Specifications

<CD SECTIONS>

System	Optical (Compact Disc System)
Quantizing Bit Number	16bit linear
Channel	2 (Stereo)
Pickup	Semiconductor laser type
Distortion (at 1kHz)	0.01%
Frequency Response	5Hz to 20kHz : $0 \pm 1\text{dB}$
S/N Ratio	100dB
Separation	95dB
Dynamic Range	90dB

<COMPACT DISC>

Track Pitch	1.6 μm
Modulation Frequency	44.1kHz
Transfer Rate	43.218M bit/sec.
Dimension	80 / 120 \times 1.2mm

<GENERAL>

Power Supply	AC 120 / 220 / 240V, 50Hz (\bigcirc , \triangle) AC 120V, 60Hz (\bullet , \blacktriangle)
Output Voltage (at 1kHz, 0dB)	2.1V \pm 1.5dB
Headphone Output Voltage (at 1kHz, 0dB / 8ohm)	370mV \pm 1.5dB
Semiconductors	14IC's, 17Transistors, 32Diodes, 1Zener Diode
Dimensions	438(W) \times 311(D) \times 85(H)mm
Weight	4.2kg

NOTE: Due to continuing product improvement, specifications and designs are subject to change without notice.

\bigcirc : With Safety Regulations Version (AD), \triangle : Without Safety Regulations Version (EK)

\bullet : U. S. A. Version (UZ), \blacktriangle : Canada Version (UQ), Others : Common.

In Case of Difficulty

If you encounter a problem, please review the items in the following checklist. Also, be sure to thoroughly

check other connected components, such as speakers, amplifier or receiver, etc.

PROBLEM	PROBABLE CAUSE AND SOLUTION
Power Does Not Come On.	<ul style="list-style-type: none">• Check AC power cord to ensure good connection at AC outlet.
Does Not Play.	<ul style="list-style-type: none">• CD disc placed in tray label side down. Open and place with label side up.• Disc damaged. Replace.
No Output	<ul style="list-style-type: none">• Be sure correct input is selected on the connected amplifier or receiver.
Remote Inoperative	<ul style="list-style-type: none">• Check "AAA" batteries. See page 14.

Special Features

Digital Direct Output Jack

To provide the highest sonic quality possible, the DZ-121 utilizes a fiber optic digital output jack. This allows the superior performance of the digital direct connection and the high quality D/A converters in the companion Luxman integrated amplifiers to be utilized.

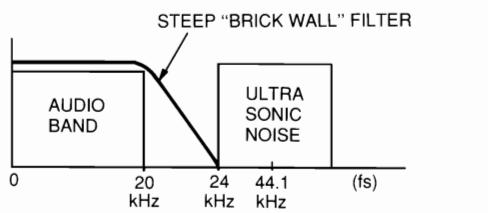

Although highest quality reproduction is assured when using Luxman integrated amplifiers, such as the LV-113, LV-117, etc., the DZ-121 may be teamed with any amplifier or D/A converter system that conforms to the EIA-J Digital Audio Interface format.

Dual Digital-to-Analog Converters

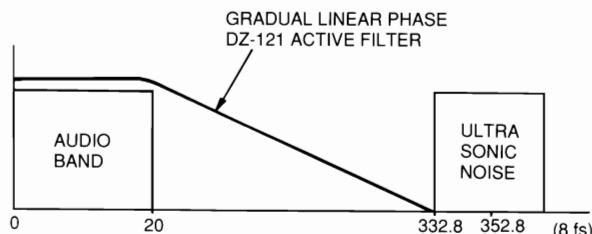

Separate 18 bit DACs on one IC substrate provide precision conversion, allowing the elimination of inter-channel phase shift as well as greatly improved S/N ratio and channel separation.

8 Times Oversampling Digital Filter

A high resolution 18 bit 8 times oversampling digital F.I.R. (Finite Impulse Response) filter is used in the DZ-121. It permits extremely rapid roll-off of the undesired ultra-high frequencies before D/A conversion, without any of the phase distortion of "brick wall" analog filters used with conventional "single sampling" data rate converters.

CONVENTIONAL "SINGLE SAMPLING" SYSTEM

DZ-121 8 TIMES OVERSAMPLING SYSTEM

In addition, 8 times oversampling moves the remaining ultra-sonic frequencies well above 300 kHz, instead of just over 24 kHz, allowing the use of a very gradual linear phase analog filter. Such a filter virtually eliminates phase and transient distortion effects, for pure, accurate sound reproduction.

High Mass Magnetic Disc Clamper

A high density magnetic disc clamper mass loads the disc center to minimize spindle motor micro vibration, thus improving tracking accuracy for lowest error rate. The magnetic clamp also provides a perfect friction-free non-wearing clamping action to hold the CD disc to the player drive spindle.

Anti-Vibration Laser Pick-up Assembly

The laser pick-up subchassis that supports the entire pick-up drive mechanism, consists of a unique 2 layer steel plate construction, bonded by a viscous-elastic resin material.

Vibration energy is effectively dissipated within the resin material as heat, virtually eliminating vibration deformation and any resultant mistracking.

In addition, the subchassis laser assembly of controlled mass is isolated by 3 glass fiber reinforced polyethylene terephthalate plastic suspension dampers.

This combination results in a mechanical filter that effectively removes any but the most gross of shock or vibration influences.

Advanced 3-Beam Laser

A highly refined 3-beam configuration, it employs advanced techniques to provide precision tracking and focusing. Combined with state-of-the-art digital tracking and focus servos, accuracy of the digital data is preserved even with discs having significant surface defects.

Serial Remote Jacks

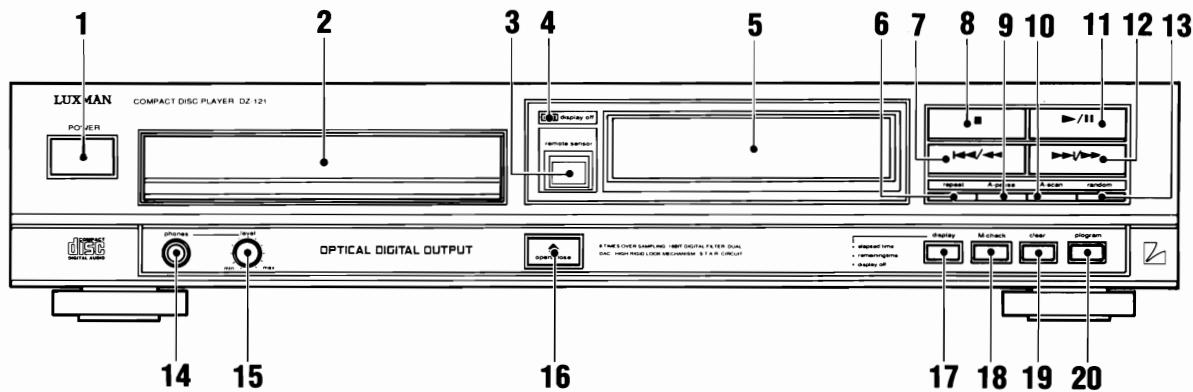

These jacks provide input and output connections for the simple "daisy chain" connection of the serially encoded RC signal of Luxman's unified remote control systems.

Gold Plated Output Jacks

The L and R analog output jacks are gold plated for the highest possible quality connections and the elimination of corrosion losses over long term use.

Controls & Switches

Front Panel

1. "POWER" button

Press this button to turn power on and off to the unit. If a disc is already loaded into the Disc Tray when power is turned on, the unit will automatically start playback, beginning with track #1.

2. Disc Tray

Place a disc on this tray, label side up. A light touch on the Tray, when open, will cause it to retrack back into the unit ready for play. Pressing Play/Pause (item #11), "A-scan" (item #10) and Direct Access Select (item #21) buttons on the remote control will also close the tray and cause the unit to go into immediate play operation.

Note:

To use 8 cm (3 inch) single CDs, place them on the inner circular recessed area marked "8 cm disc" on the tray.

3. Remote Sensor

When using the hand held remote control, it must be pointed toward this sensor to activate operational functions.

4. "display off" indicator

Lights up when the display is turned off with the "display" button.

5. Display

Track, index, time, etc. are all simultaneously shown in this Display. Refer to Operation Guidelines for details.

6. "repeat" button

In normal play, random play or A-scan mode, press this button to repeat all tracks on a disc.

In programmed play mode, pressing this button will repeat only those programmed.

Pressing the "repeat" button a second time, will cancel the repeat function.

7. Backward Skip/Scan button (◀◀/◀◀)

Pressing this button for longer than 0.5 seconds will activate the backward scan mode. To more than double the scan speed, press this button in the pause mode.

Pressing this button and releasing it immediately will cause return to the beginning of the current selection; a second immediate push will cause a skip to the preceding selection.

When the pick-up comes to the first selection, the next push will cause it to go to the beginning of the last selection on the disc.

8. Stop button (■)

One press of this button will stop playback and return the pick-up to the beginning of the disc. A second push will clear (reset) all memory contents.

Note:

The total number of tracks and the total playing time on the disc will always show on the display in the STOP mode.

9. "A-pause" (auto-pause) button

Pressing this button will cause the machine to activate Pause automatically at the end of any currently playing track.

To resume play, press the Play button.

While the auto pause function is activated, "A-pause" will show in the display.

10. "A-scan" (auto-scan) button

When pressed, "A-Scan" begins and the track number digit(s) in the display flash continuously. The first 10 seconds of each track on the disc will be automatically played, beginning at track #1. If in programmed mode, pressing this button will scan each track in the program, beginning with the first selection programmed.

"Repeat" will also work with "A-Scan" and "RANDOM" continuously repeating the scanned tracks in both the programmed and nonprogrammed operations mentioned above.

Note:

Pressing the "A-scan" button will cancel the A-pause function.

11. Play/Pause button (▶/II)

When pressed in stop or pause mode, playback will begin.

When pressed during playback, the player will go into pause mode.

12. Forward Skip/Scan button (▶▶I/▶▶)

Pressing this button for longer than 0.5 seconds will activate the forward scan mode. To more than double the scan speed, press this button in the pause mode.

Pressing this button and releasing it immediately will cause the player to skip forward, one selection (track) at a time for each successive push. When the player comes to the last selection, the next push will return the pick-up to the first selection.

13. "random" button

Use this button to automatically change the order of tracks to be played at random.

During random play operation, "RANDOM" appears in the display.

14. "phones" jack

Use the "phones" jack to connect stereo headphones for private listening.

15. "phones-level" control

Use the "phones" jack to connect stereo headphones for private listening. The "level" control adjusts the "phones" jack (item #14) levels.

16. "open/close" button (▲)

Press to open or close the Disc Tray. (See also item #2.)

17. "display" button

Each push of this button selects one of 2 disc timing displays and will turn off display as follows:

• "REMAIN" OFF

Time elasped since beginning of current track. This occurs with "REMAIN" indicator OFF.

• "REMAIN"

Play time remaining on entire disc. This occurs with "REMAIN" indicator ON.

Note:

When in programmed play mode, the remaining time displayed will be that of the selections programmed, not the entire disc.

18. "M-check" (memory-check) button

Use this button to check the order of the selections that have been programmed. With each successive push of this button, the track numbers that have been programmed will be shown to the left and the programmed order to the right, in the track display area (the time portion of the display will turn off).

Note:

The "M-check" operates only in the stop mode.

19. "clear" button

This function allows track by track clearing, in sequence, of any programmed track, beginning with the last track programmed. With each push of this button, the next track to be cleared will appear under "PROGRAM" in the display. The program sequence number appears just to the right of the "PROGRAM" track number.

Note:

Clear operates only in the stop mode.

20. "program" button

Use this button in conjunction with the Skip up/down buttons (item #7,12), or any Direct Access Select button (item #21) on the remote control, to program up to 32 track selections in any random order. To clear program contents, press Stop button (item #8) in the stop mode.

Display**PROGRAM indicator**

Lights up in programmed play mode.

►II (Play/Pause) indicator

► Lights up during normal, random, A-scan or programmed play mode.
Blinks during programming process.
►II Lights up during pause mode.

RANDOM indicator

Lights up in random play mode.

A-PAUSE indicator

Lights up in auto pause mode.

REPEAT indicator

Lights up in repeat play mode

Indicates the selection (track) number recorded on the disc.
Blinks during auto scan mode.

**EMPHASIS indicator**

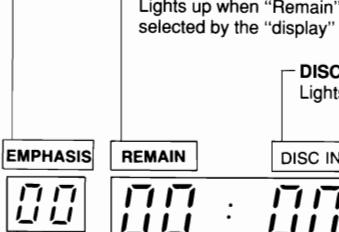

Lights up when a track has been recorded with emphasis.

REMAIN indicator

Lights up when "Remain" is selected by the "display" button.

DISC IN indicator

Lights up when a disc is loaded.

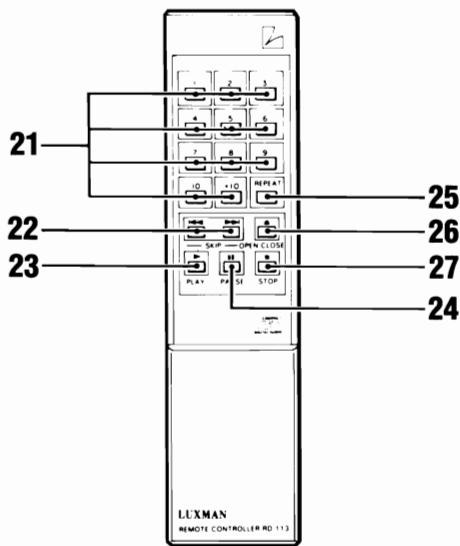

Usually indicates the elapsed time from the beginning of the current selection.

When the REMAIN indicator is lit, total remaining time on the disc is indicated.

In programmed play mode, total remaining time of the selections programmed is indicated.

Usually indicates the index number recorded on the disc. During programmed play or program check, the number of the programmed play order is indicated.

Remote Control Unit

21. Direct Access select buttons

Use for programming or immediate play of any track from 1 to 99.

22. "SKIP" buttons (◀◀, ▶▶)

These buttons allow the player to "skip" forward or backward over any selection (track) in one selection increments.

Pressing the ▶▶ button once will cause return to the beginning of the current selection; a second immediate push will cause a skip back to the preceding selection.

When the pick-up comes to the first selection, the next push will cause it to go to the beginning of the last selection on the disc.

Pressing the ▶▶ button will cause the player to skip forward, one selection at a time for each successive push.

When the player comes to the last selection, the next push will return the pick-up to the first selection.

23. "PLAY" button (▶)

Press the "PLAY" button when loading a disc for immediate playback beginning at track 1 and for starting a programmed or random sequence.

24. "PAUSE" button (II)

Press this button to temporarily cease playback or to cue up a track or segment for recording etc. To resume playback, press the "PAUSE" button again or press the "PLAY" button.

25. "REPEAT" button

In normal play, random play or A-scan mode, press this button to repeat all tracks on a disc.

In programmed play mode, pressing this button will repeat only those programmed.

Pressing the "repeat" button a second time, will cancel the repeat function.

26. "OPEN/CLOSE" button

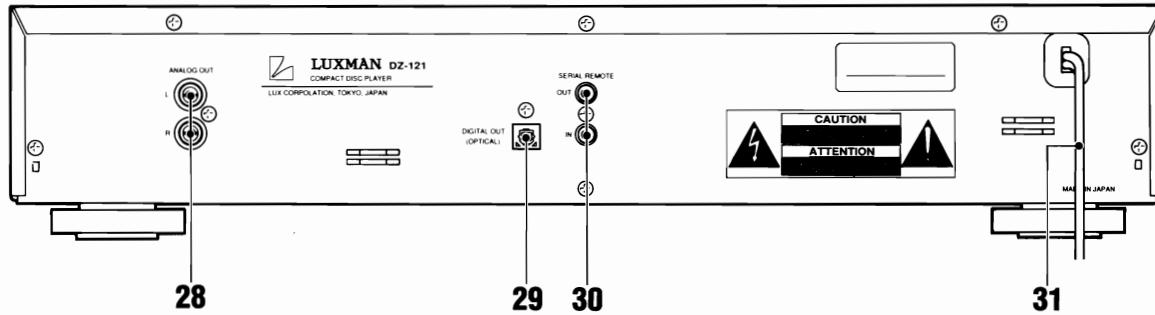

Press to open or close the Disc Tray.

27. "STOP" button

One press of this button will stop playback and return the pick-up to the beginning of the disc. A second push will clear (reset) all memory contents.

Jacks & Terminals

Rear Panel

28. "ANALOG OUT" jacks

For connection to the CD inputs of any amplifier or receiver. The output level is 2 volts fixed, referenced to 0 dB recording level.

29. "DIGITAL OUT-OPTICAL" jack

This is a standard optical jack for digital output. Use the fiber optic cable for connection to an amplifier having a digital optical input (such as the Luxman LV-113 or LV-117).

30 "SERIAL REMOTE IN/OUT" jacks

Use these jacks for a simple and convenient connection to other Luxman components for Remote Control operation. Connect these "SERIAL REMOTE IN and OUT" Jacks to the "SERIAL REMOTE OUT and IN" Jacks, respectively, on other Luxman components (in daisy chain fashion), for a unified remote control system.

Note:

Turn the power off before connecting these jacks.

31. AC Power Cord

Insert the polarized AC plug of the DZ-121 into any 120 volt AC, 60 Hz wall outlet, or, preferably, into the switched outlet of the amplifier or receiver used with it.

Operation Guidelines

Initial Set-Up

Make sure all connections are securely made. Turn the volume of the amplifier fully down and turn the power on to all the components in use. Adjust the volume of the amplifier to a suitable level just prior to playback.

Push the "open/close" button (item #16) on the DZ-121 and set a disc on the disc tray, label surface up.

Note:

To use 8 cm (3 inch) single CDs, place them on the inner circular recessed area marked "8 cm disc" on the tray.

Normal Play

1. After the disc is loaded, press the Play/Pause button (item #11).
2. Playback will begin from the first track number, continuing on through the remaining tracks.
3. Playback automatically stops after the last track on the disc is played (unless in repeat mode).

Note:

The word "**EMPHASIS**" will light up in the display if a disc or track has been recorded with pre-emphasis. This is a standard CD noise reduction system sometimes used by the disc manufacturer. The DZ-121 automatically switches in the standard deemphasis circuit when this occurs and requires no action on the part of the user.

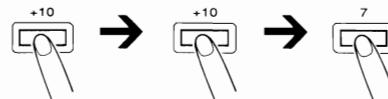

Direct Track Access

- Direct access operation is available on the Remote Controller only. (Not available on the main unit.)

1. Use the Direct Access Select buttons (item #21) to specify a desired track.
2. The selected track number will appear on the display and playback will begin immediately.
3. Playback will stop automatically after the last track is played (unless in repeat mode).

Example:

For Direct Access to the 27th selection.

Random Play

If desired, activating this function will allow the computer in the unit to select tracks, in a completely random manner, for playback. While the selection is random, it does not repeat any given track. Rather, it plays each randomly selected track once, shutting off automatically after all tracks are played. If the REPEAT function is also selected, then the unit will continuously replay all tracks but in a completely different order each time.

1. Press the "random" button (item #13) and "RANDOM" will light up on the display.

Note:

When random is pressed, it will cancel any programmed tracks.

2. Press the Play/Pause button (item #11).
3. When playback of the last track completes with the "REPEAT" not lit on the display, the unit enters the stop mode.
4. To cancel the random function, press the "random" button. The "RANDOM" indicator will turn off.

Repeat Play

1. When the "repeat" button (item #6) is pressed during normal or random playback, all tracks on the disc will be repeated continuously.

If the "repeat" button is pressed during programmed playback, all programmed tracks will be repeated continuously.

2. Pressing the "repeat" button a second time, will cancel the repeat function.

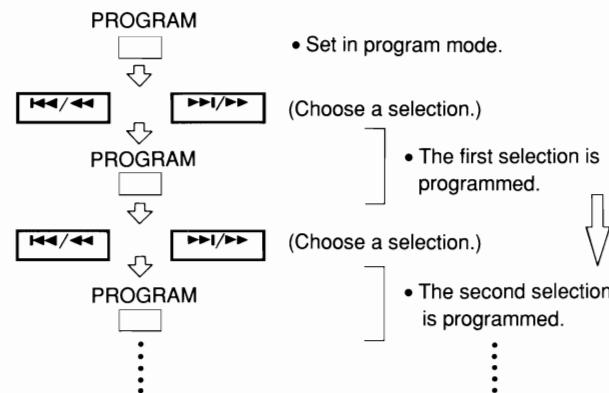

Programmed Play Operations

Programming

1. Press the "program" button (item #20) in stop mode to enter the program mode.
2. Choose the selection to be programmed by pressing the Forward Skip button (item #12), the Backward Skip button (item #7) or any Direct Access Select button (item #21) on the remote.
3. Press the "program" button after each selection, except when using the Direct Access Select buttons on the remote. Track numbers may be entered directly, one after the other, when using the remote. See (Direct Track Access), page 00 for instructions on entering numbers above 10. Also, " __ " indication will appear on the display, instead of numbers, if more than 99 minutes and 59 seconds (99:59) of total remaining times has been accumulated in a programmed sequence. (This does not indicate a malfunction.)

Note:

If more than 32 selections are chosen, "FLU LL" will be displayed on the Display for about 4 seconds, showing that no more selections can be added to the program.

4. Press the Play/Pause button (item #11), and the selections are played back in the programmed order.

Program Check

The programmed track numbers and the order they were placed in memory can be checked.

1. Press the "M-check" button (item #18) with the unit in stop mode.
2. With each successive push of the "M-check" button, the programmed track numbers will be shown on the display in the order of playback.

Note:

When the "M-check" button is continuously pressed, the memory check function will operate automatically, showing the track numbers to the left and order of playback to the right in the display.

When the check operation completes, it will stop on the last track programmed. If the button is held down, it will scan the memory again.

Clearing Programs

1. Select the specific track you wish to clear with the "M-check" button (item #18). Then press the "clear" button (item #19).

Note:

If you do not use the "M-check" button, clearing will begin with the last track programmed and continue with each successive push of the "clear" button.

2. To clear the entire program, press the Stop button (item #8) twice.

Timer Play

With the use of an external AC power timer, the DZ-121 can be made to turn on and go into automatic play at any desired time.

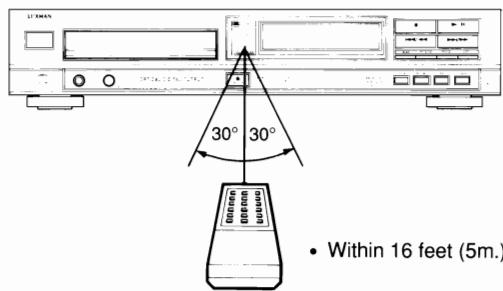

Note:

The AC power plugs of the components used for timed playback must be connected to the AC outlets of the timer.

1. Be sure the "POWER" button (item #1) is pressed ON (IN) on the DZ-121 and load a compact disc.
2. Set the playback start time and end time with the external timer. Also properly set all controls on each component used in the system for timer play as necessary.
3. Make sure the power switches on all other components used in the system for timer play operation are switched to their ON positions.
4. Set the timer to the desired start and stop times. When the power is turned on by the timer, the DZ-121 will start playback and the entire system will operate as previously set.

Remote Operations

For reliable operation, use the hand-held remote within the basic dimensional area shown below.

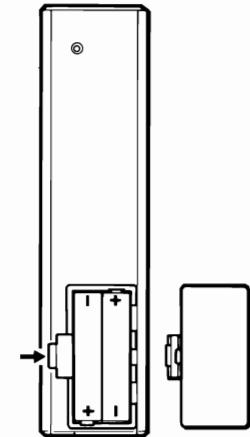

Battery Replacement

1. Open the battery compartment cover on the rear of the remote control unit. The cover should open easily if you press on the tab with your thumbnail and lift up.
2. Place two "AAA" size dry batteries in the battery compartment in accordance with the diagram in the compartment, then replace the cover.

Incorrect use of batteries may lead to leakage or rupture. Be sure to follow these guidelines:

- A. Always insert batteries into the battery compartment correctly matching the positive (+) and negative (-) polarities as shown in the diagram inside the compartment.
- B. Never mix new and used batteries together.
- C. Both rechargeable and non-rechargeable batteries are available. Be sure to use your batteries in accordance with the instructions provided on the cells.

Care & Maintenance

Precautions

Condensation may occur inside the set if it is brought into a warm room from the cold or if a cold room is heated quickly. If this happens, drops of water may form on the pickup, scattering the laser beam and hampering operation.

The extent of condensation depends on various conditions, but if condensation should occur, remove the disc then turn on the power and wait at least one hour before using the unit.

Proper Care of Compact Disc

Improper handling of your CDs will shorten their life. When handling, hold them at the edges so that you will not leave fingerprints on the playing surfaces.

When your discs are not in use, replace them in their respective cases and store away from sunlight, high temperature, humidity, and dust. Should they require cleaning, use a clean soft cloth slightly moistened with water only. A good commercially available CD cleaner may also be used. Do not use oil or chemically treated cloths.

Cleaning

The durable finish of the knobs and heavy aluminum front panel will last indefinitely with proper care and cleaning. Never use scouring pads, steel wool, scouring powders, or harsh chemical agents, such as lye solution. These will mar the finish. Clean with a soft, lintfree cloth or cotton swab slightly dampened with a mild solution of detergent and water.

Rewrap for Shipment

Should it become necessary to ship your DZ-121 for any reason, use the original packing materials. If these are no longer available, be sure that adequate materials, at least equivalent to the original, are used.

Repairs

Only the most competent and qualified service technicians should be allowed to service the DZ-121. The Luxman company and its factory-trained warranty station personnel have the knowledge and special equipment needed for repair and calibration of this precision instrument.

In the event of difficulty, call the toll free telephone number listed on the Warranty to obtain name and address of the Luxman Authorized Service Station nearest your home or business. In many cases, the dealer where you purchased your Luxman unit will be equipped to provide service.

Memo

Adjustment Procedures

1. Compact Disc System

For Adjustment of VCO, Focus Bias, Tracking Error Balance, Tracking Gain and Focus Gain, refer to the Service Manual DZ - 122 (68P31568W02).

Electrical Parts List

Resistor : Carbon resistors under 1/4 watts are not mentioned in the parts list, please confirm them by schematic diagram.

Capacitor : μF = microfarads, pF = picofarads

Abbreviations			Symbol No.	Part No.	Description
RES. = Resistor	CAP. = Capacitor		Q1401	48T57305F04	2SD1302
C.F. = Carbon Film	ELY. = Electrolytic		Q1402	48T57305F04	2SD1302
M.F. = Metal Film	CER. = Ceramic				
M.O. = Metal Oxide Film	MYL. = Mylar				
M.P. = Metal Plate	TAN. = Tantalum				
TR. = Transistor	POLY. = Polystyrol				
TRANS. = Transformer	PP. = Polypropylene				
CP. = Chip	PLT. = Polyethylene				
	PF. = Polyester Film
