

KENWOOD

KD-990

QUARTZ PLL DIRECT DRIVE AUTO LIFT UP TURNTABLE

BLOCK DIAGRAM

CIRCUIT DESCRIPTION

1. Functions of Semiconductors

ELECTRIC UNIT (X25-2580-00)

Element	Function	Operation, Condition & Interchangeability
IC1	Microprocessor	Refer to the description of μ PD7520.
IC2	PLL controller	For motor speed and phase control. Refer to the description of TC9142P.
IC3	Power ON/OFF	Each time Power SW S4 is pressed, the output from pin 2 switches between H and L, which controls Q5 to turn power ON and OFF.
IC4	Error amplifier, Hole IC driver	Drives the Hole ICs of the motor, based on the speed and phase error signals from IC2.
IC5	FG amplifier Level shifter	Amplifies the motor's FG output. Shifts the level of the IC2's Lock signal from (0 — 8 V) to (+10 — -10 V), and turns IC9 (analog SW) and Q9 ON and OFF.
IC6	Motor driver	Amplifies the motor's Hall IC output to drive the motor coil. Q14 to Q17 are output current boosters.
IC7	Difference detector for 2-phase motor coil current	Detects the difference values of the 2-phase current from the motor coil, and sends the signal to IC4 in order to eliminate the difference.
IC8	End detector	Amplifies the photo-reflector output, detects the tonearm position, differentiate the position detection output for conversion into speed, and compares it in order to detect the guide groove.
IC9	Analog SW, motor driver AC/DC coupling switch	The SW is OFF and the coupling is AC when the motor is quartz-locked, and the coupling is DC in other cases.
Q1	+8 V power supply	Increases the current of Zener diode D8.
Q2	Microprocessor reset	
Q3	Power ON/OFF	Q3 turns ON/OFF depending on the IC3's flip-flop output, controls the voltage at the base of Q1, and turns power ON and OFF.
Q4	IC3 reset	Detects the Zener current from Zener diode D9, and resets IC3. It is initialized so that the Power SW is OFF when the power cord is connected.
Q5	Q6 driver	Turned ON by microprocessor IC1 in solenoid drive operation (with microprocessor output "L").
Q6	Solenoid driver	ON when SOL is ON.
Q7	Solenoid driver	Turns ON for approx. 8 seconds from the solenoid kick operation.
Q8	LED driver	When the speed is set for 45 rpm, Q8 turns ON by "H" output from the microprocessor.
Q9	IC7 output OFF switch	Inhibits the operation of the 2-phase current difference detector circuit while the motor is not quartz-locked.
Q10, 11	End detector	Controls the photo-reflector output used for end detection.
Q12, 13	± 10 V power supply	Increases the current of Zener diodes D6 and D7.
Q14~17	Motor driver	Drives the motor coil for IC6 output current boost.

2. Two-phase current difference detector circuit

The wow & flutter of a two-phase motor deteriorates when there is a difference between the current values of the two phases, $\phi 1$ and $\phi 2$. With the KP-990, this difference is eliminated by using a circuit which detects the difference between the two phase currents and adjusts the drive current of the Hole ICs.

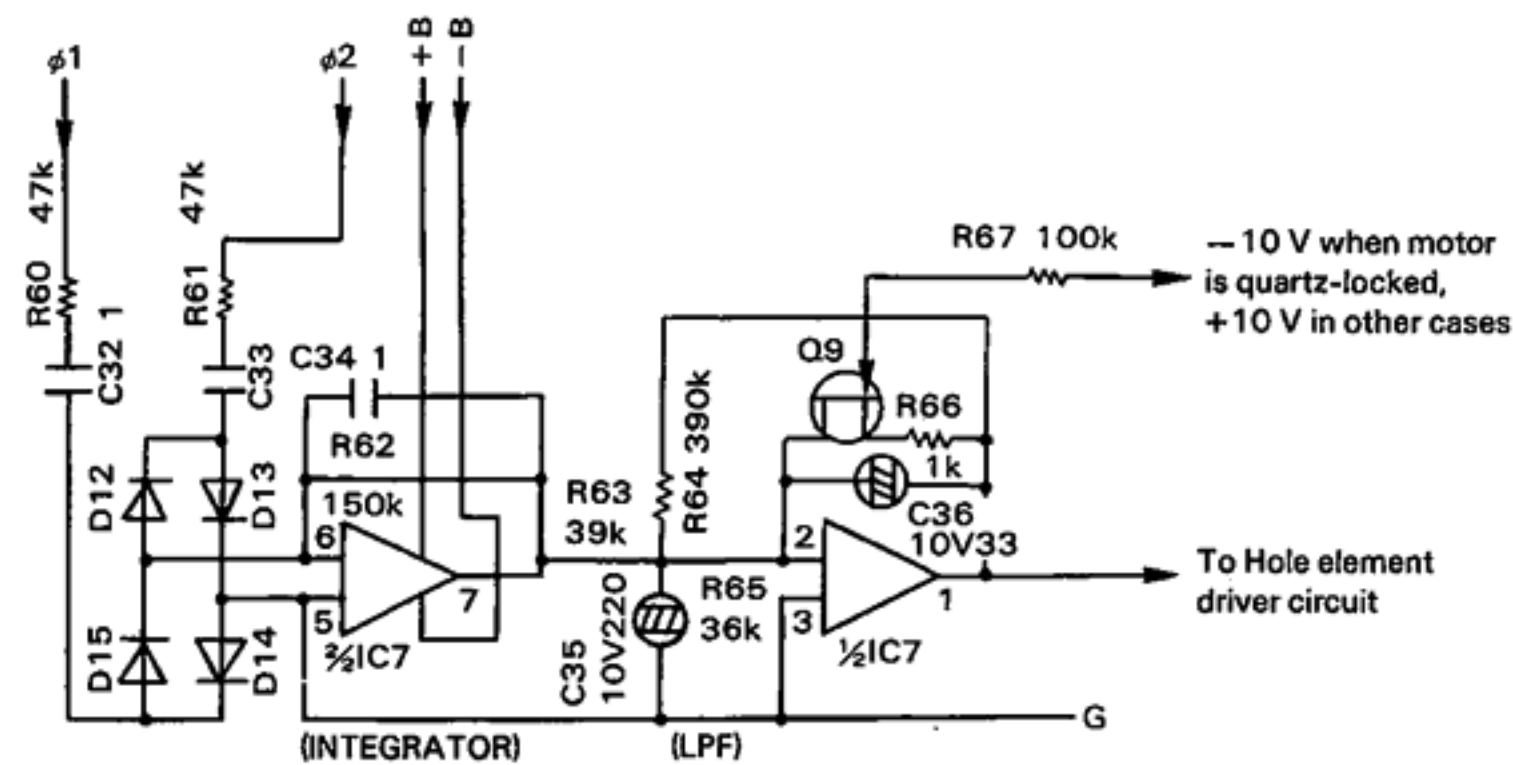

The positive side of $\phi 1$ and negative side of $\phi 2$ are input to the integrator, and the difference between $\phi 1$ and $\phi 2$ is output from it. (The difference between the ① and ② portions in the diagram on the left)

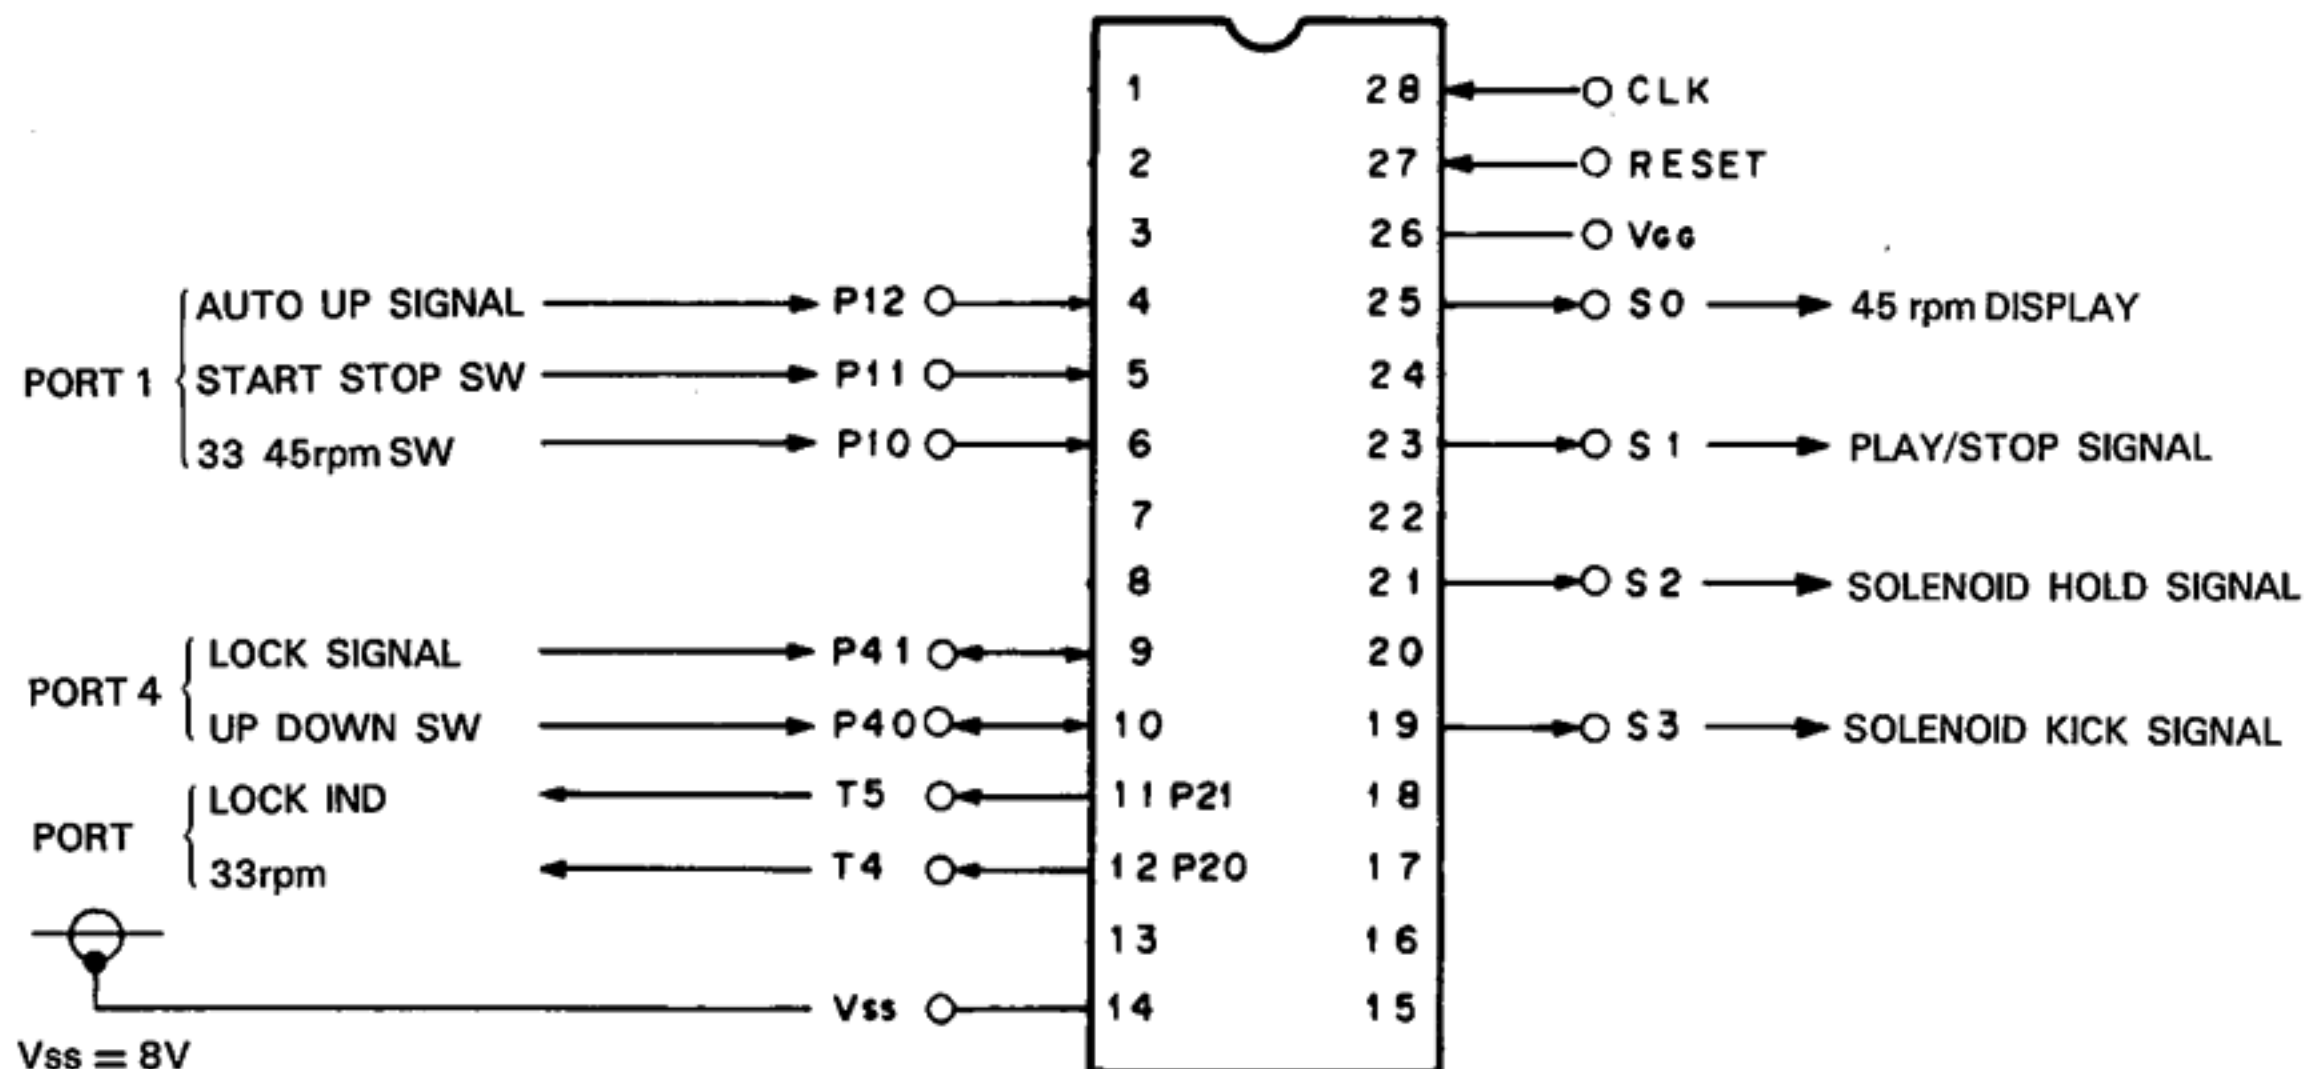

Then, the ripple incorporated in the output is eliminated by the low-pass filter, and its output is recognized as the difference between the two phase currents.

The Hole element drive circuit uses this signal to control the currents of the two Hole ICs so that $\phi 1$ and $\phi 2$ current values are equal.

When the motor is not quartz-locked, Q9 is ON, the output is fixed at about 0 V, and this circuit does not operate.

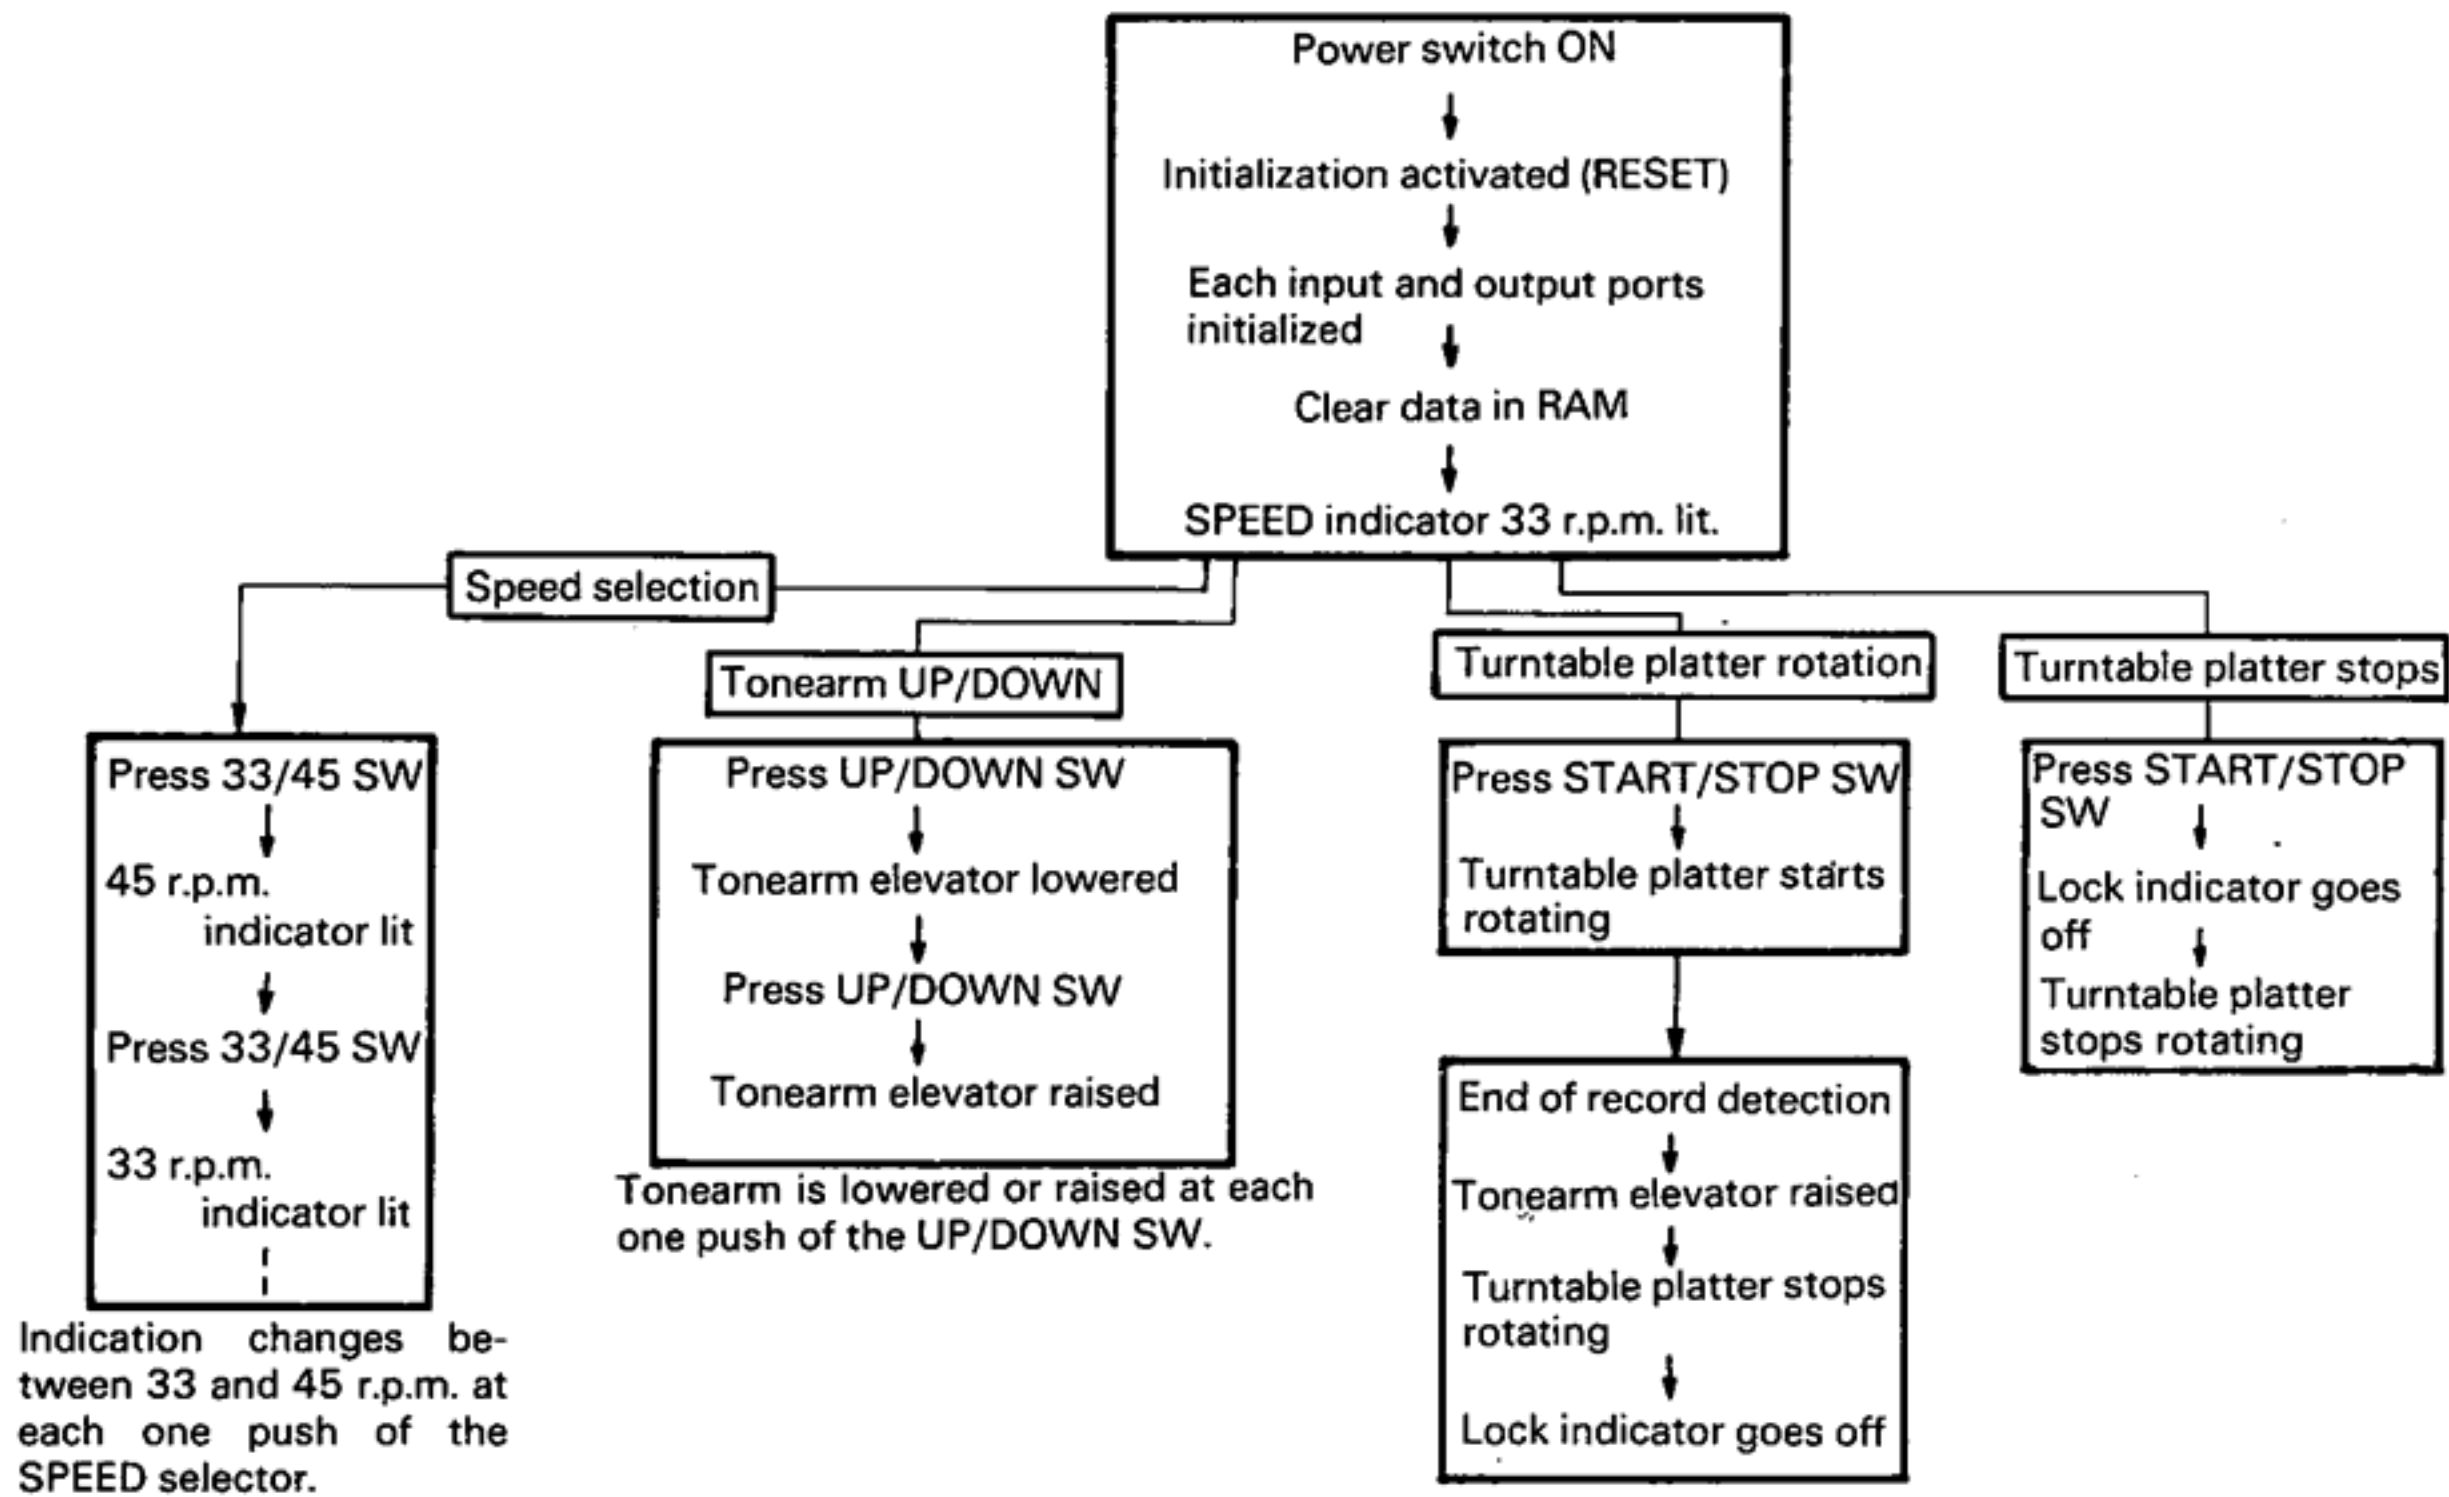

3. Microprocessor Operation Description

● Operation specifications of μ PD7520

The following diagram shows the operations of each section which occur at each operating point after power has been turned on.

Condition of each μ PD7520C-028 ports

- (1) Initialization (Power ON)
- (2) Speed selection (33/45 rpm)
- (3) Turntable platter starts rotating (START)
- (4) Tonearm auto up
- (5) Turntable platter stops rotating (STOP)

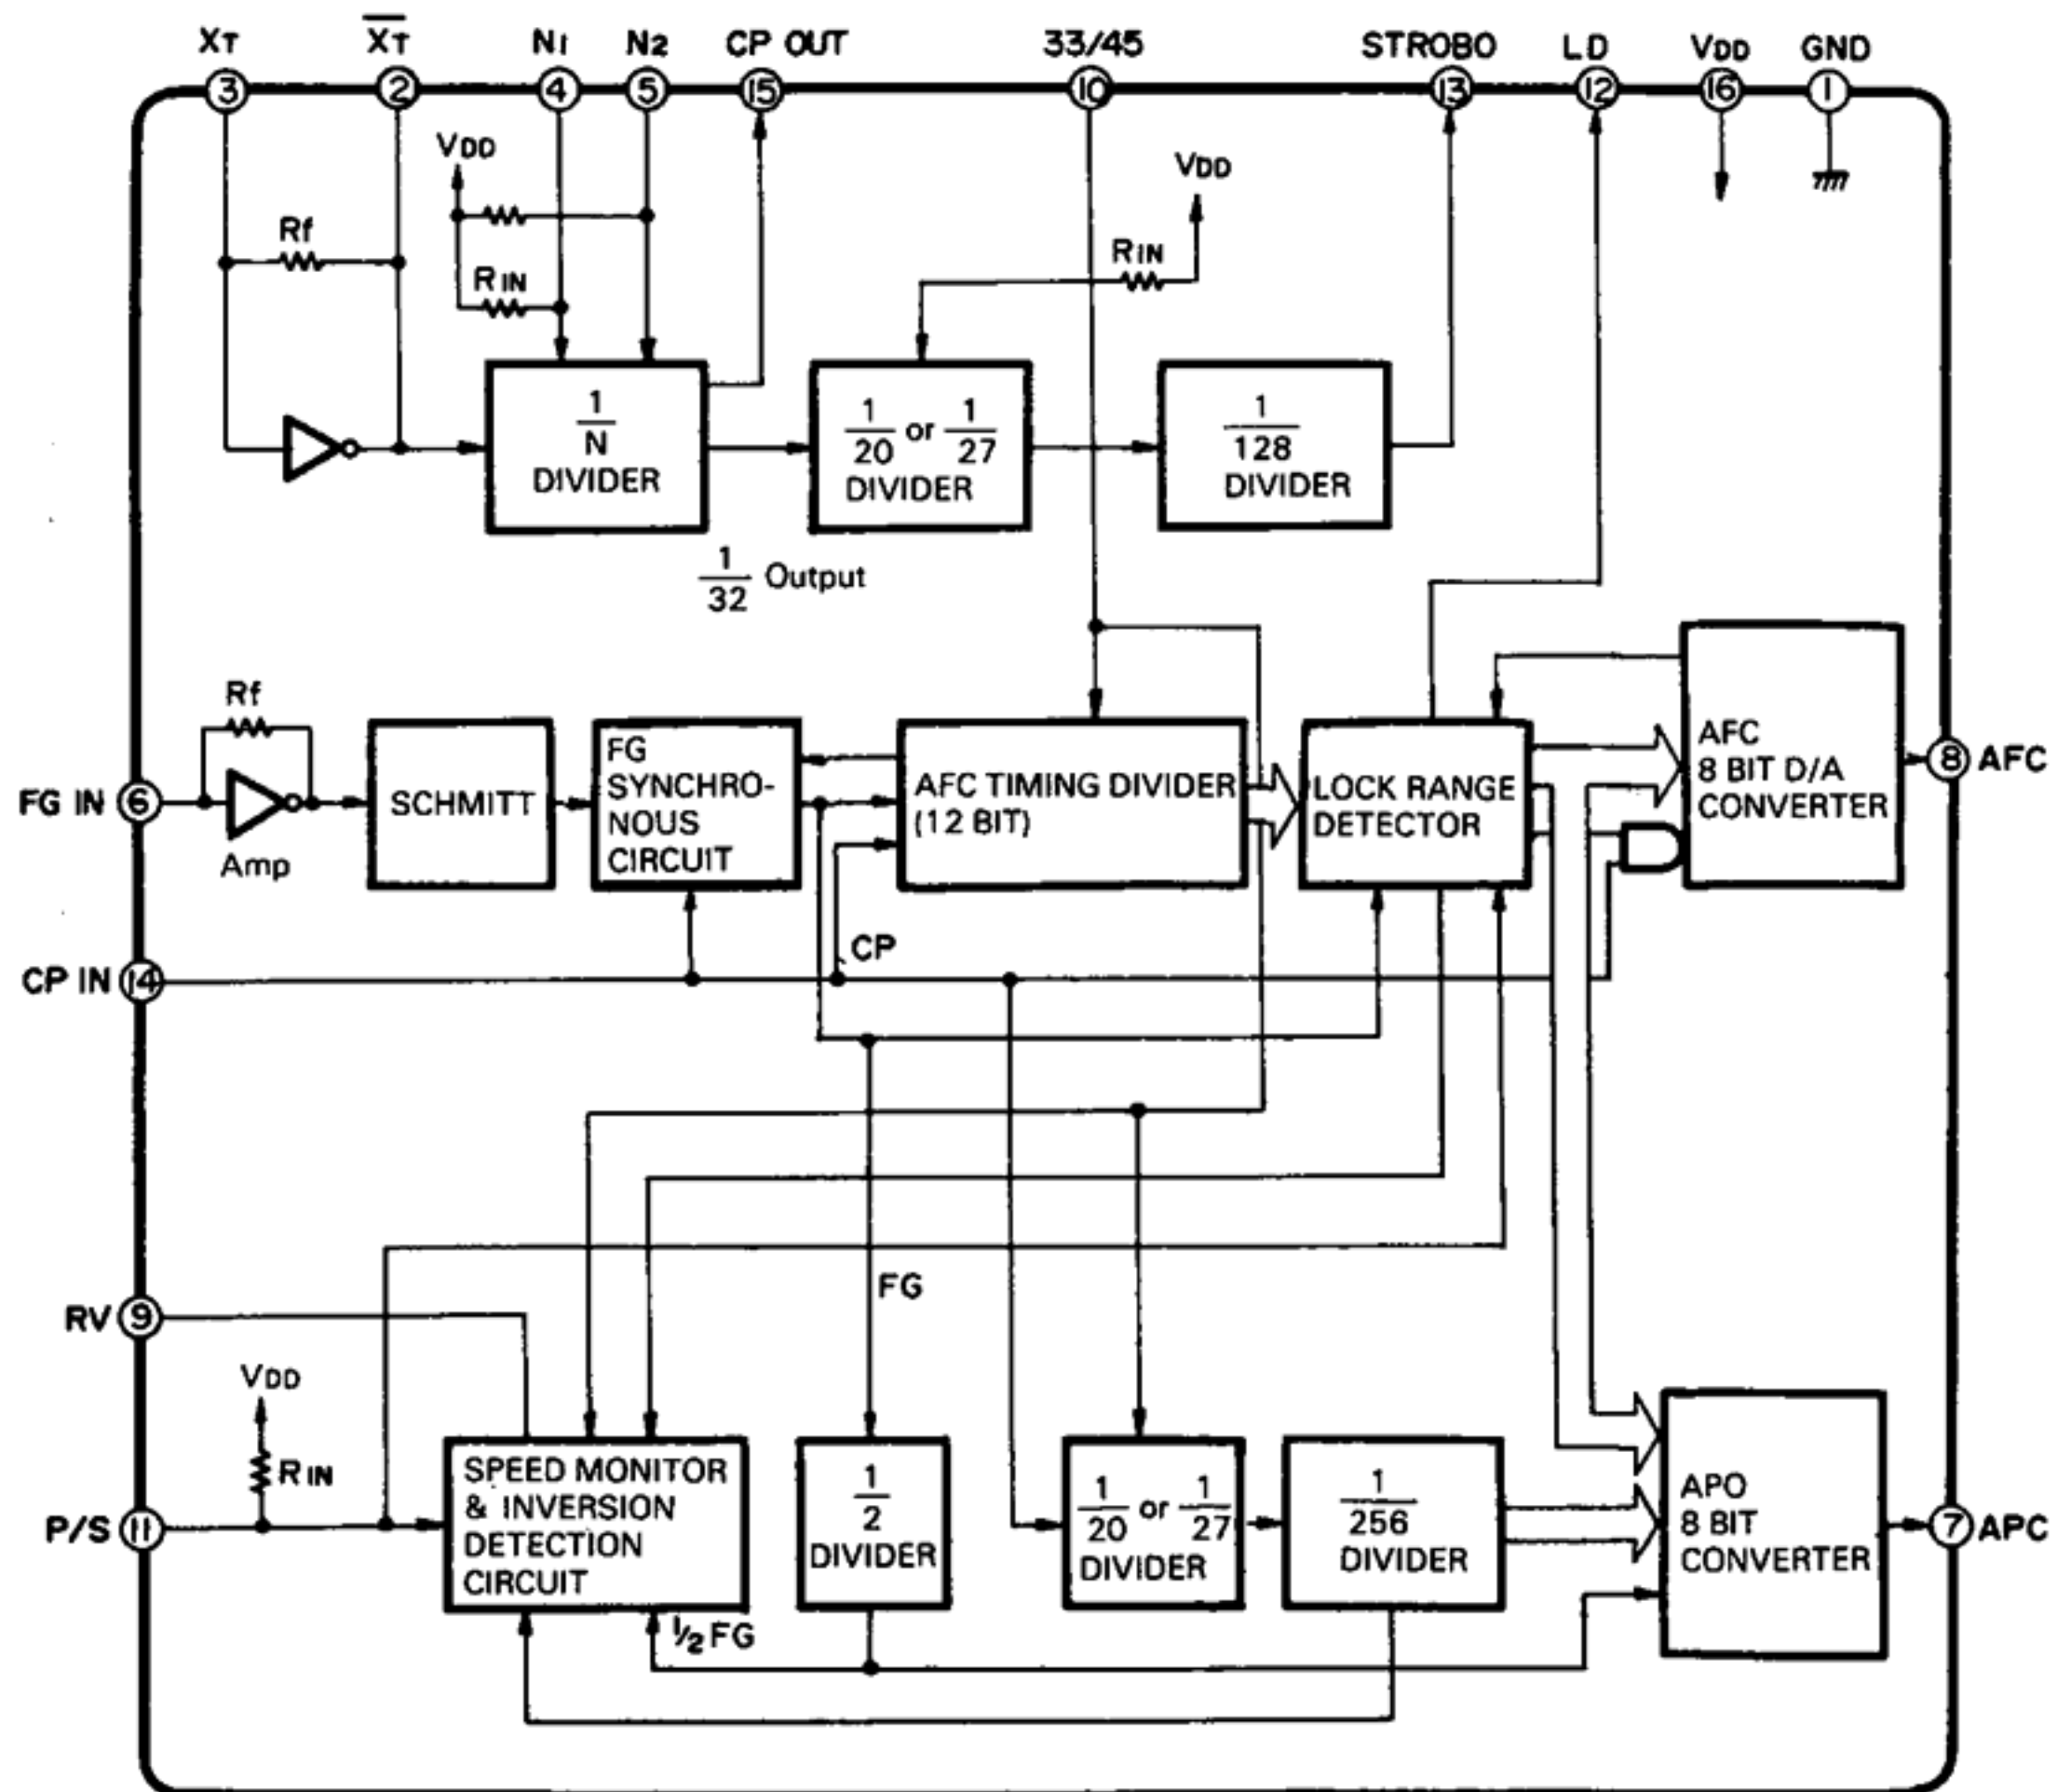

The above mentioned (1) ~ (5) are placed in the order of the functions described in “ μ PD7520C-028 Function description”. The conditions shown in the table below are also in that order so that functions can be confirmed while checking the IC’s ports.

		INPUT PORT					OUTPUT PORT						
PORT NO.		P 10	P 11	P 12	P 13	P 40	P 41	T 4	T 5	S 0	S 1	S 2	S 3
PIN NO.		6	5	4	3	10	9	12	11	25	23	21	19
PORT NAME		33/45 SW	START STOP SW	AUTO UP Signal	Not used	UP DOWN SW	LOCK Signal	33rpm LED	LOCK LED	45rpm LED	START STOP Signal	UP DOWN Signal	Kick Signal
(1)	Power ON RESET												
(2)	33/45 SW ON (45)												
	33/45 SW ON (33)												
(3)	START/STOP SW ON												
(4)	Auto up signal IN												
	START/STOP SW ON												
(5)	START/STOP SW ON												

4. Quartz PLL Motor Controller (C2-MOS LSI)

TC9142P is a motor controller for quartz lock type direct drive turntable motors. This IC employs 8-bit D/A converter for rotational speed control and phase control instead of the conventional capacitor type sampling hold circuit. This method will reduce the numbers of components and also gets free from adjustments.

• BLOCK DIAGRAM

ADJUSTMENT/REGLAGES/ABGLEICH

ADJUSTMENT

No.	ITEM	INPUT SETTINGS	OUTPUT SETTINGS	TURNTABLE SETTING	ALIGNMENT POINTS	ALIGN FOR	FIG.
1	END DETECT STARTING POSITION	—	Connect a DC voltmeter to TP1 (Pin 7 of IC8)	Set the stylus tip so that 57.5mm is obtained from the center of the turntable spindle.	VR1	0.9V	(a)
2	THRESHOLD VOLTAGE	—	Connect a DC voltmeter to TP2 (Pin 2 of IC8)	—	VR2	220mV	(b)

REGLAGES

N°	ITEM	REGLAGE DE L'ENTREE	REGLAGE DE LA SORTIE	REGLAGE DE TOURNE-DISQUE	POINTS L'ALIGNMENT	ALIGNER POUR	FIG.
1	POSITION DE DEPART LA TERMINASION DE DETECTEUR	—	Connecteur un voltmètre CC à TP1 (Fiche 7 de IC8)	Régler la crête de aiguille de façon de 57,5mm soit obtenir de centre de plateau à disques.	VR1	0,9V	(a)
2	TENTION DE SEUIL	—	Connecteur un voltmètre CC à TP2 (Fiche 2 de IC8)	—	VR2	220mV	(b)

ABGLEICH

NR.	GEGENSTAND	EINGANGS-EINSTELLUNG	AUSGANGS-EINSTELLUNG	PLATTEN SPIELER-EINSTELLUNG	ABGLEICH PUNKTE	ABGLEICHEN FÜR	ABB.
1	ENDE DETEKTS ANFANGS-STELLUNG	—	Einen Gleichspannungs messer zum TP1 (Stift 7 von IC8) anschließen.	Der spitze von Tonabnehmer so einstellen, daß ein 57,5mm aus der mitte des Plattentellers erhält wird.	VR1	0,9V	(a)
2	SCHWELLEN-SPANNUNG	—	Einen Gleichspannungs messer zum TP2 (Stift 2 von IC8) anschließen.	—	VR2	220mV	(b)

● **Functions of terminals**

CODE	NAME	FUNCTION DESCRIPTION	REMARKS
1 GND	Ground	Ground terminal for IC	
2 \overline{XT} , 3 XT	X'tal connection	Connect a crystal between these two pins.	Built-in feed back resistor
4 N1 5 N2	Reference dividing factor sw.	Dividing factor of 4,32 or 128 can be selected for reference crystal frequency by these ports.	Built-in pull-up resistor
6 FG-IN	FG pulse input	Pulses generated as motor rotates is input to this port for rotational speed detection.	
7 APC	APC output	Automatic phase controller output. (8-bit D/A converter output)	Built-in amp
8 AFC	AFC output	F-V converter output for rotational speed control. (8-bit D/A converter output)	
9 RV	Inversion signal output	Inversion signal output for turntable motor.	
10 33/45	Speed selector	Rotational speed selector port. (L: 33 1/3 r.p.m.) (H or NC: 45 r.p.m.)	Built-in pull-up resistor
11 P/S	PLAY/STOP input	Input port to select PLAY or STOP state of the turntable motor.	Built-in pull-up resistor
12 LD	Lock detection output	Outputs "H" when the rotational speed is in the lock range, otherwise "L".	
13 STROBO	STROBO output	Reference frequency output for stroboscope with the duty ratio of 1/8.	
14 CP-IN	CP-IN input	This port is normally connected oscillator input to this port will fine speed adjustment.	
15 CP-OUT	CP-OUT output	Divided frequency output of crystal oscillator for reference, normally connected to CP-IN.	
16 VDD	VDD	Feed power supply voltage of 5-9.5V.

PACKING

Refer to the schematic diagram for the values of resistor and capacitors.

SPECIFICATIONS

Motor and turntable

Drive System.....	Direct-drive system
Motor.....	Quartz PLL coreless & slotless DC servo motor
Turntable Platter.....	33 cm (13") diameter Aluminum alloy, Die-cast
Speeds.....	2 speeds, 33-1/3 and 45 rpm
Wow & Flutter.....	Less than 0.02% (WRMS) Less than 0.03% (DIN)
Rumble.....	DIN weighted better than -80 dB DIN unweighted better than -55 dB

Tonearm

Type.....	Static-balance type, J-shape tonearm
Effective Tonearm Length.....	245 mm (9-5/8")
Overhang.....	15 mm (9/16")
Tracking Error.....	+1.8° to -1.0°
Tracking Force Range.....	0 to 3 grams (0.1 g Step)
Usable Cartridge Weight.....	2.0 to 12 grams (with supplied head-shell)

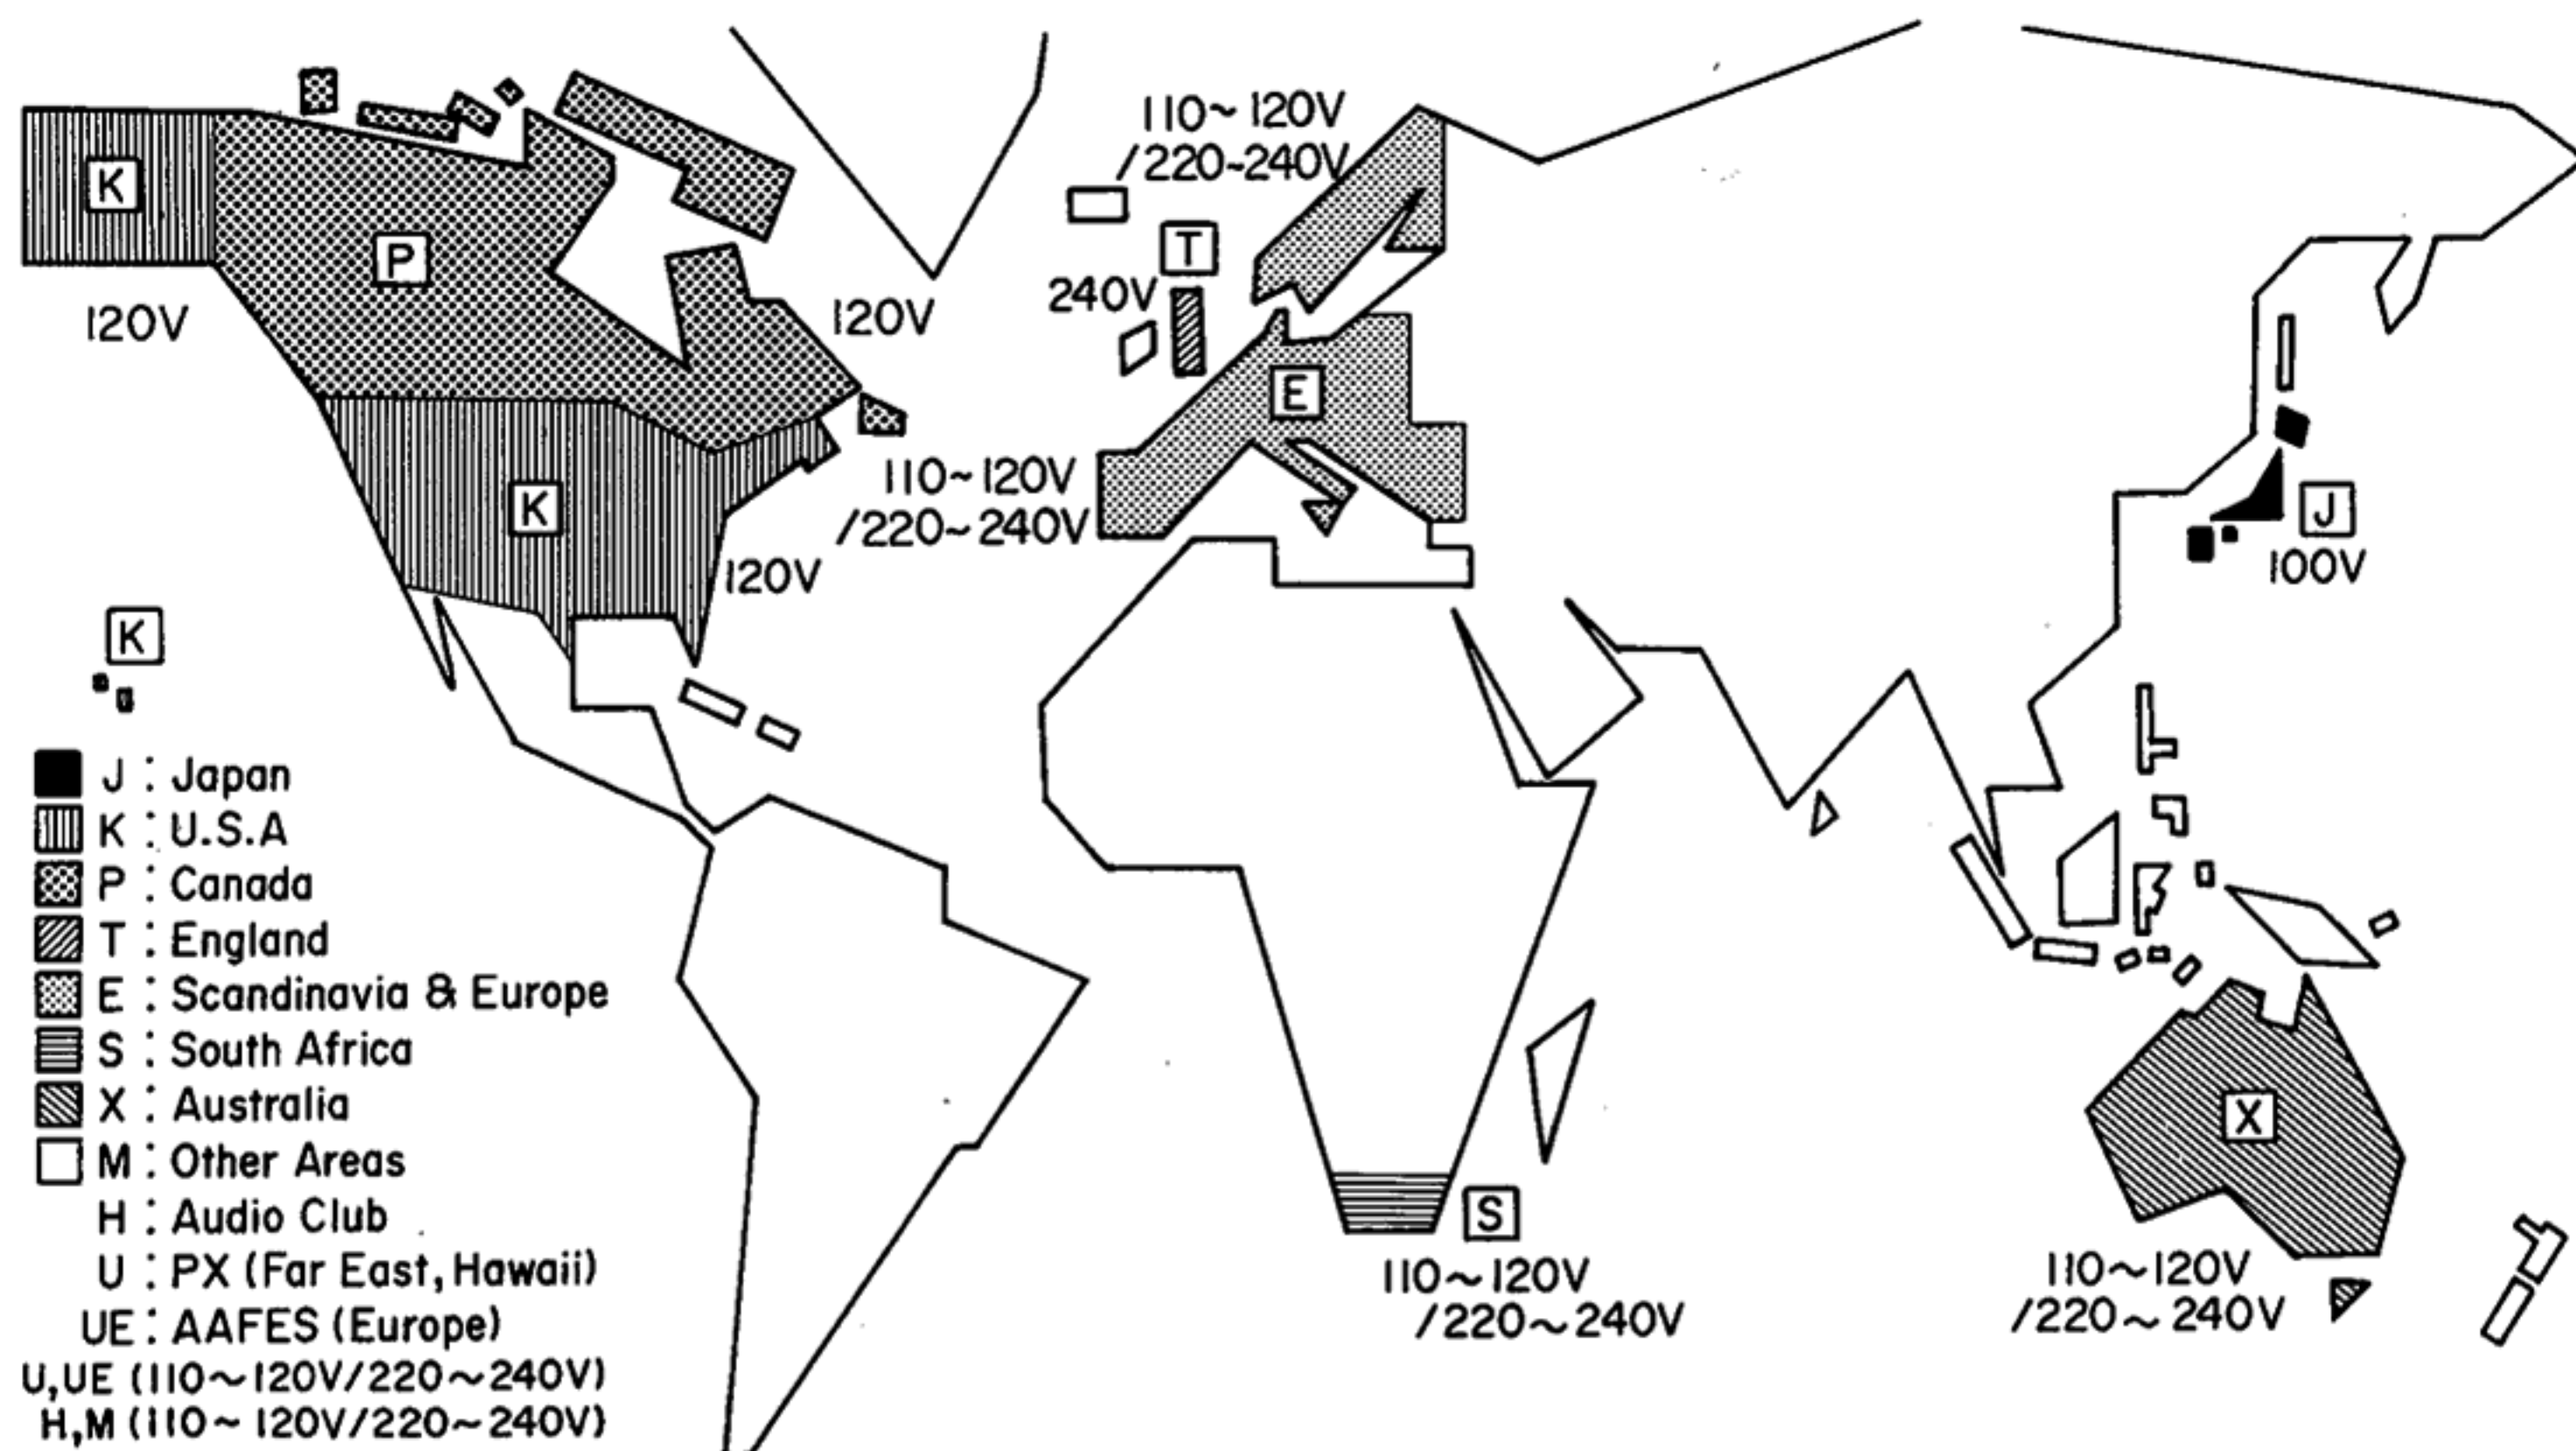

Miscellaneous

Power Consumption.....	25 watts
Dimensions.....	W 490 mm (19-5/16") H 182 mm (7-3/16") D 410 mm (16-5/32")
Weight (Net).....	13.7 kg (30.14 lb)
Supplied Accessory.....	45 rpm adaptor, Phono cable Hexagonal bar wrench

Note:

We follow a policy of continuous advancements in development. For this reason specifications may be changed without notice.

WORLD MAP & AREA CORD

Note:

Component and circuitry are subject to modification to insure best operation under differing local conditions. This manual is based on the U.S.A. (K) standard, and provides information on regional circuit modification through use of alternate schematic diagrams, and information on regional component variations through use of parts list.
