputer-controlled adjustments using electric potentiometers. The adjustment data is stored in EEPROM.

The switches used in the adjustments and their functions are as follows.

- [MENU] (STATUS) button : Press to start or exit from the adjustment menu.
- [USER 1], [USER 2] : Press to select the adjustment item.
- JOG (SHUTTER) dial (rotate) : Rotate to adjust the selected item.
- JOG (SHUTTER) dial button (push in) : Press to start an adjustment and store the adjustment value in memory.

3.3.2 Procedure

- (1) Turn the power ON, while holding the [USER 1] and [USER 2] buttons
- (2) When the power is ON, press the [MENU] button to display the ADJUST MENU.
- (3) Push the [JOG] dial button so that "*" blinks, and rotate the [JOG] dial to the specified value while observing the designated TP and measuring instrument. (In this mode, [JOG] dial rotate while holding the [MENU] button, then parameter value change quickly.)
- (4) After completing the adjustment, push the [JOG] dial button to delete the "*" and store the adjustment value in memory.
(If do not push the [JOG] dial button, adjustment value will not stored.)
- (5) Press the [USER 1] and [USER 2] button to select the next item to adjust.
- (6) Adjust for each item to do same procedure as above (3)(4).
- (7) After completing all adjustments, press the [MENU] button to exit the ADJUST MENU.
- (8) To return to normal operation mode, turn the power OFF and ON again.(If did not re-start camera power, camera will be still in ADJUST MODE, so if press the MENU button then ADJUST [MENU] indicate on the screen and will not indicate normal menu screen.)

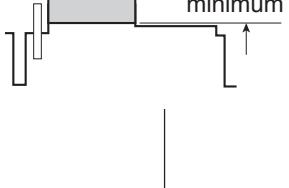

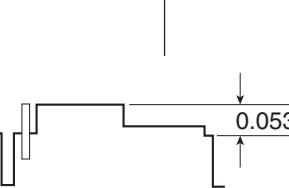

3.3.3 Adjustment mode

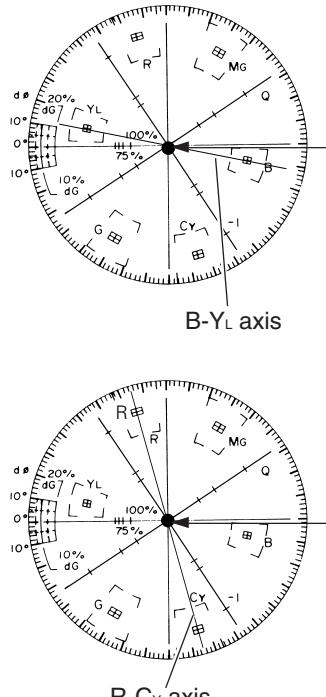

When setting to adjustment mode with the MENU setting status below, an adjustment mode that outputs PAL signal will be set.

- FRAME RATE : 50/25
- REC : DV-50I

2	ME SP VCO [Error rate adjustment]	Oscilloscope Self-recording tape	•Self-REC/ PLAY •ADJUST MENU No.102	◎ TP2 (SBE) [REWRITE BOARD] ↑ JOG dial ☆ Minimum error rate, which should be = 498 or less (per CH)	<p>Note:</p> <ul style="list-style-type: none"> • Be sure to use a brand-new tape for this adjustment. • Be sure to clean the drum with a head cleaning tape before adjustment. • The error rate should be measured with the Viterbi OFF. The Viterbi is set to OFF automatically when the adjustment mode is entered. <p>(1) Prior to the procedure below, prepare self-recording tape. (2) Select "102. ME SP VCO" adjustment. (3) Play back the self recording tape, and decrease the VR DATA to make the SBE waveform abnormal. (Fig. 3.5.2(2)) (Pressing the [STATUS] button simultaneously with the JOG dial varies the adjustment value by ±10 steps) (4) Increase the adjustment VR DATA little by little, and define the point where the SBE waveform becomes normal as value "A". (Fig. 3.5.2(3)) (5) Increase the adjustment VR DATA to make the SBE waveform abnormal. (Fig. 3.5.2(2)) (6) Decrease the adjustment VR DATA little by little, and define the point where the SBE waveform becomes normal as value "B". (Fig. 3.5.2(3)) (7) Calculate the intermediate value "C" between the point A and the point B, and set the value C. (Since the adjustment values are hex number, use a functional computation-capable calculator or the PC calculator provided in Accessories.)</p> <p>Setting value C=(A+B)/2</p> <p>(8) Confirm that the error rate value is 498 or less in each channel. (9) Check the tolerance of adjustment. Shift the adjustment value against the setting value by ±60h. Conform that the error rate is 3,000 or less in each channel. When the error rate is over 3,000, recheck the adjustment procedure from (4). (For example, when the adjustment value is "9ED", ±60h is "A4D" and "98D". So, shift the value to "A4D" and "98D", and check the tolerance of error rate adjustment.) (10) Return the adjustment value to the setting value C, and Press the JOG dial to store the adjustment data.</p>

Fig. 3.5.2 (1) SP VCO Menu

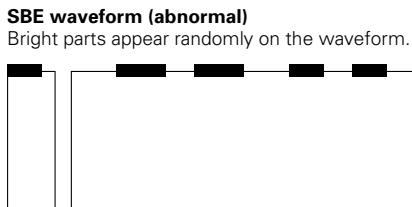

Fig. 3.5.2 (2)

SBE waveform (abnormal)
Bright parts appear randomly on the waveform.

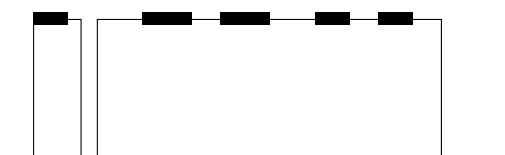

Fig. 3.5.2 (2)

SBE waveform (abnormal)
Narrow pulse trains appear uniformly. Brightness is low.

Fig. 3.5.2 (3)

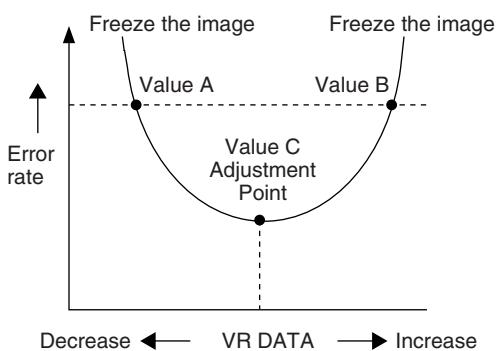

Fig. 3.5.2 (4) Concept of the adjustment

No.	Item	Measuring instruments & Input signals	Mode	Measuring point (◎) Adjustment parts (①) Adjustment level (☆)	Adjustment procedure
3	FS PLL 48 kHz adjustment	No input. Frequency counter	EE ADJUST MENU,110. FS PLL 48 kHz	◎ TP4 (FS PLL) GND: TP1 (GND) [Rewrite board] ① JOG dial ☆ 12.288 MHz ± 0.1 MHz	(1) Press the USER 1/2 button to select ADJUST MENU No. 103, "FS PLL 48 kHz". (2) Adjust the frequency to the specified level. (3) Press the JOG dial to store the adjustment data.
4	FS PLL 44.1 kHzHz adjustment	No input Frequency counter	EE ADJUST MENU, 111. FS PLL 44.1 kHz	◎ TP4 (FS PLL) GND: TP1 (GND) [Rewrite board] ① JOG dial ☆ 11.2896 MHz ± 0.1 MHz	(1) Press the USER 1/2 button to select ADJUST MENU No. 104, "FS PLL 44.1 kHz". (2) Adjust the frequency to the specified level. (3) Press the JOG dial to store the adjustment data.
5	27 MHz VCO center frequency adjustment	No input. Frequency counter	EE ADJUST MENU,113. 27 MHz VCO	◎ TP7 (MAIN VCO) GND: TP1 (GND) [Rewrite board] ① JOG dial ☆ 13.5 MHz ± 0.1 MHz	(1) Press the USER 1/2 button to select ADJUST MENU No. 106, "27 MHz VCO". (2) Adjust the frequency to the specified level. (3) Press the JOG dial to store the adjustment data.

5.6 VF ASSEMBLY M7

5.7 MECHANISM ASSEMBLY M 8

Classification	Part No.	Symbol in drawing
Grease	KYODO-SH-P	AA
Grease	RX-410R	BB
Oil	YTU94027	CC

NOTES:

- This section indicates that the grease and oil are to be applied on locations marked with AA, BB and CC.
During checking and servicing, check if grease has been applied on the locations marked with AA, BB and oil on the locations marked with CC.
- Apply also grease and oil on some locations in the main cam gear and the cam groove at the rear side of the sub cam gear.

SECTION 6

ELECTRICAL PARTS LIST

SAFETY PRECAUTION:

Parts identified by the  symbol are critical for safety. Replace only with specified parts numbers.

For maximum reliability and performance, all other replacement parts should be identical to those specified.

NOTE:

- Parts not denoted by parts numbers are not supplied by JVC.
- Abbreviations in this list are as follows:

RESISTORS

In the "Description" column:

All resistance values are in ohms (Ω).
k expresses kilo-ohm (1 000 ohms, k Ω).
M expresses mega-ohm (10^6 ohms, M Ω).

In the "Parts Name" column:

CAR.RESISTOR : Carbon Resistor
C.M.F.RESISTOR : Constant Metalized Film Resistor
COMP.RESISTOR : Composition Resistor
FUSI.RESISTOR : Fusible Resistor
M.F.RESISTOR : Metal Film Resistor
M.G.RESISTOR : Metal Graze Resistor
M.P.RESISTOR : Metal Plate Resistor
O.M.F.RESISTOR : Oxide Metalized Film Resistor
TRIM.RESISTOR : Trimerer Resistor
U.F.RESISTOR : Non-inflammable Resistor
VAL.RESISTOR : Valiable Resistor
W.W.RESISTOR : Wire Wound Resistor

CAPACITORS

In the "Description" column:

All capacitance values are in microfarad (μF) unless otherwise indicated.
p expresses picofarad (10^{-12} farad,pF).

In the "Parts Name" column:

CER.CAPACITOR : Ceramic Capacitor
E.CAPACITOR : Electrolytic Capacitor
FILM CAPACITOR : Film Capacitor
M.F.CAPACITOR : Metalized Film Capacitor
MICA CAPACITOR : Mica Capacitor
MPP CAPACITOR : Metalized PolyPropylene Capacitor
MPPS CAPACITOR : Metalized PolyPhenylene Sulfied film Capacitor
M.M.CAPACITOR : Metalized Mylar Capacitor
MYLAR CAPACITOR : Mylar Capacitor
N.P.CAPACITOR : Non-Polar electrolytic Capacitor
P.P.CAPACITOR : PolyPropylene Capacitor
PPS CAPACITOR : PolyPhenylene Sulfied film Capacitor
P.S.CAPACITOR : PolyStyrene Capacitor
TAN.CAPACITOR : Tantal Capacitor
TRIM.CAPACITOR : Trimer Capacitor
VAL.CAPACITOR : Valiable Capacitor

Note: In the "Description" column of the parts list, (U) means the parts for the GY-HD100U while (E) is for the GY-HD100E.

Symbol No.	Part No.	Part Name	Description	(U)	for GY-HD100U
			JVC	(U)	for GY-HD100U
IC1	SCV1585-064	I.C.(M)	JVC	(U)	for GY-HD100U
	SCV1585-067	I.C.(M)	JVC	(E)	for GY-HD100E

SECTION 7 PACKING

7.1 PACKING ASSEMBLY M1

SECTION 4

CHARTS AND DIAGRAMS

■ SCHEMATIC DIAGRAM NOTES

• Schematic safety precaution

△ Parts are safety related parts.

When replacing them, be sure to use the specified parts.

• Unit of value

Unless otherwise specified

1) Resistance is in Ω (1/6 W)

2) Capacitance is in μF

3) Inductance is in μH

• Expression of wiring

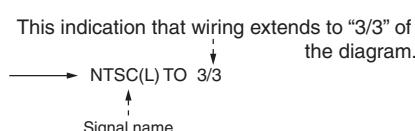

As the following circuit diagram is divided to print on some sheets, such an indication as the following is found in the case the wiring extends over two or more divided sections.

- 1) Circuit diagram divided into two or more sections:

Board	Board Name	Number of divided sections
1 0	MAIN	1/18 to 18/18
2 0	MIF	1/7 to 7/7
3 0	AUDIO	1/2 to 2/2
3 3	PR MDA	1/3 to 3/3

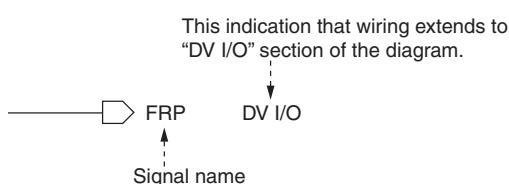

- 2) Indication of wiring which extends to another section:
(Example)

A)

In the above case, the end of the wiring is connected to the "NTSC(L)" on the 3rd section of the diagram.

B)

In the above case, the end of the wiring is connected to the "FRP" on the "DV I/O" section of the diagram.

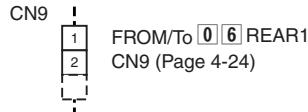

C)

In the above case, the end of the wiring is connected to the "PIX_RST" on "E" (X-axis) and "8" (Y-axis) position scale in page "3" of the diagram.

• Wiring of connector

(Example)

In the above example, CN9 is connected with CN9 on 0 6 REAR1 board.

• Signal flow on the diagram

The following allow marks indicate the specified signal paths respectively.

→ : Recording or EE signal path

⇒ : Playback signal path

↔ : Recording and Playback signal path

• Others

In regard of a board assembly whose circuit is composed of multilayered board patterns such 4- or 6-layered patterns, board patterns of the power supply lines and grounding lines are omitted in this section.

Note: For detail of each electrical part, refer to Section 6 "ELECTRICAL PARTS LIST" by its symbol number.

■ REPLACING SURFACE MOUNT "CHIP" COMPONENTS

• Some resistors, shorting jumpers (0 resistance), ceramic capacitors, transistors, and diodes are chip parts. These chip parts cannot be reused after they are once removed.

• Chip resistors used in some circuits are of high precision type having little error in resistance.

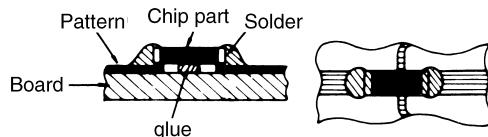

To demonstrate the full capacity of this set, place an order for proper parts referring to the diagrams and parts lists in the section 5.

• Soldering cautions:

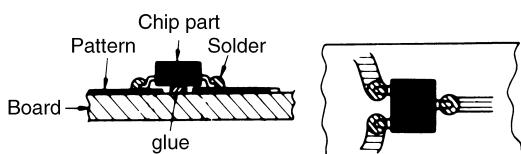

- 1) Do not apply heat for more than 3 seconds.
- 2) Avoid using a rubbing stroke when soldering.
- 3) Discard removed chips; do not reuse them.
- 4) Supplementary cementing is not required.
- 5) Use care not to scratch or otherwise damage the chips.

(1) Soldered condition of chip parts

- Resistors, capacitors, etc.

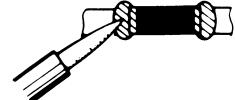

- Transistors, diodes, etc.

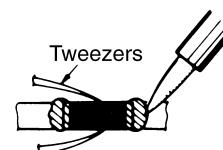

(2) Removing of chip parts

- Resistors, capacitors, etc.

- i) Melt solder at a side.

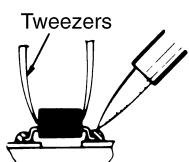

- ii) Holding the chip with tweezers, melt solder at the other side.

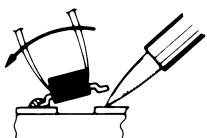

- iii) Take off the chip in twisting and sliding motion.

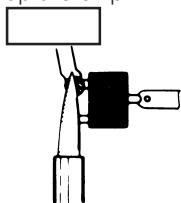

- Transistors, diodes, etc.
- Melt solder at the side of single lead.

- Lift the unsoldered side upwards.

- Simultaneously melt solder at two leads of the other side and pull up the chip.

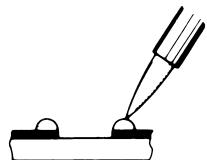

(3) Preheating and soldering of chip parts

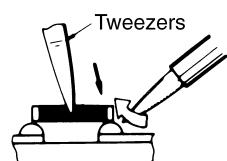

Except transistors, make sure to preheat all chip parts, capacitors in particular, with a hot wind of 150°C approx. (of a hair dryer, etc.) for 2 minutes just before soldering, and immediately solder by a soldering iron of approx. 30 W.

(4) Attaching of chip parts

- Heap up a proper amount of solder beforehand.

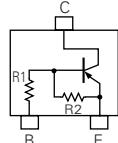

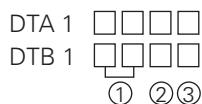

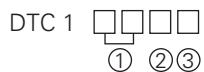

- Holding down a new chip by tweezers, solder it to the board by a soldering iron to melt solder from its lower part to the upper part (in the direction shown by a big arrow).

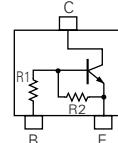

■ CHIP PARTS PIN ARRANGEMENT

[1] Digital transistors

(Top view)

(Top view)

- Two digits show resistance of R1 in abbreviation.

43 : 4.7 kΩ

14 : 10 kΩ

24 : 22 kΩ

44 : 47 kΩ

- Roman letter show the resistive ratio between R1 and R2 in abbreviation.

E : $R_2/R_1 = 1/1$

Y : $R_2/R_1 = 5/1$

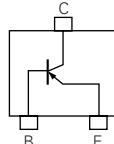

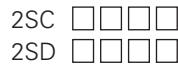

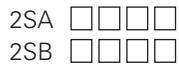

W : $R_2/R_1 = 2/1$

X : $R_2/R_1 = 1/2$

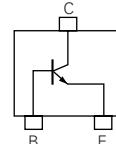

T : R_2 is opened.

- Symbol the shape of resistor in abbreviation.

SECTION 8

TECHNICAL INFORMATION

8.1 HDV FORMAT

HDV format is a basic specification established jointly by Canon Inc., Sharp Corporation, Sony Corporation and Victor Company of Japan, Limited in 2003, which allows the recording and playback of HD video on DV cassette tapes.

Based on the common VCR "DV standard", the "HDV standard" is a HD VCR standard where data recording specifications of compressed HD signals in MPEG2 are newly defined. As it uses the same cassette, tape speed and track pitch as the DV standard, main mechanisms such as drum and tape running system of the HDV standard can make use of those in the DV standard, making it highly compatible with the existing DV standard products.

There are two formats in "HDV standard"; HDV1 at 720p (720 effective scan lines/progressive) recording and HDV2 at 1080i (1080 effective scan lines/interlaced) recording.

8.1.1 HDV Features

- (1) Allows recording and playback of HD video.
- (2) Uses commonly available DVC standard cassette tapes.
- (3) Realizes same recording time as DV format through MPEG-2 high compression
- (4) Uses 720p (HDV1) progressive format and 1080i (HDV2) interlaced format
- (5) Reinforces error correction ability
- (6) Allows trick-play

HDV 720p standard is used in GY-HD100 and BR-HD50. Besides HD video, HDV720P standard also supports SD video progressive recording at 480/60p, 576/50p and 720/24p that is suitable for digital cinema. It also plans to support 720/50p/60p in the future.

8.1.2 HD Image Format

GY-HD100 employs the 720/30p format of HDV. 720/30p means the effective scan line is 720 (scan line 750), frame rate is 30Hz (practically 29.97Hz) and P means progressive scan. Similarly, 1080/60i means the effective scan line is 1080 (scan line 1125), field frequency is 60Hz (actual frame rate is 29.97Hz) and i indicates interlace.

In the case of SD image, it is 480/60i (NTSC), 576/50i (PAL). In addition, the progressive images and aspect ratio 16:9 images are also used.

HD images : 720/30p, 720/25p, 1080/60I, 1080/50i and etc.

SD images : 480/60i, 576/50i, 480/60p, 576/50p and etc.

8.1.3 Progressive method

In progressive scanning method, 1 screen is displayed with 1 scanning. In interlace method, 1 screen is displayed with 2 scanning, which are odd number lines scanning and even number lines scanning. In recent years, employment of progressive method of images is proceeding. Image scanning of DVD and PC is also progressive method. In addition, the popular LCD or Plasma TV and other display devices nowadays are also in progressive mode. The interlace images have to undergo I-P conversion. There are many advantages such as the maintenance of image quality, reduction of the conversion loss, and affinity with PC by employing progressive method when collecting data.

8.1.4 Comparison of HDV format and DV format

	HDV Format		DV format (SD)
	720p (HDV1)	1080i (HDV2)	
General			
Recording Media	Same as DV format (DV/Mini DV cassette)		DV/Mini DV
Truck width	10 µm	10 µm	10 µm/6.7 µm
Truck / Frame	Not specified		NTSC: 10 trucks /1 frame PAL: 12 trucks /1 frame
Video			
Video signal	720/30p, (720/60p) 720/25p, (720/50p) 720/24p 480/60p, 576/50p	1080/60i, 1080/50i	NTSC: 480/60i PAL: 576/50i
Number of pixels	1280 x 720 720 x 480 (480/60p) 720 x 576 (576/50p)	1440 x 1080	NTSC: 720 x 480 PAL: 720 x 576
Aspect ratio	16:9		4:3 (16:9)
Compression	MPEG-2 Video (profile & level: MP@H-14)		DCT (intra-frame)
Sampling frequency for luminance	74.25MHz/ 27MHz	55.7MHz	13.5MHz
Sampling format	4:2:0		NTSC 4:1:1 PAL 4:2:0
Quantization	8 bits (both luminance and chrominance)		
Bit rate after compression	Approx. 19Mbps	Approx. 25Mbps	Approx. 25Mbps
AUDIO			
Compression	MPEG1 Audio Layer II		Liner PCM
Sampling Frequency	48kHz		48k/ 44.1k/ 32kHz
Quantization	16 bits		16 /12bits
Bit rate after Compression	384kbps		Approx. 1.5Mbps
Audio Mode	Stereo (2 channels)		2ch / 4ch
SYSTEM			
Data Format	MPEG2 Systems		
Stream Type	Transport Stream	Packetized Elementary Stream	
Stream Interface	IEEE1394 (MPEG2-TS)		IEEE1394 (DV)

Table 8.1.2 Comparison of Format

8.1.5 Tape Format

HDV standard records MPEG data based on DV tape format. The recording method differs greatly for HDV1 and HDV2 in HDV standard. HDV1 records MPEG TS data in the conventional VIDEO sector. HDV2 breaks down the frame of conventional VIDEO and AUDIO sectors and takes in a large area that writes MPEG2 PES data (including GAP and a portion of SUB CODE sector).

(1) DV Format

ITI SECTOR	G A P	PCM AUDIO SECTOR	G A P	VIDEO SECTOR DV	G A P	SUB CODE	M A R
---------------	-------------	---------------------	-------------	--------------------	-------------	-------------	-------------

(2) HDV HD1 Format

ITI SECTOR	G A P	PCM AUDIO SECTOR	G A P	MPEG2 TS VIDEO, AUDIO, SEARCH	G A P	SUB CODE	M A R
---------------	-------------	---------------------	-------------	----------------------------------	-------------	-------------	-------------

(3) HDV HD2 Format

---------------	-----------------------------------	-------------	-------------

Table 8.1.3 Tape Format (conceptual diagram)

8.1.6 GY-HD100 & BR-HD50 Compatible Format

The following table shows a list of compatible formats.

DV/HDV	Frame Rate	Recording Format	Remark
DV	60/30 Hz	480/60i	U-model only GY-HD100 U-model only GY-HD100 U-model only GY-HD100 E-model only GY-HD100/BR-HD50 U/E model in common
	24 Hz	480/24p Normal mode (2-3-2-3 Pull Down)	
		480/24p Advanced mode (2-3-3-2 Pull Down)	
	50/25 Hz	576/50i	
		576/25p	
HDV-SD	60/30 Hz	480/60p	GY-HD100/BR-HD50 U/E model in common
	50/25Hz	576/50p	
HDV-HD	60/30 Hz	720/30p	
	24 Hz	720/24p	
	50/25 Hz	720/25p	

Table 8.1.4 Compatible Format

8.2 RECORDING SIGNAL SYNTAX

8.2.1 720/30P

Camera signals are originally generated as 60P signals. FPGA4 (IC106) converts the camera signals from 60P to 30P. Thus alternate frames of camera signals are deleted. Converted 30P signals are inputted to S.ENC (IC91) and encoded to MPEG TS signals as 30P. GOP consists of six frames each so the minimum interval for recording/editing is 0.2 second.

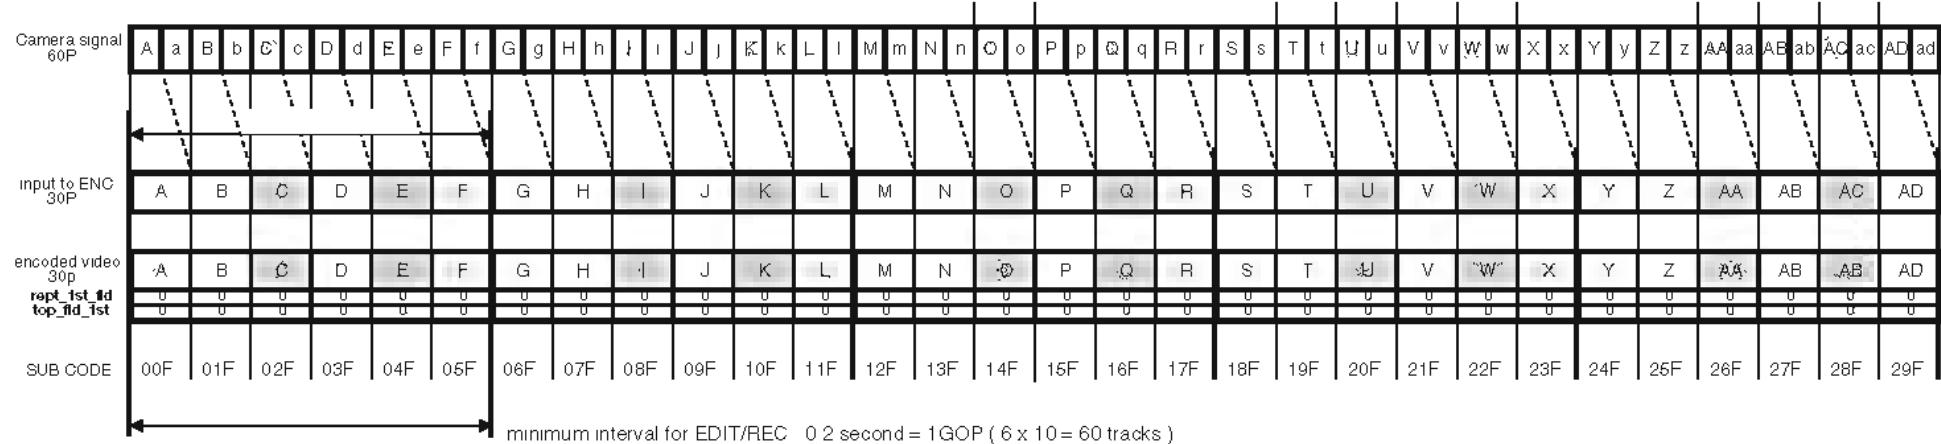

Fig. 8.2.1

8.2.2 720/24P

Camera signals are originally generated as 48P signals. FPGA4 (IC106) converts the camera signals from 48P to 24P. Thus alternate frames of camera signals are deleted. Converted 24P signals are inputted to S.ENC (IC91) and encoded to MPEG TS signals as 60P by 2-3 pull-down. First frame "A" of 24P is encoded to frame "A" and one frame "●", which is without picture data, of 60P. Second frame "B" of 24P is encoded to frame "B" and two frames "●", which are without picture data, of 60P. When playing back, each frame is displayed according to the combination of "rept_1st fld" and "top fld_1st" which are the number of repetition flag shown below.

"1" and "0": displays applicable frame twice

"1" and "1": displays applicable frame three times

GOP consists of six frames each however sub code is divided, so the minimum interval for recording/editing is required two GOP and is 0.5 second.

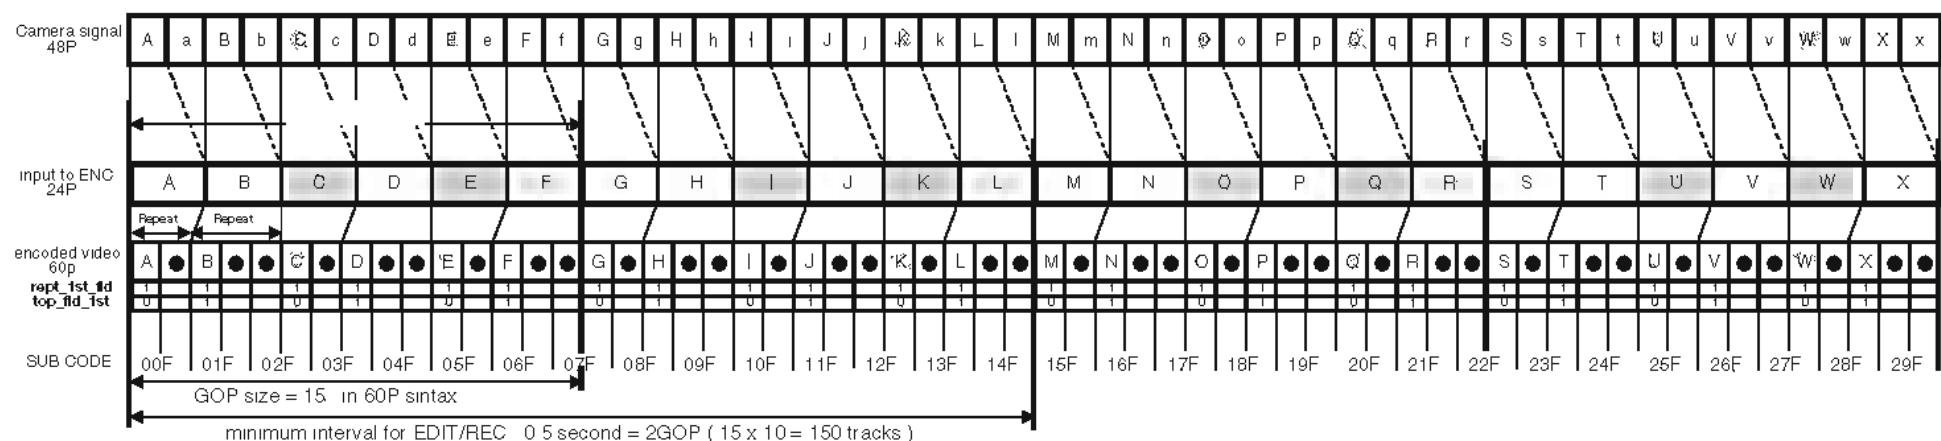

Fig. 8.2.2

8.2.3 720/25P

Camera signals are originally generated as 50P signals. FPGA4 (IC106) converts the camera signals from 50P to 25P. Thus alternate frames of camera signals are deleted. Converted 25P signals are inputted to S.ENC (IC91) and encoded to MPEG TS signals as 50P. First frame "A" of 25P is encoded to frame "A" and one frame "●", which is without picture data, of 50P. When playing back, each frame is displayed according to the combination of "rept_1st fld" and "top fld_1st" which are the number of repetition flag shown below.

"1" and "0": displays applicable frame twice

GOP consists of six frames each so the minimum interval for recording/editing is 0.24 second.

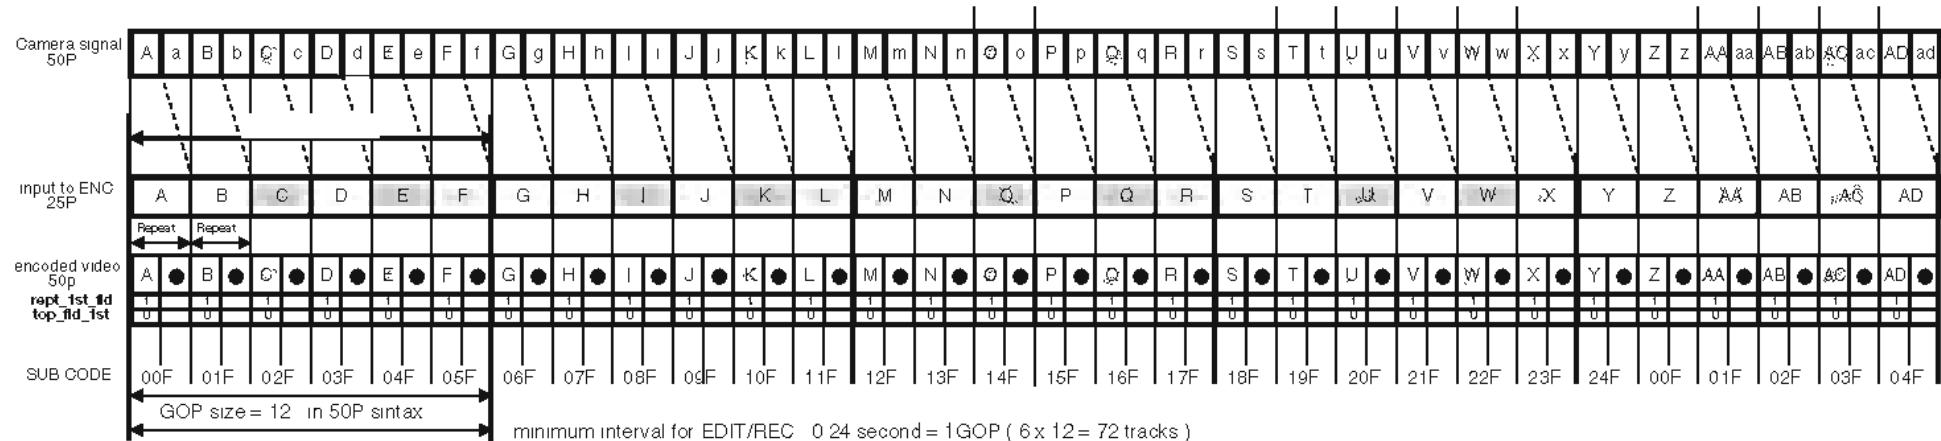

Fig. 8.2.3

8.3 VIDEO CIRCUIT

8.3.1 CCD

GY-HD100 now uses three pieces of 1/3 inch, effective pixels 1.04 million IT type CCD. The CCD's lamination utilizes with UV bonding.

(1) Specification

- Image type : Interline CCD image sensor
- Image size : 1/3 inch
- Total number of pixels : 1356 (H) x 824 (V) approx. 1.11M pixels
- Number of effective pixels : 1292 (H) x 810 (V) approx. 1.04M pixels
- Number of active pixels : 1280 (H) x 802 (V) approx. 1.02M pixels
- Chip size : 6.26mm (H) x 4.71mm (V)

(2) Pixel Reading

Although the CCD's effective pixels are 1292 x 810, the actual pixels are 1280 x 802 with 6 pixels taken away from the left and right, and 4 pixels from the top and bottom.

CCD is divided into two areas at the vertical center line. Signals are read from the center towards the left and right simultaneously. From the CCD, the left and right signals are output, after which A/D conversion is performed, then the two signals will undergo MIX by camera process IC (FPGA2). Currently for CCD, its characteristic is a high drive frequency for reading HD sized pixels at one time, and because the high-speed electrification transfer speed cannot keep up, this method caters for it

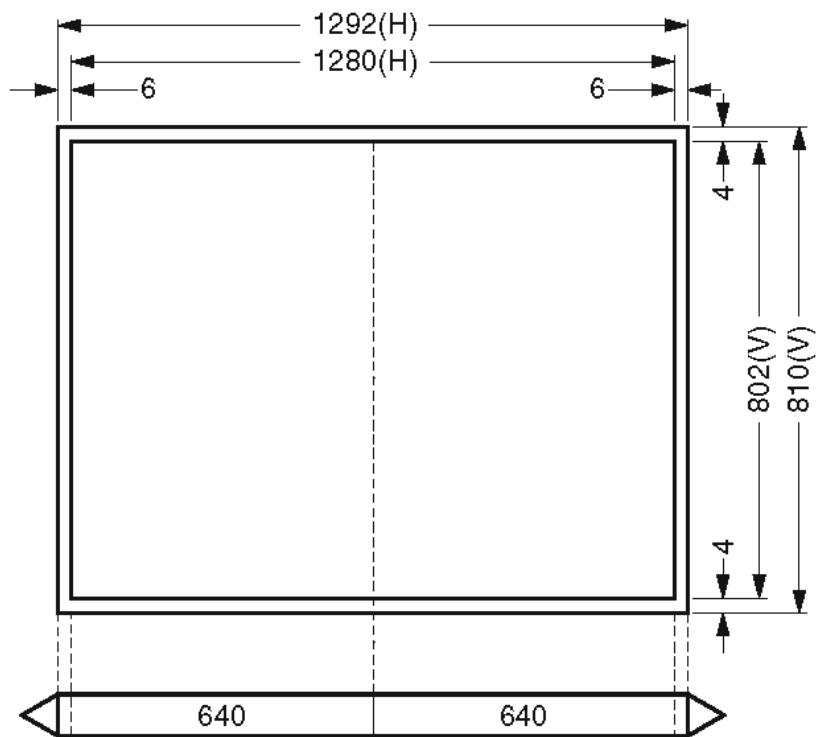

Fig. 8.3.1

8.3.2 VIDEO Signals

Fig. 8.3.3 is a block diagram of the video system.

[Recording]

- (1) The two image signals that are output from RGB CCDs (ICX485) will each be A/D converted by AFE (IC2, IC3). AFE is an abbreviation of Analog Front End, and is hereafter referred to as digital signal. Each 12-bit signal line is inserted to the MAIN board from the IS board and then input to FPGA2 (IC46), camera process LSI.
- (2) With FPGA2, white spot correction, black level correction, gamma correction, KNEE and other digital video signal processing will be carried out. After which, signals converted to digital components will be input to FPGA3 (IC60) and Pixel Converter (IC1, JCY0210).
- (3) FPGA3 (IC60) is the gate array IC for LCD/VF Process. Rate conversion, peaking processing, Focus assist, OSD (On-Screen Display) MIX, etc. will be processed, and undergo digital to analog conversion by Video DAC (IC51, IC52). After which, analog RGB signals will be output to LCD and VF. IC48, IC49 (UPD6467GR) has one for VF and another for LCD, in the character generator for onscreen display. Onscreen data is sent to FPGA3.
- (4) Pixel Conv (IC1) is an up/down converter.

When in DV mode, SD signals will be entered into DVC DSP (IC79, JCY0152) from Pixel Conv. Recorded signals will be processed with DVC DSP, then input to PRMDA board. They will undergo Amplifire by PRE/REC (IC3, JCY0132), and be recorded on DV tape. This DVC DSP (IC79, JCY0152) is the same as what is used at GY-DV5000.

When in HD mode, it will be input to FPGA4 (IC106) via 3DNR processing of Analog I/F (IC5, JCP8076).

- (5) For FPGA4, because the output from camera is 60P/50P, it is converted to 30P/25P for recording. MOTION SMOOTH (selectable with the menu) will also be carried out. This enhances the smoothness of moving images by adding discarded information with original information via 30P/25P conversion.
- (6) Signals from FPGA4 will be input to Super ENC (IC91). After MPEG encoding here, they will be output as MPEG TS signals, then input to MPEG Bridge (IC86, JCY0173). They will be input to DVC DSP after TS → DV conversion to match the DVC recorded track format. After which, like SD signals they will pass through PRMDA board's PRE/REC (IC3, JCY0132), then be recorded on DV tape.

[Playback]

- (1) Playback signals recorded on DV tape are input to DVC DSP (IC79, JCY0172), DV signal process IC, via PRE/REC (IC3, JCY0132).
- (2) When in SD mode, it will be DV decoded and then output to Pixel Conv (IC1). When in HD mode, it will be entered to Super ENC (IC91) via MPEG Bridge (IC86, JCY0173), then MPEG decode processed and output to Pixel Conv (IC1).
- (3) After being converted to the selected video format (up/down convert) by pixel converter, and after analog conversion by analog I/F (IC5, JCP8076), it will be output as Video Out. Additionally it will be output as VF/LCD by means of FPGA2 to FPGA3. IC3, IC4 (BU3095-0CFV) is an onscreen character generator for VIDEO OUT. IC3 is for SD, and IC4 for HD, to send onscreen data to analog I/F (IC5, JCP8076).

■ Keyword

3DNR	: 3-Dimensional Noise Reduction
FPGA	: Field Programmable Gate Array (Programmable)
MOTION SMOOTH	: Moving Image Filter (function to smoothen movement)
Super ENCⅢ	: MPEG2 Encoding/Decoding Process LSI
Pixel Converter	: Up-down Converter LSI (480/60i, 576/50i, 480/60p, 576/50p, 720/60p/50p, 1080/60i/50i selection)
JTAG	: Boundary Scan Test Function (for design and development only)
EJTAG	: Real-time Debugging Function (for design and development only)

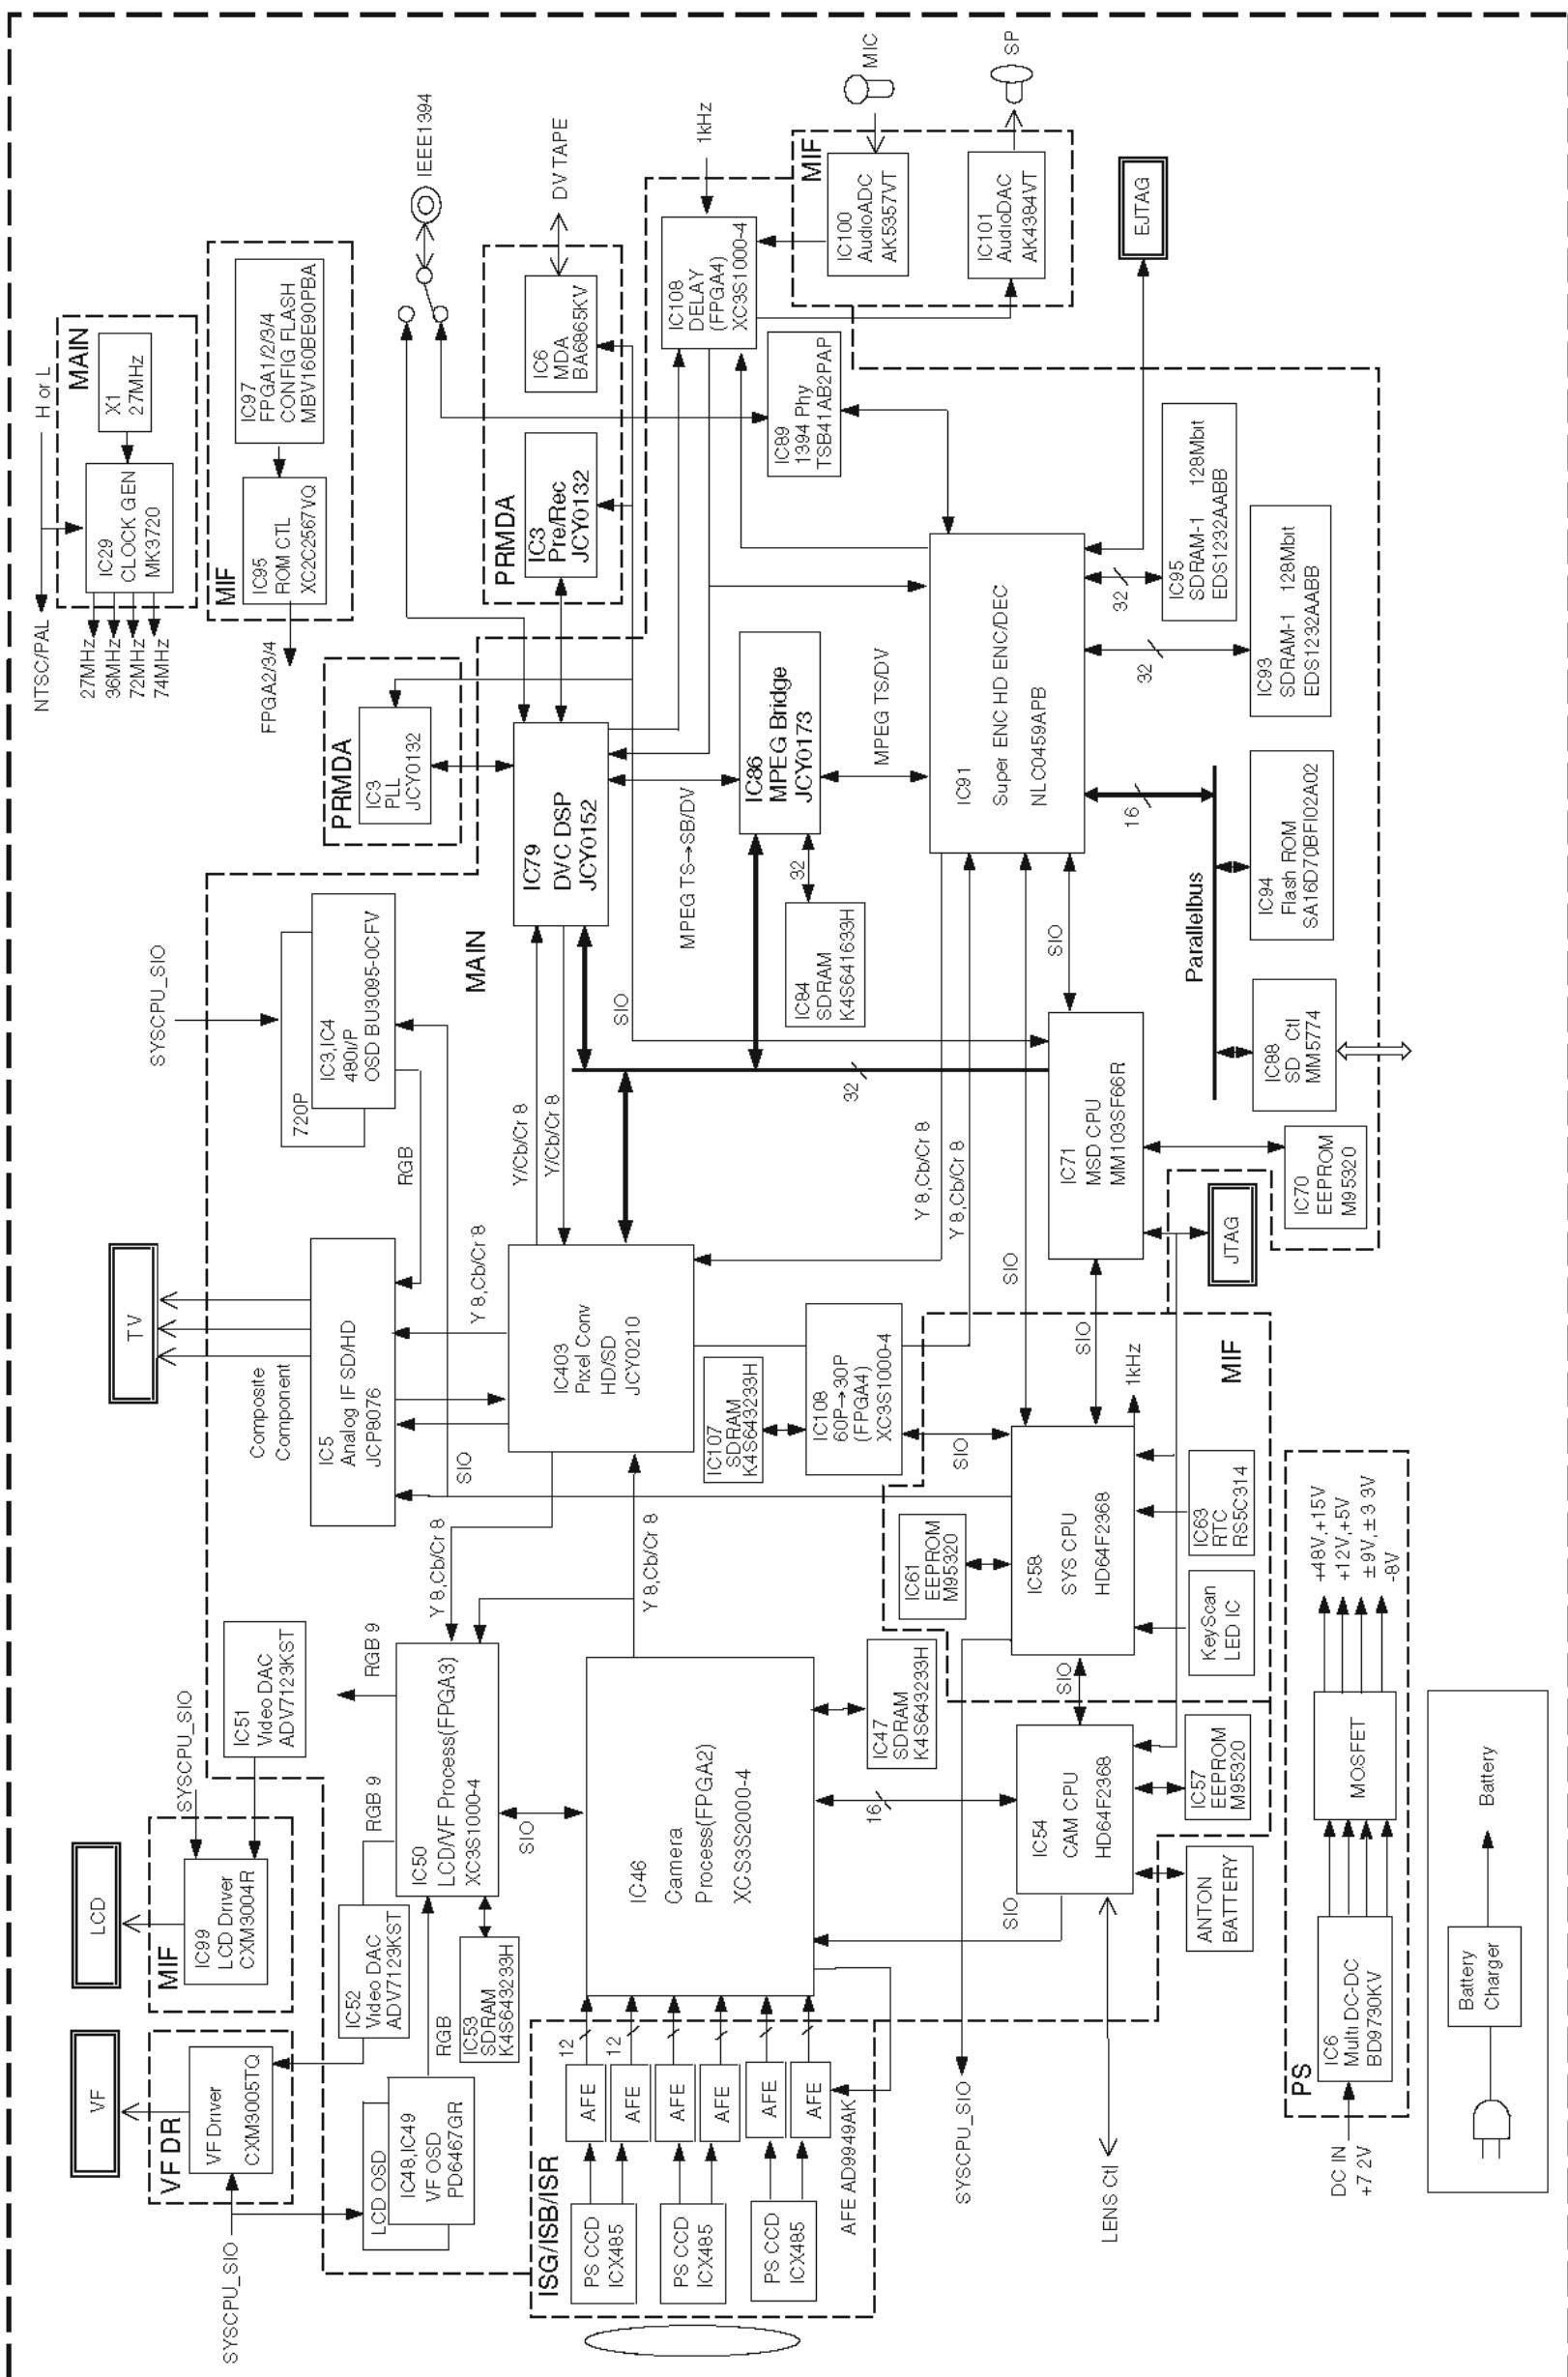

Fig. 8.3.3 VIDEO BLOCK DIAGRAM

8.3.3 AUDIO Signals

DV Format : DV Audio Standard
HDV Format : Compression Method : MPEG1 Audio Layer II
Sampling Frequency : 48kHz, No. of Bits for Quantization : 16bit
Bit Rate : 384kbps, Sound Mode : Stereo (2ch)

Fig. 8.3.4 is a block diagram of the audio system.

[Recording]

- (1) Mic input (analog signal) signals enter from AUDIO_IN1 and AUDIO_IN2 to the AUDIO board. In the case of AUTO mode, they will be input to the MIF board via ALC IC (IC201, IC202). In the case of MANUAL mode, it will be input to the MIF board via REC LEVEL VR of the AVR board.
- (2) It will be analog to digital converted (IC100, AK5357VT) by the MIF board. Digitalized audio data (ANA_IN_DAT) will be output from the MIF board, then input to FPGA4 (IC106) of the MAIN board. Data when in SD mode will be input to DVC DSP (IC79, JCY0152) as it is, and data when in HD mode will be input to Super ENC (IC91) after undergoing sampling clock conversion (64fs to 32fs conversion).
- (3) When in SD mode, its format will be converted by DV DSP (IC79, JCY0152) for recording, then recorded on DV tape as linear PCM. When in HD mode, after being compressed to MPEG1 Audio Layer II by Super ENC (IC91), it will pass through MPEG Bridge (IC86, JCY0173) and then be input to DVC DSP (IC79, JCY0152) as MPEG2 TS data. After which, it will pass through PRMDA board's PRE/REC (IC3, JCY0132), then be recorded on DV tape.

[Playback]

- (1) Playback signals will undergo AMP at PRE/REC (IC3, JCY0132) and when in SD mode, only audio data will be input by DVC DSP (IC79, JCY0152) to FPGA4 (IC106) as "PB_SD_DAT". When playing back in HD mode, MPEG2 TS data will, via MPEG Bridge (IC86, JCY0173), be input to FPGA4 (IC106) as "PB_HD_DAT" after undergoing the MPEG decoding process by Super ENC (IC91).
- (2) With FPGA4 (IC106) it will pass through the selector, then delay 1 frame and output. AUDIO data (ANA_OUT_DAT) output from FPGA4 will be input to the MIF board from the MAIN board. It will undergo digital to analog conversion at IC101 (AK4384VT), then be output to audio out and speaker.

8.4 GLOSSARY

1-9

1080i

HDTV format. Vertical lines 1,080 x horizontal pixels 1,920, displayed in interlace method. Aspect ratio 16:9, frame rate 29.97 Hz.

2-3 Pull Down

This is the method used for converting (pull down) movie film image (24 frame/sec) to TV signal (30 frame), which assigns 1 film frame to 2 fields, and next film frame to 3 fields in the film. In this case, 2 different fields (consecutive 2 frames) mix together to build up 1 frame in every 5 frames. There is a drawback that the picture quality will deteriorate.

480p

HDTV format. Vertical lines 480 x horizontal pixels 720, displayed in progressive method. 4:3 or 16:9, frame rate is 59.94 Hz, 29.97 Hz or 23.98 Hz

480i

Standard TV (SDTV) format, used by NTSC. Vertical lines 480 x horizontal pixels width 720, displayed in interlace method. Aspect ratio 4:3 or 16:9, frame rate 29.97 Hz.

576i

Standard TV (SDTV) format, used by PAL. Vertical lines 576 x horizontal pixels width 720, displayed in interlace method. Aspect ratio 4:3 or 16:9, frame rate 25 Hz.

720p

HDTV format. Vertical lines 720 x horizontal pixels 1280, displayed in progressive method. Aspect ratio 16:9, frame rate is 59.94 Hz, 29.97 Hz or 23.98 Hz

A-Z

Aspect ratio

The ratio of the width of video image to the height. Normally 3:4 for SDTV and 16:9 for HDTV

Bps

Abbreviation for Bits per second. Indicates the data size transferable in 1 second.

Compression

Reduce the size of digital information required for reproducing TV image or frame in mathematical method.

DVI

The interface standard for connecting PC and monitor. DVI-I supports both analog and digital connections, while DVI-D supports digital connection only.

Encoder

Compress image or audio data to prescribed stream. On the contrary, the decoder expands compressed stream to image or audio data.

GOP

Abbreviation for Group Of Picture.

This refers to the group of successive still images used for compression of MPEG. There is only one intra-frame compression image, I-picture within the group, while other frames contain only differential data, P-picture and B-picture. The number of frames in the GOP can be adjusted accordingly.

HDCP

Abbreviation for High-bandwidth Digital Content Protection. HDCP is a specification originally developed by Intel Corporation to enforce copyrights of digital entertainment content across the DVI interface, and now across the HDMI interface as well.

HDMI

Abbreviation for High-Definition Multimedia Interface. HDMI which was built on the foundation of DVI-HDCP, transmits uncompressed high definition video and multi-channel digital audio in a single cable with a maximum data transfer speed of 5Gbits/sec. HDMI systems while maintaining backward compatibility with DVI-HDCP devices.

HDMI supports uncompressed standard, enhanced and high definition video format as well as compressed audio formats such as Dolby Digital, DTS and uncompressed format such as PCM audio. In addition, it also supports the HDCP standard of digital video signals.

HDTV

Abbreviation for High-definition television.

A generic name of next generation TV that the number of scan line has been increased and the picture quality has been improved as compared to current TV. Aspect ratio 16:9, generally refers to 1080i or 720p.

Interlaced

In TV scanning method, 1 screen is displayed with 2 scanning, which are odd number lines scanning and even number lines scanning.

I-P Conversion

Convert the scanning method from Interlaced to Progressive.

MPEG-2

Abbreviation for Moving Picture Experts Group, Phase 2. Unlike previous compression methods, MPEG-2 uses an extremely efficient compression method that supports high-definition video. Based on the principle that much video data remains unchanged from one frame to the next, predictive coding is performed to eliminate redundant data.

Specifically, compression is applied between frames (based on DCT, Discrete Cosine Transform) and within frames (based on DCT) for an extremely efficient compression technique.

Pixel

The minimum unit of display color. The frame is consist of the lines and columns of pixels. The pixels and line number of each frame indicate the resolution of video image.

Progressive

In TV scanning method, 1 screen is displayed with 1 scanning.

SDI (Serial digital video interface)

A transmission standard defined by SMPTE, which is used when transmitting SD video by 270M, 360M or 540 Mbps, HD video by 1.485 Gbps with the video device connected.

SDTV (Standard definition television)

A standard precise video system, which aspect ratio is 4:3. Generally refers to 480i/576i.

STREAM

A series of encoded data of image and audio.

TS (Transport Stream)

Data stream containing supplementary data, compressed video and compressed audio.

UP/DOWN convert

DOWN convert refers to converting HD signal (720P/1080I) to SD signal, whereas UP convert refers to the reverse conversion.
