This service manual is for BDP3100 & BDP3080 Second Generation model, which is different from the previous generation model.

For Second Generation model, the serial number begins with KX 2A(B,C,...) xxxxxxxxx.  
( Chipset Type: MT8550FBAG)

# 1. Technical Specifications, Directions for Use

## Index of this chapter:

- [1.1 Technical Specifications](#)
- [1.2 Directions for Use](#)

### Notes:

- Figures can deviate due to the different set executions.
- Specifications are indicative (subject to change).

## 1.1 Technical Specifications

For on-line product support please use the following website:  
[http://www.p4c.philips.com/cgi-bin/dcbint/cpproduct\\_selector.pl](http://www.p4c.philips.com/cgi-bin/dcbint/cpproduct_selector.pl)

Here is product information available, as well as getting started, user manuals, frequently asked questions and software & drivers.

## 1.2 Directions for Use

You can download this information from the following websites:  
<http://www.philips.com/support>  
<http://www.p4c.philips.com>

## 2. Safety Instructions, Warnings, Notes, and Abbreviation List

### Index of this chapter:

- [2.1 Safety Instructions](#)
- [2.2 Warnings](#)
- [2.3 Notes](#)
- [2.4 Abbreviation List](#)

### 2.1 Safety Instructions

Safety regulations require the following **during** a repair:

- Connect the set to the Mains/AC Power via an isolation transformer (> 800 VA).
- Replace safety components, indicated by the symbol , only by components identical to the original ones. Any other component substitution (other than original type) may increase risk of fire or electrical shock hazard.

Safety regulations require that **after** a repair, the set must be returned in its original condition. Pay in particular attention to the following points:

- Route the wire trees correctly and fix them with the mounted cable clamps.
- Check the insulation of the Mains/AC Power lead for external damage.
- Check the strain relief of the Mains/AC Power cord for proper function.
- Check the electrical DC resistance between the Mains/AC Power plug and the secondary side (only for sets that have a Mains/AC Power isolated power supply):
  1. Unplug the Mains/AC Power cord and connect a wire between the two pins of the Mains/AC Power plug.
  2. Set the Mains/AC Power switch to the "on" position (keep the Mains/AC Power cord unplugged!).
  3. Measure the resistance value between the pins of the Mains/AC Power plug and the metal shielding of the tuner or the aerial connection on the set. The reading should be between 4.5 MΩ and 12 MΩ.
  4. Switch "off" the set, and remove the wire between the two pins of the Mains/AC Power plug.
- Check the cabinet for defects, to prevent touching of any inner parts by the customer.

### 2.2 Warnings

- All ICs and many other semiconductors are susceptible to electrostatic discharges (ESD ). Careless handling during repair can reduce life drastically. Make sure that, during repair, you are connected with the same potential as the mass of the set by a wristband with resistance. Keep components and tools also at this same potential.
- Be careful during measurements in the high voltage section.
- Never replace modules or other components while the unit is switched "on".
- When you align the set, use plastic rather than metal tools. This will prevent any short circuits and the danger of a circuit becoming unstable.

### 2.3 Notes

#### 2.3.1 General

- Measure the voltages and waveforms with regard to the chassis (= tuner) ground () or hot ground () depending on the tested area of circuitry. The voltages and waveforms shown in the diagrams are indicative. Measure them in the Service Default Mode (see chapter 5) with a colour bar signal and stereo sound (L: 3 kHz, R: 1 kHz unless stated otherwise) and picture carrier at 475.25 MHz for PAL, or 61.25 MHz for NTSC (channel 3).

- Where necessary, measure the waveforms and voltages with () and without () aerial signal. Measure the voltages in the power supply section both in normal operation () and in stand-by (). These values are indicated by means of the appropriate symbols.

#### 2.3.2 Schematic Notes

- All resistor values are in ohms, and the value multiplier is often used to indicate the decimal point location (e.g. 2K2 indicates 2.2 kΩ).
- Resistor values with no multiplier may be indicated with either an "E" or an "R" (e.g. 220E or 220R indicates 220 Ω).
- All capacitor values are given in micro-farads ( $\mu = \times 10^{-6}$ ), nano-farads ( $n = \times 10^{-9}$ ), or pico-farads ( $p = \times 10^{-12}$ ).
- Capacitor values may also use the value multiplier as the decimal point indication (e.g. 2p2 indicates 2.2 pF).
- An "asterisk" (\*) indicates component usage varies. Refer to the diversity tables for the correct values.
- The correct component values are listed in the Spare Parts List. Therefore, always check this list when there is any doubt.

#### 2.3.3 BGA (Ball Grid Array) ICs

##### *Introduction*

For more information on how to handle BGA devices, visit this URL: [www.atyourservice.ce.philips.com](http://www.atyourservice.ce.philips.com) (needs subscription, not available for all regions). After login, select "Magazine", then go to "Repair downloads". Here you will find Information on how to deal with BGA-ICs.

##### *BGA Temperature Profiles*

For BGA-ICs, you **must** use the correct temperature-profile, which is coupled to the 12NC. For an overview of these profiles, visit the website [www.atyourservice.ce.philips.com](http://www.atyourservice.ce.philips.com) (needs subscription, but is not available for all regions)

You will find this and more technical information within the "Magazine", chapter "Repair downloads".

For additional questions please contact your local repair help desk.

#### 2.3.4 Lead-free Soldering

Due to lead-free technology some rules have to be respected by the workshop during a repair:

- Use only lead-free soldering tin Philips SAC305 with order code 0622 149 00106. If lead-free solder paste is required, please contact the manufacturer of your soldering equipment. In general, use of solder paste within workshops should be avoided because paste is not easy to store and to handle.
- Use only adequate solder tools applicable for lead-free soldering tin. The solder tool must be able:
  - To reach a solder-tip temperature of at least 400°C.
  - To stabilize the adjusted temperature at the solder-tip.
  - To exchange solder-tips for different applications.
- Adjust your solder tool so that a temperature of around 360°C - 380°C is reached and stabilized at the solder joint. Heating time of the solder-joint should not exceed ~ 4 sec. Avoid temperatures above 400°C, otherwise wear-out of tips will increase drastically and flux-fluid will be destroyed. To avoid wear-out of tips, switch "off" unused equipment or reduce heat.
- Mix of lead-free soldering tin/parts with leaded soldering tin/parts is possible but PHILIPS recommends strongly to **avoid** mixed regimes. If this cannot be avoided, carefully clear the solder-joint from old tin and re-solder with new tin.

## Safety Instructions, Warnings, Notes, and Abbreviation List

### 2.3.5 Alternative BOM identification

It should be noted that on the European Service website, "Alternative BOM" is referred to as "Design variant".

The **third digit** in the serial number (example: KX2B0835000001) indicates the number of the alternative B.O.M. (Bill Of Materials) that has been used for producing the specific AV set. In general, it is possible that the same AV model on the market is produced with e.g. two different types of display, coming from two different suppliers. This will then result in sets which have the same CTN (Commercial Type Number; e.g. MCM394/12) but which have a different B.O.M. number.

Also, it is possible that same model on the market is produced with two production centers, however their partslist is the same. In such case, no alternative B.O.M. will be created.

By looking at the third digit of the serial number, one can identify which B.O.M. is used for the set he is working with. If the third digit of the serial number contains the number "1" (example: KX1B033500001), then the set has been manufactured according to B.O.M. number 1. If the third digit is a "2" (example: KX2B033500001), then the set has been produced according to B.O.M. no. 2. This is important for ordering the correct spare parts! For the third digit, the numbers 1...9 and the characters A..Z can be used, so in total: 9 plus 26 = 35 different B.O.M.s can be indicated by the third digit of the serial number.

**Identification:** The bottom line of a type plate gives a 14-digit serial number. Digits 1 and 2 refer to the production centre (e.g. LM is Arts), digit 3 refers to the B.O.M. code, digit 4 refers to the Service version change code, digits 5 and 6 refer to the production year, and digits 7 and 8 refer to production week (in example below it is 2008 week 50). The 6 last digits contain the serial number.

Figure 2-1 Serial number (example)

### 2.3.6 Module Level Repair (MLR) or Component Level Repair (CLR)

If a board is defective, consult your repair procedure to decide if the board has to be exchanged or if it should be repaired on component level. If your repair procedure says the board should be exchanged completely, do not solder on the defective board. Otherwise, it cannot be returned to the O.E.M. supplier for back charging!

### 2.3.7 Practical Service Precautions

- It makes sense to avoid exposure to electrical shock.** While some sources are expected to have a possible dangerous impact, others of quite high potential are of limited current and are sometimes held in less regard.
- Always respect voltages.** While some may not be dangerous in themselves, they can cause unexpected reactions that are best avoided. Before reaching into a powered TV set, it is best to test the high voltage insulation. It is easy to do, and is a good service precaution.

## 2.4 Abbreviation List

0/6/12	SCART switch control signal on A/V board. 0 = loop through (AUX to TV), 6 = play 16 : 9 format, 12 = play 4 : 3 format
2DNR	Spatial (2D) Noise Reduction
3DNR	Temporal (3D) Noise Reduction
AARA	Automatic Aspect Ratio Adaptation: algorithm that adapts aspect ratio to remove horizontal black bars; keeps the original aspect ratio
ACI	Automatic Channel Installation: algorithm that installs TV channels directly from a cable network by means of a predefined TXT page
ADC	Analogue to Digital Converter
AFC	Automatic Frequency Control: control signal used to tune to the correct frequency
AGC	Automatic Gain Control: algorithm that controls the video input of the feature box
AM	Amplitude Modulation
ANR	Automatic Noise Reduction: one of the algorithms of Auto TV
AP	Asia Pacific
AR	Aspect Ratio: 4 by 3 or 16 by 9
ASF	Auto Screen Fit: algorithm that adapts aspect ratio to remove horizontal black bars without discarding video information
ATSC	Advanced Television Systems Committee, the digital TV standard in the USA
ATV	See Auto TV
Auto TV	A hardware and software control system that measures picture content, and adapts image parameters in a dynamic way
AV	External Audio Video
AVC	Audio Video Controller
AVIP	Audio Video Input Processor
B/G	Monochrome TV system. Sound carrier distance is 5.5 MHz
BLR	Board-Level Repair
BTSC	Broadcast Television Standard Committee. Multiplex FM stereo sound system, originating from the USA and used e.g. in LATAM and AP-NTSC countries
B-TXT	Blue TeleteXT
C	Centre channel (audio)
CEC	Consumer Electronics Control bus: remote control bus on HDMI connections
CL	Constant Level: audio output to connect with an external amplifier
CLR	Component Level Repair
COLUMBUS	Color LUMinance Baseband
ComPair	Universal Sub-system
CP	Computer aided rePair
CSM	Connected Planet / Copy Protection
CTI	Customer Service Mode
CVBS	Color Transient Improvement: manipulates steepness of chroma transients
DAC	Composite Video Blanking and Synchronization
DBE	Digital to Analogue Converter
DDC	Dynamic Bass Enhancement: extra low frequency amplification See "E-DDC"

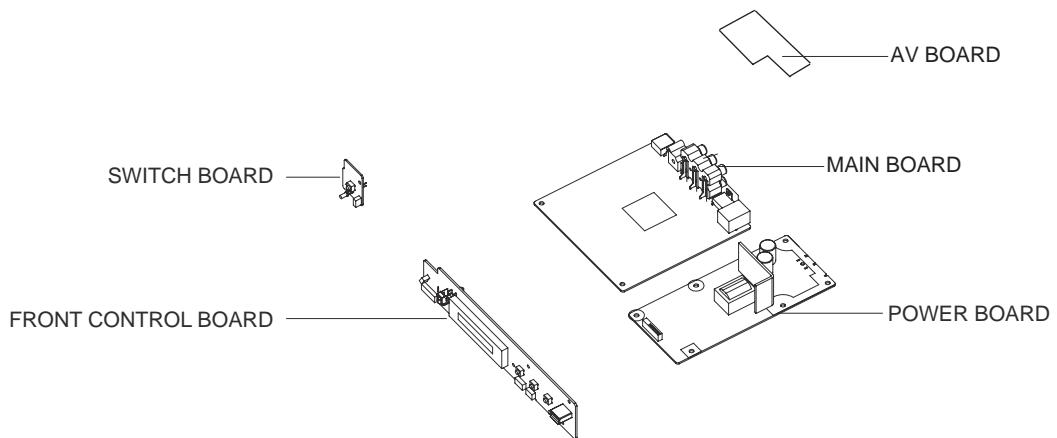

## Safety Instructions, Warnings, Notes, and Abbreviation List

D/K	Monochrome TV system. Sound carrier distance is 6.5 MHz			lines. The fields are written in "pairs", causing line flicker.
DFI	Dynamic Frame Insertion	IR	Infra Red	
DFU	Directions For Use: owner's manual	IRQ	Interrupt Request	
DMR	Digital Media Reader: card reader	ITU-656	The ITU Radio communication Sector (ITU-R) is a standards body	
DMSD	Digital Multi Standard Decoding		subcommittee of the International Telecommunication Union relating to radio communication. ITU-656 (a.k.a. SDI), is a digitized video format used for broadcast grade video.	
DNM	Digital Natural Motion		Uncompressed digital component or digital composite signals can be used. The SDI signal is self-synchronizing, uses 8 bit or 10 bit data words, and has a maximum data rate of 270 Mbit/s, with a minimum bandwidth of 135 MHz.	
DNR	Digital Noise Reduction: noise reduction feature of the set			
DRAM	Dynamic RAM		ITV	Institutional TeleVision; TV sets for hotels, hospitals etc.
DRM	Digital Rights Management			Jaguar Output Processor
DSP	Digital Signal Processing			Last Status: The settings last chosen by the customer and read and stored in RAM or in the NVM. They are called at start-up of the set to configure it according to the customer's preferences
DST	Dealer Service Tool: special remote control designed for service technicians			Latin America
DTCP	Digital Transmission Content Protection; A protocol for protecting digital audio/video content that is traversing a high speed serial bus, such as IEEE-1394			Liquid Crystal Display
DVB-C	Digital Video Broadcast - Cable	JOP		Light Emitting Diode
DVB-T	Digital Video Broadcast - Terrestrial	LS		Monochrome TV system. Sound carrier distance is 6.5 MHz. L' is Band I, L is all bands except for Band I
DVD	Digital Versatile Disc			LOCal REgression approximation
DVI(-d)	Digital Visual Interface (d= digital only)			noise reduction
E-DDC	Enhanced Display Data Channel (VESA standard for communication channel and display). Using E-DDC, the video source can read the EDID information form the display.			LG.Philips LCD (supplier)
EDID	Extended Display Identification Data (VESA standard)	LATAM		Loudspeaker
EEPROM	Electrically Erasable and Programmable Read Only Memory	LCD		Low Voltage Differential Signalling
EMI	Electro Magnetic Interference	LED		Mega bits per second
EPLD	Erasable Programmable Logic Device	L/L'		Monochrome TV system. Sound carrier distance is 4.5 MHz
EU	Europe			Microprocessor without Interlocked Pipeline-Stages; A RISC-based microprocessor
EXT	EXTernal (source), entering the set by SCART or by cinches (jacks)	LORE		Matrix Output Processor
FBL	Fast BLanking: DC signal accompanying RGB signals	LPL		Metal Oxide Silicon Field Effect
FDS	Full Dual Screen (same as FDW)	LS		Transistor, switching device
FDW	Full Dual Window (same as FDS)			Motion Pictures Experts Group
FLASH	FLASH memory	LVDS		Multi Platform InterFace
FM	Field Memory or Frequency Modulation	Mbps		MUTE Line
FPGA	Field-Programmable Gate Array	M/N		Not Connected
FTV	Flat TeleVision	MIPS		Near Instantaneous Compounded Audio Multiplexing. This is a digital sound system, mainly used in Europe.
Gb/s	Giga bits per second	MOP		Negative Temperature Coefficient, non-linear resistor
G-TXT	Green TeleteXT	MOSFET		National Television Standard
H	H_sync to the module	MPIF		Committee. Color system mainly used in North America and Japan. Color carrier NTSC M/N= 3.579545 MHz, NTSC 4.43= 4.433619 MHz (this is a VCR norm, it is not transmitted off-air)
HD	High Definition	MUTE		Non-Volatile Memory: IC containing TV related data such as alignments
HDD	Hard Disk Drive	NC		Open Circuit
HDCP	High-bandwidth Digital Content Protection: A "key" encoded into the HDMI/DVI signal that prevents video data piracy. If a source is HDCP coded and connected via HDMI/DVI without the proper HDCP decoding, the picture is put into a "snow vision" mode or changed to a low resolution. For normal content distribution the source and the display device must be enabled for HDCP "software key" decoding.	NICAM		On Screen Display
HDMI	High Definition Multimedia Interface	NTC		On screen display Teletext and Control; also called Artistic (SAA5800)
HP	HeadPhone			Project 50: communication protocol between TV and peripherals
I	Monochrome TV system. Sound carrier distance is 6.0 MHz	NTSC		Phase Alternating Line. Color system mainly used in West Europe (color carrier= 4.433619 MHz) and South America (color carrier PAL M=
I <sup>2</sup> C	Inter IC bus	NVM		
I <sup>2</sup> D	Inter IC Data bus	O/C		
I <sup>2</sup> S	Inter IC Sound bus	OSD		
IF	Intermediate Frequency	OTC		
Interlaced	Scan mode where two fields are used to form one frame. Each field contains half the number of the total amount of	P50		
		PAL		

## Safety Instructions, Warnings, Notes, and Abbreviation List

	3.575612 MHz and PAL N= 3.582056 MHz)	V	V-sync to the module
PCB	Printed Circuit Board (same as "PWB")	VCR	Video Cassette Recorder
PCM	Pulse Code Modulation	VESA	Video Electronics Standards Association
PDP	Plasma Display Panel	VGA	640x480 (4:3)
PFC	Power Factor Corrector (or Pre-conditioner)	VL	Variable Level out: processed audio output toward external amplifier
PIP	Picture In Picture	VSB	Vestigial Side Band; modulation method
PLL	Phase Locked Loop. Used for e.g. FST tuning systems. The customer can give directly the desired frequency	WYSIWYR	What You See Is What You Record: record selection that follows main picture and sound
POR	Power On Reset, signal to reset the uP		1280x768 (15:9)
Progressive Scan	Scan mode where all scan lines are displayed in one frame at the same time, creating a double vertical resolution.	WXGA	Quartz crystal
		XTAL	1024x768 (4:3)
		XGA	Luminance signal
PTC	Positive Temperature Coefficient, non-linear resistor	Y	Luminance (Y) and Chrominance (C) signal
PWB	Printed Wiring Board (same as "PCB")	Y/C	Component video. Luminance and scaled color difference signals (B-Y and R-Y)
PWM	Pulse Width Modulation	YPbPr	Component video
QRC	Quasi Resonant Converter		
QTNR	Quality Temporal Noise Reduction	YUV	
QVCP	Quality Video Composition Processor		
RAM	Random Access Memory		
RGB	Red, Green, and Blue. The primary color signals for TV. By mixing levels of R, G, and B, all colors (Y/C) are reproduced.		
RC	Remote Control		
RC5 / RC6	Signal protocol from the remote control receiver		
RESET	RESET signal		
ROM	Read Only Memory		
R-TXT	Red TeleteXT		
SAM	Service Alignment Mode		
S/C	Short Circuit		
SCART	Syndicat des Constructeurs d'Appareils Radiorécepteurs et Télésieurs		
SCL	Serial Clock I <sup>2</sup> C		
SCL-F	CLock Signal on Fast I <sup>2</sup> C bus		
SD	Standard Definition		
SDA	Serial Data I <sup>2</sup> C		
SDA-F	DAta Signal on Fast I <sup>2</sup> C bus		
SDI	Serial Digital Interface, see "ITU-656"		
SDRAM	Synchronous DRAM		
SECAM	SEquence Couleur Avec Mémoire. Color system mainly used in France and East Europe. Color carriers= 4.406250 MHz and 4.250000 MHz		
SIF	Sound Intermediate Frequency		
SMPS	Switched Mode Power Supply		
SoC	System on Chip		
SOG	Sync On Green		
SOPS	Self Oscillating Power Supply		
S/PDIF	Sony Philips Digital InterFace		
SRAM	Static RAM		
SRP	Service Reference Protocol		
SSB	Small Signal Board		
STBY	STand-BY		
SVGA	800x600 (4:3)		
SVHS	Super Video Home System		
SW	Software		
SWAN	Spatial temporal Weighted Averaging		
	Noise reduction		
SXGA	1280x1024		
TFT	Thin Film Transistor		
THD	Total Harmonic Distortion		
TMDS	Transmission Minimized Differential Signalling		
TXT	TeleteXT		
TXT-DW	Dual Window with TeleteXT		
UI	User Interface		
uP	Microprocessor		
UXGA	1600x1200 (4:3)

## Mechanical and Dismantling Instructions

### Dismantling Instruction

Detailed information please refer to the model set.

The following guidelines show how to dismantle the player.

**Step1:** Remove 6 screws around the Top Cover, and then remove the Top Cover (Figure 1).

Figure 1

**Step2:** If it is necessary to dismantle Loader or Front Panel, the Front door should be removed first. (Figure 2)  
Note: Make sure to operate gently otherwise the guider would be damaged.

Please kindly note that dismantle the front door assembly carefully to avoid damage tray and the front door.

Figure 2

**Mechanical and Dismantling Instructions****Dismantling Instruction**

Detailed information please refer to the model set.

**Step3:** If the tray can't open in normal way, you can make it through the instruction as below (Figure 3).

Note: Make sure to operate gently otherwise the guider would be damaged.

Figure 3

**Step4:** Dismantling Front Panel, disconnect the connectors (J3, CN502), need release 3 snaps of Front Panel and 2 snaps of bottom cabinet , then gently pull the Panel out from the set. (Figure 4 - Figure 6)

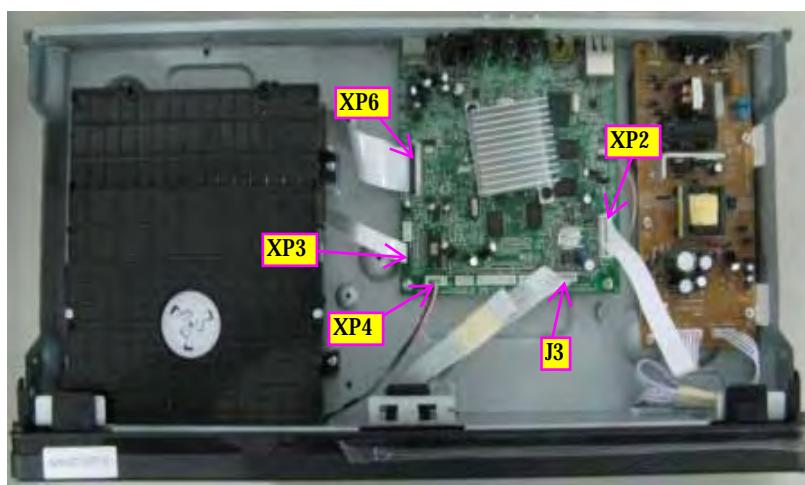

Figure 4

## Mechanical and Dismantling Instructions

### Dismantling Instruction

Detailed information please refer to the model set.

**Step5:** Dismantling Loader, disconnect the 3 connectors (XP6, XP3, XP4) aiming in the below figure, and remove 4 screws that connects the loader and the bottom cabinet. (Figure 4-5)

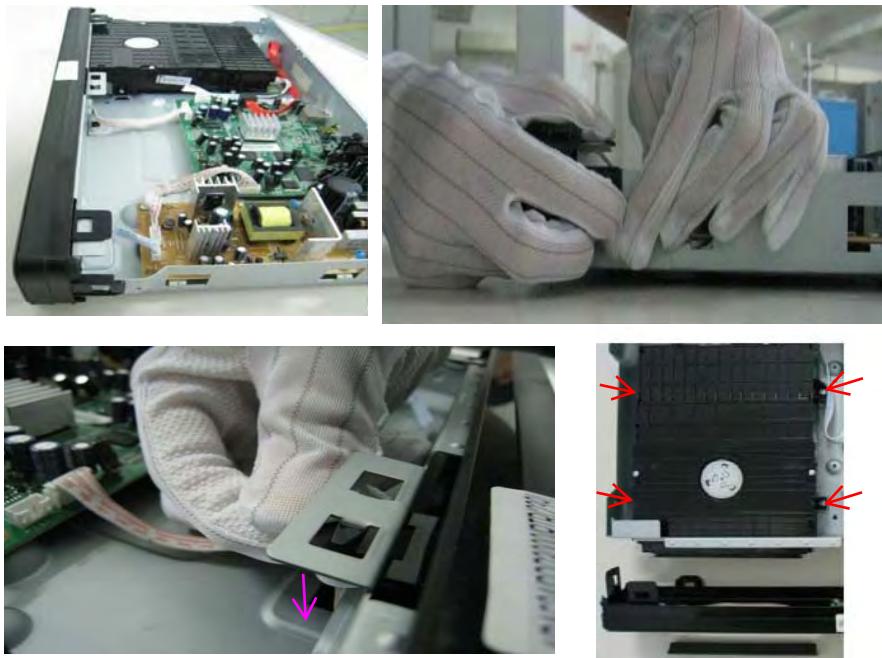

Figure 5

**Step6:** Dismantling Main Board, first disconnect the connector (XP2), and then remove 6 screws. (Figure 6)

**Step7:** Disconnect connector (CN504, CN502) and remove 6 screws on Power Board to dismantle the Power Board. (Figure 6)

Figure 6

## Software check and upgrade

### Preparation to upgrade software

- 1) Start the CD burning software & create a folder named "UPG\_ALL".
- 2) Then copy the Bin file (BDP\_3100\_S\_B.bin ) OR(BDP\_5100\_S\_B.bin )into it,
- 3) Burn the data onto the blank CD or USB.
- 4) If the model is BDP3100,must use (BDP\_3100\_S\_X.bin )to upgrade  
If the model is BDP5100,must use (BDP\_5100\_S\_X.bin )to upgrade  
X(A;B;C)If the model BD code is A,,X=A;BD code is B,X=B;BD code is C,X=C

### A. Procedure for software upgrade

#### A) Upgrade software via Disc

1) Power on the set and insert the prepared Upgrade CDR.

2) The set will starts reading disc & response with the following display TV screen:

Now searching for upgrade software!

Please wait...!

3) Press <OK> button to confirm, then screen will display :

An upgrade software has been found!

Start upgrade with version:WKXXX.X?

4) Press Right cursor button to choose "Start", then press <OK>;

5) The software will updagrd and screen will display as below:

Upgrade is ongoing, Please wait...

Please do not unplug or switch off the device.

6) The screen will display as below when upgrading complete:

Upgrade has completed successfully!

Power off after 5s.

5) Restart the set.

#### B) Upgrade softwar via network:

- 1) Setup the network connection (See "Getting started">"Set up network").
- 2) In the Home menu, select <Setting>-<Advanced Setup>-<Software Download>-<Network>.  
\* You are prompted to start upgrading processes if upgrade media is detected.
- 3) Follow the instructions on the TV screen to confirm update operation.  
\* Once software updated is complete, this player automatically turns off to standby.
- 4) Disconnect the power cord for a few seconds and connect again to turn on the player.

#### C) Update software via USB Flash Drive:

- 1) Go to [www.philips.com/support](http://www.philips.com/support) to check if the latest software version is available for this player.
- 2) Download the software onto a USB flash drive.
- 3) Insert the USB flash drive to the USB jack of the rear panel.
- 4) In the Home menu, select <Setup>-<Advanced Setup>-<Software Updade >-<USB>.  
\* Once software update is complete, this player automatically turns to standby.
- 5) Follow the instructions on the TV screen to confrim update operation.  
\* Once software update is complete, this player automatically turns to standby.
- 6) Disconnect the power cord for a few seconds and connect again to turn on the player.

### B. Read out the software versions to confirm upgrading

- 1) Power on the set and open the tray door.
- 2) Press <Home> button on the reomote control.
- 3) Select <Setup>, then press <OK>.
- 4) Select <Advanced Setup>, press right cursor to choose <Version Info.>, then press <OK>, the software version and other information will display on the TV screen as below:  
Model:BDP3XXX      or    BDP5XXX  
Versions:

<http://www.philips.com/support>

MAC:XX-XX-XX-XX-XX-XX

**Caution: The set must not be power off during upgrading, otherwise the Main board will be damaged entirely.**

**Remark:The region code can not be manual changed.**

## **Loader repair Instruction for BDP3100/5100/ 3080/98**

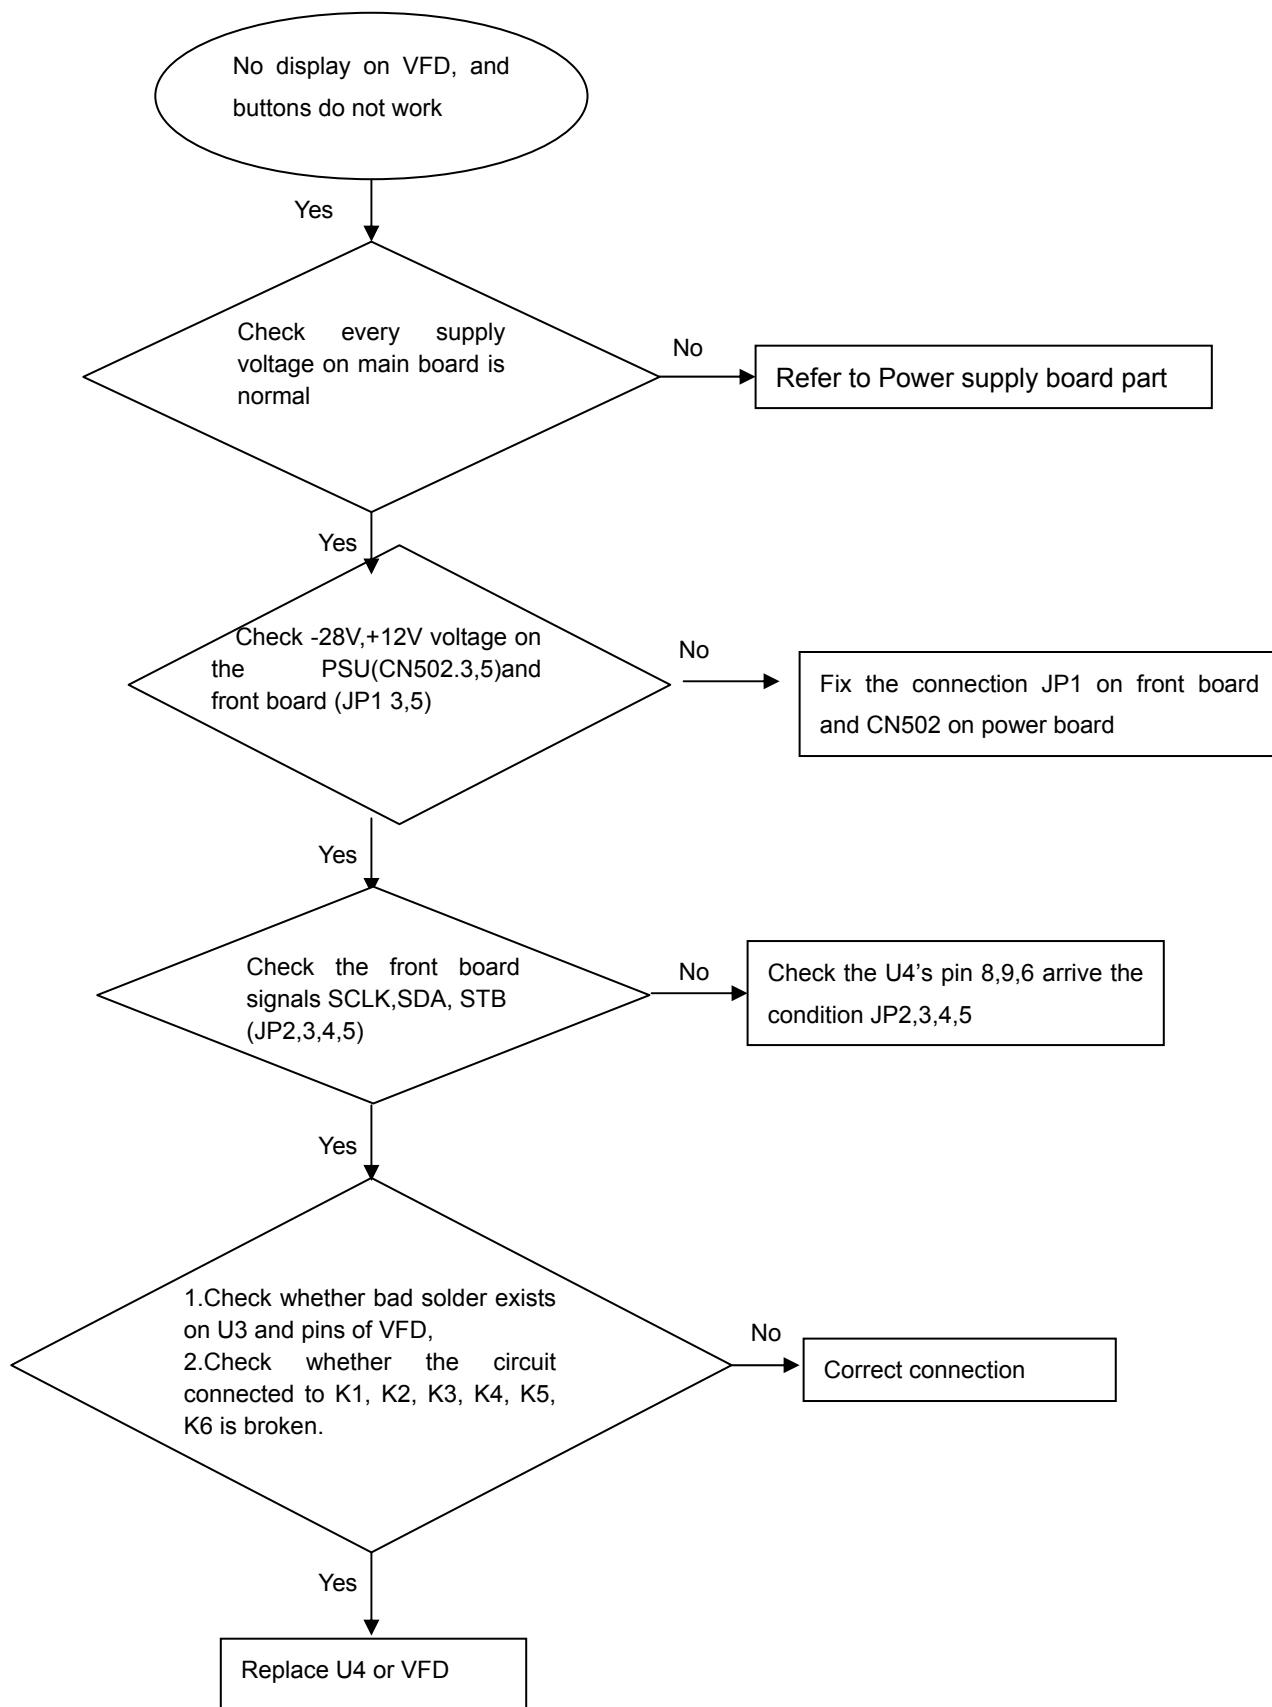

### **Preliminaries (at O.E.M. supplier site)**

After scanning BARCODE on the new LOADER in supplier – TCL factory, print the one-dimensional code which generated by scanner and computer on label, then paste it into LOADER. If FA test passed , break off the protection point under the LOADER.

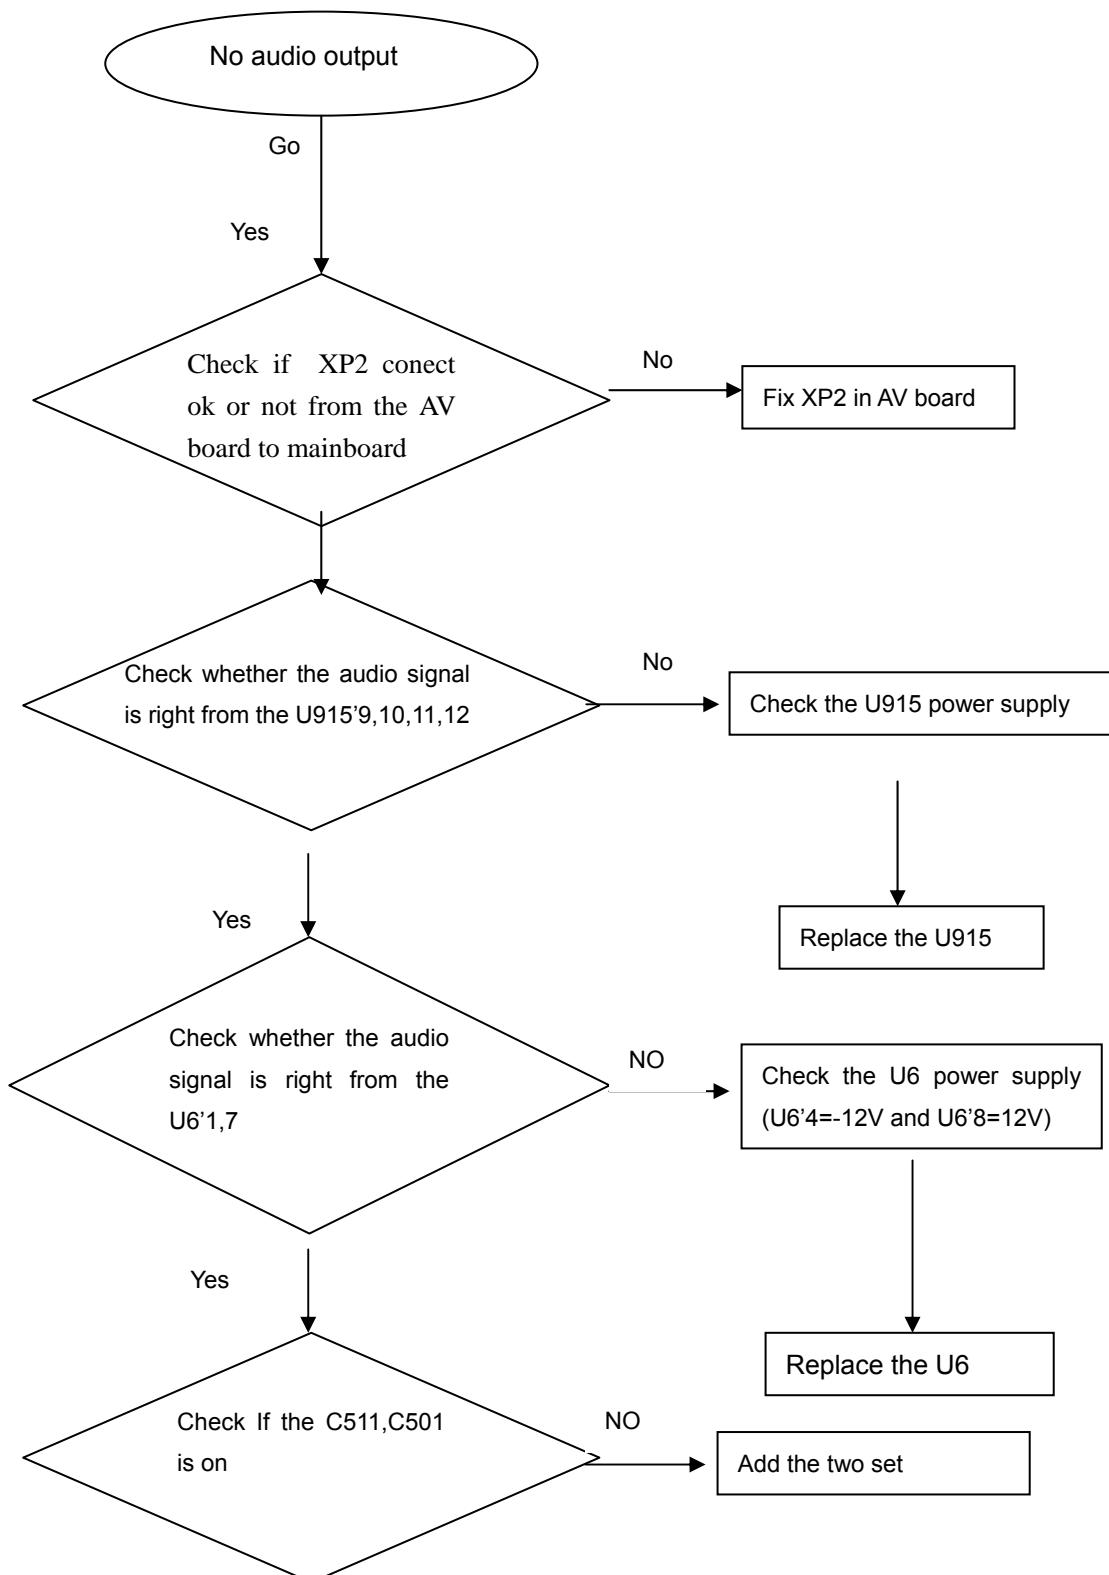

### **Repair Procedure in workshop**

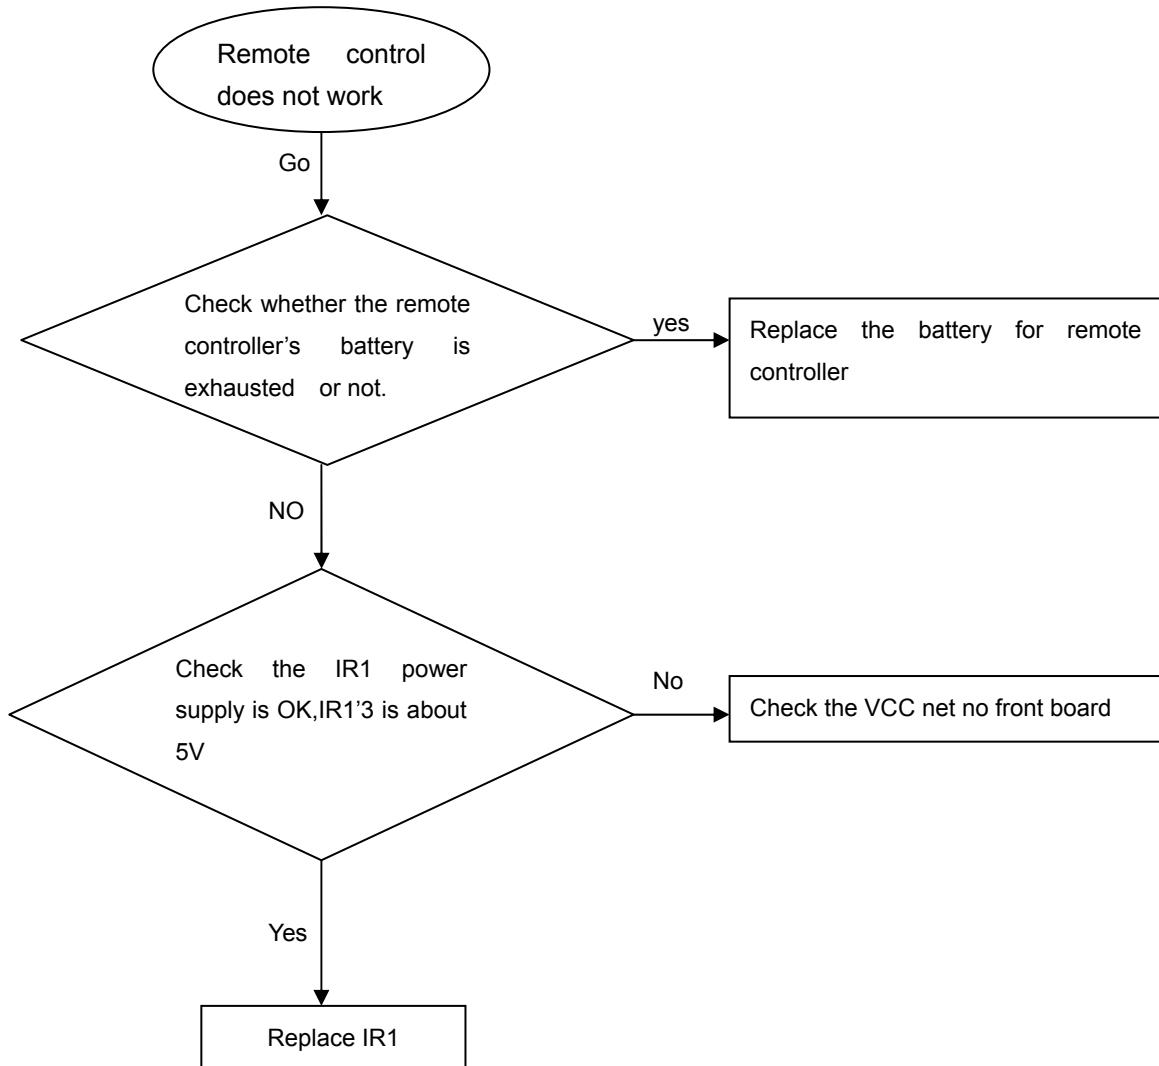

1. In region's workshop, to install loader in the machine then weld the open protection point. Keep the set to connect the TV and power on, press keys "5""1""7""7" on Remote Control when in the HOME menu, then the menu will be displayed.
2. Select "Enter Barcode Info" from the menu, input the BARCODE of the LOADER and wait until the OSD displays "PASS", press "STOP" key on Remote Control to go back to the menu.
3. Select "Laser check", confirm whether the cable is connected and welded protection point is ok.
4. Restart the set, test CD, DVD, BD discs. If ok, the LOADER replacing procedure is finish.

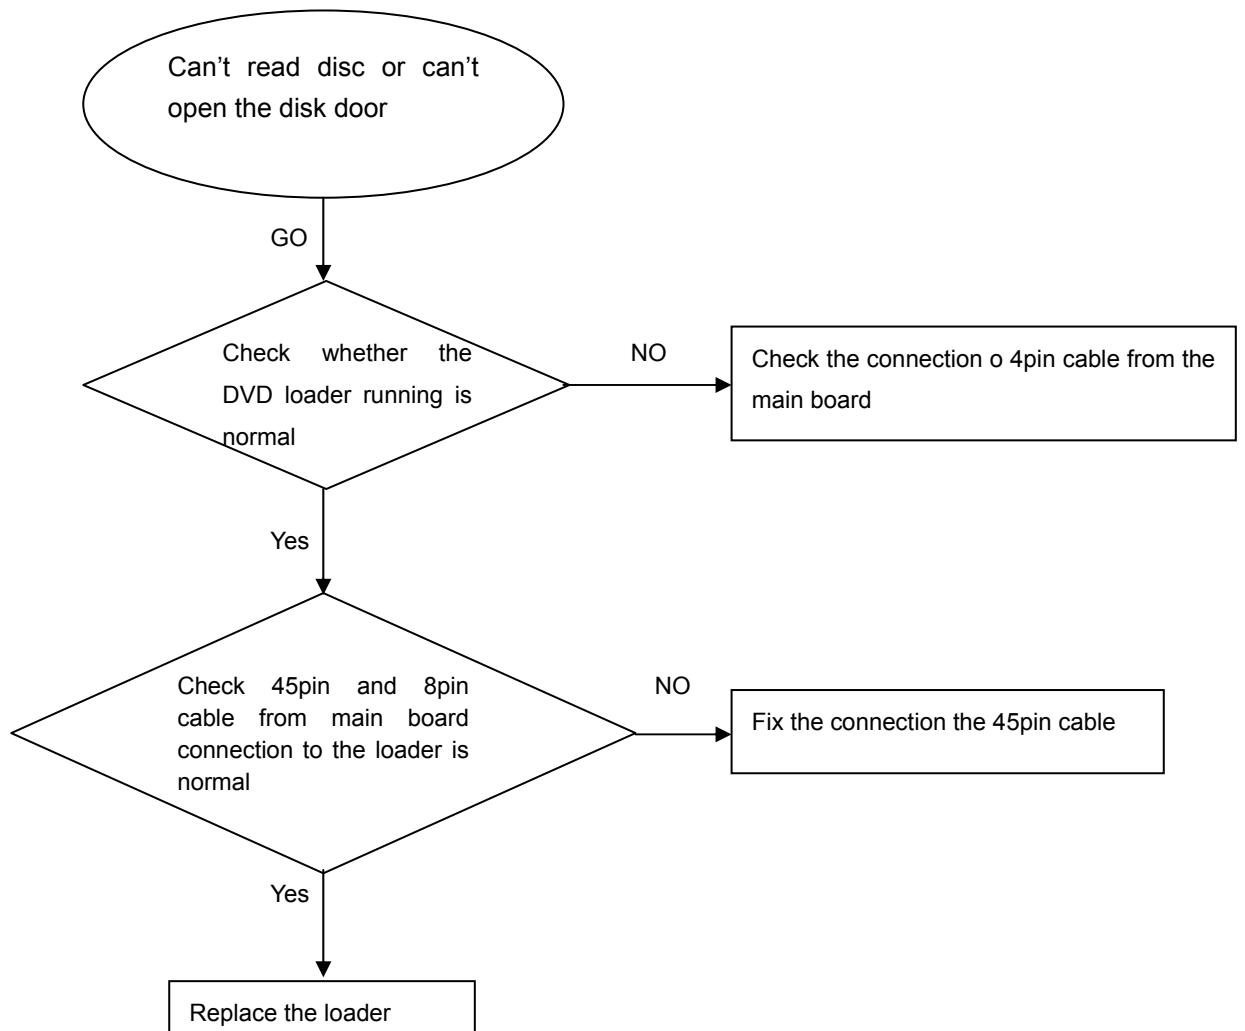

### No display on VFD, and buttons do not work

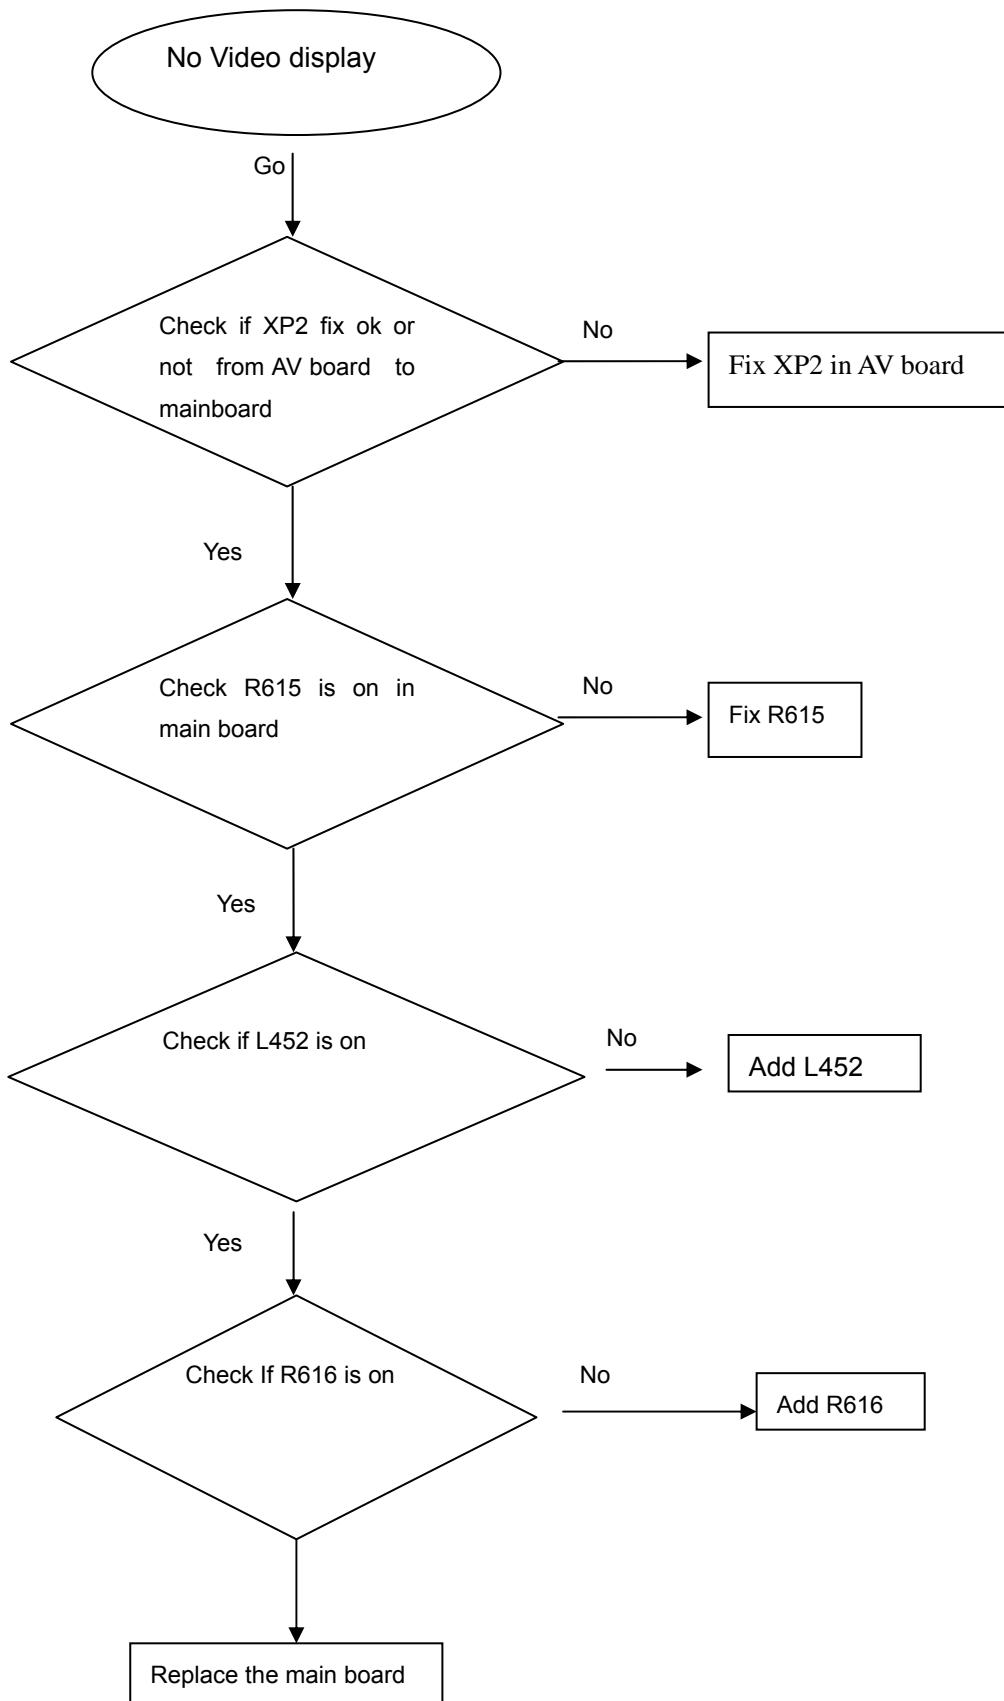

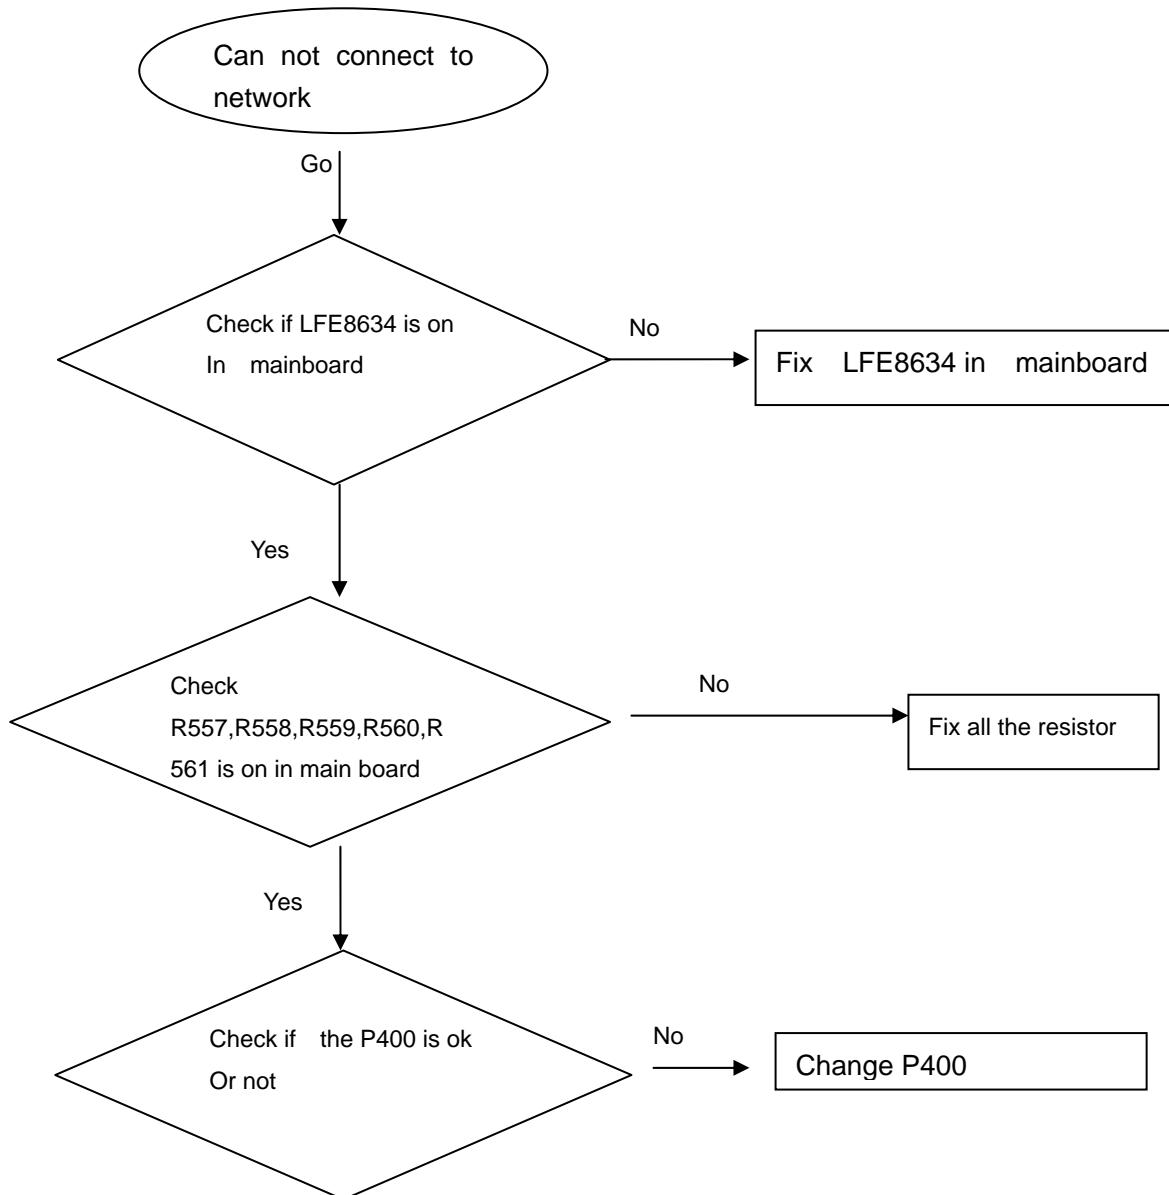

### No audio output

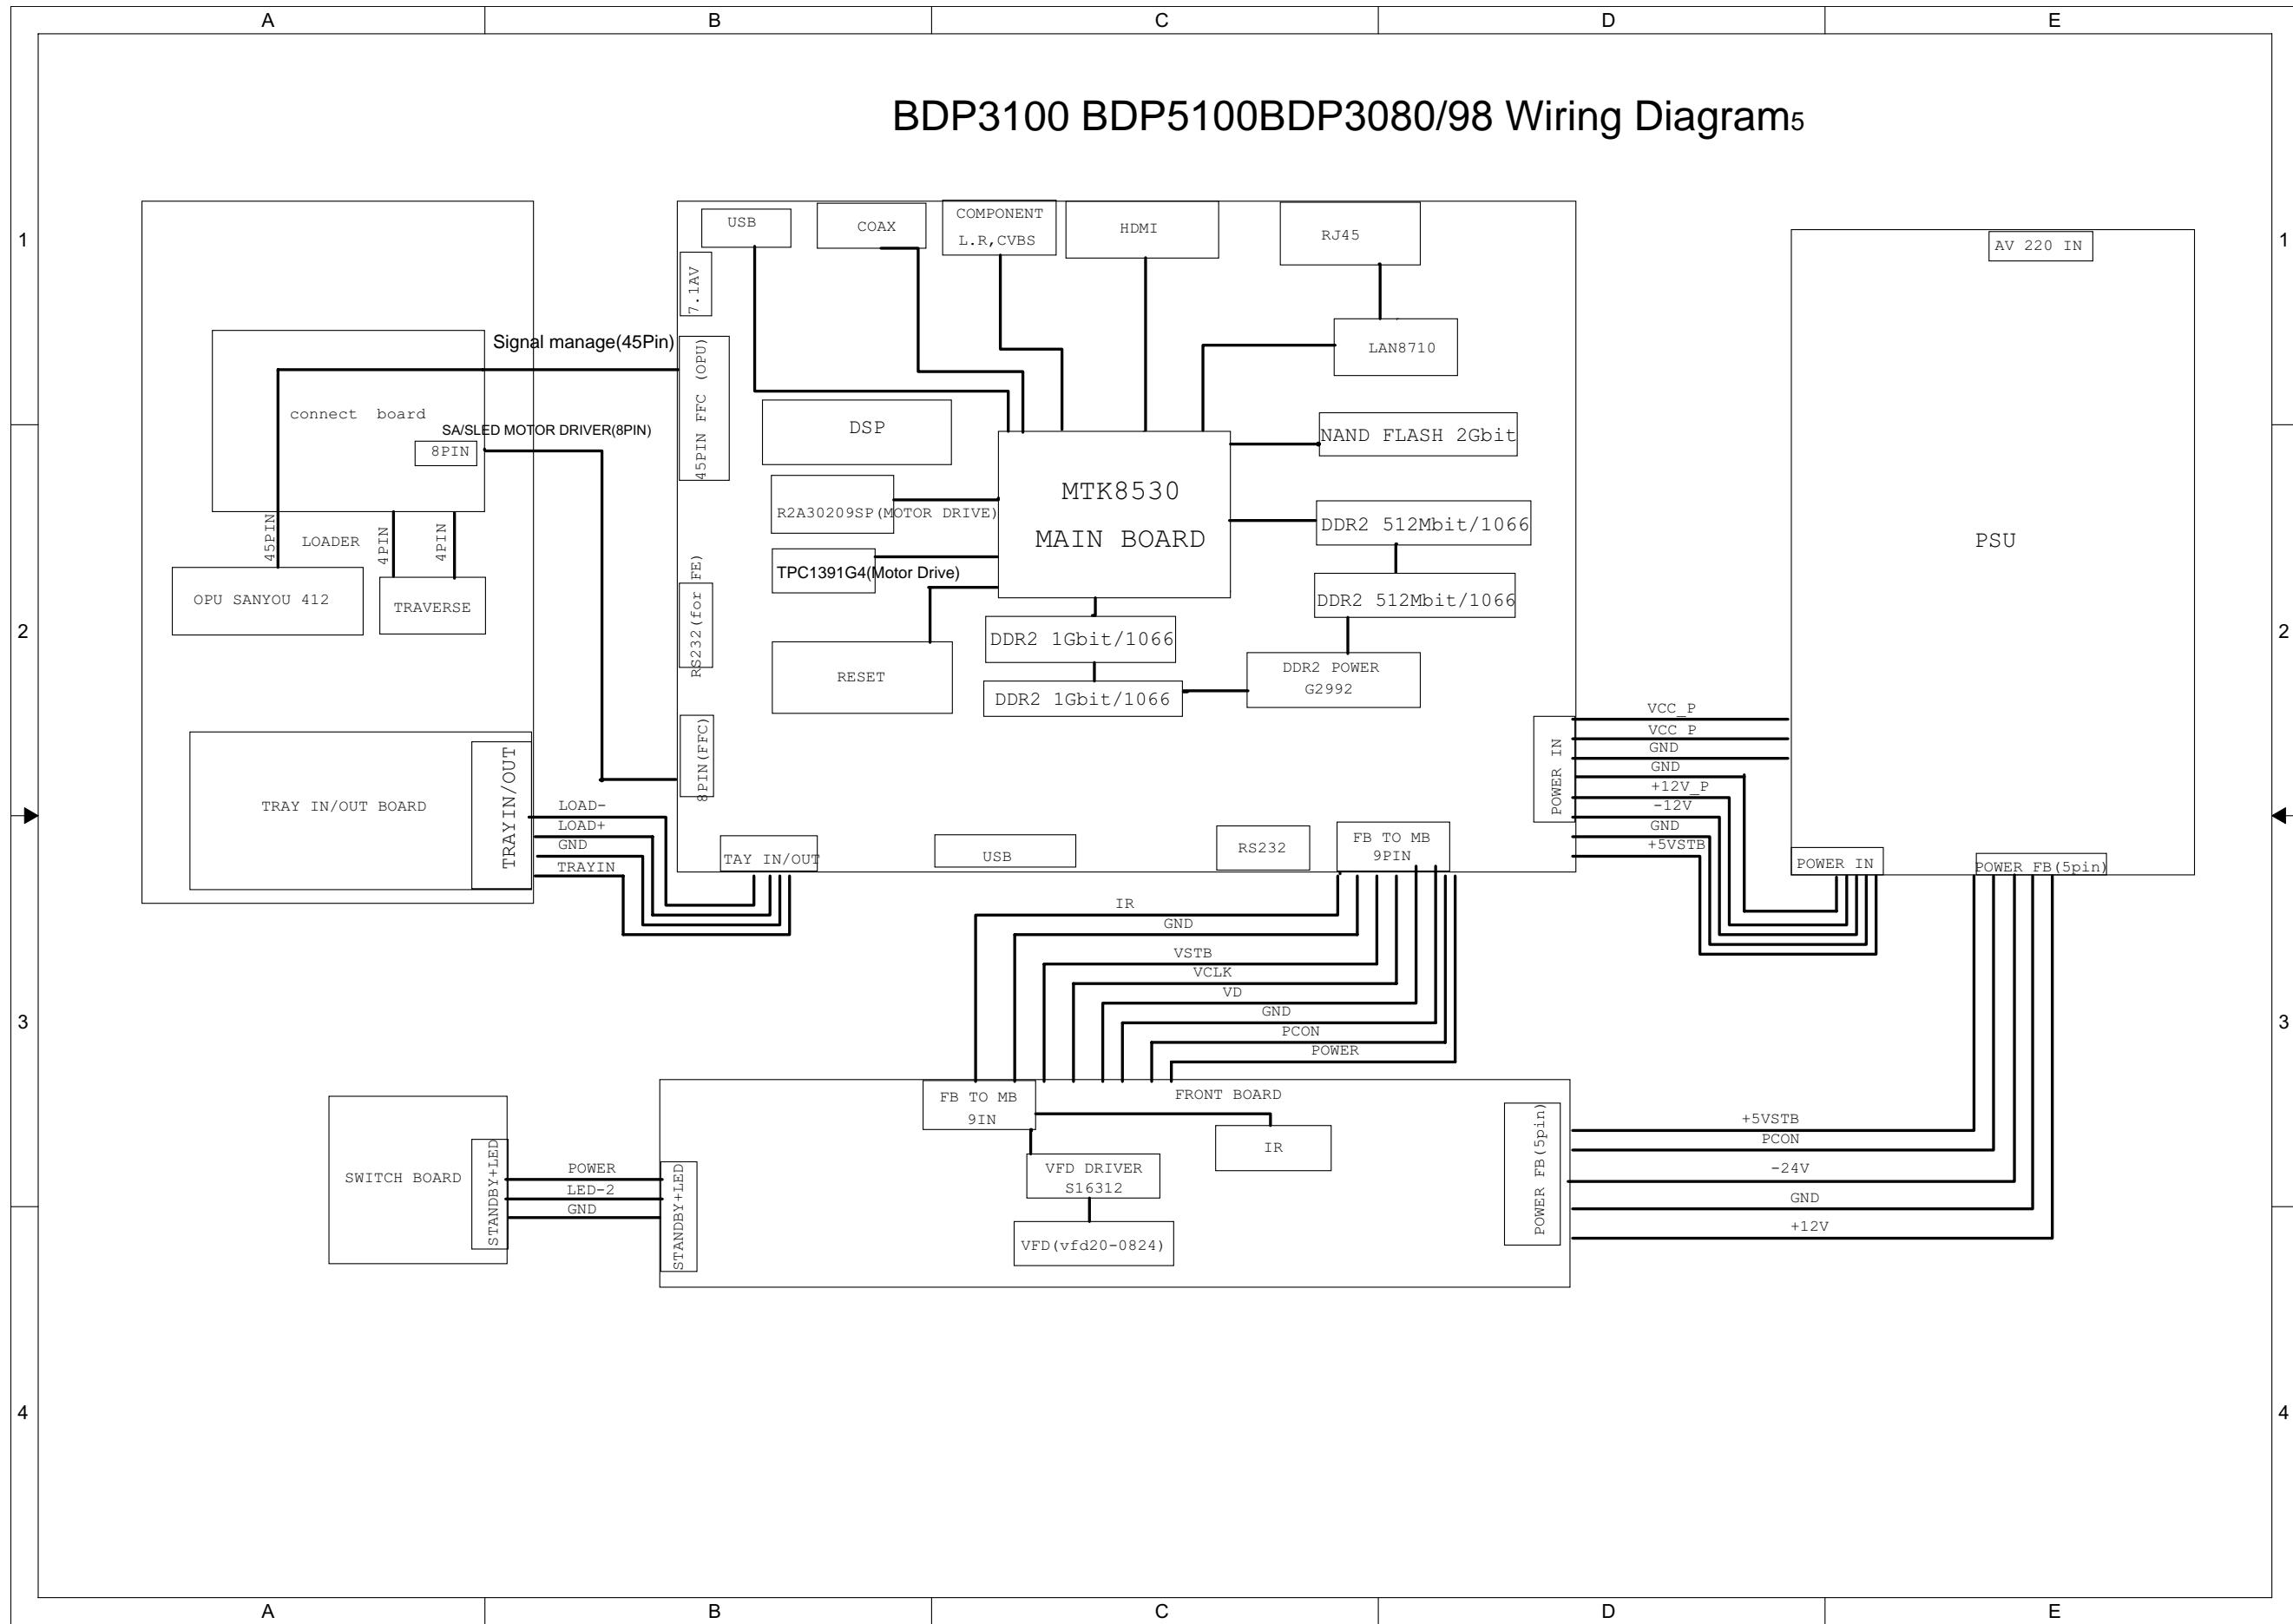

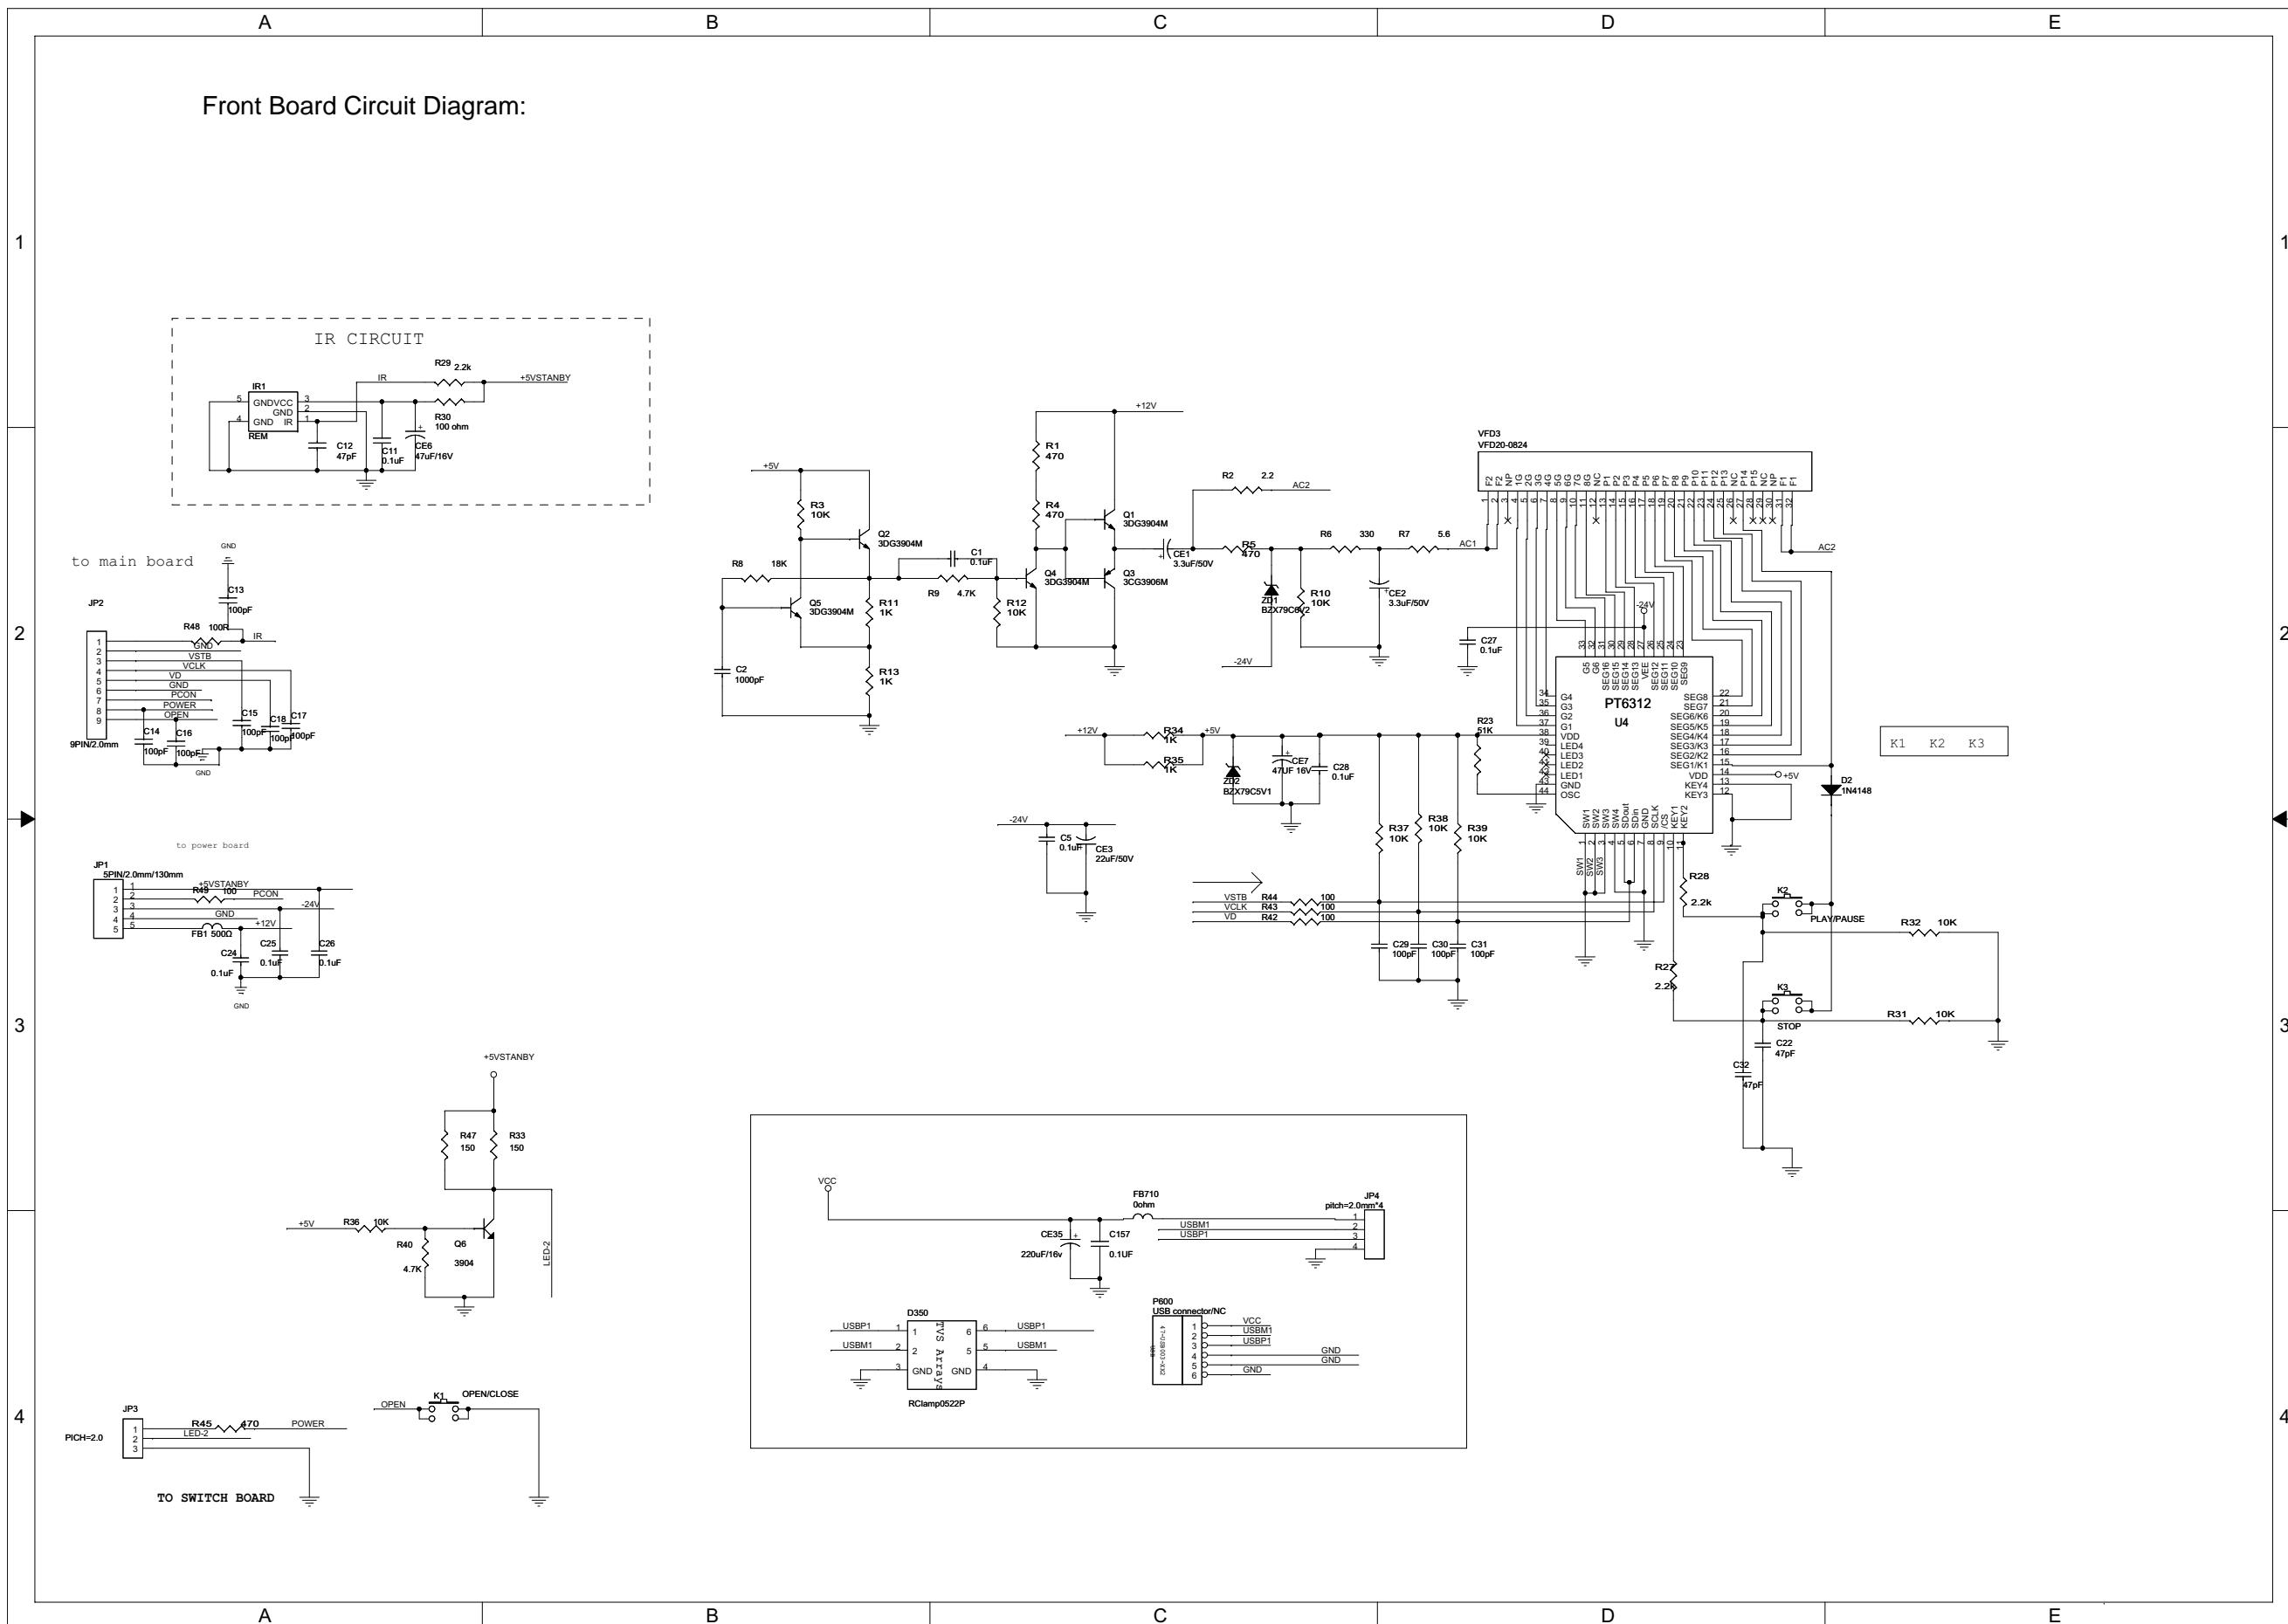

**Remote control does not work**

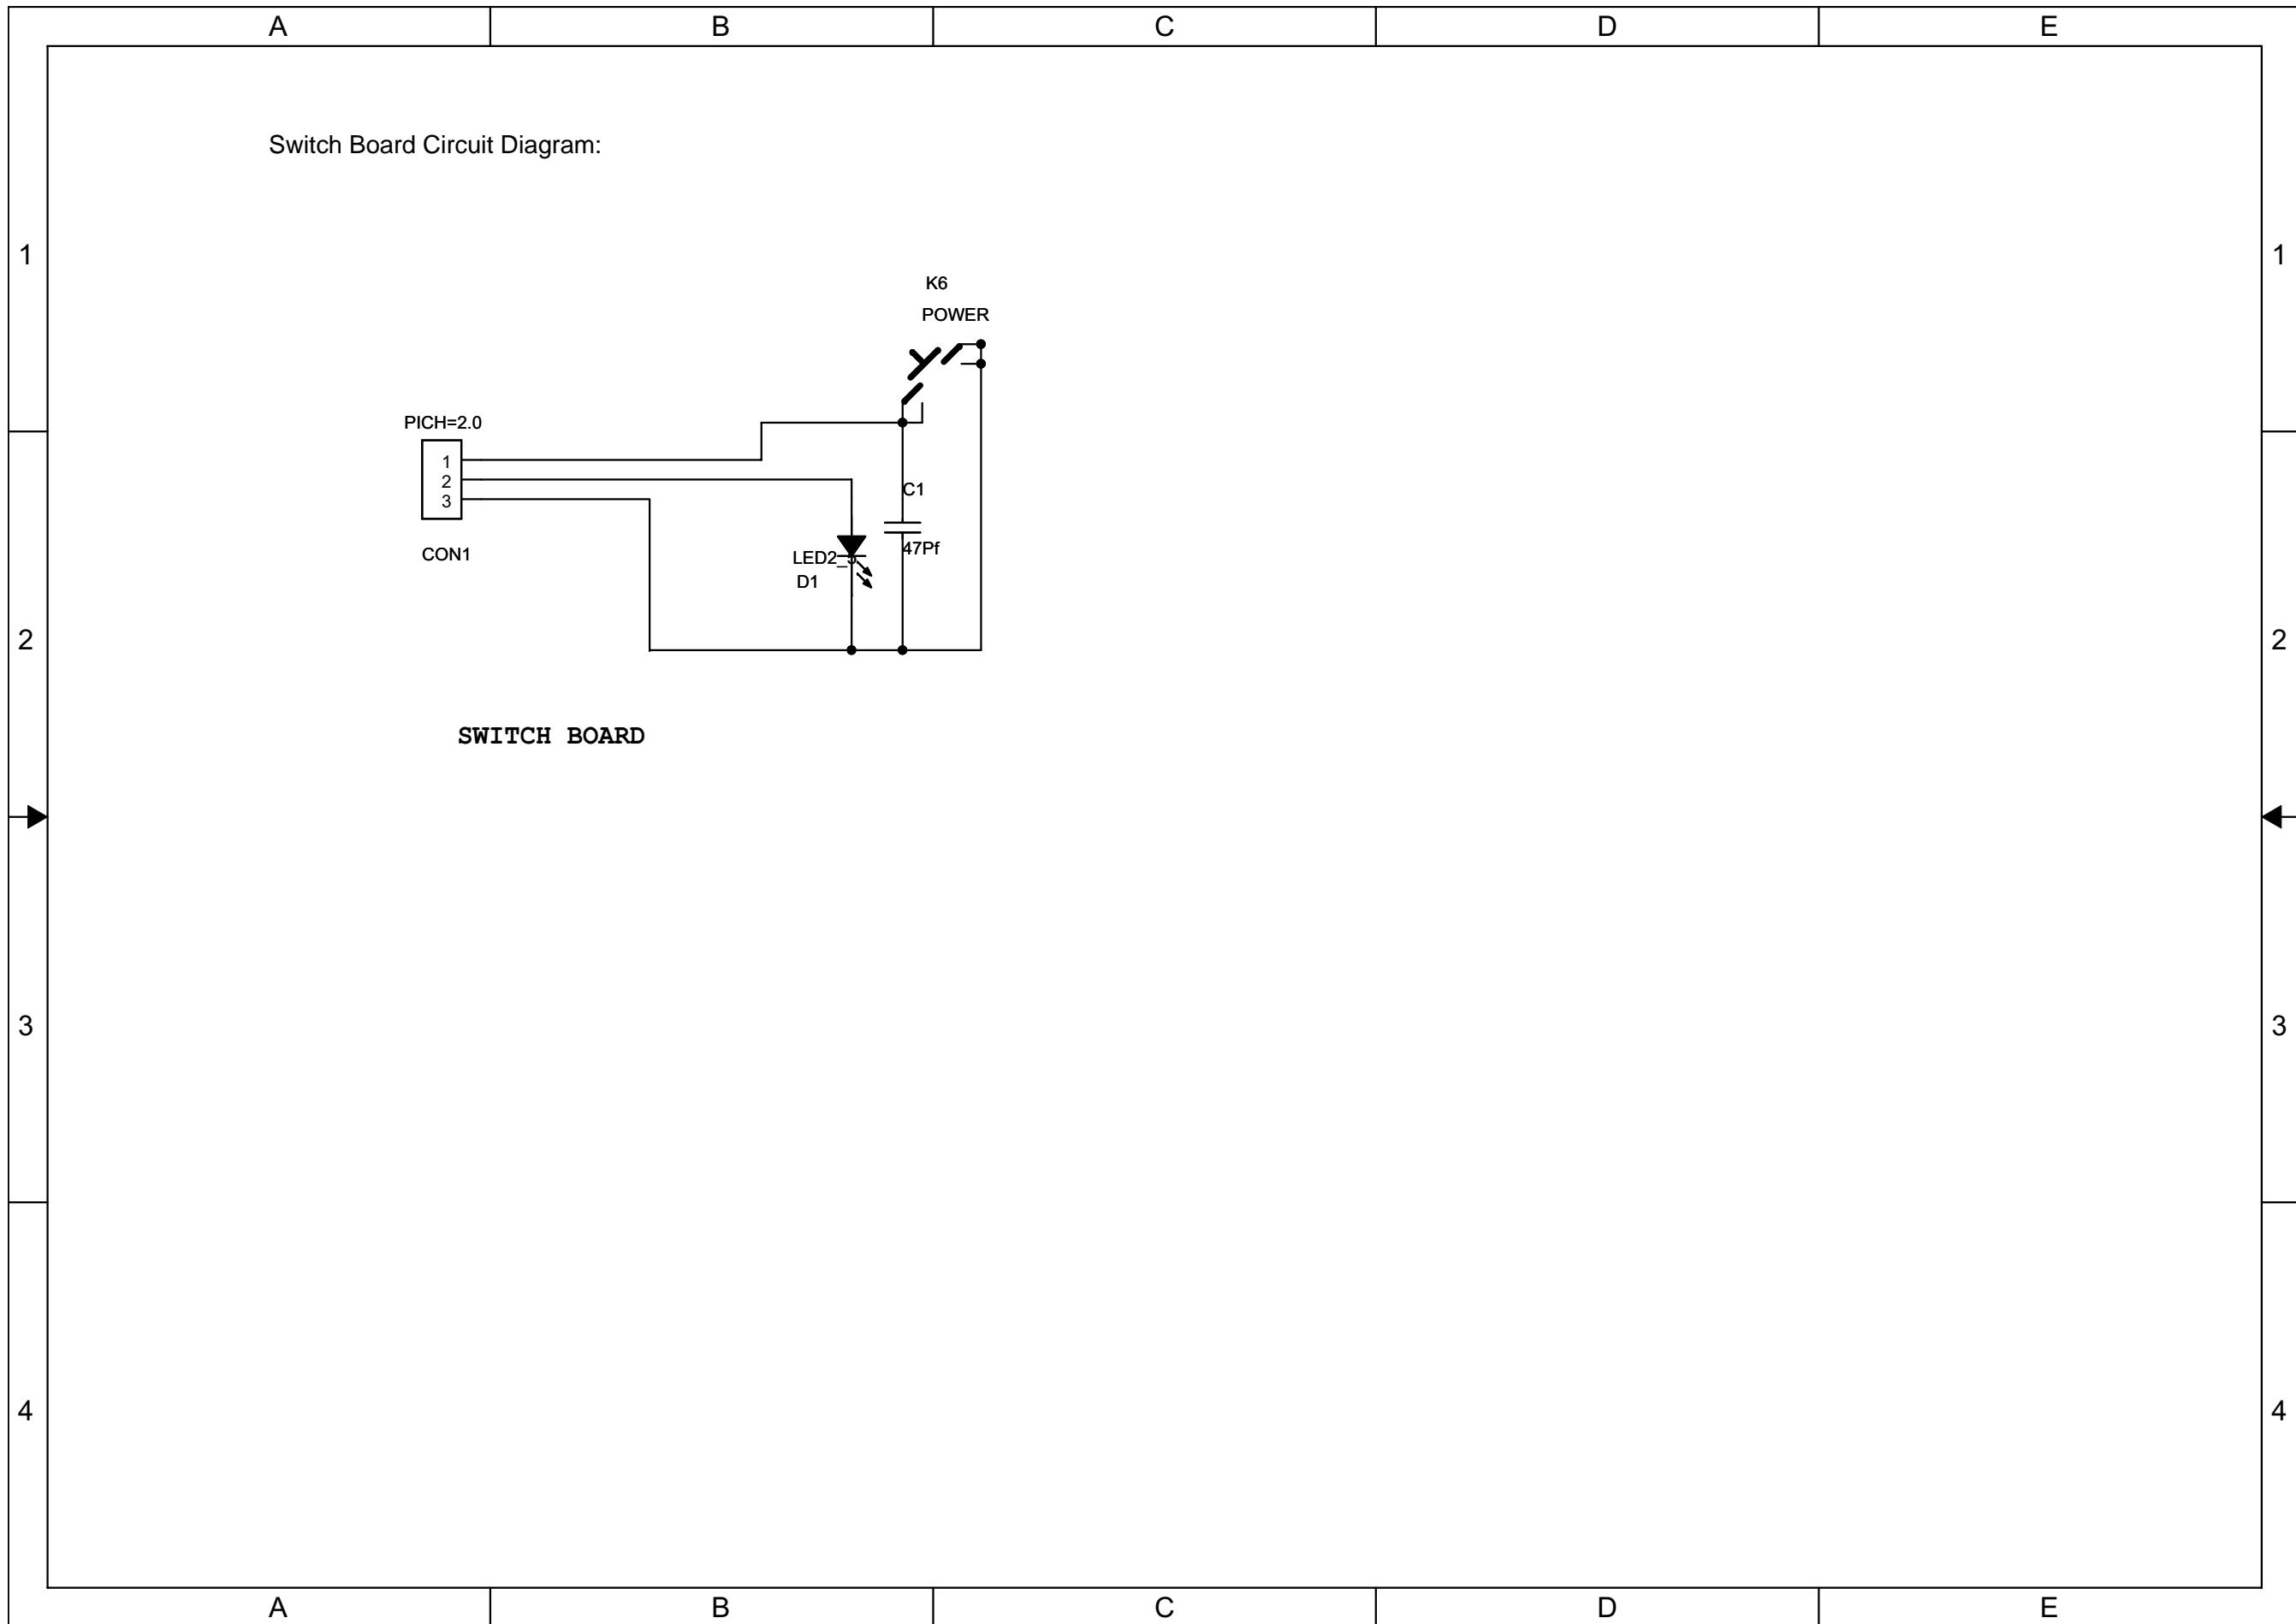

**Can't read disc or can't open the disk door**

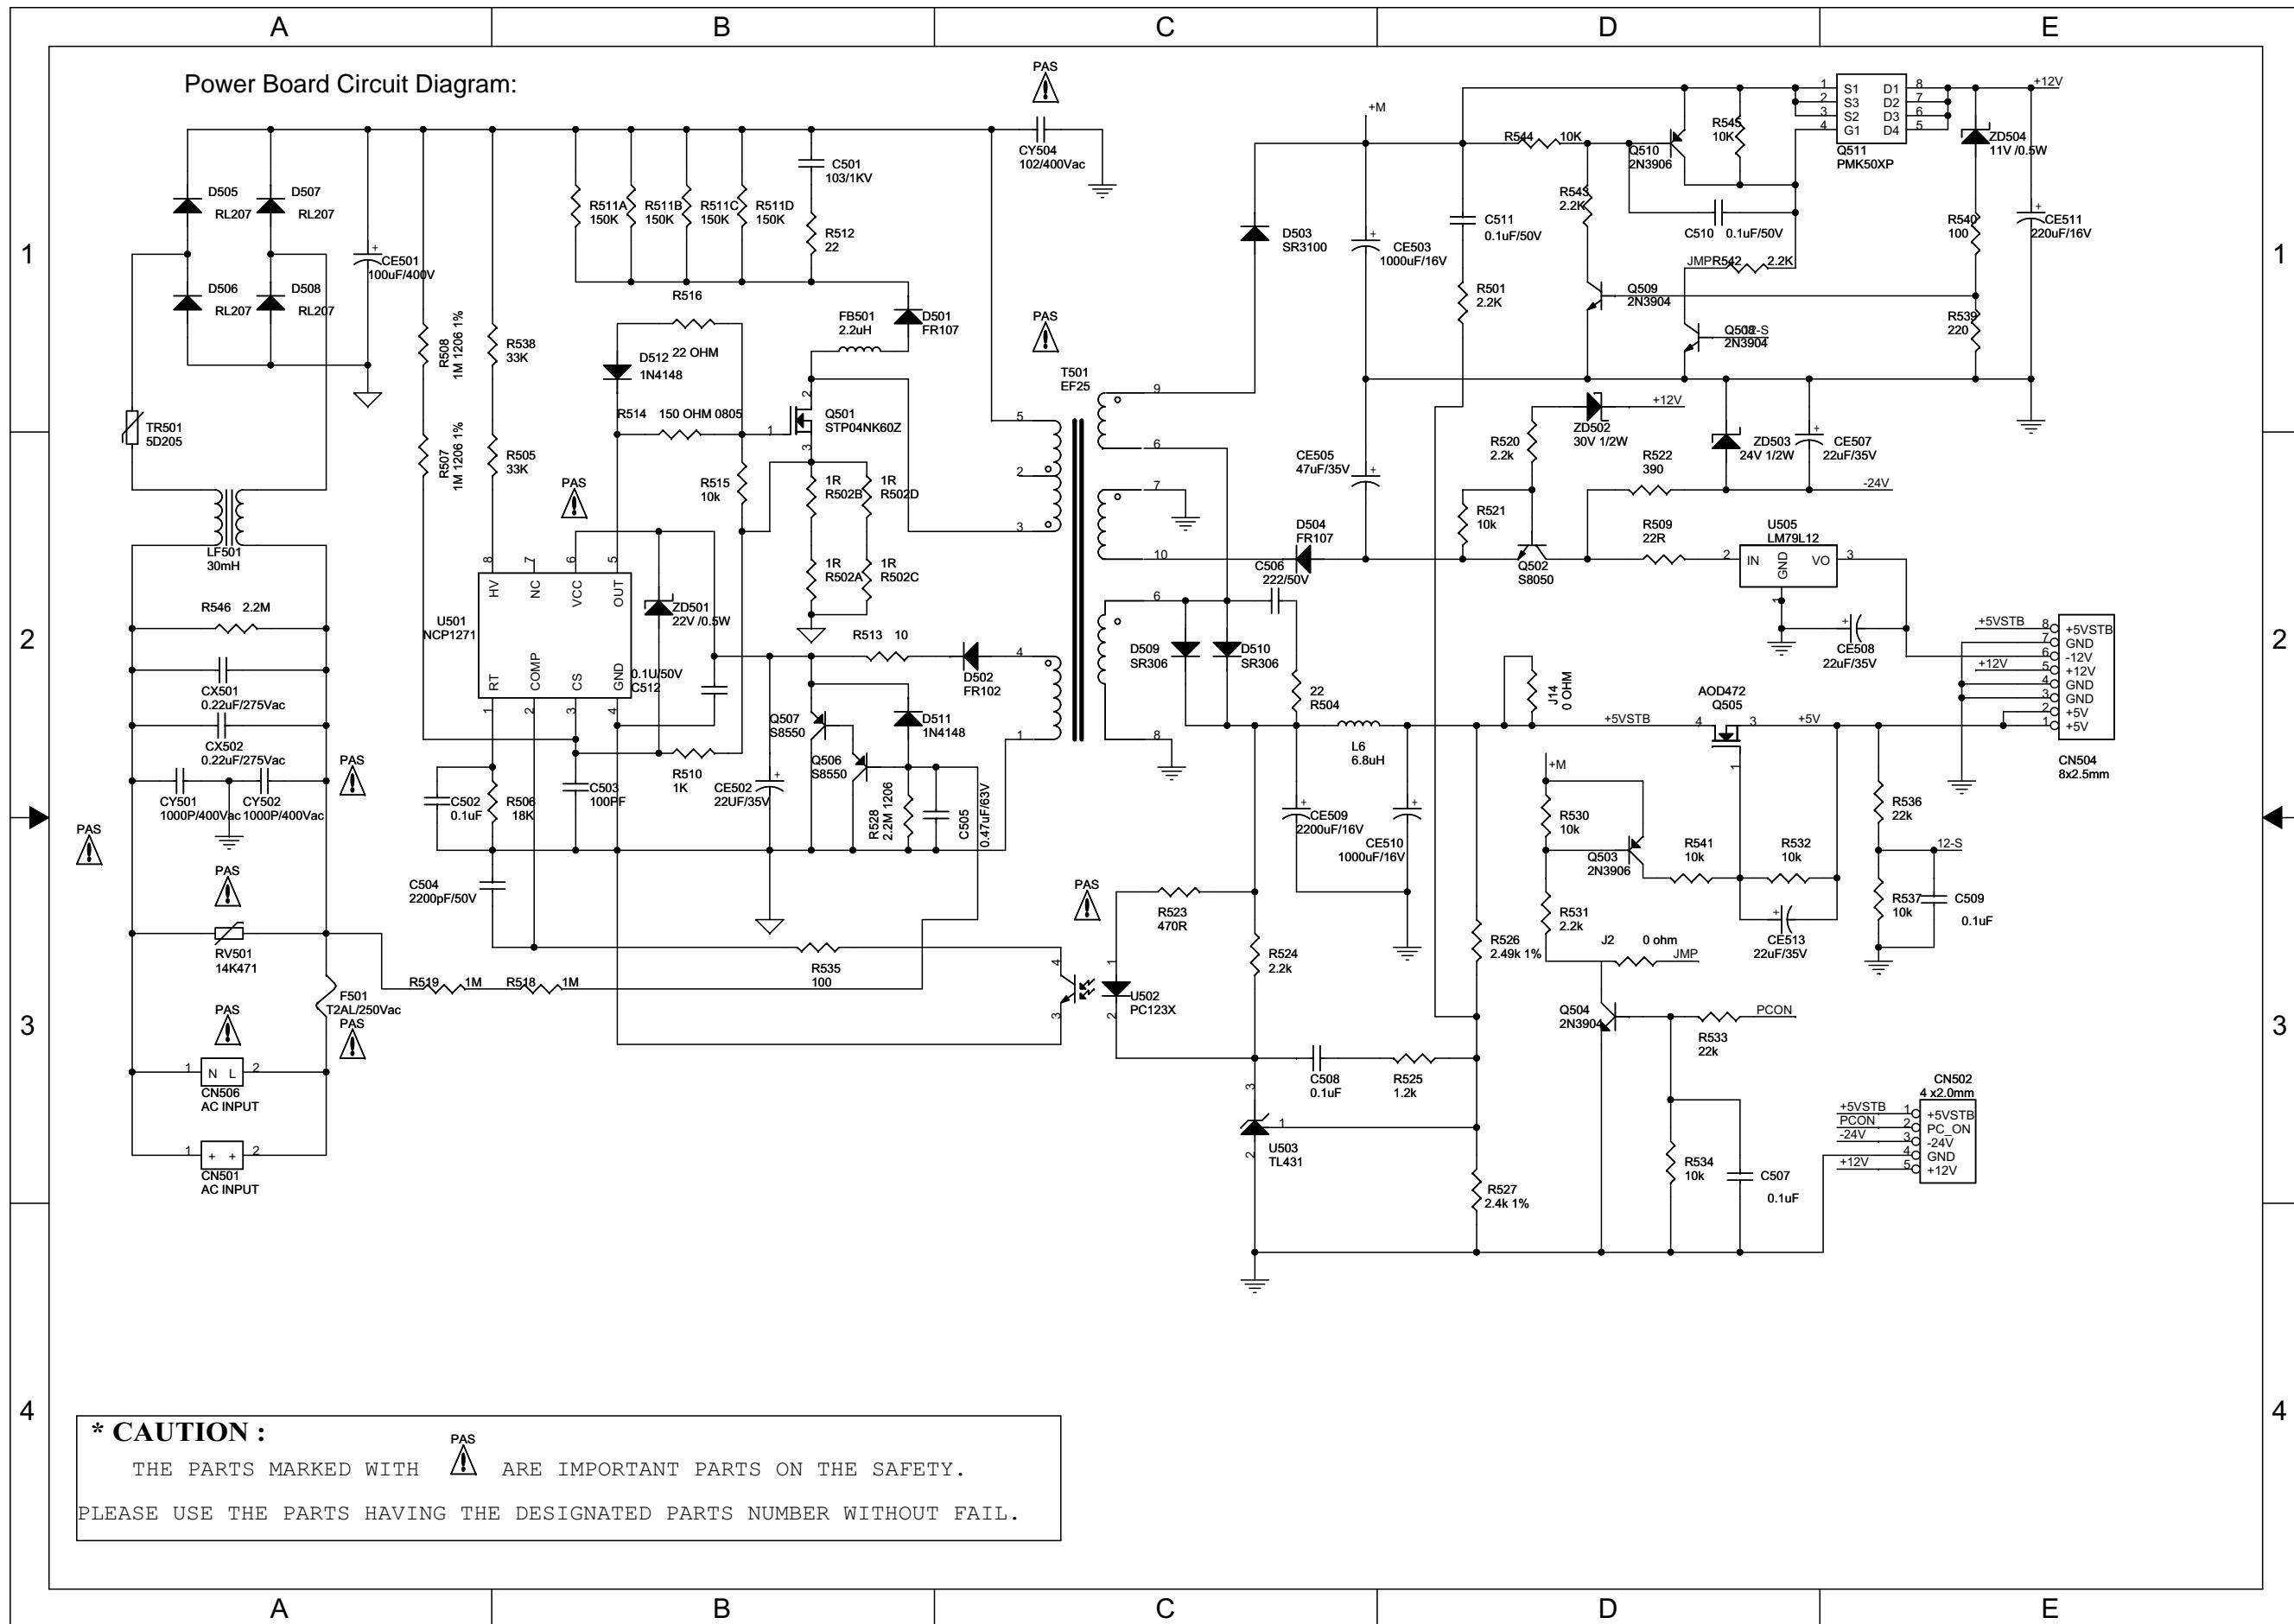

**No video display**

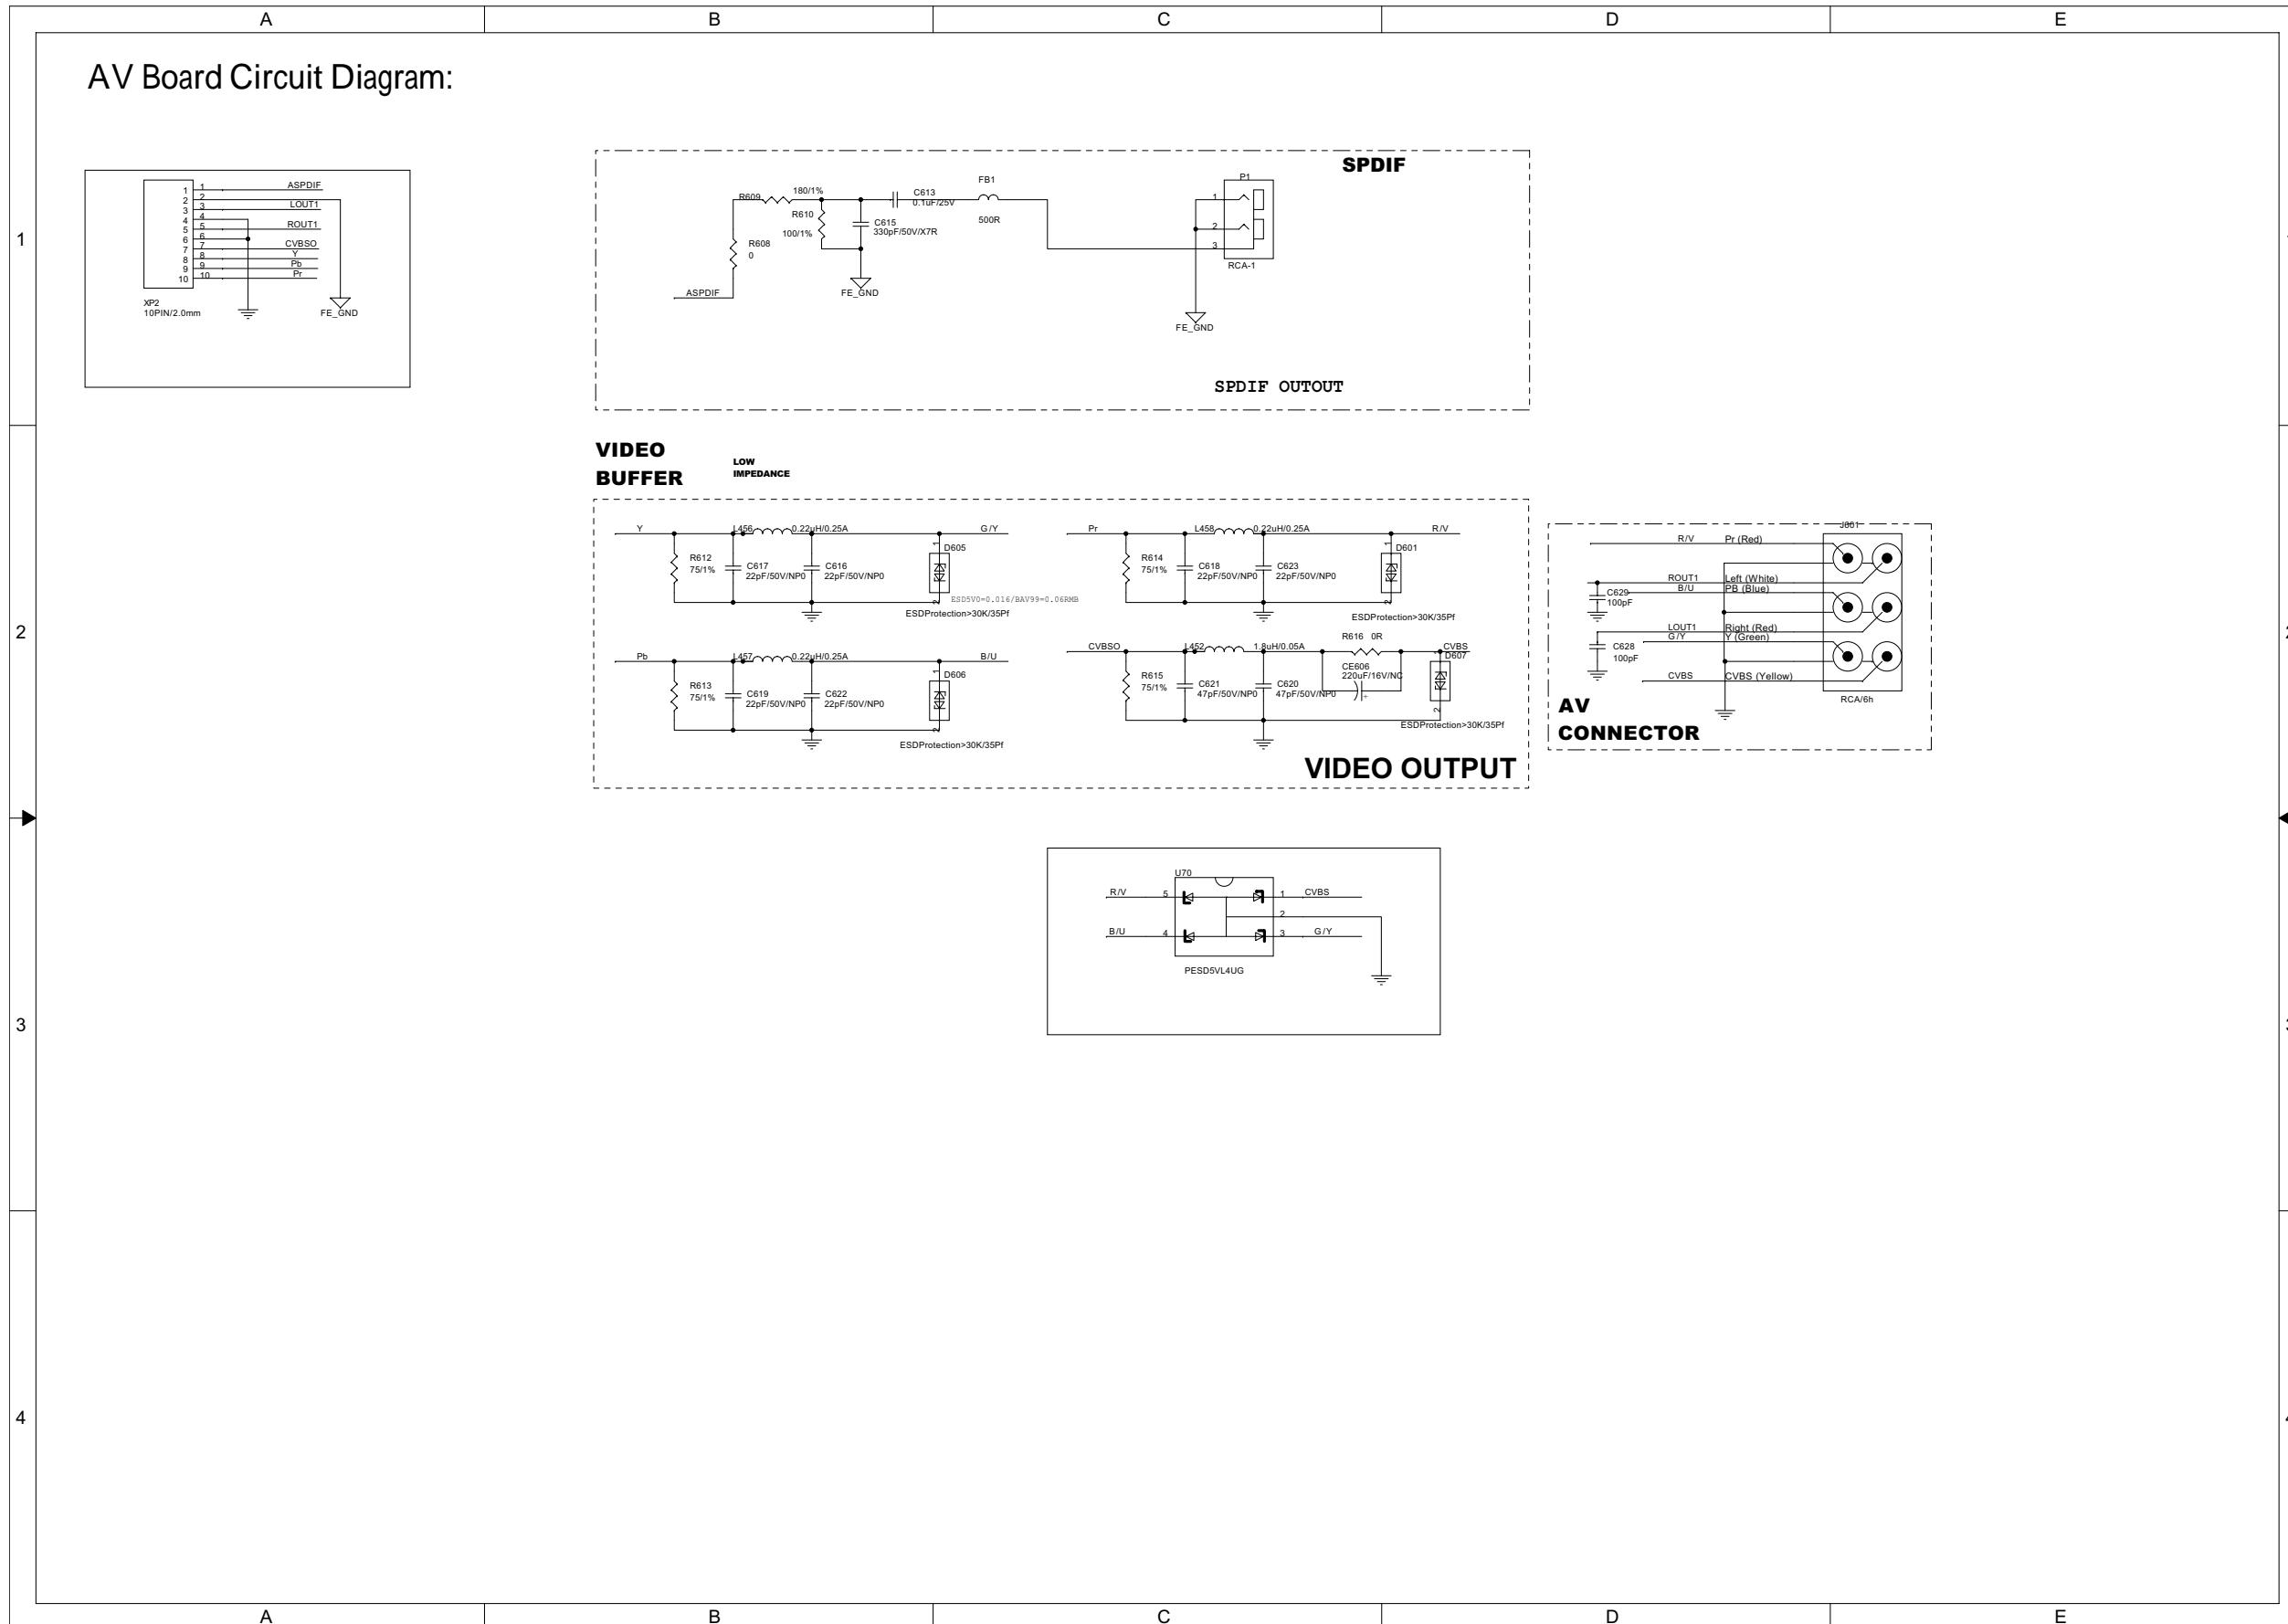

**Can not connect to network**

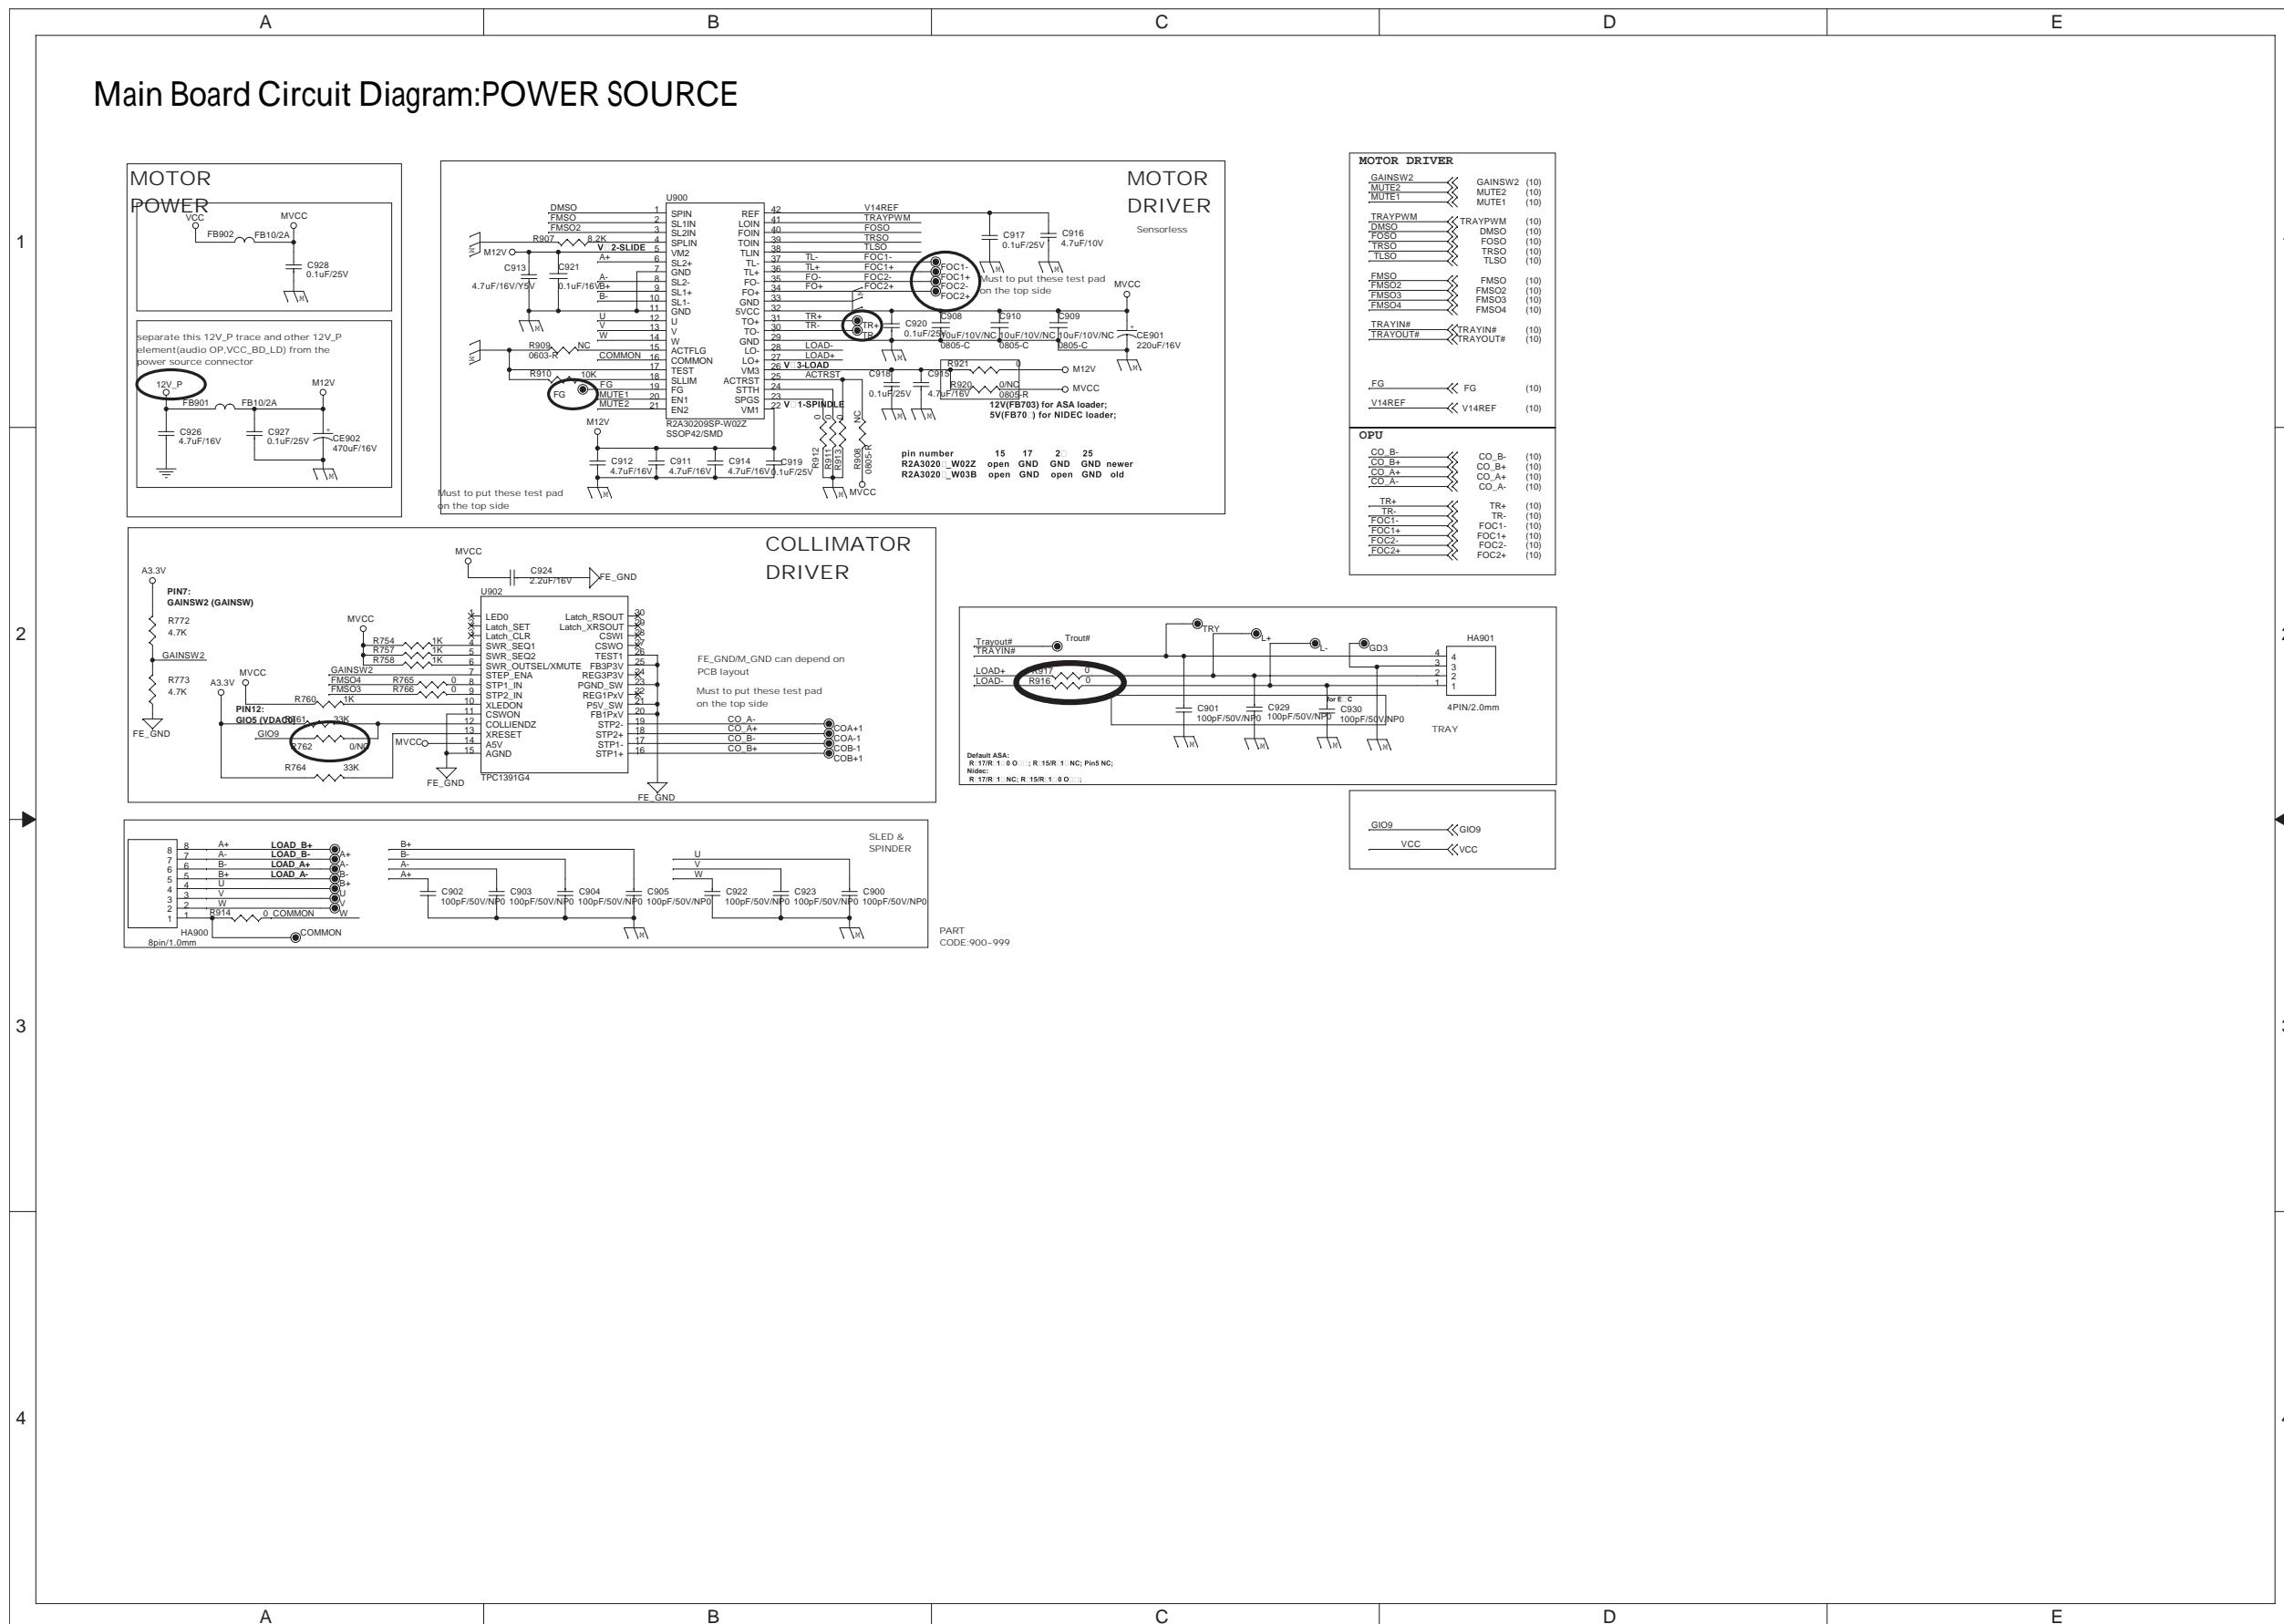

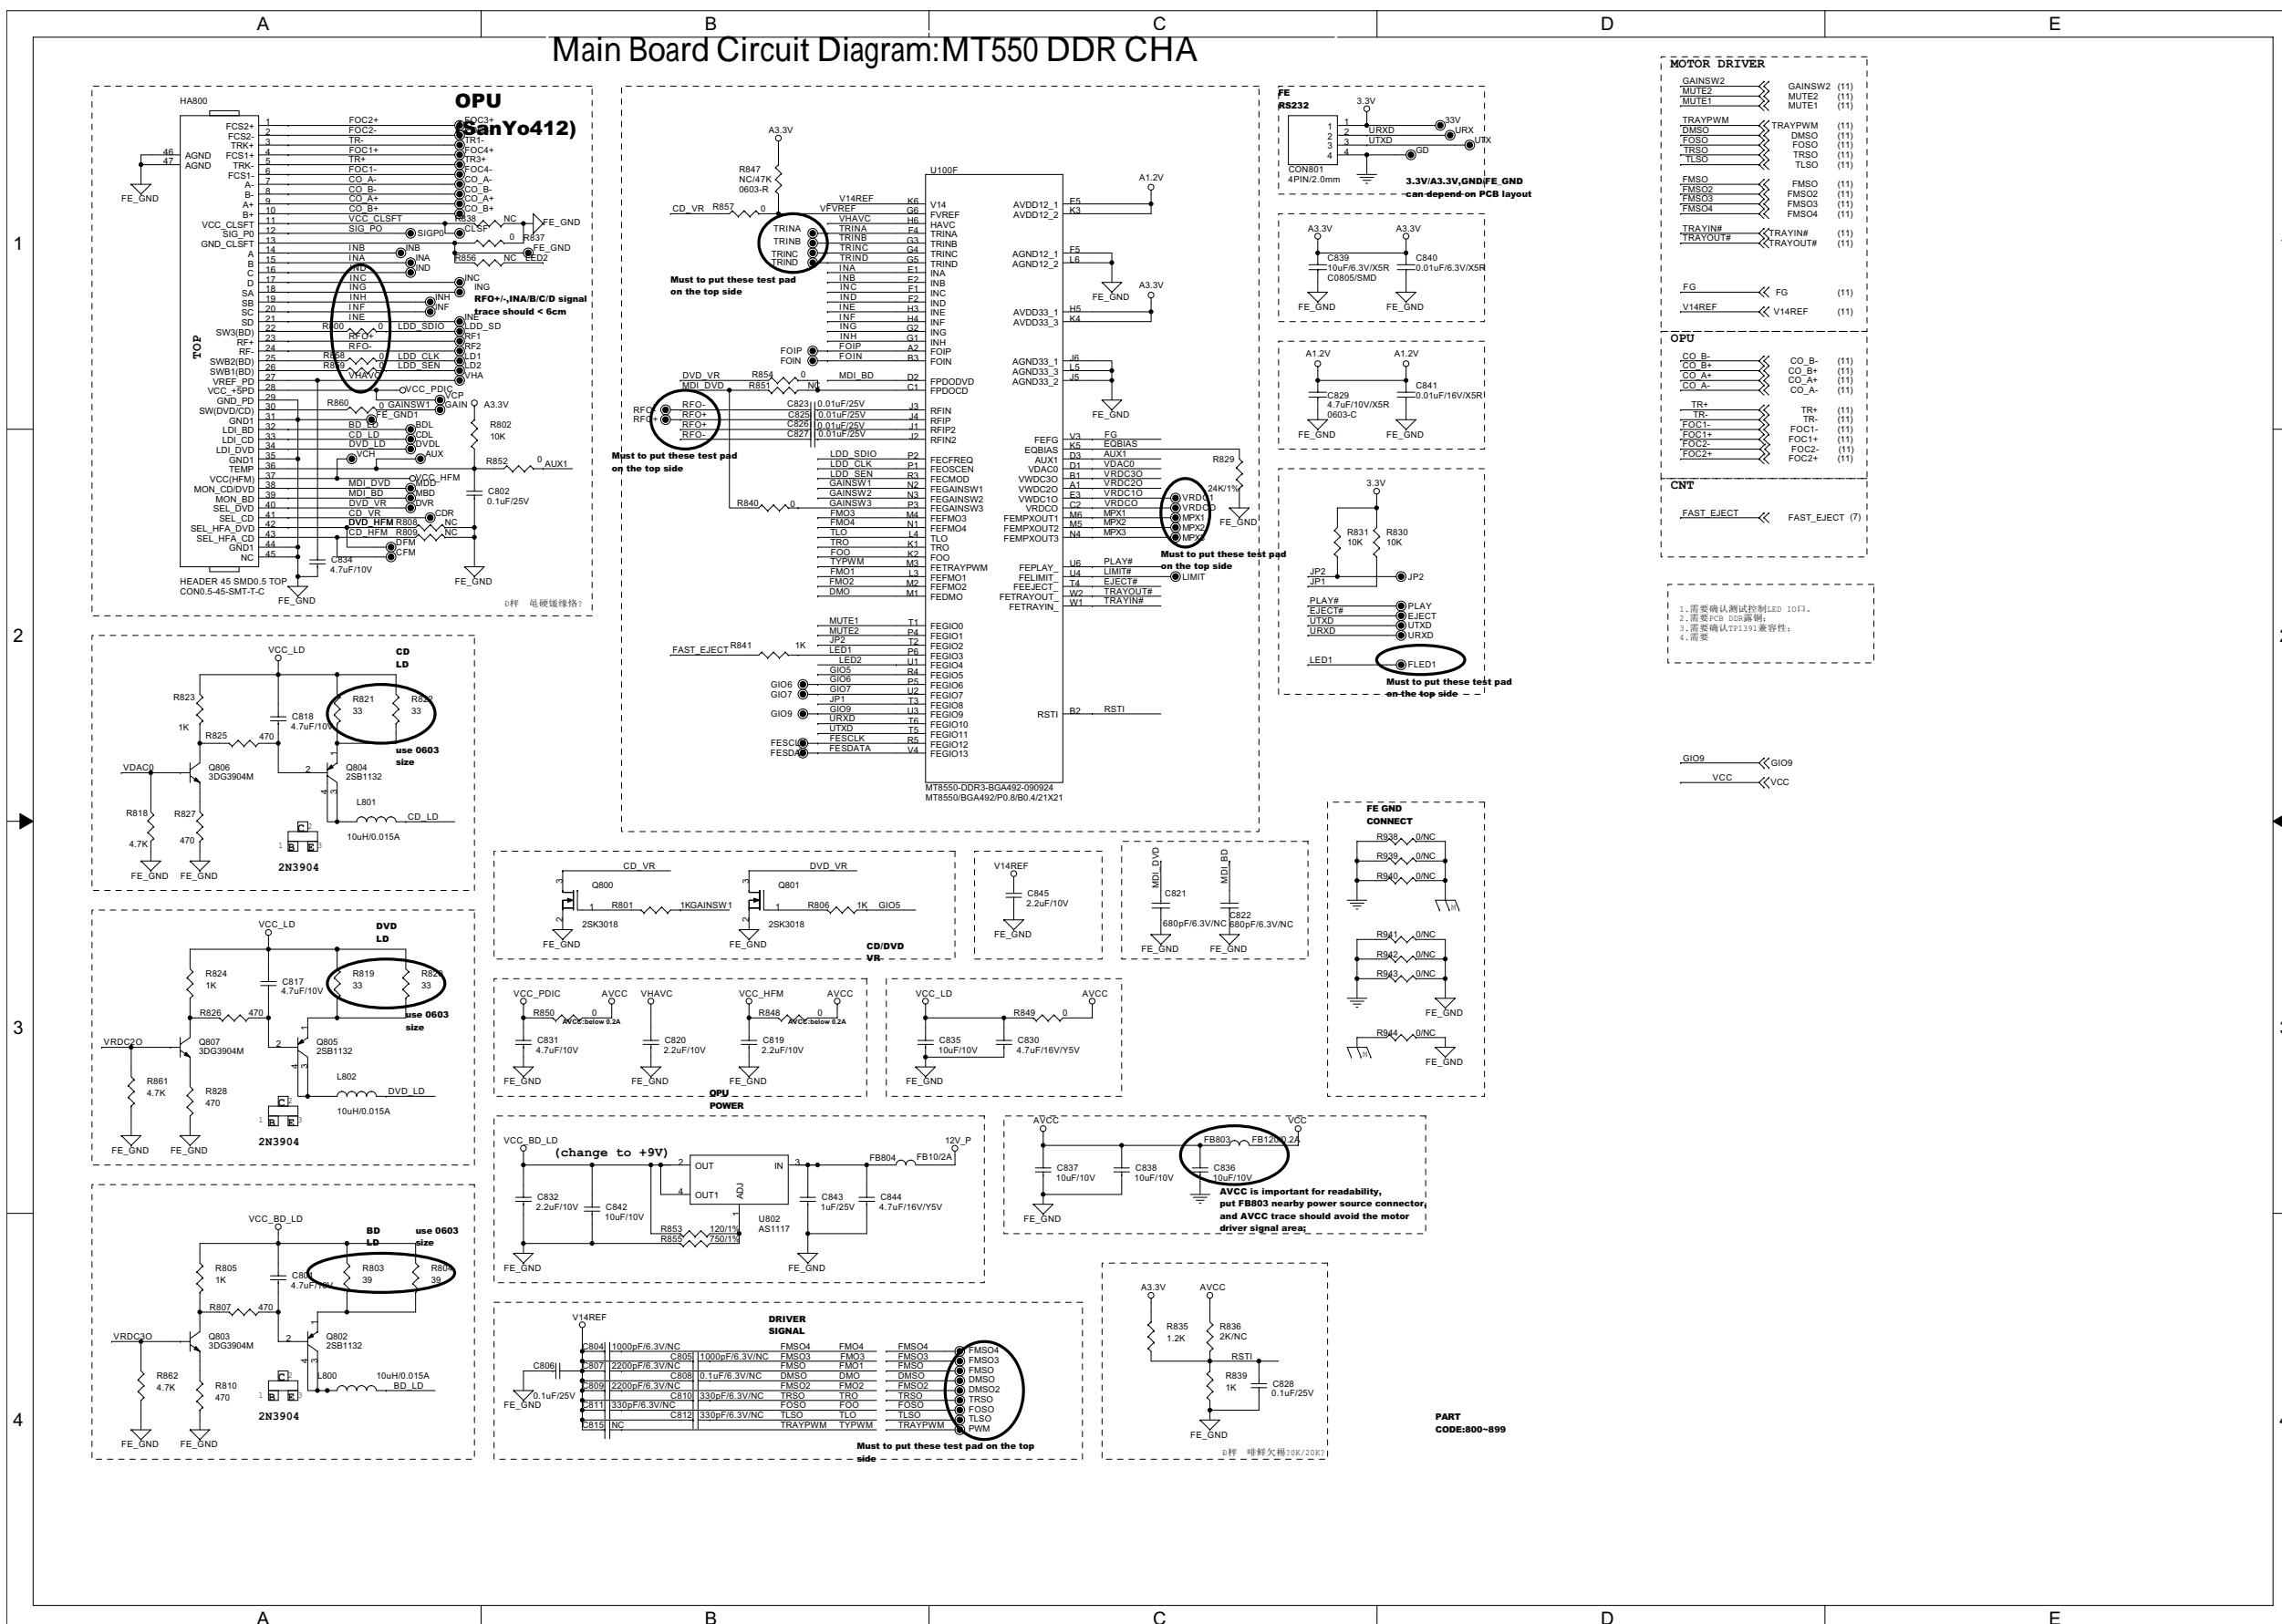

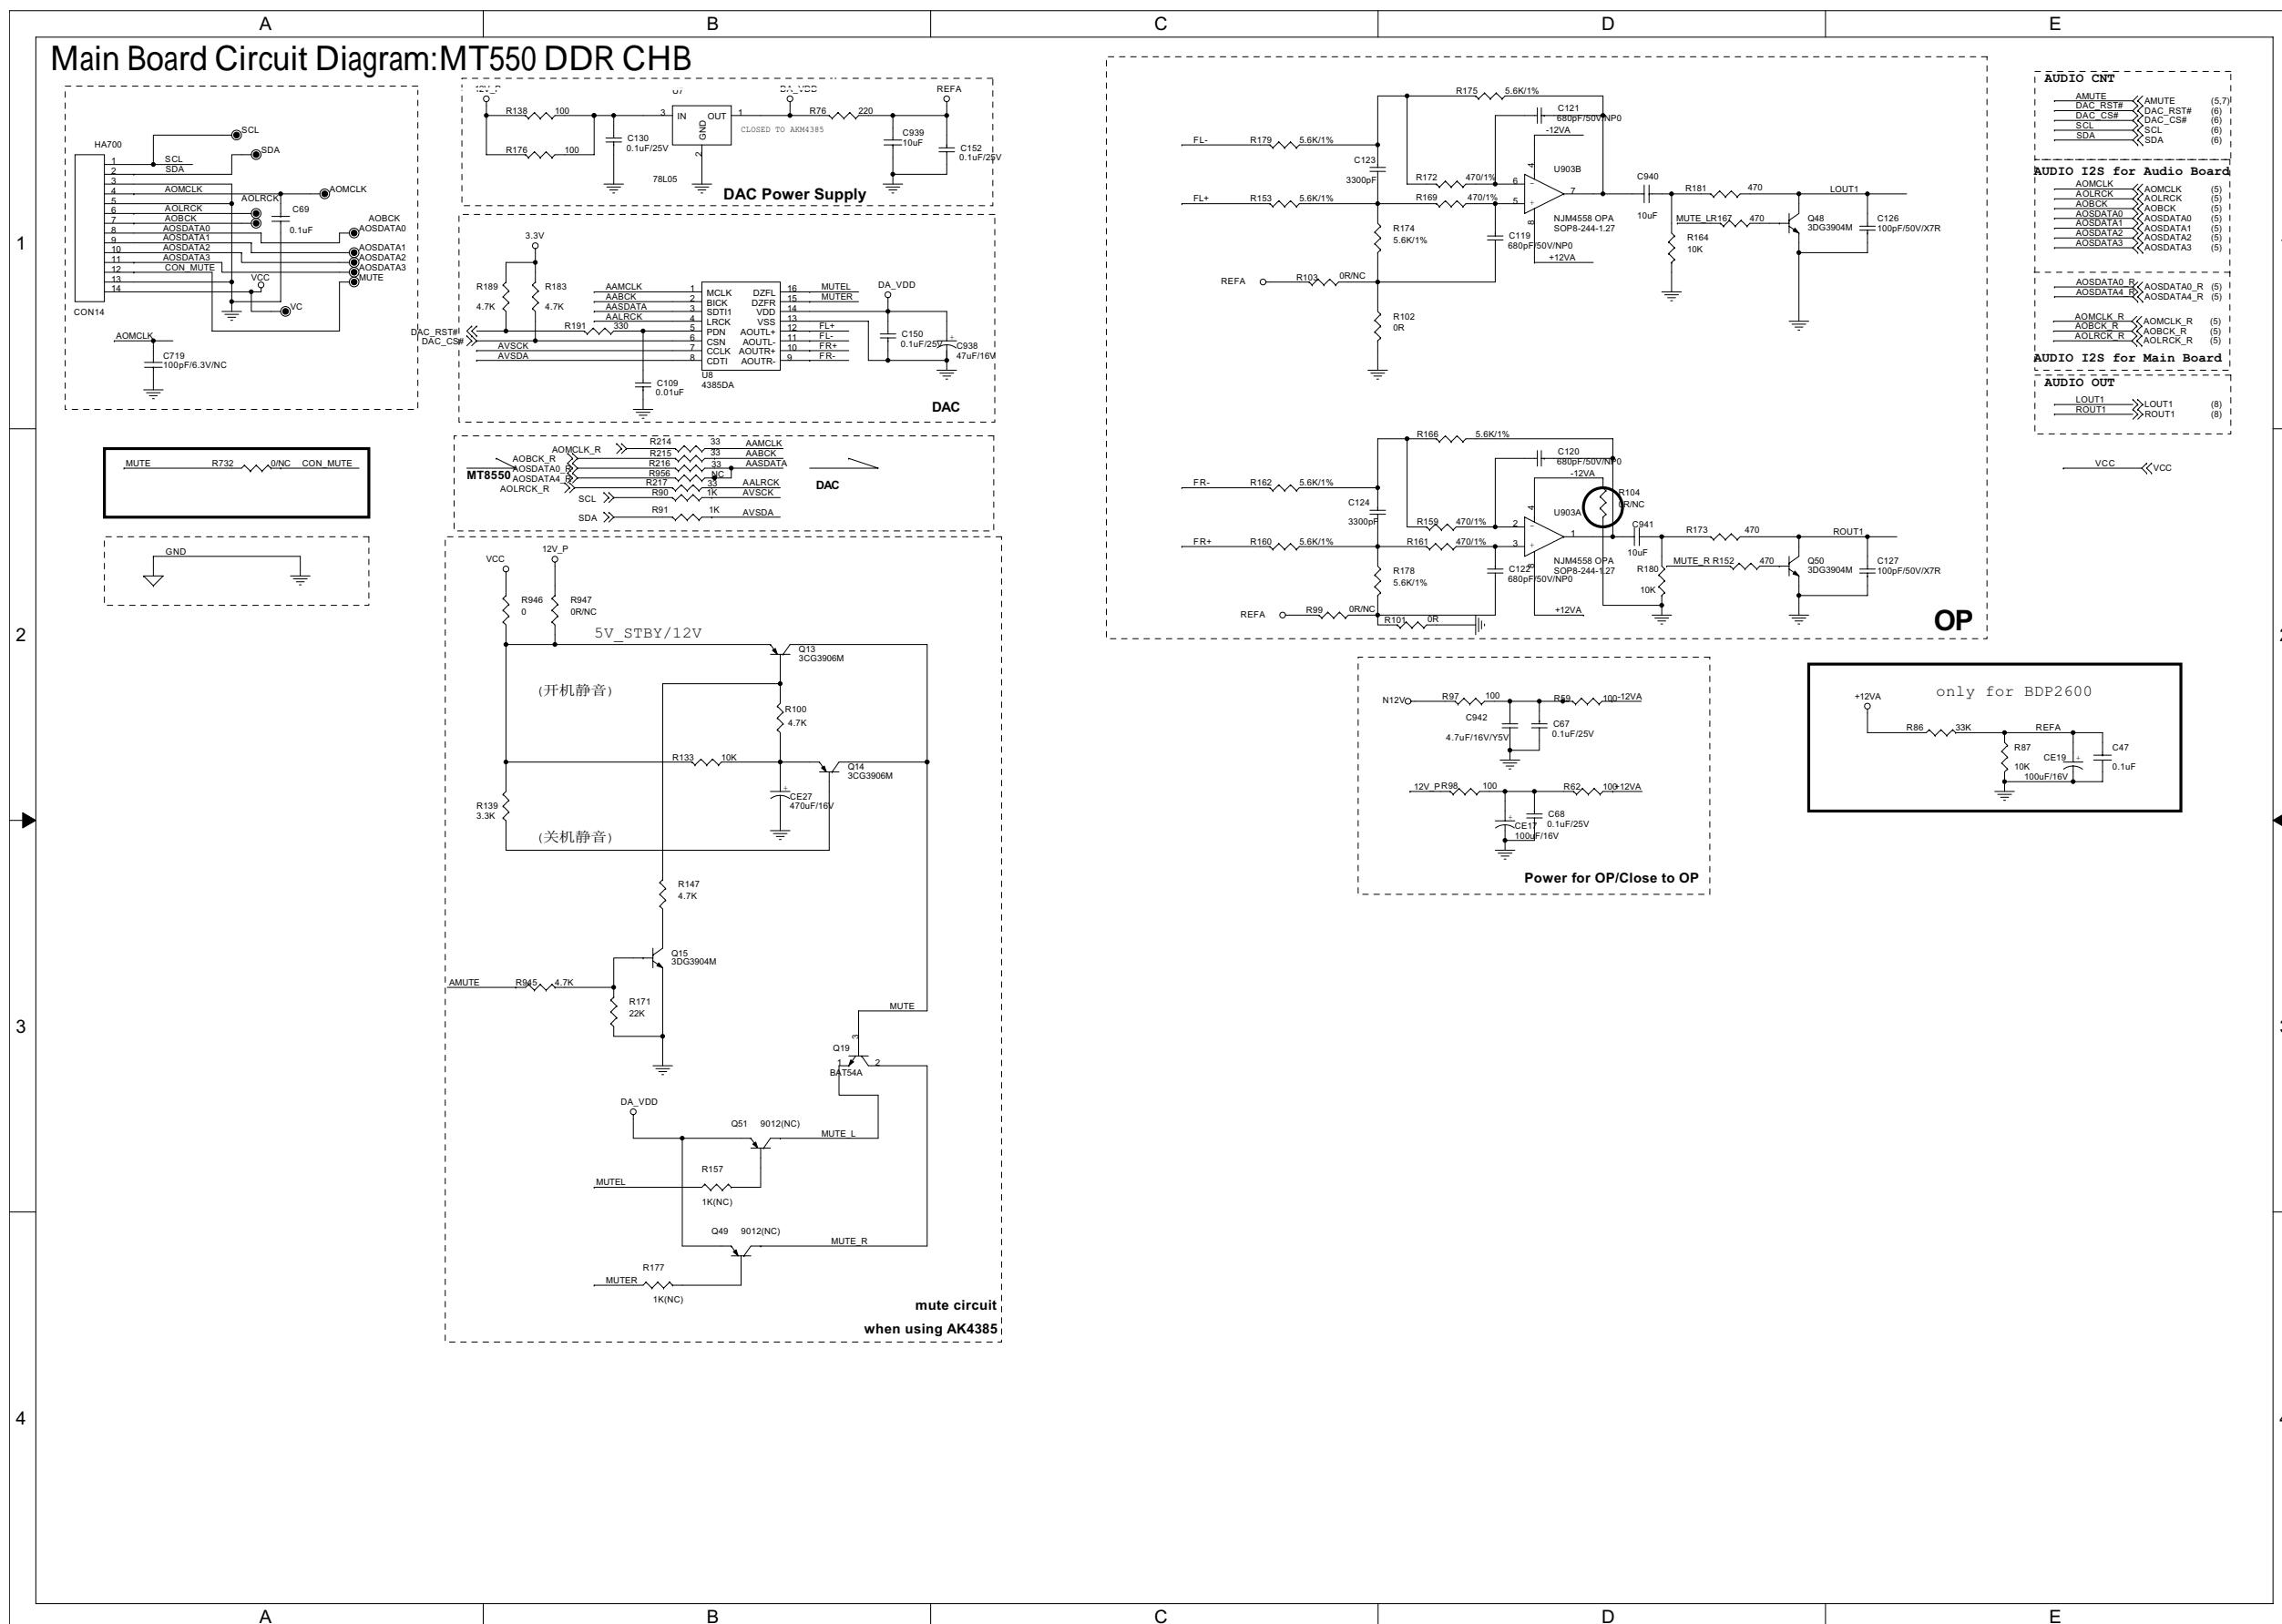

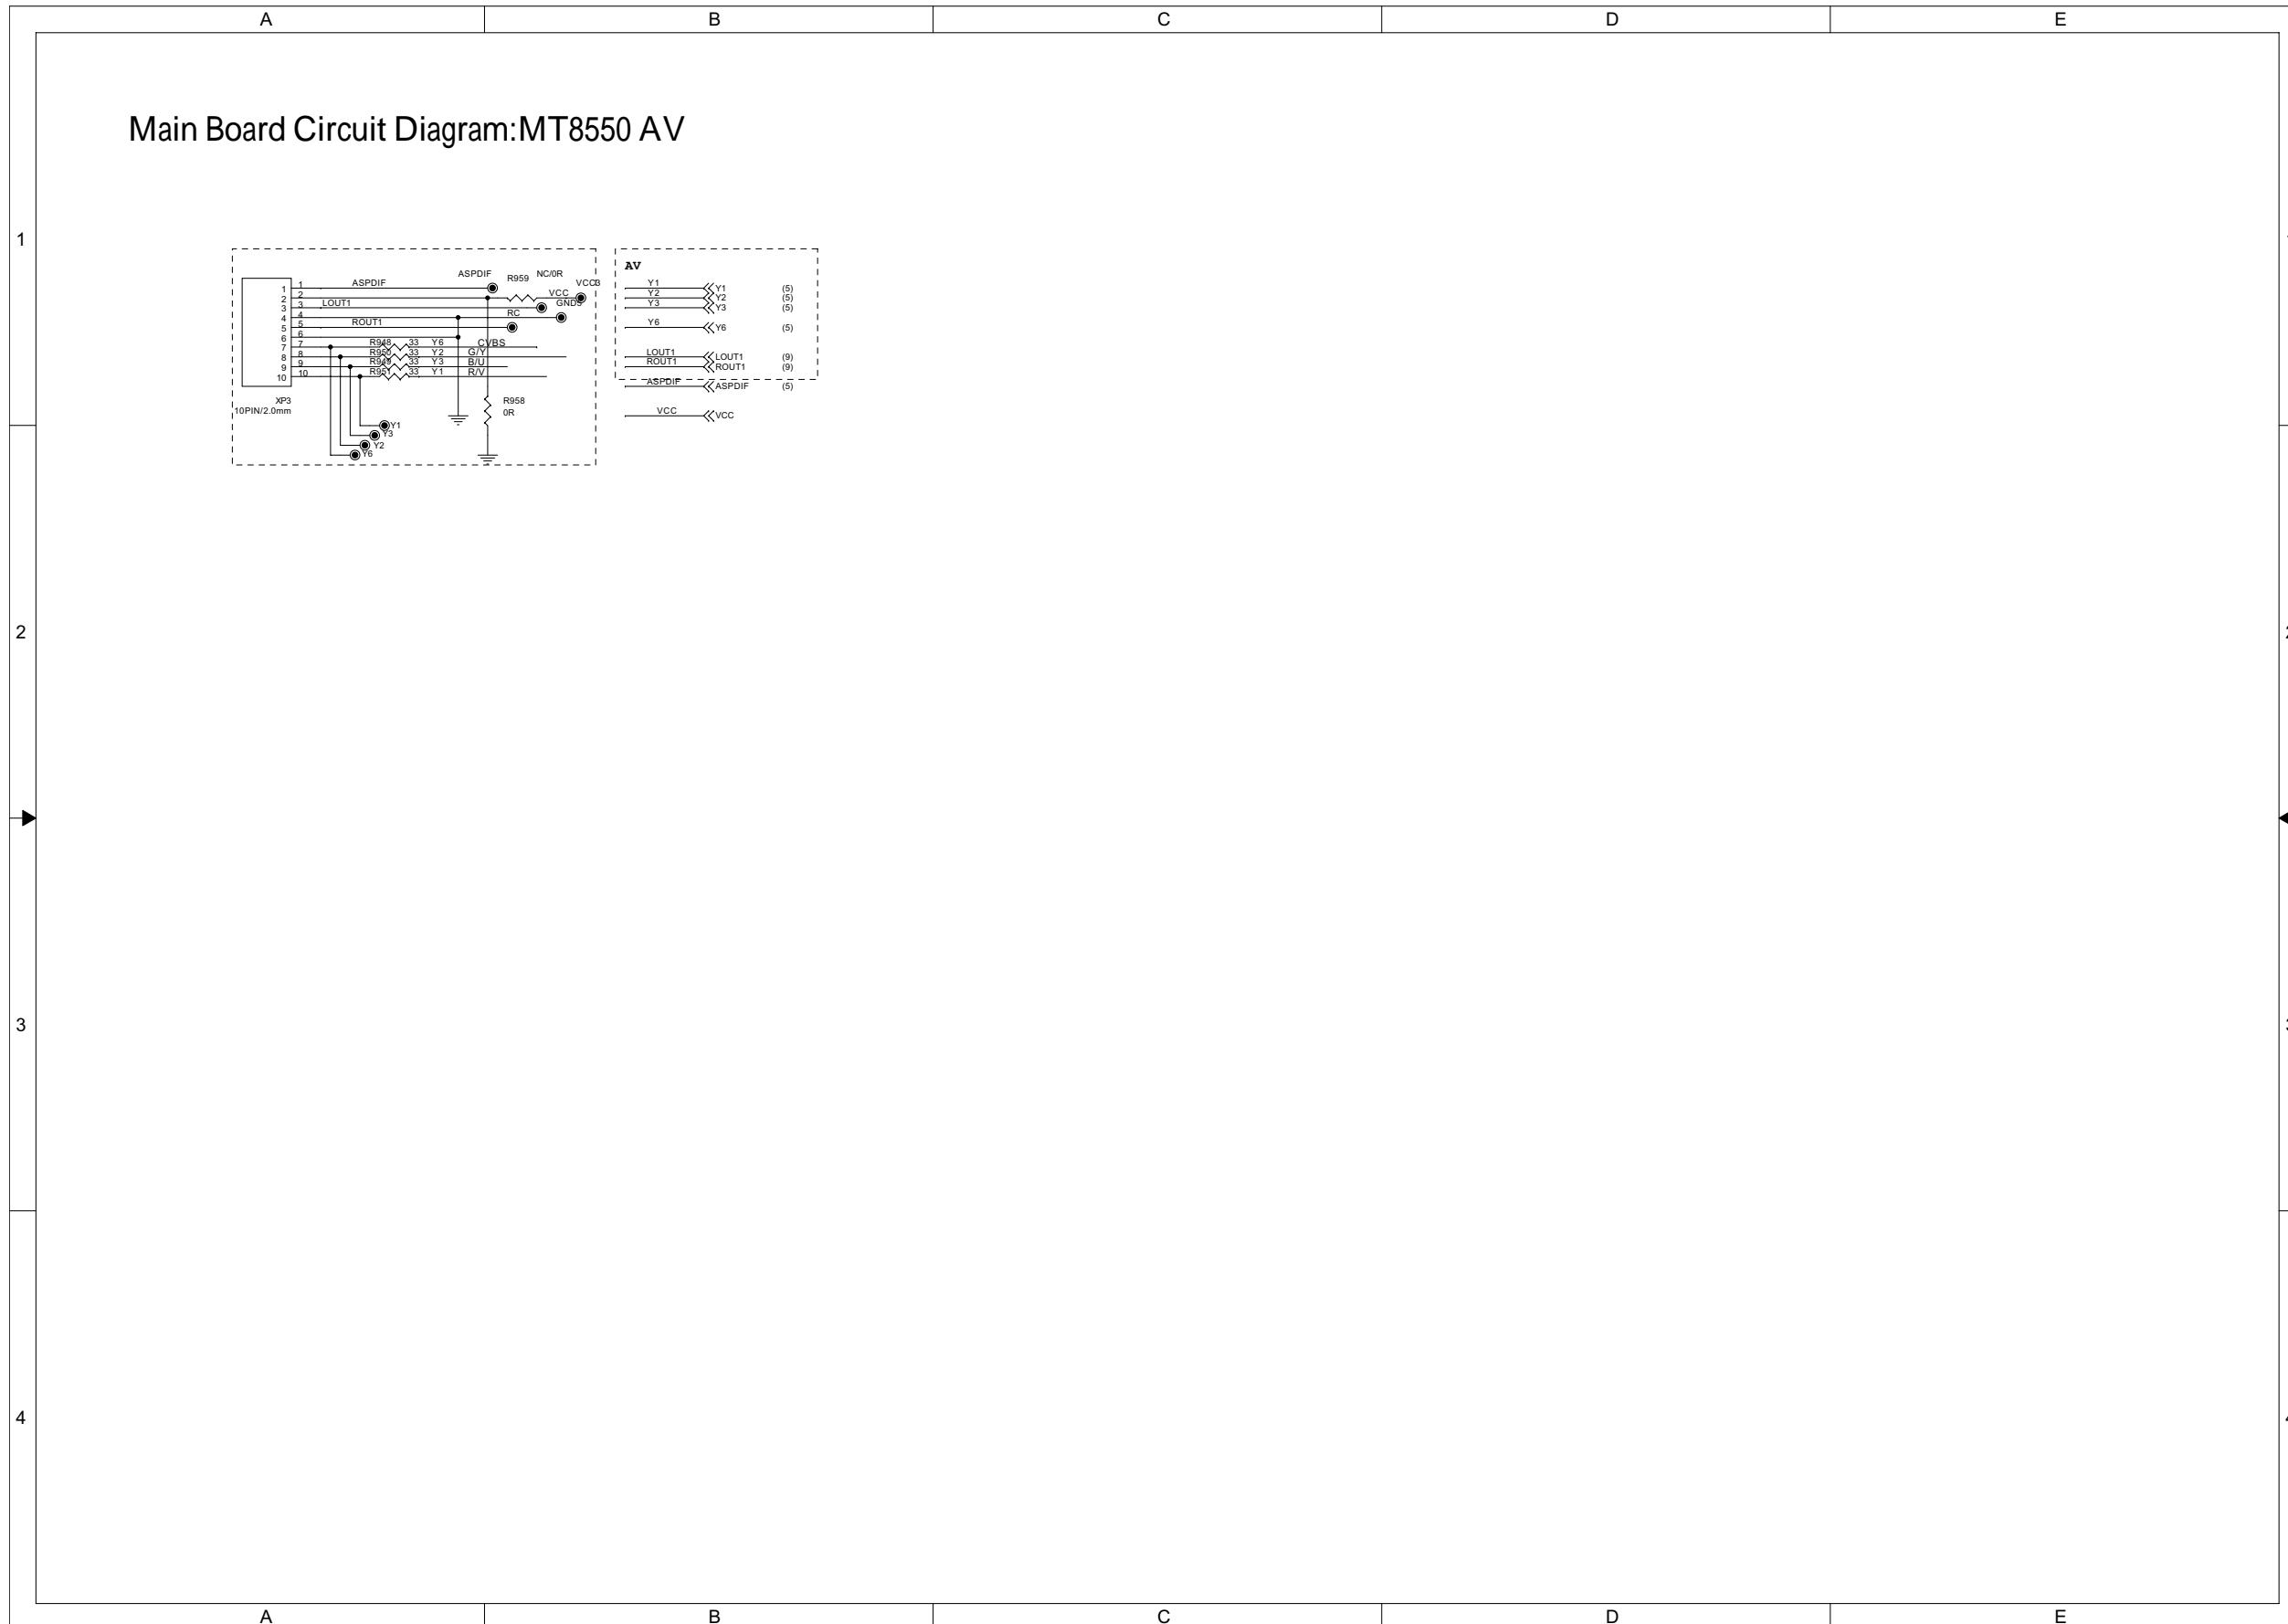

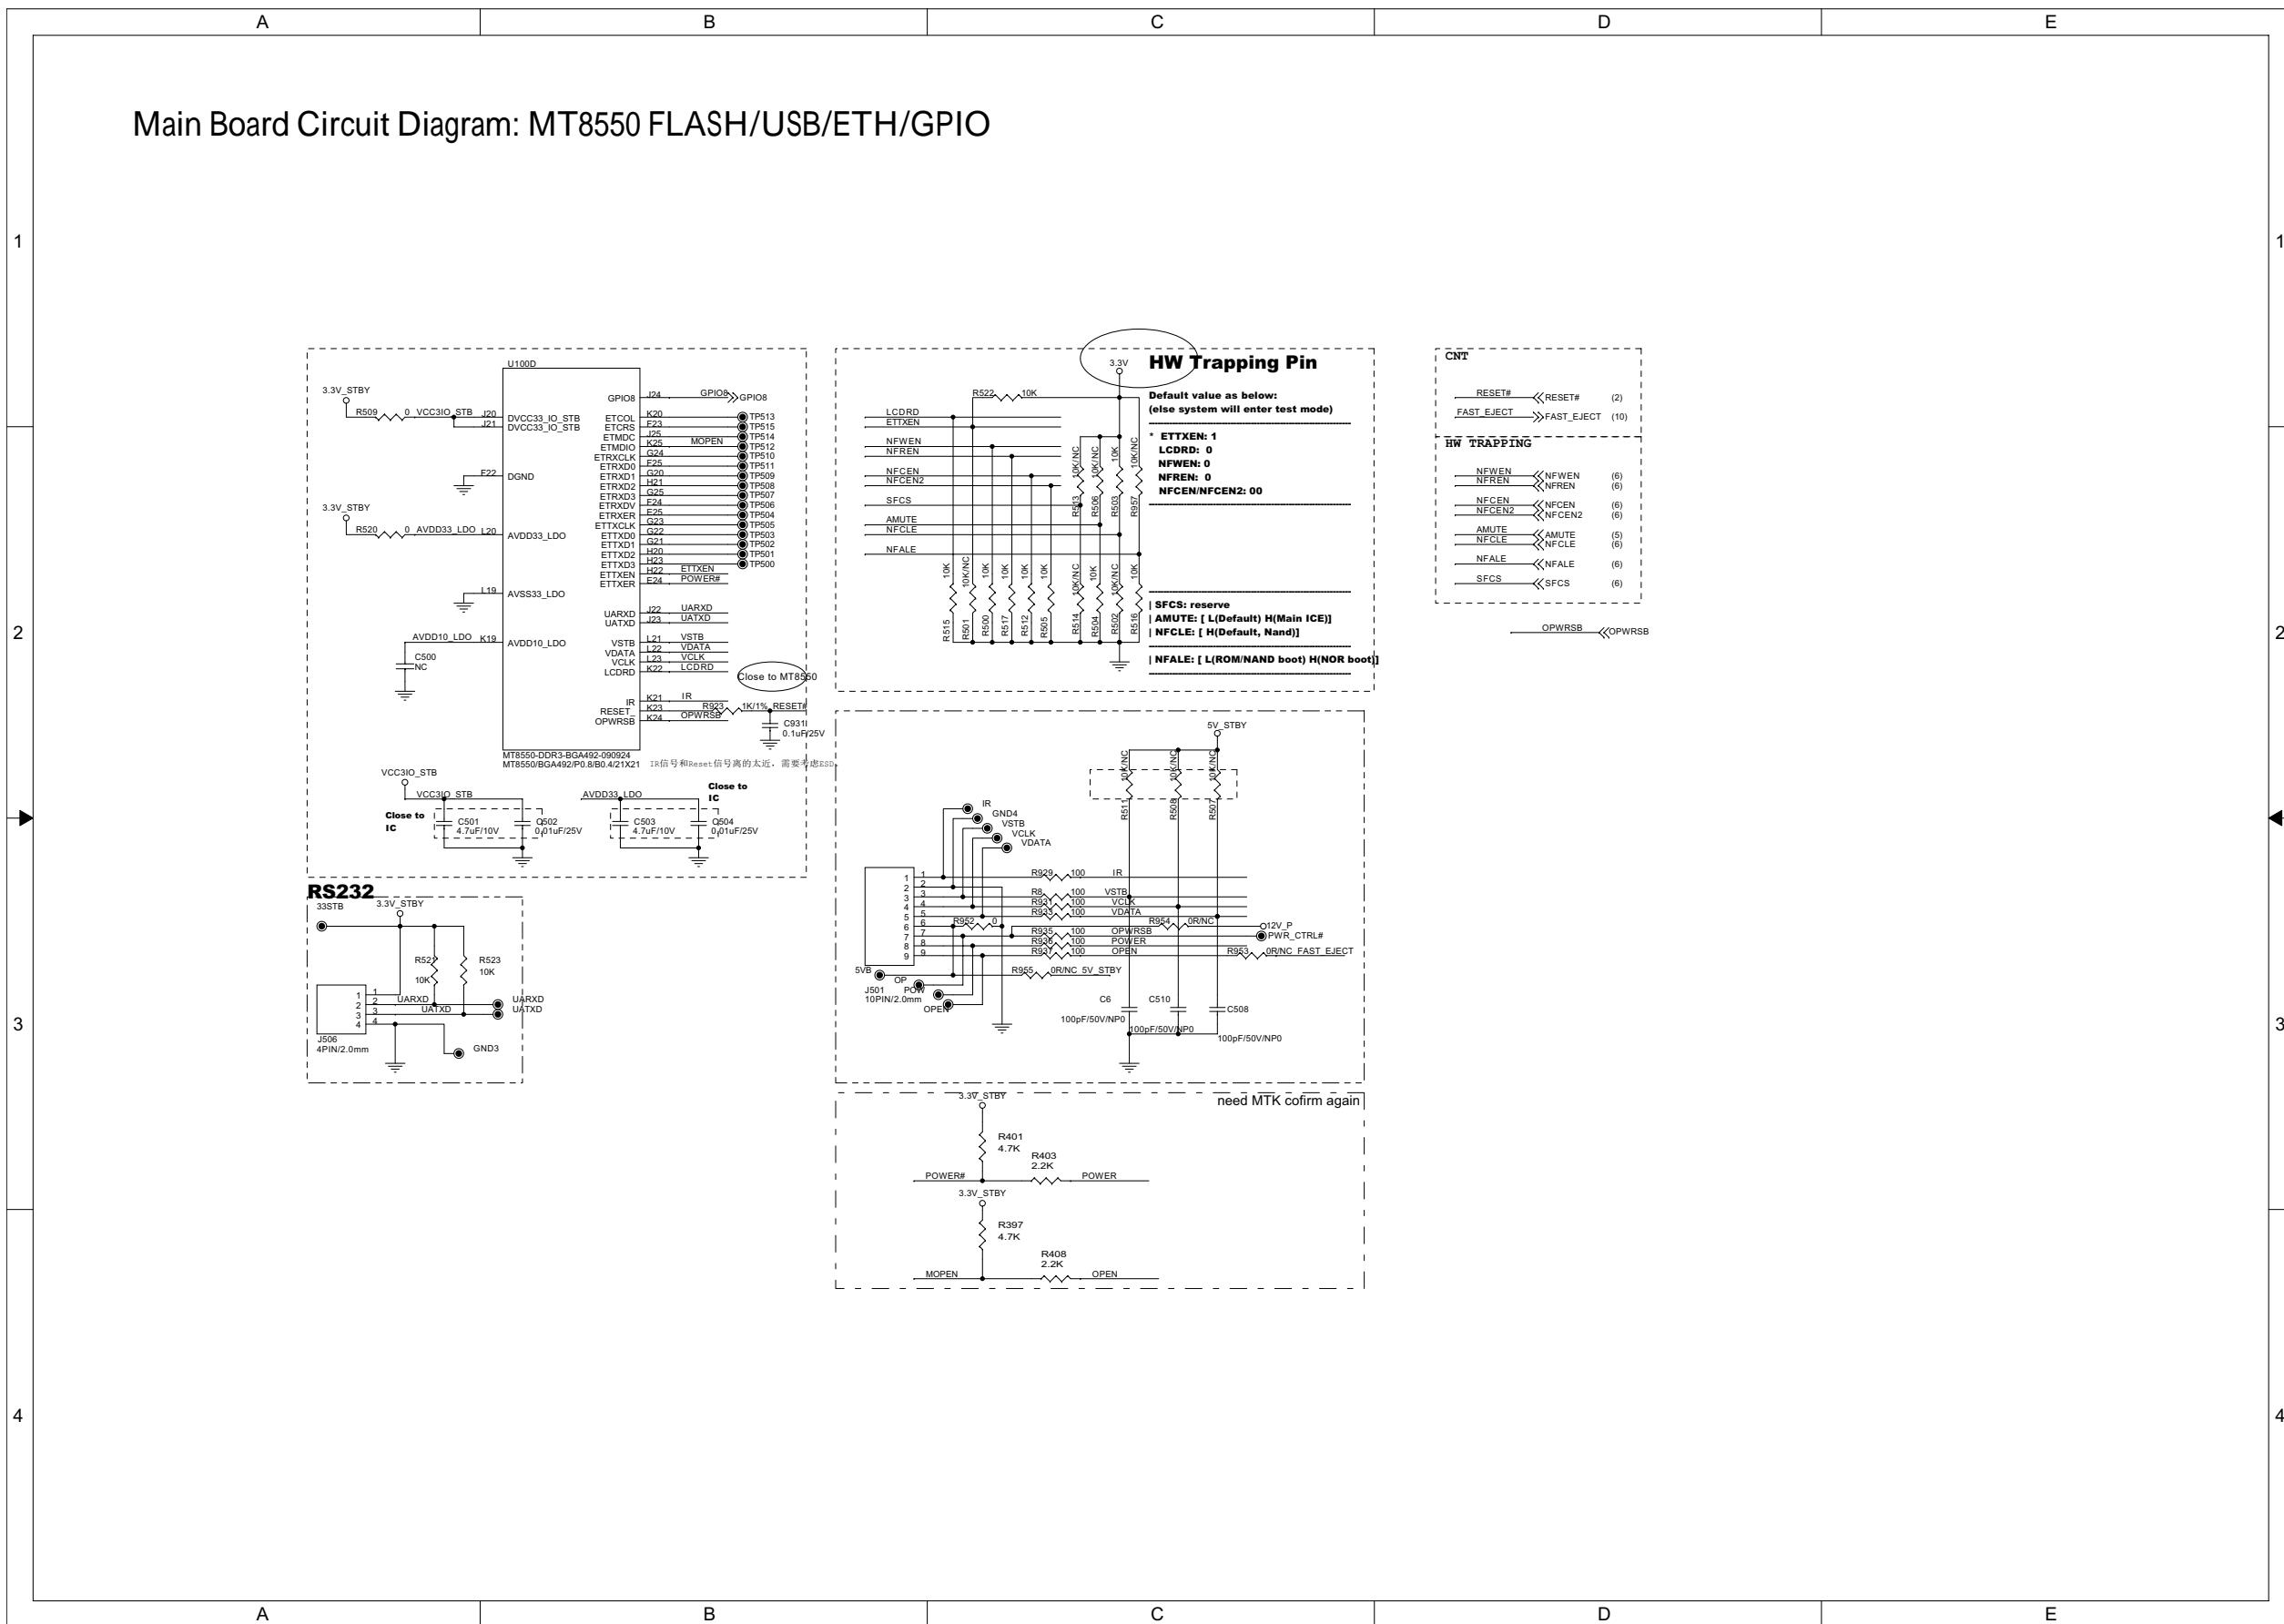

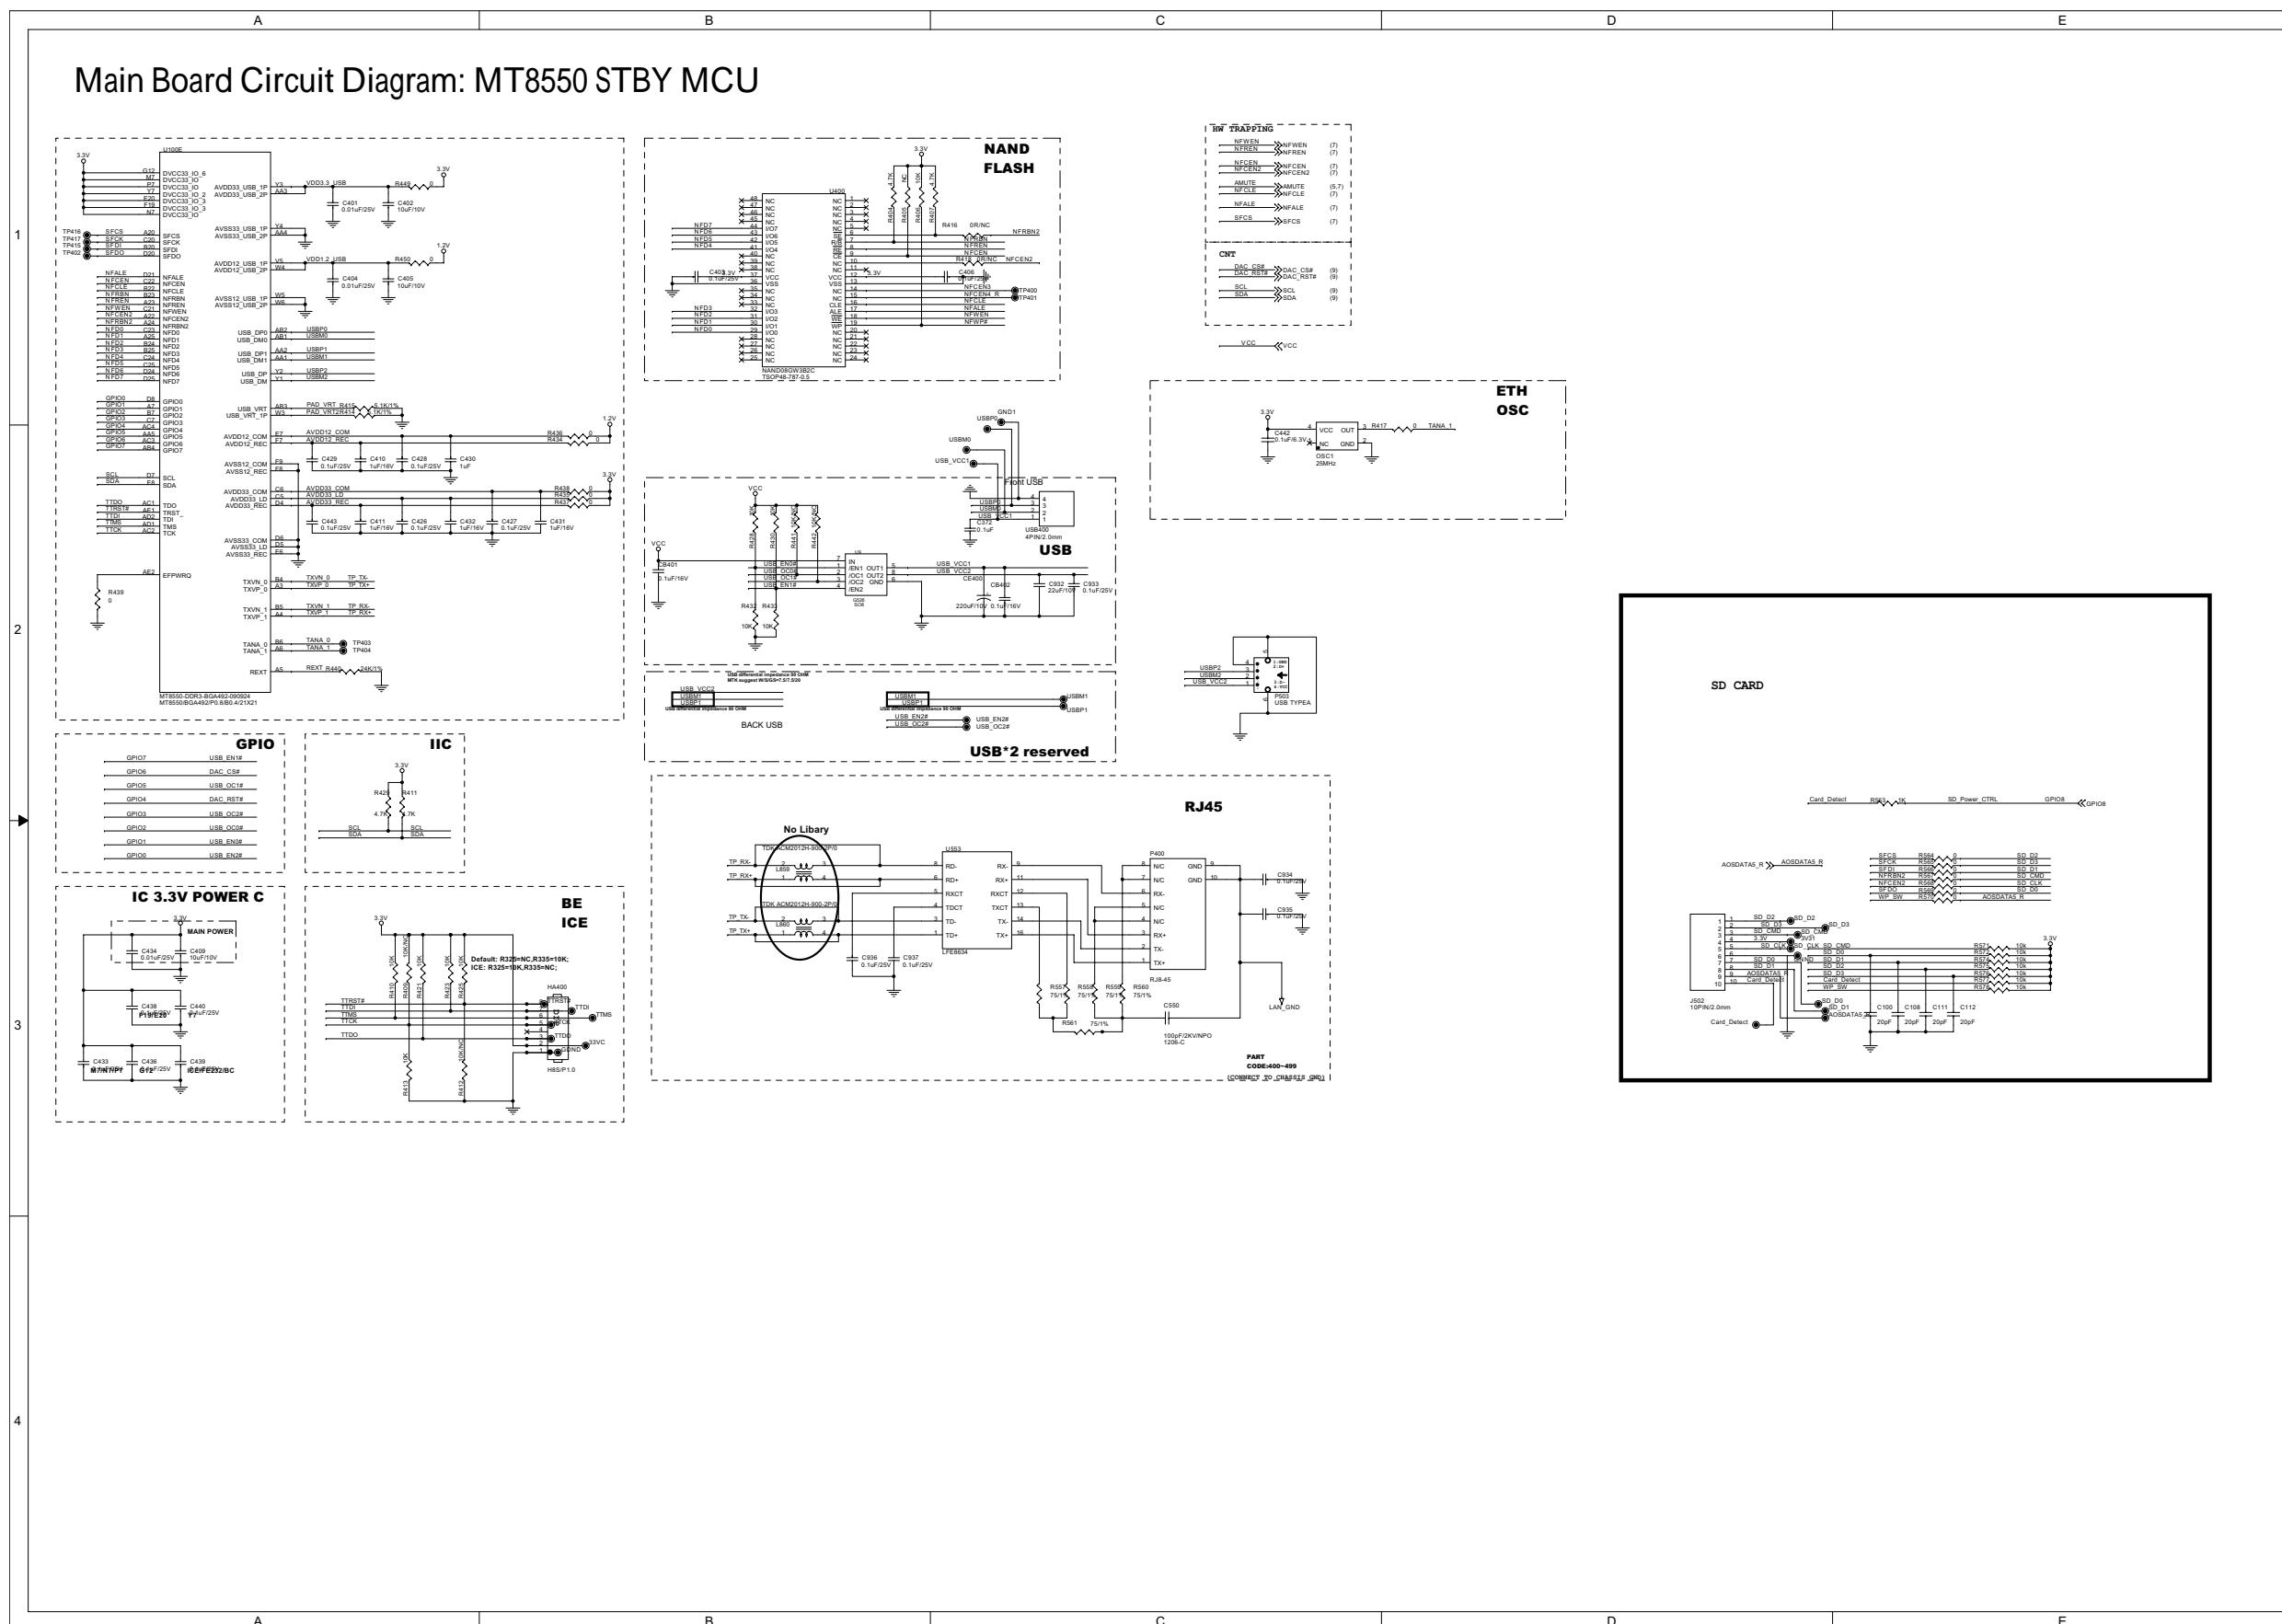

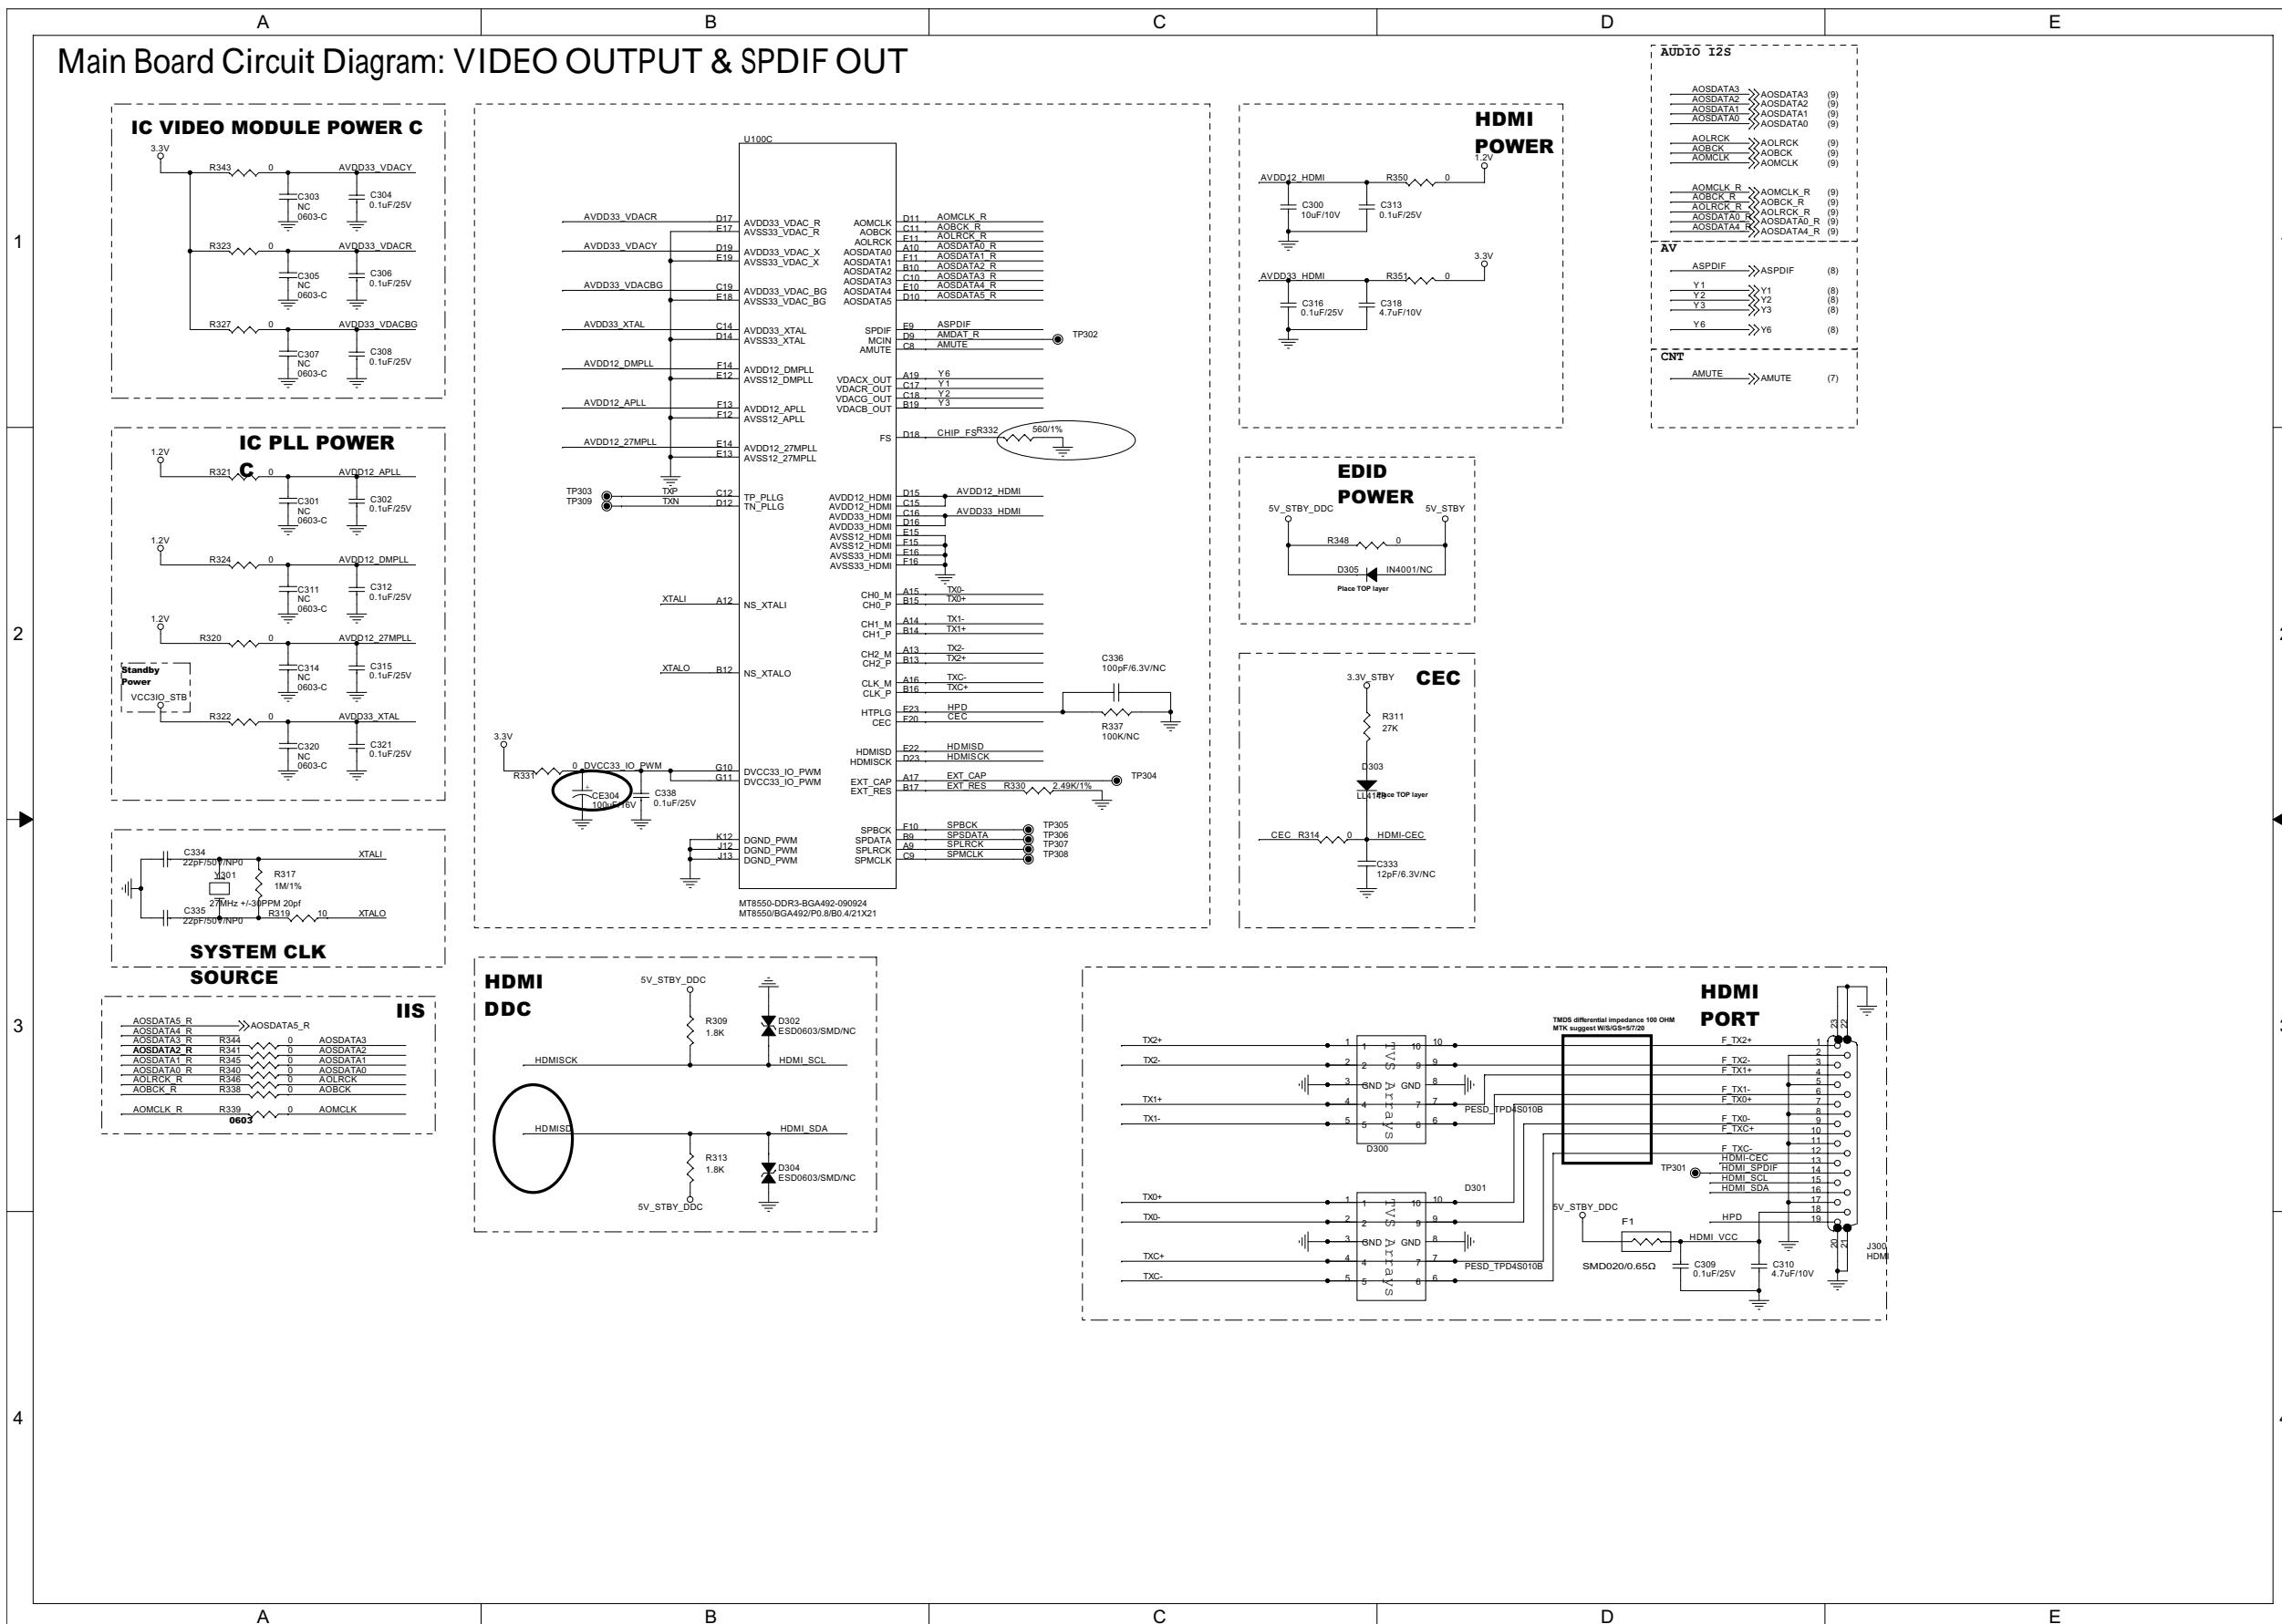

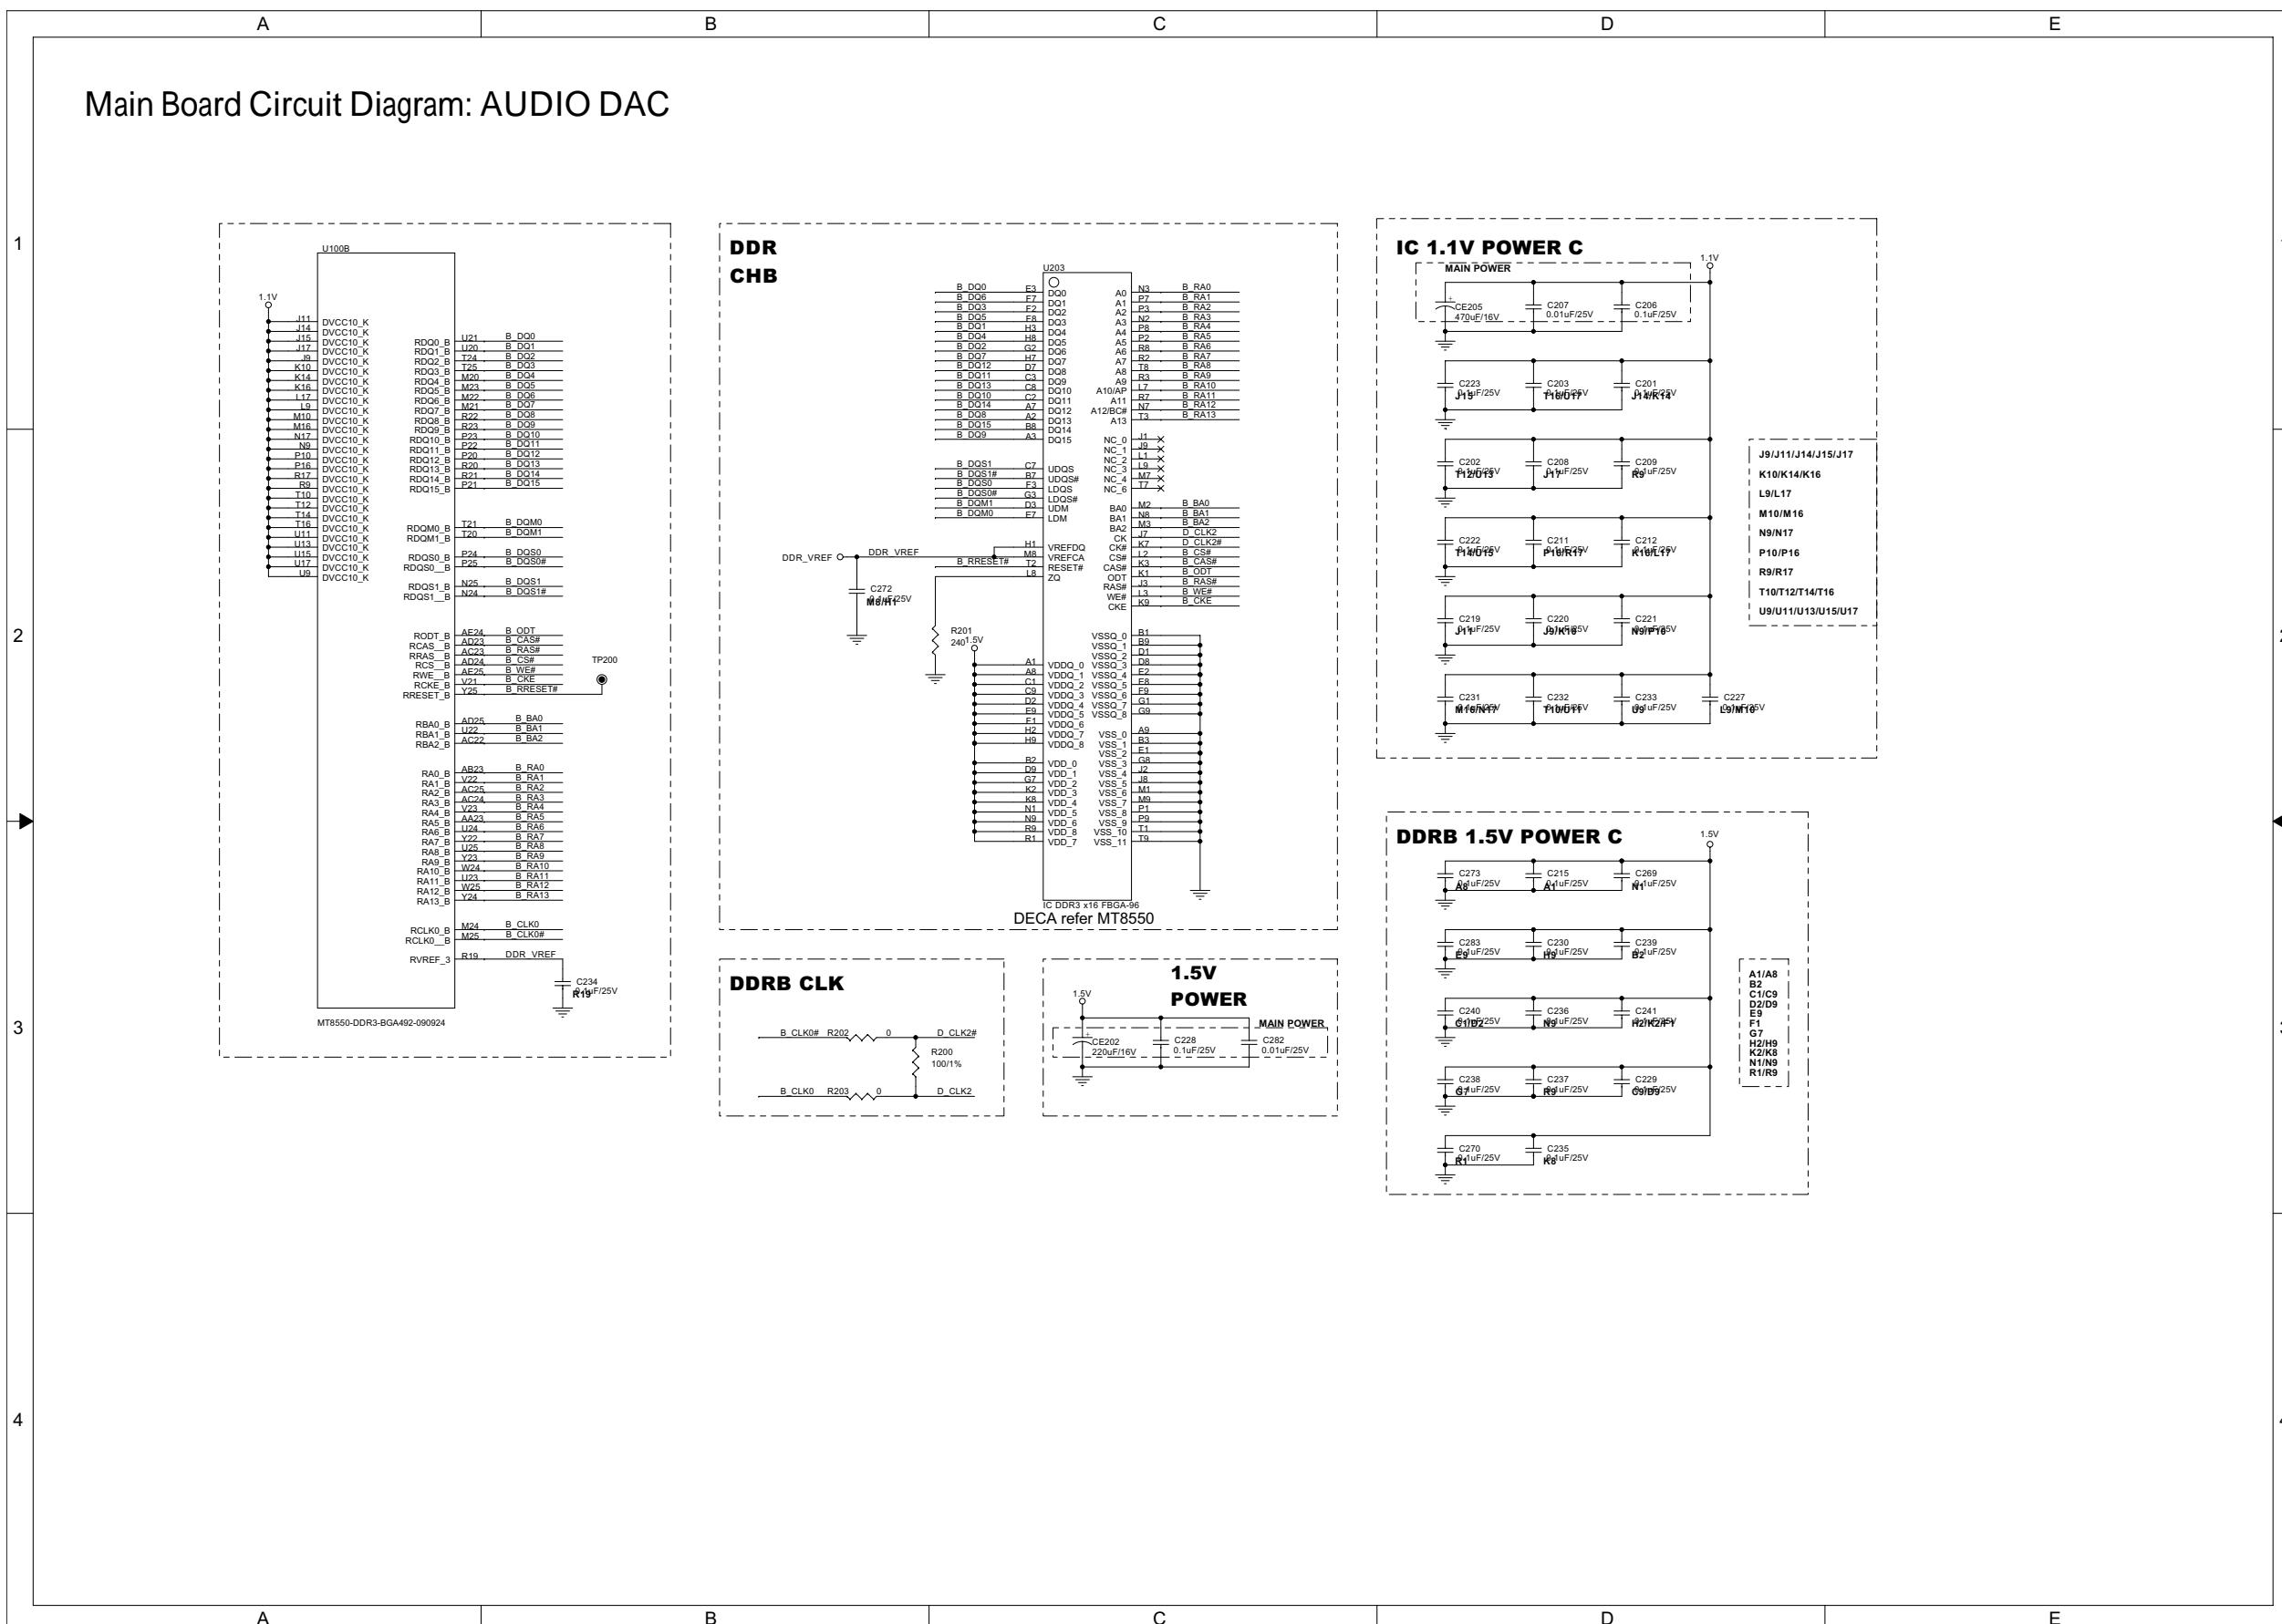

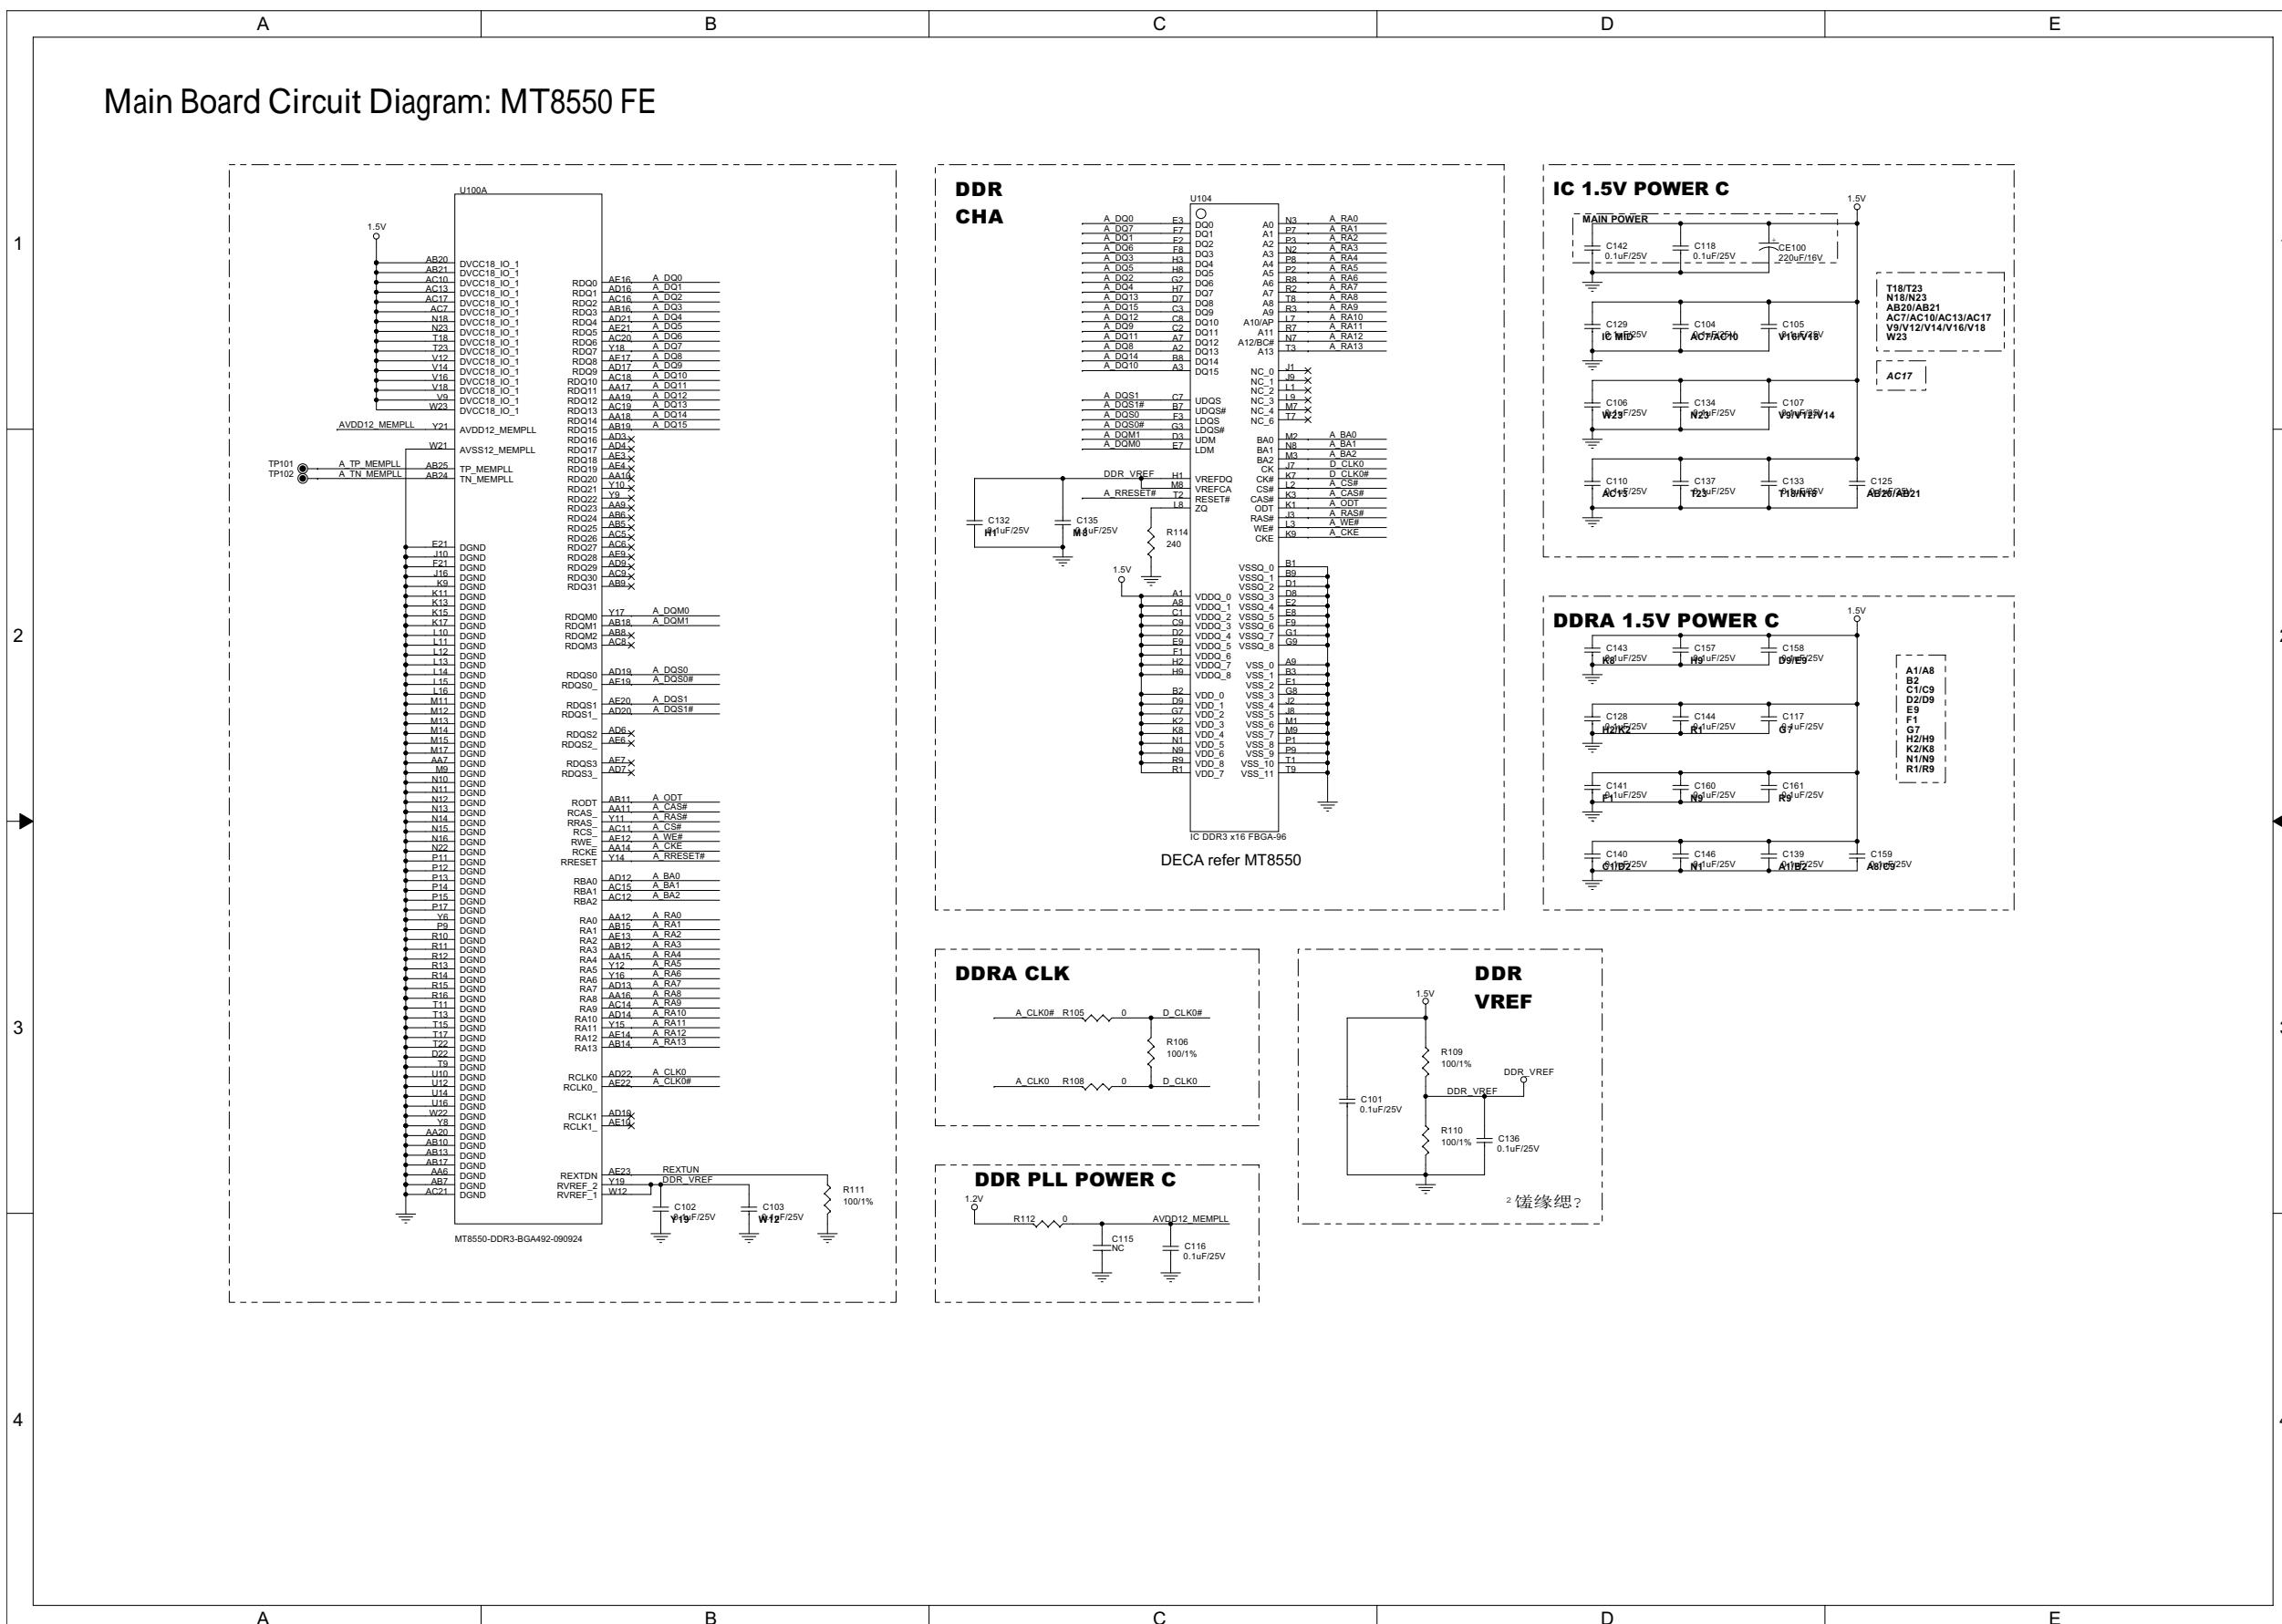

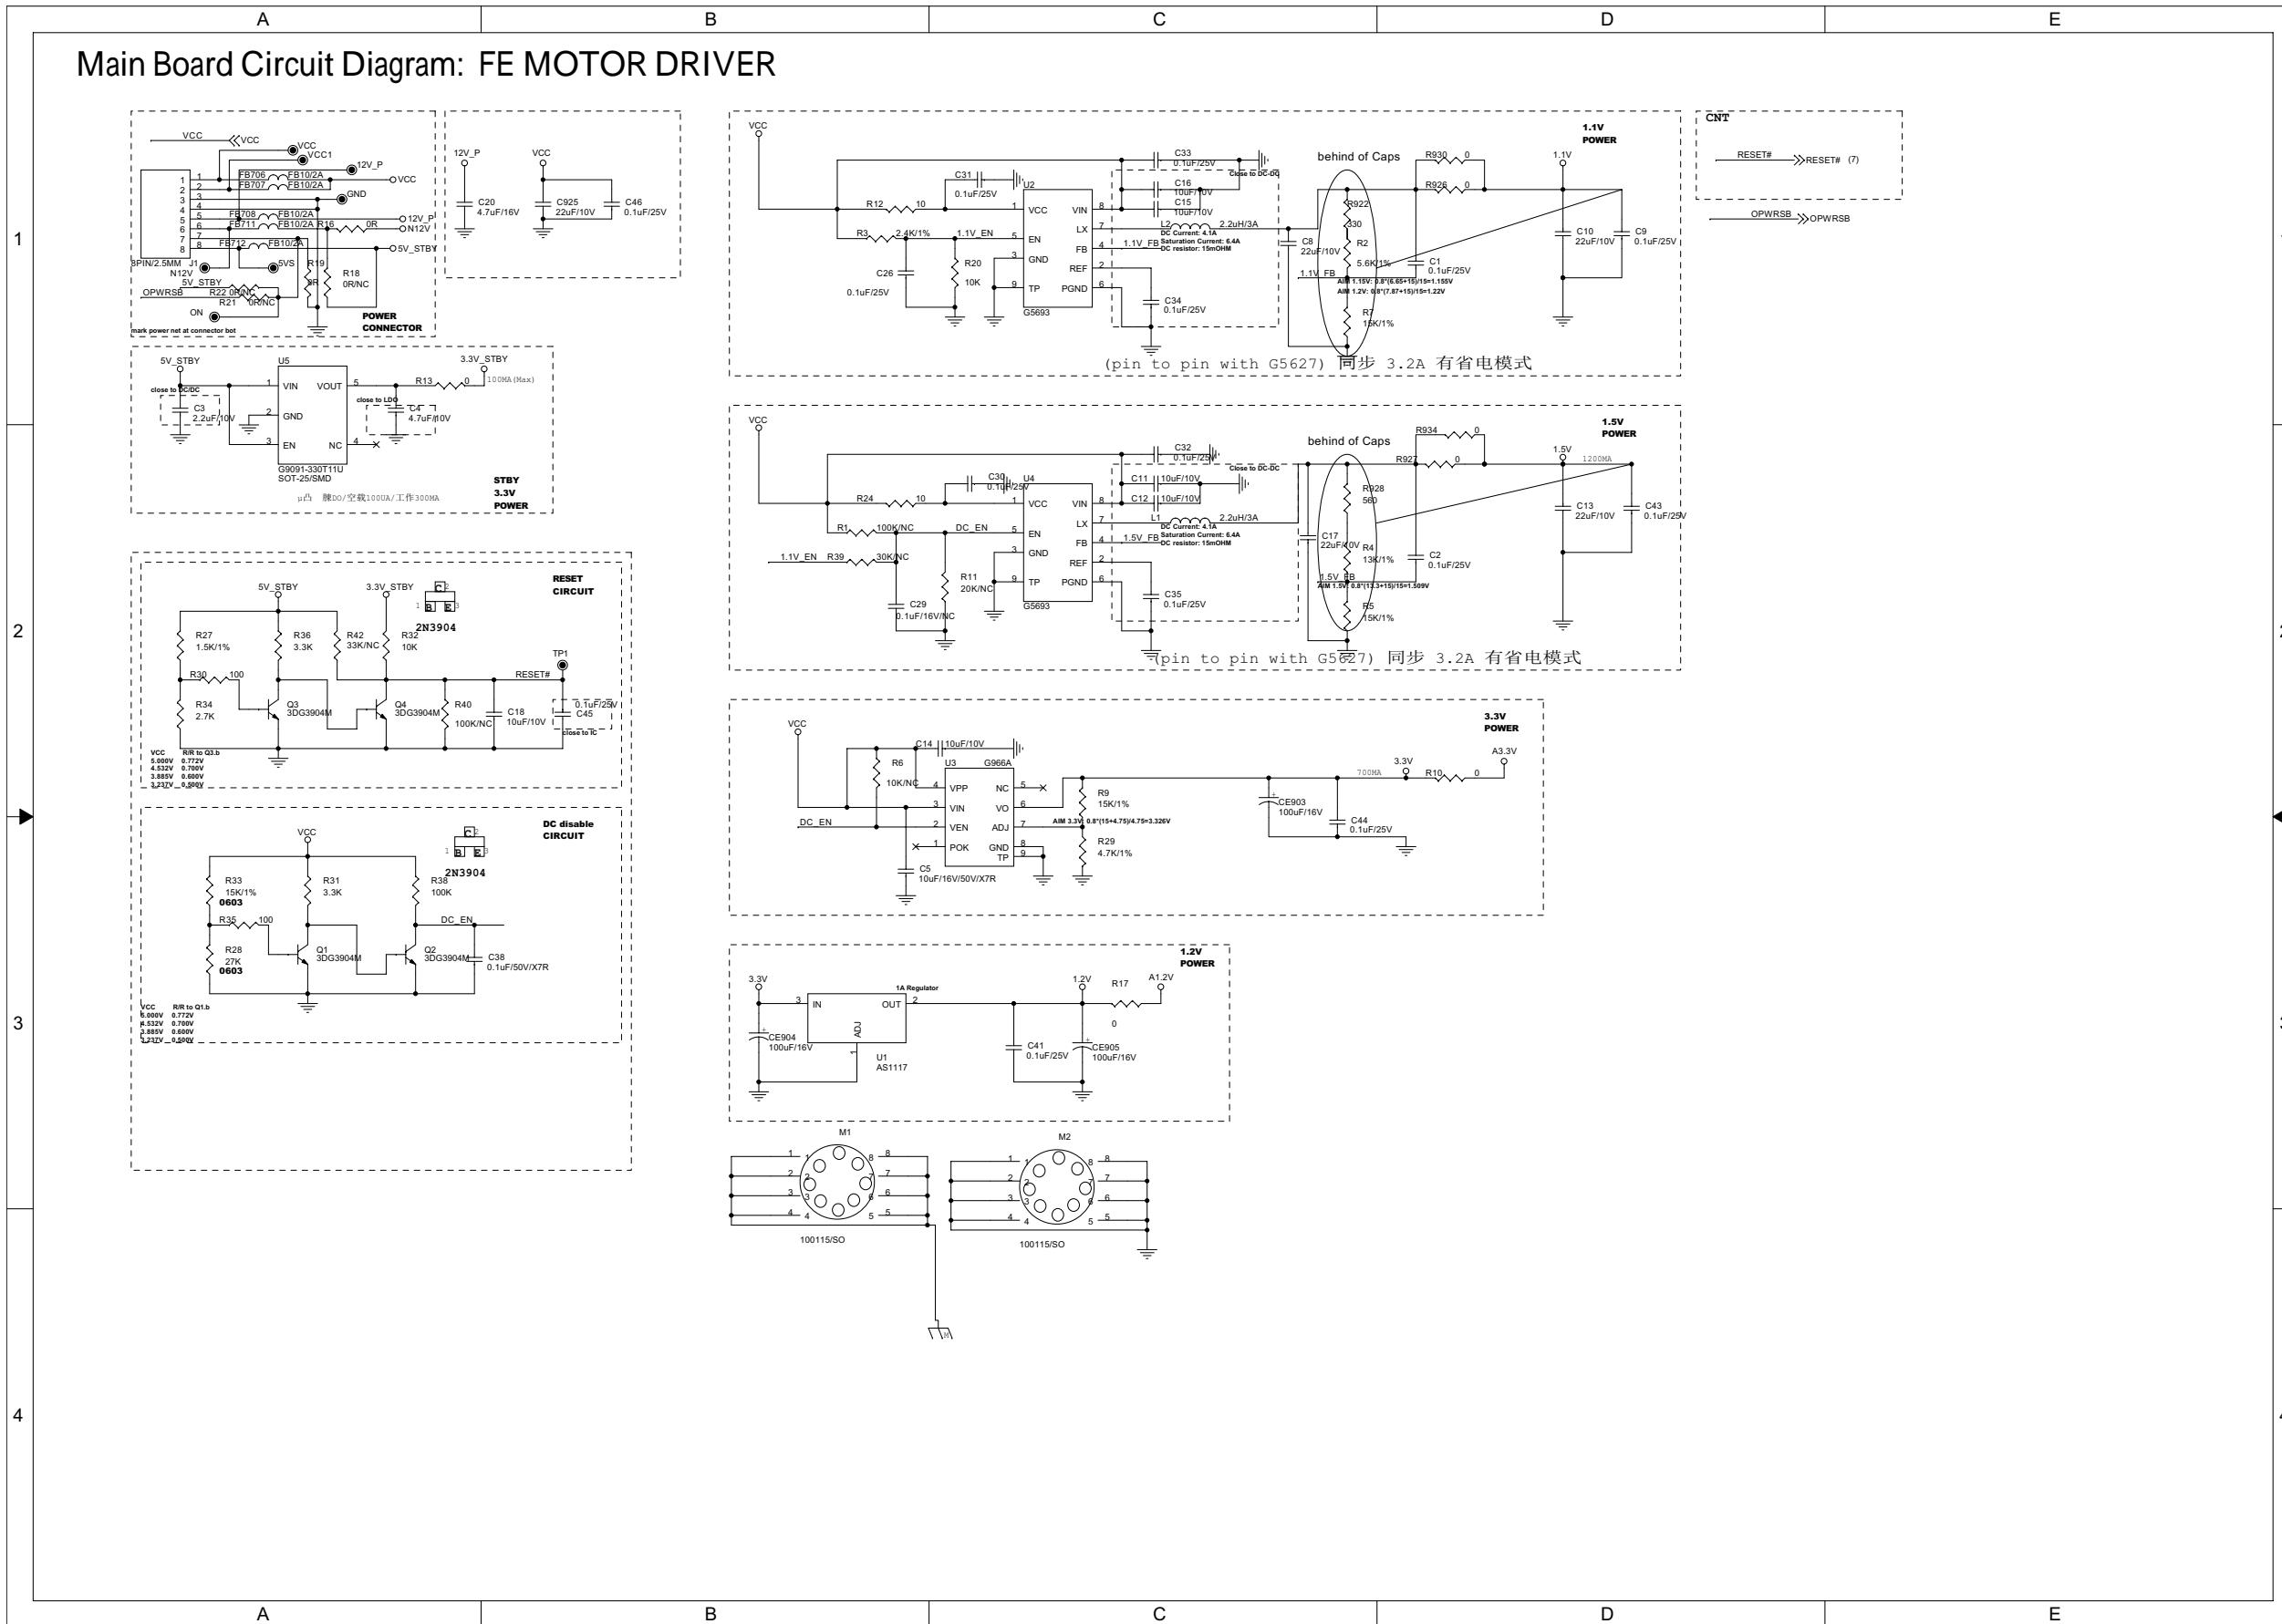

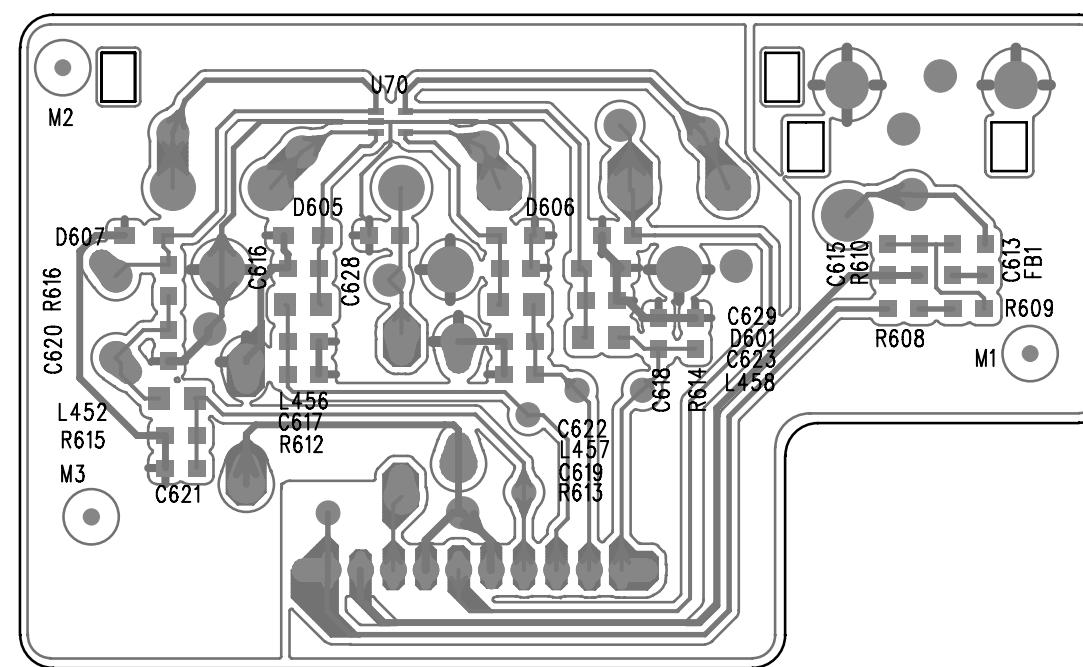

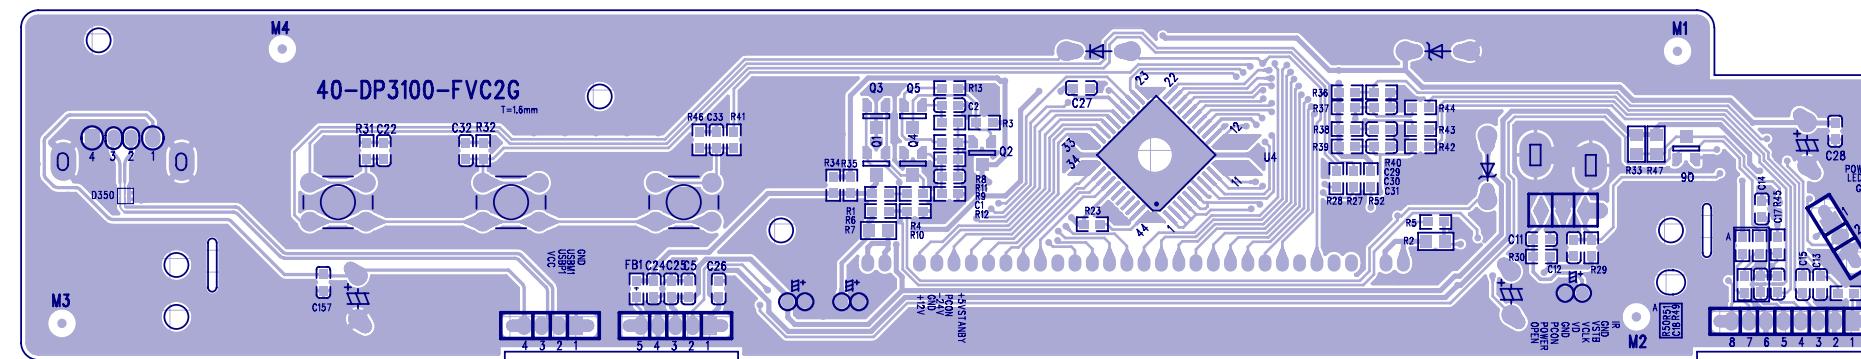

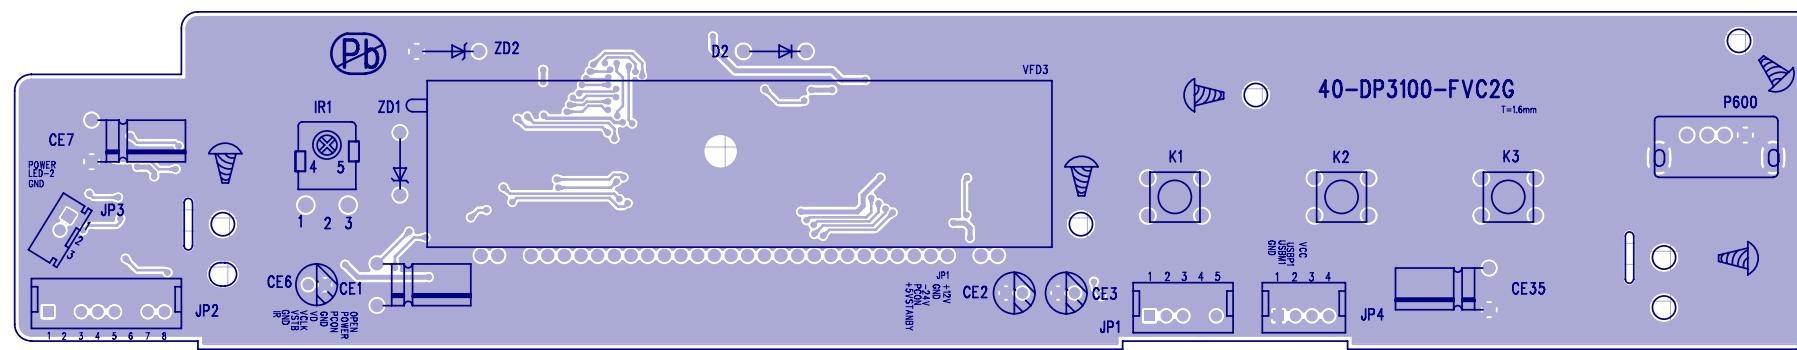

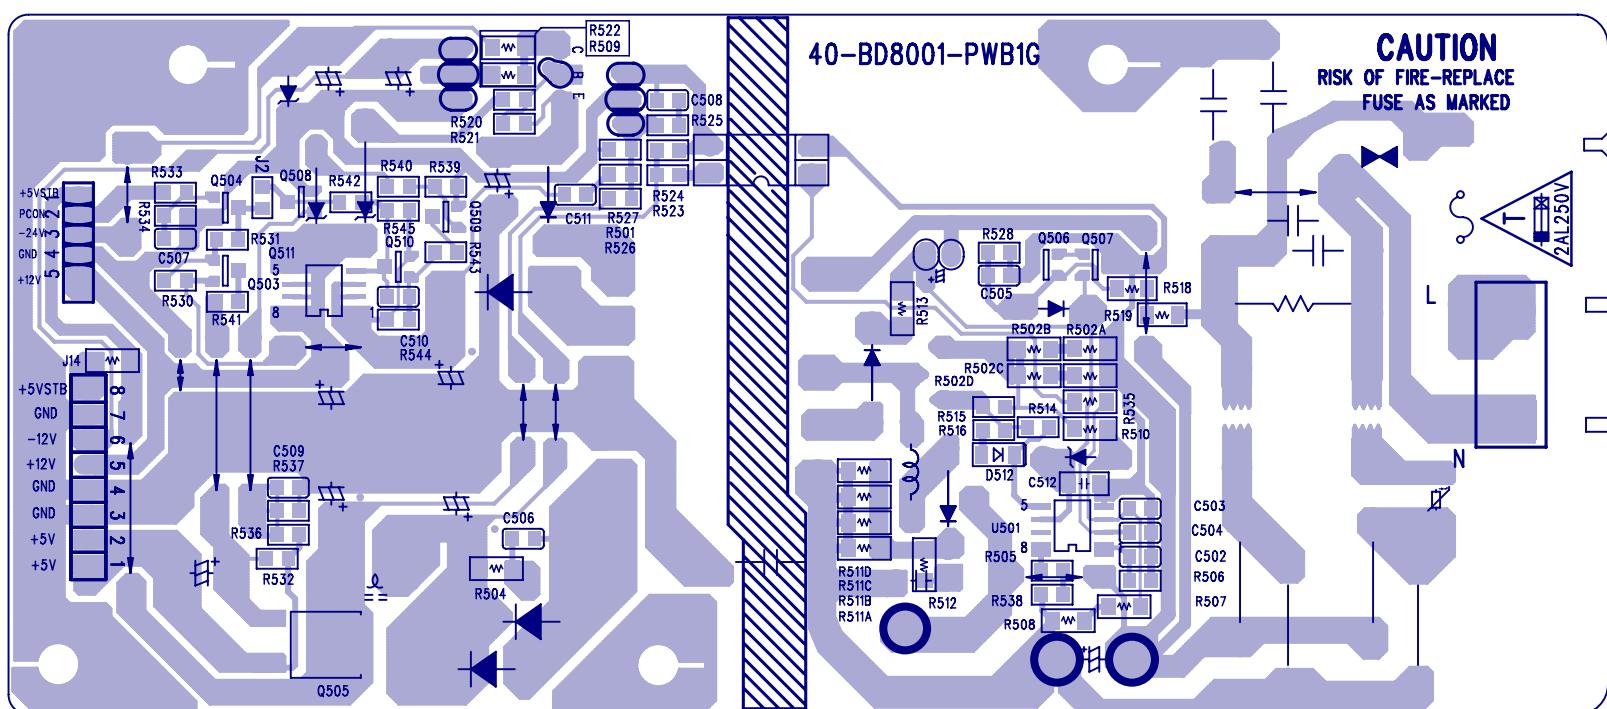

**AV BOARD - PCB LAYOUT**

Front Board Print-layout (Top and Bottom side):

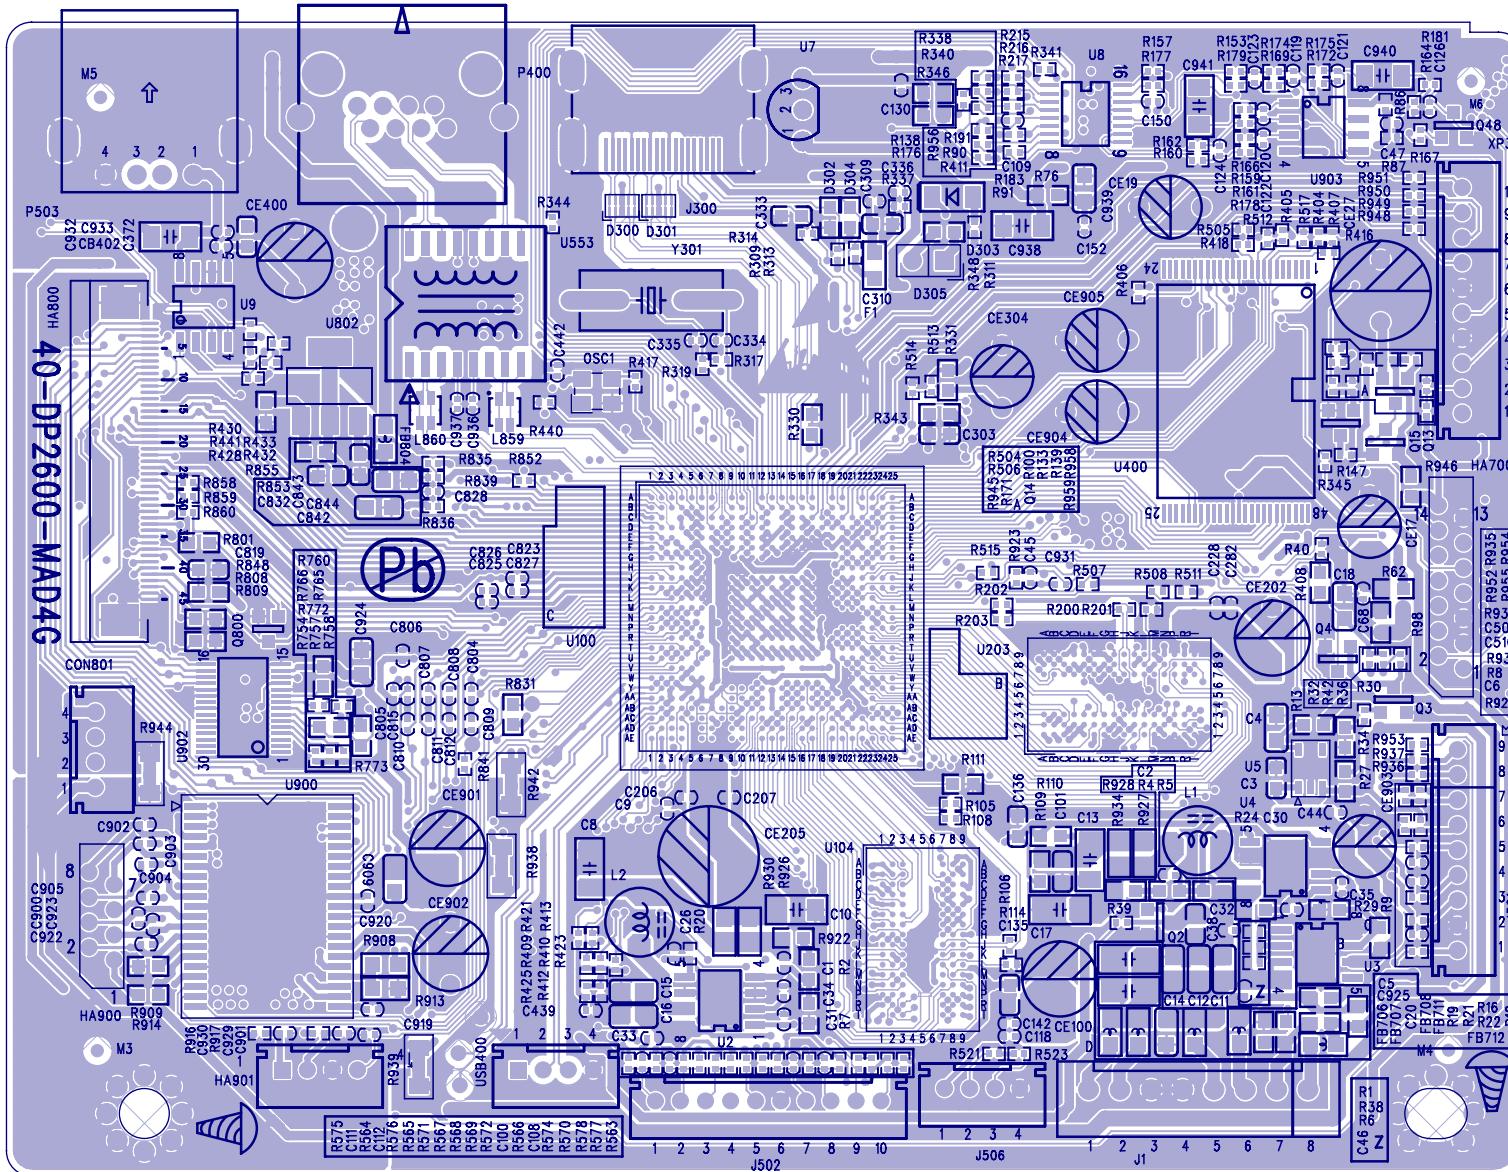

## Power Board Print-layout (Bottom side):

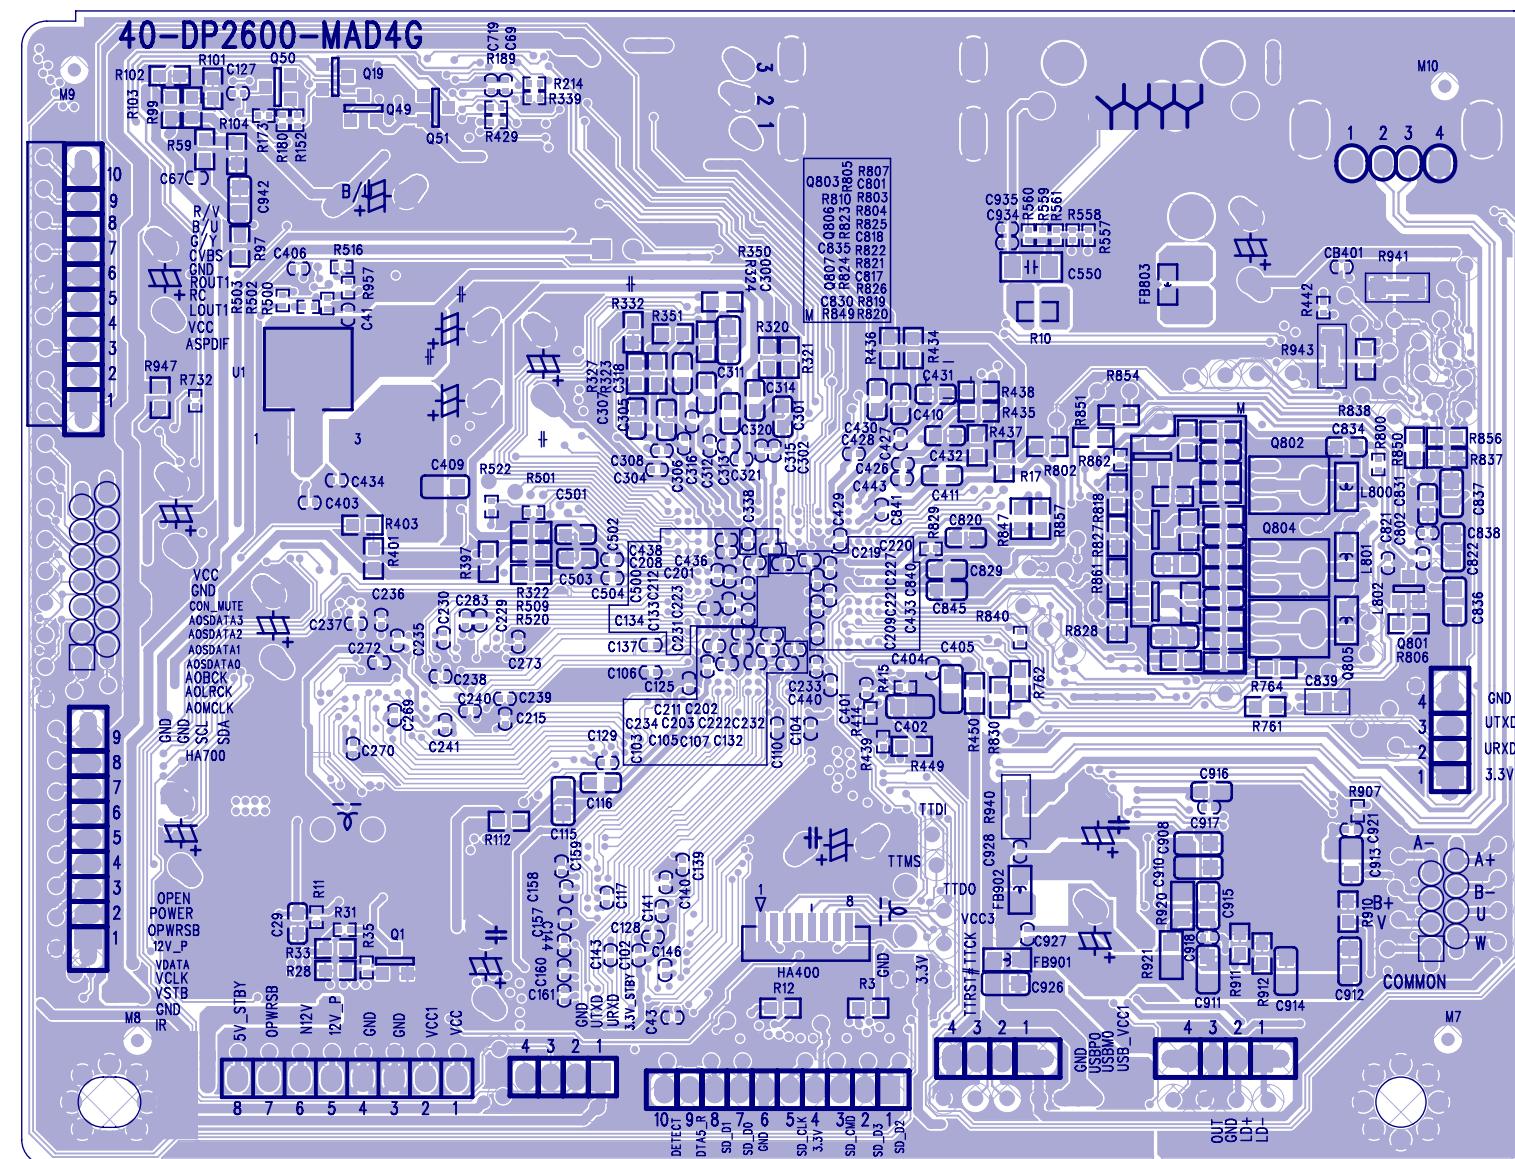

## Switch Board Print-layout (Bottom side):

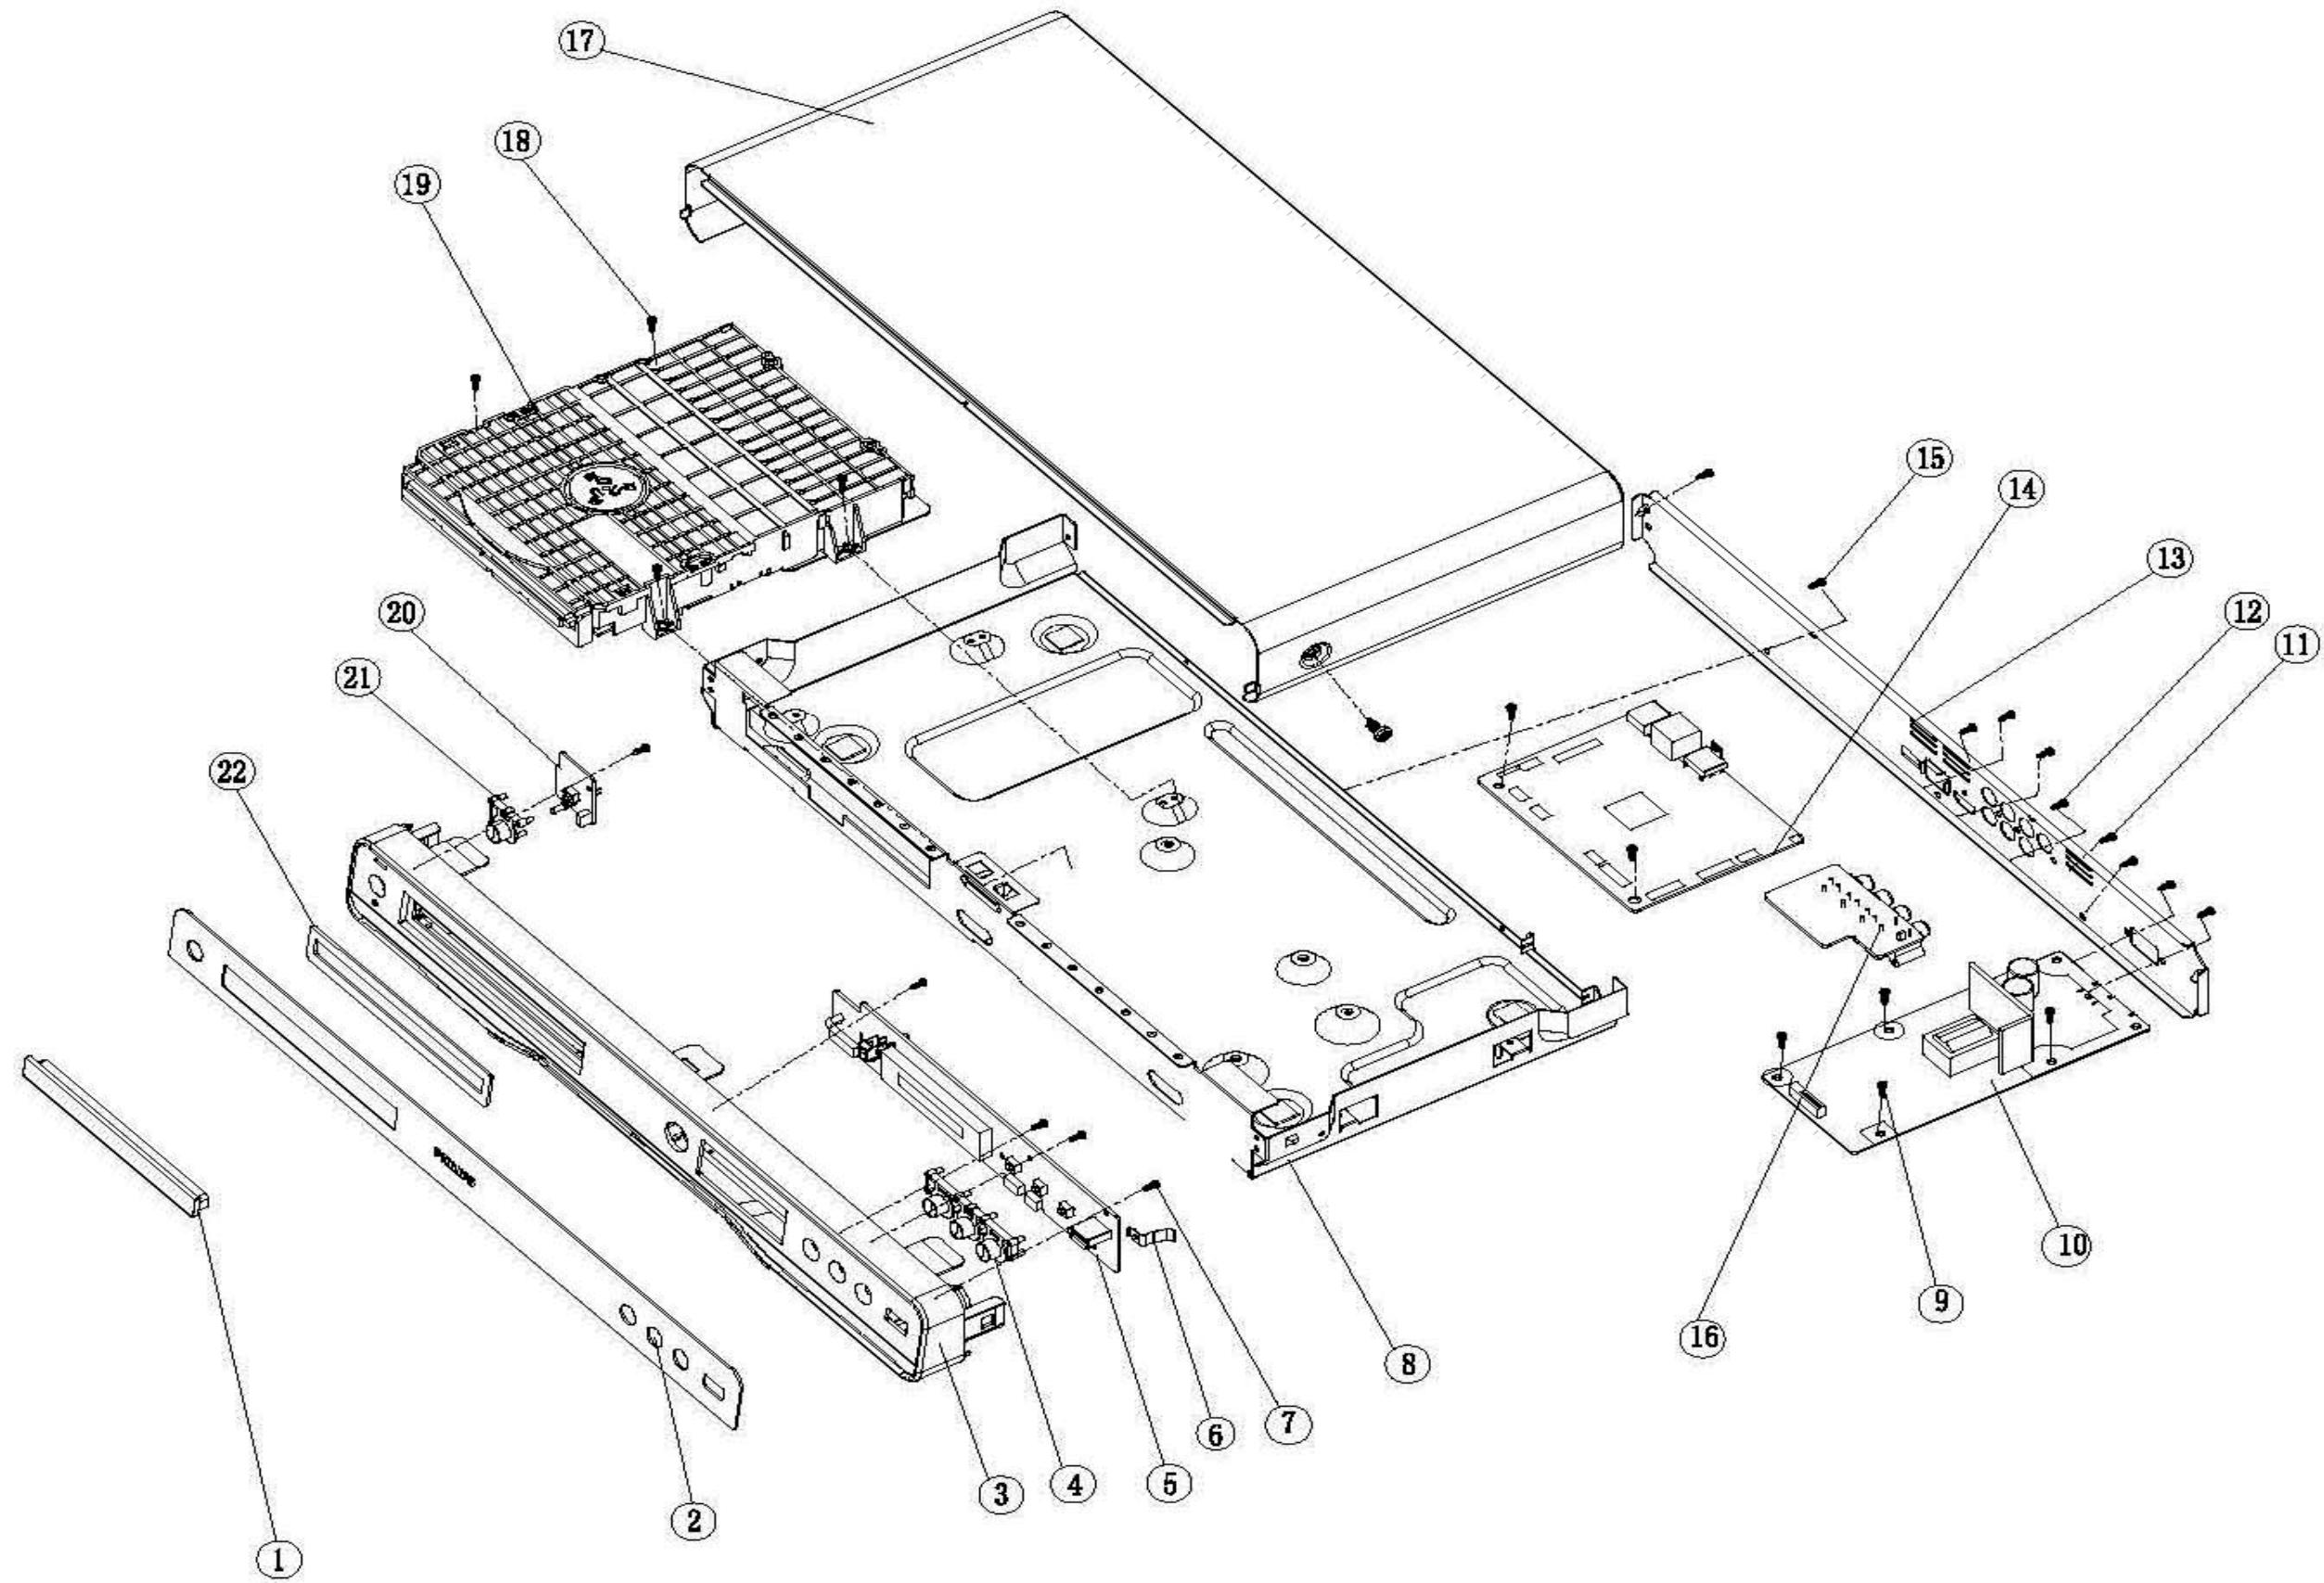

## Main Board Print-layout(Top Side):

## Main Board Print-layout(Bottom Side)

Exploded view for BDP3100/12/05/51/55/93/96/98/79/X78 ,BDP3080/98

It is a general mechanical exploded view for BDP3100,BDP3080/98 pls refer to the model set for detailed information.ASSY1 includes components:2.3.4.21.22

## ***REVISION LIST***

### **Version 1.0**

- \* Initial release for BDP3100/12/05/51/55/79/93/96/98/x78 (MKII version, S/N with KX1Bxxxxxxxxx or SM1Bxxxxxxxxx)

### **Version 1.1**

- \* BDP3080/98 added.

### **Version 1.2**

- \* Page 7-1 Mechanical Exploded View updated.
