## SERVICE MANUAL

VIDEO CASSETTE RECORDER **VHS**

### HR-D560EE

**VHS**  
PAL

#### SPECIFICATIONS

##### GENERAL

Power requirement : AC 220 - 240 V~, 50/60 Hz  
Power consumption : 19 W  
Temperature : 5°C to 40°C (Operating)  
                  : -20°C to 60°C (Storage)

Operating position : Horizontal only  
Dimensions (WxHxD) : 435 x 94 x 355 mm  
Weight : 5.2 kg  
Format : VHS PAL standard  
Tape width : 12.65 mm  
Tape speed : 23.39 mm/sec  
Maximum recording time : 240 min. with E-240 video cassette

##### VIDEO

Signal system : PAL colour and CCIR monochrome signals, 0.25 lines/50 fields  
Recording system : Rotary two-head helical scan system  
Input : 0.5 to 2.0 Vp-p, 75 ohms, unbalanced  
Output : 1.0 Vp-p, 75 ohms, unbalanced  
Signal-to-noise ratio : 43 dB (Rohde & Schwarz noise meter)  
Horizontal resolution : 250 lines

##### AUDIO

Recording system : Longitudinal track  
Input : -3.8 dBs, (GENELEC standard)  
          : more than 50 k-ohms, unbalanced  
Output : -3.8 dBs, (GENELEC standard)  
          : less than 1 k-ohm, unbalanced  
          : (100 k-ohms, load)  
Frequency range : 70 Hz to 10,000 Hz

##### TUNER

Tuning system : Voltage synthesized tuner  
TV channel storage capacity : 48 positions (+ ALIX position "AU")  
Channel coverage : VHF : 47 - 111 MHz  
                      : 111 - 300 MHz  
                      : UHF : 470 - 862 MHz  
Aerial input : PAL B/G and D/K system  
                  : (See IMPORTANT on page 1.)  
Aerial output : UHF channel 36  
                  : (adjustable 32 - 40)  
                  : System G or K (switchable)

##### TIMER

Clock reference : Quartz-crystal  
Programs capacity : 1-year/8-programme timer  
Memory backup time : 60 min.

##### ACCESSORIES

Provided accessories : Aerial cable  
                          : Infrared remote control unit  
                          : "R6" battery x 2  
                          : Video cassette tape

Optional accessory : VP6 adapter VJ-V110E

Design and specifications subject to change without notice.

**NOTE: For a technical description, please refer to Technical Guide VTG82063 General.**

# Important Safety Precautions

Prior to shipment from the factory, JVC products are strictly inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

## ● Precautions during Servicing

1. Locations requiring special caution are denoted by labels and inscriptions on the cabinet, chassis and certain parts of the product. When performing service, be sure to read and comply with these and other cautionary notices appearing in the operation and service manuals.

2. Parts identified by the  $\triangle$  symbol and shaded ( ) parts are critical for safety.

Replace only with specified part numbers.

**Note:** Parts in this category also include those specified to comply with X-ray emission standards for products using cathode ray tubes and those specified for compliance with various regulations regarding spurious radiation emission.

3. Fuse replacement caution notice.

Caution for continued protection against fire hazard.

Replace only with same type and rated fuse(s) as specified.

4. Use specified internal wiring. Note especially:

- 1) Wires covered with PVC tubing
- 2) Double insulated wires
- 3) High voltage leads

5. Use specified insulating materials for hazardous live parts. Note especially:

- |                    |                                      |            |
|--------------------|--------------------------------------|------------|
| 1) Insulation Tape | 3) Spacers                           | 5) Barrier |
| 2) PVC tubing      | 4) Insulation sheets for transistors |            |

6. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.) wrap ends of wires securely about the terminals before soldering.

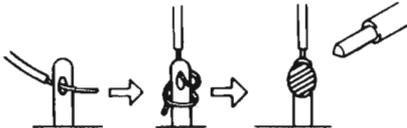

Fig. 1

7. Observe that wires do not contact heat producing parts (heat-sinks, oxide metal film resistors, fusible resistors, etc.)

8. Check that replaced wires do not contact sharp edged or pointed parts.

9. When a power cord has been replaced, check that 10–15 kg of force in any direction will not loosen it.

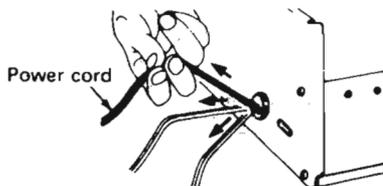

Fig. 2

10. Also check areas surrounding repaired locations.

11. Products using cathode ray tubes (CRTs)

In regard to such products, the cathode ray tubes themselves, the high voltage circuits, and related circuits are specified for compliance with recognized codes pertaining to X-ray emission. Consequently, when servicing these products, replace the cathode ray tubes and other parts with only the specified parts. Under no circumstances attempt to modify these circuits. Unauthorized modification can increase the high voltage value and cause X-ray emission from the cathode ray tube.

12. Crimp type wire connector

In such cases as when replacing the power transformer in sets where the connections between the power cord and power transformer primary lead wires are performed using crimp type connectors, if replacing the connectors is unavoidable, in order to prevent safety hazards, perform carefully and precisely according to the following steps.

1) **Connector part number** : E03830-001

2) **Required tool** : Connector crimping tool of the proper type which will not damage insulated parts.

3) **Replacement procedure**

(1) Remove the old connector by cutting the wires at a point close to the connector.

Important : Do not reuse a connector (discard it).

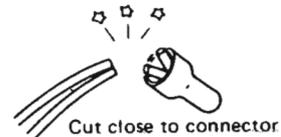

Fig. 3

(2) Strip about 15 mm of the insulation from the ends of the wires. If the wires are stranded, twist the strands to avoid frayed conductors.

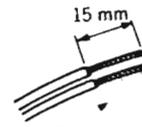

Fig. 4

(3) Align the lengths of the wires to be connected. Insert the wires fully into the connector.

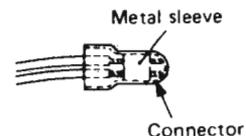

Fig. 5

(4) As shown in Fig. 6, use the crimping tool to crimp the metal sleeve at the center position. Be sure to crimp fully to the complete closure of the tool.

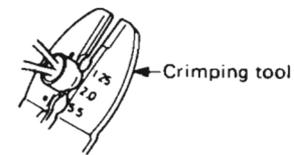

Fig. 6

(5) Check the four points noted in Fig. 7.

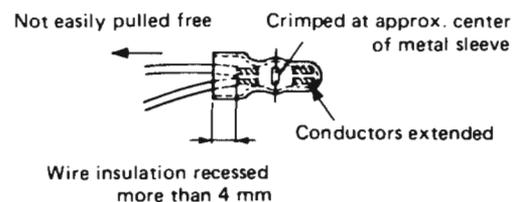

Fig. 7

## ● Safety Check after Servicing

Examine the area surrounding the repaired location for damage or deterioration. Observe that screws, parts and wires have been returned to original positions. Afterwards, perform the following tests and confirm the specified values in order to verify compliance with safety standards.

### 1. Insulation resistance test

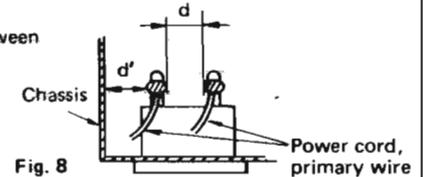

Confirm the specified insulation resistance or greater between power cord plug prongs and externally exposed parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

### 2. Dielectric strength test

Confirm specified dielectric strength or greater between power cord plug prongs and exposed accessible parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

### 3. Clearance distance

When replacing primary circuit components, confirm specified clearance distance (d), (d') between soldered terminals, and between terminals and surrounding metallic parts. See table 1 below.

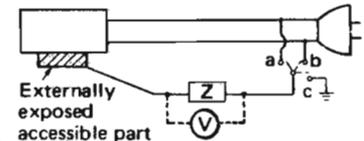

### 4. Leakage current test

Confirm specified or lower leakage current between earth ground/power cord plug prongs and externally exposed accessible parts (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.).

**Measuring Method:** (Power ON)

Insert load Z between earth ground/power cord plug prongs and externally exposed accessible parts. Use an AC voltmeter to measure across both terminals of load Z. See figure 9 and following table 2.

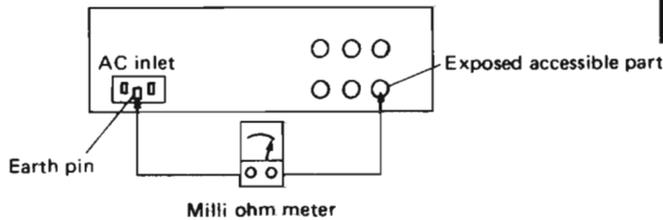

### 5. Grounding (Class I model only)

Confirm specified or lower grounding impedance between earth pin in AC inlet and externally exposed accessible parts (Video in, Video out, Audio in, Audio out or Fixing screw etc.).

**Measuring Method:**

Connect milli ohm meter between earth pin in AC inlet and exposed accessible parts. See figure 10 and grounding specifications.

#### Grounding Specifications

Region	Grounding Impedance (Z)
USA & Canada	$Z \leq 0.1 \text{ ohm}$
Europe & Australia	$Z \leq 0.5 \text{ ohm}$

AC Line Voltage	Region	Insulation Resistance (R)	Dielectric Strength	Clearance Distance (d), (d')
100 V	Japan	$R \geq 1 \text{ M}\Omega / 500 \text{ V DC}$	AC 1 kV 1 minute	$d, d' \geq 3 \text{ mm}$
100 to 240 V			AC 1.5 kV 1 minute	$d, d' \geq 4 \text{ mm}$
110 to 130 V	USA & Canada	—	AC 900 V 1 minute	$d, d' \geq 3.2 \text{ mm}$
110 to 130 V	Europe & Australia	$R \geq 10 \text{ M}\Omega / 500 \text{ V DC}$	AC 3 kV 1 minute (Class II)	$d \geq 4 \text{ mm}$
200 to 240 V			AC 1.5 kV 1 minute (Class I)	$d' \geq 8 \text{ mm}$ (Power cord) $d' \geq 6 \text{ mm}$ (Primary wire)

Table 1 Specifications for each region

AC Line Voltage	Region	Load Z	Leakage Current (i)	a, b, c
100 V	Japan		$i \leq 1 \text{ mA rms}$	Exposed accessible parts
110 to 130 V	USA & Canada		$i \leq 0.5 \text{ mA rms}$	Exposed accessible parts
110 to 130 V 220 to 240 V	Europe & Australia		$i \leq 0.7 \text{ mA peak}$ $i \leq 2 \text{ mA dc}$	Antenna earth terminals
			$i \leq 0.7 \text{ mA peak}$ $i \leq 2 \text{ mA dc}$	Other terminals

Table 2 Leakage current specifications for each region

Note: These tables are unofficial and for reference only. Be sure to confirm the precise values for your particular country and locality.

# SECTION 1

## DISASSEMBLY AND MECHANISM ADJUSTMENTS

### 1.1 DISASSEMBLY

#### 1.1.1 Top cover

1. Refer to Fig. 1-1-1 and set for the EJECT (Stop) mode and disconnect VCR from AC power.
2. Take out 5 screws (A). To remove the top cover, slide in direction of arrow and lift away.

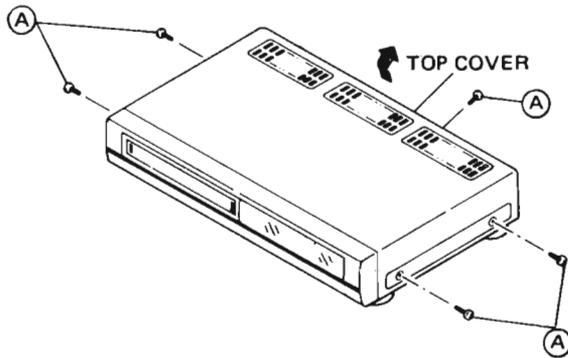

Fig. 1-1-1

#### 1.1.2 Front panel assembly

1. Remove the top cover.
2. Carefully disengage 3 tabs (B) of the front panel assembly from the upper side of the chassis.
3. Refer to Fig. 1-1-2 and pull the front panel assembly forward you to disengage 3 tabs (C) of the front panel assembly from the bottom side of the chassis, then remove the front panel assembly.

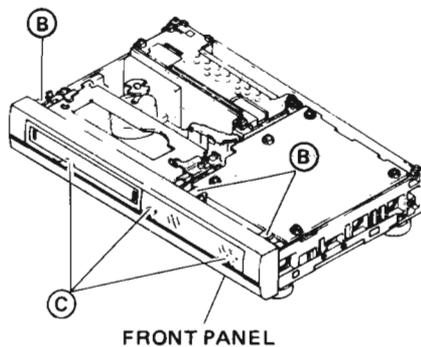

Fig. 1-1-2

#### 1.1.3 Bottom cover

1. Remove the top cover.
2. Refer to Fig. 1-1-3 and take out 5 screws (D) and disengage 4 claws (E) from the bottom of the chassis.
3. Disengage the bottom cover from the bottom of the chassis slide in direction of arrow and disengage 2 tabs (F).

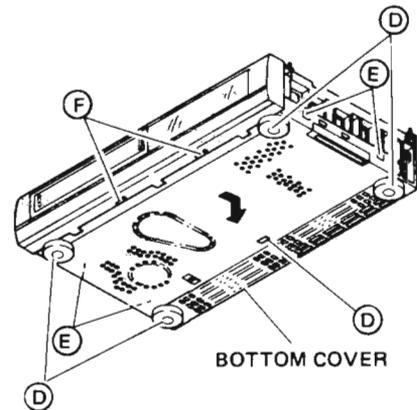

Fig. 1-1-3

#### 1.1.4 Main board assembly

1. Remove the top cover.
2. Refer to Fig. 1-1-4 and take out 5 screws (G) and 1 screw (H) from main board assembly.
3. Remove the main board assembly in the upward direction.

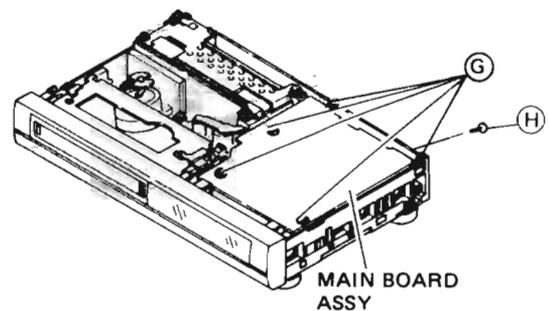

Fig. 1-1-4

### 1.1.5 Cassette housing

1. Remove the top cover and main board assembly.
2. Refer to Figs. 1-1-5 and 1-1-6.  
Take out 4 screws (J) that secure the cassette housing. Disengage 3 tabs (K) of the front panel and pull the front panel forward where it does not interfere with removing the cassette housing.
3. Remove the cassette housing in the upward direction.

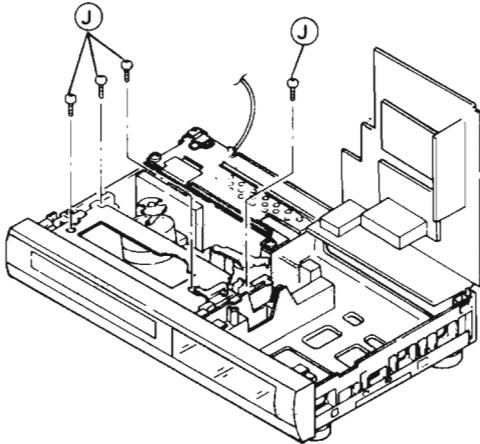

Fig. 1-1-5

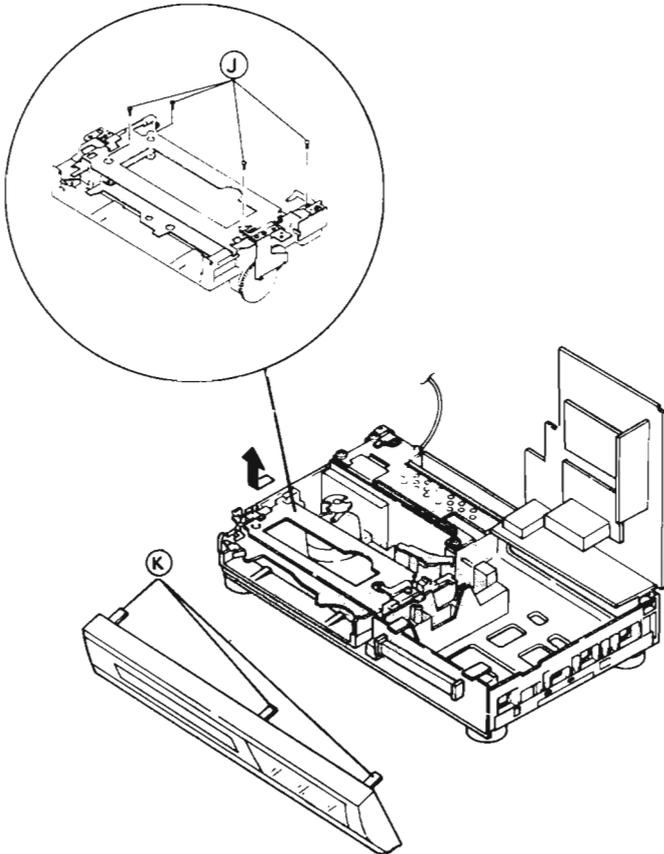

Fig. 1-1-6

### 1.1.6 Cassette housing installation

1. On the main deck, observe the positional relationships of the parts indicated in Fig. 1-1-7.  
If necessary, turn the loading motor by hand to obtain these positions.

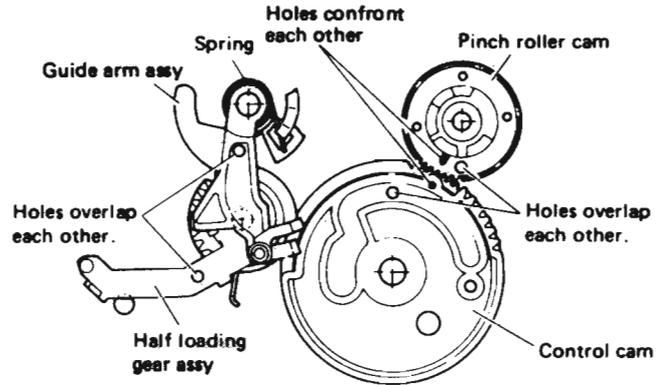

Fig. 1-1-7

2. Refer to Fig. 1-1-8 and confirm that the clutch is engaged.  
If necessary, press the lever indicated by the arrow to where the clutch is locked.

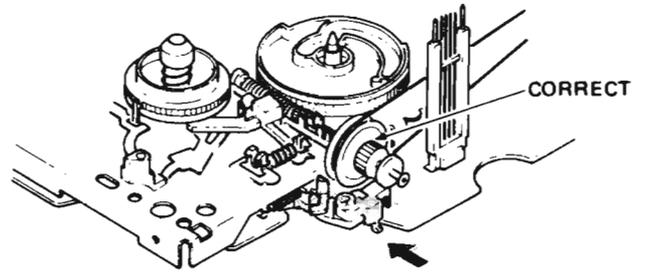

Fig. 1-1-8

3. Check that the cassette housing is in the eject state (internal holder of the cassette housing is locked in raised position).  
Set the cassette housing into place and secure with 4 screws.
4. Install the front panel as shown in Fig. 1-1-9 and re-engage the tabs. Supply power and use a spare cassette to check for normal loading and eject operations.

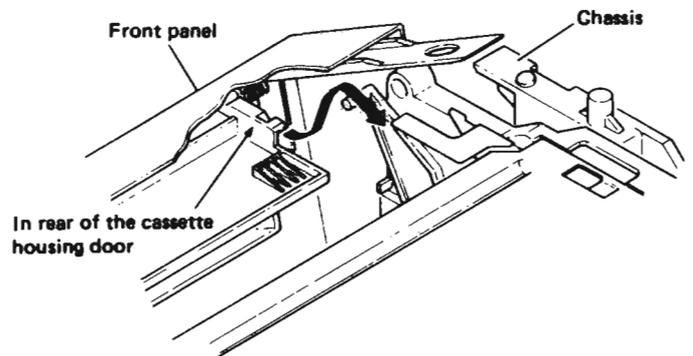

Fig. 1-1-9

5. Disconnect VCR from power, then reinstall the main board assembly and top cover.

### 1.1.7 Main-deck

1. Remove the top cover, front panel assembly and main board assembly.
2. Refer to Fig. 1-1-10 and take out 3 screws (L) from the main-deck assembly.
3. Remove the main-deck assembly in the upward direction and disconnect a connector CN1 from the DECK TERMINAL board, connectors CN1, from the Pre/Rec board, connector CN1, CN2 from the A/C head board, connector CN1 from the Loading MDA board and connector CN1 from the Drum MDA board.

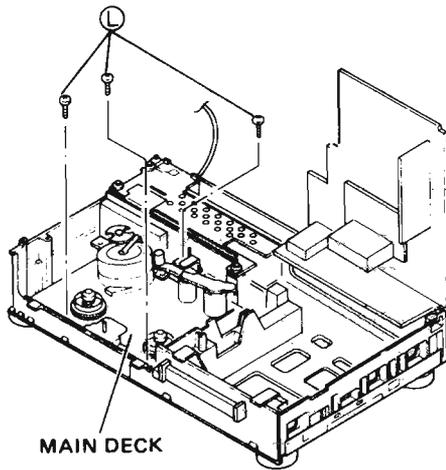

Fig. 1-1-10

### 1.1.8 Switching regulator board assembly

1. Remove the top cover.
2. Refer to Fig. 1-1-11 and take out 4 screws (M) from the switching regulator board assembly.
3. Remove the switching regulator board assembly in the upward direction.

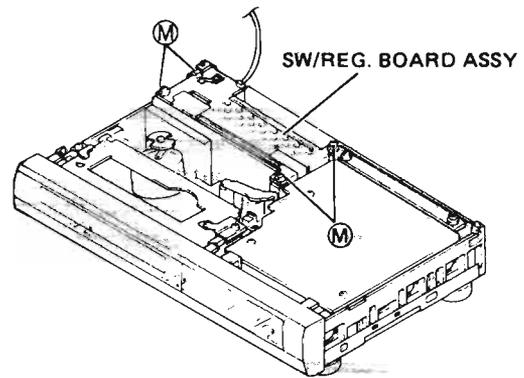

Fig. 1-1-11

## 1.2 MECHANISM ADJUSTMENTS

### 1.2.1 Precautions

1. Disconnect mainframe from AC power before soldering.
2. Avoid imparting stress to wires when disengaging connectors.
3. Determine and correct the cause of difficulty before proceeding to adjustments. Do not disturb settings unnecessarily.
4. Use care not to damage tabs, claws, etc. during repairs.
5. Install the cassette housing assembly only when the mechanism is in the Eject or Stop mode position. In the Eject mode, the internal holder of the housing is fully raised. This is fully lowered in the Stop mode.
6. When installing the front panel assembly, be sure to engage the housing door with the door lever of the cassette housing assembly. If this is omitted, the door will not open at Eject and the cassette cannot be removed.

### 1.2.2 Check without cassette housing

Mechanism operations can be observed easily by removing the cassette housing assembly. Note the following.

1. Disable the photo transistor sensor (END SENSOR) on the main-deck by applying an opaque cover.
2. Connect pins 2 and 3 of Main board connector CN601.
3. Select the desired modes with the operation buttons. However, notice that without tape, setting for the reverse direction modes produces the Stop mode after a few seconds due to absence of the reel sensor output.

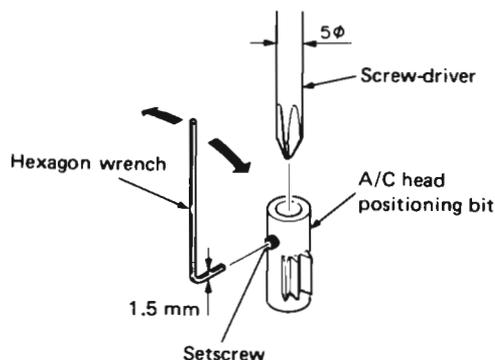

Fig. 1-2-1 A/C head positioning tool

### 1.2.3 Manually removing cassette tape

In event of electrical system failure that prevents the tape from being unloaded, the tape can be removed manually by the following procedure. Refer to Figs. 1-3-1, 1-3-2 and 1-3-3.

1. Disconnect power cord from AC outlet.
2. Turn the loading motor by hand so that the control cam rotates clockwise. This retracts the pole base assembly to the unloading position.
3. Continue turning to where the guide arm and half loading gear assemblies shift to beneath the cassette.
4. Turn the clutch assembly at the rear of the deck to absorb slack tape within the cassette.
5. Again turn the loading motor in the same direction to raise the cassette and remove it.

### 1.2.4 Test equipment

The following special tools and fixtures are required for mechanism adjustment.

1. Alignment tapes: MH-2,  
Stairstep signal is employed for interchangeability checks and adjustments.
2. Torque gauge : PUJ48075-2  
Measures tape take-up torque.
3. Back tension cassette gauge : PUJ48076-2  
Measures tape tension at the supply side.
4. A/C head positioning bit : PTU94010
  - Shifts the head base for adjusting the control head position.
  - The installation of a A/C head positioning bit on the screw-driver.

Refer to Fig. 1-2-1. Set screw-driver into the A/C head positioning bit where it does not interfere with adjusting the A/C head adjusting boss (position the screw-driver point  $6 \pm 2$  mm from point of the A/C head positioning bit). Slightly tighten the setscrew by hexagon-wrench (1.5 mm).
5. Roller driver : PTU94002  
Turns the guide roller for adjusting FM linearity.

Alignment tapes 1	Torque gauge 2	Back tension cassette gauge 3	A/C head positioning bit 4	Roller driver 5

Fig. 1-2-2 Test equipment

### 1.3 MAIN MECHANISM PARTS

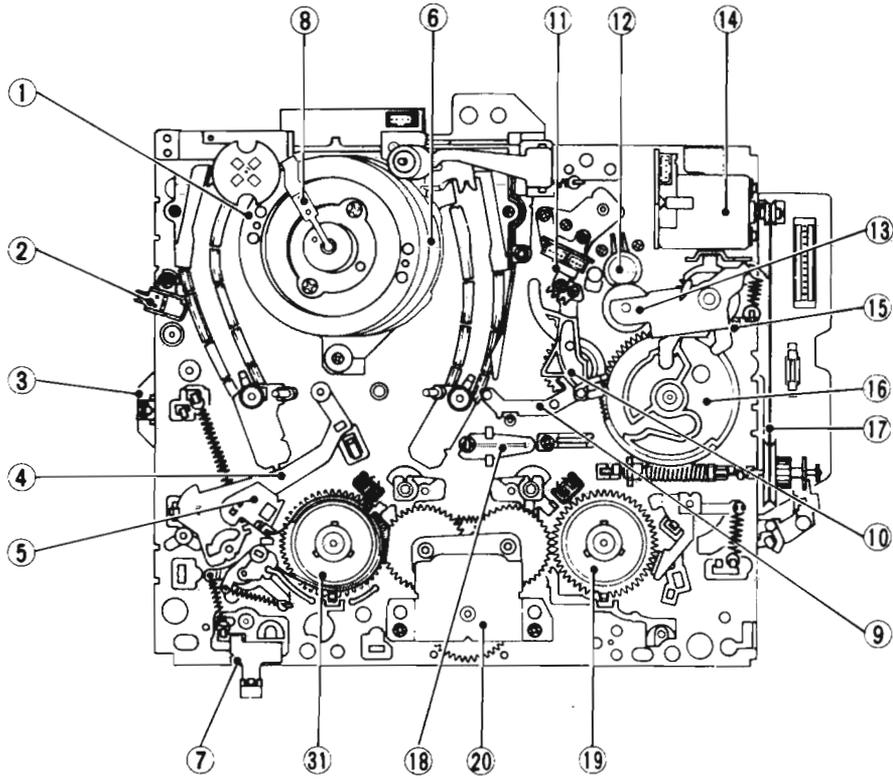

Fig. 1-3-1 Top view of main-deck

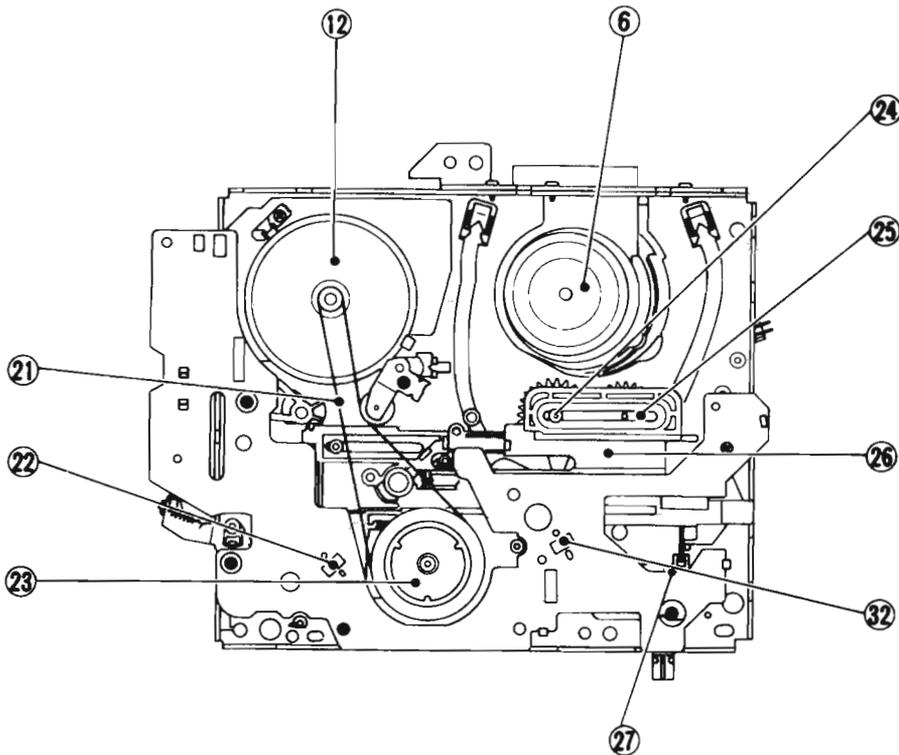

Fig. 1-3-2 Bottom view of main-deck

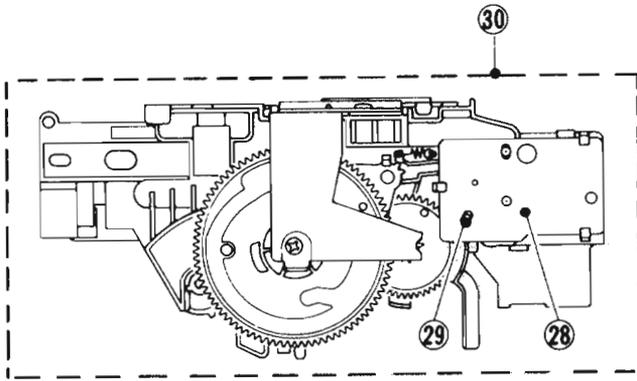

Fig. 1-3-3 Side view of cassette housing

**A. Cleaning**

Periodic cleaning of the tape transport system is desirable, but ordinarily not feasible in practice. Therefore, perform cleaning when a set is brought in for repairs or maintenance. Contamination of the video heads, tape guides and brushes can detract from playback picture quality and in extreme cases, even damage the tape. For cleaning, use a fine-mesh cotton cloth (about the texture of a white dress-shirt) moistened in alcohol.

- To clean the video heads, press the moistened cloth gently against the upper drum with fingertip and turn the drum by hand.
- Do not use a vertical stroke, as this may damage the heads.

**B. Lubrication**

Oil and grease do not normally require periodic replenishing. Apply only when replacing lubricated parts (also clean and replace lubrication of mating parts if soiled).

For parts and points to apply oil and grease, refer to the exploded views of the mechanism assembly.

Before oiling, clean with alcohol.

Apply one or two drops of oil. Avoid excess oil.

1. Table 1-1 indicates the oil and grease used in this set. Use these or recommended locally available equivalents.

Category	Part No.
Oil	COSMO-HV56
Grease	KANTO-G-31KAV

Table 1-3-1

2. Grease is not required for a replacement cassette housing assembly, as this has been applied at the factory.

**Note:** *Stir grease that has been stored for an extended period.*

**C. Main mechanical parts**

See Fig.s 1-3-1, 1-3-2 and 1-3-3.

No.	Symbol	Parts Name	See Section
1	M32A	Upper drum assy	1.5.1

Table 1-3-2

## 1.4 INSPECTION AND MAINTENANCE

This product employs rotary and moving parts which wear out in the course of usage. Periodic inspection, cleaning, lubrication and maintenance are therefore important for ensuring maximum performance. Worn parts must also be replaced at when required.

### 1.4.1 Suggested servicing schedule for main components

The following table indicates the suggested period for such service measures as cleaning, lubrication and replacement. In practice, the indicated periods will vary widely according to environmental and usage conditions. However, the indicated components should be inspected when a set is brought for service and the maintenance work performed if necessary.

Also note that rubber parts may deform in time, even if the set is not used.

System	No.	Parts Name	Symbol No.	Periodic servicing schedule (operation hours)							
				250	500	750	1000	1250	1500	1750	2000
Tape Transport	1	Upper drum assy	M32A	★	★	☆	○	○	○	○	○

## SECTION 2 ELECTRICAL ADJUSTMENTS

### 2.1 PREPARATION

Electrical adjustments are required after replacing circuit components and certain mechanical parts.

It is important to perform these adjustments only after all repairs and replacements have been completed. Also, do not attempt these adjustments unless the proper equipment is available.

#### 2.1.1 Required test equipment

1. Color television or monitor
2. Oscilloscope: wide-band, dual-trace, triggered delayed sweep
3. Frequency counter
4. Audio oscillator
5. Audio voltmeter
6. Digital voltmeter
7. Signal generator: RF/IF sweep/marker
8. Signal generator: PAL color bar, stairstep, video sweeper
9. Signal generator: Audio multiplex TV signal generator
10. Recording tape
11. Alignment tape: MH-2

Fig. 2-1-1 Color bar signal of pattern generator

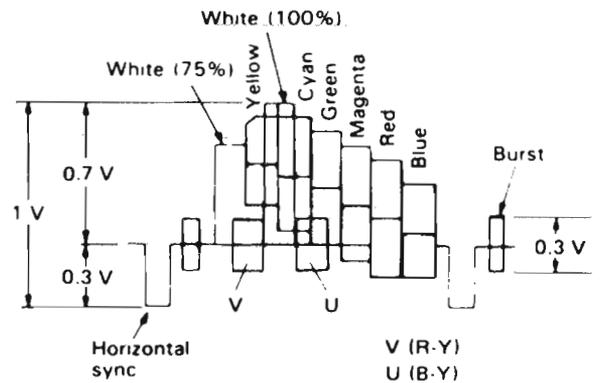

Fig. 2-1-2 Color bar signal waveform

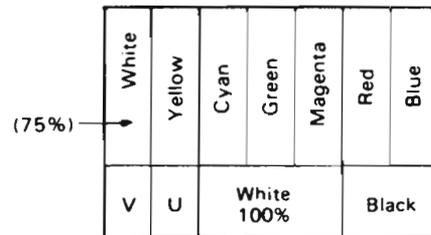

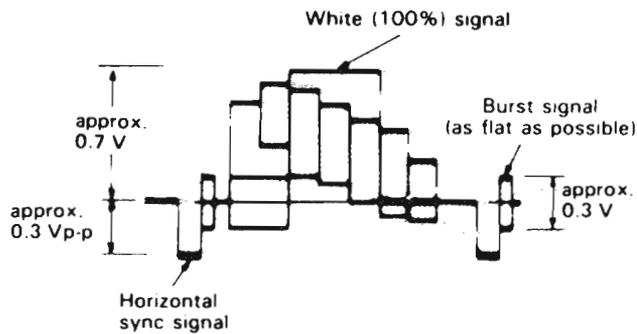

Fig. 2-1-3 Color bar pattern

### 2.1.2 Check and adjustment steps

The check and adjustment steps are provided in the following in the form of charts. For clarity, the nomenclature used in the charts is outlined below.

<b>No.</b>	Checks and adjustments are numbered in the recommended sequence in which they are to be performed.
<b>Item</b>	Name assigned to the particular check and adjustment step.
<b>Check Point</b>	Location to which measuring instrument (oscilloscope unless otherwise noted) is to be connected.
<b>Adjustment Parts</b>	Variable component (resistor, capacitor, etc.) to be adjusted in this step. Dash (—) indicates check only.
<b>Signal &amp; Mode</b>	<ul style="list-style-type: none"> <li>• Input signal required to perform adjustment. Dash (—) indicates that special signal is not required.</li> <li>• Equipment operating mode at time of check or adjustment.</li> </ul>
Color bars	Color bars signal as video input.

<b>Stairstep</b>	Stairstep signal as video input.
1 kHz	1 kHz sinewave as audio input signal.
MH-2 color bars	Color bars segment of MH-2 alignment tape.
MH-2 stairstep	Stairstep segment of MH-2 alignment tape.
MH-2 1 kHz	1 kHz audio signal segment of MH-2 alignment tape.
MH-2 RF sweep	RF sweep segment of MH-2 alignment tape.
E-E	Power on and machine in Stop mode.
REC	Recording mode
PB	Playback mode
SEARCH	Search (FWDS and REVS) playback mode
SLOW	Slow motion playback mode
STILL	Pause during playback mode
SP mode	SP recording speed

**Description** This column provides an explanation of the step, notes and adjustment values, and reference to waveforms where applicable.

### 2.2 REGULATOR CIRCUIT

**Note:** Unless otherwise specified, all test points and adjustments are located on the MAIN board.

No.	Item	Mode	Signal & Setting	Measurement Point	Adjustment Parts	Adjustment Procedure
1	5V DC output voltage	• REC	• TUNER	• Q806-B • TP803 (GND)	• R811 (SWD 5V)	1) Connect a digital voltmeter between Q806-B and TP803. 2) Record in the TUNER mode, adjust R811 for $5.30 \pm 0.05$ V.

### 2.3 TIMER CIRCUIT

**Note:** Unless otherwise specified, all test points and adjustments are located on the T/D/S board.

No.	Item	Mode	Signal & Setting	Measurement Point	Adjustment Parts	Adjustment Procedure
1	Clock	• EE	• AUX	• IC 1-16	• C6 (CLOCK)	<p><b>Note:</b> For below adjustments use 10:1 probe with input capacitance less than 100 pf.</p> <p>1) Disconnect VCR from AC. Connect a frequency counter between IC 1-16 and GND. 2) Short IC 1-8 to GND, then short the leads of capacitor C3 once in order to reset IC 1. 3) Connect VCR to AC. All FDP Segments are on. 4) Adjust C6 for <math>2048.000 \pm 0.002</math> Hz (488.2808 to 488.2818 <math>\mu</math>s).</p>

## 2.4 SERVO CIRCUIT

Note: Unless otherwise specified, all test points and adjustments are located on the MAIN board.

No.	Item	Mode	Signal & Setting	Measurement Point	Adjustment Parts	Adjustment Procedure
1	SP PB switching point	• PB	<ul style="list-style-type: none"> <li>• MH-2, MH-1 stairstep</li> <li>• Trigger slope (-)</li> <li>• Auto tracking off</li> </ul>	• TP210	• R420 (PB SW POINT)	<ol style="list-style-type: none"> <li>1) Connect an oscilloscope to TP210.</li> <li>2) Play back the stairstep segment of MH-2, (PAL) MH-1 (NTSC) alignment tape.</li> <li>3) Trigger the oscilloscope externally (- slope) with the signal from TP411.</li> <li>4) Adjust R420(PAL) to position the trigger point <math>6.5 \pm 0.5</math> H from V. sync.</li> </ol>

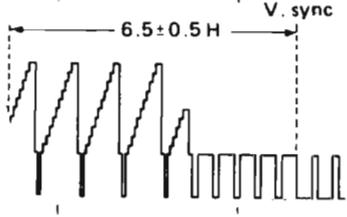

Fig. 2-4-1 PB switching point

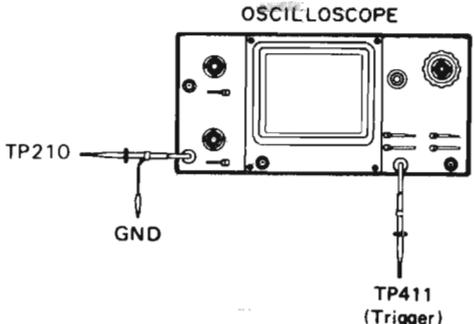

Fig. 2-4-2 oscilloscope

## 2.5 VIDEO CIRCUIT

Note: Unless otherwise specified, all test points and adjustments are located on the VIDEO unit board.

No.	Item	Mode	Signal & Setting	Measurement Point	Adjustment Parts	Adjustment Procedure
<b>IMPORTANT: Item 1,2,3 and 4</b>						
<ol style="list-style-type: none"> <li>1. Ordinarily avoid performing these adjustments. It should be performed only if IC 1 of the VIDEO UNIT board has been replaced.</li> <li>2. To adjust, replace fixed resistor with variable resistor, then adjust as required.</li> </ol>						
1	EE level & White clip	• EE	• Colour bar	<ul style="list-style-type: none"> <li>• CN207-15 (Main board)</li> <li>• IC1-22</li> </ul>	<ul style="list-style-type: none"> <li>• R60 (EE Y LEVEL)</li> <li>• R64 (WHITE CLIP)</li> </ul>	<ol style="list-style-type: none"> <li>1) When IC1 of the VIDEO UNIT board is replaced, it may also be necessary to replace R60 and R64 with adjustable resistors.</li> <li>2) Confirm <math>2.00 \left( \begin{smallmatrix} +0.07 \\ -0.05 \end{smallmatrix} \right)</math> Vp-p EE level at CN207-15 and white clip of <math>90 \pm 4\%</math> at IC1-22. If necessary, replace R60 with NVP1301-103NU and R64 with NVP1301-332NU.</li> <li>3) Supply a colour bar signal to VIDEO IN, connect one channel of a dual trace oscilloscope to CN207-15 and the other channel to IC1-22.</li> <li>4) Alternately adjust R60 and R64 for <math>2.00 \left( \begin{smallmatrix} +0.07 \\ -0.05 \end{smallmatrix} \right)</math> Vp-p at CN207-15 and white clip of <math>90 \pm 4\%</math> at IC1-22.</li> </ol>

Connect an oscilloscope to CN2-5.</p> <p>2) Adjust T3 for maximum level at audio sound.</p>
 <p>Fig. 2-7-3</p>						
4	AFC	• EE	• Tuner • TV broadcast • AFC SW off	IC1-14	• T2 (AFC)	<p>1) Receive a colour broadcast.</p> <p>2) With AFC SW to OFF, connect an oscilloscope to IC1-14 of the Tuner board.</p> <p>3) Set the oscilloscope to DC mode and adjust T2 to set the lower edge of the ripple waveform to 5VDC.</p>

# SECTION 3 CHARTS AND DIAGRAMS

## 3.1 CIRCUIT BOARD AND LOCATION

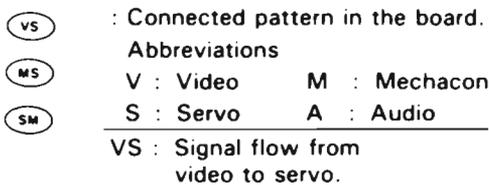

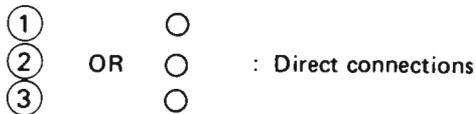

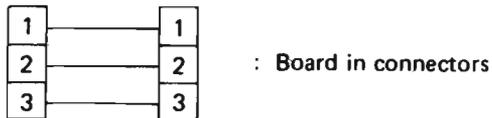

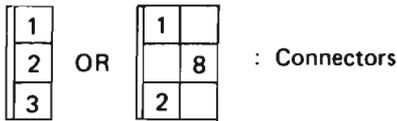

## 3.2 GENERAL INFORMATION

### 3.2.1 Connections

**Note:**

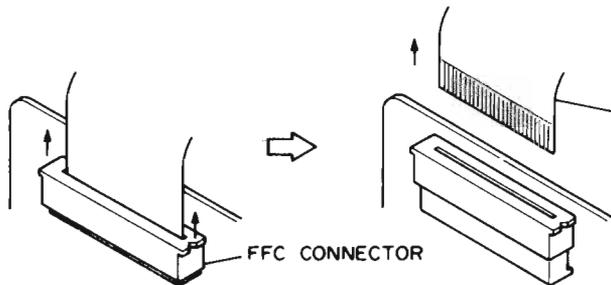

Unless otherwise specified, only signal input flow is indicated.

Connection arrows indicate only signal outputs.

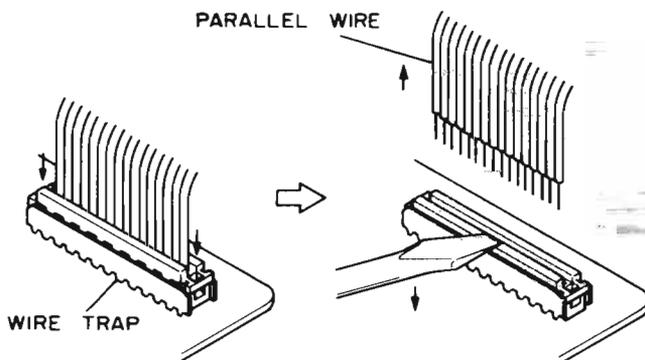

### 3.2.2 Disconnecting the flatwire

1. Pull the connector structure upward to release the clamp when removing or inserting the flat wire cable.

2. Depress the connector structure downward to release the clamp when removing or inserting the flat wire cable, as indicated below.

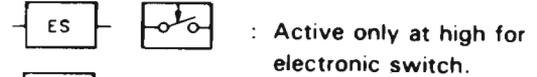

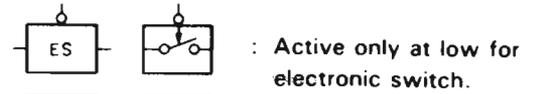

### 3.2.3 Indications

AUX : Active only at high.

$\overline{\text{AUX}}$  : Active only at low.

$\overline{\text{AUX}}$  : Active only at middle.

$\overline{\text{AUX}}$  : Active only at open.

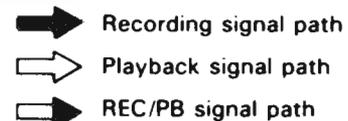

### 3.2.4 Schematic diagram values

Unless otherwise specified:

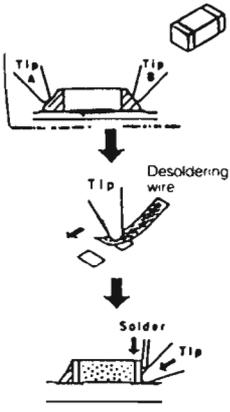

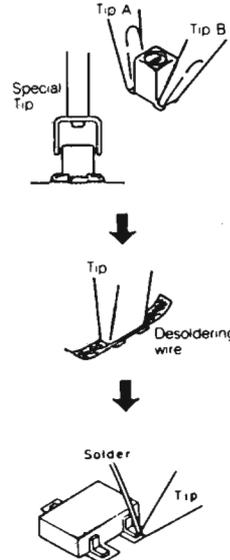

1. All resistance values are in ohms, 1/6 W or 1/8 W (refer to parts list).
2. All capacitance values are in  $\mu\text{F}$ , (P; PF).
3. All inductance values are in  $\mu\text{H}$ , (m; mH).
4. All diodes are 1SS133 or MA165, (refer to parts list).
5. Voltages are DC-measured (reference to ground) with a digital voltmeter during recording (SP mode) and playback (SP mode) with alignment tape. Where voltages differ between recording and playback, the voltage during playback is shown in parenthesis.
6. Waveforms (VIDEO System) are measured (reference to ground) with a color bar during recording (SP mode) and playback (SP mode) with alignment tape.
7. Waveforms (AUDIO System) are measured (reference to ground) with 1 kHz (-8 dBs) during recording and playback with alignment tape (1 kHz).
8. Shaded (■) parts are critical for safety. Replace only with specified part numbers.

### 3.2.5 Signal flow in the schematic

### 3.2.6 Basic knowledge of SMC\* parts replacement

**Note:** For details, refer to "VIDEO SERVICE GUIDE" (VTS81001).

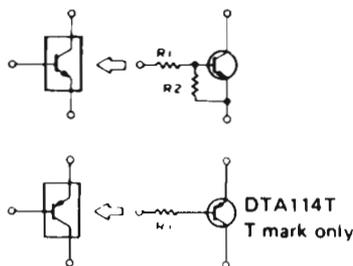

Products	Appearance	Replacement technology	Removal method	Installation method	Soldering tip types	Cautions
Thick Film Chip Resistors			<ul style="list-style-type: none"> <li>• <b>Use 2 soldering irons</b></li> <li>1 Use thin tip soldering irons</li> <li>2 Use soldering tip temperature of about 280°C</li> <li>3 Simultaneously heat both ends of the part</li> <li>4 While heating, grasp the part with the tips of the soldering irons and remove it.</li> <li>5 Use desoldering wire to completely remove the old solder from the part location of the board</li> <li>6 A clean pattern for installing the new part is very important.</li> </ul>	<ol style="list-style-type: none"> <li>1 Clean the area where the new part is to be mounted (use alcohol).</li> <li>2 Apply flux.</li> <li>3 Set part correctly into position, prevent it from shifting.</li> <li>4 Bring the soldering iron tip close to the part contact without actually touching it. Melt thin (0.3 mm) solder between the tip and part so that it flows into the part contact.</li> <li>5 Check work quality with a magnifier</li> </ol>	<p>Thin tip type</p>  <p>Small flat-blade tip type</p> 	<p>Some parts can be damaged by sudden heating. Preheat the part at about 100°C for several minutes before installing it.</p> <p>Do not touch the part body with the soldering iron.</p> <p>The thin (0.3 mm) solder for miniature parts does not contain adequate flux. Supplementary flux is thus needed in most cases.</p> <p>Set the position carefully and secure the part.</p> <p>A defective trimming resistor cannot be adjusted externally. Replace with an ordinary variable resistor</p>
Carbon Film Chip Resistors						
Metal Film Chip Resistors						
Chip Ceramic Capacitors						
Chip Trimming Resistors						
Chip Inductors			<ul style="list-style-type: none"> <li>• <b>Special desoldering iron</b></li> <li>1. Select soldering tip according to part size.</li> <li>2. Bring the tip into contact with the soldered points.</li> <li>3. When the solder melts, remove the part</li> <li>4. Remove the old solder with desoldering wire.</li> </ul> <ul style="list-style-type: none"> <li>• <b>2 soldering irons</b></li> <li>1 Use small flat-blade tips.</li> <li>2. Heat both ends of the part simultaneously</li> <li>3. When the solder melts, grasp and remove the part with the soldering iron tips.</li> <li>4. Remove the old solder with desoldering wire.</li> </ul>	<ol style="list-style-type: none"> <li>1 Clean the area where the new part is to be mounted (use alcohol).</li> <li>2 Apply flux.</li> <li>3 Set part correctly into position, prevent it from shifting.</li> <li>4 Use sharp soldering iron tip. Bring close to the part contact without actually touching it. Melt thin solder between the tip and part so that it flows into the part contact.</li> <li>5. Check work quality with a magnifier.</li> </ol>	<p>Special: Soldering tip</p>  <p>Small flat-blade tip type</p>  <p>Thin tip type</p> 	<p>Use care not to damage plastic components when soldering.</p> <p>Position the part carefully. This will also affect the soldering operation.</p> <p>Use care regarding soldering iron tip and avoid rapidly heating parts.</p> <p>For larger parts, use a slightly higher temperature (about 300°C).</p> <p>Check after installing (cold solder joints, etc.).</p> <p>Use care not to damage the circuit pattern, especially when removing.</p>

IC (VSOP) (Very Small Outline Package)						
IC (QFP) (Quad Flat Package)						
IC (VQFP) (Very Small Quad Flat Package)						
IC (PLCC) (Plastic Leaded Chip Carrier)						
IC (TSOP) (Thin Small Outline Package)						

### 3.2.7 Semiconductors

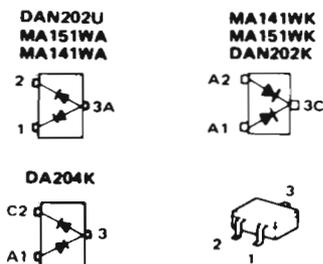

#### 1. Digital transistor

#### 2. Chip transistor

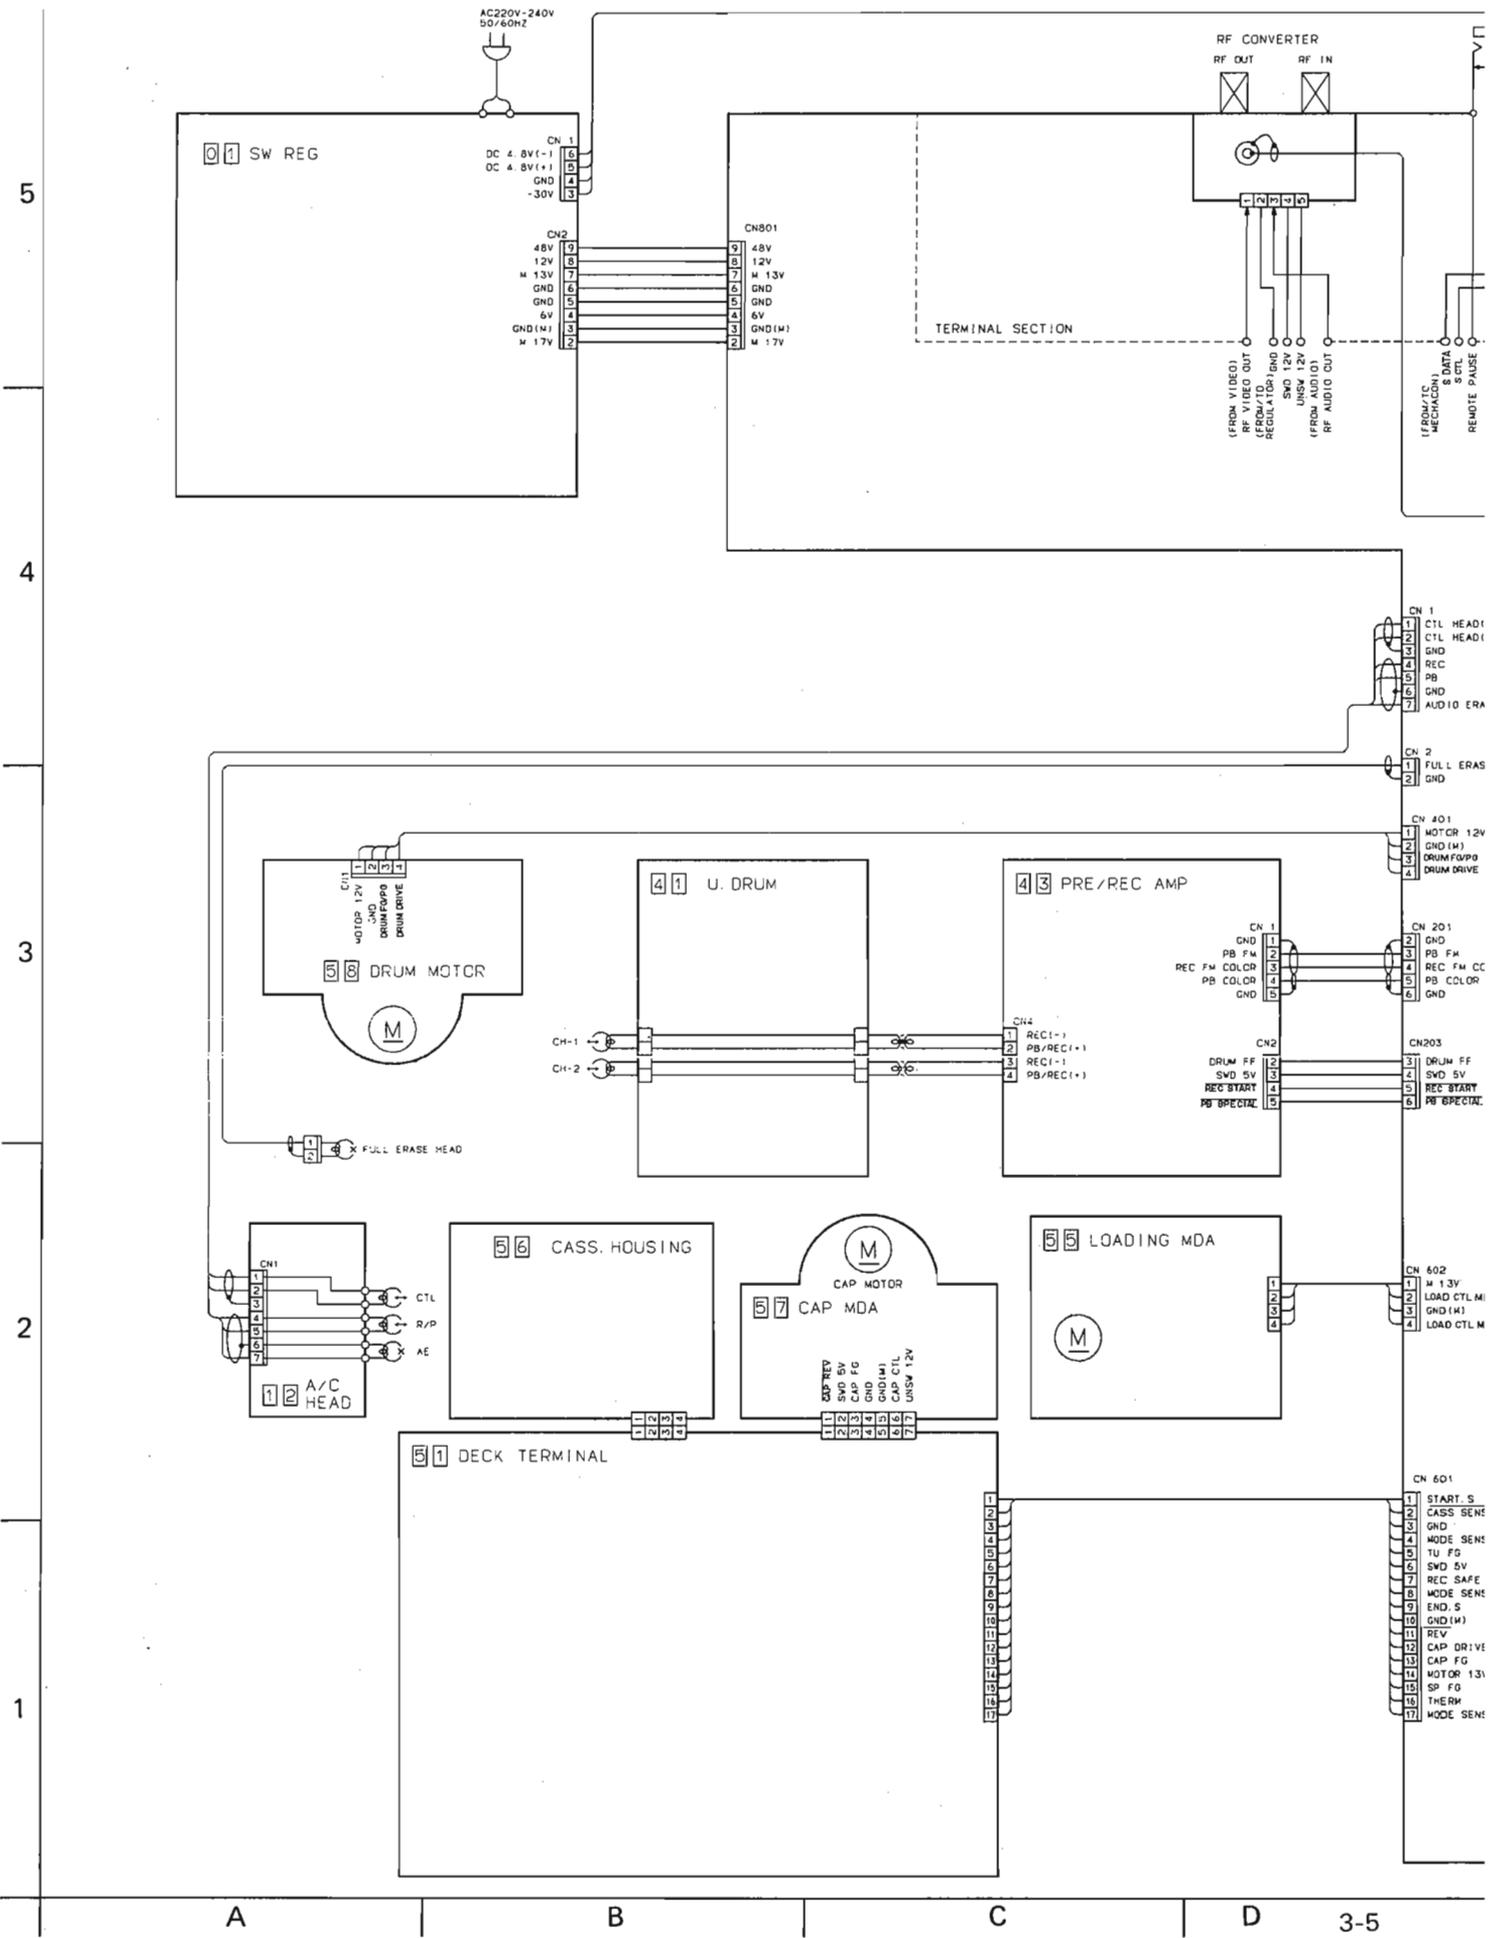

#### 3. Chip diode

**Note:** The digital transistor includes built in resistors. It features small size and high reliability. Both PNP and NPN types are available.

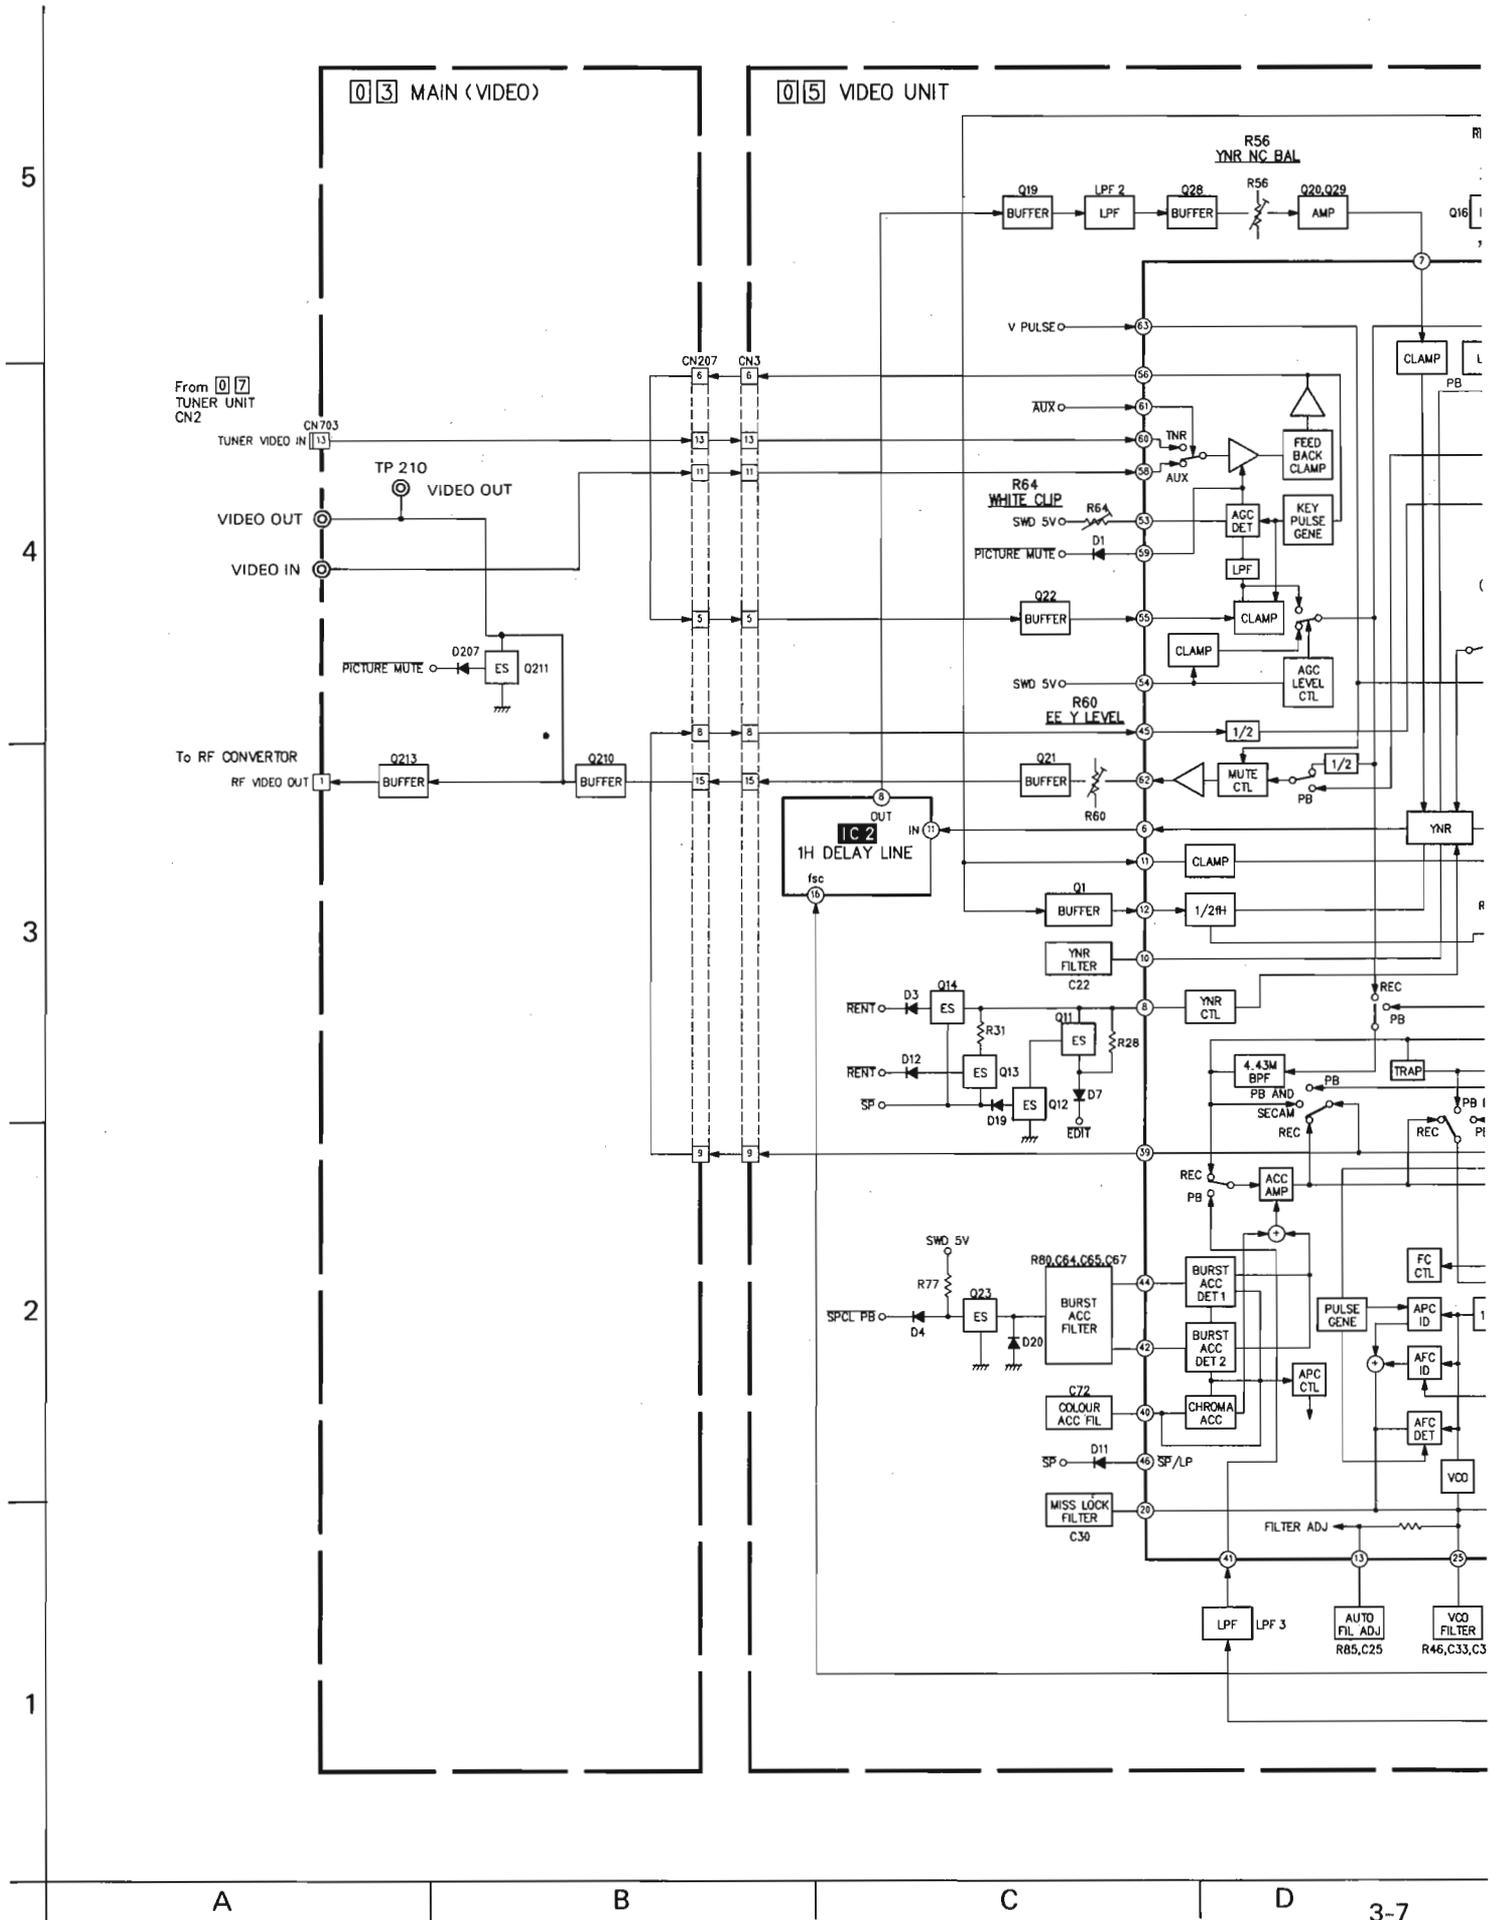

**Uses:** Inverter, interface, driver circuits.

	R3	QRD122J-102	RESISTOR	1K Ω, 1/2W
	C1	QCC11EJ-103	CAPACITOR	0.01 μ F,25V
	TH1	ERT-D2FHJ503S or PESC1084 or ERT-D2FHK503S	THERMISTOR	
			NEGA THERMISTOR	
			THERMISTOR	

## SECTION 6

### TECHNICAL INFORMATIONS

#### 6.1 CPU pin functions

##### 1. Mechacon CPU pin function (IC601)

Pin No.	Symbol	I/O format	Label	IN/OUT	Contents		
1	Vcc	--	Vcc	--	For the SYSTEM CONTROL, DC 5V (AL 5V)		
2	VREF	--	Vref	--			
3	DA	Analog	START SENS	I	LEADER TAPE DETECT (DET ON: L)		
4	PWM	PWM	NC	--	NC		
5	Port 6	N-ch OPEN DRAIN	4	FM DET	I	AUTO TRACKING DATA IN THERMIC CORRECTION (CAPSTAN BRAKE TIMING CONTROL)	
6			3	THERM			
7			2	MODE SENS A		MECHANISM MODE DETECT	
8			1	MODE SENS B			
9	0	MODE SENS C					
10	AN	Analog	7	REC SAFETY	I	DETECTS ERASE PROTECT TAB (TAB ABSENT: H) TRAILER TAPE DETECT (DET ON: L)	
11			6	END SENS			
12			5	NC	--	NC	
13			4	CAP. V	O	CAPSTAN MOTOR DRIVE VOLTAGE SERVO	
14	3	DRUM. V	DRUM MOTOR DRIVE VOLTAGE SERVO				
15	Port 4	N-ch OPEN DRAIN	2	LCM 2	O	LOADING MOTOR CONTROL	
16			1	LCM 1			
17			0	DRUM FF	I	REC TIMING CONTROL, DRUM ROTATION DETECT (25 Hz)	
18			7	CTL PULSE	I	MODE DETECT (SP/LP), BLANK DETECT	
19	Port 3	N-ch OPEN DRAIN	6	CAP REV	O	CAPSTAN ROTATION CONTROL (REV: L)	
20			5	V. PULSE	O	V PULSE CONTROL	
21			4	HEAD SELECT	O	HEAD SELECT SIGNAL OUTPUT	
22			3	NC	--	NC	
23			2	REEL FG	I	REEL ROTATION DETECT/TAPE REMAIN	
24			1	REEL FG (TU)			
25			0	SYNC DET		INPUT SIGNAL DETECT (NO SYNC: H)	
26			INT-1	--	CAP FG		MODE (SP/LP) DETECT/BACK SPACE COUNT
27	CN Vss	CN Vss	I		GND		
28	RESET	RESET			RESET AT CONNECT VCR TO AC		
29	X IN	X IN	I		MAIN SYSTEM CLOCK		
30	X OUT	X OUT	O				
31	ø	NC	--		NC		
32	Vss	Vss	--		GND		
33	Port 5	with Input Latch	7		R PAUSE	I	REMOTE PAUSE CONTROL (PAUSE ON: L)
34			6	INDEX	I/O	VISS DATA WRITE/DETECT	
35			5	S. CLK	O	CLOCK	
36			4	S. DATA	O	SERVO CONTROL DATA OUTPUT	
37		3	High Impedance	RENT	O	RENTAL MODE: L	
38		2		TEXT		TEXT MODE: L	
39		1		NC	--	NC	
40		0		EDIT	O	EDIT MODE: L	
41	Port 1	N-ch OPEN DRAIN	7	REC START		REC START: L	
42			5	AUX	O	INPUT SIGNAL CONTROL (AUX: L)	
43			4	REC		REC: L	
44			3	P MUTE		PICTURE MUTE CONTROL (MUTE ON: L)	
45			2	EE		EE: L	
46			1	POWER ON		POWER ON: L	
47			0	VIDEO		VIDEO MODE: L	
49			Port 0	N-ch OPEN DRAIN		7	A. MUTE
50	6	CASS SENS				I	CASSETTE IN/OUT DETECT
51	5	M DATA			I/O	MEMORY IC CONTROL (DATA READ/WRITE)	
52	4	TNR CTL			O	TNR MODE: H	
53	3	V. UP			O	CAPSTAN ROTATION SPEED CONTROL (V. UP: H)	
54	2	AUTO/MAN/SLOW			O	HEAD SELECT	
55	1	NC			--	NC	
56	0	M CE			O	MEMORY IC CHIP ENABLE	
57	Port 2	C MOS			O		
58			6	NC	--	NC	
59			5	PLL DATA	O	TUNING DATA OUTPUT	
60			4	PAUSE	O	CAPSTAN MOTOR SERVO (SERVO MODE: H)	
61			3	SERVO			
62			2	T. CLK	I	CLOCK	
63			1	T. DATA	I/O	M-CTL/TIMER CPU BUS DATA (16 BIT SERIAL)	
64			0	PLL LOCK	I	TUNING CHECK DATA INPUT	

Table 6-1 Mechacon CPU pin function

## 2. IC1 pin function (Timer)

Pin No.	Symbol	Label	I/O	Contents
1	S3	Sd	0	SEGMENT DISPLAY DATA OUTPUT /KEY SCAN PULSE OUTPUT /KEY SCAN PULSE OUTPUT
2	S2	Sc		
3	S1	Sb		
4	S0	Sa		
5	P00/INT4	POWER DOWN	I	POWER DOWN DETECT (P DOWN: L)
6	P01/SCK	OS CLK	-	NC
7	P02/SD	OS DATA		
8	P03/SI	TEST	I	TEST POINT (TP1)
9	P10/INT0	REMOTE	I	16 bit REMOTE DATA INPUT (A/B CODE)
10	P11/INT1	NC	-	NC
11	P12/INT2	CNT PLS	0	COUNTER DATA INPUT
12	P13/T10	CNT PLS		
13	P20	KS0	I	KEY SCAN DATA INPUT
14	P21	KS1		
15	P22	KS2		
16	P23/BUZ	KS3		
17	P30	TIMER DATA	I/O	TM (TIMER/M-CTL CPU) BUS : 16 bit SERIAL DATA : CLOCK VIDEO PROGRAMMING SYSTEM : I <sup>2</sup> C BUS DATA : CLOCK
18	P31	TIMER CLK	I	
19	P32	SDA TA	I/O	
20	P33	SCL K	O	
21	P60	OS CE	0	ON SCREEN IC CONTROL
22	P61	OS RESET	0	
23	P62	NC	-	NC
24	P63	NC		
25	P40	NC		
26	P41	NC		
27	R42	NC		
28	P43	NC		
29	PPO	NC		
30	X1	X1	I	MAIN SYSTEM CLOCK
31	X2	X2	O	
32	Vss	Vss	-	GND
33	XT1	XT1	I	GND
34	XT2	POWER	0	LED CONTROL (LED ON: L)
35	P50	NC	-	NC
36	P51	AUTO TRACK	0	LED CONTROL (LED ON: L)
37	P52	NC	-	NC
38	P53	PROGRAM	0	BLUE BACK MODE: H
39	RESET	RESET	I	RESET AT CONNECT VCR TO AC
40	T0	10G	0	COLUMN DISPLAY DATA OUTPUT
41	T1	9G		
42	T2	8G		
43	T3	7G		
44	T4	6G		
45	T5	5G		
46	T6	4G		
47	T7	3G		
48	T8	2G		
49	T9	1G		
50	T10/S15/PH3	Sp	0	SEGMENT DISPLAY DATA OUTPUT /KEY SCAN PULSE OUTPUT
51	T11/S14/PH2	So		
52	T12/S13/PH1	Sn		
53	T13/S12/PH0	Sm		
54	T14/S11	Sl		
55	T15/S10	Sk		
56	VLOAD	VLOAD	I	FDP DRIVE
57	VPRE	VPRE		
58	S9	Sj	0	SEGMENT DISPLAY DATA OUTPUT /KEY SCAN PULSE OUTPUT /KEY SCAN PULSE OUTPUT /KEY SCAN PULSE OUTPUT /KEY SCAN PULSE OUTPUT
59	S8	Si		
60	S7	Sh		
61	S6	Sg		
62	S6	Sf		
63	S4	Se		
64	VDD	VDD	-	5 V For the SYSTEM CONTROL
