

LUXMAN PX-99

Semi-Automatic Direct Drive Turntable

With the PX-99, Luxman has combined the most important features and performance with a striking and simple design.

The motor is direct drive, and has no noisy mechanical linkages and resonance-prone parts. It's also a quartz-locked motor, assuring you of accurate speed and stability.

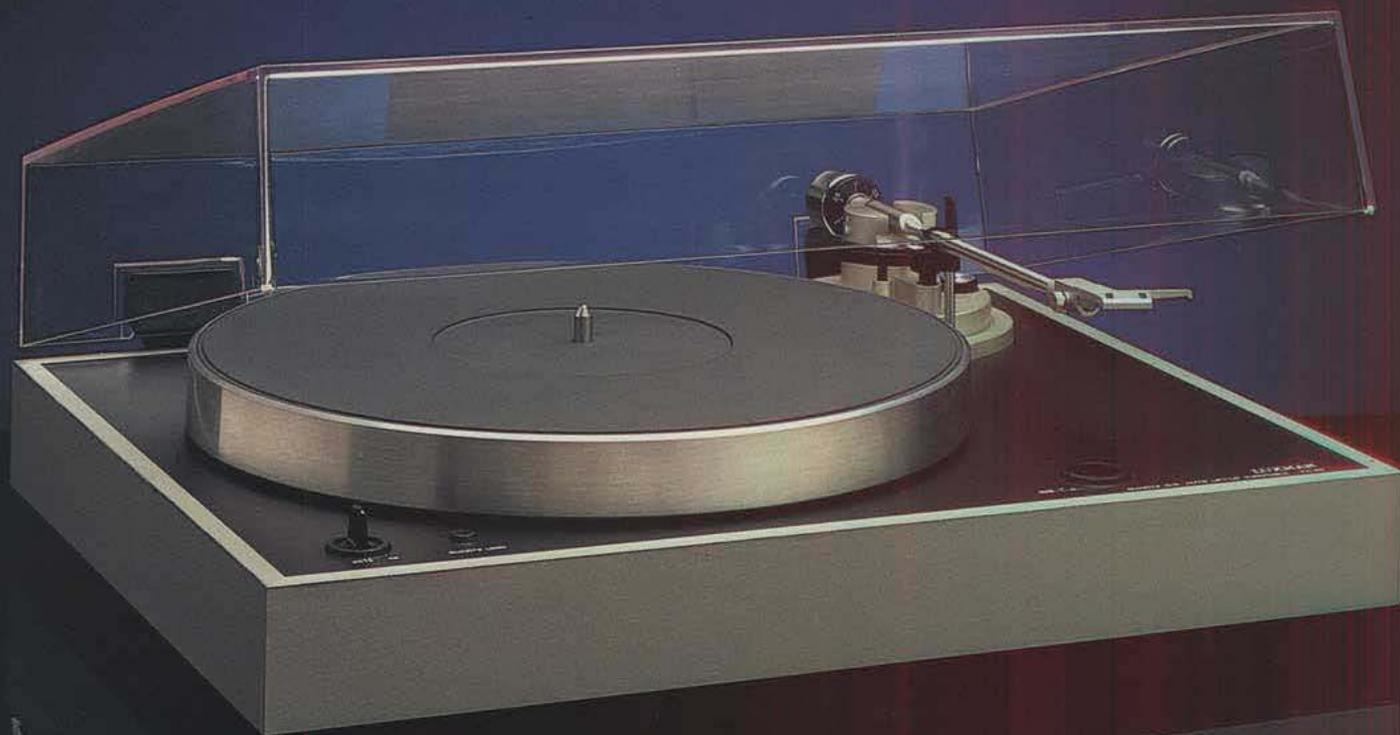

The tonearm represents a new generation of low-mass, low-friction Luxman designs. It is statically balanced so you can adjust tracking force with exceptional accuracy. The headshell is low in mass, rigid, and removeable. And because the PX-99 is semi-automatic, the tone arm lifts

off the record at the end of play, and allows the PX-99 to shut itself off.

A unique feature of the PX-99, when used with Luxman KX-Series cassette decks, is the Automatic Disc Pause Output. When you're recording discs onto a Luxman KX-Series cassette deck, the Auto Pause Output puts the cassette deck in the pause mode when the record has reached the end of play.

The PX-99 pays attention to everything that's critical in turntable design. Rumble is inaudible. Wow and flutter can hardly even be measured. Tracking ability is flawless.

LUXMAN

LUXMAN PX-99 Semi-Automatic Direct Drive Turntable

Specifications

TURNTABLE:

Drive System	Direct Drive
Motor	Quartz Locked DC Servo Motor
Speed	33-1/3, 45 rpm
Turntable Platter	Material: Aluminum diecast Diameter: 30cm Weight: 1.6kg 0.03% WRMS 70 dB (DIN B)
Wow and Flutter	
S/N (signal to noise ratio)	

ONEARM:

Type	Static balance type straight tube arm
Material	Aluminum
Effective Length	214mm
Overhang	15mm
Cartridge Height	17mm (Recommended)
Stylus Pressure	0 to 3 gr
Head Shell	Detachable (Accepts Luxman head shell only)

General:

Power Consumption	9 Watts
Dimensions	17-3/8" (W) x 5-13/16" (H) x 13-3/4" (D) 440mm x 148mm x 350mm
Weight (net)	6.5 kg 14 lb 3 oz

Specifications and design subject to change without notice.

Features

Optical Sensing Arm Lift System:

When record playback is finished, the tonearm automatically lifts and shuts off the motor because the optical circuit senses the lift-off point. It makes no mechanical contact with the tonearm at all while playing records, so operation is smooth and accurate.

Auto Lift Control Switch:

The Auto Lift Control is useful for playback of records with a music groove engraved very close to the label. The tonearm is designed so it will not lift off, even at the innermost part of the disc.

New Static Balanced Straight-Line Tonearm:

The PX-99's long Straight Arm has better trackability than the regular short S-shaped arm used

on most turntables. It also has very low mass and low resonance. The Low Mass Arm realizes accurate sound reproduction even from high dynamic range, digitally recorded records.

Auto Disc Pause:

When activated, a built-in circuit of the PX-99 automatically places your accompanying KX-100,

KX-101 or KX-102 Cassette Deck in the pause mode from the record mode, when the record being taped reaches the end of play. Allows you to leave the system unattended while taping.

Detachable Headshell:

(Accepts Luxman Headshell only).

PX-99

RX-101

KX-100

An ideal system in combination with the PX-99 is the Luxman RX-101 Receiver and the KX-100 Cassette Deck.
