

Award winning design...in a new Krell loudspeaker series

Benefiting from my expertise as a designer of high-powered audio amplifiers and the universally acclaimed LAT loudspeakers, the new Resolution Series features a breakthrough crossover design. Amp Capable Technology, or ACT™, crossovers guard against the impact-robbing quality of conventional designs. Resolution loudspeakers with ACT crossovers make every system sound better by working as an extension of the power amplifier instead of against it. Beautifully styled, designed for pure performance, and poised

to take a place of prominence within the finest music and theater systems, the Resolution Series loudspeakers will reaffirm your passion for great music and film. I invite you to experience the Resolution loudspeakers at one of our fine retailers.

Dan D'Agostino, C.E.O. and Chief Designer
