BLOCK LEVEL DIAGRAM/DISASSEMBLY FOR REPAIR

BLOCK LEVEL DIAGRAM

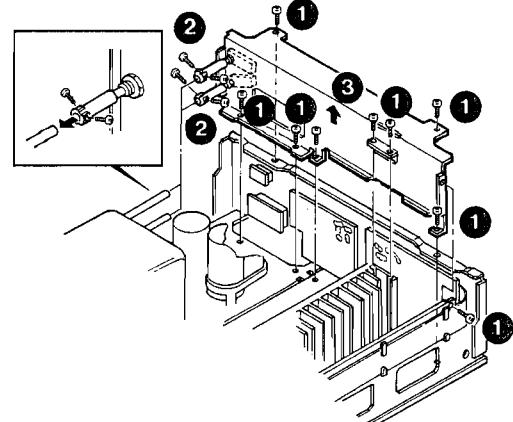

DISASSEMBLY FOR REPAIR

REPAIR ON THE REAR SIDE

For repair to the printed circuit board, etc. on the rear panel side, remove the shield plate in the following sequence.

1. Remove nine shield plate fitting screws. (①)
2. Loosen four screws of the remote switch shaft coupling (②) and remove the coupling from the extension shaft.
3. Extract the shield plate upward (③).

CIRCUIT DESCRIPTION

AUDIO (X09-2250-81)

Components	Use/Function	Operation/Condition/Interchangeability
Q1, Q2	Constant current circuit	Constant current circuit of main class A initial stage differential circuit which increases CMRR.
Q3, Q4	Bias circuit	Makes temperature compensation of the final transistor.
Q5~Q8	Predriver	
Q9~Q12	Driver	
Q13~Q16	Low side power	Final transistor on the low output side
Q17~Q20	Hi side power	Final transistor on the high output side
Q21~Q24	Current limiter	Limits current of the final transistor during overloaded drive. (Q21, Q22 are high voltage resistant transistors.)
Q25~Q32	Cascade boot strap circuit	Constitutes the VIG* circuit. Q25~Q28 constitute the constant current circuit and Q29~Q32 constitute cascade connection with base grounding.
Q33, Q34	Constant current circuit	Constant current circuit of equalizer, initial stage FET differential circuit that increases CMRR.
Q35~Q40	Constant voltage circuit	Constant voltage power supply circuit for main class A stage. Q35~Q38 constitute the control transistor and Q39, Q40 constitute the error amplifier.
Q41~Q44	Constant voltage circuit	Constant voltage power supply circuit for equalizer amplifier. Q41, Q42 constitute the control transistor and Q43, Q44 constitute the error amplifier.
Q45	Protection driver	Transmits the operation signals of current limiters Q21, Q22 to the protection IC (IC3).
Q46, Q47	Constant current circuit	Ripple removing circuit inserted into line B to class A initial stage.
IC1, IC2	DLD switching IC	DLD's Low-High switching circuit.
IC3	Protection IC	Makes output relay control due to muting at the time of power ON/OFF, DC leakage to SP terminal, overload, etc.

* VIG : See page 4.

CONTROL (X11-2200-81)

Components	Use/Function	Operation/Condition/Interchangeability
Q2, Q3	Winking circuit	The LED is lit at the time of power display or while the set is normally operating. The LED flickers until the amplifier is stabilized (around 5 seconds) after power ON and also when the protection circuit is actuated on occurrence of a fault to the power amplifier.
IC1	Tone circuit IC	

POWER AMPLIFIER (X85-1020-13)

Components	Use/Function
Q1, Q2	Class A initial stage differential amplifier
Q3~Q6	Class A initial stage cascade circuit
Q7~Q10	2nd stage differential amplifier
Q11~Q14	3rd stage differential amplifier
Q15, Q16	Current mirror circuit

PREAMPLIFIER (X85-1060-00)

Components	Use/Function
IC1	OP amplifier for EQ amplifier
Q1~Q4	Initial stage cascade circuit
Q5~Q8	Initial stage differential circuit

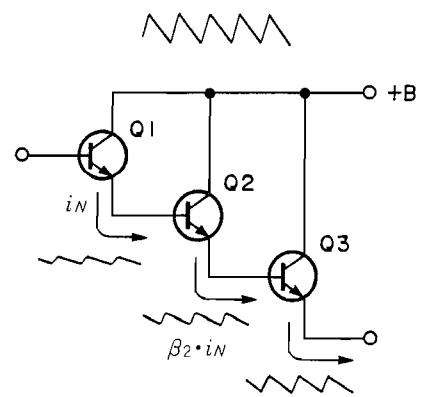

CIRCUIT DESCRIPTION

Outline of VIG (Voltage Interface Gate) circuit (X09-2250-81)

When the power supply voltage of an amplifier varies, its varying component will appear in the output of the amplifier to a minor extent. It is a large cause for deterioration in the reproduced tone quality.

In the Class A (voltage amplification) stage it is more sensitive to voltage variation when it is closer to the initial stage, and consequently, strengthening of ripple filter and constant power supply, etc. were used. In the past, however, importance was not attached to the measures against voltage fluctuation because class B (power amplification) stage did not involve voltage gain. When an investigation was made, however, it was found out that class B stage is also considerably weak against voltage fluctuation and that major improvement can be obtained in the reproduced tone quality when this point is improved.

What improved the degree of influence of this Class B stage against fluctuations of the voltage fluctuation is the VIG circuit.

β_2 : Q2 current amplification ratio
 β_3 : Q3 current amplification ratio

Fig. 1

1. Darlington connection circuit

The class B stage is of 3-stage Darlington connection. But the power variation component leaked from the power supply at Q1 as shown in Fig. 1 is multiplied by β_2 (current amplification ratio) times and is further multiplied by β_3 times by Q3. Therefore, the leakage of the power supply variation component from Q1, 2 becomes large, and countermeasures against it become necessary. As the collector resistance of a transistor and this leakage are inversely proportioning to each other, it becomes possible to take countermeasures by increasing the collector resistances of Q1, 2.

As the cascade connection circuit is a base grounded circuit, there is such a feature that the collector resistance is extremely high, and the objective can be accomplished by making cascade connecting through connection of base grounding transistor Q4 to Q1, 2 as shown in Fig. 2. This is the principle of VIG (Voltage Interface Gate).

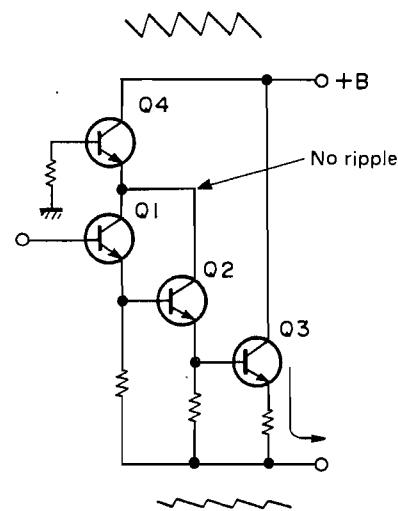

Fig. 2 Principle of VIG circuit

CIRCUIT DESCRIPTION

2. Practical circuit

It is not convenient for DC operation in the state where the base of Q4 is grounded. With KA-990V, therefore, bootstrap is made so that follow-up with the signal is made at KA-990V. Fig. 3 indicates its concrete example. Bootstrap is applied to the emitter of transistor Q3 through R1, D1. The collector voltage required for operation of Q1, 2 is produced by voltage drop of R1 and D1. Constant current circuit CC1 supplies current required for bootstrap to R1, D1, and at the same time, also supplies the base current of Q4, and thus it prevents inflow to the base of Q4 the power supply fluctuation component into the base of Q4 by the high internal resistance of CC1 itself.

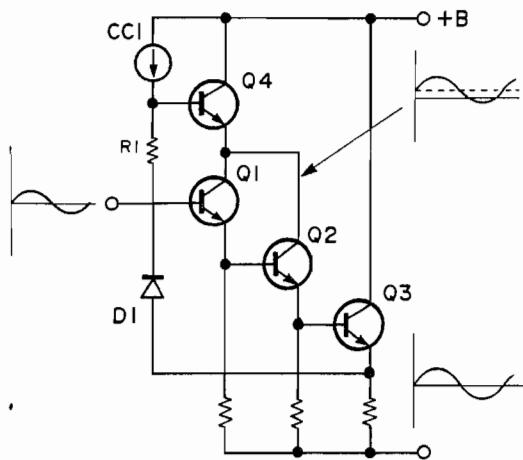

Fig. 3

A practical circuit of CC1 is shown in Fig. 4. Both bases of transistors Q5, 6 which constitute the constant current circuit are connected with constant current diodes D2 and R2, in order to increase the constant current property of Q5, 6.

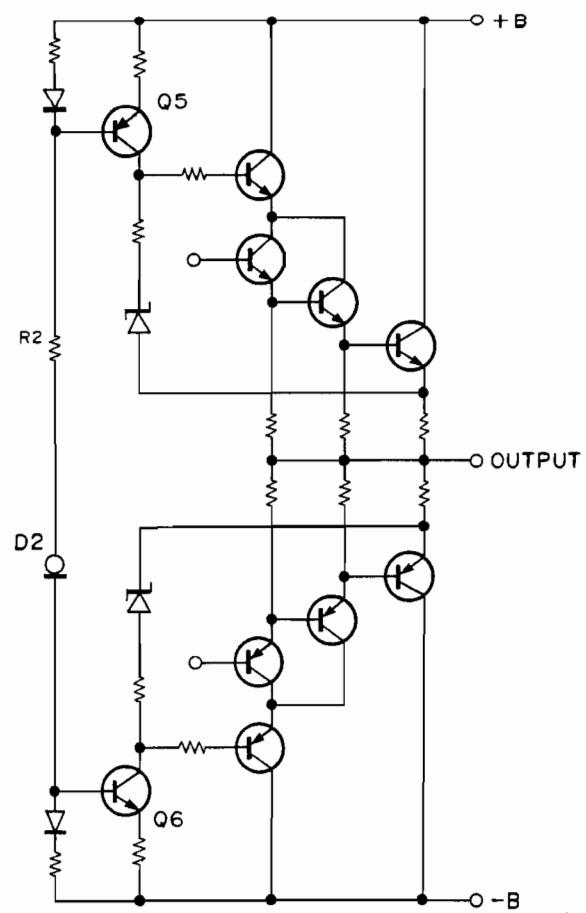

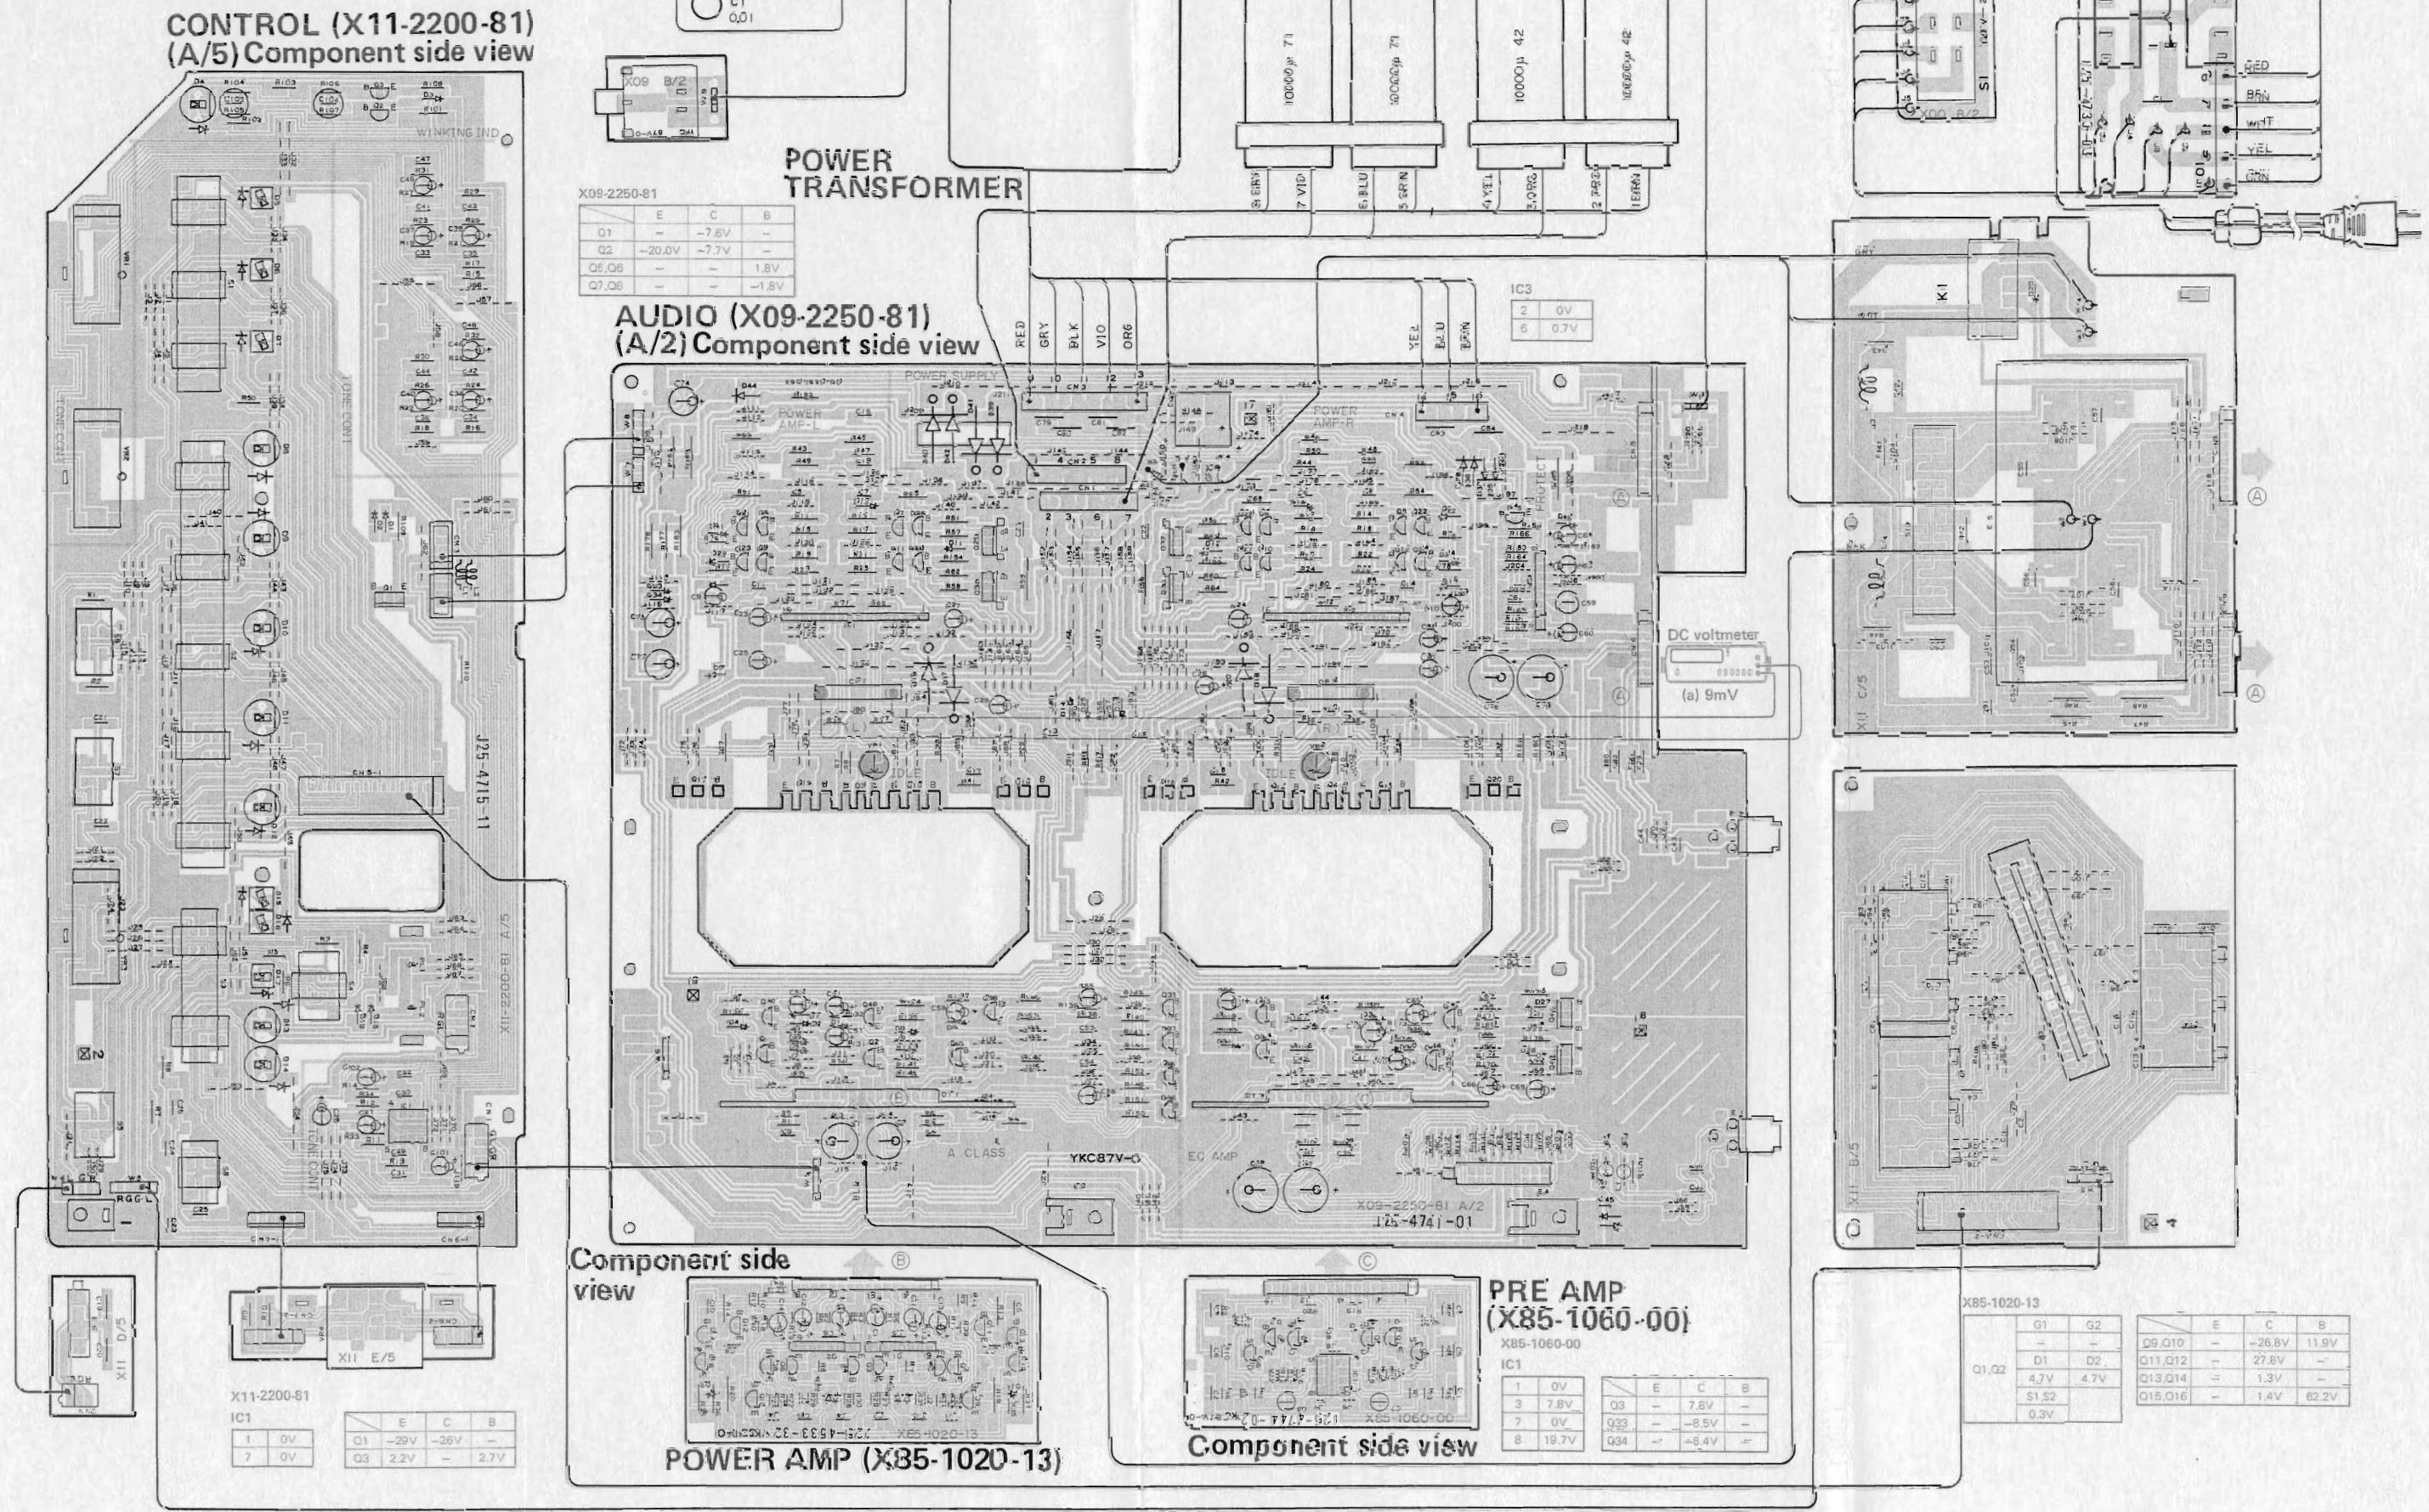

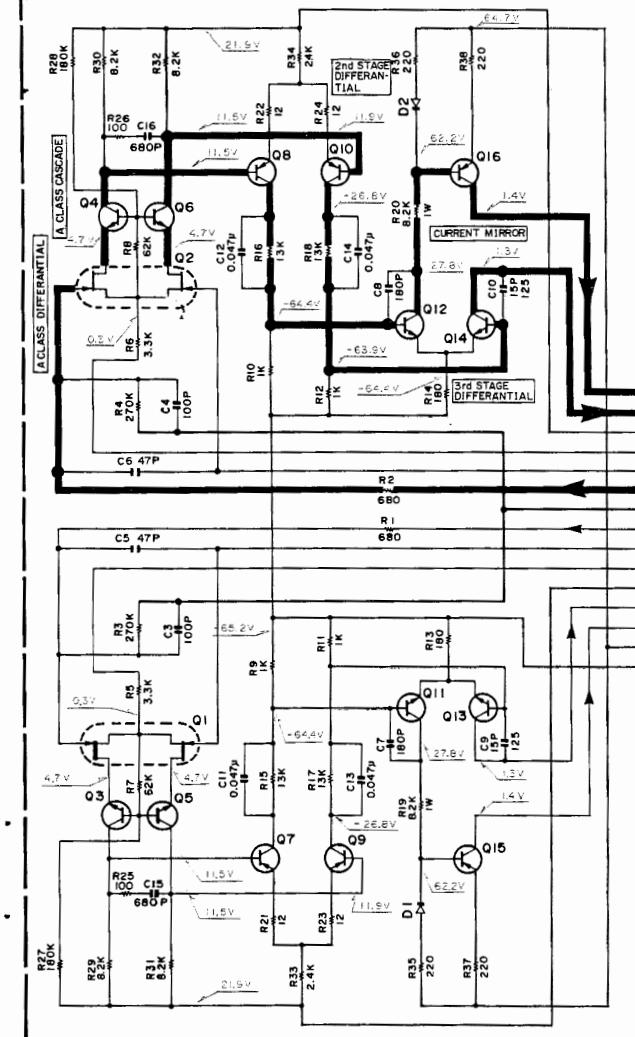

Fig. 4

PC BOARD

Refer to the schematic diagram for the values of resistors and capacitors.

CAUTION: For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list). Δ Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

DC voltages are as voltmeter with no slight due to var ments or/and units. Les tensions c.c. à mètre à haute im valeur peuvent diff mesure individuels.

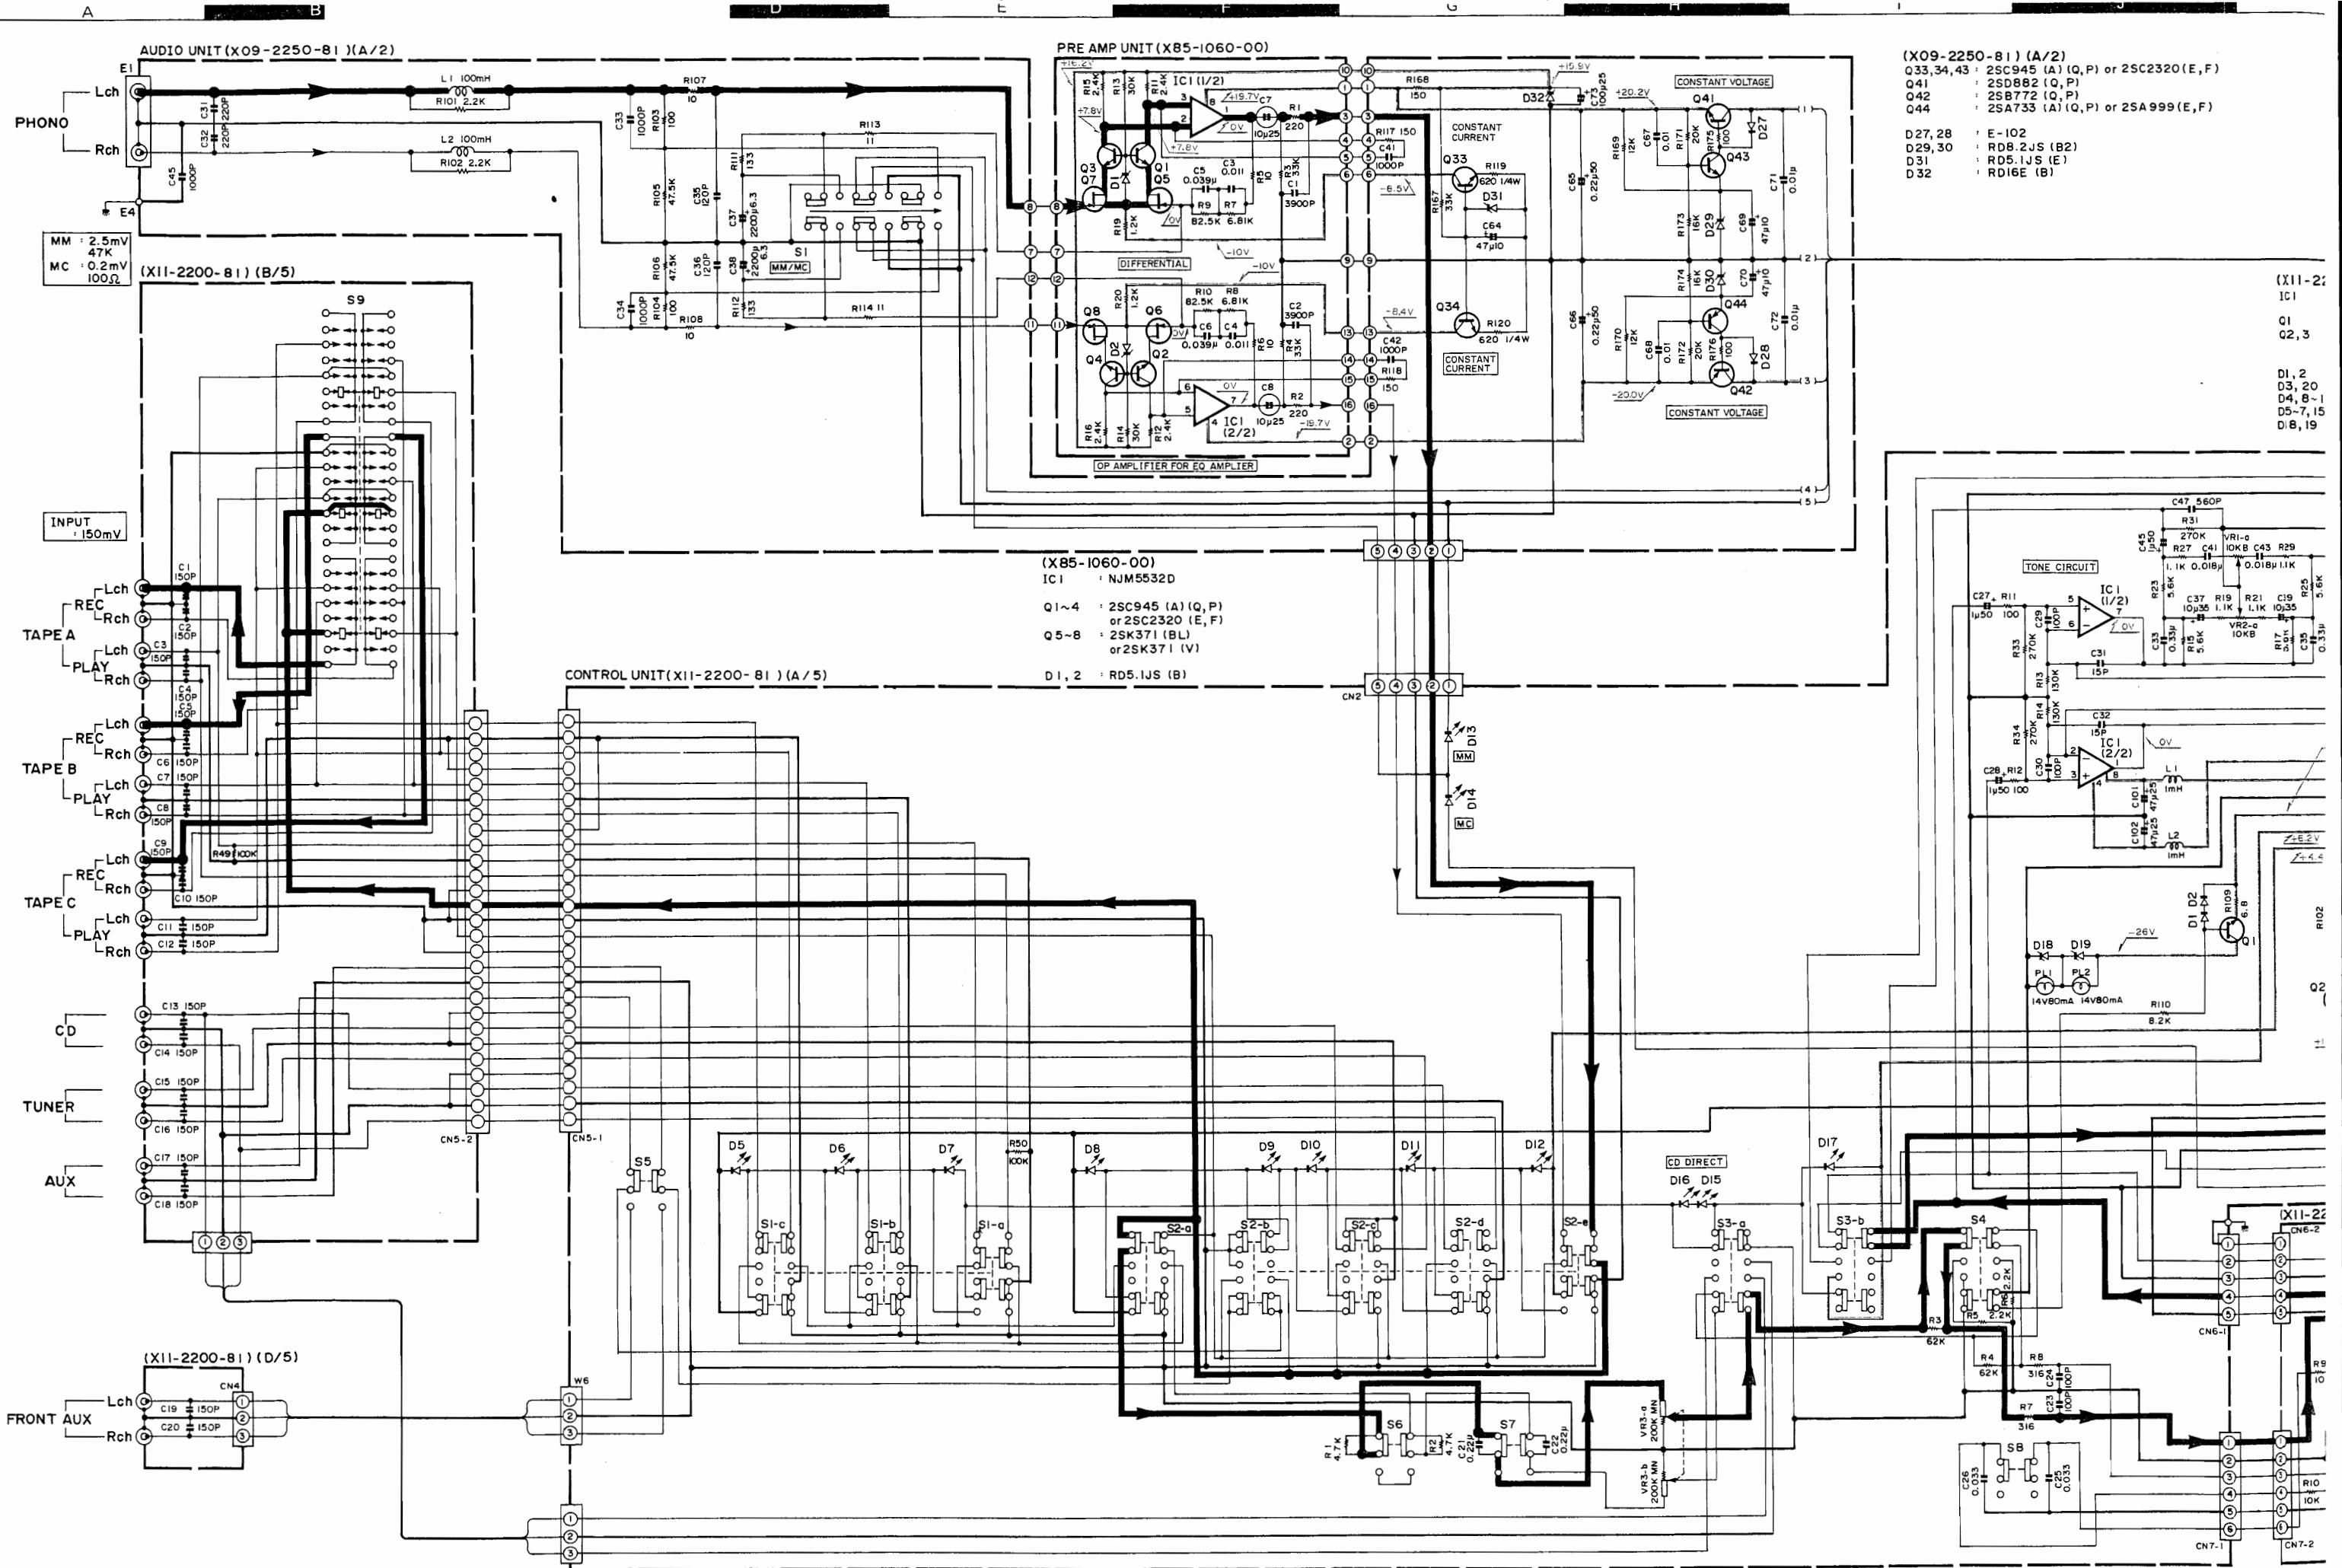

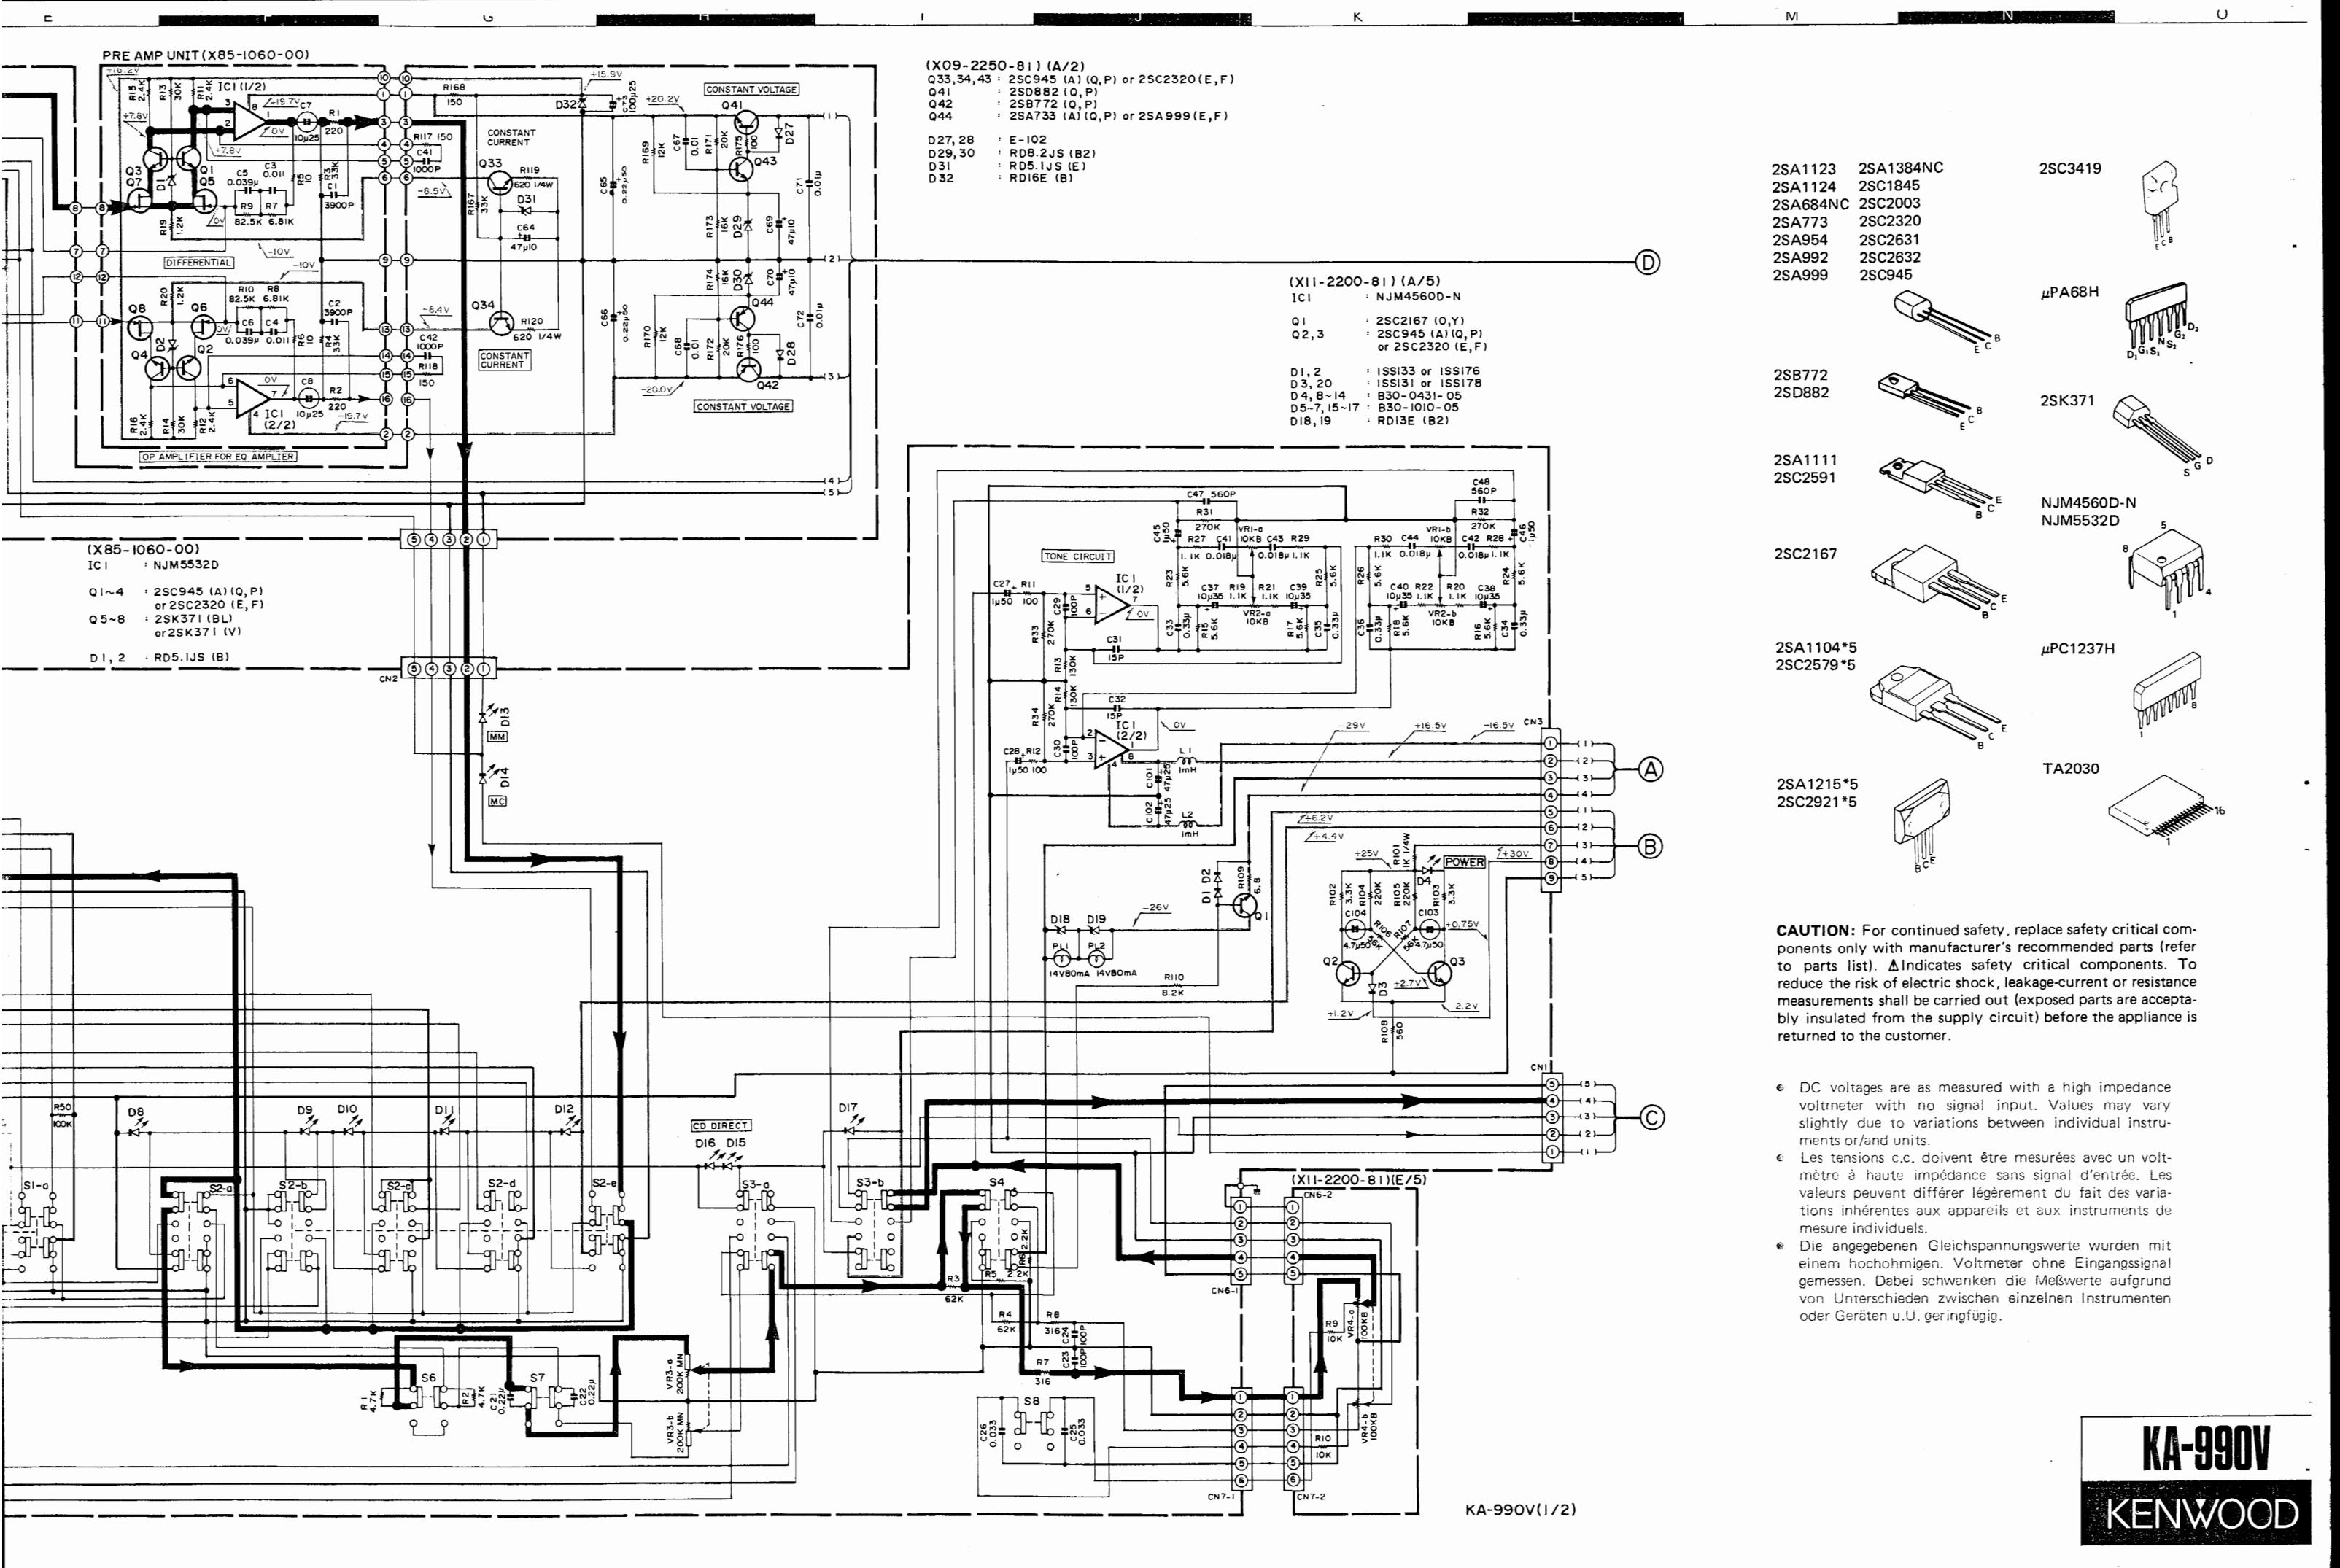

CAUTION: For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list). Δ Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

- DC voltages are as measured with a high impedance voltmeter with no signal input. Values may vary slightly due to variations between individual instruments or/and units.
- Les tensions c.c. doivent être mesurées avec un voltmètre à haute impédance sans signal d'entrée. Les valeurs peuvent différer légèrement du fait des variations inhérentes aux appareils et aux instruments de mesure individuels.

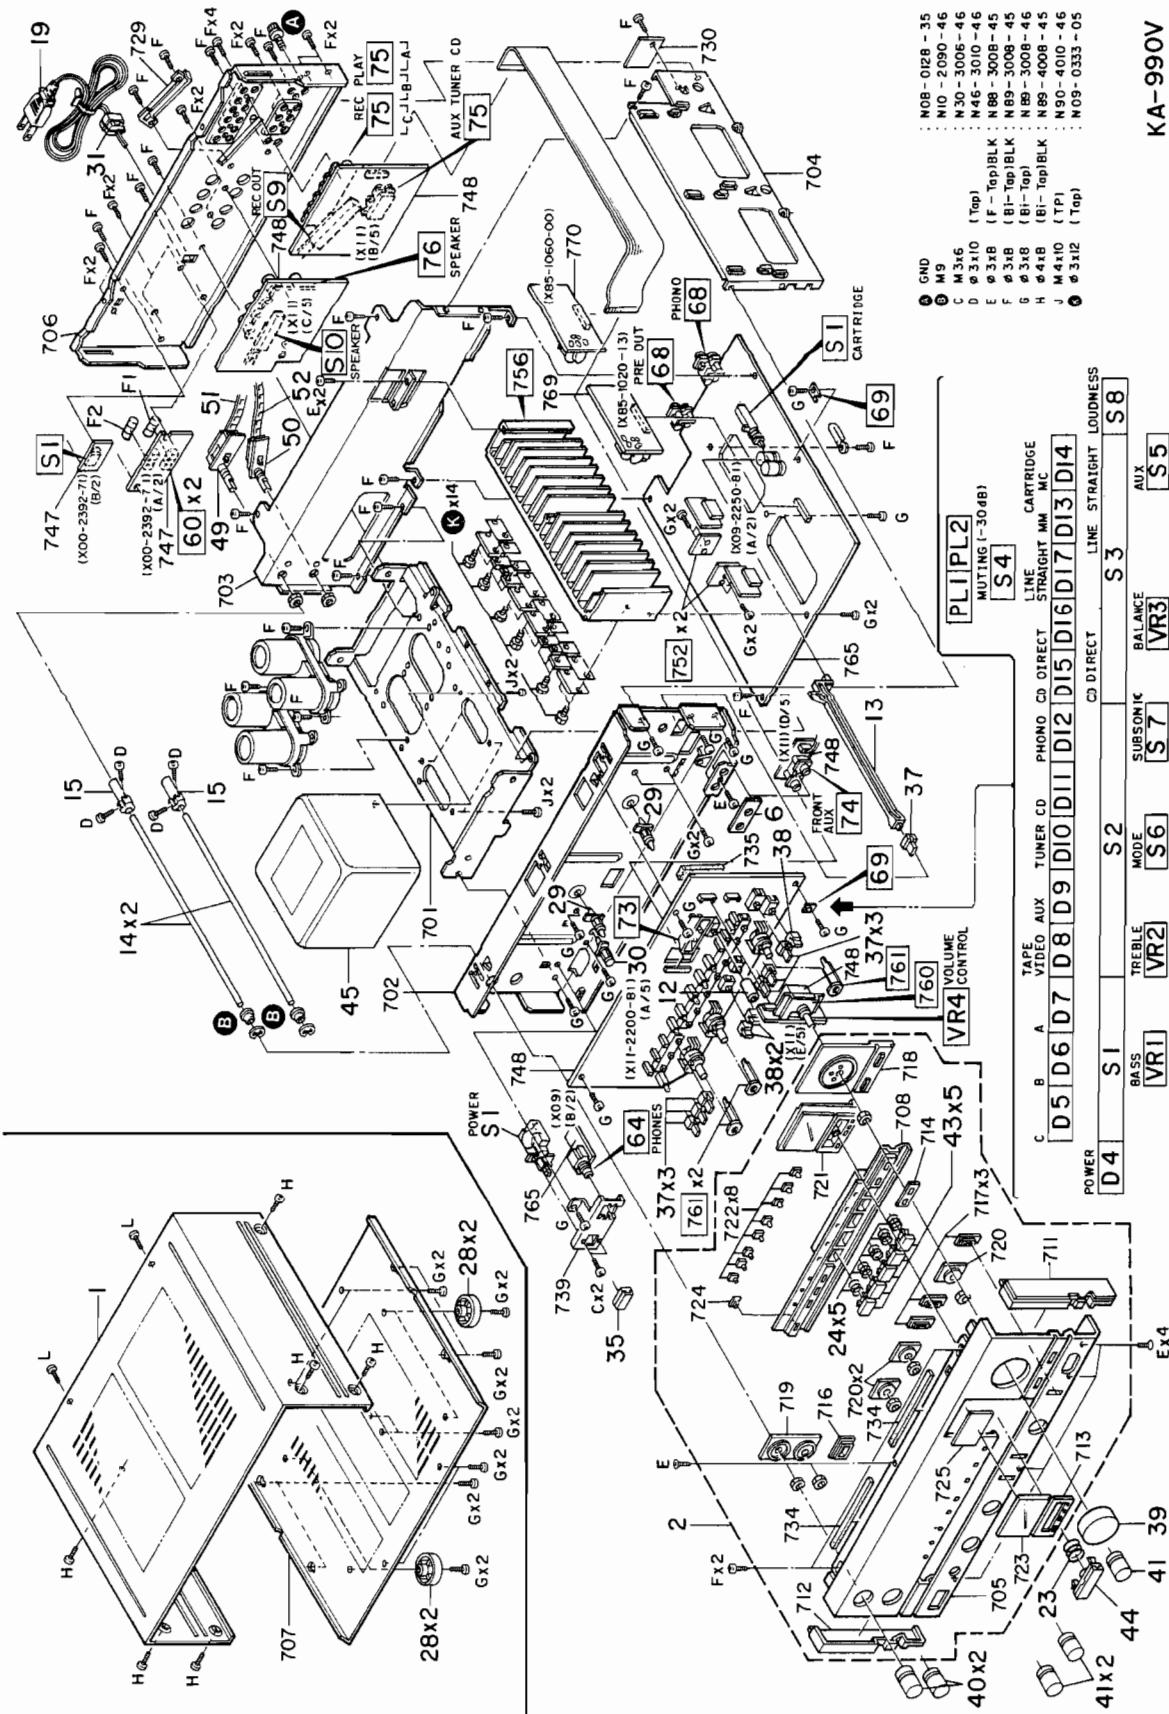

- Die angegebenen Gleichspannungswerte wurden mit einem hochohmigen Voltmeter ohne Eingangssignal gemessen. Dabei schwanken die Messwerte aufgrund von Unterschieden zwischen einzelnen Instrumenten oder Geräten u.U. geringfügig.

SPECIFICATIONS

Power Output

110 watts per channel minimum RMS, both channels driven at 8ohms from 20Hz to 20,000Hz with no more than 0.004% total harmonic distortion

Maximum Continuous Power Output (DIN) 1kHz at 4ohms	140W + 140W
Maximum Continuous Power Output (DIN) 1kHz at 8ohms	115W + 115W
Maximum Continuous Power Output (IEC/NF) from 63Hz to 12,500Hz, 0.7% Total Harmonic Distortion at 8ohms	115W + 115W
Total Harmonic Distortion (20Hz-20,000Hz, 8ohms)	0.004% at 110W
(1kHz, 8ohms)	0.002% at 110W
Inter Modulation Distortion	0.004% at rated power into 8 ohms
Frequency Response	1Hz to 180kHz + 0dB, -3dB
Phono Frequency Response	RIAA Standard curve ±0.3dB (20Hz to 20kHz)
Damping Factor (50Hz into 8ohms)	1,000
Signal to Noise Ratio (IHF-A)	
PHONO (MM)	88dB
PHONO (MC)	70dB
TUNER/CD/AUX/TAPE/VIDEO	108dB
Signal to Noise Ratio at Unweighted, 50mW Output (DIN)	
PHONO (MM)	60dB
PHONO (MC)	61dB
TUNER/CD/AUX/TAPE/VIDEO	62dB
Input Sensitivity/Impedance	
PHONO (MM)	2.5mV/ 47 kohms, 340 pF
PHONO (MC)	0.2mV/100 ohms, 560 pF
TUNER/CD/AUX/TAPE	150mV/ 47 kohms
Phono Maximum Input Level	
(MM)	200mV, 0.003% T.H.D. at 1kHz
(MC)	15mV, 0.003% T.H.D. at 1kHz
Output Level/Impedance	
TAPE REC	150mV/330 ohms
PRE OUT	2 V/600 ohms
Channel Separation (DIN) at 1,000Hz	
PHONO (Terminated with 2.2kohms)	60dB
AUX (Terminated with 47kohms + 250pF)	55dB
Tone Controls	
TREBLE	±10dB at 10kHz
BASS	±10dB at 100Hz
Subsonic Filter	6dB/oct. at 18Hz
Loudness Control (at -30dB Volume Level)	+9dB at 100Hz
Transient Response Risetime	1.7μs
General	
Power Requirements	120/220V, 50/60Hz European Model 240V, 50/60Hz Australia and U.K. Models 110-120V/220-240V, 50/60Hz Other Models
Power Consumption	220W
Dimensions	W 440mm (17-5/16") H 158mm (6-1/4") D 420mm (16-9/16")
Weight (Net)	13.5kg (3.0lb)

(IHF '66)

Note:

We follow a policy of continuous advancements in development. For this reason specifications may be changed without notice.

Note:

Component and circuitry are subject to modification to insure best operation under differing local conditions. This manual is based on, the Europe (E) standard, and provides information on regional circuit modification through use of alternate schematic diagrams, and information on regional component variations through use of parts list.
